Office of Planning, Design & Construction

SPECIFICATIONS

PROJECT NO.: 2533105

PROJECT TITLE: **Construct Arabian Leopard Habitat (ALF)
Phase 2 - Habitat & Animal Care Building**

FACILITY: **National Zoological Conservation Biology Institute (NZCBI)**

PACKAGE: **65% Construction Documents - FOR REFERENCE ONLY**

DATE: June 15, 2026

This project is approved as being in conformance with applicable provisions of the Smithsonian Directive (SD) 410.

Michael J. Carrancho, P.E., Deputy Director

SECTION 01 1000 - SUMMARY

PART 1 - GENERAL

1.1 PROJECT INFORMATION

- A. Project Identification: Construct Arabian Leopard Facility (ALF)
SF Project No. 2533105
NZP-DC: Smithsonian's National Zoo and Conservation Biology Institute (NZCBI)
3001 Connecticut Avenue, NW
Washington, D.C. 20008
- B. Smithsonian Institution Contacts:
Contracting Officer (CO) address for Fed Ex and UPS delivery: Smithsonian Institution
Attn: Virginia Chan
Office of Contracting
600 Maryland Avenue, SW, Suite 500E
Washington, DC 20024
- Contracting Officer (CO), address for USPS delivery: Smithsonian Institution
Office of Contracting
MRC 1200
P.O. Box 37012
Washington, DC 20013-7012
- Contracting Officer's Technical Representative (COTR), address for Fed Ex, USPS, and UPS delivery:
Smithsonian Institution
Attn: Ryan Swanier
Office of Planning, Design & Construction
General Services Building
National Zoological Park
3001 Connecticut Avenue, NW
Washington, DC 2000
- All references on drawings and in specifications to 'Owner,' 'SI,' 'National Zoological Park,' 'National Zoo,' 'Zoo,' or 'NZP' refer to COTR.

1.2 SUMMARY OF WORK

- A. The Work of Project is defined by the Contract Documents and consists of the following:
- I. The Contractor shall furnish all supervision, labor, materials, and equipment needed to complete Phase 2 of the Construct Arabian Leopard Facility Project located at Smithsonian Institution's National Zoological Park at 3001 Connecticut Avenue NW as set forth on the Drawings for OPDC Project No. 2533105 and in these specifications, anticipated final issue date in early October 2026 and as noted below.
- The Work includes: The Phase 2 (Habitats and Animal Care Building) for the Arabian Leopard Facility (ALF) that will be located southeast of the Connecticut Avenue entrance to the National Zoo. It will replace the former Bison Habitat and the existing Zoo in Your Backyard, which is situated along the historic Olmsted Walk, across from the Africa Trail Exhibit (currently under renovation), just north of the Elephant House, and abuts the east exit of the Panda Habitat.

2. Critical Elements of the Work: The successful Contractor shall be fully qualified to install critical elements of the Work. Upon request of the Contracting Officer, bidders shall submit a statement of qualifications to address the following critical elements of the Work:
- a. Working within an occupied, historic campus active with public, staff and animals
 - b. Coordination of specialty trades within a small site footprint
 - c. Coordination and installation of specialty animal doors, transfer systems and manually operated remote door controls.
 - d. Coordination and installation of subsurface utility systems in a congested area
 - e. Coordination and installation of subsurface drainage and water conveying systems.
 - f. Coordination and installation of radiant flooring
 - g. Coordination and installation of animal containment fencing and mesh
 - h. Coordination and installation of shotcrete faux rock and faux trees
 - i. Mitigation of sound and vibration during demolition and construction so as not to harm animals in adjacent habitats
 - j. Coordination of construction activities with Zoo operations to align with feeding schedules, DC zoning community noise regulations, Zoo hours, known and unknown animal welfare issues, veterinary care, and public events
3. Related Documents include:
- a. Arabian Leopard Facility (ALF) - Preliminary Acoustic Narrative (FOR REF ONLY), dated 1/22/26
 - b. Arabian Leopard Facility (ALF) – Geotechnical Engineering Study (FOR REF ONLY), dated 3/13/26
 - c. Arabian Leopard Facility (ALF) Phase 1 – Early Site Dwgs w-Addendum 1 (FOR REF ONLY), dated 5/11/26
 - d. Arabian Leopard Facility (ALF) Phase 1 – Early Site Dwgs w-Addendum 1 Clarifications (FOR REF ONLY), dated 5/12/26
 - e. Arabian Leopard Facility (ALF) Phase 1 – Early Site Specs w-Addendum 1 (FOR REF ONLY), dated 5/11/26
 - f. Arabian Leopard Facility (ALF) Phase 1 – Early Site Bid RFI Responses (FOR REF ONLY), dated 6/11/26
 - g. Arabian Leopard Facility (ALF) Phase 2 – Habitats & Animal Care Building 65% Design Development Drawings (FOR REF ONLY), dated 6/15/26
 - h. Arabian Leopard Facility (ALF) Phase 2 – Habitats & Animal Care Building 65% Design Development Specifications (FOR REF ONLY), dated 6/15/26
4. As-built documentation, previous project design drawings, geotechnical/soils reports, structural analysis, surveys, and other materials may be provided for supplemental reference only. Accuracy of any information provided is not guaranteed. Any information contained therein may affect the project and must be field verified.
- B. Type of Contract:
- 1. Project will be constructed under a single prime contract.
- C. Contract Time for Completion:
- 1. Work under this contract shall begin by the Contractor within ten (10) calendar days after the Notice to Proceed, unless stated otherwise in the Notice to Proceed issued by the Contracting Officer and shall be completed within the total contract time of **578** calendar days. All work, including project close-out activities, shall be completed in every respect within the contract time.

2. The start date and completion date shall be as stated in the Notice to Proceed issued by the Contracting Officer.

1.3 BIDDER EXAMINATION OF SITE

- A. Every effort has been made to indicate all work necessary to complete the project as identified. All bidders shall carefully examine the premises during the bid period and satisfy themselves as to the extent, nature, and location of the work, general and local conditions, particularly those bearing on transportation, disposal, handling and storage of materials, access routes, availability of labor, water, electric, uncertainties of the weather, type of equipment and facilities needed for the successful execution of the work.
- B. Pre-Bid Conference and Site Visit. Before or during the bidding period, a scheduled pre-bid conference and site visit will be announced by the COTR. The purpose of the scheduled meeting is to provide an opportunity for all bidders to review the project site. Any comments, information or discussion during the site visit shall not modify the contract documents.
- C. This project requires special arrangements for access to a non-public area. Access to the site may be restricted at times other than during the scheduled visit.

1.4 ACCESS TO SITE

General: Contractor shall have limited use of project site for construction operations as indicated on Drawings by the Contract limits and as indicated by requirements of this Section.

- A. Use of Site: Limit use of Project site to areas within the Contract limits indicated. Do not disturb portions of Project site beyond areas in which the Work is indicated.
 1. Limits: Confine construction operations as indicated on the contract drawings.
 2. Driveways, Walkways and Entrances: Keep driveway, parking areas, and entrances serving premises clear and available to the Owner, Owner's employees, and emergency vehicles at all times. Do not use these areas for parking or storage of materials.
 - a. Schedule deliveries to minimize use of driveways and entrances by construction operations.
 - b. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.

1.5 COORDINATION WITH OCCUPANTS

- A. Owner Limited Occupancy of Completed Areas of Construction: Owner reserves the right to occupy and to place and install equipment in completed portions of the Work, prior to Completion of the Work, provided such occupancy does not interfere with completion of the Work. Such placement of equipment and limited occupancy shall not constitute acceptance of the total Work.
 1. Obtain a Certificate of Occupancy from authorities having jurisdiction before any partial Owner occupancy.

1.6 WORK RESTRICTIONS

- A. Work Restrictions, General: Comply with restrictions on construction operations.

1. Comply with limitations on public use and with other requirements of authorities having jurisdiction.
- B. Work Restrictions, Adjacent Panda Habitats
1. Anticipated Stop Work Events – Due to the proximity of active panda habitats and associated care facilities to the Arabian Leopards project area, the Contractor shall anticipate any Stop Work Notices issued by the Contracting Officer's Technical Representative (COTR) as required by animal care staff to protect animal welfare. Stop Work Notices shall be considered a normal and expected part of project execution and shall not constitute grounds for additional cost or time.
 2. Potential Panda Relocations – Depending on the nature, duration, and intensity of adjacent construction activities, pandas may require temporary relocation to alternate enclosure spaces. Such relocations require advance notice, schedule coordination, and enhanced communication between the Contractor and the animal care team. The Contractor shall plan work sequencing to support these relocations and shall incorporate required coordination into the project schedule.
 3. Means and Methods Affecting Panda Behavior – The Contractor shall submit detailed means and methods for any construction activities that may influence panda behavior, including but not limited to noise, vibration, visual disturbance, equipment movement, or changes in access patterns.
 4. Daily Coordination Requirements for Sensitive Work – In addition to standard two week look ahead schedules, the Contractor shall conduct a daily coordination meeting with designated animal care team members prior to the start of sensitive work. This requirement applies especially to but not limited to high decibel, high impact, or otherwise disruptive activities. The purpose of the meeting is to confirm planned work; review required mitigations and resolve any animal care concerns before work begins.
- C. On-Site Work Hours: Limit work in the project area to normal business working hours of 6 a.m. to 3:30 p.m., Monday through Friday, unless otherwise indicated.
1. Weekend Hours: Contractor shall seek approval from COTR.
 2. Early Morning Hours: Contractor shall seek approval from COTR
 3. Hours for Utility Shutdowns: Shall occur during "OFF HOURS" as determined by the COTR.
- D. Existing Utility Interruptions: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and only after providing temporary utility services according to requirements indicated:
1. Shall occur during "OFF HOURS" as determined by the COTR.
 2. Existing emergency generators are not available for contractor's required power shutdowns.
- E. Noise, Vibration, and Odors: Coordinate operations that may result in high levels of noise and vibration, odors, or other disruption to Owner occupancy with Owner.
1. Notify **Owner** not less than **three** days in advance of proposed disruptive operations.
- F. Smoking is only allowed in COTR approved designated contractor locations. Contractor shall keep the area clean.
- G. Traffic Control. The GC is to provide a flagger with SI issued badge for controlling access and managing all traffic entering NZP property SI\NZP staff will need access to occupied areas adjacent to but outside of the project construction zone, such as the Kudu yard See drawing C140 for additional requirements. Contractor will provide at least one traffic control

professional at each unlocked project vehicle/staff entrance during construction operating hours. During off hours the entire work area shall be fenced off and locked.

1. **TRAFFIC PERSONNEL.** The Contractor shall provide all necessary personnel for traffic control. The following personnel shall be required:

(1) **TRAFFIC SAFETY OFFICER.** The Contractor shall provide a competent traffic safety officer. The traffic safety officer shall be thoroughly experienced in and qualified for maintenance of traffic safety control work. Prior to commencing work requiring traffic control management, the Contractor shall certify in writing that the proposed Traffic Control Officer, and any designated substitute, has been certified by the American Traffic Safety Services Association (ATSSA). The Contractor shall submit a certificate verifying successful completion of the ATSSA course and a summary of the Traffic Safety Officer's field experience in the operation of work zone traffic control. Training provided by DDOT, or private firm may be approved provided that the following minimum requirements are met:

- a) Successful completion of a comparable work zone traffic control course including evidence of passing a written examination on the material presented in the course.
- b) A minimum of one year of documented field experience in work traffic control. The traffic safety officer or an approved substitute, in case of forced absence, is expected to perform the duties on a regular basis and ensure that all traffic maintenance operations are running smoothly at all times by conducting regular inspections for the duration of the project, particularly during peak hours. The traffic safety officer's prime duty but not sole duty shall be the responsibility for the Contractor's maintenance of traffic operations. Duties shall include, but not be limited to, the following:
 - (a) Understand the requirements of the contract provisions.
 - (b) Be responsible for assuring compliance of the Contractor's maintenance and protection of traffic relative to the requirements of the contract provisions.
 - (c) Be responsible for assuring that all deficiencies are corrected.
 - (d) Be responsible for coordinating maintenance of traffic operations with the COTR.
 - (e) Supervise the installation and removal of all temporary traffic control devices and pavement markings.
 - (f) Be responsible for daily inspection of the work zone traffic control devices. Inspection results shall be recorded in a Traffic Control Device Inspection Log.
 - (g) Monitor traffic flows to confirm that delays in the work zone are kept to a minimal duration for Zoo traffic.

(2) **FLAGGERS.** Contractor shall provide all necessary flaggers required to properly maintain traffic through the work zone. Flaggers shall have completed flagger training and shall be certified by ATSSA or another approved agency or firm.

- a) Contractor must submit certification of individuals prior to working on the site.
- b) Flaggers shall properly use all required safety gear (vests, flags, cones, tape, flashlights, etc.)

4.2 USE OF PREMISES

C. Use of Site: During the construction period, the Contractor shall have full use of the majority of the premises for construction operations within the "Limits of Construction." The Contractor's use of the premises will be limited by the Smithsonian Institution's right to perform work as indicated below. Security of the construction site is the responsibility of the Contractor.

1. Staff operations within buildings surrounding the project site

2. Contractor Parking: One parking space will be assigned to the Contractor for use during the contract period. The space will be located as close to the project site as possible. Coordinate with COTR.
 3. The assigned space can only be used by the company vehicle. The vehicle must be clearly marked with company name and/or logo. The permit shall be displayed on the vehicle dashboard on the driver's side. Vehicles not in compliance with this clause are subject to ticketing and towing by the NZP police. Costs associated with parking violations shall be the sole responsibility of the Contractor.
 4. Parking spaces will not be provided for the Contractor's employees. Employees will be required to comply with the NZP's pay parking regulations.
 5. Personnel Vehicles may not be parked on the jobsite or roadways.
 6. The Contractor is expected to provide whatever means necessary to protect persons and property from work activities.
- D. Use of Utilities: Existing utilities are available for the Contractor's use. See Division 01 Section 01500 "Temporary Facilities and Controls."
- E. Off-Hours Work and Overtime: For each occasion, the Contractor chooses to work on Saturdays, Sundays, or Smithsonian holidays, or during hours other than 6:00AM – 3:00PM, obtain written permission from the COTR at least 5 working days in advance. The Zoo is located in neighborhood community surroundings, which greatly limits the option to work off hours.
- F. Temporary Construction Barriers: The contractor shall coordinate installation with the COTR at least 5 working days prior to the scheduled construction barrier installation.
- G. Work Stoppages and Deferrals for Animal Issues: Any issue posing a risk to zoo animal welfare may be considered equivalent to a safety hazard for humans.

4.3 CONTRACTOR BEHAVIOR

- C. Dress and Deportment: Contractors and subcontractors on SI-property shall conduct themselves in a manner appropriate to a public place and animal care facility, abiding by all federal, state, and local laws and ordinances, as well as Smithsonian Institution directives. Contractor and subcontractor personnel shall be fully and appropriately clothed at all times. The COTR may require immediate removal of any individual from the premises and Project for:
1. Unacceptable dress, demeanor, disruptive conduct or
 2. Unauthorized interaction, feeding, or harassment of any zoo animals or
 3. Unauthorized entry into animal containment or non-public area or
 4. Tampering with any animal containment barrier, device, gate, or lock.
- D. The consumption of alcoholic beverages by the Contractor's personnel is prohibited in/on all Smithsonian property, buildings, or leased space.
- E. Smoking or carrying lighted tobacco products is prohibited in all Smithsonian buildings and exhibition/public spaces, in areas where hazardous materials are stored or handled. Acceptable areas for smoking are outside of buildings as designated by the Smithsonian.
- F. The possession, sale, or use of narcotic or other illegal substances or contraband by Contractor employees is strictly prohibited in/on all Smithsonian property, facilities, and leased spaces. Working on the project under the influence of alcohol or illegal substances is strictly prohibited.

4.4 JOB-SITE SAFETY AND RELATED SUBMITTALS

- C. Safety Coordinator: The Contractor shall designate a person responsible and accountable for personnel safety at both corporate and project level at the project site for the duration of the project. Contracts specifically requiring safety or industrial hygiene personnel shall include a copy of their resumes. Qualifications for the Safety Coordinator shall include the OSHA 30-hour course or equivalent course.
- D. SUBMITTALS:
1. Job-Site Safety Plan: Submit a Job-Site Safety Plan that addresses safe construction operations by the contractor within 30 calendar days of the Contract Award and at least 10 calendar days prior to mobilization to the site for approval by the COTR. Detail the procedures, designated persons, instructions, and reports to be used to assure job-site safety for all contractors, subcontractors, Smithsonian personnel, the public, and others on the site. Safety plan shall include adherence to all applicable provisions of Smithsonian Directive 419 (SD419) and all safety standards issued by the Safety Officer of the National Zoological Park.
 5. Site Specific Safety Plan: Upon award of this contract, the contractor shall provide a Site-Specific Safety Plan (SSSP). The SSSP is a safety and health policy and program document and outlines how the contractor will safely conduct their work. This plan shall be job-specific and shall also address any unusual or unique aspects of the project or activity for which it is written. The SSSP shall interface with the employer's overall safety and health program, and a copy shall be available on the work site. Any portions of the employer's overall safety and health program that is referenced in the SSSP shall be included as appropriate. The plan shall include but not limited to the following:
 - a. Signature Sheet that must include plan concurrence (e.g., Chief of Operations, Corporate Chief of Safety, Corporate Industrial Hygienist, project manager or superintendent, project safety professional, project QC). Provide concurrence of other applicable corporate and project personnel (Contractor).
 - b. Background Information that must include Brief project description, description of work to be performed, and location; phases of work anticipated these will require a Job Hazard Analysis (JHA's). OSHA 3071
 - c. Statement of Safety and Health Policy
 - d. Responsibilities and lines of Authority
 - e. Subcontractors and Suppliers
 - f. Training
 - g. Safety and Health inspections that include assignment of responsibilities for a minimum daily/weekly job site safety and health inspection during periods of work activity level of technical proficiency needed to perform the inspections, proof of inspector's training/ qualifications.
 - h. Accident Reporting
 - i. Plans (programs, procedures) required by the Safety Manual. Based on a risk assessment of contracted activities and on mandatory OSHA compliance programs, the Contractor shall address all applicable occupational risks and compliance plans. Using the 29 CFR 1926 and/or current and accepted procedures in the EM 385-1-1 as a guide.
 - j. Risk Management Processes Detailed project-specific hazards and controls shall be provided by a Job Hazard Analysis (JHA) for each major phase/activity of work, including but not limited to work involving confined space, fall protection, trenching/excavation, crane/rigging, steel erection, hot work, protection of the

- public, scaffolding, and other activities that involve high risk potential.
- k. Jobsite supervisor/superintendent shall sign safety plan and JHA submissions with a final approved copies kept on the jobsite for operational references.
 - l. Project Evaluation for OSHA's silica standard (29 CFR 1926.1153) focuses on reducing exposure to respirable crystalline silica 12.
Key requirements include:
 - i. Lowering the permissible exposure limit (PEL) from 250 ug/m3 TWA to 50 ug/m3 TWA.
 - ii. Implementing engineering controls, respiratory protection, a written plan, proper training, ongoing medical surveillance, and oversight by a competent person.
- C. Occupational Safety and Health: This contract is subject to Title 29 of the Code of Federal Regulations, Part 1910 "Occupational Safety and Health Standards" and Part 1926 "Safety and Health Regulations for Construction" pursuant to the Occupational Safety and Health Act (OSHA) of 1970 administered by the US Department of Labor, Occupational Safety and Health Administration.
- D. Emergency Assistance: Post at the site telephone numbers for reporting emergencies, including the Smithsonian Office of Protection Services (OPS), ambulance, police, fire department, gas utility, electric utility, water/sewer utility, poison prevention aid, and hazardous- waste handling. Post this information in a conspicuous location within the project area prior to the start of any work at the site.
- E. Safety Signs: Post legible accident prevention signs in construction areas in accordance with OSHA standards. Safety signs shall conform to ANSI 235.1, and 235.2 Vehicular traffic control devices, barricades, and signals shall conform to ANSI D6.1.
- F. Report of Accident or Illness: In the event of any accident or illness for which medical assistance is required, any criminal actions, or any fire, notify the appropriate authority (ambulance, police, and fire department), Smithsonian Security, and the COTR.
- G. Emergency Evacuation: Post evacuation routes and facility emergency/self-protection plans at the site and train all employees in emergency procedures. In the event of a fire, immediately activate the alarm at the nearest fire alarm pull station and notify Zoo Police at (202) 633-4111. Upon the activation of the audible alarm, the building will be evacuated. No personnel shall reenter the facility until security personnel signal that the building is safe.
- H. Contractor Personnel to be contacted: Submit a written list of 24-hour emergency telephone numbers and names of persons to contact for the General Contractor superintendent and for each major sub-contractor working on the project site. The initial list shall be submitted to the COTR at the Preconstruction Meeting. Update and resubmit this list to the COTR as changes occur.

1.10 TOXIC AND HAZARDOUS SUBSTANCES

- A. Submit to the COTR, at least thirty (30) working days prior to their intended use, a written list of toxic and hazardous substances that will be used on the project and an NZP Material Approval Form for each. Submit a "Material Safety Data Sheet" similar to OSHA Form No. 20 for these substances to identify the following information:
1. Product Identification
 2. Hazardous Ingredients
 3. Physical Data
 4. Fire and Explosion Hazard Data
 5. Health Hazard Data
 6. Emergency and First Aid Procedures

7. Reactivity Data
8. Spill or Leak Procedures
9. Special Protection Information
10. Special Precautions

- B. Monitor the use of all toxic and hazardous substances to ensure that the specified Threshold Limit Values (TLV's) and/or Permissible Exposure Limits (PEL's) are not exceeded. Exposure of the Contractor's personnel and Smithsonian Institution employees and visitors to air-borne or any other physical contact with any substance shall not exceed allowable concentrations specified in:

1. "Threshold Limit Values and Biological Exposure Indices" of the American Conference of Governmental Industrial Hygienists, and
2. Title 29 CFR Part 1910, Subpart Z - "Toxic and Hazardous Substances" of the Occupational Safety and Health Standards.

- C. Provide methods, means, and facilities to prevent contamination of soil, water, and atmosphere from discharge of noxious, toxic substances and pollutants produced by construction operations. Remove contaminated waste in compliance with applicable laws and regulations.
- D. All containers used for hazardous chemicals shall be properly labeled. Labels should list at least the chemical identity, appropriate hazard warnings, and the name and address of the manufacturer, importer, or other responsible party.
- E. To achieve compliance with the requirements of this section, administration or engineering controls shall first be implemented whenever feasible. When such controls are not feasible to achieve full compliance, protective equipment or other protective measures shall be used to keep exposure of all persons within the prescribed limits. Descriptions of equipment or technical measures to be used for this purpose must be submitted to the COTR for approval. The Contractor's requirements for compliance with all applicable local, federal, and state regulations remain in force.

1.11 PERSONAL PROTECTIVE EQUIPMENT

- A. Personal protective equipment for eyes, face, ears, nose, head, extremities, and/or full body shall be provided, used, and maintained by the Contractor whenever necessitated by reasons of hazards encountered in a manner capable of causing illness, injury, or impairment in the function of any part of the body.
- B. Persons required to use personal protective equipment shall be thoroughly trained. Training programs shall, as a minimum, meet OSHA and EPA requirements where applicable. The Contractor shall submit proof and criteria for employee training as requested.

1.12 GENERAL SECURITY REQUIREMENTS

- A. Prior to the start of work on the site, submit to the COTR, a list of the names, and phone numbers of all Contractor and subcontractor employees. Identify the Prime Contractor and each subcontractor and trade. Update list as necessary to accurately identify all workers who will be working on the site during the Project.
- B. Provide the name and telephone number of the Contractor's Superintendent and authorized alternate individual who can be reached on a 24-hour basis at the Preconstruction Meeting.

- C. After Beneficial Occupancy, Contractors working inside those areas of the project shall display SI- provided ID badges and sign - in and – out at the zoo police station and other appropriate security checkpoints.

1.13 DRILLING, WELDING, TORCH, AND ARC CUTTING, AND OPERATIONS THAT PRODUCE AIRBORNE CONTAMINANTS

- A. Daily Permit: When welding, torch or arc cutting, or other heating operations are to occur inside existing structures, the Contractor shall obtain a daily “Burn Permit.” When work produces dust or other airborne contaminants, e.g., spray painting that could impair existing fire suppression or detection system(s), the Contractor shall obtain a daily “Fire System Impairment Permit.” Each permit must be obtained at least two working days in advance from the Building Manager’s Office through the COTR and posted at the job site prior to beginning the scheduled work.
- B. Fire Watch: No welding, torch, or arc cutting shall be performed unless adequate fire protection is provided. The Contractor shall maintain a fire watch for the duration of welding, cutting, and heating operations and for at least 30 minutes after the ‘hot’ work has stopped. A fire extinguisher (minimum 10 pounds, dry-chemical type, typical) shall be on hand when drilling, welding, or cutting.
- C. In lieu of SI’s Daily Permit, the Contractor may request the use of Contractor’s job site oversight permit process, confirming that it meets all SI oversight and safety requirements.

1.14 SAFETY

- A. All operations shall be conducted in accordance with all national and local fire and safety codes, laws, rules, and regulations.
- B. Warning Signs and Barricades: All roadways shall remain open to the public unless approved by the COTR. The Contractor shall provide, erect, and maintain all necessary signs, barricades, traffic cones, warning and danger signals and signs, and provide enough security guards and flaggers to insure the safe flow of traffic, protection of the work area and the safety of the public and staff.

1.15 SPECIFICATION, DRAWING CONVENTIONS, AND ELECTRONIC DATA

- A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:
 1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
 2. Specification requirements are to be performed by Contractor unless specifically stated otherwise.
- B. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.
- C. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One or more of the following are used on the Drawings to identify materials and products:

1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.
2. Abbreviations: Materials and products are identified by abbreviations published as part of the U.S. National CAD Standard and scheduled on Drawings.
3. Keynoting: Materials and products are identified by reference keynotes referencing Specification Section numbers found in this Project Manual.

1.16 MISCELLANEOUS PROVISIONS

- A. Units of Measure: Perform all layout, construction, fabrication, and installation in accordance with the units of measure given in the Contract Documents. This project may be designed, dimensioned, and specified as an imperial project.
 1. All Contractor and sub-contractor personnel working on the site shall possess and use appropriate measuring equipment for all work shown. Conversion of dimensions shown on contract documents for use of non-compliant measuring equipment is prohibited.
 2. All submittals shall display appropriate measurements to ensure conformance with the Contract Documents. Project-specific shop drawings shall be prepared in preferred appropriate drawing scales and shall display appropriate dimensions.
 3. All correspondence shall use appropriate units exclusively. All cost data submitted by the Contractor in a proposal or any other submission shall be in appropriate units.
 4. All Operations and Maintenance (O&M) material shall be submitted with appropriate units and dimensions that clearly demonstrate conformance with the contract drawings and specifications.
 5. When permits or approvals are required by outside state or local agencies and/or utilities, provide submittals to these authorities in the format, scale, and measurement system they require. Annotate these submittals with parenthetical equivalents of critical size and location dimensions to facilitate the review of the submittal in comparison to the Contract Documents.
- B. Hazardous Materials: Notify the COTR immediately if any suspected asbestos-containing materials, lead paint, PCBs, or other hazardous materials other than those indicated in the construction documents are uncovered during Work.

1.17 CONSTRUCTION APPROVAL

- A. Final approval and direction shall be provided by the Contracting Officer (CO) or Contracting Officer's Technical Representative-Construction Management (herein COTR). The Authority Having Jurisdiction is SI-Office of Safety, Health, and Environmental Management (OSHEM) and they shall provide direction through the CO or COTR. The owner's agent is the COTR. All references within the construction documents to other entities providing approval shall mean initial approval or recommendation prior to COTR final approval.

END OF SECTION 011000

SECTION 01 2300 – ALTERNATES / OPTIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The Contract Documents in their entirety, including the Drawings, Specifications, Construction Contract Clauses, and any other documents issued as part of the Contract, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for alternates/options.

1.3 DEFINITIONS

- A. Alternate/Option: An amount proposed by bidders and stated on the Bid Form for certain work defined in the bidding requirements that may be added to or deducted from the base bid amount if Owner decides to accept a corresponding change either in the amount of construction to be completed or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.
 - 1. Alternates/Options described in this Section are part of the Work only if enumerated in the Agreement.
 - 2. The cost or credit for each alternate/option is the net addition to or deduction from the Contract Sum to incorporate alternate/option into the Work. No other adjustments are made to the Contract Sum.

1.4 PROCEDURES

- A. Coordination: Revise or adjust affected adjacent work as necessary to completely integrate work of the alternate/option into Project.
 - 1. Include as part of each alternate/option, miscellaneous devices, accessory objects, and similar items incidental to or required for a complete installation whether or not indicated as part of alternate/option.
- B. Notification: Immediately following award of the Contract, notify each party involved, in writing, of the status of each alternate/option. Indicate if alternates/options have been accepted, rejected, or deferred for later consideration. Include a complete description of negotiated revisions to alternates/options.
- C. Execute accepted alternates/options under the same conditions as other work of the Contract.
- D. Schedule: A schedule of alternates/options is included at the end of this Section. Drawings and Specification Sections referenced in schedule contain requirements for materials necessary to achieve the work described under each alternate/option.

END OF SECTION 012300

SECTION 01 2500 - SUBSTITUTION PROCEDURES**PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for substitutions.
- B. Related Requirements:
 - 1. Section 016000 "Product Requirements" for requirements for submitting comparable product submittals for products by listed manufacturers.

1.3 DEFINITIONS

- A. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.
 - 1. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
 - 2. Substitutions for Convenience: Changes proposed by Contractor or COTR that are not required in order to meet other Project requirements but may offer advantage to Contractor or COTR.

1.4 ACTION SUBMITTALS

- A. Substitution Requests: Submit each request electronically in Portable Document Format (.pdf) to the COTR for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
 - 1. Substitution Request Form: Use CSI Form 13.1A or similar document information wise.
 - 2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:
 - a. Statement indicating why specified product or fabrication, or installation cannot be provided, if applicable.
 - b. Coordination information, including a list of changes or revisions needed to other parts of the Work and to construction performed by COTR and separate Contractors that will be necessary to accommodate proposed substitution.
 - c. Detailed comparison of significant qualities of proposed substitution with those of the Work specified.
 - d. Include annotated copy of applicable Specification Section.
 - e. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
 - f. Product Data, including drawings and descriptions of products and fabrication

- and installation procedures.
 - g. Samples, where applicable or requested.
 - h. Certificates and qualification data, where applicable or requested.
 - i. List of similar installations for completed projects with project names and addresses and names and addresses of architects and COTRs.
 - j. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
 - k. Research reports evidencing compliance with building code in effect for project, from ICC-ES.
 - l. Detailed comparison of Contractor's construction schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
 - m. Cost information, including a proposal of change, if any, in the Contract Sum.
 - n. Contractor's certification that proposed substitution complies with requirements in the Contract Documents except as indicated in substitution request, is compatible with related materials, and is appropriate for applications indicated.
 - o. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.
3. If necessary, COTR will request additional information or documentation for evaluation within seven days of receipt of a request for substitution. COTR will notify Contractor of acceptance or rejection of proposed substitution within 15 days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.
- a. Forms of Acceptance: Change Order, Construction Change Directive, or Architect's Supplemental Instructions for minor changes in the Work.
 - b. Use product specified if COTR does not issue a decision on use of a proposed substitution within time allocated.

1.5 QUALITY ASSURANCE

- A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

1.6 PROCEDURES

- A. Coordination: Revise or adjust affected work as necessary to integrate work of the approved substitutions.

PART 2 - PRODUCTS

2.1 SUBSTITUTIONS

- A. Substitutions for Cause: Submit requests for substitution immediately on discovery of need for change, but not later than 15 days prior to time required for preparation and review of related submittals.

- 1. Conditions: COTR will consider Contractor's request for substitution when the following

conditions are satisfied. If the following conditions are not satisfied, COTR will return requests without action, except to record noncompliance with these requirements:

- a. Requested substitution is consistent with the Contract Documents and will produce indicated results.
- b. Substitution request is fully documented and properly submitted.
- c. Requested substitution will not adversely affect Contractor's construction schedule. e. Requested substitution has received necessary approvals of authorities having Jurisdiction.
- d. Requested substitution is compatible with other portions of the Work.
- e. Requested substitution has been coordinated with other portions of the Work. h. Requested substitution provides specified warranty.
- f. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is Compatible with other products, and is acceptable to all contractors involved.

B. Substitutions for Convenience: Not allowed

PART 3 - EXECUTION (Not Used)

END OF SECTION 012500

FOR REFERENCE ONLY

SECTION 01 2600 - CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for handling and processing Contract modifications.
- B. Related Requirements:
 - 1. Section 012500 "Substitution Procedures" for administrative procedures for handling requests for substitutions made after the Contract award.

1.3 MINOR CHANGES IN THE WORK

- A. COTR will issue supplemental instructions authorizing minor changes in the Work, not involving adjustment to the Contract Sum or the Contract Time, on AIA Document G710, "Architect's Supplemental Instructions" (ASI).

1.4 PROPOSAL REQUESTS

- A. The Smithsonian Institution-Initiated Proposal Requests: COTR will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.
 - 1. Work Change Proposal Requests issued by COTR are not instructions either to stop work in progress or to execute the proposed change.
 - 2. As detailed in the proposed change request letter, submit a proposal noting the sum and the duration if any, necessary to execute the change.
 - a. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
 - b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
 - c. Include costs of labor and supervision directly attributable to the change.
 - d. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an Extension of the Contract Time.
- B. Contractor-Initiated Proposals: If latent or changed conditions require modifications to the Contract, Contractor may initiate a claim by submitting a request for a change to COTR.

1. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.
2. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
4. Include costs of labor and supervision directly attributable to the change.
5. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
6. Comply with requirements in Section 012500 "Substitution Procedures" if the proposed change requires substitution of one product or system for product or system specified.

1.5 ADMINISTRATIVE CHANGE ORDERS

- A. Allowance Adjustment: See Section 012100 "Allowances" for administrative procedures for preparation of Change Order Proposal for adjusting the Contract Sum to reflect actual costs of allowances.

1.6 CHANGE ORDER PROCEDURES

- A. After the COTR approval of a Proposal Request, the Change Order is submitted to the Office of Contracting for processing.

1.7 CONSTRUCTION CHANGE DIRECTIVE

- A. Construction Change Directive: COTR may issue a Construction Change Directive. Construction Change Directive instructs Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.
 1. Construction Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Sum or the Contract Time.

PART 2 - PRODUCTS (Not Used)

PART 3 – EXECUTION (Not Used)

END OF SECTION 012600

SECTION 01 2900 - PAYMENT PROCEDURES**PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements necessary to prepare and process Applications for Payment.
- B. Related Requirements:
1. Section 012600 "Contract Modification Procedures" for administrative procedures for handling changes to the Contract.
 2. Section 013200 "Construction Progress Documentation" for administrative requirements governing the preparation and submittal of the Contractor's construction schedule.
 4. The Smithsonian Institution Provided Supplemental Contract Documents.

1.3 DEFINITIONS

- A. Schedule of Values: A statement furnished by Contractor allocating portions of the Contract Sum to various portions of the Work and used as the basis for reviewing the Contractor's Applications for Payment.

1.4 SCHEDULE OF VALUES

- A. Coordination: Coordinate preparation of the schedule of values with preparation of Contractor's construction schedule.
1. Coordinate line items in the schedule of values with other required administrative forms and schedules, including the following:
 - a. Application for Payment forms with continuation sheets.
 - b. Submittal schedule.
 - c. Items required to be indicated as separate activities in Contractor's construction schedule.
 2. Submit the schedule of values to COTR at earliest possible date, but no later than seven Days before the date scheduled for submittal of initial Applications for Payment.
- B. Format and Content: Use Specifications table of contents as a guide to establish line items for the schedule of values. Provide at least one line item for each Specification Section.
1. Identification: Include the following Project identification on the schedule of values:
 - a. Project name and location.
 - b. Contractor's name and address.
 - c. Date of submittal.

- d. Smithsonian Facilities Project Number
 - e. Construction Contract Number
2. Arrange the schedule of values in tabular form with separate columns to indicate the following for each item listed:
- a. Related Specification Section or Division.
 - b. Description of the Work.
 - c. Change Orders (numbers) that affect value.
 - d. Dollar value of the following, as a percentage of the Contract Sum to nearest one-hundredth percent, adjusted to total 100 percent.
 - 1) Labor.
 - 2) Materials.
 - 3) Equipment.
3. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Coordinate with Specifications table of contents. Provide multiple line items for principal subcontract amounts in excess of 1 percent of the Contract Sum.
- a. Include separate line items under Contractor and principal subcontracts for and other Project closeout requirements in an amount totaling five percent of the Contract Sum and subcontract amount.
4. Round amounts to nearest whole dollar; total shall equal the Contract Sum.
5. Provide a separate line item in the schedule of values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored but not yet installed.
- a. Differentiate between items stored on-site and items stored off-site. If required, include evidence of insurance or bonded warehousing if required.
6. Provide separate line items in the schedule of values for initial cost of materials, for each subsequent stage of completion, and for total installed value of that part of the Work.
7. Each item in the schedule of values and Applications for Payment shall be complete.
- a. Temporary facilities and other major cost items that are not direct cost of actual work-in-place may be shown either as separate line items in the schedule of values or distributed as general overhead expense, at Contractor's option.
8. Schedule Updating: Update and resubmit the schedule of values before the next Applications for Payment when Change Orders or Construction Change Directives result in a change in the Contract Sum.

1.5 APPLICATIONS FOR PAYMENT

- A. Each Application for Payment following the initial Application for Payment shall be consistent with previous applications and payments as approved by the COTR. .
- B. Scheduling of the work: By the 25th of each month, inspect the work with the COTR to

determine percentages complete for each item, projected through the end of the month. In the event of a disagreement the COTR will determine the percentage complete.

- C. Payment Application Times: (By the last day of the month, submit an Application for Payment based on the determined percentages complete for each item)
- D. Application for Payment Forms: Use forms provided by The Smithsonian Institution for Applications for Payment.
- E. Application Preparation: Complete every entry on form. Execute by a person authorized to sign legal documents on behalf of the contractor. The COTR will return incomplete applications without action.
 - 1. Entries shall match data on the Schedule of Values and Contractor's Construction Schedule.
 - 2. Include the amounts of the Modifications executed before the last day of the construction period covered by application.
- F. Stored Materials: Include in Application for Payment the amounts applied for materials or equipment purchased or fabricated and stored but not yet installed. Differentiate between items stored on-site and items stored off-site.
 - 1. Provide certificate of insurance, evidence of transfer of title to The Smithsonian Institution, and consent of surety to payment, for stored materials.
 - 2. Billed Off-Site Material must comply with the applicable Federal Acquisition Regulations (FAR).
 - 3. Provide supporting documentation that verifies amount requested, such as paid invoices. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
 - 4. Provide summary documentation for stored materials indicating the following:
 - a. Value of materials previously stored and remaining stored as of date of previous Applications for Payment.
 - b. Value of previously stored materials put in place after date of previous Application for Payment and on or before date of current Application for Payment.
 - c. Value of materials stored since date of previous Application for Payment and remaining stored as of date of current Application for Payment.
- G. Electronic Submission: Submit signed original copies of each Application for Payment to COTR by a method ensuring receipt. One copy shall include waivers of lien and similar attachments if required.
 - 1. Attach one complete set of copies of certified weekly payroll data for the period covered by the Application for Payment.
 - 2. Attach the current and up to date Construction Progress Schedule.
 - 3. Attach a Change Order Status Report showing the following information for each approved Modification: Proposal Number, Modification Number (if applicable), affected activity numbers for each proposal, and the approved price for each Modification.
 - 4. Assignment of Claims: Assignment of Claims are subject to the approval of the Contracting Officer. Any Assignment of Claim or subsequent re-assignment shall meet the requirements of the Smithsonian Institution Contract Clause, "Assignment of Claims". All documents for assignments shall be written in the English language and display original ink signatures of the Contractor and the Assignee. All monies shall be in US dollars.
 - 5. Submit copies of Waste Diversion logs in accordance with Section 017419.
 - 6. Submit Construction Photos in accordance with section 013233.

- H. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following:
1. List of subcontractors.
 2. Schedule of values.
 3. Contractor's construction schedule (preliminary if not final).
 4. Combined Contractor's construction schedule (preliminary if not final) incorporating Work of multiple contracts, with indication of acceptance of schedule by each Contractor.
 5. Products list (preliminary if not final).
 6. Submittal schedule (preliminary if not final).
 7. List of Contractor's staff assignments.
 8. List of Contractor's principal consultants.
 9. Copies of building permits.
 10. Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
 11. Initial progress report.
 12. Report of preconstruction conference.
 13. Certificates of insurance and insurance policies.
 14. Performance and payment bonds.
 15. Data needed to acquire The Smithsonian Institution's insurance.
 16. Certified Payroll Documents.
- I. Final Payment Application: After completing Project closeout requirements, submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited, to the following:
1. Evidence of completion of Project closeout requirements.
 2. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.
 3. Updated final statement, accounting for final changes to the Contract Sum.
 4. Contractor's Affidavit of Release of Liens.
 5. Evidence that claims have been settled.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 012900 SECTION 012900 - PAYMENT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements necessary to prepare and process Applications for Payment.
- B. Related Requirements:
 - 1. Section 012600 "Contract Modification Procedures" for administrative procedures for handling changes to the Contract.
 - 2. Section 013200 "Construction Progress Documentation" for administrative requirements governing the preparation and submittal of the Contractor's construction schedule.
 - 4. The Smithsonian Institution Provided Supplemental Contract Documents.

1.3 DEFINITIONS

- A. Schedule of Values: A statement furnished by Contractor allocating portions of the Contract Sum to various portions of the Work and used as the basis for reviewing the Contractor's Applications for Payment.

1.4 SCHEDULE OF VALUES

- A. Coordination: Coordinate preparation of the schedule of values with preparation of Contractor's construction schedule.
 - 1. Coordinate line items in the schedule of values with other required administrative forms and schedules, including the following:
 - a. Application for Payment forms with continuation sheets.
 - b. Submittal schedule.
 - c. Items required to be indicated as separate activities in Contractor's construction schedule.
 - 2. Submit the schedule of values to COTR at earliest possible date, but no later than seven Days before the date scheduled for submittal of initial Applications for Payment.
- B. Format and Content: Use Specifications table of contents as a guide to establish line items for the schedule of values. Provide at least one line item for each Specification Section.
 - 1. Identification: Include the following Project identification on the schedule of values:
 - a. Project name and location.
 - b. Contractor's name and address.
 - c. Date of submittal.
 - d. Smithsonian Facilities Project Number
 - e. Construction Contract Number
 - 2. Arrange the schedule of values in tabular form with separate columns to indicate the following for each item listed:
 - a. Related Specification Section or Division.
 - b. Description of the Work.

- c. Change Orders (numbers) that affect value.
- d. Dollar value of the following, as a percentage of the Contract Sum to nearest one-hundredth percent, adjusted to total 100 percent.
 - 1) Labor.
 - 2) Materials.
 - 3) Equipment.
- 3. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Coordinate with Specifications table of contents. Provide multiple line items for principal subcontract amounts in excess of 1 percent of the Contract Sum.
 - a. Include separate line items under Contractor and principal subcontracts for and other Project closeout requirements in an amount totaling five percent of the Contract Sum and subcontract amount.
- 4. Round amounts to nearest whole dollar; total shall equal the Contract Sum.
- 5. Provide a separate line item in the schedule of values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored but not yet installed.
 - a. Differentiate between items stored on-site and items stored off-site. If required, include evidence of insurance or bonded warehousing if required.
- 6. Provide separate line items in the schedule of values for initial cost of materials, for each subsequent stage of completion, and for total installed value of that part of the Work.
- 7. Each item in the schedule of values and Applications for Payment shall be complete.
 - a. Temporary facilities and other major cost items that are not direct cost of actual work-in-place may be shown either as separate line items in the schedule of values or distributed as general overhead expense, at Contractor's option.
- 8. Schedule Updating: Update and resubmit the schedule of values before the next Applications for Payment when Change Orders or Construction Change Directives result in a change in the Contract Sum.

1.5 APPLICATIONS FOR PAYMENT

- A. Each Application for Payment following the initial Application for Payment shall be consistent with previous applications and payments as approved by the COTR. .
- B. Scheduling of the work: By the 25th of each month, inspect the work with the COTR to determine percentages complete for each item, projected through the end of the month. In the event of a disagreement the COTR will determine the percentage

complete.

- C. Payment Application Times: (By the last day of the month, submit an Application for Payment based on the determined percentages complete for each item)
- D. Application for Payment Forms: Use forms provided by The Smithsonian Institution for Applications for Payment.
- E. Application Preparation: Complete every entry on form. Execute by a person authorized to sign legal documents on behalf of the contractor. The COTR will return incomplete applications without action.
 - 1. Entries shall match data on the Schedule of Values and Contractor's Construction Schedule.
 - 2. Include the amounts of the Modifications executed before the last day of the construction period covered by application.
- F. Stored Materials: Include in Application for Payment the amounts applied for materials or equipment purchased or fabricated and stored but not yet installed. Differentiate between items stored on-site and items stored off-site.
 - 1. Provide certificate of insurance, evidence of transfer of title to The Smithsonian Institution, and consent of surety to payment, for stored materials.
 - 2. Billed Off-Site Material must comply with the applicable Federal Acquisition Regulations (FAR).
 - 3. Provide supporting documentation that verifies amount requested, such as paid invoices. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
 - 4. Provide summary documentation for stored materials indicating the following:
 - a. Value of materials previously stored and remaining stored as of date of previous Applications for Payment.
 - b. Value of previously stored materials put in place after date of previous Application for Payment and on or before date of current Application for Payment.
 - c. Value of materials stored since date of previous Application for Payment and remaining stored as of date of current Application for Payment.
- G. Electronic Submission: Submit signed original copies of each Application for Payment to COTR by a method ensuring receipt. One copy shall include waivers of lien and similar attachments if required.
 - 1. Attach one complete set of copies of certified weekly payroll data for the period covered by the Application for Payment.
 - 2. Attach the current and up to date Construction Progress Schedule.
 - 3. Attach a Change Order Status Report showing the following information for each approved Modification: Proposal Number, Modification Number (if applicable), affected activity numbers for each proposal, and the approved price for each Modification.
 - 4. Assignment of Claims: Assignment of Claims are subject to the approval of the Contracting Officer. Any Assignment of Claim or subsequent re-assignment shall meet the requirements of the Smithsonian Institution Contract Clause, "Assignment of Claims". All documents for assignments shall be written in the English language and display original ink signatures of the Contractor and the Assignee. All monies shall be in US dollars.
 - 5. Submit copies of Waste Diversion logs in accordance with Section 017419.

6. Submit Construction Photos in accordance with section 013233.
- H. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following:
 1. List of subcontractors.
 2. Schedule of values.
 3. Contractor's construction schedule (preliminary if not final).
 4. Combined Contractor's construction schedule (preliminary if not final) incorporating Work of multiple contracts, with indication of acceptance of schedule by each Contractor.
 5. Products list (preliminary if not final).
 6. Submittal schedule (preliminary if not final).
 7. List of Contractor's staff assignments.
 8. List of Contractor's principal consultants.
 9. Copies of building permits.
 10. Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
 11. Initial progress report.
 12. Report of preconstruction conference.
 13. Certificates of insurance and insurance policies.
 14. Performance and payment bonds.
 15. Data needed to acquire The Smithsonian Institution's insurance.
 16. Certified Payroll Documents.
- I. Final Payment Application: After completing Project closeout requirements, submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited, to the following:
 1. Evidence of completion of Project closeout requirements.
 2. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.
 3. Updated final statement, accounting for final changes to the Contract Sum.
 4. Contractor's Affidavit of Release of Liens.
 5. Evidence that claims have been settled.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 012900

SECTION 01 3100 - PROJECT MANAGEMENT AND COORDINATION**PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:
 - 1. General coordination procedures
- 2. Coordination, including items to Salvage and The SI Furnished Contractor Installed items
 - 3. Coordination drawings
 - 4. Requests for Information (RFIs)
 - 5. Project Web site
 - 6. Project meetings
 - 7. Conservation and Salvage
 - 8. Permits, Licenses, and Fees
 - 9. Pre-Condition Survey of the Site
 - 10. Equipment Coordination
- B. Each contractor shall participate in coordination requirements. Certain areas of responsibility are assigned to a specific contractor.
- C. Related Requirements:
 - 1. Division 01 Section 013200 "Construction Progress Documentation" for preparing and submitting the Contractor's Construction Schedule.
 - 2. Division 01 Section 013233 "Photographic Documentation" for preparing and submitting Pre-Condition of the Site Survey.
 - 3. Division 01 Section 013300 "Submittal Procedures" for submittal formats.
 - 4. Division 01 Section 015000 "Temporary Facilities and Controls" for additional Site Utilization Plan submittal requirements.
 - 5. Division 01 Section 017300 "Execution" for procedures for coordinating general installation and field- engineering services, including establishment of benchmarks and control points, coordination of the trades, and salvage.
 - 7. Division 01 Section 017700 "Closeout Procedures" for coordinating Contract closeout.
 - 8. Various sections of Divisions for specific coordination efforts between the trades.

1.3 COORDINATION

- A. Coordination: Coordinate design and construction operations included in various Sections of the Project Requirements and to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations, included in different Sections, which depend on each other for proper design, installation, connection, and operation.
- B. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities and activities of other contractors to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:
 - 1. Preparation of Contractor's Construction Schedule.

2. Preparation of the Schedule of Values.
 3. Installation and removal of temporary facilities and controls.
 4. Delivery and processing of submittals.
 5. Progress meetings.
 6. Pre-installation conferences.
 7. Project closeout activities.
- C. Correspondence: Correspond with the COTR for all matters related to this construction project, unless otherwise directed. Sign and date all correspondence and reference the project title, Smithsonian Project Number, and the Construction Contract Number.
- D. Conservation: Coordinate construction activities to ensure that operations are conducted with consideration given to conservation of energy, water, and materials.
- E. Salvage: Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work.
1. SI assumes no responsibility for salvage value or any loss or damage to materials or structures on the site for which the Contractor may have reflected a salvage value in the bid/offer except as specifically stated in the Contract Documents. Construction materials, equipment, or other items that are to be removed and neither re-used under this Contract nor reserved as property of SI, shall become the property of the Contractor. Remove from the premises and dispose of properly. Any items removed and sold by the Contractor cannot be identified being from the Smithsonian Institution and/or the National Zoo.
- F. Salvage: Salvage materials and equipment for The Smithsonian Institution Salvage items identified on drawings to be delivered to the Smithsonian Institution, including but not limited to the following:
1. Salvage and store items identified on drawings to be reinstalled as part of the Contractor's work,
- G. Permits, Licenses, and Fees: The Contractor is responsible for verifying all permitting requirements, fees, licenses, and estimated costs associated with the applicable local authorities and utilities. Keep the SI indemnified against all penalties and liability for breach of provisions of any national, or city ordinance, or law, and the regulations and by-laws of any local or other duly constituted authority which may be applicable to the Work, and with such rules and regulations of public bodies and companies.
- a. This is a federal project; federal projects are generally exempt from some permitting requirements. However, the following permits or costs are known to be required and are the responsibility of the Contractor: DC storm water management requirements, sediment and erosion control permit, off-site disposal, and transportation related permits, and permits related to asbestos and lead as applicable.
 - b. Obtain and pay for all applicable permits and licenses required by regulating agencies, including but not limited to permits for pedestrian and road markings and barricades, Construction fences, sidewalk cuts, utility company connections, elevator certificates, Waste containers, and other required items.
 - c. Pay all duties, fees, taxes, and other charges and file all notices necessary and incidental to the due and lawful execution of the Work.
 - d. Provide temporary constructions at the site as necessary to maintain safe access, if required, for persons with disabilities. All provisions for temporary access shall be Subject to the approval of the COTR.
- H. The Smithsonian Institution (SI) Furnished Contractor Installed Items and Installations:

1. The Contractor shall be responsible for coordinating and monitoring delivery, and for the installation of SI-Furnished items as part of the overall construction schedule.
2. The Contractor shall coordinate with standard procedures, special events, and other requirements imposed by SI/NZP.

1.4 SUBMITTALS

- A. Coordination Drawings: Prepare drawings to ensure building systems and components are compatible and fit together in the space available at appropriate tolerances.
 1. See Division 01 Section "Submittal Procedures" for information on preparation of Shop Drawings, formats, quantities, review requirements.
 2. See Division 01 Sections "Execution" and "Project Management and Coordination" for coordinated geometry and utility drawings.
- B. Site Utilization Plan: Develop a Site Utilization Plan discussing Contractor's proposed plan for working in and using the Premises for this project. Submit the Site Utilization Plan for approval no less than 5 working days prior to the Pre-construction Conference. No on-site work will be permitted until Contractor receives approval of the Site Utilization Plan. Address interactions with other agencies, contractors, tenants, the public, and any others reviewing this project and/or making use of the site and surrounding areas. Submit a Plan that both graphically and narratively describes at a minimum:
- C. Locations of overlap in use of the site by the Contractor and others, including work areas, delivery points, access/egress areas, staging and office space, if applicable
 1. Specific items of work by others required to support critical milestones in the Contractor's schedule.
 2. Completion or delivery of work by others that may impact the Contractor's schedule.
 3. Portions of the Work that create special hazards or disturbances.
 4. Portions of the Work that affect utilities, fire protection or detection systems, or security systems.
 5. Protection to be provided by the Contractor for work complete by others either before or during the Project.
 6. Coordination between all components and disciplines.
 7. Traffic control as required to maintain safe construction operation and safe pedestrian travel.
 8. Contractor staging area and their recommended solution to address contractor and staff areas of overlap.
 9. Traffic Control Plan for this area per Manual on Uniform Traffic Control Devices (U.S. Department of Transportation, Federal Highway Administration, latest edition), including but not limited to proposed plans, durations, and methods for any lane closures, including certified flaggers, barriers, traffic signals, and safe passage of pedestrians near the construction site.
- D. Staff Names: Within 10 days after award of construction operations, submit a list of principal staff assignments, including project manager for construction, superintendent, and other personnel in attendance at Project site. Identify individuals and their duties and responsibilities; list addresses and telephone numbers, including home and office telephone numbers (see also Division 01 Section "Temporary Facilities and Controls"). Provide names, addresses, and telephone numbers of individuals assigned as standbys in the absence of individuals assigned to Project.
- E. Subcontract List: Within 30 days of starting construction operations, prepare and submit a written summary identifying individuals or firms proposed for each portion of the Work, including those

who are to furnish products or equipment fabricated to a special design.

1. Name, address, and telephone number of entities performing subcontract or supplying products.
2. Number and title of related Specification Section(s) covered by subcontract.
3. Drawing number and detail references, as appropriate, covered by subcontract.

- F. Key Personnel Names: Within 10 days of starting construction operations, submit a list of key personnel assignments, including Project Manager for construction, superintendent, and other personnel

in attendance at Project site. Identify individuals and their duties and responsibilities; list addresses and telephone numbers, including home, office, and cellular telephone numbers and e-mail addresses. Provide names, addresses, and telephone numbers of individuals assigned as alternates in the absence of individuals assigned to Project.

1. Post copies of list in project meeting room, in temporary field office, on Project Web site, and by each temporary telephone. Keep list current at all times.

1.5 PROJECT MEETINGS

- A. General: Schedule and conduct meetings and conferences at Project site, unless otherwise indicated.

1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify COTR of scheduled meeting dates and times.
2. Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees.
3. Reporting: Record significant discussion and agreements achieved. Attach any updated schedules or other documentation discussed. Distribute the meeting minutes to everyone concerned. Copies for SI personnel and SI consultants shall be delivered to the COTR for distribution. Meeting minutes should be prepared within 5 working days of the meeting.

- B. Preconstruction Conference: The COTR will schedule a preconstruction conference before starting construction, at a time convenient to the Contractor, but no later than 10 working days after execution of the Agreement. The conference will be held at Project site or another convenient location at a time coordinated with the COTR. The COTR will conduct the meeting to review responsibilities and personnel assignments.

1. Attendees: Authorized representatives of the SI and COTR, Architect/Engineer, and their consultants; Contractor and its superintendent; major subcontractors; manufacturers; suppliers; and other concerned parties shall attend the conference. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.

2. Agenda: Discuss items of significance that could affect progress, including the following:

- a. Contract Time: Construction Notice-to-Proceed date and Completion date.
- b. Tentative construction schedule. Phasing.
- c. Critical work sequencing.
- d. Dimensional controls and role of surveyor.
- e. Mobilization and Staging.
- f. Designation of responsible personnel; emergency procedures and phone numbers.
- g. Procedures for processing RFI's, field decisions, and Change Orders/Contract Modifications.
- h. Procedures for processing Applications for Payment.
- i. Distribution of the Contract Documents.
- j. Submittal procedures.
- k. Preparation of Record Documents.
- l. Use of the premises: utility interruptions; building systems interruptions, including

fire protection; accessibility requirements; preservation of vegetation, wildlife, and natural resources; responsibility for temporary facilities and controls; office, work, and storage areas; equipment deliveries and priorities; access to loading dock, haul routes, Contractor deliveries.

- m. Parking availability.
- n. First aid.
- o. Security and Fire Protection requirements.
- p. Progress cleaning and housekeeping.
- q. Pre-condition of the site survey.
- r. Rough-in inspections.
- s. Testing.
- t. Quality Assurance.
- u. Frequency and scheduling of Progress Meetings.

C. Pre-Submittal and Pre-installation Conferences: Conduct pre-submittal and pre-installation conferences at Project site before each coordinated shop drawing and construction activity that requires coordination with other construction.

1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise the COTR of scheduled meeting dates.
2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:
 - a. Contract Documents.
 - b. Options.
 - c. Related Change Orders.
 - d. Purchases.
 - e. Deliveries.
 - f. Submittals.
 - g. Review of mockups.
 - h. Possible conflicts.
 - i. Compatibility problems.
 - j. Time schedules.
 - k. Weather limitations.
 - l. Manufacturer's written recommendations.
 - m. Warranty requirements.
 - n. Compatibility of materials.
 - o. Acceptability of substrates.
 - p. Temporary facilities and controls.
 - q. Space and access limitations.
 - r. Regulations of authorities having jurisdiction.
 - s. Testing and inspecting requirements.
 - t. Required performance results.
 - u. Protection of construction and personnel.
3. Record significant conference discussions, proposals, agreements, and disagreements.
4. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

D. Progress Meetings: Conduct progress meetings at weekly intervals or as scheduled by COTR. Coordinate dates of meetings with preparation of payment requests. (Progress Meetings may evolve into Project Close-out Meetings at a mutually agreed-upon point in the project.)

1. Attendees: In addition to representatives of the SI, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
 2. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
 - a. Safety issues or concerns.
 - b. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's Construction Schedule. Determine how construction behind schedule will be expedited, secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
 - c. Review present and future needs of each entity's present, including the following:
 - 1) Interface requirements.
 - 2) Dimensional and survey issues.
 - 3) Sequence of operations.
 - 4) Status of submittals & RFI's.
 - 5) Deliveries.
 - 6) Off-site fabrication.
 - 7) Access.
 - 8) Site utilization.
 - 9) Temporary facilities and controls.
 - 10) Work hours.
 - 11) Hazards and risks.
 - 12) Progress cleaning.
 - 13) Quality and work standards.
 - 14) Change Orders.
 - 15) Documentation of information for payment requests.
 3. Schedule Updating: Revise Contractor's Construction Schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.
- E. Special Topic and Coordination Meetings: Conduct special topic and coordination meetings when technical issues or immediate needs require them. Schedule time, place, and appropriate attendees with the COTR. Special topic and coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and pre-installation conferences. Provide minutes of meetings for distribution within 5 working days.
1. Fire Alarm Contractor shall walk the Project Site with the SI OSHM Fire Protection Engineer before proceeding with work to determine final mounting height and location for the exit signs.
 2. Animal care team meeting to review and select final locations of viewing ports in fence lines.
 3. Animal care team meeting to review and select final locations and arrangements of deadfall items.
- F. Monthly Executive Project Review Meetings: The COTR will conduct monthly executive meetings at the site established in the Preconstruction Conference for the purpose of briefing senior SI personnel on construction progress.
1. Attendees: In addition to representatives of the SI (as invited by the Contracting Officer and the COTR) and the Architect/Engineer, the Contractor's Project Manager, Superintendent, Quality Assurance Representative, Project Executive (as needed), other necessary

Contractor personnel, and major or otherwise critical subcontractor personnel, shall attend.

- a. Agenda: Review and correct or approve minutes of the previous meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
- b. Contractor's Construction Schedule: Review progress since the last coordination meeting. Determine whether each contract is on time, ahead of schedule, or behind schedule, in relation to Combined Contractor's Construction Schedule. Determine how construction behind schedule will be expedited; secure Commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
- c. Schedule Updating: Revise Combined Contractor's Construction Schedule after each coordination meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with report of each meeting.
- d. Review present and future needs of each contractor present, including the following:
 - 1) Interface requirements between SI activities and construction activities.
 - 2) Special events.
 - 3) Access.
 - 4) Site utilization and security.
 - 5) Hazards and risks.
 - 6) Progress cleaning.
 - 7) Quality and work standards.
 - 8) Change Orders.
 - 9) Other items significant to the participants' responsibilities.
- e. Site Tours: Meetings may conclude with a tour of the construction site. Provide an authorized Contractor's representative to lead tour and ensure safety of participants.

1.6 PRE-CONDITION SURVEY OF THE SITE

- A. After the Preconstruction Meeting and prior to start of the Work on site, inspect the project site (i.e., Building, its contents, grounds, and equipment) with major subcontractors, the COTR and other SI personnel as required for the purpose of verification of the existing conditions. Any damages or defective equipment will be noted at this time, and this survey will serve as the basis for the establishment of the pre-construction conditions. The Contractor and the Smithsonian Institution will jointly establish the identification of pre-construction conditions. Written and Photographic Documentation: Prepare a typewritten and photographic report to identify damages or defects of materials, equipment, and/or the site, in accordance with the requirements in Division 01 Section "Photographic Documentation". Retain one report and submit one report electronically to the Contracting Officer and the COTR.
- B. Video Documentation: Video the observations made during the survey of the existing conditions for the buildings, improvements, finishes, utilities, interior surfaces, construction, and other systems, components, or materials which might be affected by the Work, including sidewalks, streets, and adjacent facilities, in accordance with the requirements in Division 01 Section "Photographic Documentation." Submit documentation electronically to the COTR.

1.7 PAINT COORDINATION

- A. Coordinate marking and painting of mechanical and electrical items. The COTR will provide a paint matrix for reference and coordination between systems.

1.8 COORDINATION DRAWINGS

- A. Coordination Drawings, General: Drawings prepared by Contractor which superimpose Work of several trades, including but not limited to architectural, structural, mechanical, plumbing, fire protection, fire alarm, and electrical Work. Prepare coordination drawings according to requirements in individual Sections, and additionally where installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.

- 1. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:

- a. Use applicable Drawings as a basis for preparation of coordination drawings. Prepare sections, elevations, and details as needed to describe the relationship of various systems and components.
- b. Coordinate the addition of trade-specific information to the coordination drawings by multiple contractors in a sequence that best provides coordination of the information and resolution of conflicts between installed components before submitting for review.
- c. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
- d. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
- e. Show location and size of access doors required for access to concealed dampers, valves, and other controls.
- f. Indicate required installation sequences.
- g. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to the COTR indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract. Contractor shall utilize GIS / CAD to capture all utilities within project site and shall adhere to ASCE/CI 75-22

- E. Review: COTR will review coordination drawings to confirm that the Work is being coordinated, but not for the details of the coordination, which are Contractor's responsibility. If COTR determines that coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, the COTR will inform the Contractor, who shall make changes as directed and resubmit.

- 1. Coordination Drawing Prints: Prepare coordination drawing prints according to requirements in Section 013300 "Submittal Procedures."

- F. Special Design Considerations:

- 1. Locate any device requiring periodic maintenance or access in walls in non-public, non-animal areas or above accessible ceilings.

1.9 CONSTRUCTION LAYOUT

- A. Description of Work
 - 1. Furnish surveying and dimension control for Project.
 - 2. Locate per Civil Drawings. Maintain benchmarks throughout construction operations.
 - 3. Maintain central file of dimensional information that is updated weekly with information on actual field measurements.
 - 4. Lay out structural walls and major utilities.
- B. Contractor Responsibilities
 - 1. Contractor is responsible for properly laying out Work and for lines, measurements, and locations of Work.
 - 2. Contractor is responsible for coordinating actual field dimensions with subcontractors.
 - 3. Notify COTR of issues that arise related to actual dimensions of installed work and include proposed corrective measures.

1.10 REQUESTS FOR INFORMATION (RFIs)

- A. General: Immediately on discovery of the need for additional information or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified.
 - 1. COTR will return RFIs submitted to Architect by other entities controlled by Contractor with no response.
 - 2. Coordinate and submit RFIs in a prompt manner to avoid delays in Contractor's work or work of subcontractors.
- B. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:
 - 1. Project name.
 - 2. Project number.
 - 3. Date.
 - 4. Name of Contractor.
 - 5. RFI number, numbered sequentially.
 - 6. RFI subject.
 - 7. Specification Section number and title and related paragraphs, as appropriate.
 - 8. Drawing number and detail references, as appropriate.
 - 9. Field dimensions and conditions, as appropriate.
 - 10. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
 - 11. Contractor's signature.
 - 12. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.
 - a. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.
- C. COTR will review each RFI, determine action required, and respond. Allow ten working days response for each RFI.
 - 1. The following Contractor-generated RFIs will be returned without action:
 - a. Requests for approval of submittals.
 - b. Requests for approval of substitutions.
 - c. Requests for approval of Contractor's means and methods.

- d. Requests for coordination information already indicated in the Contract Documents.
 - e. Requests for adjustments in the Contract Time or the Contract Sum.
 - f. Requests for interpretation of The COTR's actions on submittals.
 - g. Incomplete RFIs or inaccurately prepared RFIs.
 - 2. COTR action on RFIs that may result in a change to the Contract Time, or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Section 012600 "Contract Modification Procedures."
 - a. If the RFI response warrants change in the Contract Time or the Contract Sum, notify COTR in writing within 2 days of receipt of the RFI response.
 - D. RFI Log: Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Submit log weekly. Use software log that is part of Project Web site. Include the following Software log with not less than the following:
 - 1. Project name.
 - 2. Name and address of Contractor.
 - 3. RFI number including RFIs that were returned without action or withdrawn.
 - 4. RFI description.
 - 5. Date the RFI was submitted.
 - 6. Date COTR response was received.
 - E. On receipt of COTR action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify COTR within 24 hours if Contractor disagrees with response.
 - 1. Identification of related Minor Change in the Work, Construction Change Directive, and Proposal Request, as appropriate.
 - 2. Identification of related Field Order, Work Change Directive, and Proposal Request, as appropriate.
- 1.11 PROJECT WEB SITE
- A. Contractor's Project Web site for purposes of hosting and managing project communication and documentation until Final Completion. Project Web site shall include the following functions:
 - 1. Project directory.
 - 2. Project correspondence.
 - 3. Meeting minutes.
 - 4. Contract modifications forms and logs.
 - 5. RFI forms and logs.
 - 6. Task and issue management.
 - 7. Photo documentation.
 - 8. Schedule and calendar management.
 - 9. Submittals forms and logs.
 - 10. Payment application forms.
 - 11. Drawing and specification document hosting, viewing, and updating.
 - 12. Online document collaboration.
 - 13. Reminder and tracking functions.
 - 14. Archiving functions.
 - 15. Procore or equal.
 - B. Provide up to 15 Project Web site user licenses for use of the Smithsonian Institution, The Smithsonian Institution's Commissioning Authority, Construction Manager, Architect, and Architect's consultants. Provide eight hours of software training on site office for Project Web site users.

- C. On completion of Project, provide **one** complete archive copy of all Project Web files in PDF and original document format.
1. Attendees: Authorized representatives of The Smithsonian Institution, The Smithsonian Institution's Commissioning Authority, Construction Manager, Architect, and their consultants; Contractor and its superintendent and LEED coordinator; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
 2. Closeout Conference: Contractor shall schedule and conduct a project closeout conference, at a time convenient to The Smithsonian Institution and Architect.
 3. Conduct the conference to review requirements and responsibilities related to Project closeout.
 4. Attendees: Authorized representatives of The Smithsonian Institution, The Smithsonian Institution's Commissioning Authority, Construction Manager, Architect, and their consultants; Contractor and its Superintendent; major subcontractors; suppliers; and other concerned parties shall attend the meeting. Participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
 5. Agenda: Discuss items of significance that could affect or delay Project closeout, including:
 - a. Preparation of record documents.
 - b. Procedures required prior to inspection for Substantial Completion and for final inspection for acceptance.
 - c. Submittal of written warranties.
 - e. Requirements for preparing operations and maintenance data.
 - f. Requirements for delivery of material samples, attic stock, and spare parts.
 - g. Requirements for demonstration and training.
 - h. Preparation of Contractor's punch list.
 - i. Procedures for processing Applications for Payment for final payment.
 - j. Submittal procedures.
 - k. Coordination of separate contracts.
 - l. The Smithsonian Institution's partial occupancy requirements.
 - m. Installation of The Smithsonian Institution's furniture, fixtures, and equipment.
 - n. Responsibility for removing temporary facilities and controls.
 6. Minutes: Entity conducting meeting will record and distribute meeting minutes. Revise "Progress Meetings" Paragraph below if Project requires holding progress meetings at different intervals. Insert special intervals such as "every third Tuesday" to suit special circumstances.
- F. Coordination Meetings: Conduct Project coordination meetings at required intervals. Project coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and pre-installation conferences.
1. Attendees: In addition to representatives of the COTR, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meetings shall be familiar with Project and authorized to conclude matters relating to the Work.
 2. Agenda: Review and correct or approve minutes of the previous coordination meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of project.
 - a. Combined Contractor's Construction Schedule: Review progress since the last coordination meeting. Determine whether each contract is on time, ahead of schedule, or behind schedule, in relation to combined Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure

commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.

3. Contractor's Monthly Presentation to The Smithsonian Institution's Senior Leadership:
 - a. Standing Meeting

Date - TBD

Location: NZP Visitor's Center Board Room

- b. Prepare and present a 10 - 15- minute PowerPoint presentation reviewing current progress of the project.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 013100

FOR REFERENCE ONLY

SECTION 01 3200 - CONSTRUCTION PROGRESS DOCUMENTATION**PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:
1. Startup construction schedule.
 2. Contractor's construction schedule.
 3. Construction schedule updating reports.
 4. Daily construction reports.
 5. Material location reports.
 6. Site condition reports.
 7. Special reports.
- B. Related Requirements:
1. Section 013300 "Submittal Procedures" for submitting schedules and reports.
 2. Section 014000 "Quality Requirements" for submitting a schedule of tests and inspections.

1.3 DEFINITIONS

- A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction project. Activities included in a construction schedule consume time and resources.
1. Critical Activity: An activity on the critical path that must start and finish on the planned early start and finish times.
 2. Predecessor Activity: An activity that precedes another activity in the network.
 3. Successor Activity: An activity that follows another activity in the network.
- B. Cost Loading: The allocation of the schedule of values for the completion of an activity as scheduled. The sum of costs for all activities must equal the total Contract Sum unless otherwise approved by Architect.
- C. CPM: Critical path method, which is a method of planning and scheduling a construction project where activities are arranged based on activity relationships. Network calculations determine when activities can be performed and the critical path of Project.
- D. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.
- E. Event: The starting or ending point of an activity.
- F. Float: The measure of leeway in starting and completing an activity.

1. Float time is not for the exclusive use or benefit of either Owner or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.
 2. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
 3. Total float is the measure of leeway in starting or completing an activity without adversely Affecting the planned Project completion date.
- G. Resource Loading: The allocation of manpower and equipment necessary for the completion of an activity as scheduled.
- 1.4 INFORMATIONAL SUBMITTALS
- A. Format for Submittals: Submit required submittals in the following format:
1. Working electronic copy of schedule file, where indicated.
 2. PDF electronic file.
- B. Startup construction schedule.
1. Approval of cost-loaded, startup construction schedule will not constitute approval of schedule of values for cost-loaded activities.
- C. Startup Network Diagram: Of size required to display entire network for entire construction period. Show logic ties for activities.
- D. Contractor's Construction Schedule: Initial schedule, of size required to display entire schedule for entire construction period.
1. Submit a working electronic copy of schedule, using software indicated, and labeled to comply with requirements for submittals. Include type of schedule (initial or updated) and date on label.
- E. CPM Reports: Concurrent with CPM schedule, submit each of the following reports. Format for each activity in reports shall contain activity number, activity description, cost and resource loading, original duration, remaining duration, early start date, early finish date, late start date, late finish date, and total float in calendar days.
1. Activity Report: List of all activities sorted by activity number and then early start date, or actual start date if known.
 2. Logic Report: List of preceding and succeeding activities for all activities, sorted in ascending order by activity number and then early start date, or actual start date if known.
 3. Total Float Report: List of all activities sorted in ascending order of total float.
- F. Construction Schedule Updating Reports: Submit with Applications for
- Payment. G. Daily Construction Reports: Submit at weekly intervals.
- H. Material Location Reports: Submit at monthly intervals.
- I. Site Condition Reports: Submit at time of discovery of differing conditions.

- J. Special Reports: Submit at time of unusual event.
- K. Qualification Data: For scheduling consultant.

1.5 QUALITY ASSURANCE

- A. Scheduling Consultant Qualifications: An experienced specialist in CPM scheduling and reporting, with capability of producing CPM reports and diagrams within 24 hours of COTR's request.
- A. Prescheduling Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to the preliminary construction schedule and Contractor's construction schedule, including, but not limited to, the following:
 1. Review software limitations and content and format for reports.
 2. Verify availability of qualified personnel needed to develop and update schedule.
 3. Discuss constraints, including phasing, work stages, area separations, interim milestones and partial Owner occupancy and site use.
 4. Review submittal requirements and procedures.
 5. Review time required for review of submittals and resubmittals.
 6. Review requirements for tests and inspections by independent testing and inspecting agencies.
 7. Review time required for Project closeout and Owner startup procedures, including commissioning activities.
 8. Review and finalize list of construction activities to be included in schedule.
 9. Review procedures for updating schedule.

1.6 COORDINATION

- A. Coordinate Contractor's construction schedule with the schedule of values submittal schedule, progress reports, payment requests, and other required schedules and reports.
 1. Secure time commitments for performing critical elements of the Work from entities involved.
 2. Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

PART 2 - PRODUCTS

2.1 CONTRACTOR'S CONSTRUCTION SCHEDULE, GENERAL

- A. Time Frame: Extend schedule from date established for commencement of the Work and/or the Notice to Proceed (indicate both if different), to date of final completion.
 1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.
- B. Activities: Treat each story or separate area as a separate numbered activity for each main element of the Work. Comply with the following:
 1. Activity Duration: Define activities so no activity is longer than 20 days, unless specifically allowed by the COTR.
 2. Procurement Activities: Include procurement process activities for the following long lead items and major items, requiring a cycle of more than 60 days, as separate activities in Schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.

3. Submittal Review Time: Include review and resubmittal times indicated in Section 013300 "Submittal Procedures" in schedule. Coordinate submittal review times in Contractor's construction schedule with submittal schedule.
 4. Startup and Testing Time: Include no fewer than 14 days for startup and testing.
 5. Punch List and Final Completion: Include not more than **30** days for completion of punch list items and final completion.
- C. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule and show how the sequence of the Work is affected.
1. Phasing: Arrange list of activities on schedule by phase.
 2. Work under More Than One Contract: Include a separate activity for each contract.
 3. Work by Owner: Include a separate activity for each portion of the Work performed by Owner.
 4. Products Ordered in Advance: Include a separate activity for each product. Include delivery date indicated in Section 011000 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
 5. Owner-Furnished Products: Include a separate activity for each product. Include delivery date indicated in Section 011000 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
 6. Work Restrictions: Show the effect of the following items on the schedule:
 - a. Coordination with existing construction.
 - b. Limitations of continued occupancies.
 - c. Uninterruptible services.
 - d. Partial occupancy before Substantial Completion.
 - e. Use of premises restrictions.
 - f. Provisions for future construction.
 - g. Seasonal variations.
 - h. Environmental control.
 - i. NZP Special Events Impacting Site Access
 - j. Government Holidays
 7. Work Stages: Indicate important stages of construction for each major portion of the Work, including but not limited to, the following:
 - a. Subcontract awards.
 - b. Submittals.
 - c. Purchases.
 - d. Mockups.
 - e. Fabrication.
 - f. Sample testing.
 - g. Deliveries.
 - h. Installation.
 - i. Tests and inspections.
 - j. Adjusting.
 - k. Curing.
 - l. Building flush-out.
 - m. Startup and placement into final use and operation.
 - n. establishment of planting
 8. Construction Areas: Identify each major area of construction for each major portion of the Work. Indicate where each construction activity within a major area must be sequenced or integrated with other construction activities to provide for the following:
 - a. Structural completion.
 - b. Temporary enclosure and space conditioning.
 - c. Permanent space enclosure.
 - d. Completion of mechanical installation.

- e. Completion of electrical installation.
 - f. Substantial Completion.
- D. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, Substantial Completion, and final completion.
- E. Upcoming Work Summary: Prepare summary report indicating activities scheduled to occur or commence prior to submittal of next schedule update. Summarize the following issues:
- 1. Unresolved issues.
 - 2. Unanswered Requests for Information.
 - 3. Rejected or unreturned submittals.
 - 4. Notations on returned submittals.
 - 5. Pending modifications affecting the Work and Contract Time.
- F. Recovery Schedule: When periodic update indicates the Work is 7 or more calendar days behind the current approved schedule, submit a separate recovery schedule indicating means by which Contractor intends to regain compliance with the schedule. Indicate changes to working hours, working days, crew sizes, and equipment required to achieve compliance, and date by which recovery will be accomplished.
- H Computer Scheduling Software: Prepare schedules using current version of a program that has been developed specifically to manage construction schedules.

2.2 CONTRACTOR'S CONSTRUCTION SCHEDULE (CPM SCHEDULE)

- A. General: Prepare network diagrams using AON (activity-on-node) format.
- B. Startup Network Diagram: Submit diagram within 14 days of date established for the Notice to Proceed. Outline significant construction activities for the first 90 days of construction.
- C. CPM Schedule: Prepare Contractor's construction schedule using a cost- and resource-loaded, time-scaled CPM network analysis diagram for the Work.
- 1. Develop network diagram in sufficient time to submit CPM schedule so it can be accepted for use no later than 60 days after date established for the Notice to Proceed.
 - a. Failure to include any work item required for performance of this Contract shall not excuse Contractor from completing all work within applicable completion dates, regardless of Architect's approval of the schedule.
 - 2. Conduct educational workshops to train and inform key Project personnel, including subcontractors' personnel, in proper methods of providing data and using CPM schedule information.
 - 3. Establish procedures for monitoring and updating CPM schedule and for reporting progress. Coordinate procedures with progress meeting and payment request dates.
 - 4. Use "one workday" as the unit of time for individual activities. Indicate nonworking days and holidays incorporated into the schedule to coordinate with the Contract Time.
- D. CPM Schedule Preparation: Prepare a list of all activities required to complete the Work. Using the startup network diagram, prepare a skeleton network to identify probable critical paths.
- 1. Activities: Indicate the estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Include estimated time frames for the

following activities:

- a. Preparation and processing of submittals.
 - b. Mobilization and demobilization.
 - c. Purchase of materials.
 - d. Delivery.
 - e. Fabrication.
 - f. Utility interruptions.
 - g. Installation.
 - h. Work by Owner that may affect or be affected by Contractor's activities.
 - i. Testing and commissioning.
 - j. Punch list and final completion.
 - k. Activities occurring following final completion.
2. Critical Path Activities: Identify critical path activities, including those for interim completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
 3. Processing: Process data to produce output data on a computer-drawn, time-scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.
 4. Format: Mark the critical path. Locate the critical path near center of network; locate paths with most float near the edges.
 - a. Sub networks on separate sheets are permissible for activities clearly off the critical path.
 5. Cost- and Resource-Loading of CPM Schedule: Assign cost to construction activities on the CPM schedule. Do not assign costs to submittal activities. Obtain Architect's approval prior to assigning costs to fabrication and delivery activities. Assign costs under main subcontracts for testing and commissioning activities, operation and maintenance manuals, punch list activities, Project record documents.
- E. Contract Modifications: For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using a network fragment to demonstrate the effect of the proposed change on the overall project schedule.
- F. Initial Issue of Schedule: Prepare initial network diagram from a sorted activity list indicating straight "early start-total float." Identify critical activities. Prepare tabulated reports showing the following:
1. Contractor or subcontractor and the Work or activity.
 2. Description of activity.
 3. Main events of activity.
 4. Immediate preceding and succeeding activities.
 5. Early and late start dates.
 6. Early and late finish dates.
 7. Activity duration in workdays.
 8. Total float or slack time.
 9. Average size of workforce.
 10. Dollar value of activity (coordinated with the schedule of values).
- G. Schedule Updating: Concurrent with making revisions to schedule, prepare tabulated reports showing the following:
1. Identification of activities that have changed.
 2. Changes in early and late start dates.
 3. Changes in early and late finish dates.
 4. Changes in activity durations in workdays.
 5. Changes in the critical path.

6. Changes in total float or slack time.
 7. Changes in the Contract Time.
- H. Value Summaries: Prepare two cumulative value lists, sorted by finish dates.
1. In first list, tabulate activity number, early finish date, dollar value, and cumulative dollar value.
 2. In second list, tabulate activity number, late finish date, dollar value, and cumulative dollar value.
 3. In subsequent issues of both lists, substitute actual finish dates for activities completed as of list date.
 4. Prepare list for ease of comparison with payment requests, coordinate timing with progress meetings.
 - a. In both value summary lists, tabulate "actual percent complete" and "cumulative value completed" with total at bottom.
 - b. Submit value summary printouts before each regular scheduled progress meeting.

2.3 REPORTS

- A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site:
1. List of subcontractors at Project site.
 2. List of separate contractors at Project site.
 3. Approximate count of personnel at Project site.
 4. Equipment at Project site.
 5. Material deliveries.
 6. High and low temperatures and general weather conditions, including presence of rain or snow.
 7. Accidents.
 8. Meetings and significant decisions.
 9. Unusual events (see special reports).
 10. Stoppages, delays, shortages, and losses.
 11. Meter readings and similar recordings.
 12. Emergency procedures.
 13. Orders and requests of authorities having jurisdiction.
 14. Change Orders received and implemented.
 15. Change Directives received and implemented.
 16. Services connected and disconnected.
 17. Equipment or system tests and startups.
 18. Partial completions and occupancies.
 19. Substantial Completions authorized.
- B. Material Location Reports: At monthly intervals, prepare and submit a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site. Indicate the following categories for stored materials:
1. Material stored prior to previous report and remaining in storage.
 2. Material stored prior to previous report and since removed from storage and installed.
 3. Material stored following previous report and remaining in storage.
- C. Site Condition Reports: Immediately on discovery of a difference between site conditions and the Contract Documents, prepare and submit a detailed report. Submit with a Request for Information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

2.4 SPECIAL REPORTS

- A. General: Submit special reports directly to Owner within **one** day of an occurrence. Distribute copies of report to parties affected by the occurrence.
- B. Reporting Unusual Events: When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the work, prepare and submit a special report. List chain of events, persons participating, and response by Contractor's personnel, evaluation of results or effects, and similar pertinent information. Advise Owner in advance when these events are known or predictable.

PART 3 - EXECUTION

3.1 CONTRACTOR'S CONSTRUCTION SCHEDULE

- A. Scheduling Consultant: Engage a consultant to provide planning, evaluation, and reporting using CPM scheduling.
 - 1. In-House Option: Owner may waive the requirement to retain a consultant if Contractor employs skilled personnel with experience in CPM scheduling and reporting techniques. Submit qualifications.
 - 2. Meetings: Scheduling consultant shall attend all meetings related to Project progress, alleged delays, and time impact.
- B. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue before each regularly scheduled progress meeting.
 - 1. Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
 - 2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
 - 3. As the Work progresses, indicate final completion percentage for each activity.
- C. Distribution: Distribute copies of approved schedule to COTR, separate contractors, testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.
 - 1. Post copies in Project meeting rooms and temporary field offices.
 - 2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction Activities.

END OF SECTION 013200

SECTION 01 3233 - PHOTOGRAPHIC DOCUMENTATION**PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The Contract Documents in their entirety, including the Drawings, Specifications, Construction Contract Clauses, and any other documents issued as part of the Contract, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for the following:
1. Preconstruction photographs.
 2. Periodic construction photographs.
 3. Final completion construction photographs.
 4. Preconstruction video recordings.
 5. Periodic construction video recordings.
 6. Web-based construction photographic documentation.
- B. Related Requirements:
1. Section 013300 "Submittal Procedures" for submitting photographic documentation.
 2. Section 017700 "Closeout Procedures" for submitting photographic documentation as project record documents at Project closeout.
 3. Section 017900 "Demonstration and Training" for submitting video recordings of demonstration of equipment and training of Owner's personnel.
 4. Section 024119 "Selective Structure Demolition" for photographic documentation before selective demolition operations commence.
 5. Section 311000 "Site Clearing" for photographic documentation before site clearing Operations commence.

1.3 SUBMITTALS

- A. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names, and addresses of architects and owners, and other specified information.
- B. Key Plan: Submit key plan of Project site and building with notation of vantage points marked for location and direction of each **photograph**. Indicate elevation or story of construction. Include same information as corresponding photographic documentation.
- C. Construction Photographs: Submit one digital file of each photographic view within ten working days of taking photographs.
1. All images, digital media, contact sheets, photographs, and negatives, including the copyright thereto, are the sole property of the Smithsonian Institution and shall be submitted to the COTR before Final Payment processing. The Contractor shall not use Smithsonian Institution property except as authorized in writing by the Contracting Officer.
 2. Digital Images: Submit a complete set of digital image electronic files. Identify electronic media with date photographs were taken. Submit images that have the same aspect ratio as the sensor, un-cropped.
 3. Submit a minimum of 10 digital photo files per week.

1.4. QUALITY ASSURANCE

- A. Photographer Qualifications: An individual with advanced camera skills and professional quality equipment.

1.5. COORDINATION

- A. Auxiliary Services: Cooperate with the photographer and provide auxiliary services requested, including access to Project site and use of temporary facilities including temporary lighting.

PART 2 - PRODUCTS

2.1 PHOTOGRAPHIC MEDIA

- A. Digital Images: Provide images in JPEG format, with minimum sensor size of 8 megapixels format transmitted electronically to the COTR.

PART 3 - EXECUTION

3.1 CONSTRUCTION PHOTOGRAPHS

- A. Pre-construction Photographs: Before starting construction, take color photographs of project site and surrounding areas from different vantage points, as directed by the COTR. This will serve as the basis for the establishment of pre-construction conditions. See also Division 01 Section "Project Management and Coordination", Article 1.6.
 - 1. Take photographs to show existing conditions adjacent to the property before starting the Work.
 - 2. Identify damages or defects of materials, equipment, and the site. Retain one copy and submit one copy to the COTR electronically.
- B. Periodic Construction Photographs: Take a minimum of 10 color photographs per week, with timing each month adjusted to coincide with the cutoff date associated with each Application for Payment. The actual number and location of views shall be directed by the COTR. Take photographs at the start and finish of various construction activities as directed by the COTR. Select vantage points to best show status of construction and progress since the last photographs were taken.
- C. Final Completion Construction Photographs: The COTR will discuss with the photographer for desired vantage points.
 - 1. Upon completion of the project, provide pictures of the entire project documenting all of the project's highlights and features.
- D. All references to photo documentation is for electronic format submissions. All documentation submitted will become the property of SI for SI's duplication and distribution.

END OF SECTION 013233

SECTION 01 3250 - BUILDING INFORMATION MODELING (BIM) REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes requirements for Building Information Modeling including, but not limited to, the following:
 - 1. Development of BIM Execution Plan.
 - 2. Development of Construction Model(s).
 - 3. Development of Fabrication/Shop Drawings at Contractor's option.
 - 4. Development of Coordination Model(s).
 - 5. Development of Coordination Report.
 - 6. As-Built Model(s) and Drawings.
- B. Related Requirements:
 - 1. Division 01 section Operation and Maintenance Data for Facility Asset Data Requirements.
- C. Contractor's Responsibility:
 - 1. Develop deliverables required in this Section.
 - 2. Contractor is solely responsible for the quality and accuracy of all documentation and submittals of this Section.
 - 3. The intent of BIM deliverables is to avoid interference and conflicts, optimize construction sequencing, achieve greater efficiencies in cost estimating and project coordination, and ensure access for maintenance, replacement, or repairs.
 - a. Coordination: Contractor is solely responsible for the coordination of facility systems and equipment.
 - b. Construction sequencing: Contractor is solely responsible to sequence construction activities to facilitate the fabrication and installation of systems and equipment without interference, conflicts, or delays in construction, and providing adequate access to effectively maintain and replace systems and equipment.
- D. Existing Documents: The following building information, obtained and developed by the Architect and/or Engineer during the design phase, may be available to the Contractor:
 - 1. Design Intent Model(s) (.rvt, .ifc, & .nws / .nwd)
 - 2. Contract Documents (.pdf)
 - 3. CAD Files (.dwg)
 - 4. Point Clouds (.rcs)
 - 5. Scans of the original building design drawings (.pdf)
 - 6. BIM PxP (.docx, .pdf)
 - 7. LOD Matrix(.xlsx, .pdf)
- E. SI BIM Practice Requirements:
 - 1. The following documents related to are available on the Smithsonian A/E Information Center website, under the SI Design Standards (SDS) section and are applicable to BIM requirements:
 - a. Smithsonian OPDC BIM Guidelines: Describes information, procedures, and responsibilities relevant to BIM work completed by architecture, engineering, and construction (AEC) consultants in order to assure accurate and consistent deliverables.

- b. OPDC Revit Templates: BIM templates developed by Smithsonian OPDC are available for the Contractor to use when utilizing Autodesk Revit as the model authoring software to populate with accurate project-specific facility asset data.
 - 1) Scope of required facility data is described in the template and should be modified to reflect actual Project requirements.
- c. OPDC Revit Template Users Guide: This document, prepared by Smithsonian OPDC, describes how to incorporate and “OPDC Revit Templates” and develop the project BIM.
- d. OPDC BIM Project Execution Plan (PxP): Template document that defines the expected BIM deliverables and guides the coordination of the project team, throughout the project lifecycle.

1.2 DEFINITIONS

- A. As-Built Model: Building Information Model(s) developed by the Contractor that represents the installed condition of facility elements.
- B. Building Information Model (BIM): A digital representation of physical and functional characteristics of a facility.
- C. BIM Project Execution Plan (PxP): A document prepared by the contractor, utilizing a standard OPDC PxP template that defines the expected BIM deliverables and guides the coordination of the project team, throughout the project lifecycle.
- D. Construction Model: Building Information Model(s) that demonstrates and communicates the facility data necessary to procure, fabricate, schedule or construct the Project.
- E. Coordination: A process implemented to ensure the efficiency and harmony of the relationship of facility elements. Typically performed in a BIM environment by evaluating interferences, also called “clash detection”.
- F. Coordination Model: Building Information Model(s) that demonstrates and communicates the spatial relationship of facility elements.
- G. Coordination Report: A report developed to communicate and demonstrate that the facility elements have been properly coordinated and identify areas where issues may still exist.
- H. Design Intent Model: Building Information Model(s) that demonstrates and communicates the creative objectives of the designer.
- I. Fabrication/Shop Drawing: Drawing generated by the contractor from a Construction Model based on the contract documents that communicates the information necessary to fabricate facility elements. Fabrication/Shop Drawings typically contain one system and are intended for use of trade personnel to fabricate, assemble, and install facility elements.
- J. Facility Breakdown Structure: a system-oriented hierarchical decomposition of a facility into smaller components. Typically, the facility breakdown structure is based on disciplines, trades, described by Master Format.
- K. Facility Asset Data: Non-graphical information attached to an object in a Building Information Model that defines various characteristics of an object.

- L. Furnishings: Built-in or movable cabinets, casework, seating, or other appurtenances provided by the Contractor.
- M. Interference: Spatial conflict between facility elements.
- N. Level of Development: Describes the minimum dimensional, spatial, quantitative, qualitative, and other data includes in a model element as defined in the OPDC BIM Guidelines.
- O. Level of Accuracy: Describes the minimum dimensional accuracy of element(s) as defined in the OPDC BIM Guidelines.
- P. Conformed Model – Updates the Design Intent Model for those aspects maintained by the designer to record authorized design changes during construction.

1.3 SUBMITTALS

- A. BIM Project Execution Plan (PxP): Prepare and submit a plan utilizing the “OPDC BIM Execution Plan” framework document available on the Smithsonian Architectural-Engineer Information Center website. Submit the PxP in Portable Document Format (PDF) within 60 days after contract award. BIM Project Execution Plan (PxP) shall be updated as required and submitted with Final As-Built Model(s).
- B. Submit plans, sections, and other review documents monthly, in .pdf format. To include field changes that affect the accuracy of the Construction and As-Built Models.
- C. Construction Model(s): Prepare and submit, on a quarterly basis, Construction Model(s) that contain spaces, objects and data required to purchase, fabricate, and install project elements. Graphically indicate construction progress in Construction Model(s). Construction Model(s) are to be submitted with all Coordination Model(s) link into one central model using Autodesk Navisworks with all disciplines.
- D. Coordination Model(s): Prepare and submit Coordination Model(s) on a monthly basis. Coordination Model(s) are to be based on the facility breakdown structure of the Design Intent Model. Contractors are to perform all work utilizing 3D modeling software in order to facilitate seamless coordination with BIM workflows and file integration. All design elements should be produced three-dimensionally in programs that can output file formats supported by Autodesk Navisworks. Coordination Model(s) are to be submitted using Autodesk Navisworks with all disciplines.
 - 1. Coordination Model(s) are to be submitted prior to fabrication, and installation of any element within the area represented within the Coordination Model(s).
 - 2. Fabrication/Shop Drawings and Construction Model(s) are to be integrated into the Coordination Model(s) or otherwise referenced in the Coordination Model(s).
- E. CAD Drawings. Export CAD documents from the BIM authoring application in a format conforming to SI requirements. Reference the “OPDC Revit Template Users Guide” and “OPDC CAD Guidelines”.
- F. Coordination Report: Prepare and submit a written Coordination Report generated from the Coordination Model(s) prior to fabrication, and installation of any facility element within the area represented within the Coordination Model(s).
 - 1. Coordination Report is to be submitted in Portable Document Format (PDF).

- G. Final As-Built Model(s): After installation of all Facility Elements, update and submit As-Built Model(s) to document the condition of the facility upon completion of construction. As-Built Models are to be submitted with all Model(s) and link into one central model using Autodesk Navisworks with all disciplines.
- H. As-Built Fabrication/Shop Drawings: After installation of all Facility Elements, update and submit Fabrication/Shop Drawings to document the condition of the facility upon completion of construction.
- I. By submitting the As-Built Model(s) and Coordination Report(s), the Contractor confirms that the following have been accomplished:
1. Existing and As-Built conditions have been adequately identified, documented, and field verified.
 2. Facility elements are properly represented within the Model(s) to align with field verified conditions.
 3. Access to maintain, repair, or replace facility elements has been identified and validated.
 4. Clearances, such as those required by code and equipment specifications, have been identified and validated.
 5. Interferences have been identified and resolved.
- J. Data Capture (Laser Scan): Survey, prepare and submit Point Cloud files at key stages during the construction process including but not limited to: post-demo, open trenches, rough-in / close-in, project completion, etc. as directed by COTR. This survey to be utilized to ensure all As-Built conditions for the project are documented properly. This will include establishing the necessary Survey Control Network throughout the site and scanning as many points as may be required to create a reliable point cloud of all interior and exterior surfaces of the building. The required object surface density of scanning shall be a minimum of 6 mm (1/4"). RGB color shall be mapped to both the exterior and interior scans. Point Cloud data should be broken into separate data sets as directed by COTR and be registered in the same coordinate frame (origin point) as the As-Built Model(s). Point cloud data to be submitted using Autodesk Recap.

PART 2 - EXECUTION

2.1 CONTRACT DOCUMENTS AND DESIGN INTENT MODEL(S)

- A. The Contract Documents and Design Intent Model(s) will be provided to the Contractor for reference in the development of the Construction and Coordination Model(s) and Fabrication/Shop drawings. The Contract Documents and Design Intent Model(s) communicate creative objectives of the Architect and/or Engineer and are not intended to be used for fabrication and construction of the facility in that the size, arrangement, and level of development of facility elements may not have the necessary tolerances to allow for fabrication.
- B. The Contract Documents are the binding document(s) of record, the Design Intent Model(s) are provided for reference only.

2.2 DEVELOPMENT OF BUILDING INFORMATION MODELING PLAN (BIM PxP)

- A. The BIM PxP shall be approved by SI prior to development of Construction / Coordination Model(s), and development of Facility Asset Data. Information contained in the BIM PxP shall conform to the "OPDC BIM Guidelines".

2.3 INSPECTION OF EXISTING CONDITIONS

- A. Prior to the development of the Construction / Coordination Model(s), inspect and verify accuracy of information communicated in the Contract Documents and Design Intent Model with respect to the existing conditions. Notify COTR if any conflicts among Contract Documents, the Design Intent Model, and existing conditions are discovered. Do not proceed with development of Construction / Coordination Model(s) until conflicts are resolved to the satisfaction of SI.

2.4 FACILITY ASSET DATA

- A. See spec 01 section OPERATION AND MAINTENANCE DATA for asset data requirements
- B. The Contractor is responsible for incorporating Design Intent Model and Facility Asset Data Spreadsheet revisions into the Construction and As-Built Model(s) in order to maintain an up-to-date basis for Building Information Modeling throughout construction.
- C. Contractor is responsible for incorporating the following Asset Data from SI Facility Asset Data Spreadsheet into the Construction and As-Built Model(s):
 - 1. Asset ID# (SI will provide)
 - 2. Asset Name (SI will provide)
 - 3. SpecID (CSI Master Format 2016)
 - 4. Manufacturer
 - 5. Description

2.5 DEVELOPMENT OF CONSTRUCTION MODEL(S)

- A. The intent of the Construction Model(s) is to communicate the necessary information to construct the facility including size, location, and arrangement of both existing to remain and new elements and to incorporate the as-built conditions.
- B. Develop Construction Model(s) based upon Contract Documents, Design Intent Model(s), and verified existing conditions.
- C. Construction Model(s) shall accurately reflect the geometry and details of existing and new elements within the facility.
 - 1. Use manufacturer or custom model elements to accurately reflect the components detailed in documents submitted for approval.
 - 2. Update the model elements to accurately reflect any revisions to geometry or details arising from the submittal review process.
- D. Construction Model(s) are to have a consistent origin that can be referenced to a real world datum or benchmark, located as required in the "OPDC Revit Template Users' Guide".
- E. Quality Control. The Construction Model(s) will undergo automated model checks utilizing rulesets, as described in the "OPDC BIM Guidelines" document and visual review by SI.
- F. The Construction Model(s) are to reflect all necessary access and clearances.
- G. The Construction Model(s) will include, but not be limited to, the following elements with all necessary intelligence included to produce plans, sections, elevations, riser diagrams, and schedules as applicable:

1. Substructure: All foundations, subgrade enclosures, slabs-on-grade, and water and gas utility connections. Substructure elements shall be depicted with all necessary recesses, curbs, pads, slopes, closure pours, expansion/construction joints, and major penetrations depict-ed.
2. Shell: All superstructure, exterior vertical enclosures, and exterior horizontal enclosures, including a depiction of expansion/construction joints.
 - a. Superstructure: All columns, primary and secondary framing members, and bracing for the roof and floor systems (including decks).
 - b. Exterior Vertical Enclosures: Exterior vertical enclosures shall be depicted to the exact height, length, width, and ratings (thermal, acoustic, fire) to properly reflect element types. Exterior windows, doors and grilles including hardware sets, louvers and vents, and wall appurtenances shall be depicted to represent their actual size, type and location.
3. Interiors: All interior partitions, windows, doors and grilles, louvers, and vents, raised floors, and ceilings, depicted to represent their exact location, height, length, width, and ratings (thermal, acoustic, fire) to properly reflect element types.
4. Services: All elevators, escalators, plumbing, HVAC, fire protection, electrical, communications, electronic safety and security, and integrated automation elements, including all major openings and penetrations, cable trays, cable bundles and pipe grouping. All clearances and insulation shall be accounted for in the model for use in interference management and maintenance access requirements. Nonpermanent items are not required to be modeled or contain facility data.
 - a. Plumbing: All plumbing elements including plumbing piping and fixture layouts, floor and area drains, and related equipment.
 - b. Heating, Ventilation, And Air Conditioning (HVAC): All heating, ventilation, and air conditioning (HVAC) elements including piping, valves, ductwork fixture lay-outs and related equipment.
 - c. Fire Protection: All fire protection elements including piping, valves, and related equipment.
 - d. Electrical: All electrical elements including conduit, fixture layouts and related equipment (including power for systems furniture).
 - e. Communications: All communications and low voltage systems elements including conduit and related equipment.
 - f. Security: All Electronic Safety and Security elements including conduit and related equipment.
 - g. Integrated Automation: All integrated automation elements including conduit and related equipment.
 - h. Model all elements larger than 38mm (1-1/2 inch) in diameter for any trade. When equal or smaller element are grouped or run in a uniform path. That group of elements shall be modeled when larger than 152mm (6 inches).
5. Equipment and Furnishings: All fixed equipment and furnishings, depicted to represent their exact location, height, length, width, configuration, materials, finishes, and mechanical and electrical requirements.
6. Special Construction and Demolition: All special construction and demolition including special construction, facility remediation and demolition
7. Sitework: All sitework elements, including site improvements, liquid and gas utilities, electrical site improvements, and site communications.

- H. Construction Model(s) must be revised and certified by the Contractor prior to installation of facility elements contained within the models.

2.6 DEVELOPMENT OF COORDINATION MODEL(S)

- A. Develop Coordination Model(s) that combine facility elements contained within the Construction Models with other facility elements depicted in the Design Intent Model to review the efficiency and harmony of the relationship of the facility elements.
- B. Verify that all facility elements are properly represented within the Construction and Coordination Model(s) prior to coordination.
- C. Conduct the following interferences checks to ensure that there are no conflicts in the installation of facility elements.
 - 1. Substructure/Shell vs Interiors
 - 2. Substructure/Shell vs Equipment and Furnishings provided by Contractor
 - 3. Interiors vs Equipment and Furnishings provided by Contractor.
 - 4. Substructure vs. Shell
 - 5. Services vs other components:
 - a. Services vs Substructure/Shell
 - b. Services vs Interiors
 - c. Services vs Equipment and Furnishing
 - d. Services vs Site work
 - 6. Services
 - a. Plumbing vs HVAC
 - b. Plumbing vs Fire Protection
 - c. Plumbing vs Electrical
 - d. Plumbing vs Communications
 - e. Plumbing vs Electronic Safety and Security
 - f. HVAC vs Fire Protection
 - g. HVAC vs Electrical
 - h. HVAC vs Communications
 - i. HVAC vs Electronic Safety and Security
 - j. Fire Protection vs Electrical
 - k. Fire Protection vs Communications
 - l. Fire Protection vs Electronic Safety and Security
 - m. Electrical vs Communications
 - n. Electrical vs Electronic Safety and Security
 - o. Communications vs Electronic Safety and Security
 - 7. ADA Accessibility
- D. Coordination Model(s) shall be free of interferences prior to installation of any associated facility element.
- E. Update the Coordination Model(s) to reflect changes throughout construction prior to installation of any associated facility element.

2.7 COORDINATION REPORT(S)

- A. Develop Coordination Reports identifying outstanding issues after the development of the Coordination Model(s), including but not limited to:
 - 1. Clashes:
 - a. Itemize number of clashes.
 - b. Clash Category
 - c. Describe clashes.

- d. Describe the resolution of clashes and other conflicts.
2. Design changes.
3. Differing site conditions.
4. Hazardous or safety related issues.
5. Assets installed and assets pending installation.

- B. The report shall be organized by CSI Master Format 2016 specification section or by trade
- C. The issues identified within the Coordination Report are to be addressed by the **Contractor** in consultation with the SI and the Architect / Engineer prior to installation of facility elements.
- D. The Contractor is solely responsible for the cost of remedying any clashes that could have been discovered during the clash detection process.

2.8 INSTALLATION

- A. Install facility elements in accordance with approved Construction Model(s), Fabrication/Shop Drawings, Coordination Model(s), and Coordination Reports. Any variance from these documents shall require approval by the SI C O T R prior to the installation of the associated facility elements.
- B. Adjust Coordination Model(s) throughout construction to reflect all changes made to the approved Contract Drawings and Specs, Design Intent Model, and Fabrication/Shop Drawings.
- C. Maintain an up-to-date Fabrication/Shop Drawing set and Coordination Model(s) for all parties to access.

2.9 AS-BUILT MODEL AND DRAWINGS

- A. Upon completion of the installation of facility elements, update and deliver As-Built Model(s) and Fabrication/Shop Drawings to document the condition of the facility upon completion of construction.
 1. The updated Construction and Coordination Model(s) are considered the As-Built Model for this facility. These models shall clearly indicate portions of the facility that are constructed and portions where construction is pending.
 2. As-Built Model(s) shall be field verified for accuracy and updated as required. The Level of Development (LOD) shall be LOD 500
 3. The Level of Accuracy (LOA) of the model(s) shall be minimal 12mm (1/2") for existing and align with construction tolerances for all new construction (minimal 24mm (1")).
 4. Model(s), CAD and SI-GIS exports are to be delivered in native file formats as well as file formats and naming conventions consistent with SI standards. Reference the "OPDC Revit Templates Users Guide" and "Smithsonian OPDC BIM Guidelines" guidance documents.
 5. All models shall be linked and submitted using Autodesk Navisworks.

END OF SECTION 01 3250

SECTION 01 3300 - SUBMITTAL PROCEDURES**PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The Contract Documents in their entirety, including the Drawings, Specifications, Construction Contract Clauses, and any other documents issued as part of the Contract, apply to this Section. All submittal documentation shall be submitted in a PDF format plus program file and hard copies as requested.

1.2 SUMMARY

- A. Section includes requirements for the submittal schedule and administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals.
- B. Related Requirements:
 - 1. Division 01 Section 012500 "Substitution Procedures" and "Product Requirements" for substitutions.
 - 2. Division 01 Section 012900 "Payment Procedures" for submitting Applications for Payment.
 - 3. Division 01 Section 013100 "Project Management and Coordination" for submitting reports and coordination drawings.
 - 4. Division 01 Section 013200 "Construction Progress Documentation" for submitting schedules and reports, including Contractor's Construction Schedule Submittals Schedule.
 - 5. Division 01 Section 013233 "Photographic Documentation" for submitting construction photographs.
 - 6. Division 01 Section 014000 "Quality Requirements" certifications and for erecting mockups.
 - 7. Division 01 Section 017700 "Closeout Procedures" for submitting warranties.
 - 8. Division 01 Section 017839 "Project Record Documents" for submitting Record Drawings,

Record Specifications and Record Product Data.

1.3 DEFINITIONS

- A. Shop Drawings: Detailed drawings, schedules, diagrams, and illustrations prepared specifically for this project by the Contractor, or any subcontractor, manufacturer, supplier, or distributor to illustrate fabrication and/or installation of a portion of the Work.
- B. Schedule: A detailed tabulation of components, items, or parts to be furnished for use on this project.
- C. Statement: An affirmation prepared by the Contractor, the installer, or manufacturer of a material, product, or system, to satisfy a requirement defined in a technical section.
- D. Factory Test Report: A written report of the findings of a test performed by the Contractor on an actual portion of the Work or prototype prepared for this project before it is shipped to the site.
- E. Field Test Report: A written report of the findings of a test performed by the Contractor on a portion of the Work during or after installation.
- F. Certificate of Compliance: A written statement, signed by an authorized official of the manufacturer of a product or system or supplier of a material attesting that the product, system, or material meets the requirements of the contract documents. The certificate of compliance

must be dated after the award of this Contract and must name the project and cite the specification section, paragraph, and requirements which it is intended to address.

- G. Product Data: Illustrations, standard schedules, performance charts, instructions, brochures, diagrams, manufacturer's descriptive literature, and catalog information illustrating a material, product, or system to be installed on this project.
- H. Color Charts: Pre-printed brochures showing the color range of a material.
- I. Test Reports: Reports verifying that a material, assembly, system, process, or laboratory meets requirements established in the Contract Documents. Reports shall indicate compliance by naming and describing the test method and test results. Testing must have occurred within three years of the date of award of this contract.
- J. Samples:
 - 1. Physical examples of materials, equipment, assemblies, or workmanship establishing standards for evaluating finished Work.
 - 2. Color/Texture Selection Sample ("range set"): Samples of an available range of textures and/or colors of a material formed of the actual finish material over a substrate identical to that which will be used in the field.
- K. Testing Mock-Ups:
 - 1. Provide full scale assemblies of components specified as test specimens. Simulate actual construction conditions as accurately as possible.
 - 2. Provide extra materials required to replace any which fail during tests, except intentional failure tests beyond specified performance requirements. Provide sufficient stock of Replacement materials at test site to complete tests without delay.
 - 3. See relevant Specification Sections for testing requirements.
 - 4. Shipping mock-up to test site:
 - a. Assemble test specimens in shop to verify completeness and adequacy.
 - b. Dismantle test specimens and ship to test site using same packing, loading procedures and mode of transportation as used for components shipped directly to Project site.
 - 5. Assembling mock-ups at test site:
 - a. Retain same installer as will be assembling components at project site to assemble test specimens at test site.
 - b. When possible, use personnel assigned to Project site to do assembly.
- L. Sample Panels:
 - 1. A sample panel specially erected near Project site or, upon COTR's approval or direction, at a remote location that incorporates several specified materials.
 - 2. Sample panels display color range, texture, bond, joinery, tolerances, mortar color and workmanship expected of materials incorporated in Work.
 - 3. Sample panels will be used by COTR for final material selection.
 - 4. Maintain approved sample panels in good condition until completion of relevant work and use as standard for work.
 - 5. Remove sample panels from project site at completion of project.
- M. Shop Production Samples:
 - 1. A sample panel specially erected at fabricator's shop that incorporates specified materials or

components.

2. Construct shop production samples prior to commencing fabrication of component.
3. Shop production samples display color range, texture, bond, joinery, fabrication tolerances, mortar color and workmanship expected of materials incorporated in work.
4. Maintain approved shop production samples in good condition until completion of relevant work and use as standard for work.
5. Finished and maintained shop production samples may be incorporated into work.

N. Mockups (Sample Installations):

1. Definition: A partial installation of selected materials for COTR's approval of workmanship, installation tolerances and visual acceptance of materials.
2. Construct mockups prior to pre-installation conferences.
3. Maintain mockups during construction as a standard for work.
4. Finished and maintained mockups may be incorporated into work, unless they are specifically indicated to be removed from project site at completion of project.

O. Material Safety Data Sheets: Instructions, warnings, and recommended and required handling and use procedures for individual hazardous materials published by the product manufacturer.

1.4 SUBMITTALS

A. General Submittal Procedure Requirements: Prepare and submit submittals required by individual specification sections. Types of submittals are indicated in individual specification sections.

1. The Contractor shall provide electronic submittals as PDF electronic files directly to the COTR for distribution to the A/E team. See below for hard copy requirements.
2. The COTR will return a memorandum containing applicable comments with an annotated file, if applicable.
3. The Contractor is to annotate and retain one copy of the file as an electronic project record.

B. Certificates and certifications submittals: Provide a statement that includes the signature of the entity responsible for preparing the certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.

C. Construction Drawings: Prepare and submit on a bi-weekly basis. Files shall be submitted in CAD / GIS format. Construction drawings shall contain objects and data required to purchase, fabricate, and install project elements and graphically indicate construction progress.

D. As-Built Drawings: After installation of all elements, update and submit As-Built drawings to document the condition of the facility upon completion of construction. Files shall be submitted in CAD / GIS format. In addition, SI expects to receive final approved PDF As-Built Drawings electronically.

E. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for Coordination. The COTR reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.
3. Submittals shall be complete for each Specification Section in order to be considered

for Review by the COTR, with the exception of installation and post-installation tests and reports. Incomplete submittals will be rejected by the COTR.

- F. Submittals Schedule and Control Log: Comply with requirements in Division 01 Section "Construction Progress Documentation" for list of submittals and time requirements for scheduled performance of related construction activities.
- G. Processing Time: Allow enough time for submittal review, including time for re-submittals, as follows. Time for review shall commence on the COTR's receipt of submittal.
1. Initial Review: Allow 15 working days for initial review of each submittal. Allow additional time if processing must be delayed permitting coordination with subsequent submittals. The COTR will advise Contractor when a submittal being processed must be delayed for coordination.
 2. If intermediate submittal is necessary, process it in same manner as initial submittal.
 3. Allow 10 working days for each re-submittal.
 4. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including time for Resubmission of items which are initially rejected due to improper submission or non-Compliance with the Contract Documents.
 5. Provide COTR with 2 weeks' notice of proposed visits to remote sites to review shop production samples.
- H. Identification: Place a permanent label or title block on each submittal for identification.
1. Indicate name of firm or entity that prepared each submittal on label or title block.
 2. Provide adequate space on label or beside title block to record Contractor's review and approval markings, COTR/Engineer's submittal stamp, and the COTR's submittal stamp. On submittals requiring delegated-design responsibility, provide room for Professional Engineer's stamp and signature.
 3. Include the following information on label for:
 - a. Project name.
 - b. Project Number.
 - c. Date.
 - d. Name and address of Contractor.
 - e. Name and address of subcontractor.
 - f. Name and address of supplier.
 - g. Name of manufacturer.
 - h. Unique identifier, including revision number.
 - i. Specification Section number, title, and full paragraph number of appropriate specifications.
 - j. Drawing number and detail references, as appropriate.
 - k. Other necessary identification.
- I. Deviations: Highlight, encircle, or otherwise identify deviations from the Contract Documents on submittals.
- J. Requests for Substitutions: Submit requests for substitutions for items identified by manufacturer, brand name, make, catalog number, etc. in the Construction Documents, in accordance with the Smithsonian Institution Construction Contract Clauses. After award of the Contract, Contractor requests for substitutions may be considered and accepted by the SI at the discretion of the Contracting Officer. See also Division 01 Section "Product Requirements."
- K. Additional Copies: Unless additional copies are required for final submittal, and unless COTR observes noncompliance with provisions of the Contract Documents, initial submittal may serve

as final submittal.

- L. Transmittal: Package each submittal individually and appropriately for transmittal and handling. Transmit each submittal using a transmittal form. COTR will discard submittals received from sources other than Contractor.
1. On an attached separate sheet, prepared on Contractor's letterhead, record relevant information, requests for data, revisions other than those requested by the COTR on previous submittals, and deviations from requirements of the Contract Documents, including minor variations and limitations. Include the same label information as the related submittal.
 2. Include Contractor's certification stating that information submitted complies with requirements of the Contract Documents.
 3. Transmittal Form: Provide locations on form for the following information:
 - a. Project name.
 - b. Date.
 - c. Destination (To:).
 - d. Source (From:).
 - e. Names of subcontractor, manufacturer, and supplier.
 - f. Category, type, and number of submittals.
 - g. Submittal purpose and description.
 - h. Submittal and transmittal distribution record.
 - i. Remarks.
 - j. Signature of transmitter.
 - k. Quality certification, certifying submittal meets all Contract Document requirements.
- M. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, and installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.
- N. Use for Construction: Use only final submittals with mark indicating action taken by the COTR in connection with construction.

PART 2 - PRODUCTS

2.1 SUBMITTAL PROCEDURES

- A. General Submittal Procedure Requirements: Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.
1. Post electronic submittals as PDF electronic files directly to Project Website specifically established for project.
 - a. COTR will return annotated file. Annotate and retain one copy of file as an electronic Project record document file.
 2. Submit electronic submittals via email as PDF electronic files.
 - a. COTR will return annotated file. Annotate and retain one copy of file as an electronic Project record document file.
 3. Certificates and Certifications Submittals: Provide a statement that includes signature of

entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.

- a. Provide a digital signature with digital certificate on electronically submitted certificates and certifications where indicated.
- b. Provide a notarized statement on original paper copy certificates and certifications where indicated.

B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.

- 1. If information must be specially prepared for submittal because standard printed data are not suitable for use, submit as Shop Drawings, not as Product Data.
- 2. Mark each copy of each submittal to show which products and options are applicable.
- 3. Include the following information, as applicable
 - a. Manufacturer's written recommendations
 - b. Manufacturer's product specifications
 - c. Manufacturer's installation instructions
 - d. Standard color charts
 - e. Manufacturer's catalog cuts
 - f. Wiring diagrams showing factory-installed wiring.
 - g. Printed performance curves
 - h. Operational range diagrams.
 - i. Mill reports.
 - j. Standard product operating and maintenance manuals
 - k. Compliance with recognized trade association standards
 - l. Compliance with recognized testing agency standards.
 - m. Application of testing agency labels and seals
 - n. Notation of coordination requirements.
 - o. PDF electronic file

C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.

- 1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:
 - a. Dimensions.
 - b. Identification of products.
 - c. Fabrication and installation drawings.
 - d. Roughing-in and setting diagrams.
 - e. Wiring diagrams showing field-installed wiring, including power, signal, and control wiring. Differentiate between manufacturer-installed and field-installed wiring.
 - f. Shopwork manufacturing instructions.
 - g. Templates and patterns.
 - h. Schedules.
 - i. Design calculations, with Professional Engineer's stamp as required.
 - j. Compliance with specified standards.
 - k. Notation of coordination requirements.

- 2. Submit Shop Drawings in the following format:

- a. PDF electronic file.
- D. Coordination Drawings: Comply with requirements in Division 01 Section "Project Management and Coordination." Submit in same format and quantity as Shop Drawings.
- E. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.
 - 1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
 - 2. Identification: Attach label on unexposed side of Samples that includes the following:
 - a. Generic description of Sample.
 - b. Product name and name of manufacturer.
 - c. Sample source.
 - d. Number and title of applicable Specification Section.
 - e. Specification paragraph number and generic name of each item.
 - 3. For projects where electronic submittals are required, provide corresponding electronic submittal of Sample transmittal, digital image file illustrating Sample characteristics, and identification information for record.
 - 4. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.
 - a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in undamaged condition at time of use.
 - b. Samples not incorporated into the Work, or otherwise designated as COTR's property, are the property of Contractor.
 - 5. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.
 - a. Number of Samples: Submit 2 of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. COTR will return submittal with options selected.
 - 6. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured, and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.
 - a. Number of Samples: Submit three sets of Samples. COTR will retain one Sample set; remainder will be returned to Contractor with submittal response. Contractor to retain one returned Sample set as a project record sample.
 - 1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.

- 2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.
- F. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:
1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Contractor if none is indicated.
 2. Manufacturer and product name, and model number if applicable.
 3. Number and name of room or space.
 4. Location within room or space.
 5. Submit product schedule in the following format:
 - a. PDF electronic file.
- G. Professional Certification Submittal: Comply with requirements in Division 01 Section "Quality Requirements." Shop drawings, calculations, and other submittals that are required by the technical specifications to be prepared and/or reviewed by a registered, licensed design professional shall display the stamp/seal, registration/license number, and signature of the individual taking responsibility. Individuals must be registered/licensed in the state or jurisdiction in which the Project is located. Contractor's Construction Schedule: Comply with requirements in Division 01 Section "Construction Progress Documentation."
- H. Submittals Schedule: Comply with requirements in Division 01 Section "Construction Progress Documentation."
- I. Application for Payment: Comply with requirements in Division 01 Section "Payment Procedures."
- J. Schedule of Values: Comply with requirements in Division 01 Section "Payment Procedures."
- K. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, names, and addresses of architects and COTRs, and other specified information.
- L. Certificates:
1. Product Certificates: Prepare written statements on manufacturer's letterhead certifying that product complies with requirements
 2. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements. Submit record of Welding Procedure Specification (WPS) and Procedure Qualification Record (PQR) on AWS forms. Include names of firms and personnel certified.
2. Installer Certificates: Prepare written statements on manufacturer's letterhead certifying that Installer complies with requirements and, where required, is authorized for this specific Project
4. Manufacturer Certificates: Prepare written statements on manufacturer's letterhead certifying that manufacturer complies with requirements. Include evidence of manufacturing experience where required.
 5. Material Certificates: Prepare written statements on manufacturer's letterhead certifying That material complies with requirements.
- M. Test Reports:
1. Material Test Reports: Prepare reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements
 2. Preconstruction Test Reports: Prepare reports written by a qualified testing agency, on

testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements.

3. Compatibility Test Reports: Prepare reports written by a qualified testing agency, on Testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.
 4. Field Test Reports: Prepare reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements
 5. Product Test Reports: Prepare written reports indicating current product produced by manufacturer complies with requirements. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests Performed by a qualified testing agency.
- N. Research/Evaluation Reports: Prepare written evidence, if required, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:
1. Name of evaluation organization.
 2. Date of evaluation
 3. Time period when report is in effect.
 4. Product and manufacturers' names.
 5. Description of product.
 6. Test procedures and results.
 7. Limitations of use.
- O. Maintenance Data: Prepare written and graphic instructions and procedures for operation and normal maintenance of products and equipment. Comply with requirements in Division 01 Section "Operation and Maintenance Data."
- P. Design Data: Prepare written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.
- Q. Manufacturer's Instructions: Prepare written or published information that documents manufacturer's recommendations, guidelines, and procedures for installing or operating a product or equipment. Include name of product and name, address, and telephone number of manufacturers. Include the following, as applicable:
1. Preparation of substrates.
 2. Required substrate tolerances.
 3. Sequence of installation or erection.
 4. Required installation tolerances.
 5. Required adjustments.
 6. Recommendations for cleaning and protection.
- R. Manufacturer's Field Reports: Prepare written information documenting factory-authorized service representative's tests and inspections. Include the following, as applicable:
1. Name, address, and telephone number of factory-authorized service representative making report.
 2. Statement on condition of substrates and their acceptability for installation of product.

3. Statement that products at Project site comply with requirements.
 4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
 5. Results of operational and other tests and a statement of whether observed performance comply with requirements.
 6. Statement whether conditions, products, and installation will affect warranty.
 7. Other required items indicated in individual Specification Sections.
- S. Insurance Certificates and Bonds: Prepare written information indicating the current status of insurance or bonding coverage. Include name of entity covered by insurance or bond, limits of coverage, amounts of deductibles, if any, and the term of the coverage.
- T. Construction Photographs and Videotapes: Comply with requirements in Division 01 Section "Photographic Documentation."
- U. Material Safety Data Sheets: Submit information to COTR as required by technical specifications.

2.2 DELEGATED DESIGN SERVICES

- A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to COTR.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

- A. Review each submittal and check for compliance with the Construction Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to the COTR.
1. Assure that all submittals use the appropriate units of measure. All drawings and technical data shall be in metric units for projects designed in metric units.
 2. Transmit all required submittals for a technical specification section at the same time unless prior written waiver of this requirement has been provided by the COTR.
 3. Transmit submittals to the COTR in a logical and orderly sequence in accordance with the Submittal Schedule to prevent project delays or adversely impact work by the Smithsonian Institution, its consultants, or other Contractors.

- B. Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.2 COTR ACTION

- A. The COTR will not review submittals that do not bear Contractor's approval stamp and will return them without action.
- B. Submittals: The Architect/Engineer will review each submittal, make marks to indicate corrections or modifications required, and return it. The Architect/Engineer will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action taken (and

recommended to the COTR). The COTR reviews the action recommended by the A/E and provides official action taken on the submittal to the Contractor on the Smithsonian Institution submittal stamp as follows:

1. Approved
 2. Approved as noted
 3. Revise and Resubmit
 4. Rejected
- C. Informational Submittals: The COTR and Architect/Engineer will review each submittal and will not return it or will reject and return it if it does not comply with requirements. The COTR will forward each submittal to appropriate party.
- D. Submittals not required by the Construction Documents may not be reviewed and may be discarded.
- E. Submittals not in the appropriate system of measurement will be rejected without review. Pre-printed literature may be annotated. Shop drawings prepared for this project must be in appropriate scale(s).
- F. Submittal approval by the COTR shall not relieve the Contractor of responsibility for submittal errors, omissions, or deviations from the Contract Documents. Approval of submittals does not constitute acceptance of substitutions, except as covered under subparagraph "Request for Substitutions," above.

3.3 SUBSEQUENT CONTRACTOR'S ACTION

- A. Correct and resubmit submittals, as necessary, according to response from the COTR.
- B. Commence Work on items requiring submittals only after all related submittals are reviewed and approved by the COTR. All work shall conform to Contract Documents and approved submittals.
- C. Retain copies of all approved submittals in their entirety for use in compiling Project Record Documents. See Division 01 Section "Project Record Documents."

END OF SECTION 013300

SECTION 01 3573 - DELEGATED DESIGN REQUIREMENTS AND PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes procedures for portions of Work under this Contract that include delegated design requirements and procedures.
- B. Related Requirements:
 - 1. Section 01 3100 "Project Management and Coordination" for project management and coordination with delegated design requirements.
 - 2. Section 01 3300 "Submittal Procedures" for quality control of submittal procedure and coordination with delegated design requirements.
 - 3. Section 01 4000 "Quality Requirements" for quality assurance requirements with delegated design requirements.

1.2 DEFINITIONS

- A. Delegated Design: A portion or component of the Work identified by the Contract Documents to be designed by the Contractor, or an entity assigned by the Contractor, to satisfy performance and design criteria specified in the Contract Documents for that portion or component.
- B. Registered Design Professional: Design professional, assigned by the Contractor, who is responsible for providing the delegated design work, and for certifying that the work is in compliance with the specified performance requirements and design criteria. Design professional shall be legally qualified to practice in jurisdiction where Project is located and shall be experienced in providing delegated design services of the kind indicated. Delegated design services are defined as those performed for installation of the system, assembly or product that are similar in material, design, and extent to those indicated for this Project.
- C. AHJ: Authority having jurisdiction.
- D. Technical Sections: Specification sections included in Divisions 02 through 35 of the Project Manual.

1.3 SUBMITTAL PROCEDURES

- A. Performance and Design Criteria: Where delegated design services are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
 - 1. If specific performance and design criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.
 - 2. Architect's and Engineer's review of delegated design submittal shall be for conformance with performance and design criteria only.
- B. Delegated-Design Services Submittal: Include Shop Drawings, Product Data, and other required submittals indicated in individual technical sections. Submit digitally signed PDF electronic file of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.

1. In addition to other submittal requirements specified in other technical sections, at minimum, include the following in delegated design submittal:
 - a. Statement of design and performance criteria identified by the Contract Documents.
 - b. Assumptions.
 - c. Details, calculations, etc. related to the performance criteria.
 - d. Reactions to structure (where applicable).
 - e. Instructions for fabrication, assembly, installation, and interface with other trades.
 2. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.
- C. BIM File Incorporation: Incorporate delegated-design drawing and data files into Building Information Model established for Project.
1. Prepare delegated-design drawings in the following format: Same digital data software program, version, and operating system as the original Drawings.
- D. Submittal Procedures for Delegated Design Components:
1. Comply with requirements specified for other types of submittals included in this Section, including, but not limited to, form and procedures for delivering submittals.
 - a. Submit delegated design documents for approval prior to fabrication of components included in delegated design work.
 - b. Architect's review of delegated design submittals is for the limited purpose of checking for general conformance with information given and the design intent expressed in the Contract Documents. Architect will review submittals consistent with this limited purpose.
 - 1) Architect's review does not lessen nor shift burden or responsibility from Contractor to Architect or Owner.
 - 2) If during submittal review, Architect notes any deficiencies or errors, submittal will be returned with comments. Otherwise, there will be no responsive action by Architect.
 2. Delegated Design Submittal Schedule: Submit list of items identified in the Contract Documents that require delegated design. For each item, include the delegated design entity and the registered design professional.
 - a. If required, submit schedule to the authority having jurisdiction.
 3. Preliminary Submission: In order to avoid engineering and detailing of an unacceptable design, and if required by individual technical section, submit to Architect, preliminary documentation describing registered design professional's design prior to preparing engineering calculations and shop drawings.
 4. Delegated Design Submission: Submit final delegated design documents to Architect and AHJ if required for review, allowing not less than 10 days for review by Architect, and Architect's consultants and AHJ.
 - a. Comply with AHJ requirements.
 - b. Ensure registered design professional's signed seal is affixed to documents in accordance with jurisdictional requirements.
 - c. Make corrections noted by Architect and comply with AHJ requirements.

1.4 RESPONSIBILITIES

- A. General Contractor's Responsibilities:

1. Ensure drawings, calculations, specifications, and other documentation provided by registered design professional are complete and are sealed and signed by the registered design professional in accordance with requirements of AHJ. Architect and Owner shall be entitled to rely on the completeness and accuracy of the documentation provided by the registered design professional.
 2. Coordinate and assign complete responsibility for design, documentation, calculations, and submittal of delegated design components.
 3. Coordinate components requiring delegated design with adjacent or related systems whether designed by Architect or another entity. Ensure complete, operational systems that perform their intended are provided.
 4. When required to be reviewed by AHJ, submit delegated design documentation for in a timely manner that will not negatively impact Project's construction schedule.
 5. Performance requirements and design criteria are described in each technical section requiring delegated design. Conduct thorough review of other related portions of the Contract Documents to ensure inclusion of full scope of work in delegated design preparation and submittals.
 - a. Provide products and systems complying with specific performance and design criteria indicated.
 6. Comply with quality assurance requirements specified in individual technical sections containing delegated design requirements.
 7. Comply with accessibility guidelines, codes, policies, and standards required by the AHJ, applicable to the project, and as indicated.
- B. Registered Design Professional: Responsibilities include, but are not limited to, the following:
1. Sole responsibility to ensure delegated design accommodates all building movements, including, but not limited to deflection, rotation, creep, shrinkage, live loads, wind loads, and loads, interim and otherwise, resulting from means and methods.
 2. If applicable, prepare documentation required by AHJ.
 3. Prepare delegated design submittals that are sealed and signed by registered design professional.
- C. Architect's Responsibilities: Architect will review and mark submittals in accordance with procedures defined in Section 01 3300 "Submittal Procedures", using the action codes defined in that section.
- 1.5 SCHEDULING
- A. Schedule delegated design activities and submittals to occur in a timely manner that will not negatively impact Project's construction schedule.
1. Allow sufficient time for Architect's review of delegated design submittals.
 2. If Architect's approval of shop drawings relating to delegated design components is required prior to application for permit, schedule and sequence delegated design shop drawing review prior to permit submittal. Comply with requirements of Section 01 3300 "Submittal Procedures."
- B. Owner will not be responsible to pay for delays, additional products, additional hours of work, including overtime, restocking or rework required due to failure by Contractor to coordinate delegated design work with work of other trades.

June 15, 2026

Smithsonian OPDC Project No. 2533105

SmithGroup Project No. 00100084

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

FOR REFERENCE ONLY

SECTION 014000 - QUALITY REQUIREMENTS**PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for quality assurance and quality control.
- B. All Tests and inspections required under the project's contract documents, even ones explicitly assigned to Owner are the Contractor's responsibility to provide with an independent approved subcontractor.
 - 1. Specific quality-control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
 - 2. Specified tests, inspections, and related actions do not limit Contractor's quality-control procedures that facilitate compliance with the Construction Document requirements.
 - 3. Requirements for Contractor to provide quality-control services required by the COTR or authorities having jurisdiction are not limited by provisions of this Section.
 - 4. Specific test and inspection requirements are not specified in this Section.
- C. Related Sections include the following:
 - 1. Division 01 Section 013200 "Construction Progress Documentation" for developing a schedule of required tests and inspections.
 - 2. Division 01 Section 013300 "Submittal Procedures."
 - 3. Testing and Inspection Services identified in other specification sections.
 - 4. Division 01 Section 017300 "Execution" for repair and restoration of construction disturbed by testing and inspecting activities and for the installation or performance of other components of the Work.

1.3 DEFINITIONS

- A. Quality Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.
- B. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the work and completed construction comply with requirements. Services do not include contract enforcement activities performed by the COTR.
- C. Mockups: Full-size physical assemblies that are constructed on-site. Mockups are constructed to verify selections made under Sample submittals; to demonstrate aesthetic effects and, where indicated, qualities of materials and execution; to review coordination, testing, or operation; to show interface between dissimilar materials; and to demonstrate compliance with specified installation tolerances. Mockups are not Samples. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.
 - 1. Laboratory Mockups: Full-size physical assemblies constructed at testing facility

- to verify performance characteristics.
- 2. Integrated Exterior Mockups: Mockups of the exterior envelope erected separately from the building but on Project site, consisting of multiple products, assemblies, and subassemblies.
- 3. Room Mockups: Mockups of typical interior spaces complete with wall, floor, and ceiling finishes, doors, windows, millwork, casework, specialties, furnishings and equipment, and lighting.
- D. Preconstruction Testing: Tests and inspections performed specifically for Project before products and materials are incorporated into the Work, to verify performance or compliance with specified criteria.
- E. Product Testing: Tests and inspections that are performed by an NRTL, an NVLAP, or a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.
- F. Source Quality-Control Testing: Tests and inspections that are performed at the source, e.g., plant, mill, factory, or shop.
- G. Field Quality-Control Testing: Tests and inspections that are performed on-site for installation of the Work and for completed Work.
- H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.
- I. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.
 - 1. Use of trade-specific terminology in referring to a trade or entity does not require that certain construction activities be performed by accredited or unionized individuals, or that requirements specified apply exclusively to specific trade(s).
- J. Experienced: When used with an entity or individual, "experienced" means having successfully completed a minimum of 10 previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

1.4 PROFESSIONAL CERTIFICATIONS

- A. Construction Document Performance and Design Criteria: Where professional design services or certifications (e.g., design calculations and/or shop drawings signed, stamped, and sealed by a professional, licensed engineer) by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
 - 1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to the COTR.
 - 2. Shop drawings, calculations, and other submittals that are required by the technical specifications to be prepared and/or reviewed by a registered, licensed design professional shall display the stamp/seal, registration/license number, name, and signature of the individual holding responsibility. The individual must be registered/licensed in the state or jurisdiction in which the Project is located.

1.5 REGULATORY REQUIREMENTS

- A. Copies of Regulations: Obtain or provide access to copies of governing regulations upon request. Retain copies of regulations, as reasonable, at Project site to be available for reference.

1.6 SUBMITTALS

- A. Qualifications: Submit evidence of fabricator, installer, manufacturer, or other representative experience as described below and required in the individual Specification sections.
- B. Professional Certification Submittal: In addition to Construction Documents, Shop Drawings, Product Data, and other required submittals, submit a statement, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional, indicating that the products and systems are in compliance with performance and design criteria indicated. Include list of codes, loads, and other factors used in performing these services.
- C. Permits, Licenses, and Certificates: For Smithsonian Institution's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

1.7 QUALITY ASSURANCE

- A. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- B. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
- C. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance. If required by the individual specification section, installers must be acceptable to and/or authorized by product/system manufacturer.
- D. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance.
- E. Specialists: Certain sections of the Specifications require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.
 - 1. Requirement for specialists shall not supersede building codes and similar regulations governing the Work, nor interfere with local trade-union jurisdictional settlements and similar conventions.

1.8 QUALITY CONTROL

- A. Smithsonian Institution Responsibilities: Inspection of the Work may be done on a daily basis by the COTR. The SI will have appropriate personnel available to witness Owner System Performance Verification (OSPV) tests.
- B. Contractor Responsibilities: Unless otherwise indicated, provide quality-control services specified and required by authorities having jurisdiction. Ensure that the Work complies with the quality and workmanship requirements in the technical specifications. Ensure that representatives from all

applicable subcontractors and manufacturers are available during multiple systems commissioning and Owner System Performance Verification tests.

- C. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and quality-control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting. Coordinate construction activities and planning with existing conditions.
- D. Contactor shall notify COTR at least 24 hours prior to any concealment activities to give SI the opportunity to schedule any pre-concealment inspections or documentation desired.

1.9 Paragraph below may resolve issues that sometimes arise when using referenced standards due to conflicting requirements in the Contract Documents. Coordinate with Conditions of the Contract. Revise to suit Project, office policy, and Owner's requirements.

- A. Referenced Standards: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer conflicting requirements that are different, but apparently equal, to COTR for a decision before proceeding.
- B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements.

1.10 ACTION SUBMITTALS

- A. Shop Drawings: For mockups, provide plans, sections, and elevations, indicating materials and size of mockup construction.
 - 1. Indicate manufacturer and model number of individual components.
 - 2. Provide axonometric drawings for conditions difficult to illustrate in two dimensions.

1.11 INFORMATIONAL SUBMITTALS

- A. Contractor's Quality-Control Plan: For quality-assurance and quality-control activities and responsibilities.
- B. Qualification Data: For Contractor's quality-control personnel.
- C. Contractor's Statement of Responsibility: When required by authorities having jurisdiction, submit copy of written statement of responsibility sent to authorities having jurisdiction before starting work on the following systems:
 - 1. Seismic-force-resisting system, designated seismic system, or component listed in the designated seismic system quality-assurance plan prepared by Architect.
 - 2. Main wind-force-resisting system or a wind-resisting component listed in the wind-force-resisting system quality-assurance plan prepared by Architect.
- D. Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.

A. Schedule of Tests and Inspections: Prepare in tabular form and include the following:

1. Specification Section number and title.
2. Entity responsible for performing tests and inspections.
3. Description of tests and inspection.
4. Identification of applicable standards.
5. Identification of test and inspection methods.
6. Number of tests and inspections required.
7. Time schedule or time span for tests and inspections.
8. Requirements for obtaining samples.
9. Unique characteristics of each quality-control service.

1.12 CONTRACTOR'S QUALITY-CONTROL PLAN

- A. Quality-Control Plan, General: Submit quality-control plan within **10** days of **Notice to Proceed**, and not less than **five** days prior to preconstruction conference. Submit in a format that is acceptable to the Architect. Identify personnel, procedures, controls, instructions, tests, records, and forms to be used to carry out Contractor's quality-assurance and quality-control responsibilities. Coordinate with Contractor's construction schedule.
- B. Quality-Control Personnel Qualifications: Engage qualified trained and experienced in managing and executing quality-assurance and quality-control procedures similar in nature and extent to those required for Project.
- C. Submittal Procedure: Describe procedures for ensuring compliance with requirements through review and management of submittal process. Indicate qualifications of personnel responsible for submittal review.
- D. Testing and Inspection: In quality-control plan, include a comprehensive schedule of Work requiring testing or inspection, including the following:
1. Contractor-performed tests and inspections including subcontractor-performed tests and inspections. Include required tests and inspections and Contractor-elected tests and inspections.
 2. Special inspections required by authorities having jurisdiction and indicated on the "Statement of Special Inspections."
- E. Continuous Inspection of Workmanship: Describe process for continuous inspection during construction to identify and correct deficiencies in workmanship in addition to testing and specified inspection. Indicate types of corrective actions to be required to bring work into compliance with standards of workmanship established by Contract requirements and approved mockups.
- F. Monitoring and Documentation: Maintain testing and inspection reports including a log of approved and rejected results. Include work COTR. Indicate corrective actions taken to bring nonconforming work into compliance with requirements. Comply with requirements of authorities having jurisdiction.

1.13 REPORTS AND DOCUMENTS

- A. Test and Inspection Reports: Prepare and submit certified written reports specified in other Sections. Include the following:

1. Date of issue.
 2. Project title and number.
 3. Name, address, and telephone number of testing agency.
 4. Dates and locations of samples and tests or inspections.
 5. Names of individuals making tests and inspections.
 6. Description of the Work and test and inspection method.
 7. Identification of product and Specification Section.
 8. Complete test or inspection data.
 9. Test and inspection results and an interpretation of test results.
 10. Record of temperature and weather conditions at time of sample taking and testing and inspecting.
 11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
 12. Name and signature of laboratory inspector.
 13. Recommendations on retesting and re-inspecting.
- B. Manufacturer's Technical Representative's Field Reports: Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:
1. Name, address, and telephone number of technical representative making report.
 2. Statement on condition of substrates and their acceptability for installation of product.
 3. Statement that products at Project site comply with requirements.
 4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
 5. Results of operational and other tests and a statement of whether observed performance comply with requirements.
 6. Statement weather conditions, products, and installation will affect warranty.
 7. Other required items indicated in individual Specification Sections.
- C. Factory-Authorized Service Representative's Reports: Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:
1. Name, address, and telephone number of factory-authorized service representative making report.
 2. Statement that equipment complies with requirements.
 3. Results of operational and other tests and a statement of whether observed performance comply with requirements.
 4. Statement weather conditions, products, and installation will affect warranty.
 5. Other required items indicated in individual Specification Sections.
- D. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

1.14 QUALITY ASSURANCE

- A. General: Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.
- B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful service performance, as well as sufficient production capacity to produce required units.

- C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- D. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.
- E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar in material, design, and extent to those indicated for this Project.
- F. Specialists: Certain Specification Sections require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.
 - 1. Requirements of authorities having jurisdiction shall supersede requirements for specialists.
- G. Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspecting indicated, as documented according to **ASTM E 329**;
 and with additional qualifications specified in individual Sections; and, where required by authorities having jurisdiction, which is acceptable to authorities.
 - 1. NRTL: A nationally recognized testing laboratory according to 29 CFR 1910.7.
 - 2. NVLAP: A testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program.
- H. Manufacturer's Technical Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
- I. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
- J. Preconstruction Testing: Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following:
 - 1. Contractor responsibilities include the following:
 - a. Provide test specimens representative of proposed products and construction.
 - b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
 - c. Provide sizes and configurations of test assemblies, mockups, and laboratory mockups to adequately demonstrate capability of products to comply with performance requirements.
 - d. Build site-assembled test assemblies and mockups using installers who will

- perform same tasks for Project.
 - e. Build laboratory mockups at testing facility using personnel, products, and methods of construction indicated for the completed Work.
 - f. When testing is complete, remove test specimens, assemblies, do not reuse products on Project.
 - 2. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to COTR. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.
 - K. Mockups: Before installing portions of the work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed work:
 - 1. Build mockups in location and of size indicated or, if not indicated, as directed by COTR.
 - 2. Notify COTR **seven** days in advance of dates and times when mockups will be constructed.
 - 3. Employ supervisory personnel who will oversee mockup construction. Employ workers that will be employed during the construction at Project.
 - 4. Demonstrate the proposed range of aesthetic effects and workmanship.
 - 5. Obtain COTR approval of mockups before starting work, fabrication, or construction.
 - a. Allow **seven** days for initial review and each re-review of each mockup.
 - 6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 - 7. Demolish and remove mockups when directed unless otherwise indicated.
 - L. Integrated Exterior Mockups: Construct integrated exterior mockup **according to approved Shop Drawings**. Coordinate installation of exterior envelope materials and products for which mockups are required in individual Specification Sections, along with supporting materials.
- 1.15 QUALITY CONTROL
- A. Contractor Responsibilities: All Tests and inspections, even ones explicitly assigned to Owner/COTR are the Contractor's responsibility for coordination and compensation within the contract's award amount. Perform additional quality-control activities required to verify that the Work complies with requirements, whether specified or not.
 - 1. Provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.
 - 2. Where services are indicated as Contractor's responsibility, engage a qualified testing agency to perform these quality-control services.
 - 3. Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
 - 4. All Testing and inspecting requested by Contractor and are required by the Contract Documents are solely the Contractor's responsibility.
 - 5. Submit additional copies of each written report directly to authorities having jurisdiction.
 - B. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Section 013300 "Submittal Procedures."
 - C. Manufacturer's Technical Services: Where indicated, engage a manufacturer's technical representative to observe and inspect the work. Manufacturer's technical representative's services

include participation in pre-installation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.

- D. Retesting/Re-inspecting: Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and re-inspecting, for construction that replaced Work that failed to comply with the Contract Documents.
- E. Testing Agency Responsibilities: Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.
 - 1. Notify COTR and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
 - 2. Determine the location from which test samples will be taken and in which in-situ tests are conducted.
 - 3. Conduct and interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.
 - 4. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
 - 5. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
 - 6. Do not perform any duties of Contractor.
- F. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and - control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.
 - 1. Schedule times for tests, inspections, obtaining samples, and similar activities.
- G. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents as a **component of Contractor's quality-control plan**. Coordinate and submit concurrently with Contractor's construction schedule. Update as the Work progresses.
 - 1. Distribution: Distribute schedule to COTR testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

1.16 SPECIAL TESTS AND INSPECTIONS

- A. Special Tests and Inspections: At the COTR's request a qualified **testing agency** to conduct special tests and inspections.
- B. Special Tests and Inspections: Conducted by a qualified **testing agency** as required and as follows:
 - 1. Verifying that manufacturer maintains detailed fabrication and quality-control procedures and reviews the completeness and adequacy of those procedures to perform the Work.
 - 2. Notifying COTR and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
 - 3. Submitting a certified written report of each test, inspection, and similar quality-control service to COTR with copy to Contractor and to authorities having jurisdiction.
 - 4. Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
 - 5. Interpreting tests and inspections and stating in each report whether tested and inspected work complies with or deviates from the Contract Documents.
 - 6. Retesting and re-inspecting corrected work.
 - 7. Clearly indicate on all report submissions COMPLIANT or NON-

COMPLIANT. PART 2 - PRODUCTS (Not Used)

PART 3 – EXECUTION

3.1 TEST AND INSPECTION LOG

- A. Test and Inspection Log: Prepare a record of tests and inspections. Include the following:
 - 1. Date test or inspection was conducted.
 - 2. Description of the Work tested or inspected.
 - 3. Date test or inspection results were transmitted to Architect.
 - 4. Identification of testing agency or special inspector conducting test or inspection.
- B. Maintain log at Project site. Post changes and revisions as they occur. Provide access to test and inspection log for **COTR**, reference during normal working hours.

3.2 REPAIR AND PROTECTION

- A. General: On completion of testing, inspecting, sample taking, and similar services, repair damaged construction and restore substrates and finishes.
 - 1. Provide materials and comply with installation requirements specified in other Specification Sections or match existing substrates and finishes. Restore patched areas and extend restoration into adjoining areas with durable seams that are as invisible as possible. Comply with the Contract Document requirements for cutting and patching in Section 017300 "Execution."
- B. Protect construction exposed by or for quality-control service activities.
- C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

3.3 NON-CONFORMING WORK

- A. Remove portions of the Work that fail to conform to quality-control requirements of the Contract Documents.
- B. Replace defective portions of the Work as directed by the COTR. No adjustment will be made to Contract Sum nor Contract Time.

END OF SECTION 014000

SECTION 01 4200 - REFERENCES**PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.
- A. The Contract Documents in their entirety, including the Drawings, Specifications/Project Manual, Construction Contract Clauses, and any other documents issued as part of the Contract, apply to this Section.

1.2 DEFINITIONS

- A. General: Basic Contract definitions are included in the Conditions of the Contract.
- B. "Approved": The term "approved," when used in conjunction with COTR's action on Contractor's submittals, applications, and requests, is limited to COTR's duties and responsibilities as stated in the Conditions of the Contract. When using terms such as those in "Approved" and "Directed" paragraphs below, do not extend Architect's responsibility into Contractor's area of means, methods, and techniques of construction. See Evaluations.
- B. "Directed": Terms such as "directed," "requested," "authorized," "selected," "approved," "required," and "permitted" mean directed by COTR, requested by COTR, and similar phrases.
- D. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."
- E. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.
- F. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.
- G. "Install": Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to dimension, finish, cure, protect, clean, and similar operations at Project site.
- H. "Provide": Furnish and install, complete and ready for the intended use.
- I. "Project Site": Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.
- J. "Installer": An installer is Contractor or another entity engaged by Contractor, as an employee, subcontractor, or contractor of lower tier, to perform a particular construction operation, including installation, erection, application, and similar operations.
- K. The term "experienced," when used with the term "installer," means having successfully completed a minimum of **five** previous projects similar in size and scope to this Project; being familiar with the special requirements indicated; and having complied with requirements of authorities having jurisdiction.
 - 1. Using a term such as "carpentry" does not imply that certain construction activities must be

performed by accredited or unionized individuals of a corresponding generic name, such as "carpenter." It also does not imply that requirements specified apply exclusively to trades people of the corresponding generic name.

1.3 INDUSTRY STANDARDS

- A. SI Codes, Standards and Guidelines, current edition, shall cover the production of Construction Documents.
- B. Publication Dates: Comply with codes and standards in effect as of the date of the Contract Documents, unless otherwise indicated.
- C. Conflicting Requirements: Where compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels comply with the most stringent requirement. Refer uncertainties and requirements that are different, but apparently equal, to the COTR for a decision before proceeding.
 - 1. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of the requirements. Refer uncertainties to the COTR for a decision before proceeding.
- D. Copies of Codes and Standards: Each entity engaged in construction on Project must be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.
 - 1. Where copies of standards are needed to perform the required design or construction activity, obtain copies directly from the publication source and make them available on request.

1.4 ABBREVIATIONS AND ACRONYMS

- A. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' "National Trade & Professional Associations of the United States."
- B. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. This information is subject to change and is believed to be accurate as of the date of the Contract Documents.
- C. Abbreviations and Names: Abbreviations and acronyms are frequently used in the Specifications and other Contract Documents to represent the name of a trade association, standards- developing organization, authorities having jurisdiction, or other entity in the context of referencing a standard or publication. Where abbreviations and acronyms are used in the Specifications or other Contract Documents, they mean the recognized name of these entities.

Refer to Gale Research's "Encyclopedia of Associations" or Columbia Books' "National Trade & Professional Associations of the U.S.," which are available in most libraries.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 014200

SECTION 01 5000 - TEMPORARY FACILITIES AND CONTROLS**PART 1 – GENERAL****1.1 RELATED DOCUMENTS**

- A. The Contract Documents in their entirety, including the Drawings, Specifications, Construction Contract Clauses, and any other documents issued as part of the Contract, apply to this Section.

1.2 SUMMARY

- A. This Section includes requirements for temporary facilities and controls, including temporary utilities, support facilities, and security and protection facilities.
- B. Temporary utilities include, but are not limited to, the following:
1. Sewers and drainage.
 2. Water service, metering, and distribution.
 3. Sanitary facilities, including toilets, wash facilities, and drinking-water facilities.
 4. Heating and cooling facilities.
 5. Ventilation.
 6. Electric power service.
 7. Electric power service – temporary backup generator.
 8. Lighting.
 9. Telephone service
- C. Support facilities include, but are not limited to, the following:
1. Temporary roads, paving and markings
 2. Excavation support, shoring and temporary bridging.
 3. Wash racks.
 4. Dewatering facilities and drains.
 5. Project identification and temporary signs.
 6. Waste disposal facilities.
 7. Field offices.
 8. Storage and fabrication sheds.
 9. Lifts and hoists.
 10. Temporary stairs and ramps.
 11. Construction aids and miscellaneous services and facilities.
- D. Security and protection facilities include, but are not limited to, the following:
1. Environmental protection.
 2. Stormwater, sediment, and erosion controls control.
 3. Tree, plant, and animal protection.
 4. Pest control.
 5. Site enclosure fence (maintenance of and modifications to existing).
 6. Security enclosure and lockup.
 7. Additional Security for Special Events.
 8. Barricades, warning signs, and lights. This includes traffic control on the North Road as well as interior systems.
 9. Covered walkways.
 10. Temporary enclosures.
 11. Temporary partitions.
 12. Noise control.
 13. Weather protection.
 14. Fire protection.

15. Sediment and erosion control, including permit.

E. Related Requirements:

1. Section 011000 "Summary" for work restrictions and limitations on utility interruptions.
2. Section 312319 "Dewatering" for disposal of ground water at Project site.
3. Section 321216 "Asphalt Paving" for construction and maintenance of asphalt pavement for temporary roads and paved areas.
4. Section 321313 "Concrete Paving" for construction and maintenance of cement concrete pavement for temporary roads and paved areas.
5. Division 01 Section 013100 "Project Management and Coordination" for additional Site Utilization Plan submittal requirements.
6. Division 01 Section 013300 "Submittal Procedures" for procedures for submitting copies of implementation and termination schedule and utility reports.
7. Division 01 Section 017300 "Execution Requirements" for progress cleaning requirements.

1.3 DEFINITIONS

- A. Permanent Enclosure: As determined by the COTR, permanent or temporary roofing is complete, insulated, and weather tight; exterior walls are insulated and weather tight; and all openings are closed with permanent construction or substantial temporary closures.

1.4 USE CHARGES

- A. General: Cost or use charges for temporary facilities are not chargeable to the Smithsonian Institution and shall be included in the Contract Sum. Allow other entities to use temporary services and facilities without cost, including, but not limited to, the following:
1. SI Staff and construction forces.
 2. Occupants of Project.
 3. SI-provided office trailers.
 4. SI's designated parking.
 5. Testing agencies.
 6. Personnel of authorities having jurisdiction.
 7. Storm Water Management Permit Fees
- B. Utilities: SI will provide all utility services. Contractor is responsible for all temporary connections, load sizing and protection based upon available service and full restoration of any changes to permanent utilities. The contractor shall implement basic conservation measures, otherwise they will be charged for utility usage.
- C. General: Installation and removal of and use charges for temporary facilities shall be included in the Contract Sum unless otherwise indicated. Allow other entities to use temporary services and facilities without cost.
- D. Water and Sewer Service from Existing System: Water from Owner's existing water system is available for use without metering and without payment of use charges. Provide connections, extensions and temperature protection of services as required for construction operations.
- E. Electric Power Service from Existing System: Electric power from Owner's existing system is available for use without metering and without payment of use charges. Provide connections and extensions of services as required for construction operations per code requirements.

1.5 INFORMATIONAL SUBMITTALS

- A. Site Plan: Show temporary facilities, utility hookups, staging areas, and parking areas for construction personnel.
- B. Erosion and Sedimentation-Control Plan: Show compliance with requirements of EPA Construction General Permit or authorities having jurisdiction, whichever is more stringent.
- C. Fire-Safety Program: Show compliance with requirements of NFPA 241 and authorities having jurisdiction. Indicate Contractor personnel responsible for management of fire-prevention program.
- D. Moisture-Protection Plan: Describe procedures and controls for protecting materials and construction from water absorption and damage.
 - 1. Describe delivery, handling, and storage provisions for materials subject to water absorption or water damage.
 - 2. Indicate procedures for discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and replacing water-damaged Work.
 - 3. Indicate sequencing of work that requires water, such as sprayed fire-resistive materials, plastering, and terrazzo grinding, and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.
- E. Dust- and HVAC-Control Plan: Submit coordination drawing and narrative that indicates the dust- and HVAC-control measures proposed for use, proposed locations, and proposed time frame for their operation. Identify further options if proposed measures are later determined to be inadequate. Include the following:
 - 1. Locations of dust-control partitions at each phase of work.
 - 2. HVAC system isolation schematic drawing.
 - 3. Location of proposed air-filtration system discharge.
 - 4. Waste handling procedures.
 - 5. Other dust-control measures.
- F. Implementation and Termination Schedule: Within 15 days of date established for submittal of Contractor's Construction Schedule, submit a schedule indicating implementation and termination of each temporary utility.
- G. Plan for Construction Facilities, Temporary Controls, and Protection of the Site, to be part of the Site Utilization Plan per Section 013100 "Project Management and Coordination" and as stated

below: Submit a Plan that both graphically and narratively describes the proposed facilities, temporary controls, and protection of the site to the COTR for approval no less than 5 working days prior to the Preconstruction Conference. The plan shall address construction sequencing as required by Section 011000 "Summary", Article 1.5A Work Sequence. At a minimum, include the following in the Plan:

- 1. Proposed method, location, materials, and construction of temporary structures, facilities, walkways, utilities, field offices, storage sheds, trailers, toilet facilities, storage areas, fencing, enclosures, barriers, dust/noise partitions, identification and directional signage, and other temporary controls.
 - a. Provide approved and appropriate barriers for the protection and containment of the animal collection if applicable.
- 2. Routes of vehicular and pedestrian access and egress for Contractor personnel, SI personnel, the public (where applicable), including those for people with disabilities (where applicable), including temporary striping where required.
- 3. Location and maintenance of emergency exits.

4. Methods of protection of existing surfaces, occupants, utilities, and other SI property, including protection of existing historic fabric and the North Road.
5. Means of connection of temporary enclosures/controls to existing historic materials.
6. Incorporating all existing site conditions and constraints.

Traffic Control Plan per Manual on Uniform Traffic Control Devices (U.S. Department of Transportation, Federal Highway Administration, latest edition) to maintain at a minimum one single lane of synchronized traffic at all times. The plan shall address barricade size, type and configuration, the minimum lane width (13'), controlled Contractor access into the work zone, any barricade cones or barrels before the traffic barricades, signage, temporary lane markings, The traffic control plan shall be prepared and signed by a Licensed Professional Engineer in the District of Columbia.

- H. Material Safety Data Sheets (MSDS): Submit Material Safety Data Sheets for all toxic and/or hazardous substances proposed for temporary controls prior to use of any such substances. Submit NZP material approval request form and required data for all hazardous materials.
- I. Professional Project Sign: Submit a shop drawing indicating proposed construction, mounts and or posts, materials, colors, font, letter sizes, graphics, etc. to scale of the required Project Sign.

1.6 QUALITY ASSURANCE

- A. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.
- B. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.
- C. Accessible Temporary Egress: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and ICC/ANSI A117.1
- D. Standards: Comply with ANSI A10.6, NECA's "Temporary Electrical Facilities," and NFPA 241.
 1. Trade Jurisdictions: Assigned responsibilities for installation and operation of temporary utilities are not intended to interfere with trade regulations and union jurisdictions.
 2. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.
- E. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.

1.7 PROJECT CONDITIONS

- A. Temporary Use of Permanent Facilities: Engage Installer of each permanent service to assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.
- B. Conditions of Use: The following conditions apply to use of temporary services and facilities by all parties engaged in the Work

1. Keep temporary services and facilities clean and neat. Operate in a safe and efficient manner.
 2. Relocate temporary services and facilities as required by progress of the Work.
 3. Take necessary fire-prevention measures.
 4. Do not allow hazardous, dangerous, or unsanitary conditions, or public nuisances to develop or persist on site.
 5. Take measures to prevent rodent infestation of waste and stored materials. Empty food trash daily.
 6. Comply with Division 01 Section "Indoor Air Quality Requirements."
- C. Sanitary Facilities: Contractor personnel may not use existing Smithsonian restrooms on the premises. Provide temporary facilities on site in accordance with requirements set forth in Parts 2 and 3 below.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Chain-Link Fencing: Minimum 2-inch, 0.148-inch-thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet high required at the Limits of Disturbance perimeter with galvanized-steel pipe posts; minimum 2-3/8-inch-OD line posts and 2-7/8-inch-OD corner and pull posts, with 1-5/8-inch-OD top rails. Gates and posts are to be mounted into the ground.
 - a. Wrap the entire fence with a printed fabric banner.
 - i. Banner content provided by Smithsonian Institution Exhibits
 - ii. Banner fabric density sufficiently open to prevent wind loads from exceeding 40 lbs. square foot.
- B. Polyethylene Sheet: Reinforced, fire-resistive sheet, 10-mil minimum thickness, with flame-spread rating of 15 or less per ASTM E 84 and passing NFPA 701 Test Method 2.
- C. Dust-Control Adhesive-Surface Walk-off Mats: Provide mats minimum 36 by 60 inches.
- D. Insulation: Unfaced mineral-fiber blanket, manufactured from glass, slag wool, or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
- E. General: Provide new materials. Undamaged, previously used materials in serviceable condition may be used if approved by the COTR. Provide materials suitable for use intended.
- F. Pavement: Comply with Division 32.
- G. Temporary backup generator including associated controls, wiring, cables, switchgear, and fuel as required.
- H. All temporary fences (like new) full height with printed images on fabric. Fence structure that is not used for animal containment or protection shall be supported to resist 40 mph winds.
- I. Standard SI Construction Fence: Install new, as needed, and maintain the existing standard SI construction fence as detailed on the Drawings.

2.2 TEMPORARY FACILITIES

- A. Field Offices, General: Prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading. Contractor to provide submission for COTR's approval. Contractor responsible for all temporary connections.
- B. Storage and Fabrication Sheds: Provide sheds sized, furnished, and equipped to accommodate

materials and equipment for construction operations.

1. Store combustible materials apart from building. (Submit for COTR approval)

2.3 EQUIPMENT

- A. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.
- B. HVAC Equipment: Unless Owner authorizes use of permanent HVAC system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.
 1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
 2. Heating Units: Listed and labeled for type of fuel being consumed, by a qualified testing agency acceptable to authorities having jurisdiction and marked for intended location and application.
 3. Permanent HVAC System: If Owner authorizes use of permanent HVAC system for temporary use during construction, provide filter with MERV of 8 at each return-air grille in system and remove at end of construction and clean HVAC system as required in Section 017700 "Closeout Procedures".
- C. Air-Filtration Units: Primary and secondary HEPA-filter-equipped portable units with four-stage filtration. Provide single switch for emergency shut off. Configure to run continuously.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work.
 1. Locate facilities to limit site disturbance as specified in Section 011000 "Summary."
- B. Provide each facility ready for use when needed to avoid delay. Do not remove until facilities are no longer needed or are replaced by authorized use of complete permanent facilities.

3.2 TEMPORARY UTILITY INSTALLATION

- A. General: Install temporary service or connect to existing service.
 1. Arrange with utility company, COTR, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.
- B. Sewers and Drainage: If sewers are available, provide temporary connections to remove effluent that can be discharged lawfully. If sewers are not available or cannot be used, provide drainage ditches, dry wells, stabilization ponds, and similar facilities. If neither sewers nor drainage facilities can be lawfully used for discharge of effluent, provide containers to remove and dispose of effluent off-site in a lawful manner.
 1. Filter out excessive soil, construction debris, chemicals, oils, and similar contaminants that might clog sewers or pollute waterways before discharge.
 2. Connect temporary sewers to municipal system as directed by sewer department officials.

3. Maintain temporary sewers and drainage facilities in a clean, sanitary condition. After heavy use, restore normal conditions promptly.
 4. Provide temporary filter beds, settlement tanks, separators, and similar devices to purify effluent to levels acceptable to authorities having jurisdiction.
- C. Water Service: Install water service and distribution piping in sizes and pressures adequate for construction.
- D. Sanitary Facilities: Provide temporary toilets, wash facilities, and drinking water for use of construction personnel. Comply with requirements of authorities having jurisdiction for type, number, location, operation, and maintenance of fixtures and facilities.
- E. Heating and Cooling: Provide temporary heating and cooling required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of low temperatures or high humidity. Select equipment from that specified that will not have a harmful effect on completed installations or elements being installed.
1. Maintain a minimum temperature of 50 deg F in permanently enclosed portions of building for normal construction activities, and 65 deg F for finishing activities and areas where finished Work has been installed.
 2. Maintain a maximum temperature of 95 deg F in permanently enclosed portions of building for normal construction activities, and 86 deg F for finishing activities and areas where finished Work has been installed.
- F. Ventilation and Humidity Control: Provide temporary ventilation required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of high humidity as specified in the documents. Select equipment from that specified that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce ambient conditions required and minimize energy consumption.
- G. Electric Power Service: Connect to Owner's existing electric power service. Maintain equipment in a condition acceptable to Owner. Electric Power Service: Provide weatherproof, grounded electric power service and distribution system of sufficient size, capacity, and power characteristics during construction period. Include meters, transformers, overload-protected disconnecting means, automatic ground-fault interrupters, and main distribution switchgear.
- H. Temporary Power Service: Provide temporary power generator as required by the Contractor to complete the Work.
1. Install temporary backup power distribution cabling and wiring overhead; rise vertically where least exposed to damage.
 2. Install temporary backup power generator controls and switchgear where least exposed to damage.
- I. Electric Distribution: Provide receptacle outlets adequate for connection of power tools and equipment.
1. Provide waterproof connectors to connect separate lengths of electrical power cords if single lengths will not reach areas where construction activities are in progress. Do not exceed safe length- voltage ratio or manufacturer recommendations.
 2. Provide warning signs at power outlets other than 110 to 120 V.
 3. Provide metal conduit, tubing, or metallic cable for wiring exposed to possible damage. Provide rigid steel conduits for wiring exposed on grades, floors, decks, or other traffic areas.

4. Provide metal conduit enclosures or boxes for wiring devices.
 5. Provide 4-gang outlets, spaced so 100-foot extension cord can reach each area for power hand tools and task lighting. Provide a separate 125-V ac, 20-A circuit for each outlet.
- J. Lighting: Provide temporary lighting with local switching that provides adequate illumination for construction operations and traffic conditions.
1. Install and operate temporary lighting that fulfills security, emergency egress, and protection requirements without operating entire system. (1 foot candle)

3.3 SUPPORT FACILITIES INSTALLATION

A. General: Comply with the following:

1. Locate field offices, storage sheds, sanitary facilities, and other temporary construction and support facilities for easy access within the approved designated areas.
2. Provide incombustible construction for offices, shops, and sheds located within construction area or within 30 feet of building lines. Comply with NFPA 241.
3. Maintain support facilities until near Substantial Completion. Remove before Substantial Completion. Personnel remaining after Substantial Completion will be permitted to use

permanent facilities, under conditions acceptable to the COTR.

B. Traffic and Pedestrian Controls: Provide temporary traffic controls at junction of temporary roads with public roads. Include warning signs for public traffic and "STOP" signs for entrance onto public roads.

1. Provide safety barricades in accordance with the District of Columbia Building Code and applicable OSHA regulations. Provide barricades, subject to the approval of the COTR, to deter passage of persons and/or vehicles into construction areas as specified or necessary.
2. When construction activities impact on the public right-of-way (e.g., public sidewalks), provide barricades as necessary to create a safe passage for pedestrians around the obstacles and separate from vehicular traffic lanes. Provide appropriate directional signs and certified signalers.
3. See Section 013100 "Project Management and Coordination" for Site Utilization Plan and Traffic Control Plan requirements.

C. Temporary Roads and Paved Areas: Construct and maintain temporary roads and paved areas adequate for construction operations. Locate temporary roads and paved areas **as indicated** on the Drawings.

1. Provide dust-control treatment that is nonpolluting and non-tracking. Reapply treatment as required to minimize dust.

D. Temporary Use of Permanent Roads and Paved Areas: Locate temporary roads and paved areas in same location as permanent roads and paved areas. Construct and maintain temporary roads and paved areas adequate for construction operations. Extend temporary roads and paved areas, within construction limits indicated, as necessary for construction operations.

1. Coordinate elevations of temporary roads and paved areas with permanent roads and paved areas.
2. Prepare subgrade and install subbase and base for temporary roads and paved areas according to Section 312000 "Earth Moving."

3. Recondition base after temporary use, including removing contaminated material, regrading, proof rolling, compacting, and testing.
 4. Delay installation of final course of permanent hot-mix asphalt pavement until immediately before Substantial Completion. Repair hot-mix asphalt case-course pavement before installation of final course according to Section 321216 "Asphalt Paving."
- E. Traffic Management to be provided by the Contractor.
1. Protect existing site improvements to remain including curbs, pavement, and utilities.
 2. Maintain access for fire-fighting equipment and access to fire hydrants.
 3. Address Public Pedestrian and Vehicle Traffic in vicinity of project
- F. Parking. NO PARKING areas for construction personnel will be provided on site or campus.
- G. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water.
1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
 2. Remove snow and ice as required to minimize accumulation and impairment of construction operations within the limits of construction.
- H. Project Signs: Provide Project signs as indicated. Unauthorized signs are not permitted.
- I. Project Identification and Temporary Signs: Prepare Project identification and other signs in sizes indicated. Install signs where indicated to inform public and persons seeking entrance to Project. Do not permit installation of any unauthorized signs. Submit all sign designs to the COTR for approval.
1. Engage an experienced sign painter to apply graphics for Project identification signs. Comply with details indicated.
 2. Prepare temporary signs to provide directional information to construction personnel and visitors.
 3. Construct signs of exterior-type Grade B-B high-density concrete form overlay plywood in sizes and thicknesses indicated. Support on posts or framing of preservative-treated wood or steel.
 4. Paint sign panel and applied graphics with exterior-grade alkyd gloss enamel over exterior primer.
 5. For project identification sign, see diagram at end of this Section for construction, materials, colors, required wording, and use of logos. Camera-ready artwork for logos will be provided by the COTR.
 6. Maintain and touchup signs so they are legible at all times.
- J. Waste Disposal Facilities: Comply with requirements specified in Section 017419 "Construction Waste Management and Disposal."
- K. Waste Disposal Facilities: Provide waste-collection containers in sizes adequate to manage waste from construction operations. Comply with requirements of authorities having jurisdiction. Comply with progress cleaning requirements in Section 017300 "Execution."
- L. Lifts and Hoists: Provide facilities necessary for hoisting materials and personnel.
1. Truck cranes and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.

- M. Temporary Stairs, Boardwalks, and Ramps: Until permanent stairs are available, provide temporary stairs, boardwalks, or ramps where ladders or walkways are not adequate. Cover finished permanent stairs with protective covering of plywood or similar material so finishes will be undamaged at time of acceptance.

3.4 SECURITY AND PROTECTION FACILITIES INSTALLATION

- A. Protection of Existing Facilities: Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities.
- B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations that minimize possible air, waterway, subsoil contamination, pollution or other undesirable effects.
 - 1. Comply with work restrictions specified in Section 011000 "Summary."
- C. Temporary Erosion and Sedimentation Control: Comply with authorities having jurisdiction, Requirements specified in Section 311000 "Site Clearing."
- D. Temporary Erosion and Sedimentation Control: Provide measures to prevent soil erosion and discharge of soil-bearing water runoff and airborne dust to undisturbed areas and to adjacent properties and walkways, according to erosion- and sedimentation-control Drawings and the authorities having jurisdiction, whichever is more stringent.
 - 1. Based upon contract documents submit, pay fees, oversee, and maintain all related to Temporary Erosion and Sedimentation Control measures to comply with authorities having jurisdiction's requirements.
 - 2. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross tree- or plant- protection zones.
 - 3. Inspect, repair, and maintain erosion and sedimentation control measures during construction until permanent vegetation has been established.
 - 4. Clean, repair, and restore adjoining properties and roads affected by erosion and sedimentation from Project site during the course of Project.
 - 5. Remove erosion and sedimentation controls and restore and stabilize areas disturbed during removal.
- E. Stormwater Control: Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of storm water from heavy rains.
- F. Tree and Plant Protection: Comply with requirements specified in Section 015639 "Temporary Tree and Plant Protection."
- G. Pest Control: Implement practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals so Project will be free of pests and their residues at Substantial Completion.

Pest Control: ALL PEST CONTROL MUST BE COORDINATED WITH THE NZP PEST CONTROL OFFICER. Contractor shall follow Best Management Practices regarding site management and cleanup to minimize vermin or pest infestations for the duration of the project. No extermination materials are to be used on this project without the written approval of the NZP Pest Control Officer.

- H. Site Enclosure Fence: Before construction operations begin, furnish, and install site enclosure fence in a manner that will prevent people and animals from easily entering site except by entrance gates.

If fence needs to be modified or relocated to accommodate current construction activities, submit a request and description of modification to COTR at least 24 hours in advance.

1. Extent of Fence: As required to enclose entire Project site as indicated on Drawings.
 2. Maintain security and restrict access to authorized personnel only.
 3. Lock shall be a combination lock, not a keyed lock.
 4. Maintain security by limiting distribution of lock combination to authorized personnel. Provide COTR with lock combination.
- I. Security Enclosure and Lockup: Install temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. Lock entrances at end of each workday.
- J. Barricades, Warning Signs, and Lights: Comply with standards and code requirements for erecting structurally adequate barricades. Paint with appropriate colors, graphics, and warning signs to inform personnel and public of possible hazard. Where appropriate and needed, provide lighting, including flashing red or amber lights. Provide easily identifiable, accessible walkways around construction activities and obstacles. Post directional signs at decision points to prevent unnecessary travel along changed routes and to dead ends. Erect and dismantle barriers in phases so that a clear route is always available. Provide security hardware on doors to construction areas to prevent entry by unauthorized persons.
1. For exterior safety barriers, sidewalk bridges, and similar uses, provide minimum 5/8-inch-thick exterior plywood and structurally appropriate dimensional lumber. Provide appropriate supports to prevent overturning. Paint both sides and maintain in good condition, repainting as necessary, for the duration of use.
- K. Temporary Egress: Maintain temporary egress from existing occupied facilities as indicated and as required by authorities having jurisdiction.
- L. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. For IT equipment to remain in the Police Station basement.
- M. Scaffolding and Platforms: Erect temporary scaffolding in accordance with OSHA 29 CFR 1926.451 and ANSI A10.8.
1. Provide landing platforms with stairways or ladders for proper access and egress to and from all work areas.
 2. For all frame scaffolding greater than 13 feet in height, submit shop drawings, signed, and sealed by a Professional Engineer registered and licensed in jurisdiction of the project, to the COTR a minimum of 10 working days prior to erection.
 3. During non-working hours, close and lock scaffolding with a physical barrier to prevent Access by unauthorized persons.
 4. Submit daily installation inspection documentation, signed by qualified personnel
- N. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weather tight enclosure for building exterior.
1. Temporary enclosures for people (public and non-public).
 - a. Where heating or cooling is needed and permanent enclosure is not complete, provide insulated temporary enclosures. Coordinate enclosure with ventilating and material drying or curing requirements to avoid dangerous conditions and effects.
 - b. Vertical Openings: Close openings of 25 sq. ft. or less with plywood or similar materials.

- c. Horizontal Openings: Close openings in floor or roof decks and horizontal surfaces with load bearing, wood-framed construction.
 - d. Install tarpaulins securely using fire-retardant-treated wood framing and other materials.
 - e. Where temporary wood or plywood enclosure exceeds 100 sq. ft. in area, use fire- Retardant-treated material for framing and main sheathing.
- O. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241.
- 1. Provide fire extinguishers, installed on walls on mounting brackets, visible and accessible from space being served, with sign mounted above.
 - a. Contractor Field Offices: Class A stored-pressure water-type extinguishers.
 - b. Other Locations: Class ABC dry-chemical extinguishers or a combination of extinguishers of NFPA-recommended classes for exposures.
 - c. Locate fire extinguishers where convenient and effective for their intended purpose; provide not less than one extinguisher per work area and near each entry

And exit.

- 2. Store combustible materials in containers in fire-safe locations.
- 3. Maintain unobstructed access to fire extinguishers, fire hydrants, temporary fire- protection facilities, stairways, and other access routes for firefighting. Prohibit smoking in hazardous fire-exposure areas.
- 4. Supervise welding operations, combustion-type temporary heating units, and similar Sources of fire ignition.
- 5. Develop and supervise an overall fire-prevention and first-aid fire-protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.
- 6. Provide hoses for fire protection of sufficient length to reach construction areas. Hang hoses with a warning sign stating that hoses are for fire-protection purposes only and are not to be removed. Match hose size with outlet size and equip with suitable nozzles.

3.5 MOISTURE AND MOLD CONTROL

- A. Contractor's Moisture-Protection Plan: Avoid trapping water in finished work. Document visible signs of mold that may appear during construction.
- B. Exposed Construction Phase: Before installation of weather barriers, when materials are subject to wetting and exposure and to airborne mold spores, protect as follows:
 - 1. Protect porous materials from water damage.
 - 2. Protect stored and installed material from flowing or standing water.
 - 3. Keep porous and organic materials from coming into prolonged contact with concrete.
 - 4. Remove standing water from decks.
 - 5. Keep deck openings covered or dammed.
- C. Partially Enclosed Construction Phase: After installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture and ambient mold spores, protect as follows:
 - 1. Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed buildings.
 - 2. Keep interior spaces reasonably clean and protected from water damage.
 - 3. Periodically collect and remove waste containing cellulose or other organic matter.

4. Discard or replace water-damaged material.
5. Do not install material that is wet.
6. Discard, replace, or clean stored or installed material that begins to grow mold.
7. Perform work in a sequence that allows any wet materials adequate time to dry before enclosing the material in drywall or other interior finishes.

3.6 OPERATION, TERMINATION, AND REMOVAL

- A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.
- B. Maintenance: Maintain facilities in good operating condition until removal.
 1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
- C. Operate Project-identification-sign lighting daily from dusk until 12:00 midnight.
- D. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion.
- E. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facilities. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.
 1. Materials and facilities that constitute temporary facilities are property of Contractor. Owner reserves right to take possession of Project identification signs.
 2. Remove temporary roads and paved areas not intended for or acceptable for integration into permanent construction. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove Materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.
 3. At Substantial Completion, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Section 017700 "Closeout Procedures."

3.7 PROJECT SIGN

- A. Contractor shall provide two signs (4 feet by 8 feet) installed on posts sufficient to resist 40 mph winds without damage. All materials used shall be exterior grade quality, be resistant to direct sun and ultraviolet light, and designed to last a minimum of five years.
- B. In the event a sign is damaged or fades during the contract period, provide a new replacement sign. Contractor will also be responsible for any required sign relocation due to site conditions.
- C. See sketch of sample sign below. Layout of sign to be approved by COTR prior to

installation. Locate installed sign as directed by COTR.

Sample Sign (8 feet x 4 feet)

END OF SECTION 015000

SECTION 01 5639 - TEMPORARY TREE AND PLANT PROTECTION**PART 1 - GENERAL****1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division I Specifications Sections, apply to this Section.

1.1 SUMMARY

- A. This Section includes the protection and stress reduction of existing trees and vegetation that interfere with, or are affected by, execution of the work, whether temporary or permanent. Work is to be coordinated with Site & Landscape Improvements and Tree Preservation Plan. Refer to the Tree Protection Action Key (TPAK) to referencing pertinent work for each tree. Not every application is relevant on this site currently.

- B. The following specifications apply to work of the Contract Arborist related to Protection and Stress Reduction Measures and coordination and oversight of the Tree Protection and Preservation Program by the Design Team Arborist. This work includes but is not limited to the following:

1. Submittals from the General Contractor
2. Pre- Construction Meeting and Onsite Monitoring of Tree Preservation.
3. Selective tree removals for "Removal by Arborist" (RBA) (Contract Arborist) Within Tree Protection Areas (TPAs).
4. Temporary Site and Tree protection fencing and temporary sign installation
5. Root Protection Matting for temporary construction access in TPAs
6. Composted Mulching
7. Liquid subsurface fertilization
8. Tree Growth Regulator (Paclobutrazol)
9. Soil Nutrient Testing
10. Super Silt Fence / Silt Fence "Trenchless Attachment" to Root Protection Matting (RPM) and Root Aeration Matting (RAM)
11. Temporary Limb Guying or Clearance Pruning for construction access
12. Seasonal Supplemental Watering
13. Monitoring and Treatment of Tree Health
14. Supersonic Air Tool (SSAT) and Hand Excavation within the Critical Root Zones (CRZs)

1.1 DEFINITIONS

- A. Certified Arborist: Credential of an individual arborist issued and administered by the International Society of Arboriculture (ISA). This credential must be current and valid to qualify to use the copyrighted designation of "Certified Arborist". Refer to www.isa-arbor.com for additional information.

B. Design Team Arborist: Consulting firm contracted to provide planning and design services, technical assistance and advice to the COTR and design team. Duties include but are not limited to the following: design phase tree inventories, assessments, and root investigations, etc.; develop tree preservation plans, methods, details and specifications; and provide site monitoring, construction submittal document review, and monitoring of the Contract Arborist. Design Team Arborist is contracted directly to the Issues.

- C. Contract Arborist: Arboricultural contracting firm implementing the approved tree preservation plans on site. All crews conducting arboricultural operations on site shall consist of at least one Certified Arborist who directly oversees all work by that crew. Arboricultural operations include, but are not limited to, pruning, tree protection device installation and maintenance (fence, matting, etc.), root pruning, air tool root excavation/exploration (SSAT), soil care activities, soil testing, mulch application, tree inspections, pesticide/chemical applications and tree removal. Special qualifications submittal is required for review and approval below. Contract Arborist will be sub-contracted by the general contractor or COTR, at the COTR's discretion.
- D. Tree Protection Area (TPA): Area indicated on Drawings surrounding individual trees or groups of trees to be protected during construction.
- E. Critical Root Zone (CRZ): Area shown on Drawings for all trees within scope of this project with a circle. Estimated area is based upon an industry standard "rule of thumb" of 1.5 feet of radius per inch of diameter at breast height (DBH). CRZ is described as the minimum area of tree roots required to be protected to maintain tree health. Any impact within the CRZ must be mitigated based on severity up to and including tree removal if the impact or disturbance is severe.
- F. Tree Protection Action Key (TPAK): Matrix provided on Plan sheets for each tree indicating designated protection and stress reduction measures specified in this document.
- G. Supersonic Air Tool (SSAT): Handheld tool designed to focus highly compressed air (90-125 psi) provided from a large air compressor (185-375 cfm) at speeds close to 1400 mph at the tip of the tool. Widely used by arboricultural firms and consultants for multiple purposes including but not limited to: root collar investigation, CRZ investigation, root pruning (especially large roots > 1.5" diameter or where existing underground cables or conduits are located), radial mulching and restoration of compacted soils, excavation for utilities within protected CRZs to minimize root damage from construction.
- H. Tree Removal by Arborist: Action whereby the Contract Arborist removes trees designated for "Removal by Arborist" selected from inside the TPAs. Trees shall be taken down by hand sectionally or fall directionally to minimize damage to adjacent tree canopies, root systems, or adjacent structures. Roots and stump are not disturbed unless so designated in TPAK.
- I. Root Pruning: Action indicated on Drawings to provide a more suitable cut for protected tree roots to minimize ripped or torn roots during excavations and grading with standard construction equipment. Various methods may be used as specified.
- K. Root Protection Mat (RPM): The purpose of the temporary RPM is to reduce compaction, rutting, and contamination of soils and root systems of trees to be retained should staging, temporary stockpile, or equipment access be required within the CRZ areas due to extreme site constraints.
 - 1. RPM shall be used for all access within CRZ areas of trees to remain. Matting is not required where existing pavement or concrete will remain undisturbed.
- L. Mulching of Trees: Application of a wood mulch product to areas surrounding designated trees. Mulch

increases moisture-holding capacity, helps mitigate soil compaction, and increases soil organic composition needed.

- M. Soil Amendments: Various product components applied to existing soil environment of protected trees, as indicated on Plan notes.
- N. Tree Growth Regulator (*Paclobutrazol*): Products applied to designated trees used to regulate plant growth in such a way as to restrict canopy growth and free stored or produced energy for other uses in the tree. For highly impacted trees, more energy may be made available for fibrous root growth (to

combat root loss), thicker darker leaves (allowing for increased photosynthesis, and increased drought tolerance), and pest tolerance (often an issue with construction stressed trees), among other potential benefits.

O. Limits of Disturbance (LOD) (also called Limits of Construction): Specific outer limits of all construction activities for the entire project.

P. DBH (Diameter at Breast Height): Tree trunk diameter measured at 4.5 feet above grade.

1.2 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings for specific protection work within tree critical root zones. These are as follows.
 - a) Root protection matting
 - b) Method of supplemental watering for tree protection areas.
- C. Documentation of work: For each phase, the Contract Arborist shall document that for each tree designated to remain, the required protection measures have been implemented prior to or during construction according to construction documents.
- D. Qualification Data: For Contract Arborist Firm Qualifications, submit firm and individual qualifications as follows.
 - a) Submit a minimum of two resumes and detailed qualifications from staff or team individuals assigned to this project as detailed under Quality Assurance below. Due to the complexity of this project, standard arboricultural experience may not qualify.
 - b) Provide references for above from a minimum of three commercial, non-governmental or governmental projects for whom similar tree preservation programs have been successfully implemented. Include the following information:
 - a. Project name, size and scope
 - b. Number and principal species of trees involved.
 - c. Relevant photos or aerials.
 - d. Tree preservation budget.
 - e. Scope of services provided.
 - f. Name and contact for project COTR, designer, or contractor.
- E. Pedestrian/Property Protection Plan: Contract Arborist to submit a written plan describing all protective measures proposed to be used to minimize potential impact to pedestrians, parked cars, workers and other public and private property.
 - a) Protection measures shall be required for all on-site tree care activities including but not limited to Supersonic Air Tool excavation, root pruning, canopy pruning, etc.
- F. Maintenance Prescription: Design Team Arborist (or Contract Arborist) shall submit seasonal/monthly recommendations for maintenance and stress reduction measures as a result of construction, changes in weather patterns or events, and response in health from individual trees during and after completing the work.
- G. Soil Samples: Submit soil sample for analysis during site work phase of this project. Take the samples between April through October. The sample shall be a combined mix of

representative soil samples from all areas of protected trees (landscape areas and street tree planting pits where pertinent). Samples and procedures per local cooperative extension shall be followed. Forward reports to Architect and Project Arborist.

- H. Soil Amendments: Contract Arborist shall submit specific fertilizer formulations, application rates and methods for review by Project Arborist. All fertilization and soil amendments shall be in conformance with soil test results.
- I. Site Documentation: Submit monthly reports to COTR and Project Arborist containing documentation of all tree protection work for each tree. These activities include but not limited to root pruning, tree protection fencing, excavation within critical root zones, temporary root protection or root aeration matting. Documentation shall include tree numbers of trees and plan markup. Representative photos of each activity are also required.
- J. Existing Conditions: Upon installation of designated protection measures the Contract Arborist shall submit documentation of existing trees and plantings indicated to remain, which establishes preconstruction conditions that might be misconstrued as damage caused by construction activities.
 - a) Use sufficiently detailed photographs, tree numbers, or videotape.
 - b) Include plans and notations to indicate specific prior wounds, root disturbance, damage, or conditions of each tree or other plants designated to remain.

1.3 QUALITY ASSURANCE

- A. On-site Arborist (individual) Qualifications: An arborist certified by the International Society of Arboriculture (ISA) and licensed in the jurisdiction where project is located. All work performed by Contract Arborist including any oversight and documentation work, shall be performed or directly supervised by at least one on-site arborist with these minimum qualifications.
- B. Contract Arborist Firm Qualifications:
 - 1. Established business with documented experience of at least five years.
 - 2. Experience working on a minimum of three commercial, nongovernmental or governmental projects where similar tree preservation programs have been successfully implemented.
 - 3. Properly licensed and insured to perform arboricultural work in the jurisdiction where the project is located.

Provide names of each individual to comply with the following:

- 4. Minimum BS or AS degree in forestry, arboriculture, or related field.
- 5. Certification by ISA (Certified Arborist or Board-Certified Master Arborist).
- 6. Maryland Licensed Tree Expert # as pertinent.
- 7. TRAQ qualifications.
- 8. Resumes should reflect combined 10 years' full-time experience on similar tree preservation projects.
- 9. Provide individual(s) names, certifications, and each anticipated role in this project. "Role(s)"

shall be defined as one or more of the following:

- a) Project Manager
- b) Technical oversight
- c) Field Arborist / Technician

For each staff member, list a minimum of three construction projects and a minimum three years' experience in the following technical applications:

10. Soil amendment prescriptions and applications.
11. Supersonic Air Tool Excavations for underground utilities equal to or exceeding 24" depth.
12. Root Protection Matting or similar applications.
13. Construction oversight and monitoring on large projects.
14. Coordination of arboricultural activities with construction project managers on large projects.

- C. Publications listed herein are part of this work to extent referenced:
 - a) ANSI A300 Standard Practices for Trees, Shrubs, and Other Woody Plant Maintenance
 - b) Part 1-2001, Tree Pruning;
 - c) Part 2-3004, Fertilization;
 - d) Part 3-2000, Cabling, Bracing, Guying of Established Trees;
 - e) Part 4-2002, Lightning Protection Systems.
 - f) ANSI Z133.1 - 1994 and most recent updates, Tree Care Operations - Safety Requirements
- D. Fertilizer and pesticides will be applied in strict accordance with the manufacturers label instructions and applicable federal, state, and local requirements. Fertilizer, soil conditioners, and pesticide applications must be approved by the COTR prior to application. Material Safety Data Sheets (MSDS) will be available for fertilizers and pesticides in the Contract Arborists' possession while on the site.
- E. Preconstruction Meeting: Conduct meeting at the project site prior to commencement of any project related site activities.
 1. Contract Arborist, Design Team Arborist, Project Design Team, COTR and Contractors shall attend. As well as the local agency inspector as applicable.
 2. Walk the site limits to review methods and procedures related to tree protection and preservation including, but not limited to, the following:
 - a) Construction schedule - verify availability of materials, personnel, and equipment needed to make progress and avoid delays.
 - b) Enforcement of requirements for tree protection areas.
 - c) Responsibilities of all parties, including coordination, access and timing requirements.
 - d) Field quality control.
 - e) Mark tree removals
 - f) Review and mark locations of root pruning, root protection mat-ting, and special demolition within tree protection areas.
 - g) Review sequencing of demo and excavation work near trees.
 - h) Review location and sequencing of shoring for excavation near trees.

1.4 PROJECT CONDITIONS

- A. The following practices are prohibited within all tree protection areas except as specifically indicated herein:
 - a) Storage or stockpiling of construction materials, chemicals, debris, or excavated materials
 - b) Parking vehicles, trailers or equipment
 - c) Foot traffic
 - d) Erection of sheds or structures
 - e) Impoundment or discharge of water

- f) Excavation or other digging unless otherwise indicated
 - g) Attachment of signs or other materials to, or wrapping materials around trees or plants unless otherwise indicated
- B. Do not direct vehicle or equipment exhaust toward protection zones.
- C. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones and organic mulch.

PART 2 – PRODUCTS

2.1 MATERIALS

- A. Temporary Light Duty Root Protection Matting (RPM): geo-composite material comprised of a tri-planar geonet structure with thermally bonded nonwoven geotextiles on both sides.
- 1. Material shall be SynTec ROADRAIN T-7 or approved equivalent.
 - 2. For short duration applications (1-2 pass/1-3 day or less), AlturMATs® or 1” thick steel plates may be used in lieu of RPM.
 - 3. Submit shop drawings / cut sheets and material samples for review by Project Arborist and project civil.
- B. Temporary Trunk/Limb Protection Wrap: to provide specific protection to tree trunks when construction activities are expected to be in proximity.
- 1. Material shall be SynTec ROADRAIN T-7 or approved equivalent.
 - 2. Alternative methods and materials may be submitted for review.
 - 3. Chain-Link Fence: Galvanized steel chain-link fence fabric of 10 - 12-gauge wire fabric; 6 feet high; with 1.9-inch- diameter line posts; 2-3/8 inch - diameter terminal and corner posts; with tie wires, hog ring ties, gates, and other accessories for a temporary fence system.
 - 4. Site Fence: Exact specifications per civil specifications.
 - 5. Welded Wire Fence: 48” height, 14 gauge, 4’ x2” galvanized fabric with 6’ steel T-posts, metal wire clips, tree protection signs.
- C. Woven Silt Tube: A three-dimensional tubular sediment control and storm water runoff filtration device typically used for perimeter control of sediment and soluble pollutants (such as phosphorus and petroleum hydrocarbons), on and around construction activities. This method of sediment control provides a non-invasive approach when used within tree protection zones there is no root disturbance.
- 1. Refer to manufacturer’s instructions for materials and installation: www.fil-trex.com or equivalent.
- D. Wood Chip Mulch
- 1. Double ground whole tree hardwood aged a minimum 6 months from production, free from deleterious materials. Green chips or mulch aged less than 6 months shall not be used. Walnut mulch shall not be used. Submittal shall include original material source(s), number and type of grindings/chippings, duration of aging, timing of turning /aeration.
- E. Hardwood Destructive Borer /Beetle Control: Bifenthrin, such as *Onyx* or equivalent. Applied per label.
- F. Tree Growth Regulator (*Paclobutrazol*)
- 1. Paclobutrazol is a compound used to regulate plant growth in such a way as to restrict canopy

growth and free stored or produced energy for other uses in the tree. For highly impacted trees, this means more energy may be made available for fibrous root growth (to combat root loss), thicker darker leaves (allowing for increased photosynthesis, and increased drought tolerance), and pest suppression (often an issue with construction stressed trees); among countless other potential benefits. Trade name Cambistat® or equal.

G. Soil Care/Soil Amendments

1. Fertilizer and soil amendment selection shall be based upon soil test results and recommendations.

PART 3 - EXECUTION

1.1 TREE REMOVAL

- A. All trees and shrubs or hedges designated for removal shall be marked red for review and approval by COTR.
- B. All trees designated for removal, shall be taken down sectionally, or directionally felled to minimize damage to adjacent tree canopies or root systems by a qualified Contract Arborist. Gouges in turf from impacts shall be filled with topsoil and seeded at the direction of the COTR. Damage to adjacent trees shall be reviewed by Project Arborist and COTR for remedial recommendations or replacement.
- C. All work shall be done by hand, bucket truck, or crane operated equipment.
- D. Motorized equipment shall operate on existing pavement and not enter tree preservation areas without prior approval. Temporary root protection matting may be required for such access to prevent rutting and compaction.
- E. Stumps shall be ground to 8" below grade and grindings raked and removed from site; backfill holes with approved topsoil and mulch or seed per COTR. Coordinate with underground utilities locators prior to grinding. All stump grinding shall be performed by the Contract Arborist.
 1. For tree pits where a new tree is proposed, the stump may be ground out completely (as determined by the Contract Arborist) to allow the proposed tree to be planted. Backfill as above.
 2. Only trees with stumps within deep excavations may have stumps removed by excavator. Stump excavation to be performed by Site Contractor and under the direct supervision of the Contract Arborist.
- F. Removal of shrubs and hedges designated for removal for each phase shall be cut and stumps ground out or hand dug to remove stumps. Prior to removal, verify with COTR.
- G. Remove all wood debris from site promptly. All wood debris shall be removed each day unless directed otherwise by COTR.

1.2 TREE PROTECTION AND STRESS REDUCTION MEASURES -

1. General

- A. Refer to the TPAK and drawings sheet, detail sheet, and notes sheet for specific measures determined for each tree.

- B. Installation/implementation of the following measures shall be performed in the field by an ISA Certified Arborist as provided by the Contract Arborist.
 - C. All work, substitutions and/or modifications shall be subject to review and approval by the COTR and Project Arborist.
 - D. All work shall conform to applicable federal, state and local regulations and industry standards.
 - E. The Contract Arborist shall be responsible for all items in this section.
2. Coordination of Temporary Tree and Plant Protection. The work of the Contract Arborist coordination to include but not limited to the following:
- A. Existing underground utility marker conflicts brought to the attention of the Contractor for resolution as well uncovered underground utilities as a result of work.
 - B. Coordinate necessary survey layout of proposed construction elements in order to provide accurate locations for tree protection measures.
 - C. Layout location of designated tree protection based upon proposed construction and methods of construction for that area.
 - D. Site walk with Design Team Arborist and Site Superintendent to verify location of all tree protection measures prior to execution.
 - E. Notify Site Superintendent and Design Team Arborist if construction adjacent to tree protection does not appear to follow specifications or prior agreement or conflicts with tree protection seem eminent.
 - F. Coordinate with Site Superintendent, Construction Managers, COTR, and Security for access of deliveries, crews, equipment, start up, and clean-up of each item of work.
 - G. Provide "as built" of any change to location of tree protection.
 - H. Attend progress meetings as requested.
 - I. Provide submittals as required.
 - J. Notify Superintendent and Project Arborist of any breach or damage to tree protection requiring attention.
3. Temporary Tree Protection Fence
- A. Type and placement of fence to be designated on Plans and Details.
 - B. Attach tree protection area signs @ 30' spacing facing construction LOD.
- For fences lower than 6' in height, attach minimum 3 strips glow-flagging 2' long for each fence panel.
- C. Tree protection area signs shall be high visibility and all weather to last the duration of the project / Phase. Phone number of responsible contacts per- son shall be included on sign.
 - D. Install after root pruning if shown, and prior to demolition, clearing & excavation.
 - E. Install at 6"-12" outside (construction side) of the Root Prune line or within the Root Prune trench.
 - F. Silt fence will be outside (construction side) the tree protection fence; unless super silt fence is used in lieu of tree protection. Trenchless installation method shall be employed per Detail if Root Protection Matting is designated.
 - G. Exact placement of fence will be determined in walk through with Contractor, Project Arborist, Contract Arborist, Architect and COTR.
 - H. Sequencing of the tree protection fence will be determined during the initial site walk. In any case, no construction activities shall occur in each phase or section until approved protection is installed.
4. Root Protection Mat (RPM)
- A. The purpose of the RPM is to reduce compaction, rutting, and contamination of soils and root systems of trees to be retained should staging, temporary stockpile, or equipment access be required within the CRZ areas due to extreme site constraints.
 - B. RPM shall be used for all access within CRZ areas of trees to remain. Matting is not required where existing pavement or concrete will remain undisturbed.

- C. Shop drawings indicating the placement and types of panels and layers to be used, and method of removal shall be submitted.
- D. Light Duty RPM is for tree protection for construction access receiving temporary or minimally repetitive materials staging, foot traffic, or light equipment access within protected root zone. Wood chip mulch 2-3" may be installed under matting to further protect soils and roots if indicated on drawings.
- E. If short duration access is needed, such as one week or less, the use of "AlturnaMATS", 1" steel plate, or approved equal may be needed to avoid rutting and compaction. These materials may be shifted and re-used as work progresses.
- F. Medium Duty RPM for rubber tracked equipment access and staging is not anticipated to cause rutting. A combination of 4-6" wood chip mulch, triple-ply geocomposite, Alturnamats, steel plates or other matting can be used.
- G. Extreme Duty RPM is for all-weather staging, stockpile, or other repetitive construction operations may require 12" stone layer over RPM to allow heavy vehicles have the potential to cause dynamic compaction yet without rutting original surface soils and roots. In this situation, the stone may be contained by silt fence or super silt fence where adjacent to or within a TPA.
- H. All temporary RPM areas to be used beyond a single day or beyond continuous on-site supervision of the Contract Arborist shall be surrounded by temporary tree protection fence as per specifications.
- I. For temporary staging of soils beyond 24 hours "trenchless" silt fence fabric shall be installed on the lower / downhill side or as directed by the Project Arborist.
- J. If Silt Fence is required for Erosion Control in RPM areas, installation of silt fence shall be coordinated with the Contract Arborist and must be performed by the Contract Arborist to prevent damage to tree roots from trenching operations. Erosion control socks may be used in lieu of silt fabric if approved by the COTR.

5. Supersonic Air Tool (SSAT) Excavation

- A. Refer to "Hand Excavation within Tree Protection Areas" specification in this section for additional requirements.
- B. At a minimum, all SSAT work shall include the use of a barrier system such as temporary walls or tents to protect property and pedestrians from flying debris.
- C. Excavate along the edge of the proposed trench closest to the trees to be protected as shown on the plans. Roots shall be uncovered, and care taken to avoid damage to roots and bark.
- D. Excavation shall proceed per the "Hand Excavation within Tree Protection Areas" specification in this section.

6. Wood chip mulch

- A. Mulching for the duration of construction for protection and stress reduction. Mulching will increase moisture-holding capacity, minimize soil compaction, and increase needed organic composition.
- B. Mulch area options:
 - 1. For individual trees designated on the TPAK within the TPA or curvilinear TPA install mulch to a radius equal to trunk diameter inches equated to mulch ring diameter in feet (24" trunk diameter = 24' diameter mulch ring). Where planting pit areas are restricted by hardscape or other restrictions, mulch the greatest area possible.
 - 2. For linear TPAs along LOD Install mulch strips a minimum 10' wide the length of critical root zones along the outside of the LOD/ Root Prune line (just inside the Tree Protection Zone) for designated significant trees impacted by proposed construction.
 - 3. Either option may be used as appropriate for the area.
- B. For privately owned trees, any installation is contingent upon receipt of COTR's permission.

COTRs may decline.

- C. Motorized equipment shall not enter the TPA unless specifically approved by the Project Arborist and specific conditions met (RPM, AlturnaMATS, etc.). Any such motorized equipment shall be operated by a certified arborist while inside the TPA.
- D. Do not allow mulch to contact trunk/root flare.
- E. Mulch depth shall be 3" – 4".
- F. Mulch shall remain for the duration of construction and may remain permanently if the COTR approves.
- G. If the mulch is to be removed after construction, it must be removed by hand only. No equipment may be used.

7. Tree Growth Regulator (Paclobutrazol):

- A. Paclobutrazol is a compound used to regulate plant growth in such a way as to restrict canopy growth and free stored or produced energy for other uses in the tree. For highly impacted trees, more energy may be made available for fibrous root growth (to combat root loss), thicker darker leaves allowing for increased photosynthesis, and increased drought tolerance.
- B. Specific methods and dosages are contained on the label and are determined by size and species and applied by a state licensed pesticide applicator. Designated trees are shown on the TPAK.

8. Supplemental Watering

- A. This action is for high impact trees of significance during seasonal drought times of project construction. Based upon the number and size of trees various strategies can be considered to maintain adequate soil moisture during these times. These strategies may include but are not limited to the following:
 - 1. Fire hydrant connection battery powered timer and drip irrigation hose / tubing.
 - 2. Water tank truck and hand applied as directed;
 - 3. Temporary above grade poly tank with battery-powered timers for drip or soaker hoses at each TPA.
 - 4. 30-50-gallon watering cans with 6-8 drilled holes in bottom to allow slow seeping of water; spacing and rotation to reach desired gallons. Equivalent means of effectively watering trees as approved by Architect or Project Arborist
- B. Trees requiring this treatment are indicated in the TPAK. Other trees will not receive this treatment.
- C. Drought times shall be defined as:
 - 1. Periods during the growing season of two weeks or longer, where daytime high temperatures reach 80 degrees Fahrenheit or higher and less than 3/4" rainfall is recorded per week. Or,
 - 2. Periods during the growing season designated as "abnormally dry" or "drought" of any severity, by the U.S. Drought Monitor: (<http://droughtmonitor.unl.edu/>). Or,
 - 3. Any period of extraordinary circumstance, as determined by the Project Arborist or COTR.
- D. A prescription for the number of gallons and strategy for watering designated trees will be developed. Large mature trees with impacts to root systems require as much as 100- 250 gallons per week during 90-degree days during summer drought times.
- E. Periodic inspections by an ISA Certified Arborist (provided by the Contract Arborist) at this time are critical. Depth of moisture in soils shall be determined by soil sample tube or other exploratory means.
- F. Minimum watering shall be 6 applications per growing season typically July through October

with the exact timing and duration to be determined by the ISA Arborist in conjunction with the COTR. Additional unit costs per watering designated trees at prescribed rates.

9. Overhead Clearance

- A. Trees to remain shall be assessed prior to construction for overhead clearance for construction activities. Contract Arborist shall recommend either canopy pruning, temporary guying/typing of select limbs, or alternative construction methods.
- B. Pruning for clearance shall not remove branches above 12' or over 6" diameter.
- C. All pruning proposed by the Contractor and/or Contract Arborist shall first be reviewed and approved by the COTR and Project Arborist.
- D. Equipment exhaust should be directed away from trees as much as possible. Stationary equipment shall not be exhausted directly under or towards trees.
- E. The contractor shall use appropriate equipment near trees to ensure that trees are not damaged by construction. Contractor shall provide any specialized equipment needed at no additional cost to the COTR.
- F. Any pruning shall also conform to the pruning specifications in this section.

10. Soil Tests and Soil Care/Fertilization

- A. Initial soil testing within tree protection areas is required. Conduct individual soil tests for separate tree protection areas (small adjacent areas may be tested together). Soil test shall be a representative sample from each area. Soil testing shall include a texture analysis (sand, silt, and clay percentages), soluble salts, and sodium tests.
- B. Treatments to the tree protection areas for specified trees (see TPAK) shall be based on the results of the soil analysis. Fertilization should be consistent with the recommendations of the ANSI A-300 (Part 2) Tree, Shrub, and Other Woody Plant Maintenance – Standard Practices (Fertilization) 2004, except as described herein.
- C. Application rates shall not exceed a rate of 1 pound of actual nitrogen per 1,000 square feet annually. Fertilizer used should include humic acids, soluble seaweed extracts and soil biological inoculants (mycorrhizae, etc.).
- D. Applications to confined areas (i.e. street tree planting pits) should be made by soil injection. In areas where adequate application rates cannot be achieved, injection should be made to the point of refusal.

11. SSAT Landscape Planting Excavation

- A. Proposed landscape planting of B&B plants within critical root zones within TPAs shall be reviewed by the Contract Arborist, contractor, and COTR in the field to determine potential for damage to priority roots of select trees and layout the limit of work.
- B. Pre-watering of the proposed areas of excavation during summer and fall months is recommended to maintain root / soil moisture.
- C. The Contract Arborist shall provide a qualified arborist crew experienced with the SSAT and landscape planting excavation to protect adjacent natural resources and construction work, open the excavation, hand prune minor roots, and identify and protect priority roots to remain. Coordination with the appropriate sub-contractor shall be made to determine appropriate width, depth, and sequencing.

3.3 FIELD QUALITY CONTROL AND MONITORING

A. Tree Condition Monitoring

- 1. An ISA Certified Arborist (provided by the Contract Arborist) shall perform monitoring twice per month year-round to monitor insects, disease, soil moisture levels, weather, and health

changes on all trees designated on Tree Protection Action Key.

2. The monitoring will include a report that details problematic areas that have been addressed, treatments provided to reduce the problem, and anticipated treatments forecast for 30 days. This report will be forwarded to the Project Arborist, Architect and COTR for documentation.
3. Any treatments recommended by the Contract Arborist not already included in the project scope shall be noted in the reports for review by the Project Arborist, Architect and COTR. No additional work is to be performed unless approved in writing by the COTR.

B. Construction Oversight by Contract Arborist

1. Any work within CRZs of retained trees shall be directly supervised by the Contract Arborist.
2. If roots are encountered during excavations, work shall progress as directed by the Contract Arborist. Contract Arborist, in coordination with the construction and design teams, shall determine appropriate means and methods to address the roots. Options may include, but not be limited to, severing the roots, hand or SSAT excavation. Contractor shall not cut roots.
3. Refer to "Hand Excavation within Tree Protection Areas" specification in this section.
4. All work shall be documented thoroughly, including photo documentation. Refer to site documentation submittal requirements.

3.4 CONTRACTOR DAMAGES AND PENALTIES

A. Remedial Measures

1. Any damage caused to the trees by the work of this contract through negligence by the contractor shall be immediately remedied by the contractor. Contractor shall be responsible for any associated costs.
2. Remedial work may include pruning, cabling, or any other measures up to and including removal and replacement, as determined by the Project Arborist and COTR.
3. Remedial work shall be performed by the Contract Arborist, as approved by the Project Arborist and COTR.
4. All required remedial work shall be performed to the satisfaction of the Project Arborist and COTR, at no additional cost to the COTR.

B. Tree Replacement

1. If damage to any tree is severe, because of negligence by the contractor as determined by the Project Arborist and COTR, it shall be replaced with a new tree of equal size caliper and species as that of the damaged tree.
2. If a replacement tree of equal size caliper is not possible as determined by the Project Arborist and COTR, it shall be replaced on an inch for inch basis with new trees of a minimum caliper size of 2-3".
3. Replacement trees shall be supplied and installed at no additional costs to the COTR, including all incidental costs including the costs of inspection of the tree at the nursery and any other incidental costs associated with tree replacement

END OF SECTION 015639

SECTION 01 5713 – TEMPORARY EROSION AND SEDIMENT CONTROL

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes requirements for temporary erosion and siltation control measures.

1.3 APPLICABLE SPECIFICATIONS

- A. DOEE Construction Standards and Specifications.
- B. DOEE Erosion and Sediment Control Manual
- C. DOEE Erosion and Sediment Control Details

1.4 INFORMATIONAL SUBMITTALS

- A. Erosion and Sedimentation Control Plan: Prior to the start of the work the Contractor shall prepare and submit a plan for applying temporary and permanent erosion and siltation control measures. The plan shall include, but is not limited to, the operations of clearing and grubbing, stripping of topsoil, grading, stabilizing cleared areas, dewatering, and the construction of structures at watercourses. Construction work shall not commence until the schedule of work, and the methods of operations have been reviewed and approved by the Engineer.
- B. Temporary measures shall be coordinated with the construction of permanent drainage facilities and other contract work to the extent practicable to ensure economical, effective, and continuous erosion and sediment control, and to prevent any damage, clogging, or other negative impacts upon the Work or other property.

1.5 PROJECT CONDITIONS

- A. Retain this article to impose responsibility for maintenance and protection of permanent services and facilities used to provide temporary service and facility. Unless otherwise specified, the Contractor is responsible for obtaining and complying with any and all applicable State, Federal, and Local permits which are required for construction.

PART 2 – PRODUCTS

2.1 MATERIALS

- A. Materials shall be at the Contractor's option with the approval of the Engineer in Accordance with DOEE.

PART 3 - EXECUTION

3.1 Installation and Maintenance of erosion and Sediment Control

- A. Contractor shall pull DOEE permits, coordinate DOEE site inspections, DOEE site approvals and pay all DOEE related fees as per jobsite site requirements.
- B. No grading operations will be allowed until temporary sediment and erosion control measures have been installed in accordance with the approved plan.
- C. Control measures shall be periodically cleaned of silt and maintained. Immediately after every rainstorm, all control measures shall be inspected and any deficiencies corrected by the Contractor.
- D. DOEE reserves the right to order the performance of other temporary measures not specifically described herein to correct an erosion or siltation condition.
- E. Temporary control measures may be removed when the area has been stabilized.

3.2 EXTENT OF GRADING OPERATIONS

- A. The Contractor shall limit the surface area of earth material exposed by grubbing, stripping of topsoil and excavation to that which is necessary to perform the next operation within a given area.
- B. Unless specifically authorized by the Engineer, the grubbing of root mat and stumps shall be confined to the area over which excavation is to be actively prosecuted within 30 days following the grubbing operations.
- C. The stripping of topsoil shall be confined to the area over which excavation is to be actively prosecuted within 7 days following the stripping operations; and excavation and embankment construction shall be confined to the minimum area necessary to accommodate the Contractor's equipment and work force engaged in the earth moving work.
- D. No disturbed area, is to remain denuded longer than 7 days without temporary seeding or otherwise stabilizing the area.

3.3 DEWATERING AND DISCHARGES

- A. All dewatering operations shall be conducted in a manner that prevents or minimizes the amount of sediment or other pollutants which discharge to the storm sewer system, which includes curb and gutter, or any open watercourse. Any discharge from dewatering operations shall be properly filtered prior to being discharged. Dewatering activities shall not create any erosion nor flooding. A dewatering plan must be included as part of the Erosion and Sediment Control plan with sufficient detail to ensure that the proposed dewatering will meet all applicable requirements.
- B. All non-stormwater discharges to the DC Water's storm sewer system, which includes curb and gutter, or any open watercourse must comply regulations. Contaminants, including but not limited to, volatile organic compounds, petroleum products, metals, PCBs/Pesticides, shall not be discharged to the DC Waters storm sewer system without approval from DC Water.
- C. Contractors shall not dump or dispose of anything in a storm drain, street, stream, or riparian area that could cause adverse conditions. Contractors shall employ good housekeeping and pollution prevention measures at work sites at all times. Work areas, including staging or stockpile areas, shall be kept clean and free of trash and debris to the maximum extent possible. Construction materials shall be properly stored and secured. Stockpiled materials shall be kept covered and

perimeter controls shall be employed to minimize exposure to wind, precipitation, and runoff. Equipment and vehicle washing shall not be permitted onsite without proper controls and facilities to collect all sediment and/or pollutants. Spill kits and appropriate tools for cleanup shall be kept on-site at all times. Spills shall be cleaned immediately using absorbent materials or other appropriate measures which will prevent any pollutants from entering a storm drain or open watercourse.

END OF SECTION 01 5713

FOR REFERENCE ONLY

SECTION 01 5715 - TEMPORARY NOISE AND VIBRATION CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes requirements for temporary acoustic walls and associated structures.

1.2 REFERENCES

- A. "The Smithsonian National Zoo – Arabian Leopard Enclosure: Preliminary Acoustic Narrative" Metropolitan Acoustics, January 22, 2026

1.3 SUBMITTALS

- A. Implementation and Termination Schedule: Within 15 days of date established for commencement of the Work, submit schedule indicating implementation and termination dates of each temporary measures as described in this section.
- B. Site Plan: Show temporary facilities, utility hookups, staging areas, and parking areas for construction personnel integrated with temporary noise barrier indicated on the site plan.
- C. Noise and Vibration Control Plan: Identify construction activities that may impact the occupancy and use of existing spaces within the project site or adjacent existing buildings, whether occupied by others, or occupied by the Owner. Include the following:
 - 1. Methods used to meet the goals and requirements of the Owner.
 - 2. Concrete cutting method(s) to be used.
 - 3. Location of construction devices on the site.
 - 4. Show compliance with the use and maintenance of quieted construction devices for the duration of the Project.
 - 5. Indicate activities that may disturb adjacent building occupants and that are planned to be performed during non-standard working hours as coordinated with the Owner.
 - 6. Indicate locations of sensitive areas or other areas requiring special attention as identified by Owner. Indicate means for complying with Owner's requirements.
- D. Product Data: Provide product data sheet clearly indication height, color, and composition of acoustic canvas panels. Structure from which panels will be hung to also be provided.
- E. Warranty Documentation
- F. Shop Drawings:
 - 1. Clearly indicate layout of individual panels integrated on the site coordinated and located on a site plan.
 - 2. Engineer sealed drawings of structural system from which acoustic canvas panels to be hung to be provided showing typical elevation, member sizes, plan, etc.

1.4 MOCKUPS

- A. Pre-installation Meeting: Pre-installation meeting to take place with Owner and Architect prior to installation of in-place mockup.
- B. In-place Mockup: Provide on-site mockup of no less than (2) panels in place on site.

1.5 PROJECT CONDITIONS

- A. Temporary Use of Permanent Facilities: Engage Installer of each permanent service to assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Acoustic Canvas Panels (Temporary Noise Barrier Fence):
 - 1. Manufacturers:
 - a. SoftdB (Basis of Design)
 - b. Environmental Noise Control Sound Walls
 - c. Noise Monitoring Services Temporary Sound Walls
 - 2. Material: PVC fabric, ultrasonic welded, reinforced with fiberglass, encasing 50mm Rockwool acoustic insulation and high-density noise reduction vinyl sheet.
 - a. UV resistant and watertight.
 - 3. Sound Attenuation: minimum STC-34
 - 4. Warranty: Minimum 1-year
 - 5. Face Weight: Minimum 4 PSF
 - 6. Height: 15 Feet
 - 7. Length: 160 feet (see Preliminary Acoustic Narrative for additional information)
 - 8. Support Structure: As specified by Contractor/Manufacturer.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work.
 - 1. Locate facilities to limit site disturbance as specified in Section 01 1000 "Summary."
- B. Provide each facility ready for use when needed to avoid delay. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.2 SECURITY AND PROTECTION FACILITIES INSTALLATION

- A. Site Enclosure Fence and Temporary Noise Barrier: Before construction operations begin, furnish and install site enclosure fence in a manner that will prevent people from easily entering site except by entrance gates.

1. Extent of Fence: As required to enclose entire Project site or portion determined sufficient to accommodate construction operations.

3.3 OPERATION, TERMINATION, AND REMOVAL

- A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.
- B. Maintenance: Maintain facilities in good operating condition until removal.
 1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
- C. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.
 1. Materials and facilities that constitute temporary facilities are property of Contractor. Owner reserves right to take possession of Project identification signs.
 2. At Substantial Completion, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Section 01 7700 "Closeout Procedures."

END OF SECTION

SECTION 01 6000 - PRODUCT REQUIREMENTS**PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; and comparable products.
- B. Related Requirements:
 - 1. Division 01 Section 013300 "Submittal Procedures."
 - 2. Division 01 Section 014200 "References" for applicable industry standards for products specified.
 - 3. Division 01 Section 017700 "Closeout Procedures" for submitting warranties for contract closeout.

1.3 DEFINITIONS

- A. Products: Items obtained for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.
 - 1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature that is current as of date of the Contract Documents.
 - 2. New Products: Items that have not previously been incorporated into another project or facility. Products salvaged or recycled from other projects are not considered new products.
 - 3. Comparable Product: Product that is demonstrated and approved through submittal process to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.
- B. Basis-of-Design Product Specification: A specification in which a specific manufacturer's product is named and accompanied by the words "basis-of-design product," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of additional manufacturers named in the specification.
- C. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Construction Documents and proposed by Contractor.
- D. Manufacturer's Warranty: Preprinted written warranty published by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.
- E. Special Warranty: Written warranty required by or incorporated into the Construction Documents, either to extend time limit provided by manufacturer's warranty or to provide more

rights for Owner.

1.4 SUBMITTALS

- A. Product List: Submit a list, in tabular form, showing specified products. Include generic names of products required. Include manufacturer's name and proprietary product names for each product.
1. Coordinate product list with Contractor's Construction Schedule and the Submittals Schedule.
 2. Form: Tabulate information for each product under the following column headings:
 - A. Specification Section number and title.
 - B. Generic name used in the Construction Documents.
 - C. Proprietary name, model number, and similar designations.
 - D. Manufacturer's name and address.
 - E. Supplier's name and address.
 - F. Installer's name and address.
 - G. Projected delivery date or time span of delivery period.
 - H. Identification of items that require early submittal approval for scheduled delivery date.
 3. Completed List: Within 60 days after date of commencement of the Work, submit 5 copies of completed product list. Include a written explanation for omissions of data and for variations from Construction requirements.
 4. COTR's Action: COTR will respond in writing to Contractor within 21 days of receipt of completed product list. COTR's response will include a list of unacceptable product selections and a brief explanation of reasons for this action. COTR's response, or lack of response, does not constitute a waiver of requirement that products comply with the Construction Documents.
- B. Substitution Requests: Substitutions may be considered only in accordance with the procedures indicated in the "Brand Name or Equal" Contract Clause. Submit three copies of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
1. Substitution Request Form: Submit request on Supplier/Subcontractor letterhead, accompanied by cover letter on General Contractor's letterhead.
 2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:
 - A. Statement indicating why specified material or product cannot be provided.
 - B. Coordination information, including a list of changes or modifications needed to other parts of the Work and to construction performed by Owner and separate contractors that will be necessary to accommodate proposed substitution.
 - C. Detailed comparison of significant qualities of proposed substitution with those of the work specified. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
 - D. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
 - E. Samples, where applicable or requested.
 - F. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners.
 - G. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
 - H. Research/evaluation reports evidencing compliance with building code in effect for Project, from a model code organization acceptable to authorities having jurisdiction.

- I. Detailed comparison of Contractor's Construction Schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating lack of availability or delays in delivery.
 - J. Cost information, including a proposal of change, if any, in the Contract Sum.
 - K. Contractor's certification that proposed substitution complies with requirements in the Construction Documents and is appropriate for applications indicated.
 - L. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.
 - M. Any additional costs incurred by SI (e.g., travel, site visit, AE investigation, etc.) related to the substitution shall be borne by the Contractor.
3. COTR's Action: If necessary, COTR will request additional information or documentation for evaluation within one week of receipt of a request for substitution. COTR will notify Contractor of acceptance or rejection of proposed substitution within 21 days of receipt of request, or 15 days of receipt of additional information or documentation, whichever is later.
- a. Form of Acceptance: Letter from COTR and/or Change Order/Contract Modification, if necessary.
 - b. Use product specified if COTR cannot make a decision on use of a proposed substitution within time allocated.
 - c. Substitution request should not result in basis for Contract Time extension.
- C. Basis-of-Design Product Specification Submittal: Comply with requirements in Division 01 Section "Submittal Procedures." Show compliance with requirements.

1.5 QUALITY ASSURANCE

- A. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.
 - 1. Each contractor is responsible for providing products and construction methods compatible with products and construction methods of other contractors.
 - 2. If a dispute arises between contractors over concurrently selectable but incompatible products, Architect will determine which products shall be used.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.
- B. Delivery and Handling:
 - 1. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
 - 2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
 - 3. Deliver products to Project site in an undamaged condition in manufacturer's original

sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.

4. Inspect products on delivery to determine compliance with the Contract Documents and to determine that products are undamaged and properly protected.

C. Storage:

1. Store products to allow for inspection and measurement of quantity or counting of units.
2. Store materials in a manner that will not endanger Project structure.
3. Store products that are subject to damage by the elements, under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation.
4. Protect foam plastic from exposure to sunlight, except to extent necessary for period of installation and concealment.
5. Comply with product manufacturer's written instructions for temperature, humidity, Ventilation, and weather-protection requirements for storage.
6. Protect stored products from damage and liquids from freezing.
7. Provide a secure location and enclosure at Project site for storage of materials and equipment by Owner's construction forces. Coordinate location with Owner.

1.7 PRODUCT WARRANTIES

- A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturers' disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.
 1. Manufacturer's Warranty: Written warranty furnished by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.
 2. Special Warranty: Written warranty required by the Contract Documents to provide specific rights for Owner.
- B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution.
 1. Manufacturer's Standard Form: Modified to include Project specific information and properly executed.
 2. Specified Form: When specified forms are included with the Specifications, prepare a written document using indicated form properly executed.
 3. See other Sections for specific content requirements and particular requirements for submitting special warranties.
- C. Submittal Time: Comply with requirements in Section 017700 "Closeout Procedures."

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

- A. General Product Requirements: Provide products that comply with the Contract Documents, are undamaged and, unless otherwise indicated, are new at time of installation.
 1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
 2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.

3. COTR reserves the right to limit selection to products with warranties not in conflict with requirements of the Contract Documents.
 4. Where products are accompanied by the term "as selected," COTR will make selection.
 5. Where products are accompanied by the term "match sample," sample to be matched is provided by the COTR.
 6. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.
 7. Or Equal: For products specified by name and accompanied by the term "or equal," or "or approved equal," or "or approved," comply with requirements in "Comparable Products" Article to obtain approval for use of an unnamed product.
- B. Product Selection Procedures:
1. Product: Where Specification paragraphs or subparagraphs titled "Product" name a single product and manufacturer, provide the product named.
 - a. Substitutions may be considered as provided in "Brand Name or Equal" Clause.
 - b. Contractor shall provide all additional labor and materials consequential to the approval of any substitution or component thereof.
 2. Manufacturer/Source: Where Specification paragraphs or subparagraphs titled "Manufacturer" or "Source" name single manufacturers or sources, provide a product by the manufacturer or from the source named that complies with requirements. Substitutions may be considered only as provided in the "Brand Name or Equal" Clause.
 3. Products: Where Specification paragraphs or subparagraphs titled "Products" introduce a list of names of both products and manufacturers, provide one of the products listed that complies with requirements. Substitutions may be considered only as provided in the "Brand Name or Equal" Clause.
 4. Manufacturers: Where Specification paragraphs or subparagraphs titled "Manufacturers" introduce a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements. Substitutions may be considered only as provided in the "Brand Name or Equal" Clause.
 5. Available Products: Where Specification paragraphs or subparagraphs titled "Available Products" introduce a list of names of both products and manufacturers, provide one of the products listed or another product that complies with requirements. Comply with provisions in "Comparable Products" Article ("Brand Name or Equal" Clause) to obtain approval for use of an unnamed product.
 6. Available Manufacturers: Where Specification paragraphs or subparagraphs titled "Available Manufacturers" introduce a list of manufacturers' names, provide a product by one of the manufacturers listed or another manufacturer that complies with requirements. Comply with provisions in "Comparable Products" Article ("Brand Name or Equal" Clause) to obtain approval for use of an unnamed product.
 7. Product Options: Where Specification paragraphs titled "Product Options" indicate that size, profiles, and dimensional requirements on Drawings are based on a specific product or system, provide either the specific product or system indicated or a comparable product or system by another manufacturer. Comply with provisions in "Product Substitutions" Article ("Brand Name or Equal" Clause).
 8. Basis-of-Design Products: Where Specification paragraphs or subparagraphs titled "Basis-of-Design Products" are included and also introduce or refer to a list of manufacturers' names, provide either the specified product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with provisions in "Comparable Products" Article ("Brand Name or Equal" Clause) to obtain approval for use of an unnamed product.
 9. Visual Matching Specification: Where Specifications require matching an established Sample, select a product (and manufacturer) that complies with requirements and matches sample. COTR's decision will be final on whether a proposed product matches satisfactorily.

- a. If no product available within specified category matches satisfactorily and complies with other specified requirements, comply with provisions of the Contract Documents on "substitutions" for selection of a matching product.
- 10. Visual Selection Specification: Where Specifications include the phrase "as selected from manufacturer's colors, patterns, textures or a similar phrase, select a product (and manufacturer) that complies with other specified requirements.
 - a. Standard Range: Where Specifications include the phrase "standard range of colors, patterns, textures" or similar phrase, COTR will select color, pattern, or texture from manufacturer's product line that does not include premium items.
 - b. Full Range: Where Specifications include the phrase "full range of colors, patterns, textures" or similar phrase, COTR will select color, pattern, or texture from

manufacturer's product line that includes both standard and premium items.

- 11. Codes, Standards, and Regulations: Select products that are in compliance with the Project specifications and SI standards, as well as with construction standards and all applicable codes and regulations.
- 12. Performance Requirements: Provide products that comply with specific performances indicated and are recommended by the manufacturer (in published product literature or by individual certification) for the application indicated.
- 13. Prescriptive Requirements: Provide products that have been produced in accordance with prescriptive requirements, using specified ingredients and components, and comply with specified requirements for mixing, fabricating, curing, finishing, testing, and other operations in the manufacturing process.

2.2 PRODUCT SUBSTITUTIONS

- A. Timing: COTR will consider requests for substitution. Substitutions may be considered only in accordance with the procedures indicated in the "Brand Name or Equal" Contract Clause.
- B. Conditions: COTR will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, COTR will return requests without action, except to record noncompliance with these requirements:
 - 1. Requested substitution offers SI a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities SI must assume.
 - 2. Requested substitution is consistent with the Construction Documents and will produce indicated results.
 - 3. Substitution request is fully documented and properly submitted.
 - 4. Requested substitution will not adversely affect Contractor's Construction Schedule.
 - 5. Requested substitution has received necessary approvals of authorities having jurisdiction.
 - 6. Requested substitution is compatible with other portions of the Work.
 - 7. Requested substitution has been coordinated with other portions of the Work.
 - 8. Requested substitution provides specified warranty.
 - 9. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

2.3 COMPARABLE PRODUCTS

- A. "Brand Name or Equal" Clause governs. Where products or manufacturers are specified by name, submit the following, in addition to other required submittals, to obtain approval of an unnamed product:

1. Evidence that the proposed product does not require revisions to the Construction Documents that it is consistent with the Construction Documents and will produce the indicated results, and that it is compatible with other portions of the Work.
2. Detailed comparison of significant qualities of proposed product with those named in the Specifications or commonly referenced in the industry. Significant qualities include, but are not limited to, attributes such as performance, weight, size, durability, material construction, maintainability, sustainability, compatibility, aesthetic and visual effect, texture, toxicity, consequential effects of use, and specific features and requirements indicated.
3. Evidence that proposed product provides specified warranty.
4. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners.

PART 3 - EXECUTION (Not

Used)

END OF SECTION 016000

SECTION 01 7300 - EXECUTION REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes general administrative and procedural requirements governing execution of the Work including, but not limited to, the following:
 - 1. Construction layout.
 - 2. Field engineering and surveying.
 - 3. Installation of the Work.
 - 4. Cutting and patching.
 - 5. Coordination of Owner-installed products.
 - 6. Progress cleaning.
 - 7. Starting and adjusting.
 - 8. Protection of installed construction.
 - 9. Correction of the Work.
- B. Related Requirements:
 - 1. Division 01 Section 013100 "Project Management and Coordination" for procedures for coordinating field engineering with other construction activities.
 - 2. Division 01 Section 013300 "Submittal Procedures" for submitting surveys.
 - 3. Division 01 Section 017700 "Closeout Procedures" for submitting final property survey with Project Record Documents, recording of SI-accepted deviations from indicated lines and levels, and final cleaning.

1.3 DEFINITIONS

- A. Cutting: Removal of in-place construction necessary to permit installation or performance of other work.
- B. Patching: Fitting and repair work required to restore construction to original conditions after installation of other work.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For land surveyor and professional engineer.
- B. Certificates: Submit certificate signed by professional engineer certifying that location and elevation of improvements comply with requirements.
- C. Cutting and Patching Plan: Submit plan describing procedures at least 10 days prior to the time cutting and patching will be performed. Include the following information:
 - 1. Extent: Describe reason for and extent of each occurrence of cutting and patching.
 - 2. Changes to In-Place Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building appearance

- and other significant visual elements.
 - 3. Products: List products to be used for patching and firms or entities that will perform patching work.
 - 4. Dates: Indicate when cutting and patching will be performed.
 - 5. Utilities and Mechanical and Electrical Systems: List services and systems that cutting and patching procedures will disturb or affect. List services and systems that will be relocated and those that will be temporarily out of service. Indicate length of time permanent services and systems will be disrupted.
 - a. Include description of provisions for temporary services and systems during interruption of permanent services and systems.
 - D. Landfill Receipts: Submit copy of receipts issued by a landfill facility, licensed to accept hazardous materials, for hazardous waste disposal.
 - E. Certified Surveys: Submit one hard, CAD / GIS, and PDF copies signed by professional engineer.
 - F. Final Site Survey: Submit one hard, CAD / GIS, and PDF copies showing the Work performed and record survey data.
- 1.5 QUALITY ASSURANCE
- A. Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing land-surveying services of the kind indicated.
 - B. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of construction elements.
 - 1. Structural Elements: When cutting and patching structural elements, notify C O T R of locations and details of cutting and await directions from COTR before proceeding. Shore, brace, and support structural elements during cutting and patching. Do not cut and patch structural elements in a manner that could change their load-carrying capacity or increase deflection.
 - 2. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety. Operational elements include the following:
 - a. Primary operational systems and equipment.
 - b. Fire separation assemblies.
 - c. Air or smoke barriers.
 - d. Fire-suppression systems.
 - e. Mechanical systems piping and ducts.
 - f. Control systems.
 - g. Communication systems.
 - h. Fire-detection and -alarm systems
 - i. Electrical wiring systems.
 - j. Operating systems of special construction.
 - 3. Other Construction Elements: Do not cut and patch other construction elements or components in a manner that could change their load-carrying capacity, which results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety.

Other construction elements include but are not limited to the following:

- a. Water, moisture, or vapor barriers.
 - b. Membranes and flashings.
 - c. Exterior curtain-wall construction.
 - d. Sprayed fire-resistive material.
 - e. Equipment supports.
 - f. Piping, ductwork, vessels, and equipment.
 - g. Noise- and vibration-control elements and systems.
4. Visual Elements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch exposed construction in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.
- C. Cutting and Patching Conference: Before proceeding, meet at Project site with parties involved in cutting and patching, including mechanical and electrical trades. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.
- D. Manufacturer's Installation Instructions: Obtain and maintain on-site manufacturer's written recommendations and instructions for installation of products and equipment.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. General: Comply with requirements specified in other Sections.
- 1. For projects requiring compliance with sustainable design and construction practices and procedures, use products for patching that comply with requirements in Section 018113.13 "Sustainable Design Requirements - LEED for New Construction and Major Renovations."
- B. In-Place Materials: Use materials for patching identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.
- 1. If identical materials are unavailable or cannot be used, use materials that, when installed, will provide a match acceptable to Architect for the visual and functional performance of in-place materials.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Existing Conditions: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities, mechanical and electrical systems, and other construction affecting the Work.
- 1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, and water-service piping, underground electrical services, and other utilities.
 - 2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.

- B. Existing Utilities: The existence and location of underground and other utilities and

construction indicated as existing are not guaranteed. Before beginning site work, investigate and verify the existence and location of underground utilities and other construction affecting the Work.

1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, and water-service piping, and underground electrical services.
 2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.
- C. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.
1. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
 2. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
 3. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
- D. Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:
1. Description of the Work.
 2. List of detrimental conditions, including substrates.
 3. List of unacceptable installation tolerances.
 4. Recommended corrections.
- E. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Existing Utility Information: Furnish information to COTR that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.
- B. Existing Utility Interruptions: Do not interrupt utilities serving facilities occupied by SI or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:
1. Notify COTR not less than two days in advance of proposed utility interruptions.
 2. Do not proceed with utility interruptions without COTR's written permission.
- C. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
- D. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents caused by differing field conditions outside the control of Contractor, submit a request for information to Architect according to requirements in Section 013100 "Project Management and Coordination."

3.3 CONSTRUCTION LAYOUT

- A. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks. If discrepancies are discovered, notify COTR promptly.
- B. General: Engage a professional engineer to lay out the Work using accepted surveying practices.
 - 1. Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.
 - 2. Establish limits on use of Project site.
 - 3. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
 - 4. Inform installers of lines and levels to which they must comply.
 - 5. Check the location, level and plumb, of every major element as the Work progresses.
 - 6. Notify COTR when deviations from required lines and levels exceed allowable tolerances.
 - 7. Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.
- C. Site Improvements: Locate and layout site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and rim and invert elevations.
- D. Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.
- E. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by COTR.

3.4 FIELD ENGINEERING

- A. Identification: COTR will identify existing benchmarks, control points, and property corners.
- B. Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.
 - 1. Do not change or relocate existing benchmarks or control points without prior written approval COTR. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to COTR before proceeding.
 - 2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.
- C. Benchmarks: Establish and maintain a minimum of two permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.
 - 1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.
 - 2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.

3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.
- D. Certified Survey: On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.
- E. Final Property Survey: Engage a professional engineer to prepare a final property survey showing significant features (real property) for the Project. Include a certification on the survey, signed by a professional engineer, that certifies the metes, bounds, lines, and levels are accurately positioned as shown on the survey.
 1. Show boundary lines, monuments, streets, site improvements and utilities, existing improvements, and significant vegetation, adjoining properties, acreage, grade contours, and the distance and bearing from a site corner to a legal point.
 2. Recording: At Substantial Completion, have the final property survey recorded by or with authorities having jurisdiction as the official "property survey."

3.5 INSTALLATION

- A. General: Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.
 1. Make vertical work plumb and make horizontal work level.
 2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
 3. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.
 4. Maintain minimum headroom clearance of 96 inches in occupied spaces and 90 inches in unoccupied spaces.
- B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.
- C. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.
- D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.
- E. Sequence the Work and allow adequate clearances to accommodate movement of construction items on site and placement in permanent locations.
- F. Tools and Equipment: Do not use tools or equipment that produce harmful noise levels.
- G. Templates: Obtain and distribute templates, to the party's involved, for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.
- H. Attachment: Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the work. Where size and type of attachments are not indicated, verify size and type required for load conditions.
 1. Mounting Heights: Where mounting heights are not indicated, mount components at

- heights directed by COTR.
- 2. Allow for building movement, including thermal expansion and contraction.
- 3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, which are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- I. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.
- J. Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.

3.6 CUTTING AND PATCHING

- A. Cutting and Patching, General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.
 - 1. Cut in-place construction to provide for installation of other components or performance of other construction and subsequently patch as required to restore surfaces to their original condition.
- B. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during installation or cutting and patching operations, by methods and with materials that won't void existing warranties.
- C. Temporary Support: Provide temporary support of work to be cut.
- D. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.
- E. Adjacent Occupied Areas: Where interference with use of adjoining areas or interruption of free passage to adjoining areas is unavoidable, coordinate cutting and patching according to requirements in Section 011000 "Summary."
- F. Existing Utility Services and Mechanical/Electrical Systems: Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to prevent interruption to occupied areas.
- G. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.
 - 1. In general, use hand or small power tools designed for sawing and grinding, not hammering, and chopping. Cut holes and slots neatly to minimum size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
 - 2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
 - 3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond- core drill.
 - 4. Excavating and Backfilling: Comply with requirements in applicable Sections where required by cutting and patching operations.
 - 5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portions of pipe or conduit to

- prevent entrance of moisture or other foreign matter after cutting.
 - 6. Proceed with patching after construction operations requiring cutting are complete.
- H. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other work. Patch with durable seams that are as invisible as practicable. Provide materials and comply with installation requirements specified in other Sections, where applicable.
 - 1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.
 - 2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will minimize evidence of patching and refinishing.
 - a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
 - b. Restore damaged pipe covering to its original condition.
 - 3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.
 - a. Where patching occurs in a painted surface, prepare substrate, apply primer, and intermediate paint coats appropriate for substrate over the patch, and apply final paint coat over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.
 - 4. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.
 - 5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition and ensures thermal and moisture integrity of building enclosure.
- I. Cleaning: Clean areas and spaces where cutting and patching are performed. Remove paint, mortar, oils, putty, and similar materials from adjacent finished surfaces.

3.7 SUBMITTALS

- A. Cutting and Patching Proposal: For areas not indicated to be cut and patched in the Construction Drawings, submit a proposal describing procedures at least 10 days before the time cutting and patching will be performed, requesting approval to proceed. Include the following information:
 - 1. Extent: Describe cutting and patching, show how they will be performed, and indicate why they cannot be avoided.
 - 2. Changes to Existing Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building's appearance and other significant visual elements.
 - 3. Products: List products to be used and firms or entities that will perform the Work.
 - 4. Dates: Indicate when cutting and patching will be performed.
 - 5. Utilities: List utilities that cutting and patching procedures will disturb or affect. List utilities that will be relocated and those that will be temporarily out of service. Indicate how long service will be disrupted.

6. Structural Elements: Where cutting and patching involve adding reinforcement to structural elements, submit details and engineering calculations showing integration of reinforcement with original structure. Do not cut or alter structural members except where noted on the drawings, without approval of
7. the cutting and patching proposal and authorization of the COTR. COTR's Approval: Obtain approval of cutting and patching proposal before cutting and patching. Approval does not waive right to later require removal and replacement of unsatisfactory work.
8. Torch or Arc cutting, burning, welding and penetrations through fire separations must be coordinated with the COTR and submitted for prior approvals and permits.

3.8 QUALITY ASSURANCE

- A. Structural Elements: Do not cut and patch structural elements in a manner that could change their load-carrying capacity or load-deflection ratio.
- B. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that result in increased maintenance or decreased operational life or safety.
- C. Visual Requirements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch construction exposed on the exterior or in occupied spaces in a manner that would, in COTR's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.
- D. Call unknown conditions exposed by removal of existing work that do not match new finishes or align with new work to the COTR's immediate attention. Necessary corrective work directed by the COTR will be subject to adjustment provisions as stated in the Contract.

3.9 WARRANTY

- A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during cutting and patching operations, by methods and with materials so as not to void existing warranties.

END OF SECTION 017300

SECTION 01 7419 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections apply to this Section.

1.2 SUMMARY

- A. Reduce construction and demolition waste on job site and minimize waste sent to landfills through implementation of Construction Waste Management Plan as required by USGBC's LEED® 2009 for New Construction & Major Renovations and as outlined within this Section and in the Sections referenced herein
- B. Section includes administrative and procedural requirements for the following:
 - 1. Salvaging nonhazardous waste.
 - 2. Recycling nonhazardous waste.
 - 3. Disposing of nonhazardous waste.
- C. Related Requirements:
 - 1. Section 024119 "Selective Demolition" for disposition of waste resulting from partial demolition of buildings, structures, and site improvements.
 - 2. Section 042000 "Unit Masonry" for disposal requirements for masonry waste.
 - 3. Section 311000 "Site Clearing" for disposition of waste resulting from site clearing and removal of above - and below-grade improvements.

1.3 DEFINITIONS

- A. Construction Waste: Building and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.
- B. Demolition Waste: Building and site improvement materials resulting from demolition or selective demolition operations.
- C. Disposal: Removal off-site of demolition and construction waste and subsequent sale, recycling, reuse, or deposit in landfill or incinerator acceptable to authorities having jurisdiction.
- A. Recycle: Recovery of demolition or construction waste for subsequent processing in preparation for reuse.
- E. Salvage: Recovery of demolition or construction waste and subsequent sale or reuse in another facility.
- F. Salvage and Reuse: Recovery of demolition or construction waste and subsequent incorporation into the Work.

1.4 PERFORMANCE REQUIREMENTS

- A. General: Achieve end-of-Project rates for salvage/recycling as required for percent by weight of total non-hazardous solid waste generated by the Work. Practice efficient waste management in the use of materials in the course of the Work. Use all reasonable means to divert construction and demolition waste from landfills and incinerators. Facilitate recycling and salvage of materials **including the following**:
 - 1. Demolition Waste:
 - a. Asphalt paving.

- b. Concrete.
- c. Concrete reinforcing steel.
- d. Brick.
- e. Concrete masonry units.
- f. Wood studs.
- g. Wood joists.
- h. Plywood and oriented strand board.
- i. Wood paneling.
- j. Wood trim.
- k. Structural and miscellaneous steel.
- l. Rough hardware.
- m. Roofing.
- n. Insulation.
- o. Doors and frames.
- p. Door hardware.
- q. Windows.
- r. Glazing.
- s. Metal studs.
- t. Gypsum board.
- u. Acoustical tile and panels.
- v. Carpet.
- w. Carpet pad.
- x. Demountable partitions.
- y. Equipment.
- z. Cabinets.
- aa. Plumbing fixtures.
- bb. Piping.
- cc. Supports and hangers. D
- d. Valves.
- ee. Sprinklers.
- ff. Mechanical equipment.
- gg. Refrigerants.
- hh. Electrical conduit.
- ii. Copper wiring.
- jj. Lighting fixtures.
- kk. Lamps.
- ll. Ballasts.
- mm. Electrical devices.
- nn. Switchgear and panelboards.
- oo. Transformers.
- 2. Construction Waste:
 - a. Masonry and CMU.
 - b. Lumber.
 - c. Wood sheet materials.
 - d. Wood trim.
 - e. Metals.
 - f. Roofing.
 - g. Insulation.
 - h. Carpet and pad.
 - i. Gypsum board.
 - j. Piping.
 - k. Electrical conduit.
 - l. Packaging: Regardless of salvage/recycle goal indicated in "General" Paragraph above, salvage or recycle 100 percent of the following

uncontaminated packaging materials:

- 1) Paper.
- 2) Cardboard.
- 3) Boxes.
- 4) Plastic sheet and film.
- 5) Polystyrene packaging.
- 6) Wood crates.
- 7) Plastic pails.

1.1 ACTION SUBMITTALS

- A. Waste Management Plan: Submit plan within 7 days of date established for **commencement of the Work**.
- B. Prior to any waste removal and within 30 days of Contract award, submit for approval a detailed Construction and Demolition Waste Management Plan outlined in this Section:
 1. Analysis of estimated job-site waste to be generated, including types and quantities of compostable, recyclable and salvageable materials.
 2. Description of means and methods to achieve 75 percent diversion requirement for compostable, recyclable, and salvageable materials, including those that may be donated to charitable organizations.
 3. Identification of recycling contractors and haulers proposed for use in the project and locations accepting construction waste materials or entities providing related services.

1.2 INFORMATIONAL SUBMITTALS

- A. Waste Reduction Progress Reports: Concurrent with each Application for Payment, submit report. Include the following information:
 1. Material category.
 2. Generation points of waste.
 3. Total quantity of waste in tons.
 4. Quantity of waste salvaged, both estimated and actual in tons.
 5. Quantity of waste recycled, both estimated and actual in tons.
 6. Total quantity of waste recovered (salvaged plus recycled) in tons.
 7. Total quantity of waste recovered (salvaged plus recycled) as a percentage of total waste.
- B. Waste Reduction Calculations: Before request for Substantial Completion, submit calculated end-of-Project rates for salvage, recycling, and disposal as a percentage of total waste generated by the Work.
- C. Records of Donations: Indicate receipt and acceptance of salvageable waste donated to individuals and organizations. Indicate whether organization is tax exempt.
- D. Records of Sales: Indicate receipt and acceptance of salvageable waste sold to individuals and organizations. Indicate whether organization is tax exempt.
- E. Recycling and Processing Facility Records: Indicate receipt and acceptance of recyclable waste by recycling and processing facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.
- F. Landfill and Incinerator Disposal Records: Indicate receipt and acceptance of waste by landfills and incinerator facilities licensed to accept them. Include manifests, weight tickets, receipts, and

invoices.

- G. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

1.3 QUALITY ASSURANCE

- A. Refrigerant Recovery Technician Qualifications: Certified by EPA-approved certification program.
- B. Regulatory Requirements: Comply with hauling and disposal regulations of authorities having jurisdiction.
- C. Waste Management Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to waste management including, but not limited to, the following:
 - a. Review requirements for documenting quantities of each type of waste and its disposition.
 - b. Review and finalize procedures for materials separation and verify availability of containers and bins needed to avoid delays.
 - c. Review procedures for periodic waste collection and transportation to recycling and disposal facilities.
 - d. Review waste management requirements for each trade.

1.4 WASTE MANAGEMENT PLAN

- A. General: Develop a waste management plan according to ASTM E 1609 and requirements in this Section. Plan shall consist of waste identification, waste reduction work plan, and cost/revenue analysis. **Distinguish between demolition and construction waste.** Indicate quantities by weight or volume but use same units of measure throughout waste management plan.
- B. Waste Identification: Indicate anticipated types and quantities of **demolition, site-clearing and construction** waste generated by the Work. Use **Form CWM-1 for construction waste and Form CWM- 2 for demolition waste**. Include estimated quantities and assumptions for estimates.
- C. Waste Reduction Work Plan: List each type of waste and whether it will be salvaged, recycled, or disposed of in landfill or incinerator. Use **Form CWM-3 for construction waste and Form CWM-4 for demolition waste**. Include points of waste generation, total quantity of each type of waste, quantity for each means of recovery, and handling and transportation procedures.
 - 1. Salvaged Materials for Reuse: For materials that will be salvaged and reused in this Project, describe methods for preparing salvaged materials before incorporation into the Work.
 - 2. Salvaged Materials for Sale: For materials that will be sold to individuals and organizations, include list of their names, addresses, and telephone numbers.
 - 3. Salvaged Materials for Donation: For materials that will be donated to individuals and organizations, include list of their names, addresses, and telephone numbers.
 - 4. Recycled Materials: Include list of local receivers and processors and type of recycled materials each will accept. Include names, addresses, and telephone numbers.
 - 5. Disposed Materials: Indicate how and where materials will be disposed of. Include name, address, and telephone number of each landfill and incinerator facility.
 - 6. Handling and Transportation Procedures: Include method that will be used for separating recyclable waste including sizes of containers, container labeling, and designated location where materials separation will be performed.

- D. Cost/Revenue Analysis: Indicate total cost of waste disposal as if there was no waste management plan and net additional cost or net savings resulting from implementing waste management plan. Use Form **CWM- 5 for construction waste** and Form **CWM-6 for demolition waste**. Include the following:
1. Total quantity of waste.
 2. Estimated cost of disposal (cost per unit). Include hauling and tipping fees and cost of collection containers for each type of waste.
 3. Total cost of disposal (with no waste management).
 4. Revenue from salvaged materials.
 5. Revenue from recycled materials.
 6. Savings in hauling and tipping fees by donating materials.
 7. Savings in hauling and tipping fees that are avoided.
 8. Handling and transportation costs. Include cost of collection containers for each type of waste.
 9. Net additional cost or net savings from waste management plan.
- E. Training and Coordination:
1. Furnish copies of approved Waste Management Plan to all on-site supervisors, each subcontractor, Owner, and Architect.
 2. Instruction: Provide on-site instruction of appropriate separation, handling, and recycling, salvage, reuse, and return methods to be used by all entities at the appropriate stages of the Project.
 3. Meetings: Include construction waste management on the agenda of all required regularly scheduled construction meetings.
- F. Facilities: Provide designated facilities for co-mingling or separation and storage of materials for recycling, salvage, reuse, return, and waste disposal, per approved Construction Waste Management Plan for use by all contractors and installers.
1. Provide bi-lingual signage.
 2. Provide materials for barriers and enclosures that are nonhazardous, recyclable, or reusable to the maximum extent possible; reuse project construction waste materials if possible.
 3. Provide adequate space, convenient to subcontractors, for pick-up and delivery.
 4. Keep recycling and waste bin areas neat and clean to avoid contamination of materials.
- G. Records: Maintain onsite logs for each load of materials removed from site:
1. Landfill Log: Include type of material, load (by weight or volume), recycling/hauling service, date accepted by landfill, and facility fee.
 2. Waste Diversion: Include type of material, load (by weight or volume), recycling/hauling service, date accepted by recycling service, or non-profit receiver and facility fee.
 3. Where comingling occurs prior to collection, track the amount of construction waste diverted from landfill based on the weight or volume of the removed co-mingled waste and provide the documentation of percentages of recycled from the sorting facility.
- H. Methods of waste disposal that are not acceptable for Sustainable Design Requirements are:
1. Burning or incinerating on or off project site.
 2. Burying on project site, other than fill.
 3. Dumping or burying on other property, public or private, other than official landfill.
 4. Illegal dumping or burying.
- I. Recycling Procedures:

1. Co-mingle or separate, store, protect, and handle at the site identified recyclable waste products in order to prevent contamination of materials and to maximize recyclability of identified materials. Arrange for timely pickups from the site or deliveries to recycling facility in order to prevent contamination of recyclable materials.
 2. Coordinate work of recycling, composting and salvaging waste haulers with other trades.
 3. Revenues, savings, rebates, tax credits, and other incentives received for recycling waste materials shall accrue to Contractor.
- J. Reuse of materials On-Site: Set aside, sort, and protect separate products in preparation for reuse.
1. Materials qualifying as reused shall not be part of the waste diversion calculation. See Division 1 Section "Sustainable Design Requirements" requirements.
 2. Concrete, masonry and asphalt crushed and reused onsite shall contribute to Sustainable Design Requirements. See Division 1 Section "Sustainable Design Requirements".
 3. Stone excavated from the site, crushed and reused on site shall contribute Sustainable Design Requirements. See Division 1 Section "Sustainable Design Requirements".
- K. Salvage of Materials: Set aside, sort, and protect products to be salvaged for reuse offsite.
- L. Hazardous Waste Handling: Separate, store and dispose of hazardous wastes separately and in accordance with local regulations. Do not handle, separate, store, salvage, or recycle hazardous. Properly package, mark and label hazardous waste and dispose of in accordance with applicable EPA and DOE regulations. Manifest for shipping hazardous waste must be signed by the NZP Hazardous Waste Coordinator and generator copies maintained on site.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 PLAN IMPLEMENTATION

- A. General: Implement approved waste management plan. Provide handling, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract.
1. Comply with operation, termination, and removal requirements in Section 015000 "Temporary Facilities and Controls."
- B. Training: Train workers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the Work.
1. Distribute the waste management plan to everyone concerned within **three** days of submittal return.
 2. Distribute the waste management plan to entities when they first begin work on-site. Review plan procedures and locations established for salvage, recycling, and disposal.
- C. Site Access and Temporary Controls: Conduct waste management operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
1. Designate and label specific areas on Project site necessary for separating materials that are to be salvaged, recycled, reused, donated, and sold.

2. Comply with Section 015000 "Temporary Facilities and Controls" for controlling dust and dirt, environmental protection, and noise control.

3.2 SALVAGING DEMOLITION WASTE

- A. Salvaged Items for Reuse in the Work: Salvage items for reuse and handle as follows: B.

1. Clean salvaged items.
2. Pack or crate items after cleaning. Identify contents of containers with label indicating elements, date of removal, quantity, and location where removed.
3. Store items in a secure area until installation.
4. Protect items from damage during transport and storage.
5. Install salvaged items to comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make items functional for use indicated.

3.3 RECYCLING, DEMOLITION AND CONSTRUCTION WASTE, GENERAL

- A. General: Recycle paper and beverage containers used by on-site workers.
- B. Preparation of Waste: Prepare and maintain recyclable waste materials according to recycling or reuse facility requirements. Maintain materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to the recycling process.
- C. Procedures: Separate recyclable waste from other waste materials, trash, and debris. Separate recyclable waste by type at Project site to the maximum extent practical according to approved construction waste management plan.
1. Provide appropriately marked containers or bins for controlling recyclable waste until removed from Project site. Include list of acceptable and unacceptable materials at each container and bin.
 - a. Inspect containers and bins for contamination and remove contaminated materials if found.
 2. Stockpile processed materials on-site without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
 3. Stockpile materials away from construction area. Do not store within drip line of remaining trees.
 4. Store components off the ground and protect from the weather.
 5. Remove recyclable waste from Owner's property and transport to recycling receiver or processor.

3.4 RECYCLING DEMOLITION WASTE

- A. Asphalt Paving: Grind asphalt
1. Crush asphaltic concrete paving and screen to comply with requirements in Section 312000 "Earth Moving" for use as general fill.
- B. Asphalt Paving: Break up and transport paving to asphalt-recycling facility.
- C. Concrete: Remove reinforcement and other metals from concrete and sort with other metals. C.

1. Crush concrete and screen to comply with requirements in Section 312000 "Earth Moving" for use as satisfactory soil for fill or subbase.
 - D. Masonry: Remove metal reinforcement, anchors, and ties from masonry and sort with other metals.
 1. Pulverize masonry to maximum
 - a. Crush masonry and screen to comply with requirements in Section 312000 "Earth Moving" for use as satisfactory soil for fill or subbase.
 - b. Crush masonry and screen to comply with requirements in Section 329300 "Plants" for use as mineral mulch.
 2. Clean and stack undamaged, whole masonry units on wood pallets.
 - E. Wood Materials: Sort and stack members according to size, type, and length. Separate lumber, engineered wood products, panel products, and treated wood materials.
 - F. Metals: Separate metals by type.
 1. Structural Steel: Stack members according to size, type of member, and length.
 2. Remove and dispose of bolts, nuts, washers, and other rough hardware.
 - G. Metal Suspension System: Separate metal members including trim, and other metals from acoustical panels and tile and sort with other metals.
 - H. Piping: Reduce piping to straight lengths and store by type and size. Separate supports, hangers, valves, sprinklers, and other components by type and size.
- 3.5 RECYCLING CONSTRUCTION WASTE
- A. Packaging:
 1. Cardboard and Boxes: Break down packaging into flat sheets. Bundle and store in a dry location.
 2. Polystyrene Packaging: Separate and bag materials.
 3. Pallets: As much as possible, require deliveries using pallets to remove pallets from Project site. For pallets that remain on-site, break down pallets into component wood pieces and comply with requirements for recycling wood.
 4. Crates: Break down crates into component wood pieces and comply with requirements for recycling wood.
 - B. Wood Materials:
 1. Clean Cut-Offs of Lumber: Grind or chip into small pieces.
 2. Clean Sawdust: Bag sawdust that does not contain painted or treated wood.
 - a. Comply with requirements in Section 329300 "Plants" for use of clean sawdust as organic mulch.
 - C. Gypsum Board: Stack large clean pieces on wood pallets or in containers and store in a dry location.
 1. Clean Gypsum Board: Grind scraps of clean gypsum board using small mobile chipper or hammer mill. Screen out paper after grinding.
 - a. Comply with requirements in Section 329300 "Exterior Plants" for use of clean ground gypsum board as inorganic soil amendment.

3.6 DISPOSAL OF WASTE

- A. General: Except for items or materials to be salvaged, recycled, or otherwise reused, remove waste materials from Project site and legally dispose of them in a landfill or incinerator acceptable to authorities having jurisdiction.
 - 1. Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate on-site.
 - 2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
- B. Burning: Do not burn waste materials.
- C. Disposal: Remove waste materials from Owner's property and legally dispose of them.

END OF SECTION 017419

FOR REFERENCE ONLY

SECTION 01 7700 - CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for contract close-out, including, but not limited to, the following:
 - 1. Final completion procedures.
 - 2. Warranties.
 - 3. Final cleaning.
 - 4. Repair of the Work.
- B. Related Requirements:
 - 1. Final Completion.
 - 2. Division 01 Section 012900 "Payment Procedures" for requirements for Applications for Payment.
 - 3. Division 01 Section 013233 "Photographic Documentation" for submitting Final Completion construction photographic documentation.
 - 4. Division 01 Section 016000 "Product Requirements" for warranties.
 - 5. Division 01 Section 017300 "Execution" for progress cleaning of Project site.
 - 6. Division 01 Section 017419 "Construction Waste Management and Disposal" for Sustainable Design related documentation requirements.
 - 7. Division 01 Section 017823 "Operation and Maintenance Data" for operation and maintenance manual requirements.
 - 8. Division 01 Section 017839 "Project Record Documents" for submitting record Drawings, record Specifications, and record Product Data.
 - 9. Division 01 Section 017900 "Demonstration and Training" for requirements for instructing COTR's personnel.

1.3 ACTION SUBMITTALS

- A. Product Data: For cleaning agents.
- B. Contractor's List of Incomplete Items: Initial submittal at Substantial Completion.
- C. Certified List of Incomplete Items: Final submittal at Final Completion.

1.4 CLOSEOUT SUBMITTALS

- A. Certificates of Release: From authorities having jurisdiction.
- B. Certificate of Insurance: For continuing coverage.
- C. Field Report: For pest control inspection.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Schedule of Maintenance Material Items: For maintenance material submittal items specified in other Sections.

1.6 FINAL COMPLETION PROCEDURES

- A. Definition: The date of Final Completion of the Project is the date, as confirmed by the COTR, when the Work is satisfactorily completed and accepted in accordance with the Contract Documents, as amended and/or modified.
- B. Preliminary Procedures: Before requesting final inspection to determine the date of Final Completion, complete the following:
1. Submit a final Application for Payment according to Division 01 Section "Payment Procedures."
 2. Submit certified copy of Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by COTR. The certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
 3. Arrange for final changeover of locks.
 4. Submit evidence of payment and transfer date of utility company accounts for those utilities previously billed to the Contractor during construction.
 5. Submit evidence that all regulatory agency permits and code requirements have been completed and recorded, as necessary.
 6. Submission of a signed, written statement that no damage has occurred to the Site as documented by the Final Photographic/Videotape Documentation report.
 7. Submit evidence of final, continuing insurance coverage complying with insurance requirements.
 8. Final Clean-up.
- C. Inspection: Submit a written request for final inspection for acceptance. On receipt of request, COTR will either proceed with inspection or notify Contractor of unfulfilled requirements. COTR will prepare a final Letter of Acceptance after inspection or will notify Contractor of construction that must be completed or corrected before letter will be issued.
1. Re-inspection: Request re-inspection when the Work identified in previous inspections as incomplete is completed or corrected.
- D. Final Application for Payment: Complete all requirements for transmittal of the Final Application for Payment in accordance with Division 01 Section "Payment Procedures", including submission of:
1. Final labor data and Construction Progress Schedule update.
 2. Certification, signed by the Contractor, that all Contract requirements, including Contract Modifications have been met.
 3. Release of assignment of claims or consent of surety submitted, as necessary.
 4. Return of all parking permits.
 5. Final Project Record Documents.

1.7 LIST OF INCOMPLETE ITEMS (PUNCH LIST)

- A. Organization of List: Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction
 - 1. Organize list of spaces in sequential order,
 - 2. Organize items applying to each space by major element, including categories for ceiling, individual walls, floors, equipment, and building systems.
 - 3. Include the following information at the top of each page:
 - a. Project name.
 - b. Date.
 - c. Name of Contractor.
 - d. Page number
 - e. Total number of pages
 - f. SI Project Number.

1.8 SUBMITTAL OF PROJECT WARRANTIES

- A. Time of Submittal: Submit written warranties on request of COTR for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated, or when delay in submittal of warranties might limit COTR's rights under warranty.
- B. Partial Occupancy: Submit properly executed warranties within 15 days of completion of designated portions of the Work that are completed and occupied or used by COTR during construction period by separate agreement with Contractor.
- C. Organize warranty documents into an orderly sequence based on the table of contents of Project Manual. Organize in a PDF.
 - 1. Warranty Electronic File: Submit Warranties in a submittal package into a single indexed electronic PDF file with links enabling navigation to each item. Provide bookmarked table of contents at beginning of document.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.
 - 1. Use cleaning products that comply with Green Seal's GS-37, or if GS-37 is not applicable, use products that comply with the California Code of Regulations maximum allowable VOC levels.

PART 3 – EXECUTION

3.1 FINAL CLEANING

- A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.

- B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.
1. Complete the following cleaning operations before requesting inspection for certification of Completion for entire Project or for a designated portion of Project:
 - a. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.
 - b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
 - c. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.
 - d. Remove tools, construction equipment, machinery, and surplus material from project site.
 - e. Remove snow and ice to provide safe access to building.
 - f. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
 - g. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
 - h. Sweep concrete floors broom clean in unoccupied spaces.
 - i. Vacuum carpet and similar soft surfaces, removing debris and excess nap; clean according to manufacturer's recommendations if visible soil or stains remain.
 - j. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Polish mirrors and glass, taking care not to scratch surfaces.
 - k. Remove labels that are not permanent.
 - l. Wipe surfaces of mechanical and electrical equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
 - m. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
 - n. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.
 - o. Clean ducts, blowers, and coils if units were operated without filters during construction or that display contamination with particulate matter on inspection.
 - 1) Clean HVAC system in compliance with NADCA Standard 1992-01. Provide written report on completion of cleaning.
 - p. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency.
 - q. Leave Project clean and ready for occupancy.
- C. Construction Waste Disposal: Comply with waste disposal requirements in Section 015000 "Temporary Facilities and Controls" and Section 017419 "Construction Waste Management and Disposal."

3.2 REPAIR OF THE WORK

- A. Complete repair and restoration operations before requesting inspection for

determination of Substantial Completion.

- B. Repair or remove and replace defective construction. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment. Where damaged or worn items cannot be repaired or restored, provide replacements. Remove and replace operating components that cannot be repaired. Restore damaged construction and permanent facilities used during construction to specify condition.
1. Remove and replace chipped, scratched, and broken glass, reflective surfaces, and other damaged transparent materials.
 2. Touch up and otherwise repair and restore marred or exposed finishes and surfaces. Replace finishes and surfaces that already show evidence of repair or restoration.
 - a. Do not paint over "UL" and other required labels and identification, including mechanical and electrical nameplates. Remove paint applied to required labels and identification.
 3. Replace parts subject to operating conditions during construction that may impede operation or reduce longevity.
 4. Replace burned-out bulbs, bulbs noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.

END OF SECTION 017700

SECTION 01 7823 - OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:
 - 1. Operation and maintenance documentation directory.
 - 2. Emergency manuals.
 - 3. Operation manuals for systems, subsystems, and equipment.
 - 4. Product maintenance manuals.
 - 5. Systems and equipment maintenance manuals.
- B. Related Requirements:
 - 1. Section 013300 "Submittal Procedures" for submitting copies of submittals for operation and maintenance manuals.
 - 2. Section 019113 "General Commissioning Requirements" for verification and compilation of data into operation and maintenance manuals.
 - 3. Divisions 02 through 33 Sections for specific operation and maintenance manual requirements for the Work in those Sections.

1.3 DEFINITIONS

- A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.
- B. Subsystem: A portion of a system with characteristics similar to a system.

1.4 CLOSEOUT SUBMITTALS

- A. Manual Content: Operations and maintenance manual content is specified in individual Specification Sections to be reviewed at the time of Section submittals. Submit reviewed manual content formatted and organized as required by this Section.
 - 1. COTR will comment on whether content of operations and maintenance submittals are acceptable.
 - 2. Where applicable, clarify and update reviewed manual content to correspond to revisions and field conditions.
- B. Format: Submit operations and maintenance manuals in the following format:
 - 1. PDF electronic file. Assemble each manual into a composite electronically indexed file. Submit on digital media acceptable to COTR.
 - a. Name each indexed document file in composite electronic index with

applicable item name. Include a complete electronically linked operation and maintenance directory.

PART 2 - PRODUCTS

2.1 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY

- A. Directory: Prepare a single, comprehensive directory of emergency, operation, and maintenance data and materials, listing items and their location to facilitate ready access to desired information. Include a section in the directory for each of the following:
 - 1. List of documents.
 - 2. List of systems.
 - 3. List of equipment.
 - 4. Table of contents.
- B. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.
- C. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.
- D. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.
- E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

2.2 REQUIREMENTS FOR EMERGENCY, OPERATION, AND MAINTENANCE MANUALS

- A. Organization: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:
 - 1. Title page.
 - 2. Table of contents.
 - 3. Manual contents.
- B. Title Page: Include the following information:
 - 1. Subject matter included in manual.
 - 2. Name and address of Project.
 - 3. Name and address of Owner.
 - 4. Date of submittal.
 - 5. Name and contact information for Contractor.
 - 6. Name and contact information for Construction Manager.
 - 7. Name and contact information for Architect.
 - 8. Name and contact information for Commissioning Authority.
 - 9. Names and contact information for major consultants to the Architect that designed the systems contained in the manuals.
 - 10. Cross-reference to related systems in other operation and maintenance manuals.
- C. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.

1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.
- D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.
- E. Manuals, Electronic Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.
 1. Electronic Files: Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
 2. File Names and Bookmarks: Enable bookmarking of individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

2.3 EMERGENCY MANUALS

- A. Content: Organize manual into a separate section for each of the following:
 1. Type of emergency.
 2. Emergency instructions.
 3. Emergency procedures.
- B. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:
 1. Fire.
 2. Flood.
 3. Gas leak.
 4. Water leak.
 5. Power failure.
 6. Water outage.
 7. System, subsystem, or equipment failure.
 8. Chemical release or spill.
- A. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.
- D. Emergency Procedures: Include the following, as applicable:
 1. Instructions on stopping.
 2. Shutdown instructions for each type of emergency.
 3. Operating instructions for conditions outside normal operating limits.
 4. Required sequences for electric or electronic systems.
 5. Special operating instructions and procedures.

2.4 OPERATION MANUALS

- A. Content: In addition to the requirements in this Section, include operation data required in the individual Specification Sections and the following information:
1. System, subsystem, and equipment descriptions. Use designations for systems and equipment indicated on Contract Documents.
 2. Performance and design criteria if the Contractor has delegated design responsibility.
 3. Operating standards.
 4. Operating procedures.
 5. Operating logs.
 6. Wiring diagrams.
 7. Control diagrams.
 8. Piped system diagrams.
 9. Precautions against improper use.
 10. License requirements including inspection and renewal dates.
- B. Descriptions: Include the following:
1. Product name and model number. Use designations for products indicated on Contract Documents.
 2. Manufacturer's name.
 3. Equipment identification with serial number of each component.
 4. Equipment function.
 5. Operating characteristics.
 6. Limiting conditions.
 7. Performance curves.
 8. Engineering data and tests.
 9. Complete nomenclature and number of replacement parts.
- C. Operating Procedures: Include the following, as applicable:
1. Startup procedures.
 2. Equipment or system break-in procedures.
 3. Routine and normal operating instructions.
 4. Regulation and control procedures.
 5. Instructions on stopping.
 6. Normal shutdown instructions.
 7. Seasonal and weekend operating instructions.
 8. Required sequences for electric or electronic systems.
 9. Special operating instructions and procedures.
- D. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.
- E. Piped Systems: Diagram piping as installed and identify color-coding where required for identification.

2.5 PRODUCT MAINTENANCE MANUALS

- A. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.
- B. Source Information: List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and

telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.

- C. Product Information: Include the following, as applicable:
 - 1. Product name and model number.
 - 2. Manufacturer's name.
 - 3. Color, pattern, and texture.
 - 4. Material and chemical composition.
 - 5. Reordering information for specially manufactured products.
- D. Maintenance Procedures: Include manufacturer's written recommendations and the following:
 - 1. Inspection procedures.
 - 2. Types of cleaning agents to be used and methods of cleaning.
 - 3. List of cleaning agents and methods of cleaning detrimental to product.
 - 4. Schedule for routine cleaning and maintenance.
 - 5. Repair instructions.
- E. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.
- F. Warranties: Include copies of warranties and lists of circumstances and conditions that would affect validity of warranties.
 - 1. Include procedures to follow and required notifications for warranty claims.
 - 2. Provide any extended warranties offered by manufactures and/or installers (including labor) for any and all equipment for Owner to review.

2.6 SYSTEMS AND EQUIPMENT MAINTENANCE MANUALS

- A. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranty and bond information, as described below.
- B. Source Information: List each system, subsystem, and piece of equipment included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.
- C. Manufacturers' Maintenance Documentation: Manufacturers' maintenance documentation including the following information for each component part or piece of equipment:
 - 1. Standard maintenance instructions and bulletins.
 - 2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
 - 3. Identification and nomenclature of parts and components.
 - 4. List of items recommended to be stocked as spare parts.
- D. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:
 - 1. Test and inspection instructions.

2. Troubleshooting guide.
 3. Precautions against improper maintenance.
 4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
 5. Aligning, adjusting, and checking instructions.
 6. Demonstration and training video recording, if available.
- E. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.
1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semi-annual, and annual frequencies.
 2. Maintenance and Service Record: Include manufacturers' forms for recording maintenance.
- F. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.
- G. Maintenance Service Contracts: Include copies of maintenance agreements with name and telephone number of service agent.
- H. Warranties: Include copies of warranties and lists of circumstances and conditions that would affect validity of warranties.
1. Include procedures to follow and required notifications for warranty claims.
 2. Provide any extended warranties offered by manufacturers and/or installers (including labor) for any and all equipment for Owner to review.

PART 3 - EXECUTION

3.1 MANUAL PREPARATION

- A. Operation and Maintenance Documentation Directory: Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals.
- B. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.
- C. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.
- D. Operation and Maintenance Manuals: Assemble a complete set of operation and maintenance data indicating operation and maintenance of each system, subsystem, and piece of equipment not part of a system.
 1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
 2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.
- E. Manufacturers' Data: Where manuals contain manufacturers' standard printed data, include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a

tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.

1. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.
- F. Drawings: Prepare drawings supplementing manufacturers printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in record Drawings to ensure correct illustration of completed installation.
1. Do not use original project record documents as part of operation and maintenance manuals.
 2. Comply with requirements of newly prepared record Drawings in Section 017839 "Project Record Documents."
- G. Comply with Section 017700 "Closeout Procedures" for schedule for submitting operation and maintenance documentation.

END OF SECTION 017823

SECTION 01 7839 - PROJECT RECORD DOCUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for project record documents, including the following:
 - 1. Record Drawings.
 - 2. Record Specifications.
 - 3. Record Product Data.
 - 4. Miscellaneous record submittals.
- B. Related Requirements:
 - 1. Section 017300 "Execution" for final property survey.
 - 2. Section 017700 "Closeout Procedures" for general closeout procedures.
 - 3. Section 017823 "Operation and Maintenance Data" for operation and maintenance manual requirements.

1.3 CLOSEOUT SUBMITTALS

- A. Record Drawings: Comply with the following:
 - a. Final Submittal:
 - 1) Submit electronic PDF of marked-up record prints.
- B. Record Specifications: Submit annotated PDF electronic files of Project's Specifications, including addenda and contract modifications.
- C. Record Product Data: Submit annotated PDF electronic files and directories of each submittal.
 - 1. Where record Product Data is required as part of operation and maintenance manuals, submit duplicate marked-up Product Data as a component of manual.
- D. Miscellaneous Record Submittals: See other Specification Sections for miscellaneous record-keeping requirements and submittals in connection with various construction activities. Submit annotated PDF electronic files and directories of each submittal.
- E. Reports: Submit written report biweekly indicating items incorporated into project record documents concurrent with progress of the Work, including revisions, concealed conditions, field changes, product selections, and other notations incorporated.

PART 2 - PRODUCTS

1.1 RECORD DRAWINGS

- A. Record Prints: Maintain one set of marked-up paper copies of the Contract Drawings and Shop Drawings, incorporating new and revised drawings as modifications are issued.
1. Preparation: Mark record prints to show the actual installation where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to provide information for preparation of corresponding marked-up record prints.
 - a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
 - b. Accurately record information in an acceptable drawing technique.
 - c. Record data as soon as possible after obtaining it.
 - d. Record and check the markup before enclosing concealed installations.
 - e. Cross-reference record prints to corresponding archive photographic documentation.
 2. Content: Types of items requiring marking include, but are not limited to, the following:
 - a. Dimensional changes to Drawings.
 - b. Revisions to details shown on Drawings.
 - c. Depths of foundations below first floor.
 - d. Locations and depths of underground utilities.
 - e. Revisions to routing of piping and conduits.
 - f. Revisions to electrical circuitry.
 - g. Actual equipment locations.
 - h. Duct size and routing.
 - i. Locations of concealed internal utilities.
 - j. Changes made by Change Order or Change Directive.
 - k. Changes made following Architect's written orders.
 - l. Details not on the original Contract Drawings.
 - m. Field records for variable and concealed conditions.
 - n. Record information on the Work that is shown only schematically.
 3. Mark the Contract Drawings and Shop Drawings completely and accurately. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.
 4. Mark important additional information that was either shown schematically or omitted from original Drawings.
 5. Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.
 6. Mark each sheet with the designation "AS BUILT."
- B. Record Digital Data Files: Review marked-up record prints with COTR. When authorized, prepare a full set of corrected digital data files of the Contract Drawings, as follows:
1. Format: Same CAD program, version, and operating system as the original Contract Drawings and PDF copy.
 2. Format: ArcGIS, filegeodatabase
 3. Format: Annotated PDF electronic file with comment function enabled.
 4. Incorporate changes and additional information previously marked on record prints. Delete, redraw, and add details and notations where applicable. Mark each sheet/file with the designation "AS BUILT."

5. Refer instances of uncertainty to COTR for resolution.
- C. Newly Prepared Record Drawings: Prepare new Drawings instead of preparing record Drawings where Architect determines that neither the original Contract Drawings nor Shop Drawings are suitable to show actual installation.
1. New Drawings may be required when a Change Order is issued as a result of accepting an alternate, substitution, or other modification.
 2. Ask the COTR for proper scale and scope of detailing and notations required to record the actual physical installation and its relation to other construction. Integrate newly prepared record Drawings into record Drawing sets; comply with procedures for formatting, organizing, copying, binding, and submitting.
- D. Format: Identify and date each record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location.
1. Record Prints: Organize record prints and newly prepared Record Drawings into manageable sets. Bind each set with durable paper cover sheets. Include identification on cover sheets.
 2. Format: Annotated PDF electronic file with comment function enabled.
 3. Record Digital Data Files: Organize digital data information into separate electronic files that correspond to each sheet of the Contract Drawings. Name each file with the sheet identification. Include identification in each digital data file.
 4. Identification: As follows:
 - a. Project name.
 - b. Date.
 - c. Designation "PROJECT RECORD DRAWINGS."
 - d. Name of Contractor.

1.2 RECORD SPECIFICATIONS

- A. Preparation: Mark Specifications to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications.
1. Give particular attention to information on concealed products and installations that cannot be readily identified and reordered later.
 2. Mark copies with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
 3. Record the name of manufacturer, supplier, Installer, and other information necessary to provide a record of selections made.
 4. For each principal product, indicate whether record Product Data has been submitted in operation and maintenance manuals instead of submitted as record Product Data.
 5. Note related Change Orders, record Product Data, and record Drawings where applicable.
 6. Mark cover sheet with the designation "AS BUILT."
- A. Format: Submit record Specifications as annotated PDF electronic file of marked-up paper copy of Specifications.

1.3 RECORD PRODUCT DATA

- A. Preparation: Mark Product Data to indicate the actual product installation where

installation varies substantially from that indicated in Product Data submittal.

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Include significant changes in the product delivered to Project site and changes in manufacturers' written instructions for installation.
3. Note related Change Orders, record Specifications, and record Drawings where applicable.
4. Mark each cover sheet with the designation "AS BUILT."

B. Format: Submit record Product Data as annotated PDF electronic file of marked-up paper copy of Product Data.

1. Include record Product Data directory organized by Specification Section number and title, electronically linked to each item of record Product Data.

1.4 MISCELLANEOUS RECORD SUBMITTALS

A. Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.

B. Format: Submit miscellaneous record submittals as PDF electronic file of marked-up miscellaneous record submittals.

1. Include miscellaneous record submittals directory organized by Specification Section number and title, electronically linked to each item of miscellaneous record submittals.

PART 3 - EXECUTION

1.1 RECORDING AND MAINTENANCE

A. Recording: Maintain one copy of each submittal during the construction period for project record document purposes. Post changes and revisions to project record documents as they occur; do not wait until end of Project.

B. Maintenance of Record Documents and Samples: Store record documents and Samples in the field office apart from the Contract Documents used for construction. Do not use project record documents for construction purposes. Maintain record documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to project record documents for COTR reference during normal working hours.

END OF SECTION 017839

SECTION 01 7900 - DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for instructing COTR's personnel, including the following:

1. Demonstration of operation of systems, subsystems, and equipment.
2. Training in operation and maintenance of systems, subsystems, and equipment.
3. Demonstration and training video recordings.

1.3 INFORMATIONAL SUBMITTALS

A. Instruction Program: Submit outline of instructional program for demonstration and training, including a list of training modules and a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.

1. Indicate proposed training modules using manufacturer-produced demonstration and training video recordings for systems, equipment, and products in lieu of video recording of live instructional module.

B. Qualification Data: For facilitator, instructor, and videographer.

C. Attendance Record: For each training module, submit list of participants and length of instruction time.

D. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.

E. Related Sections include the following:

1. Division 01 Section 013100 "Project Management and Coordination" for requirements for pre-instruction conferences.
2. Division 01 Section 013233 "Photographic Documentation" for preparing and submitting demonstration and training videotapes.
3. Division 01 Section 019113 "General Commissioning Requirements"

F. Allowances: Where training and demonstration requirements are not provided in the technical specifications sections, allow for a one-hour minimum demonstration period for each system or piece of equipment.

G. Demonstration and Training Videotape: Submit two copies at end of each training module.

1.4 CLOSEOUT SUBMITTALS

A. Demonstration and Training Video Recordings: Submit electronically within seven days of end of each training module.

1. Identification: Provide a Submittal with the following information:
 - a. Name of Project.
 - b. Name and address of videographer.
 - c. Name of Architect.
 - d. Name of Construction Manager.
 - e. Name of Contractor.
 - f. Date of video recording.
2. Transcript: Prepared and bound in format matching operation and maintenance manuals. Mark appropriate identification on front and spine of each binder. Include a cover sheet with same label information as the corresponding video recording. Include name of Project and date of video recording on each page.
3. Transcript: Prepared in PDF electronic format. Include a cover sheet with same label information as the corresponding video recording and a table of contents with links to corresponding training components. Include name of Project and date of video recording on each page.
4. At completion of training, submit complete training manual(s) for COTR's use prepared and bound in format matching operation and maintenance manuals and in PDF electronic file format on compact disc.

1.5 QUALITY ASSURANCE

- A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.
- B. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Section 014000 "Quality Requirements," experienced in operation and maintenance procedures and training.
- C. Videographer Qualifications: A videographer who is experienced photographing demonstration and training events like those required.
- D. Pre-instruction Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to demonstration and training including, but not limited to, the following:
 1. Inspect and discuss locations and other facilities required for instruction.
 2. Review and finalize instruction schedule and verify availability of educational materials, instructors' personnel, audiovisual equipment, and facilities needed to avoid delays.
 3. Review required content of instruction.
 4. For instruction that must occur outside, review weather and forecasted weather conditions and procedures to follow if conditions are unfavorable.

1.6 COORDINATION

- A. Coordinate instruction schedule with COTR's operations. Adjust schedule as required to minimize disrupting COTR's operations and to ensure availability of COTR's personnel.
- B. Coordinate instructors, including providing notification of dates, times, length of instruction time,

and course content.

C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data has been reviewed and approved by COTR.

PART 2 - PRODUCTS

2.1 INSTRUCTION PROGRAM

A. Program Structure: Develop an instruction program that includes individual training modules for each

system and for equipment not part of a system, as required by individual Specification Sections.

B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following as applicable to the system, equipment, or component:

1. Basis of System Design, Operational Requirements, and Criteria: Include the following:
 - a. System, subsystem, and equipment descriptions.
 - b. Performance and design criteria if Contractor are delegated design responsibility.
 - c. Operating standards.
 - d. Regulatory requirements.
 - e. Equipment function.
 - f. Operating characteristics.
 - g. Limiting conditions.
 - h. Performance curves.
2. Documentation: Review the following items in detail:
 - a. Emergency manuals.
 - b. Operations manuals.
 - c. Maintenance manuals.
 - d. Project record documents.
 - e. Identification systems.
 - f. Warranties and bonds.
 - g. Maintenance service agreements and similar continuing commitments.
3. Emergencies: Include the following, as applicable:
 - a. Instructions on meaning of warnings, trouble indications, and error messages.
 - b. Instructions on stopping.
 - c. Shutdown instructions for each type of emergency.
 - d. Operating instructions for conditions outside of normal operating limits.
 - e. Sequences for electric or electronic systems.
 - f. Special operating instructions and procedures.
4. Operations: Include the following, as applicable:
 - a. Startup procedures.
 - b. Equipment or system break-in procedures.
 - c. Routine and normal operating instructions.
 - d. Regulation and control procedures.
 - e. Control sequences.
 - f. Safety procedures.
 - g. Instructions on stopping.

- h. Normal shutdown instructions.
 - i. Operating procedures for emergencies.
 - j. Operating procedures for system, subsystem, or equipment failure.
 - k. Seasonal and weekend operating instructions.
 - l. Required sequences for electric or electronic systems.
 - m. Special operating instructions and procedures.
5. Adjustments: Include the following:
- a. Alignments.
 - b. Checking adjustments.
 - c. Noise and vibration adjustments.
 - d. Economy and efficiency adjustments.
6. Troubleshooting: Include the following:
- a. Diagnostic instructions.
 - b. Test and inspection procedures.
7. Maintenance: Include the following:
- a. Inspection procedures.
 - b. Types of cleaning agents to be used and methods of cleaning.
 - c. List of cleaning agents and methods of cleaning detrimental to product.
 - d. Procedures for routine cleaning
 - e. Procedures for preventive maintenance.
 - f. Procedures for routine maintenance.
 - g. Instruction on use of special tools.
8. Repairs: Include the following:
- a. Diagnosis instructions.
 - b. Repair instructions.
 - c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
 - d. Instructions for identifying parts and components.
 - e. Review of spare parts needed for operation and maintenance.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a training manual organized in coordination with requirements in Section 017823 "Operation and Maintenance Data."
- B. Set up instructional equipment at instruction location.

3.2 INSTRUCTION

- A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and COTR for number of participants, instruction times, and location.
- B. Engage qualified instructors to instruct COTR's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.
- C. Scheduling: Provide instruction at mutually agreed on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.

1. Schedule training with COTR with at least seven days' advance notice.

D. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.

E. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of a performance-based test if required by the COTR.

F. Cleanup: Collect used and leftover educational materials and give to COTR. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

3.3 DEMONSTRATION AND TRAINING VIDEO RECORDINGS

A. General: Engage a qualified videographer to record demonstration and training video recordings. Record each training module separately. Include classroom instructions and demonstrations, board diagrams, and other visual aids.

1. At beginning of each training module, record each chart containing learning objective and lesson outline.

B. Video: Provide minimum 640 x 480 video resolution converted to format file type acceptable to COTR on electronic media.

1. Electronic Media: Read-only format compact disc acceptable to COTR, with commercial-grade graphic label.

2. File Hierarchy: Organize folder structure and file locations according to project manual table of contents. Provide complete screen-based menu.

3. File Names: Utilize file names based upon name of equipment generally described in video segment, as identified in Project specifications.

4. Contractor and Installer Contact File: Using appropriate software, create a file for inclusion on the Equipment Demonstration and Training flash drive that describes the following for each Contractor involved on the Project, arranged according to Project table of contents:

- a. Name of Contractor/Installer.
- b. Business address.
- c. Business phone number.
- d. Point of contact.
- e. E-mail address.

C. Recording: Mount camera on tripod before starting recording, unless otherwise necessary to adequately cover area of demonstration and training. Display continuous running time.

1. Film training session(s) in segments not to exceed 15 minutes.

- a. Produce segments to present a single significant piece of equipment per segment.
- b. Organize segments with multiple pieces of equipment to follow order of Project Manual table of contents.
- c. Where a training session on a piece of equipment exceeds 15 minutes, stop

filming, and
pause training session. Begin training session again upon commencement of new
filming segment.

D. Light Levels: Verify light levels are adequate to properly light equipment. Verify equipment
markings
are clearly visible prior to recording.

1. Furnish additional portable lighting as required.

E. Narration: Describe scenes on video recording by audio narration by microphone while video
recording is recorded. Include description of items being viewed.

F. Transcript: Provide a transcript of the narration. Display images and running time captured from
videotape opposite the corresponding narration segment.

G. Pre-produced Video Recordings: Provide video recordings used as a component of training
modules
in same format as recordings of live training.

END OF SECTION 017900

FOR REFERENCE ONLY

SECTION 01 8113 - SUSTAINABLE DESIGN REQUIREMENTS – LEED

Part 1- GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes general requirements and procedures for compliance with certain USGBC LEED prerequisites and credits needed for Project to obtain **LEED Gold** certification based on USGBC's "LEED 2009 for New Construction & Major Renovations."
 - 1. Other LEED prerequisites and credits needed to obtain LEED certification depend on product selections and may not be specifically identified as LEED requirements. Compliance with requirements needed to obtain LEED prerequisites and credits may be used as one criterion to evaluate substitution requests and comparable product requests.
 - 2. Additional LEED prerequisites and credits needed to obtain the indicated LEED certification depend on Architect's design and other aspects of Project that are not part of the Work of the Contract.
 - 3. A copy of the LEED Project checklist is attached at the end of this Section for information only.
 - 4. Specific requirements for LEED are included in greater detail in other Sections.

1.3 DEFINITIONS

- A. Chain-of-Custody Certificates: Certificates signed by manufacturers certifying that wood used to make products was obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship." Certificates shall include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.
- B. Regional Materials: Materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site. If only a fraction of a product or material is extracted/harvested/recovered and manufactured locally, then only that percentage (by weight) shall contribute to the regional value.
- C. Recycled Content: The recycled content value of a material assembly shall be determined by weight. The recycled fraction of the assembly is then multiplied by the cost of assembly to determine the recycled content value.
 - 1. "Post-consumer" material is defined as waste material generated by households or by commercial, industrial, and institutional facilities in their role as end users of the product, which can no longer be used for its intended purpose.
 - 2. "Pre-consumer" material is defined as material diverted from the waste stream during the manufacturing process. Excluded is reutilization of materials such as rework, regrind, or scrap generated in a process and capable of being reclaimed within the same process that generated it.

1.4 ADMINISTRATIVE REQUIREMENTS

- A. Respond to questions and requests from Architect and the USGBC regarding LEED credits that are the responsibility of the Contractor, that depend on product selection or product qualities, or that depend on

Contractor's procedures until the USGBC has made its determination on the project's LEED certification application. Document responses as informational submittals.

- B. The Contractor is responsible for achieving the minimum amount of Construction related credits outlined within the LEED Scorecard.
- C. The Contractor is responsible for submitting all Construction related credits to USGBC through the LEED Online platform.

1.5 ACTION SUBMITTALS

- A. General: Submit additional LEED submittals required by other Specification Sections.
- B. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
- C. LEED Documentation Submittals:
 - 1. Credit EA 5: Product data and wiring diagrams for sensors and data collection system used to provide continuous metering of building energy-consumption performance over a period of time of not less than one year of postconstruction occupancy.
 - 2. Credit MR 2: Comply with Section 017419 "Construction Waste Management and Disposal."
 - 3. Credit MR 3: Receipts for salvaged and refurbished materials used for Project, indicating sources and costs for salvaged and refurbished materials.
 - 4. Credit MR 4: Product data and certification letter from product manufacturers indicating percentages by weight of post-consumer and pre-consumer recycled content for products having recycled content. Include statement indicating material cost for each product having recycled content.
 - 5. Credit MR 5: Product data for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
 - 6. Credit MR 7: Product data and chain-of-custody certificates for products containing certified wood. Include statement indicating cost for each certified wood product.
 - 7. Credit IEQ 3.1:
 - a. Construction indoor-air-quality management plan.
 - b. Product data for temporary filtration media.
 - c. Product data for filtration media used during occupancy.
 - d. Construction Documentation: Six photographs at three different times during the construction period, along with a brief description of the SMACNA approach employed, documenting implementation of the indoor-air-quality management measures, such as protection of ducts and on-site stored or installed absorptive materials.
 - 8. Credit IEQ 3.2:
 - a. Signed statement describing the building air flush-out procedures including the dates when flush-out was begun and completed and statement that filtration media was replaced after flush-out.
 - b. Product data for filtration media used during flush-out and during occupancy.
 - c. Report from testing and inspecting agency indicating results of indoor-air-quality testing and documentation showing compliance with indoor-air-quality testing procedures and requirements.

9. Credit IEQ 4.1: Product data for adhesives and sealants used inside the weatherproofing system indicating VOC content of each product used.
10. Credit IEQ 4.2: Product data for paints and coatings used inside the weatherproofing system indicating VOC content of each product used.
11. Credit IEQ 4.4: Product data for products containing composite wood or Agri fiber products or wood glues indicating that they do not contain urea-formaldehyde resin.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For LEED coordinator.
- B. Project Materials Cost Data: Provide statement indicating total cost for materials used for Project. Costs exclude labor, overhead, and profit. Include breakout of costs for the following categories of items:
 1. Furniture.
 2. Plumbing.
 3. Mechanical.
 4. Electrical.
 5. Specialty items such as elevators and equipment.
 6. Wood-based construction materials.
- C. LEED Action Plans: Provide preliminary submittals within 14 days of date established for the Notice to Proceed indicating how the following requirements will be met:
 1. Credit MR 2: Waste management plan complying with Section 017419 "Construction Waste Management and Disposal."
 2. Credit MR 3: List of proposed salvaged, refurbished, and reused materials. Identify each material that will be salvaged, refurbished, or reused, including its source, cost, and replacement cost if the item was to be purchased new.
 3. Credit MR 4: List of proposed materials with recycled content. Indicate cost, post-consumer recycled content, and pre-consumer recycled content for each product having recycled content.
 4. Credit MR 5: List of proposed regional materials. Identify each regional material, including its source, cost, and the fraction by weight that is considered regional.
 5. Credit MR 7: List of proposed certified wood products. Indicate each product containing certified wood, including its source and cost of certified wood products.
 6. Credit IEQ 3.1: Construction indoor-air-quality management plan.
- D. LEED Progress Reports: Concurrent with each Application for Payment, submit reports comparing actual construction and purchasing activities with LEED action plans for the following:
 1. Credit MR 2: Waste reduction progress reports complying with Section 017419 "Construction Waste Management and Disposal."
 2. Credit MR 3: Salvaged, refurbished, and reused materials.
 3. Credit MR 4: Recycled content.
 4. Credit MR 5: Regional materials.
 5. Credit MR 7: Certified wood products.

1.7 QUALITY ASSURANCE

- A. LEED Coordinator: Engage an experienced LEED-Accredited Professional to coordinate LEED requirements. LEED coordinator may also serve as waste management coordinator.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Provide products and procedures necessary to obtain LEED credits required in this Section. Although other Sections may specify some requirements that contribute to LEED credits, the Contractor shall determine additional materials and procedures necessary to obtain LEED credits indicated.

2.2 SALVAGED, REFURBISHED, OR REUSED MATERIALS

- A. Credit MR 3: Not less than 5 percent of building materials (by cost) shall be salvaged, refurbished, or reused materials.

2.3 RECYCLED CONTENT OF MATERIALS

- A. Credit MR 4: Building materials shall have recycled content such that post-consumer recycled content plus one-half of pre-consumer recycled content for Project constitutes a minimum of 20 percent of cost of materials used for Project.
 - 1. Cost of post-consumer recycled content plus one-half of pre-consumer recycled content of an item shall be determined by dividing weight of post-consumer recycled content plus one-half of pre-consumer recycled content in the item by total weight of the item and multiplying by cost of the item.
 - 2. Do not include furniture, plumbing, mechanical and electrical components, and specialty items such as elevators and equipment in the calculation.

2.4 REGIONAL MATERIALS

- A. Credit MR 5: Not less than 10 percent of building materials (by cost) shall be regional materials.

2.5 CERTIFIED WOOD

- A. Credit MR 7: Not less than 50 percent (by cost) of wood-based materials shall be produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
 - 1. Wood-based materials include, but are not limited to, the following materials when made from wood, engineered wood products, or wood-based panel products:
 - a. Rough carpentry.
 - b. Miscellaneous carpentry.
 - c. Heavy timber construction.
 - d. Wood decking.
 - e. Metal-plate-connected wood trusses.
 - f. Structural glued-laminated timber.
 - g. Finish carpentry.
 - h. Architectural woodwork.
 - i. Wood paneling.
 - j. Wood veneer wall covering.
 - k. Wood flooring.

- l. Wood lockers.
- m. Wood cabinets.
- n. Furniture.

2.6 LOW-EMITTING MATERIALS

- A. Credit IEQ 4.1: For field applications that are inside the weatherproofing system, adhesives and sealants shall comply with the following VOC content limits when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

1. Wood Glues: 30 g/L.
2. Metal-to-Metal Adhesives: 30 g/L.
3. Adhesives for Porous Materials (Except Wood): 50 g/L.
4. Subfloor Adhesives: 50 g/L.
5. Plastic Foam Adhesives: 50 g/L.
6. Carpet Adhesives: 50 g/L.
7. Carpet Pad Adhesives: 50 g/L.
8. VCT and Asphalt Tile Adhesives: 50 g/L.
9. Cove Base Adhesives: 50 g/L.
10. Gypsum Board and Panel Adhesives: 50 g/L.
11. Rubber Floor Adhesives: 60 g/L.
12. Ceramic Tile Adhesives: 65 g/L.
13. Multipurpose Construction Adhesives: 70 g/L.
14. Fiberglass Adhesives: 80 g/L.
15. Contact Adhesive: 80 g/L.
16. Structural Glazing Adhesives: 100 g/L.
17. Wood Flooring Adhesive: 100 g/L.
18. Structural Wood Member Adhesive: 140 g/L.
19. Single-Ply Roof Membrane Adhesive: 250 g/L.
20. Special-Purpose Contact Adhesive (contact adhesive that is used to bond melamine-covered board, metal, unsupported vinyl, rubber, or wood veneer 1/16 inch or less in thickness to any surface): 250 g/L.
21. Top and Trim Adhesive: 250 g/L.
22. Plastic Cement Welding Compounds: 250 g/L.
23. ABS Welding Compounds: 325 g/L.
24. CPVC Welding Compounds: 490 g/L.
25. PVC Welding Compounds: 510 g/L.
26. Adhesive Primer for Plastic: 550 g/L.
27. Sheet-Applied Rubber Lining Adhesive: 850 g/L.
28. Aerosol Adhesive, General-Purpose Mist Spray: 65 percent by weight.
29. Aerosol Adhesive, General-Purpose Web Spray: 55 percent by weight.
30. Special-Purpose Aerosol Adhesive (All Types): 70 percent by weight.
31. Other Adhesives: 250 g/L.
32. Architectural Sealants: 250 g/L.
33. Nonmembrane Roof Sealants: 300 g/L.
34. Single-Ply Roof Membrane Sealants: 450 g/L.
35. Other Sealants: 420 g/L.
36. Sealant Primers for Nonporous Substrates: 250 g/L.
37. Sealant Primers for Porous Substrates: 775 g/L.
38. Modified Bituminous Sealant Primers: 500 g/L.
39. Other Sealant Primers: 750 g/L.

- B. Credit IEQ 4.2: For field applications that are inside the weatherproofing system, paints and coatings shall comply with the following VOC content limits when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

1. Flat Paints and Coatings: VOC not more than 50 g/L.
 2. Nonflat Paints and Coatings: VOC not more than 150 g/L.
 3. Dry-Fog Coatings: VOC not more than 400 g/L.
 4. Primers, Sealers, and Undercoaters: VOC not more than 200 g/L.
 5. Anticorrosive and Antirust Paints Applied to Ferrous Metals: VOC not more than 250 g/L.
 6. Zinc-Rich Industrial Maintenance Primers: VOC not more than 340 g/L.
 7. Pretreatment Wash Primers: VOC not more than 420 g/L.
 8. Clear Wood Finishes, Varnishes: VOC not more than 350 g/L.
 9. Clear Wood Finishes, Lacquers: VOC not more than 550 g/L.
 10. Floor Coatings: VOC not more than 100 g/L.
 11. Shellacs, Clear: VOC not more than 730 g/L.
 12. Shellacs, Pigmented: VOC not more than 550 g/L.
 13. Stains: VOC not more than 250 g/L.
- C. Credit IEQ 4.4: Composite wood, agrifiber products, and adhesives shall not contain urea-formaldehyde resin.

PART 3 - EXECUTION

3.1 REFRIGERANT AND CLEAN-AGENT FIRE-EXTINGUISHING-AGENT REMOVAL

- A. Prerequisite EA 3: Remove CFC-based refrigerants from existing HVAC&R equipment indicated to remain and replace with refrigerants that are not CFC based. Replace or adjust existing equipment to accommodate new refrigerant as described in HVAC Sections.
- B. Credit EA 4: Remove clean-agent fire-extinguishing agents that contain HCFCs or halons and replace with agent that does not contain HCFCs or halons. See Section 212200 "Clean-Agent Fire-Extinguishing Systems" for additional requirements.

3.2 MEASUREMENT AND VERIFICATION

- A. Credit EA 5: Implement measurement and verification plan consistent with Option B: Energy Conservation Measure Isolation the EVO's "International Performance Measurement and Verification Protocol (IPMVP), Volume III: Concepts and Options for Determining Energy Savings in New Construction,".
- B. If not already in place, install metering equipment to measure energy usage. Monitor, record, and trend log measurements.
- C. Evaluate energy performance and efficiency by comparing actual to predicted performance.
- D. Measurement and verification period shall cover at least one year of postconstruction occupancy.

3.3 CONSTRUCTION WASTE MANAGEMENT

- A. Credit MR 2: Comply with Section 017419 "Construction Waste Management and Disposal."

3.4 CONSTRUCTION INDOOR-AIR-QUALITY MANAGEMENT

- A. Credit IEQ 3.1: Comply with SMACNA's "SMACNA IAQ Guideline for Occupied Buildings under Construction."

1. If Owner authorizes use of permanent heating, cooling, and ventilating systems during construction period as specified in Section 015000 "Temporary Facilities and Controls," install filter media having a MERV 8 according to ASHRAE 52.2 at each return-air inlet for the air-handling system used during construction.
2. Replace all air filters immediately prior to occupancy.

B. Credit IEQ 3.2: Comply with one of the following requirements:

1. After construction ends, prior to occupancy and with all interior finishes installed, perform a building flush-out by supplying a total volume of 14000 cu. ft. of outdoor air per sq. ft. of floor area while maintaining an internal temperature of at least 60 deg F and a relative humidity no higher than 60 percent.
2. If occupancy is desired prior to flush-out completion, the space may be occupied following delivery of a minimum of 3500 cu. ft. of outdoor air per sq. ft. of floor area to the space. Once a space is occupied, it shall be ventilated at a minimum rate of 0.30 cfm per sq. ft. of outside air or the design minimum outside air rate determined in Prerequisite IEQ 1, whichever is greater. During each day of the flush-out period, ventilation shall begin a minimum of three hours prior to occupancy and continue during occupancy. These conditions shall be maintained until a total of 14000 cu. ft./sq. ft. of outside air has been delivered to the space.
3. Air-Quality Testing:
 - a. Conduct baseline indoor-air-quality testing, after construction ends and prior to occupancy, using testing protocols consistent with the EPA's "Compendium of Methods for the Determination of Air Pollutants in Indoor Air," and as additionally detailed in the USGBC's "Green Building Design and Construction Reference Guide."
 - b. Demonstrate that the contaminant maximum concentrations listed below are not exceeded:
 - 1) Formaldehyde: 27 ppb
 - 2) Particulates (PM10): 50 micrograms/cu. m.
 - 3) Total Volatile Organic Compounds (TVOC): 500 micrograms/cu. m.
 - 4) 4-Phenylcyclohexene (4-PH): 6.5 micrograms/cu. m.
 - 5) Carbon Monoxide: 9 ppm and no greater than 2 ppm above outdoor levels.
 - c. For each sampling point where the maximum concentration limits are exceeded, conduct additional flush-out with outside air and retest the specific parameter(s) exceeded to indicate the requirements are achieved. Repeat procedure until all requirements have been met. When retesting noncomplying building areas, take samples from same locations as in the first test.
 - d. Air-sample testing shall be conducted as follows:
 - 1) All measurements shall be conducted prior to occupancy but during normal occupied hours, and with building ventilation system starting at the normal daily start time and operated at the minimum outside air flow rate for the occupied mode throughout the duration of the air testing.
 - 2) Building shall have all interior finishes installed including, but not limited to, millwork, doors, paint, carpet, and acoustic tiles. Nonfixed furnishings such as workstations and partitions are encouraged, but not required, to be in place for the testing.
 - 3) Number of sampling locations varies depending on the size of building and number of ventilation systems. For each portion of building served by a separate ventilation system, the number of sampling points shall not be less than one per 25,000 sq. ft. or

- for each contiguous floor area, whichever is larger, and shall include areas with the least ventilation and greatest presumed source strength.
- 4) Air samples shall be collected between 3 and 6 feet from the floor to represent the breathing zone of occupants, and over a minimum four-hour period.

END OF SECTION 018113

FOR REFERENCE ONLY

SECTION 01 9113 – COMMISSIONING**PART 1 – GENERAL****1.1 Description**

- A. The Smithsonian will procure the services of independent Commissioning Consultant; other terms are Commissioning Provider, Commissioning Agent, and Commissioning Authority. The Commissioning Consultant is an independent and knowledgeable third party, contracted to verify that the systems work as described in the Owners Project Requirements (OPR). The Commissioning Consultant will inform the Construction Manager (CM) COTR and the Architect of the results of the commissioning and provide suggestions, as necessary, to correct deficiencies in observed performance or installation.
- B. Commissioning is the process to verify to the Smithsonian that systems, equipment, mechanical, electrical, controls and special systems function together properly to meet performance requirements and design intent, and as described in the Contract Documents. The General Contractor shall be responsible for participation in the commissioning process as outlined below and in references and attachments throughout the Contract Documents. The General Contractor shall furnish labor and materials sufficient to meet all requirements of building commissioning under this contract.
- C. Various sections in Division 23 and 26 Specifications as well as specifications in other formats outline the specific commissioning responsibilities of each General Contractor and corresponding subcontractors for the division and obligate the General Contractor to coordinate and manage the commissioning responsibility of those subcontractors.

1.2 REQUIREMENTS INCLUDED

- A. Duties of Contractor.
- B. Duties of Commissioning Consultant.
- C. Commissioning Field Notebook.
- D. Acceptance Procedures.
- E. Performance Period.
- F. Training and Instruction.

1.3 RELATED SECTIONS

- A. All Division 1 Sections and Smithsonian General Requirements
- B. All Division 21 Sections
- C. All Division 22 Sections
- D. All Division 23 Sections
- E. All Division 25 Sections
- F. All Division 26 Sections
- G. All Division 28 Sections

1.4 TERMS

- A. Acceptable Performance: A component or system being able to meet specified design parameters under actual load including satisfactory documented completion of all functional performance tests, control system trending and resolution of outstanding issues.
- B. Basis of Design: The Basis of Design is a document that records the concepts, calculations, decisions, and product selections used to meet the Owner's Project Requirements and to satisfy applicable regulatory requirements, standards, and guidelines. The document includes both narrative descriptions and lists of individual items that support the design process. (ASHRAE Guideline 0-2013). The Basis of Design

provided by the design engineer addresses the decisions to meet the design intent as defined by the Smithsonian Institution. The Basis of Design describes the systems, components, conditions, and methods to meet the design intent.

- C. Commissioning Plan: The Smithsonian's Commissioning Consultant prepares The Commissioning Plan. *The Commissioning plan is a document that outlines the organization, schedule, allocation of resources, and documentation requirements of the Commissioning Process (ASHRAE Guideline 0-2013).* In addition, it defines the scope and format of the commissioning process and the responsibilities of all involved parties. The commissioning team reviews the Commissioning Plan to inform the intent and scope of the commissioning process, to ensure inclusion in the construction project scope/schedule and to facilitate and expedite the commissioning process. The Commissioning Plan is to be distributed by the Commissioning Consultant during the first third of the construction timeframe.
- D. Functional Performance Testing: Is a full range of checkouts and tests carried out to determine if all components, sub-systems, systems, and interfaces between systems function in accordance with the Contract Documents and meets the design intent. In this context, "function" includes all modes and sequences of control operation, all interlocks and conditional control responses and all specified responses to abnormal emergency conditions. The Commissioning Consultant will prepare the functional performance tests.
- E. Commissioning (Also Commissioning Process) is *a quality-focused process enhancing the delivery of a project. The process focusses upon verifying and documenting that the facility and all of its systems and assemblies are planned, designed, installed, tested, operated, and maintained to meet the Owner's Project Requirements. (ASHRAE Guideline 0-2013).* Process to demonstrate the Smithsonian building equipment controls and systems function together properly to meet design intent and performance requirements shown in a composite manner in the Contract Documents.
- F. Resolution Log: The purpose of this document is to provide a method for tracking and resolution of deficiencies discovered during the commissioning process. This list also includes the current disposition of issues and the date of final resolution as confirmed by the Commissioning Consultant. Deficiencies are issues where products, execution or performance does not satisfy the Specifications and/or the design intent. The Commissioning consultant creates and manages the Resolution Log.
- G. Pre-functional Construction Checklists: Commissioning Consultant prepares Checklist for equipment of systems and assemblies. See paragraph 1. A. Checklist shall be for the systems or equipment involved in the commissioning process to verify installation and start-up of equipment is complete and verify that systems are ready for functional testing. These documents require signature by the Contractor prior to continuing with the commissioning process and are required as a pre-condition of beginning the Functional Performance Testing.
- H. Testing and balancing (TAB) process. A complete pencil copy of TAB reports, reviewed on a system-by-system basis by the engineer and the Cx entity, is required prior to the start of any final functional performance test.

1.5 DUTIES OF CONTRACTOR

- A. Provide copies of all approved shop drawings, manufacturer's literature, maintenance information or other information as may be needed for systems and assemblies to the Commissioning Consultant.
- B. Collect the information requested by Commissioning Consultant for development of a complete Commissioning Plan, Commissioning Field Notebook, and Functional Performance Tests and provide to the Commissioning Consultant. The General Contractor shall review the Commissioning Plan, Commissioning Field Notebook, and Functional performance Test and confirm in writing to the CM COTR, Architect and Commissioning Consultant any known areas of conflict or areas requiring clarifications.
- C. Collect all proposed equipment start-up and Pre-Functional Construction Checklists documentation and place

it into the Commissioning Field Notebook. The General Contractor will provide the Commissioning Consultant with the completed commissioning field notebook.

- D. Provide the Contractor's schedule to the commissioning Consultant for review and comment. Plan for and incorporate commissioning activities into the construction schedule. Provide a sufficient detailed level of scheduling, activity, and detail to properly coordinate and schedule the trades. Provide a detailed Commissioning Schedule Fragnet to the project schedule, updated monthly reflecting actual construction progress.
- E. Provide Commissioning Consultant with submittals for all systems and assemblies for review and comments. Include submittals of controls system and wiring diagrams and narrative sequences of operation, in time for use in preparing the Functional Test Procedures. The Commissioning Consultant review comments of pertinent submittals is coordinated through the Construction Manager COTR.
- F. Provide a fully operational system per Specifications, started, verified, debugged, calibrated, balanced, tested and under automatic control.
- G. Provide qualified personnel to participate in the commissioning tests, including seasonal testing.
- H. Cooperate with the Commissioning Consultant's personnel.
- I. Provide access to site for the Commissioning Consultant for review, verification and testing activities.
- J. Provide organized storage space for project drawings, Specifications, equipment and materials submittals, shop drawings and operation and maintenance manuals in the job site trailers or job site office space.
- K. Provide updates to all project documentation to reflect all supplemental instructions, addenda or other revisions to the project construction documents. Updates and architect's supplemental instructions must be posted to the master set of documentation for review and reference by all Contractors and for the Commissioning Consultant's use.
- L. Provide adequate time and resources to perform functional testing of systems and assemblies in contract. These times and activities shall be reflected in the Commissioning Fragnet schedule, updated monthly.
- M. Coordinate participation of all pertinent subcontractors including mechanical, electrical, controls and Testing and Balancing TAB subcontractors in the commissioning process.
- N. Participate in any efforts to finalize sequences of operations with Construction Manager COTR, Designers and Commissioning Consultant.
- O. Verify that coordination, installation, quality control and final testing have been completed such that installed systems and equipment comply with construction documents.
- P. Review the Commissioning Plan, Project Reports and test results and submit comments to the Commissioning Authority.
- Q. In a timely manner, address issues identified during construction that may affect the commissioning process or final system performance.
- R. Perform equipment start-up and testing of mechanical and electrical equipment and systems and document as required with start-up reports and completion of Pre-functional Construction Checklists. These checklists include installation documentation, start-up documentation, controls point-to-point documentation and calibration documentation, verification that controls sequence of operations meets design intent and TAB final documentation. Reports will be stored in the Contractor's field trailer, as a part of the Commissioning Field Notebook. Contractor will coordinate efforts to complete the pre-functional documentation.

- S. Lead verification testing of fire/smoke dampers and direct the resolution of deficiencies. Each fire/smoke damper and its functions are tracked in a matrix spreadsheet. Owner's Authority Having Jurisdiction (OSHEM) shall witness and approve all life safety systems including fire / smoke damper operation.
- T. Provide preliminary TAB report, indicating all actual field values recorded to the Commissioning Consultant through the Construction Manager COTR, prior to initiation of functional testing. These reports shall be incorporated in the commissioning field notebook. Provide these "pencilcopy" TAB data on a system-by-system basis, as systems have been finally and completely balanced.
- U. Pre-test all systems prior to scheduling the final Functional Performance Test for the record. Operate equipment and systems as required in preparation of final functional performance testing. This includes but is not limited to manipulating the appropriate controls systems to execute the Functional Test Procedures.
- V. The Contractor shall issue a written Notice of Readiness for each system; include verification of system completion, TAB completion and controls. Provide the Commissioning Consultant with a copy of the Notice of Readiness upon completion of all systems work, start-up and Pre-functional Construction Checklists requirements by trade contractors.
- W. Participate in fine-tuning or troubleshooting of system performance, if these measures become necessary.
- X. The Contractor shall compensate the Government for retesting and/or troubleshooting time required by the Commissioning Consultant when the Contractor's systems do not meet specified performance and are not ready for commissioning. Back-charge Contractors as necessary to collect reimbursement for Commissioning Consultant compensation.
- Y. Review operating and maintenance data for verification, organization, distribution, and conformance to requirement of the Contract Documents.
- Z. Submit complete operation and maintenance information and as-built drawings to the Commissioning Consultant for compliance review of the requirement of the Contract Documents. Incorporate changes and recommendations provided by the commissioning Consultant into the
- AA. Provide all documentation of training for the specified systems.
- BB. Provide all proprietary test equipment required to test all the systems and equipment in this project. The Contractor shall provide all necessary tools, lifts, ladders, access, PPE, and other equipment required for the Commissioning Consultant to witness Functional Performance Testing.
- CC. The Commissioning Field Notebook will be stored in the Contractors field trailer and will be managed by the Contractor. The Contractor shall confirm in writing to the Commissioning Consultant that systems are complete, functional and the appropriate subcontractors have completed the specified tasks and signed off all pre function documentation.

1.6 DUTIES OF COMMISSIONING CONSULTANT

- A. Develop Commissioning plan at the construction phase.
- B. Develop Functional Test Procedures from Contract Documents and final equipment submittals including narrative sequences of operation, control diagrams and software code for execution with the assistance of Contractor staff as required.
- C. Review the Contractor's submittals relative to the systems and assemblies. Provide comments on the submittals during the same timeframe as the architect / engineer's review. Architect / Engineer has final decision on incorporating comments by the Commissioning Consultant. CM COTR formally incorporates the response to the General Contractor.

- D. Perform site observations to follow installation progress and to verify system installation quality and readiness for testing.
- E. Observe the start-up activities and initial testing of selected equipment and systems as required and review Contractor's start-up documentation.
- F. Observe or review documentation of validation activities including Proper test and balance activities, rotating equipment drive alignment, vibration testing, acoustical testing, electrical testing, and functional tests for normal and off-normal operating sequences.
- G. Review submittal of all required pre-functional and start-up documentation provided by the General Contractor for completeness and reasonableness. This includes installation documentation, start-up documentation, point-to-point checklists, and preliminary TAB report, prior to initiation of functional testing.
- H. Witness a random selection of TAB readings (10%) performed by the TAB contractor. Coordinate with Division 23 and 25 project specifications. This witnessing activity is during the execution of regular TAB activities.
- I. TAB verification to be a separate activity, occurring prior to the final Functional Performance Testing activities.
- J. Assist with scheduling, direct, and witness complete functional testing as defined in the Commissioning Plan and Functional Test Procedures. All testing to be performed and verified by the General Contractor and documented by the Commissioning Consultant.
- K. Witness and verify satisfactory completion of equipment and system tests and inter-systems functional performance tests.
- L. Conduct commissioning meetings and distribute minutes of those meetings to all attendees.
- M. Provide site observation, functional tests, or other project reports in a timely manner.
- N. Document inconsistencies or deficiencies in system operations and system compliance. System deficiencies shall be forwarded to the CM COTR and documented in the Resolution Log.
- O. Coordinate via the General Contractor participation of Government's personnel with equipment, component and systems performance verification and participation in required training.
- P. When commissioning has been successfully completed, recommend acceptance to the Smithsonian Institution, and provide suggestions for those systems not performing as expected.
- Q. Once all functional tests are successfully completed and all outstanding issues resolved, the Commissioning Consultant will provide the Smithsonian Institution with a Final Commissioning Report of all commissioning activities that occurred during the project.
- R. Provide technically qualified personnel when scheduled.
- S. The Commissioning Consultant will formally communicate with the Contractor via approved project channels. It is expected, however, that informal communication and coordination will be conducted directly with the subcontractors; records of all contacts will be sent to the Architect through the normal channels.
- T. The Commissioning Consultant is not authorized to release, revoke, alter or expand requirements of Contract Documents, to approve or accept any portion of the work or to perform any duties of the Contractor.

1.7 COMMISSIONING PLAN

- A. The Commissioning Plan is a tool through which the commissioning process is described and incorporates the

Construction Manager COTR, Architect, Contractor, and Commissioning Authority roles relative to the commissioning process. Commissioning team members are all contractors, subcontractors, and design professionals whose participation is of benefit in the delivery of a fully functioning building to the Government. The plan shall describe the communication, authority, and responsibility of commissioning team members. The Commissioning Plan will include the following:

1. The purpose of commissioning.
2. Detail the commissioning process.
3. Commissioning team members' responsibilities.
4. Describe Pre-functional Construction Checklist Procedures.
5. Provide guidelines for acceptance of each piece of equipment or system.
6. Systems to be commissioned.
7. Provide a .pdf copy of entire completed Commissioning Field Notebook to Commissioning Consultant at conclusion of project for use in developing final Commissioning Report, prepared by the Commissioning Consultant.

1.8 SYSTEMS TO BE COMMISSIONED

- A. Systems and Equipment to Be Functionally Tested: The system features are to be functionally tested, and other building features will be evaluated for installation quality during construction. The functional performance testing will include the following systems and equipment.

1. Mechanical Systems:

- a. Ductless split system units (indoor and outdoor units)
- b. Pumps
- c. Fans
- d. Unit heaters (all types)
- e. ATC dampers in OA intake and exhaust connections
- f. Radiant floor manifolds
- g. Humidifiers
- h. Boilers
- i. Automatic glycol feeder
- j. Condensate pumps (electric & pressure powered)
- k. Building automation system

2. Electrical Systems:

- a. Variable Frequency Controllers
- b. Lighting Control System

1.9 COMMISSIONING ACTIVITIES

- A. The Commissioning Fragnet Schedule: This schedule defines the milestones and conditions that must be achieved before system testing and other commissioning activities can commence. The schedule also includes the expected duration of the various tasks so that the commissioning process can be incorporated into the overall construction schedule.
- B. Preparation for Testing: To prepare for the system performance testing, the Commissioning Consultant will examine the design and Construction Documents, develop with appropriate Contractors Pre-functional Construction Checklists of construction responsibilities that must be completed prior to testing and develop detailed Functional Test Procedures and data forms. Using the Pre-functional Construction Checklists, the Contractor must verify that the systems they install comply with the Construction Documents and are fully functional. Commissioning is not intended to be a testing or inspection function that replaces any of the

Contractors' obligations for testing and proof of performance. Functional testing will only begin when the appropriate subcontractors' complete checklists, initialed, signed and returned to the Commissioning Consultant, the TAB process is complete for both air and water balancing, and the controls are completed, and all control loops properly tuned.

- C. Functional Testing: experienced and qualified technicians of the Contractor(s) perform Functional testing, responsible for installation as facilitated by the Commissioning Consultant and may be observed by other members of the commissioning team including the Owner. Functional testing will verify proper sequencing, operation and performance of installed equipment and systems under realistic operating conditions. The functional testing will follow with written Functional Test Procedures with test results documented for permanent record.
- D. Documentation: In addition to the Pre-functional Construction Checklists and Functional Test Procedures, written documentation will be maintained for all other commissioning activities. Project communication reports shall be issued by the Commissioning Authority to the Contractor and key members of the commissioning team to document apparent deficiencies identified during examination of design and construction documents, daily activities on-site, construction deficiencies and successful or unsuccessful functional test results. At the end of the commissioning process, all documentation will be assembled and summarized in the Final Commissioning Report.
- E. Deficiency Resolution: When an Issues Log, Resolution Log or Field Report is issued to address an identified deficiency, the Contractor shall forward the reports to the appropriate parties to initiate corrective action in an expeditious manner. The designer is relied on for supplemental instructions or design modifications and issuance of final design details and the Contractors are relied on for implementation of that design. Change orders must be issued through proper contract channels.

1.10 FUNCTIONAL TEST PROCEDURES

- A. The Functional Test Procedures include, but are not limited to, the following:
 1. Verification of testing, adjusting and balancing performance.
 2. Verification of all equipment's ability to perform to the design intent.
 3. Verification of the performance of sub-systems consisting of combinations of equipment (e.g., refrigeration cycle, pumps, and interconnecting piping).
 4. Verification of the performance of the automatic controls in all seasonal modes.
 5. Verification of the performance of the HVAC system as a whole.
 6. Verification of the performance of all life safety devices and systems that interface with the HVAC systems. Commissioning of life safety systems by the Commissioning Authority shall be limited to the fire alarm interface with the HVAC systems.

PART 2 - PRODUCTS (NOT USED) PART 3 -

EXECUTION

3.1 GENERAL

- A. Operating equipment and systems shall be tested in the presence of Government's Commissioning Consultant and Project Officer (Construction Manager COTR) to demonstrate compliance with specified requirements.
 1. Notify COTR, in writing, fourteen (14) days prior to tests, twenty-one (21) days prior if a utility shutdown is required, scheduled under requirements of this Section.
 2. Testing shall be conducted under specified design operating conditions as recommended or approved by construction Manager COTR and Architect.

- B. The Functional Performance Testing shall be completed by the Contractor as a requirement of Substantial Completion. The acceptance of Functional Performance Test by Construction Manager COTR is a requirement of Final Completion.
- C. All elements of systems shall be tested to demonstrate that total systems satisfy all requirements of these Specifications. Testing shall be accomplished on hierarchical basis. Test each piece of equipment for proper operation, followed by each sub-system, followed by entire system, followed by interaction with other major systems.
- D. Proprietary test equipment required by the manufacturer, whether specified or not, shall be provided by the manufacturer of the equipment through the installing contractor. Manufacturer shall provide the test equipment, demonstrate its use, and assist the Commissioning Consultant in the commissioning process.
- E. Acceptance Documentation: A copy of the functional performance tests results shall be necessary acceptance documentation along with other specified requirements. Documentation must be signed and dated.

3.2 ACCEPTANCE PROCEDURES

- A. Prior to functional performance testing of each system, the Commissioning Consultant shall observe and verify that the physical installation of components and systems being tested is substantially installed in accordance with the Contract Documents.
- B. Contractor's Tests:
 - 1. System shall be checked for proper installation, shall be adjusted, and calibrated to verify that it is ready to function as specified.
 - 2. All system elements shall be checked to verify that they have been installed properly and that all connections have been made correctly.
 - 3. All discrete elements and sub-systems shall be adjusted and checked for proper operation.
 - 4. Start-up and operational tests shall be complete, with all required Pre-functional Construction Checklists signed and submitted for review by Commissioning Consultant within five (5) days of each activity, prior to starting functional performance testing.
- C. Smithsonian Institution witnessed Functional Tests:
 - 1. Objective of these tests is to demonstrate that system is operating and complying with specified performance requirements.
 - 2. Smithsonian Institution witnessed functional performance tests shall be performed on complete system. Each function shall be demonstrated to satisfaction of the Architect / Engineer through the CM COTR and Smithsonian Institution's Commissioning Consultant on paragraph-by-paragraph basis of Commissioning Consultant's written test procedure, developed to demonstrate conformance to requirements of the Specifications.
 - 3. Functional performance tests shall be witnessed and endorsed by the Commissioning Consultant upon satisfactory completion.
 - 4. Actual testing program shall be conducted in accordance with prior approved procedures and shall be documented as required herein.
 - 5. Contractor shall notify Architect and Construction Manager COTR at least two (2) weeks prior to date of functional performance tests.
- D. The functional performance testing process shall be accomplished for all equipment, sub-systems, systems, and system interfaces. The order of functional performance testing shall be reflected in the Commissioning Fragnet Schedule. All must be tested for acceptance and there shall be a separate checklist for each to ensure documentation specific to each is complete.

- E. Each system shall be operated through all modes of system operation (e.g., seasonal, occupied, unoccupied, warm-up, cool-down, etc., as applicable) including every individual interlock and conditional control logic, all control sequences, both full-load and part-load conditions and simulation of all abnormal conditions for which there is a specified system or controls response. The warm-up and cool-down test shall be a performance test, as applicable.
- F. Temporary upsets of systems, such as distribution faults, control loss, set-point change, equilibrium upset and component failure, shall be imposed at different operation loads to determine system stability and recovery time.
- G. When the functional performance of all individual systems has been proven, the interface or coordinated responses between systems shall be checked. The systems involved may be within

the overall HVAC work or they may involve other systems, such as emergency systems for life safety.
- H. Corrective Measures: If acceptable performance cannot be achieved, the cause of the deficiency will be identified. If it is determined that the deficiency was caused by the system or component not being installed per the manufacturer's recommendations or Contract Documents, the necessary corrective measures shall be conducted by the General Contractor. Every check or test for which acceptable performance was not achieved shall be repeated after the necessary corrective measures have been completed. This re-testing process should be repeated until acceptable performance is achieved. The Contractor will be allowed one retest after initial testing of the equipment. If the retest fails, the Contractor shall be financially responsible, at standard rates, to reimburse the Commissioning Consultant for the additional time taken to achieve acceptable performance.

3.3 TRAINING AND INSTRUCTION

- A. Training and instruction of Government personnel is a part of the commissioning process and essential for the proper operation of the facility. The contractors and vendors providing the training will complete training plans and submit to the Commissioning Consultant for review and approval in conjunction with the COTR.

3.4 SEASONAL COMMISSIONING AND OCCUPANCY VARIATIONS

- A. Seasonal commissioning pertains to testing under full-load conditions during peak heating and peak cooling seasons, as well as part-load conditions in the spring and fall. Initial commissioning will be done as soon as contract work is completed, regardless of season. Subsequent commissioning may be undertaken at any time thereafter to ascertain adequate performance during the different seasons.
- B. All equipment and systems will be tested and commissioned in a peak season to observe full-load performance. Heating equipment will be tested during winter design conditions. Cooling equipment will be tested during summer design conditions, with a fully occupied building. Each Contractor and supplier will be responsible to participate in the initial and the alternate peak season test of the systems required demonstrating performance.
- C. Subsequent commissioning may be required under conditions of minimum and/or maximum occupancy or use. All equipment and systems affected by occupancy variations will be tested and commissioned at the minimum and peak loads to observe system performance. Each Contractor and supplier will be responsible to participate in the occupancy sensitive testing of systems to provide verification of adequate performance.
- D. Commissioning team including contractor, subcontractors, commissioning personnel and COTR shall meet at site roughly ten months after Substantial Completion to review any system issues, and correct any operational concerns covered by warranty. Commissioning Consultant shall lead this site meeting and shall summarize findings in a site report.

3.5 SCHEDULE

- A. The schedule includes the probable expected sequence and duration for the various tasks, so that the commissioning process can be integrated with the general construction schedule and refined over the course of the project. Actual sequencing and durations shall be by the General Contractor and Sub-Contractors, coordinated with the Commissioning Consultant.

Milestone	Duration	Successor	Predecessor
Commissioning Kick off Mtg.	1 day	All contractors on board including Controls and TAB	Before major MEP installation
Review equipment submittals	2 weeks	After receipt of submittals	Before ordering or installation
Develop Pre-functional Construction Checklists	4 weeks	After equipment submittal review and after receipt of O&M literature	Before MEP installation
Walk contractors through Pre-functional Construction Checklists	5 days	After development of Pre-Functional Checklist documentation	Before MEP installation
Write Functional Tests	3 to 5 weeks	After controls submittal review	3 weeks prior to functional testing
Submit Functional Tests for review by COTR and Contractors	1 week	After development of Functional Tests	Before Functional testing
Complete Pre-functional Construction Checklists (contractor task)	Ongoing	During installation, startup, and test, adjust and balance	Before TAB Backcheck and functional testing
Site Observations (CxA)	Ongoing	After majority of MEP installation	Before TAB Backcheck and functional testing
Test, Adjust and Balance (Contractor task)	See CPM schedule	After Start-up and Pre-functional Construction checks. All walls, windows, doors, ceilings must be installed.	Before TAB Backcheck
Test, Adjust and Balance Backcheck (10%)	1 week	After Start-up and receipt of completed Pre-functional Construction Checklists from contractors	Before functional testing
Functional Testing	2 months postponed if needed for slab heating in winter.	After TAB Backcheck and receipt of completed Pre-functional Construction Checklist have been completed by contractors	Before Government occupancy
Issues Resolution	2 weeks	After Functional Testing	Before Government occupancy
Final Commissioning Documentation Submittal	2 weeks	After resolution of issues log	2 weeks after resolution of issues log

END OF SECTION 01 91 13

SECTION 02 4116 - STRUCTURE DEMOLITION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Demolition and removal of buildings and site improvements.
 - 2. Abandoning in-place Removing below-grade construction.
 - 3. Disconnecting, capping or sealing, and abandoning in-place removing site utilities.
 - 4. Salvaging items for reuse by Owner.
- B. Related Requirements:
 - 1. Section 01 0000 "Supplementary Conditions for Construction".
 - 2. Section 01 1000 "Summary" for use of the premises and phasing requirements.
 - 3. Section 02 4119 "Selective Structure Demolition" for partial demolition of buildings, structures, and site improvements.
 - 4. Section 31 1000 "Site Clearing" for site clearing and removal of above- and below-grade site improvements not part of building demolition.

1.2 DEFINITIONS

- A. Remove: Detach items from existing construction and legally dispose of them off-site unless indicated to be removed and salvaged.
- B. Remove and Salvage: Carefully detach from existing construction, in a manner to prevent damage, and deliver to Owner ready for reuse. Include fasteners or brackets needed for reattachment elsewhere.

1.3 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition waste becomes property of Contractor.
- B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.
 - 1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

1.4 PREINSTALLATION MEETINGS

- A. Predemolition Conference: Conduct conference at Project site.
 - 1. Inspect and discuss condition of construction to be demolished.
 - 2. Review structural load limitations of existing structures.
 - 3. Review and finalize building demolition schedule and verify availability of demolition personnel, equipment, and facilities needed to make progress and avoid delays.
 - 4. Review and finalize protection requirements.
 - 5. Review procedures for noise control and dust control.
 - 6. Review procedures for protection of adjacent buildings.
 - 7. Review items to be salvaged and returned to Owner.

1.5 INFORMATIONAL SUBMITTALS

- A. Engineering Survey: Submit engineering survey of condition of building.
- B. Proposed Protection Measures: Submit informational report, including Drawings, that indicates the measures proposed for protecting individuals and property, for environmental protection, for dust control and, for noise control. Indicate proposed locations and construction of barriers.
 - 1. Adjacent Buildings: Detail special measures proposed to protect adjacent buildings to remain[including means of egress from those buildings].
- C. Schedule of Building Demolition Activities: Indicate the following:
 - 1. Detailed sequence of demolition work, with starting and ending dates for each activity.
 - 2. Temporary interruption of utility services.
 - 3. Shutoff and capping or re-routing of utility services.
- D. Inventory: Submit a list of items to be removed and salvaged and deliver to Owner prior to start of demolition.
- E. Predemolition Photographs: Show existing conditions of adjoining construction and site improvements, including finish surfaces, that might be misconstrued as damage caused by demolition operations. Comply with Section 01 3233 "Photographic Documentation." Submit before the Work begins.
- F. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

1.6 CLOSEOUT SUBMITTALS

- A. Inventory: Submit a list of items that have been removed and salvaged.

1.7 QUALITY ASSURANCE

- A. Refrigerant Recovery Technician Qualifications: Certified by EPA-approved certification program.
- B. Regulatory Requirements: Comply with governing EPA notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- C. Standards: Comply with ANSI/ASSE A10.6 and NFPA 241.
- D. Predemolition Conference: Conduct conference at Project site.
 - 1. Inspect and discuss condition of construction to be demolished.
 - 2. Review structural load limitations of existing structures.
 - 3. Review and finalize building demolition schedule and verify availability of demolition personnel, equipment, and facilities needed to make progress and avoid delays.
 - 4. Review and finalize protection requirements.

5. Review procedures for noise control and dust control.
6. Review procedures for protection of adjacent buildings.
7. Review items to be salvaged and returned to Owner.

1.8 FIELD CONDITIONS

- A. Buildings to be demolished will be vacated and their use discontinued before start of the Work.
- B. Buildings immediately adjacent to demolition area will be occupied. Conduct building demolition so operations of occupied buildings will not be disrupted.
 1. Provide not less than 72 hours' notice of activities that will affect operations of adjacent occupied buildings.
 2. Maintain access to existing walkways, exits, and other facilities used by occupants of adjacent buildings.
 - a. Do not close or obstruct walkways, exits, or other facilities used by occupants of adjacent buildings without written permission from authorities having jurisdiction.
- C. Owner assumes no responsibility for buildings and structures to be demolished.
 1. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.
- D. Hazardous Materials: It is not expected that hazardous materials will be encountered in the Work.
 1. Hazardous materials will be removed by Owner before start of the Work.
 2. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify Architect and Owner. Hazardous materials will be removed by Owner under a separate contract.
- E. On-site storage or sale of removed items or materials is not permitted.

1.9 COORDINATION

- A. Arrange demolition schedule so as not to interfere with Owner's on-site operations or operations of adjacent occupied buildings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- B. Standards: Comply with ANSI/ASSE A10.6 and NFPA 241.

2.2 SOIL MATERIALS

- A. Satisfactory Soils: Comply with requirements in Section 31 2000 "Earth Moving."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that utilities have been disconnected and capped before starting demolition operations.
- B. Review Project Record Documents of existing construction provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in Project Record Documents.
- C. Inventory and record the condition of items to be removed and salvaged. Provide photographs of conditions that might be misconstrued as damage caused by salvage operations. Comply with Section 01 3233 "Photographic Documentation."
- D. Engage a professional engineer to perform an engineering survey of condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during building demolition operations.
 - 1. Steel Tendons: Locate tensioned steel tendons and include recommendations for de-tensioning.
- E. Verify that hazardous materials have been remediated before proceeding with building demolition operations.
- F. Inventory and record the condition of items to be removed and salvaged.

3.2 PREPARATION

- A. Refrigerant: Remove refrigerant from mechanical equipment according to 40 CFR 82 and regulations of authorities having jurisdiction before starting demolition.
- B. Existing Utilities: Locate, identify, disconnect, and seal or cap off indicated utilities serving buildings and structures to be demolished.
 - 1. Owner will arrange to shut off indicated utilities when requested by Contractor.
 - 2. If removal, relocation, or abandonment of utility services will affect adjacent occupied buildings, then provide temporary utilities that bypass buildings and structures to be demolished and that maintain continuity of service to other buildings and structures.
 - 3. Cut off pipe or conduit a minimum of 24 inches (610 mm) below grade. Cap, valve, or plug and seal remaining portion of pipe or conduit after bypassing according to requirements of authorities having jurisdiction.
- C. Temporary Shoring: Provide and maintain interior and exterior shoring, bracing, or structural support to preserve stability and prevent unexpected movement or collapse of construction being demolished.
 - 1. Strengthen or add new supports when required during progress of demolition.
- D. Salvaged Items: Comply with the following:
 - 1. Clean salvaged items of dirt and demolition debris.
 - 2. Pack or crate items after cleaning. Identify contents of containers.
 - 3. Store items in a secure area until delivery to Owner.
 - 4. Transport items to storage area designated by Owner.
 - 5. Protect items from damage during transport and storage.

3.3 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

- A. Existing Utilities to be Disconnected: Locate, identify, disconnect, and seal or cap off utilities serving buildings and structures to be demolished.
 - 1. Owner will arrange to shut off utilities when requested by Contractor.
 - 2. Arrange to shut off utilities with utility companies.
 - 3. If removal, relocation, or abandonment of utility services will affect adjacent occupied buildings, then provide temporary utilities that bypass buildings and structures to be demolished and that maintain continuity of service to other buildings and structures.
 - 4. Cut off pipe or conduit a minimum of 24 inches (610 mm) below grade. Cap, valve, or plug and seal remaining portion of pipe or conduit after bypassing according to requirements of authorities having jurisdiction.
 - 5. Do not start demolition work until utility disconnecting and sealing have been completed and verified in writing.

3.4 PROTECTION

- A. Existing Facilities: Protect adjacent walkways, loading docks, building entries, and other building facilities during demolition operations. Maintain exits from existing buildings.
- B. Temporary Shoring: Provide and maintain interior and exterior shoring, bracing, or structural support to preserve stability and prevent unexpected movement or collapse of construction being demolished.
 - 1. Strengthen or add new supports when required during progress of demolition.
- C. Existing Utilities to Remain: Maintain utility services to remain and protect from damage during demolition operations.
 - 1. Do not interrupt existing utilities serving adjacent occupied or operating facilities unless authorized in writing by Owner and authorities having jurisdiction.
 - 2. Provide temporary services during interruptions to existing utilities, as acceptable to Owner and authorities having jurisdiction.
 - a. Provide at least 72 hours' notice to occupants of affected buildings if shutdown of service is required during changeover.
- D. Temporary Protection: Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction and as indicated. Comply with requirements in Section 01 5000 "Temporary Facilities and Controls."
 - 1. Protect adjacent buildings and facilities from damage due to demolition activities.
 - 2. Protect existing site improvements, appurtenances, and landscaping to remain.
 - 3. Erect a plainly visible fence around drip line of individual trees or around perimeter drip line of groups of trees to remain.
 - 4. Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.
 - 5. Provide protection to ensure safe passage of people around building demolition area and to and from occupied portions of adjacent buildings and structures.
 - 6. Protect walls, windows, roofs, and other adjacent exterior construction that are to remain and that are exposed to building demolition operations.
 - 7. Erect and maintain dustproof partitions and temporary enclosures to limit dust, noise, and dirt migration to occupied portions of adjacent buildings.

- E. Remove temporary barriers and protections where hazards no longer exist. Where open excavations or other hazardous conditions remain, leave temporary barriers and protections in place.

3.5 DEMOLITION, GENERAL

- A. General: Demolish indicated buildings and site improvements completely. Use methods required to complete the Work within limitations of governing regulations and as follows:
 - 1. Do not use cutting torches until work area is cleared of flammable materials. Maintain portable fire-suppression devices during flame-cutting operations.
 - 2. Maintain fire watch during and for at least 2 hours after flame cutting operations.
 - 3. Maintain adequate ventilation when using cutting torches.
 - 4. Locate building demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
- B. Engineering Surveys: During demolition, perform surveys to detect hazards that may result from building demolition activities.
- C. Site Access and Temporary Controls: Conduct building demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
 - 1. Do not close or obstruct streets, walks, walkways, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.
 - 2. Use water mist and other suitable methods to limit spread of dust and dirt. Comply with governing environmental-protection regulations. Do not use water when it may damage adjacent construction or create hazardous or objectionable conditions, such as ice, flooding, and pollution.
- D. Explosives: Use of explosives is not permitted.

3.6 DEMOLITION BY MECHANICAL MEANS

- A. Proceed with demolition of structural framing members systematically, from higher to lower level. Complete building demolition operations above each floor or tier before disturbing supporting members on the next lower level.
- B. Remove debris from elevated portions of the building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
 - 1. Remove structural framing members and lower to ground by method suitable to minimize ground impact and dust generation.
- C. Salvage: Items to be removed and salvaged are indicated on Drawings.
- D. Below-Grade Construction: Demolish foundation walls and other below-grade construction that are within footprint of new construction and extending 5 feet (1.5 m) outside footprint indicated for new construction. Abandon below-grade construction outside this area.
 - 1. Remove below-grade construction, including basements, foundation walls, and footings, to depths indicated.

- E. Existing Utilities: Demolish and remove existing utilities and below-grade utility structures.
 - 1. Piping: Disconnect piping at unions, flanges, valves, or fittings.
 - 2. Wiring Ducts: Disassemble into unit lengths and remove plug-in and disconnecting devices.

3.7 SITE RESTORATION

- A. Below-Grade Areas: Rough grade below-grade areas ready for further excavation or new construction.
- B. Site Grading: Uniformly rough grade area of demolished construction to a smooth surface, free from irregular surface changes. Provide a smooth transition between adjacent existing grades and new grades.

3.8 REPAIRS

- A. Promptly repair damage to adjacent buildings caused by demolition operations.

3.9 DISPOSAL OF DEMOLISHED MATERIALS

- A. Remove demolition waste materials from Project site and recycle or dispose of them according to Section 01 7419 "Construction Waste Management and Disposal."
 - 1. Do not allow demolished materials to accumulate on-site.
 - 2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
- B. Do not burn demolished materials.

3.10 CLEANING

- A. Clean adjacent structures and improvements of dust, dirt, and debris caused by building demolition operations. Return adjacent areas to condition existing before building demolition operations began.
 - 1. Clean roadways of debris caused by debris transport.

END OF SECTION

SECTION 02 4119 – SELECTIVE DEMOLITION

PART 1 - GENERAL

1.1 SUMMARY

- A. This Sections includes the following:
 - 1. Removing below grade construction.
- B. Disconnecting, capping or sealing, and removing site utilities. Removing existing elements if removal is necessary to accommodate the new design. These elements include, but are not limited to:
 - 1. Utilities including pipes, ducts, and conduits

1.2 DEFINITIONS

- A. Remove: Detach items from existing construction and legally dispose of them off-site unless indicated to be removed and salvaged.
- B. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged.

1.3 SUBMITTALS

- A. Proposed Environmental-Protection, Dust-Control and Noise-Control Measures: Submit statement or drawing that indicates the measures proposed for use, proposed locations, and proposed time frame for their operation. Identify options if proposed measures are later determined to be inadequate.
- B. Schedule of Site Demolition Activities: Indicate the following:
 - 1. Detailed sequence of demolition and removal work, with starting and ending dates for each activity.
 - 2. Interruption of utility services.
 - 3. Coordination for shutoff, capping, and continuation of utility services.

1.4 QUALITY ASSURANCE

- A. Regulatory Requirements:
 - 1. Health Hazards:
 - a. Whenever construction operations could result in worker contact with hazardous materials, follow recommendations of an American Board of Industrial Hygiene Certified Industrial Hygienist (CIH) employed by Contractor.
 - b. Existing Asbestos and Asbestos-Containing Materials: Comply with 29 CFR 1926.1101; complete removal is required.
 - c. Existing Lead-Based Paint: Comply with 29 CFR 1926.62; either removal or recoating is acceptable.

1.5 PROJECT CONDITIONS

- A. Storage or sale of removed items or materials on site is not permitted.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Survey existing conditions and correlate with requirements indicated to determine extent of utility demolition required.
- B. Review Project Record Documents of existing construction provided by SI and NZP. SI and NZP does not guarantee the existing conditions are the same as those indicated in Project Record Documents.
- C. When unanticipated mechanical, electrical, or structural elements are encountered, investigate, and measure the nature and extent of the element.
- D. Verify that hazardous materials have been remediated before proceeding with utility demolition operations.

3.2 PREPARATION

- A. Existing Utilities: Locate, identify, and protect all utilities within the limits of disturbance, disconnect, and seal or cap off indicated utilities serving buildings and structures to be demolished.
 - 1. Arrange to shut off indicated utilities with Contracting Officer Technical Representative (COTR).
 - 2. If utility services are required to be removed or relocated, before proceeding with building demolition provide temporary utilities that bypass buildings and structures to be demolished and that maintain continuity of service to other buildings and structures.
 - 3. Cut off pipe or conduit a minimum of 2-feet below grade. Cap, valve, or plug and seal remaining portion of pipe or conduit after bypassing.

3.3 PROTECTION

- A. Existing Utilities: Maintain utility services indicated to remain and protect them against damage during demolition operations.
 - 1. Do not interrupt existing utilities serving adjacent occupied or operating facilities unless authorized in writing by COTR.
 - 2. Provide temporary services during interruption to existing utilities, as acceptable to COTR.
 - 3. Provide at least 72 hours' notice to COTR if shutdown of service is required during changeover.

3.4 DEMOLITION

- A. Engineering Surveys: Perform surveys as the Work progresses to detect hazards that may result from utility demolition activities.
- B. Existing Utilities: Demolish existing utilities and below grade utility structures as indicated.
- C. Explosives: Use of explosives is not permitted.

3.5 SITE RESTORATION

- A. Below-Grade Areas: Rough grade below-grade areas ready for further excavation or new construction.
- B. Site Grading: Uniformly rough grade area of demolished construction to a smooth surface, free from irregular surface changes. Provide a smooth transition between adjacent existing grades and new grades.

3.6 REPAIRS

- A. General: Promptly repair damage to adjacent construction caused by utility demolition.
- B. Where repairs to existing surfaces are required, patch to produce surfaces suitable for a new materials.
- C. Restore exposed finishes of patched areas and extend restoration into adjoining construction in a manner that eliminates evidence of patching and refining.

3.7 DISPOSAL OF DEMOLISHED MATERIALS

- A. Remove demolished materials from Project site and legally dispose of them.
 - 1. Do not allow demolished materials to accumulate on-site.
 - 2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
- B. Burning: Do not burn demolished materials.
- C. Disposal: Transport demolished materials off-site and legally dispose of them.

3.8 CLEANING

Clean adjacent structures and improvements of dust, dirt, and debris caused by demolition operations. Return adjacent areas to existing condition before demolition operations began.

END OF SECTION

SECTION 03 3000 – CAST IN PLACE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to the work of this Section.

1.2 SUMMARY

- A. Section includes but is not limited to the following as shown on the drawings and as specified herein:
 - 1. Foundation systems including footings, pile caps, piles, walls, beams, piers, pilasters, pits and similar concrete.
 - 2. Slabs on grade.
 - 3. Structural slabs on grade.
 - 4. Structural slabs on metal deck.
 - 5. Cast-in-place slabs, beams, walls, and columns.
 - 6. Topping slabs.
 - 7. Furnishing and installing all required anchors and inserts.
 - 8. Placing in the forms all inserts, anchors, anchor bolts, bearing plates and the like furnished by other trades for casting into the concrete and cleaning of same after stripping of forms.
 - 9. Protection of all inserts, anchors, hangers, sleeves and supports furnished and set by others for the attachment of other work to the concrete, or required to permit the passage of other work through the concrete.
 - 10. Supply, fabricate and place all required reinforcing bars, mesh and other reinforcement for concrete where shown, called for, and/or required complete with proper supporting devices.
 - 11. Erection and removal of all formwork required to properly complete the work.
 - 12. Finishing of all concrete work as hereinafter specified.
 - 13. Curing and protection of all concrete work.
 - 14. Site concrete consisting of curbs, walls, pads, boxes and the like as shown on the drawings.
 - 15. Floor sealers and dust-proofing of all areas exposed and/or covered with carpet.
 - 16. Cutting, patching, grouting, repairing and pointing up as required.
 - 17. Vapor barrier system below slabs on grade.
 - 18. Under slab drainage course.
 - 19. Dewatering.
 - 20. Waterproofing.
 - 21. Equipment pads as required.
 - 22. All other work and materials as may be reasonably inferred and needed to make the work of this section complete.
 - 23. Waste Management
- B. Related Requirements:
 - 1. Division 01 Section “Construction Waste Management and Disposal”
 - 2. Division 04 Section “Unit Masonry”
 - 3. Division 05 Section “Structural Steel”
 - 4. Division 05 Section “Metal Deck”
 - 5. Division 05 Section “Metal Fabrications”

6. Division 06 Section "Rough Carpentry"
7. Division 07 Section "Waterproofing"
8. Division 07 Section "Joint Sealants"
9. Division 07 Section "Expansion Joint Cover Assemblies"
10. Division 31 Section "Dewatering"

1.3 SUSTAINABLE DESIGN REQUIREMENTS

- A. The Contractor is to efficiently use resources and energy while executing the Work of this Section. Resource efficient aspects to be considered in completing this Project include the use of techniques that minimize waste generation, reuse of construction materials on site where possible, and recycling of waste generated during the construction process.
- B. Performance Requirements: The following criteria are required for the products included in this section
 1. Preference shall be given to cast-in-place concrete containing raw materials harvested or extracted within 500 miles of the project site.
 2. All reinforcing steel, steel anchors, welded wire reinforcement, and other steel items required by the work of this section shall contain a minimum of 50% (combined) pre-consumer/post-consumer recycled content.

1.4 SUBMITTALS

- A. Product Data: Submit data for proprietary materials and items, including the following:
 1. Reinforcement.
 2. Supports for reinforcement.
 3. Forming accessories.
 4. Admixtures.
 5. Patching compounds.
 6. Waterstops.
 7. Joint systems.
 8. Curing compounds.
 9. Dry-shake finish materials.
 10. Mechanical splice couplers.
 11. Others items as requested by Architect.
- B. Shop Drawings, Reinforcement: Submit original shop drawings for fabrication, bending, and placement of concrete reinforcement. Comply with ACI 315 "Details and Detailing of Concrete Reinforcement" showing bar sizes, lengths, materials, grades, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, location of splices, lengths of lap splices, details of mechanical splice couplers, details of welded splices, tie spacing, hoop spacing, and supports for concrete reinforcement. Include special reinforcement required for openings through concrete structures. The shop drawings shall be prepared only by competent detailers, checked by the contractor prior to submission.
 1. The shop drawings shall show construction, contraction and isolation joint locations and the added reinforcement required at same.
 2. Obtain and coordinate information for sleeves, openings, and conduits in concrete, which are required for the work of other trades. Make coordinated drawings showing size and location of all openings, sleeves, and conduits and incorporate this information on the reinforcing drawings.

3. Only those splices indicated on the approved shop drawings will be permitted.
 4. Provide elevations of all foundation walls and other structural elements to a minimum 1/4" scale.
 5. For structural thermal break connection system, indicate general configuration, insulation dimensions, tension bars, compression pads, shear bars, and dimensions.
- C. Shop Drawings Formwork: Submit shop drawings for fabrication and erection of specific finished concrete surfaces. Show form construction including jointing, special form joint or reveals, location and pattern of form tie placement, and other items which affect exposed concrete visually. Architect's review is for general architectural applications and features only. Design of formwork for structural stability and efficiency is Contractor's responsibility, prepared by or under the supervision of a qualified professional engineer detailing fabrication, assembly, and support of formwork.
1. Shoring and Reshoring: Indicate proposed schedule and sequence of stripping formwork, shoring removal, and reshoring installation and removal.
- D. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.
1. Location of construction joints is subject to approval of the Architect.
- E. Contraction Joint Layout: Indicate proposed contraction joints required per applicable codes and drawings.
1. Location of contraction joints is subject to approval of the Architect.
- F. The use of the Architect's or Engineer of Record's electronic drawing files as a base for the reinforcement, formwork, and joint layout shop drawings will be permitted at the request of the detailer/designer upon completion and return of the waiver form. The use of the Architect's or Engineer of Record's electronic drawing files as a base for shop drawing details will not be permitted. The detailer/designer will be responsible for compatibility of the files with his hardware or software. The electronic files are not to be considered the contract documents, the design team makes no representation regarding the accuracy or completeness of the electronic files given to detailer/designer and their use will be at the detailer/designer's sole risk and without liability to the design team. The detailer/designer shall remove the project title box and all references to the structural drawings including drawing numbers and structural drawing sections and details. The detailer/designer shall also remove all reference to work not included in the concrete contract.
- G. Scaling of the Architect's or Engineer of Record's drawings is not permitted. This applies to hard paper, electronic, and all other versions.
- H. Samples: Submit samples of materials as requested by Architect, including names, sources and descriptions.
- I. Laboratory Test Reports: Submit laboratory test reports for concrete materials, mix design test and microwave test.
- J. Material Certificates: Provide materials certificates in lieu of materials laboratory test reports when permitted by Architect. Manufacturer and Contractor, certifying that each material item complies with, or exceeds, specified requirements shall sign material certificates. Provide certification from admixture manufacturers that chloride content complies with specification requirements.

- K. Cold Weather and Hot Weather Concreting Procedures: Submit written descriptions of contractor's proposed cold weather and hot weather concreting procedures, when applicable.
- L. Certification that pozzolanic materials conforms to ASTM C 618-01 (noting class C or class F), ASTM C 989 or ASTM C1240.
- M. Certified recycled steel content. Provide cut sheets clearly indicating whether the rebar used meets the minimums for post-consumer OR post-industrial recycled contents. Or, if cut sheets are not available, obtain a written affidavit from the manufacturer stating the recycled content percentage and if the recycled content is post-consumer or post-industrial.
- N. Formwork: Specify whether reusable, permanent, salvaged or new wood forms are to be used.
- O. Recycled Aggregate: Provide laboratory reports indicating that aggregate conforms to ASTM C33 for structural concrete or ASTM D1241-00 for sub-base material. Provide cut sheets clearly indicating the source, total weight and volume of the recycled aggregate. If aggregate provided is a mix of virgin and recycled aggregates obtain a written affidavit from the manufacturer stating the recycled content percentage
- P. VOC content for curing compounds, sealants and release agents: Provide a cut sheet and a Material Safety Data Sheet (MSDS) for each curing compound, sealant, hardener and release agent used highlighting VOC contents. VOC content must be less than or equal to limits stated under "PRODUCTS".

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.
- B. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.
- C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.4/D 1.4M, "Structural Welding Code - Reinforcing Steel."
- D. Codes and Standards: Comply with provisions of following codes, specifications, and standards, except where more stringent requirements are shown or specified:
 - 1. International Building Code, 2024
 - 2. ACI 117 "Standard Specifications for Tolerances for Concrete Construction and Materials and Commentary."
 - 3. ACI 211.1 "Standard Practice for Selecting Proportions for Normal, Heavyweight and mass concrete."
 - 4. ACI 211.2, "Standard Practice for Selecting Proportions for Structural Lightweight Concrete."
 - 5. ACI 214R, "Evaluation of Strength Test Results of Concrete."
 - 6. ACI 232.2R, "Use of Fly Ash in Concrete."
 - 7. ACI 233R, "Guide to Use of Slag Cement in Concrete and Mortar."
 - 8. ACI 234, "Guide for the Use of Silica Fume in Concrete."
 - 9. ACI 301 "Specifications for Structural Concrete."

10. ACI 302.1R "Guide for Concrete Floor and Slab Construction."
 11. ACI 304R, "Guide for Measuring, Mixing, Transporting and Placing Concrete."
 12. ACI 305R "Hot Weather Concreting."
 13. ACI 306R-10 "Guide to Cold Weather Concreting."
 14. ACI 308.1 "Standard Specification for Curing Concrete."
 15. ACI 309R, "Guide for Consolidation of Concrete."
 16. ACI 311.4R, "Guide for Concrete Inspections."
 17. ACI 315, "Details and Detailing of Concrete Reinforcement."
 18. ACI 318 "Building Code Requirements for Structural Concrete and Commentary."
 19. ACI 347 "Guide to Formwork of Concrete."
 20. Concrete Reinforcing Steel Institute, (CRSI) "Manual of Standard Practice."
 21. CRSI-WCRSI, "Placing Reinforcing Bars."
 22. AWS D1.4, "Structural Welding Code Reinforcing Steel."
 23. The ACI Field Reference Manual, SP-15 shall be kept at the job site, and the practices set forth therein shall be strictly adhered to.
 24. ASTM Standards as applicable in the building code of the local jurisdiction and as noted in this specification.
 25. AASHTO T 318, "Standard Method of Test for Water Content of Freshly Mixed Concrete Using Microwave Oven Drying."
- E. Concrete Testing Service: Owner will engage a testing laboratory acceptable to Architect and Engineer of Record to perform material evaluation tests and to design concrete mixes.
- F. Materials and installed work may require testing and retesting at anytime during progress of work. Tests, including retesting of rejected materials for installed work, shall be done at Contractor's expense.
- G. Mockups: Cast concrete slab-on-grade and formed-surface panels to demonstrate typical joints, surface finish, texture, tolerances, floor treatments, and standard of workmanship.
1. Build panel approximately 200 sq. ft. (18.6 sq. m) for slab-on-grade minimum and 100 sq. ft. (9.3 sq. m) for formed surfaces in the location indicated or, if not indicated, as directed by Architect.
 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- H. Preconstruction Meeting:
1. At least 35 days prior to the start of the concrete construction schedule, the Contractor shall conduct a meeting to review the proposed mix designs and to discuss the required methods and procedures to achieve the required concrete construction. The Contractor shall send a pre-concrete conference agenda to all attendees 20 days prior to the scheduled date of the conference.
 2. The Contractor shall require responsible representatives of every party who is concerned with the concrete work to attend the conference, including but not limited to the following:
 - a. Contractor's superintendent
 - b. Laboratory responsible for the concrete design mix
 - c. Laboratory responsible for field quality control
 - d. Concrete subcontractor
 - e. Ready-mix concrete producer
 - f. Admixture manufacturer(s)
 - g. Concrete pumping equipment manufacturer.

3. Minutes of the meeting shall be recorded, typed and printed by the contractor and distributed by the contractor to all parties concerned within 5 days of the meeting. One copy of the minutes shall also be transmitted to the following for information purposes: Owner or owner's representative, Architect, and Engineer of Record.
4. The minutes shall include a statement by the concrete contractor indicating that the proposed mix design and placing can produce the concrete quality required by these specifications.
5. A minimum of a 4 cubic yard trial mixture containing all required admixtures shall be placed at the job site using the accepted methods of placing, finishing and curing. All applicable tests including slump, strength, water content, air content, permeability, and air content will be performed. This shall occur at least four weeks before actual concreting operations with the proposed mix design begins. The admixture manufacturer(s) and inspectors shall be present. The same testing should be done in the laboratory at the same time for comparison. A test sample should be done for each condition that is to be placed.
6. The Engineer of Record will be present at the conference. The Contractor shall notify the Engineer of Record at least 10 days prior to the scheduled date of the conference.

1.6 PROJECT CONDITIONS

- A. The Contractor, before commencing work, shall examine all adjoining work on which this work is in any way dependent for proper installation and workmanship according to the intent of this specification, and shall report to the Architect or Engineer of Record any condition which prevents this contractor from performing first class work.
- B. Protection of Footings Against Freezing: Cover completed work at footing level with sufficient temporary or permanent cover as required to protect footings and adjacent subgrade against possibility of freezing; maintain cover for time period as necessary.
- C. Protect adjacent finish materials against spatter during concrete placement.
- D. Provide all barricades and safeguards at all pits, holes, shaft and stairway openings, etc., to prevent injury to workmen and others within and about the premises. Also provide all safeguards as required by the Building Code, OSHA, or any other departments having jurisdiction. Take full responsibility for all safety precautions and methods.
- E. Procedure of Work: The contractor shall keep themselves constantly informed as to the progress of the work in the field, materials and workers ready to start work immediately when conditions of preceding work are available or ready, wholly or in part, so as not to delay the progress of building work or to interfere with the progress of work of other contractors, and in any event the contractor shall, within 24 hours after notice from the Owner, proceed with such work as directed to maintain the uninterrupted progress of the work.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage. Avoid damaging coatings on steel reinforcement.
- B. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

PART 2 - PRODUCTS**2.1 FORM MATERIALS**

- A. Forms for Exposed Finish Concrete: Unless otherwise indicated, construct of plywood, metal, metal-framed plywood faced, or other acceptable panel-type materials, to provide continuous, straight, smooth, exposed surfaces. Furnish in largest practicable sizes to minimize number of joints and to conform to joint system shown on drawings. Provide form material with sufficient strength and thickness to withstand pressure of newly placed concrete without bow or deflection.
1. Use plywood complying with U.S. Product Standard PS-1 "B-B (Concrete Form) Plywood", Class I, Exterior Grade or better mill oiled and edge-sealed, with each piece bearing legible inspection trademark.
- B. Forms for Unexposed Finish Concrete: Plywood, lumber, metal, or other acceptable material. Preference shall go to salvaged or re-used Dimensional Lumber. Provide lumber dressed on at least 2 edges and one side for tight fit.
- C. Sustainability Requirements For Wood Used For Formwork
1. New Dimensional Lumber for Formwork: Provide wood certification documentation from the manufacturer/distributor, declaring conformance with Forest Stewardship Council (FSC) guidelines for certified wood building components. The following independent certification organizations are accredited by the FSC and provide the manufacturer/distributor with documentation:
 - a. Scientific Certification Systems, Inc..
 - b. Smart Wood Certification Program: Rainforest Alliance
 2. Salvaged or re-used Dimensional Lumber for Formwork: Provide documentation certifying products are from salvaged wood sources. Provide grading certificate for structural applications. For wood salvage wood resources see GreenSpec.
 3. If new dimensional Lumber is neither Certified nor salvaged: select regionally grown lumber with the lowest grade that meets performance requirements.
- D. Form Coatings: Provide VOC compliant commercial formulation form-coating compounds that will not bond with, stain nor adversely affect concrete surfaces, and will not impair subsequent treatments of concrete surfaces. Use biodegradable form release agent listed below or equivalent made from soy or rapeseed oil.
- | | |
|----------------------|---------------------------------|
| 1. "Clean Strip JEF" | Dayton Superior |
| 2. "Bio-Form" | M Chem Solutions |
| 3. "Duogard II" | W. R. Meadows, Inc. |
| 4. "Atlas Bio-Guard" | Atlas Construction Supply, Inc. |
- E. Forms for Cylindrical Columns, Pedestals, and Supports: Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that produce surfaces not exceeding specified formwork surface class.
1. Provide forms with sufficient wall thickness to resist plastic concrete loads without detrimental deformation.
- F. Void Forms: Biodegradable paper surface, treated for moisture resistance, structurally sufficient to support weight of plastic concrete and other superimposed loads.

- G. Form Ties: Form ties and spreaders: prefabricated assemblies by Richmond; Superior, Dayton or approved equal. Wire ties shall not be used. Ties for foundation work shall be of snap design with removal cones and water seal washer.
1. Furnish units that will leave no corrodible metal closer than 1 inch (25 mm) to the plane of exposed concrete surface.
 2. Furnish ties that, when removed, will leave holes no larger than 1 (25 mm) inch in diameter in concrete surface.
 3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

2.2 REINFORCING MATERIALS

- A. Reinforcing Bars: ASTM A615/A615M, Grade 60 (Grade 420), deformed. All reinforcing bars shall be Grade 60 unless otherwise noted. Provide Grade 75, Grade 80, or Grade 100 reinforcing bars where indicated on the contract documents.
- B. Weldable Reinforcing Bars: ASTM A 706/A 706M, Grade 60 (Grade 420).
- C. Mechanical Splice Couplers: ACI 318/ACI 318M, same material of reinforcing bar being spliced. Provide mechanical couplers as an alternate to standard tension lap splices where indicated on the contract documents and in areas of rebar congestion. A mechanical splice coupler shall develop in tension or compression, as required, at least 1.25 times the yield strength of the bar being spliced.
- D. Steel Wire and Welded Wire Reinforcement: ASTM A 1064. Galvanized at exterior locations, conditions permanently exposed to weather and/or water, and where noted on drawings (plan and/or sections).
- E. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60 (Grade 420), plain-steel bars, cut true to length with ends square and free of burrs.
- F. Supports for Reinforcement: Bolsters, chairs, spacers and other devices for spacing, supporting and fastening reinforcing bars and welded wire reinforcement in place. Use wire bar type supports complying with CRSI specifications.
1. For exposed-to-view concrete surfaces, where legs of supports are in contact with forms, provide supports with legs which are plastic protected (CRSI, Class I) or stainless steel protected (CRSI, Class 2), at a spacing not to exceed 4'-0" on center in either direction.

2.3 CONCRETE MATERIALS

- A. Cement: Portland cement (ASTM C 150, Types I, II, or I/II) or Portland limestone cement (ASTM C 595). Total percentage of Portland Cement is NOT to exceed 75% of the cementitious content of each mix, except mixes assigned to exposure class F3. Use one brand of cement throughout project, unless otherwise acceptable to Architect. Provide supplementary cementitious materials in mixes per sections below.
- a. Fly Ash: Cast-in-place concrete shall incorporate fly ash as a replacement for at least 25% (by weight) of the Portland cement. All design mixes must be reviewed and approved by the Engineer of Record. Where concrete is assigned to exposure class F3, limit the replacement of Portland cement with fly ash (by weight) to 25% max.
 - b. Ground Granulated Blast Furnace Slag (GGBF): Cast-in-place concrete shall incorporate GGBF as a replacement for at least 40% (by weight) of the Portland cement. All design mixes

must be reviewed and approved by the Engineer of Record. Where concrete is assigned to exposure class F3, limit the replacement of Portland cement with GGBF slag (by weight) to 50% max.

- c. Post-Consumer Recycled Ground Glass Pozzolan (GGP): Cast-in-place concrete shall incorporate GGP as a replacement for at least 25% (by weight) of the Portland cement. All design mixes must be reviewed and approved by the Engineer of Record.
 - d. Pozzolans and Slags: These must be completely accounted for in the design mix. Mix design must meet minimum design requirements set in the contract documents. Additional admixtures may be required to meet early strength requirements and alternative cementitious material goals. If a "blended cement" is used which already contains a certain percentage of Pozzolans or Slags this content may offset or entirely satisfy the minimum percentage required.
 - 1) Coal Fly Ash: ASTM C 618 (Class C or Class F): ASTM C 618 (Note: Class F fly Ash will require higher amounts of air entraining admixtures than class C).
 - 2) Blast Furnace Slag: ASTM C989
 - 3) Ground Glass Pozzolan: ASTM C1866
 - 4) Silica Fume: ASTM C 1240
 - 5) Rice Hull (or "husk") Ash: ASTM C 618 Blended hydraulic cement, as defined by ASTM C 595 or ASTM C 1157
- B. Normal Weight Aggregates: ASTM C 33, and as herein specified. Provide aggregates from a single source for exposed concrete.
- 1. Local aggregates not complying with ASTM C 33 but which have shown by special test or actual service to produce concrete of adequate strength and durability may be used when acceptable to Architect.
 - 2. Normal weight Fine Aggregate: washed, inert, natural or manufactured or combination thereof, sand conforming ASTM C33 gradation.
 - 3. Normal weight Coarse Aggregate: well graded crushed stone or washed gravel conforming to ASTM C33, sizes 57 for foundations and 67 for slabs and structure.
 - a. Recycled crushed concrete aggregate in concrete mixes is only to be used with approval of Engineer of Record. Recycled aggregate shall be used only as a substitute for coarse aggregate and must also be washed and well-graded, conforming to ASTM C33.
 - b. For sub-base, slabs on grade and non-structural applications and Recycled Aggregate Materials are NOT required to meet the ASTM C 33 standard. In addition to concrete rubble, glass, porcelain, and tire chips can be used as filler material. Any inert material conforming to ASTM D1241 is acceptable for the applications described in this paragraph.
- C. Lightweight Aggregates: Well-graded crushed expanded shale produced by rotary kiln method. Solite or equal, conforming to ASTM C330.
- D. Water: Free from oils, acids, alkali, organic matter and other deleterious material to conform to ASTM C94. ASTM C94 for gray water use in the production of ready mixed concrete per approval by the Engineer of Record.
- E. Air Entraining Admixture: ASTM C 260.
- 1. Liquid air entrainment: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:
 - a. "Air Mix"
 - b. "AEA-92"
 - c. "Darex AEA"

Euclid Chemical Co.

Euclid Chemical Co.

GCP Applied Technologies

d. "MasterAir AE200"

Master Builders Solutions

F. Water-Reducing Admixture: ASTM C 494.

1. Products: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:

- | | |
|-------------------------|---------------------------|
| a. "MasterPolyheed 997" | Master Builders Solutions |
| b. "Eucon MR" | Euclid Chemical Co. |
| c. "WRDA 64" | GCP Applied Technologies |

G. High-Range Water-Reducing Admixture (Superplasticizer): ASTM C 494, Type F or Type G and containing not more than 0.05 percent chloride ions.

1. Products: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:

- | | |
|-------------------------------------|---------------------------|
| a. "Eucon 37, 1037 or Plastol 5000" | Euclid Chemical Co. |
| b. "Rheobuild 1000" | Master Builders Solutions |
| c. "MasterGlenium Series" | Master Builders Solutions |
| d. "Daracem-100" | GCP Applied Technologies |

H. Water Reducing, Non-Corrosive Accelerating Admixture: The admixture shall conform to ASTM C 494, Type C or E, and not contain more chloride ions than are present in municipal drinking water. The admixture manufacturer must have long-term non-corrosive test data from an independent testing laboratory (of at least a year's duration) using an acceptable accelerated corrosion test method such as that using electrical potential measures. Accelerating admixtures are not to be used as antifreeze agents. Accelerating admixtures are permitted only upon review by Engineer of Record.

1. Products: Subject to compliance with requirements, provide the following or equal approved by Engineer of Record:

- | | |
|------------------------------------|---------------------------|
| a. "Accelguard NCA, 80, 90, or G3" | Euclid Chemical Co. |
| b. "Daraset 400 or 422" | GCP Applied Technologies |
| c. "MasterSet FP 20" | Master Builders Solutions |

I. Water-Reducing, Retarding Admixture: ASTM C 494, Type D, and contain not more than 0.05 percent chloride ions.

1. Products: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:

- | | |
|-------------------------------|---------------------------|
| a. "Eucon Retarder 75 or 100" | Euclid Chemical Co. |
| b. "MasterSet R 100" | Master Builders Solutions |
| c. "Plastiment" | Sika Chemical Co. |
| d. "Daratard" | GCP Applied Technologies. |

J. Microsilica Admixture shall be dry densified or slurry formed. Microsilica shall come from the same source throughout the project. If a single source cannot be maintained, laboratory testing of each new source shall be required before acceptance by the Engineer of Record at no cost to the owner.

1. Products: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:

- | | |
|---------------------|--------------------------|
| a. "Emsac F 100" | Elkem Chemical, Inc. |
| b. "Eucon MSA" | Euclid Chemical Co. |
| c. "Force 10,000 D" | GCP Applied Technologies |

- K. Prohibited Admixtures: Calcium chloride, thiocyanates or admixtures containing more than 0.05 percent chloride ions are not permitted.
- L. Certification: Written conformance to the above-mentioned requirements and the chloride ion content of admixtures will be required from the admixture manufacturer prior to mix design review by the Engineer of Record.
- M. Corrosion Inhibitor: 30% calcium nitrite (where called for in the specifications or on the drawings). Subject to compliance with requirements, provide the following at 3 gal/cy:
 - 1. "Eucon CIA" Euclid Chemical Co.
 - 2. "DCI" GCP Applied Technologies
 - 3. "MasterLife CI 30" Master Builders Solutions
- N. Contractor will be required to provide information demonstrating successful use in prior placement involving all admixtures.

2.4 WATERSTOPS

- A. Flexible PVC Waterstops: CE CRD-C 572, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or equal approved by Engineer of Record:
 - a. BoMetals, Inc.
 - b. Sika Greenstreak
 - c. Paul Murphy Plastics Company
 - d. Vinylex Corp.

2.5 GROUT

- A. Non-Shrink, Non-Metallic Grout: The non-shrink grout shall be a factory pre-mixed grout and shall conform to ASTM C1107, "Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-Shrink)." In addition, the grout manufacturer shall furnish test data from an independent laboratory indicating that the grout when placed at a fluid consistency shall achieve 95% bearing under a 4' x 4' base plate.
 - 1. Products: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:
 - a. "NS Grout" Euclid Chemical Co.
 - b. "Five Star Grout" Five Star
 - c. "SikaGrout-713" Sika Chemical Co.
- B. High Flow Grout: Where high fluidity and/or increased placing time is required, use high flow grout. The factory pre-mixed grout shall conform to ASTM C1107, "Standard Specification for Packages Dry, Hydraulic-Cement Grout (Non-shrink)." In addition, the grout manufacturer shall furnish test data from an independent laboratory indicating that the grout when placed at a fluid consistency shall achieve 95% bearing under a 18" x 36" base plate.
 - 1. Products: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:
 - a. "Hi-Flow Grout" Euclid Chemical Co.
 - b. "SikaGrout-928" Sika Chemical Co.
 - c. "Five Star Fluid Grout 100" Five Star

2.6 RELATED MATERIALS

- A. Granular Fill: Clean mixture of crushed stone or crushed or uncrushed gravel; ASTM D 1241, Size 57, with 100 percent passing a 1-1/2 (37.5 mm) inch sieve and 0 to 5 percent passing a No. 8 (2.36 mm) sieve.
- B. Fine-Graded Granular Material: Clean mixture of crushed stone, crushed gravel, and manufactured or natural sand; ASTM D 1241, Size 10, with 100 percent passing a 3/8 inch (9.5 mm) sieve, 10 to 30 percent passing a No. 100 (0.15 mm) sieve, and at least 5 percent passing No. 200 (0.075 mm) sieve; complying with deleterious substance limits of ASTM C 33 for fine aggregates.
- C. Non-slip Aggregate Finish: Provide fused aluminum oxide grits, or crushed emery, as abrasive aggregate for non-slip finish with emery aggregate containing not less than 40% aluminum oxide and not less than 25% ferric oxide. Use material that is factory-graded, packaged, rustproof and non-glazing, and is unaffected by freezing, moisture, and cleaning materials.
- D. Absorptive Cover: Burlap cloth made from jute or kenaf, weighing approximately 9 oz. per sq. yd., complying with AASHTO M 182, Class 2.
- E. Moisture-Retaining Cover: One of the following, complying with ASTM C 171:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Waterproof paper
 - b. Polyethylene film
 - c. Polyethylene-coated burlap
- F. Curing Compounds: The compound shall conform to ASTM C 309. Limit VOC content to 130 g/L. Use water-based curing compound. For surfaces receiving both a curing compound and additional flooring, verify that the curing compound and additional flooring are compatible.
1. Products: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:
 - a. "SealTight 1100" W.R. Meadows
 - b. "Kurez W VOX" Euclid Chemical Co.
- G. Curing & Sealing Compounds: Only specify for slabs that will remain exposed, i.e. will not receive additional flooring. The compound shall conform to ASTM C1315. Limit VOC content to 130 g/L. Use water-based curing compound.
1. Products: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:
 - a. "Super Diamond Clear VOX" Euclid Chemical Co.
 - b. "VOCOMP-25" W.R. Meadows
- H. Curing, Sealing, & Hardening Compounds: For use on concrete surfaces that will remain exposed. Slabs that will receive additional flooring do not require sealing or hardening. Sealers and hardeners must not yellow under ultra violet light after 500 hours of test in accordance with and have a maximum moisture loss of 0.039 grams per sq. cm. when applied at a coverage rate of 250 sq. ft. per gallon. Limit VOC content to 130 g/L. Use water- or vegetable-based product.
1. Products: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:
 - a. "Kure-N-Harden" BASF

- I. For concrete floors subjected to heavy vehicular traffic use a Liquid Sealer/Densifier: The product must be a high performance, deeply penetrating concrete densifier conforming to ASTM C836; odorless, colorless, VOC - compliant, non-yellowing silicate based solution designed to harden, dustproof and protect and to resist black rubber tire marks on concrete surfaces. The compound must contain a minimum of 20% solids content of which 50% is silicate
- J. Evaporation Retardant:
1. Products Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:
 - a. "Eucobar" Euclid Chemical Co.
 - b. "MasterKure ER 50" Master Builders Solutions
- K. Certify that all curing compounds, sealers and hardeners are compatible with all adhesive products intended for attaching co-lateral floor material. In conformance with ASTM F 710, coordination with flooring manufacturer is required to ensure concrete coatings will not obstruct the bond between the concrete and the adhesive. Ensure coatings and adhesives are "benignly compatible" - in other words, do not combine substances whose constituents are reactive. Reactivity releases VOCs and /or other toxic fumes.
- L. Crack Sealer: Elastomeric liquid crack sealer resistant to water, gasoline, oil and salts.
1. Products: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:
 - a. "Eucoelastic 1NS" Euclid Chemical Co.
 - b. Maximum allowable depth of this product is 1/2".
- M. Underlayment Compound: Free flowing, self-leveling, pumpable cementitious base compound.
1. Products: Subject to compliance with requirements, provide the following or equal approved by Engineer of Record:
 - a. "EucoFloor SL 160" Euclid Chemical Co.
 - b. "Ardex" Ardex Co.
 - c. "MasterTop 110 SL" Sika Chemical Co.
- N. Bonding Admixture: The compound shall be a latex, non-rewettable type.
1. Products: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:
 - a. "Flex-Con" Euclid Chemical Co.
 - b. "SBR Latex" Euclid Chemical Co.
- O. High Strength Polymer Repair Mortar: For form and pouring or large horizontal repairs, provide the flowable on-part, high strength repair mortar.
1. Products: subject to compliance with requirements, provide the following or equal approved by Engineer of Record:
 - a. "Eucocrete or EucoRepair SCC" Euclid Chemical Co.
 - b. "Euco Speed MP" (Cold Weather) Euclid Chemical Co.
 - c. "Emaco R" Master Builders Solutions
- P. Bonding Agent: ASTM C 1059/C 1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.
- a. "Daraweld C" GCP Applied Technologies
 - b. "Acrylic Bonding Agent J40" Dayton Superior

c. Euroweld 2.0

Euclid Chemical Co.

- Q. Epoxy Bonding Adhesive: ASTM C 881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements, and as follows:
1. Type IV for bonding hardened concrete to hardened concrete, and Type V for bonding freshly mixed concrete to hardened concrete.
- R. Reglets: Fabricate reglets of not less than 0.022 inch (0.55 mm) thick, galvanized-steel sheet. Temporarily fill or cover face opening of reglet to prevent intrusion of concrete or debris.
- S. Dovetail Anchor Slots: Hot-dip galvanized-steel sheet, not less than 0.034 inch (0.85 mm) thick, with bent tab anchors. Temporarily fill or cover face opening of slots to prevent intrusion of concrete or debris.
- T. Vapor Barrier: Provide vapor barrier which conforms to ASTM E 1745, Class A or B. The membrane shall have a water-vapor permeance rate no greater than 0.012 perms when tested in accordance with ASTM E 154, Section 7. The vapor barrier shall be placed over prepared base material where indicated below slabs on grade. Vapor barrier shall be no less than 10 mil thick in accordance with ACI 302.1R. Preferred vapor barriers will be manufactured from post-consumer recycled polymers.
1. Products: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:

a. "Stego Wrap (15 mil) Vapor Barrier"	Stego Industries LLC
b. "Griffolyn Vaporguard"	Reef Industries
c. "Premoulded Membrane with Plastmatic Core"	W.R. Meadows.
- U. Expansion Joint Filler: ASTM D 1751.
1. Products: Subject to compliance with requirements, provide one of the following or equal approved by Engineer of Record:

a. "Homex 300"	Homasote Company
b. "Standard Cork Expansion Joint Filler"	APS Cork
c. "Fibre Expansion Joint"	W.R. Meadows
- V. Water: Potable.

2.7 PROPORTIONING AND DESIGN OF MIXES

- A. Preparation of Design Mixes
1. All mix designs shall be proportioned in accordance with Section 26.4.3.1(b) of ACI 318 and prepared by a licensed testing laboratory approved by the owner, but paid for by the contractor. Submit mix designs on each class of concrete for review.
 2. If previously used mixes are submitted, all materials shall be from the same sources and with the same brand names as the previously utilized mix.
 3. If trial batches are used, the mix design shall be prepared by an independent testing laboratory and shall achieve an average compressive strength 1200 psi higher than the specified strength. This over-design shall be increased to 1.10f_c+700 psi when concrete strengths greater than 5000 psi are used.
 4. The proposed mix designs shall be accompanied by complete standard deviation analysis or trial mixture test data.

- B. Submit each proposed mix to the Architect and Structural Engineer for review at least 5 days prior to the pre-concrete conference. Do not begin concrete production until Architect and Engineer of Record has reviewed and approved mixes.
1. Submit Test reports for any pozzolans or slags indicating compliance with ASTM C 618, ASTM C 989, or ASTM C1866 respectively.
 2. Provide cut sheets clearly indicating the percentages of pozzolans or slags used in the mix design as replacement for Portland cement. Or, if cut sheets are not available, obtain a written affidavit from the manufacturer stating the percentage.
 3. Test reports for recycled aggregate indicating compliance with ASTM C 33. Provide cut sheets clearly indicating the percentage of aggregates used that are recycled. Or, if cut sheets are not available, obtain a written affidavit from the manufacturer stating the recycled content percentage and source or sources of the material.
 4. Provide cut sheets clearly indicating the percentage of sub-base and filler aggregate materials that are recycled. Or, if cut sheets are not available, obtain a written affidavit from the manufacturer stating the recycled content percentage and source or sources of the material.
- C. Design mixes to provide concrete with strength as indicated on drawings and schedules.
- D. Adjustment to Concrete Mixes: Mix design adjustments may be requested by Contractor when characteristics of materials, job conditions, weather, test results, or other circumstances warrant; at no additional cost to Owner and as accepted by Architect and Engineer of Record. Laboratory test data for revised mix design and strength results must be submitted to and accepted by Architect and Engineer of Record before using in work.
- E. Admixtures:
1. Use water-reducing admixture or high range water-reducing admixture (superplasticizer) in all concrete as required for placement and workability.
 2. Use non-corrosive, non-chloride accelerating admixture in concrete slabs placed at ambient temperatures below 50oF (10oC).
 3. Use high-range water-reducing admixture in pumped concrete, architectural concrete, parking structure slabs, fiber concrete, concrete required to be watertight, concrete with ultimate strength of 5,000 psi or more, and concrete with water/cement ratios below 0.50.
 - 4.
 5. Use air-entraining admixture in exterior exposed concrete, unless otherwise indicated. See the Concrete Mix Design table on the drawings for Exposure Class. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having total air content with a tolerance of plus-or-minus 1-1/2 percent within following limits:
 - a. Concrete structures and slabs exposed to freezing and thawing or deicer chemicals.
 - 1) 1-1/2" maximum aggregate: 4.5 percent (exposure class F1, moderate exposure); 5.5 percent (exposure class F2 and F3, severe exposure)
 - 2) 1" maximum aggregate: 4.5 percent (exposure class F1, moderate exposure); 6 percent (exposure class F2 and F3, severe exposure)
 - 3) 3/4" maximum aggregate: 5 percent (exposure class F1, moderate exposure); 6 percent (exposure class F2 and F3, severe exposure)
 - 4) 1/2" maximum aggregate: 5.5 percent (exposure class F1, moderate exposure); 7 percent (exposure class F2 and F3, severe exposure)
 - 5) 3/8" maximum aggregate: 6 percent (exposure class F1, moderate exposure); 7.5 percent (exposure class F2 and F3, severe exposure)

- b. Other Concrete: (not exposed to freezing, thawing, or hydraulic pressure): 2 percent to 4 percent air.
- c. Interior concrete to receive hard troweling shall not be air entrained unless specifically approved by the Engineer.
- 6. Use admixtures for water-reducing and set-control in strict compliance with manufacturer's directions.
- F. Water-Cement Ratio: Provide concrete for following conditions with maximum water-cement (W/C) ratios as follows:
 - 1. Concrete for architecturally exposed structural elements or architecturally exposed surfaces: W/C 0.40.
 - 2. Refer to the Concrete Mix Design table in the structural drawings for other W/C ratio requirements based on exposure class, element type, etc.
 - 3. Refer to the requirements for concrete by exposure class in ACI 318 for balance of info related to maximum W/C ratios, minimum f'_c values, and additional requirements.
- G. Slump Limits: Proportion and design mixes to result in concrete slump at point of placement as follows:
 - 1. Ramp slabs and sloping surfaces: Not more than 3".
 - 2. Reinforced foundation systems, including mud slabs below hydrostatic slabs: Not less than 1" and not more than 3".
 - 3. Concrete containing HRWR admixture (superplasticizer): Not more than 9" unless otherwise approved by the architect.
 - 4. Other Concrete: Not less than 1" or more than 4".
- H. Chloride Ion Level: Chloride ion content shall be tested by the laboratory making the trial mixes. The total chloride ion content of the mix including all constituents shall not exceed the limitations set forth in Table 19.3.2.1 of ACI 318.

2.8 CONCRETE MIXING

- A. Ready-Mix Concrete: Comply with requirements of ASTM C 94, and as herein specified.
- B. Provide batch ticket for each batch discharged and used in work, indicating project identification name and number, date, mix type, mix time, quantity, and amount of water introduced.
- C. During hot weather, or under conditions contributing to rapid setting of concrete, a shorter mixing time than specified in ASTM C 94 may be required. When air temperature is between 85oF (30oC) and 90oF (32oC), reduce maximum mixing and delivery time from 1-1/2 hours to 75 minutes, and when air temperature is above 90oF (32oC), reduce maximum mixing and delivery time to 60 minutes.
- D. No water shall be added after mixing to concrete containing HRWR (Superplasticizer). If loss of slump occurs, the concrete treated with HRWR may be redosed as long as a "flash set" has not occurred. Redosage procedures must be discussed and approved by the Engineer of Record and the manufacturer.

PART 3 - EXECUTION

3.1 GENERAL

- A. Coordinate the installation of joint materials and vapor retarders with placement of forms and reinforcing steel.

3.2 INSPECTION

- A. Examine all work prepared by others to receive work of this section and report any defects affecting installation to the Contractor for correction. Commencement of work will be construed as complete acceptance of preparatory work by others.

3.3 CONCRETE

- A. Concrete shall develop the minimum compressive strengths shown on drawings at 28 days when sampled and tested in accordance with ASTM C 31 and C 39 with the maximum slump in accordance with the approved mix design.
- B. Concrete shall be in accordance with the requirements and specifications of "Building Code Requirements for Structural Concrete" as modified by the building code noted above.
- C. Fly Ash Concrete & Slag Concrete: Concrete mixes containing high volumes of fly ash or Slag have slower set times and may take up to 56 days to reach full strength. The Engineer of Record, agency responsible for concrete mix design, the architect and the concrete subcontractor must coordinate to ensure that the form stripping schedule is consistent with the ability of the structure to support itself and all imposed construction loads.

3.4 FORMS

- A. Design formwork to maximize its reusability, reduce resources devoted to formwork construction and minimize waste generated. Where appropriate choose alternative formwork systems (refer to sections listed above).
- B. Design, erect, support, brace and maintain formwork to support vertical and lateral, static, and dynamic loads that might be applied until such loads can be supported by concrete structure. Construct formwork so concrete members and structures are of correct size, shapes, alignment, elevation and position. Maintain formwork construction tolerances complying with ACI 347. Provide Class A tolerances for concrete exposed to view. Provide Class C tolerances for other concrete surfaces.
- C. Design formwork to be readily removable without impact, shocks or damage to cast-in-place concrete surfaces and adjacent materials.
- D. Construct forms to size shapes, lines and dimensions shown, and to obtain accurate alignment, location, grades, level and plumb work in finished structures. Provide for openings, offsets, sinkages, keyways, recesses, moldings, rustications, reglets, chamfers, blocking, screeds, bulkheads, anchorages and inserts, and other features required in work. Use selected materials to obtain required finishes. Solidly butt joints and provide back- up at joints to prevent leakage of cement paste.

- E. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush plates or wrecking plates where stripping may damage cast concrete surfaces. Provide top forms for inclined surfaces where slope is too steep to place concrete with bottom forms only. Kerf wood inserts for forming keyways, recesses, and the like, to prevent swelling and for easy removal.
- F. Provide temporary openings where interior area of formwork is inaccessible for cleanout, for inspection before concrete placement, and for placement of concrete. Securely brace temporary openings and set tightly to forms to prevent loss of concrete mortar. Locate temporary openings on forms at inconspicuous locations.
- G. Chamfer exposed corners and edges as indicated, using wood, metal, PVC or rubber chamfer strips fabricated to produce uniform smooth lines and tight edge joints.
- H. Provisions for Other Trades: Provide openings in concrete formwork to accommodate work of other trades. Determine size and location of openings, recesses and chases from trades providing such items. Accurately place and securely support items built into forms.
- I. Cleaning and Tightening: Thoroughly clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt or other debris just before concrete is placed. Retightening forms and bracing after concrete placement is required to eliminate mortar leaks and maintain proper alignment.

3.5 VAPOR BARRIER INSTALLATION

- A. Examine the condition of porous fill and remedy any unsatisfactory portions prior to installing vapor barriers.
- B. Sub-base material to be per above sections.
- C. Following leveling and tamping of sub-base for slabs on grade, place vapor barrier sheeting with longest dimension parallel with direction of pour.
- D. Lap joints 6" and seal with appropriate tape.
- E. After placement of moisture barrier, cover with granular material and compact to depth as shown on drawings.
- F. Avoid cutting or puncturing vapor barrier during reinforcement placement and concreting operations.

3.6 PLACING REINFORCEMENT

- A. Comply with Concrete Reinforcing Steel Institute's recommended practice for "Placing Reinforcing Bars", for details and methods of reinforcement placement and supports, and as herein specified.
- B. Clean reinforcement of loose rust and mill scale, earth, ice, and other materials, which reduce or destroy bond with concrete.

- C. Accurately position, support and secure reinforcement against displacement by formwork, construction, or concrete placement operations. Locate and support reinforcing by metal chairs, runners, bolsters, spacers, and hangers, as required.
- D. Place reinforcement to obtain at least minimum coverage's for concrete protection. Arrange, space and securely tie bars and bar supports to hold reinforcement in position during concrete placement operations. Set wire ties so ends are directed into concrete, not toward exposed concrete surfaces.
- E. Splices: Lap splices as indicated on Drawings.
 - 1. Bars indicated to be continuous, and all vertical bars shall be lapped not less than values indicated in the contract documents.
 - 2. Stagger splices in accordance with ACI 318/ACI 318M
 - 3. Mechanical Splice Couplers: Install in accordance with manufacturer's instructions.
 - 4. Weld reinforcing bars in accordance with AWS D1.4/D 1.4M, where indicated on Drawings.
- F. Install welded-wire reinforcement in longest practicable lengths.
 - 1. Support welded-wire reinforcement in accordance with CRSI "Manual of Standard Practice."
 - 2. Lap edges and ends of adjoining sheets at least one wire spacing plus 2 inches (50 mm) for plain wire and 8 inches (200 mm) for deformed wire.
 - 3. Offset laps of adjoining sheet widths to prevent continuous laps in either direction.
 - 4. Lace overlaps with wire.

3.7 JOINTS

- A. Construction Joints:
 - 1. Construct joints true to line with faces perpendicular to surface plane of concrete.
 - 2. Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.
 - 3. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints, except as otherwise indicated.
 - 4. Locate joints for beams, slabs, joists, and girders in the middle third of spans.
 - a. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
 - 5. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
 - 6. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
- B. Waterstops: Provide waterstops in construction joints as indicated. Install waterstops to form continuous diaphragm in each joint. Make provisions to support and protect exposed waterstops during progress of work. Fabricate field joints in waterstops in accordance with manufacturer's printed instructions, using manufacturer's specified welding irons.
- C. Isolation Joints in Slabs-on-Ground: Construct isolation joints in slabs-on-ground at points of contact between slabs-on-ground and vertical surfaces, such as column pedestals and elsewhere as indicated.
- D. Joint filler and sealant materials are specified in the section for "Related Materials"

- E. Contraction (Control) Joints in Slabs-on-Ground: Maximum joint spacing shall be 36 times the slab thickness unless otherwise noted on the drawings. The dry cut saw shall be used immediately after final finishing and to a depth of 1-1/2". A conventional saw shall be used as soon as possible without dislodging aggregate and to a depth of 1/4 slab thickness.
 - 1. Joint sealant material is specified in the section for "Related Materials".

3.8 INSTALLATION TOLERANCES

- A. Comply with ACI 117/ACI 117M.

3.9 INSTALLATION OF EMBEDDED ITEMS

- A. General: Set and build into work anchorage devices and other embedded items required for other work that is attached to, or supported by, cast-in-place concrete. Use setting drawings, diagrams, instructions and directions provided by suppliers of items to be attached thereto.
- B. Edge Forms and Screed Strips for Slabs: Set edge forms or bulkheads and intermediate screed strips for slabs to obtain required elevations and contours in finished slab surface. Provide and secure units sufficiently strong to support types of screed strips by use of strike-off templates or accepted compacting type screeds.
- C. Embedded Plates at Foundation Walls: Install plate at top of forms so that exterior face of steel plate is level and plumb. Use construction documents for locations, sizes and elevations.

3.10 PREPARATION OF FORM SURFACES

- A. Clean re-used forms of concrete matrix residue, repair and patch as required to return forms to acceptable surface condition.
- B. If form-release compound is required, coat contact surfaces of forms with a form-coating compound before reinforcement is placed.
- C. Thin form-coating compounds only with thinning agent of type, and amount, and under conditions of form-coating compound manufacturer's directions. Do not allow excess form-coating material to accumulate in forms or to come into contact with in-place concrete surfaces against which fresh concrete will be placed. Apply in compliance with manufacturer's instructions.
- D. Coat steel forms with a non-staining, rust-preventative form oil or otherwise protect against rusting. Rust-stained steel formwork is not acceptable.

3.11 CONCRETE PLACEMENT

- A. Ready-mix concrete shall comply with the requirements of ASTM C 94 and ACI 304. All plant and transporting equipment shall comply with the concrete plant standards and truck mixer and agitator standards of the National Ready Mix Concrete Association.
- B. Cold weather mixing procedures shall be submitted to the architect for approval.

- C. Placement of structural concrete with a least dimension greater than or equal to 4 feet shall be considered "mass concrete" per ACI definition. Contractor shall adhere to mass concrete procedures and recommendations of ACI 301 and ACI 211.
- D. Notify Architect and Owner's Inspector at least 36 hours (1 1/2 regular working days) before each pour so that forms and reinforcing may be examined. Do not place concrete until inspection has been made or waived.
- E. Preplacement Inspection: Before placing concrete, inspect and complete formwork installation, reinforcing steel, and items to be embedded or cast-in. Notify other crafts to permit installation of their work; cooperate with other trades in setting such work. Moisten wood forms immediately before placing concrete where form coatings are not used.
 - 1. Apply temporary protective covering to lower 2' of finished walls adjacent to poured floor slabs and similar conditions, and guard against spattering during placement.
- F. General: Comply with ACI 304 "Recommended Practice for Measuring, Mixing, Transporting, and Placing Concrete," and as herein specified.
 - 1. Deposit concrete continuously or in layers of such thickness that no concrete will be placed on concrete which has hardened sufficiently to cause the formation of seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as herein specified. Deposit concrete as nearly as practicable to its final location to avoid segregation.
- G. Placing Concrete in Forms: Deposit concrete in forms in horizontal layers not deeper than 18" and in a manner to avoid inclined construction joints. Where placement consists of several layers, place each layer while preceding layer is still plastic to avoid cold joints. Use internal vibrators penetrating both the top and preceding layers.
- H. Consolidate placed concrete by mechanical vibrating equipment supplemented by hand-spading, rodding or tamping. Use equipment and procedures for consolidation of concrete in accordance with ACI recommended practices.
- I. Use and type of vibrators shall conform to ACI 309 "Recommended Practice for Consolidation of Concrete." Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations not farther than visible effectiveness of machine. Place vibrators to rapidly penetrate placed layer and at least 6" into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to set. At each insertion limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing segregation of mix.
- J. Placing Concrete Slabs:
 - 1. Deposit and consolidate concrete slabs in a continuous operation, within limits of construction joints, until the placing of a panel or section is completed.
 - 2. Per ACI 318, beams, girders, or slabs supported by columns or walls shall not be cast or erected until concrete in the vertical support members is no longer plastic.
- K. Consolidate concrete during placing operations so that concrete is thoroughly worked around reinforcement and other embedded items and into corners.
- L. Slabs: Bring slab surfaces to correct level with straightedge and strikeoff. Use highway straightedge, bull floats or darbies to smooth surface free of humps or hollows. Do not disturb slab

surfaces prior to beginning finishing operations. See also "MONOLITHIC SLAB FINISHES" below.

- M. Maintain reinforcing in proper position during concrete placement operations.
- N. Cold Weather Placing: Protect concrete work from physical damage or reduced strength which could be caused by frost, freezing actions, or low temperatures, in compliance with ACI 306 and as herein specified.
 - 1. When air temperature has fallen to or is expected to fall below 40oF (4oC), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50oF (10oC), and not more than 80oF (27oC) at point of placement.
 - 2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
 - 3. Use only a non-corrosive, non-chloride accelerator. Calcium chloride, thiocyanates or admixtures containing more than 0.05% chloride ions are NOT permitted.
 - 4. Care must be taken to store water-based curing and sealing compounds where they will not freeze. In most cases, they cannot be reconstituted after thawing.
- O. Hot Weather Placing: When hot weather conditions exist that would seriously impair quality and strength of concrete, place concrete in compliance with ACI 305 and as herein specified.
 - 1. Cool ingredients before mixing to maintain concrete temperature at time of placement below 90oF (32oC). Mixing water may be chilled, or chopped ice may be used to control temperature provided water equivalent of ice is calculated to total amount of mixing water. Use of liquid nitrogen to cool concrete is Contractor's option.
 - 2. Cover reinforcing steel with water-soaked burlap if it becomes too hot, so that steel temperature will not exceed the ambient air temperature immediately before embedment in concrete.
 - 3. Fog spray forms, reinforcing steel and subgrade just before concrete is placed.

3.12 FINISH OF FORMED SURFACES

- A. Concrete mixes containing pozzolans or slags do not set at the same rate or with the same bleed water characteristic as plain Portland cement. Therefore attention must be directed to the proper procedures. Refer to ACI 232.2R and ACI 301.
- B. Rough Form Finish: For formed concrete surface not exposed to view in the finish work or by other construction, unless otherwise indicated. This is the concrete surface having texture imparted by form facing material used, with tie holes and defective areas repaired and patched and fins and other projections exceeding 1/4" in height rubbed down or chipped off.
- C. Smooth Form Finish: For formed concrete surfaces exposed to view, or that are to be covered with a coating material applied directly to concrete, or a covering material applied directly to concrete, such as waterproofing, damp-proofing, painting or other similar system. This is as-cast concrete surface obtained with selected form facing material, arranged orderly and symmetrically with a minimum of seams. Repair and patch defective areas with fins or other projections completely removed and smoothed. Follow all requirements in ACI 301, Chapter 10 for smooth form finish. Surface preparation for surfaces receiving waterproofing must be approved by the waterproofing manufacturer prior to construction.

3.13 FLOOR FLATNESS/LEVELNESS TOLERANCES

- A. FF defines the maximum floor curvature allowed over 24 in. Computed on the basis of successive 12 in. (300 mm) elevation differentials, FF is commonly referred to as the "Flatness F-Number".
- B. FL defines the relative conformity of the floor surface to a horizontal plane as measured over a 10 ft. (3.05 m) distance commonly referred to as the "Levelness F-Number".
- C. All floors shall be measured within 72 hours of being poured and in accordance with ASTM E 1155 "Standard Test Method for Determining Floor Flatness and Levelness Using the "F Number" System (Inch-Pound Units).
- D. All slabs shall achieve the specified overall tolerance. The minimum local tolerance (1/2 bay or as designated by the architect) shall be 2/3 of the specified tolerances.
- E. All elevated slabs shall achieve the specified FL tolerance before the removal of the forms.

3.14 MONOLITHIC SLAB FINISHES

- A. Trowel Finish: Apply trowel finish to monolithic slab surfaces to be exposed to view, and slab surfaces to be covered with resilient flooring, carpet, ceramic or quarry tile, paint, or other thin film finish coating system, unless otherwise noted. After floating, begin first trowel finish operation using a power-driven trowel. Begin final troweling when surface produces a ringing sound as trowel is moved over surface. Consolidate concrete surface by final hand-troweling operation, free of trowel marks, uniform in texture and appearance and with a surface leveled to an FF 35 / FL 20 tolerance (FL 20 for elevated slabs). Grind smooth surface defects, which would telegraph through applied floor covering system.
- B. Trowel and Fine Broom Finish: Where ceramic or quarry tile is to be installed with thin-set mortar, and slab surfaces which are to be covered with membrane or elastic waterproofing, or sand-bed terrazzo, and exterior walking surfaces, and as otherwise indicated, apply single trowel finish as specified, then immediately follow with slightly scarifying surface by fine brooming. Surface preparation for surfaces receiving waterproofing must be approved by the waterproofing manufacturer prior to construction.
- C. Sealers, Hardeners and Liquid Densifiers: Apply a coat of the specified compound to all EXPOSED interior concrete floors where indicated on the drawings. This surface must be continuously moist cured by a method satisfactory to the Architect. Apply and mechanically scrub compound into the floor in strict accordance with the manufacturer's printed instructions.

3.15 CONCRETE CURING AND PROTECTION

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.
 - 1. Start initial curing as soon as free water has disappeared from concrete surface after placing and finishing. Weather permitting, keep continuously moist for not less than 7 days.
 - 2. Begin final curing procedures immediately following initial curing and before concrete has dried. Continue final curing for at least 7 days in accordance with ACI 301 procedures. Avoid rapid drying at end of final curing period.

3. In order to avoid plastic or drying shrinkage cracks during warm, dry or windy weather, ACI 302 and ACI 308 shall be followed using wind breaks and sun shades when recommended.
 4. Care must be taken to store water based curing and sealing compounds where they will not freeze. In most cases, they cannot be reconstituted after thawing.
- B. Curing Methods: Perform curing of concrete by moisture curing, moisture-retaining cover curing, curing and sealing compound, and by combinations thereof, as herein specified.
1. Provide moisture curing by following methods.
 - a. Keep concrete surface continuously wet by covering with water.
 - b. Continuous water-fog spray.
 - c. Covering concrete surface with specified absorptive cover, thoroughly saturating cover with water and keeping continuously wet. Place absorptive cover to provide coverage of concrete surfaces and edges, with 4" lap over adjacent absorptive covers.
 2. Provide moisture-retaining cover curing as follows:
 - a. Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width with sides and ends lapped at least 3" and sealed by waterproof tape or adhesive. Immediately repair any holes or tears during curing period using cover material and waterproof tape.
 3. Provide curing and sealing compound to exposed interior slabs not receiving additional flooring. A clear curing and sealing compound shall be used on exterior slabs, sidewalks and curbs not receiving a penetrating sealer.
 4. Use the specified curing compound on surfaces to be covered with finish or coating material applied directly to concrete, such as liquid densifier/sealer, waterproofing, dampproofing, membrane roofing, flooring, painting, and other coatings and finish materials. Apply compound in accordance with manufacturer's direction.
- C. Curing Formed Surfaces: Cure formed concrete surfaces, including undersides of beams, supported slabs and other similar surfaces by moist curing with forms in place for full curing period or until forms are removed. If forms are removed, continue curing by methods specified above, as applicable.
- D. Curing Unformed Surfaces: Cure unformed surfaces, such as slabs, floor topping, and other flat surfaces by application of the specified curing compound or a continuous moist curing method approved by the architect.
- E. Certify that all curing compounds, sealers and hardeners are compatible with all adhesive products intended for attaching co-lateral floor material. In conformance with ASTM F710, coordination with flooring manufacturer is required to insure concrete coatings will not obstruct the bond between the concrete and the adhesive. In addition, insure coatings and adhesives are "benignly compatible" -- in other words, do not combine substances whose constituents are reactive.
- F. Sealer and Dustproofers: Apply a second coat of the specified curing and sealing compound to exposed interior slabs not subjected to vehicular traffic, noted on the drawings. These slabs must have received an initial coat of the curing and sealing compound.

3.16 SHORES AND SUPPORTS

- A. Contractor shall provide the services of a registered Professional Engineer to design the shoring, and determine timing of removal.

- B. Remove shores and reshore in a planned sequence to avoid damage to partially cured concrete. Locate and provide adequate reshoring to safely support work without excessive stress or deflection.
- C. Keep reshores in place a minimum of 15 days after placing upper tier, and longer if required, until concrete has attained its required 28-day strength and heavy loads due to construction operations have been removed.

3.17 REMOVAL OF FORMS

- A. Formwork not supporting weight of concrete, such as sides of beams, walls, columns, and similar parts of the work, may be removed after cumulatively curing at not less than 50oF (10oC) for 12 hours after placing concrete, provided concrete is sufficiently hard to not be damaged by form removal operations, and provided curing and protection operations are maintained.
- B. For formwork supporting weight of concrete, such as beam soffits, joints, slabs and other structural elements, comply with ACI 347 recommendations for various element types. Determine compressive strength of in-place concrete by testing field-cured specimens representative of concrete location or members.
- C. Form facing material may be removed 4 days after placement, only if shores and other vertical supports have been arranged to permit removal of form facing material without loosening or disturbing shores and supports.

3.18 RE-USE OF FORMS

- A. Clean and repair surfaces of forms to be re-used in work. Split, frayed, delaminated or otherwise damaged form facing material will not be acceptable for exposed surfaces. Apply new form coating compound as specified for new form work.
- B. When forms are intended for successive concrete placement, thoroughly clean surfaces, remove fins and laitance, and tighten forms to close joints. Align and secure joint to avoid offsets. Do not use "patched" forms for exposed concrete surfaces, except as acceptable to Architect.

3.19 MISCELLANEOUS CONCRETE ITEMS

- A. Filling-In: Fill-in holes and openings left in concrete structures for passage of work by other trades, unless otherwise shown or directed, after work of other trades is in place. Mix, place and cure concrete as herein specified, to blend with in- place construction. Provide other miscellaneous concrete filling shown or required to complete work.
- B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and steel-troweling surfaces to a hard, dense finish with corners, intersections and terminations slightly rounded.
- C. Equipment Bases and Foundations: Provide machine and equipment bases and foundations, as shown on drawings. Set anchor bolts for machines and equipment to template at correct elevations, complying with certified diagrams or templates of manufacturer furnishing machines and equipment.

- D. Grout base plates and foundations as indicated using specified free-flowing non-shrink grout. Use non-metallic grout for exposed conditions, unless otherwise indicated.
- E. Where high fluidity and/or increased placing time is required use the specified high flow grout. This grout shall be used for all base plates larger than 10 square feet.
- F. Reinforced Masonry: Provide concrete grout for reinforced masonry lintels and bond beams where indicated on drawings and as scheduled. Maintain accurate location of reinforcing steel during concrete placement.

3.20 CONCRETE SURFACE REPAIRS

- A. Prior to all repairs, an as-built condition sketch and method of repair must be submitted to the Architect and Engineer of Record for review and approval.
- B. Patching Defective Areas: Repair and patch defective areas with cement mortar immediately after removal of forms, when acceptable to Architect.
- C. Cut out honeycomb, rock pockets, voids over 1/4" in any dimension, and holes left by tie rods and bolts, down to solid concrete but, in no case to a depth of less than 1". Make edges of cuts perpendicular to the concrete surface. Thoroughly clean, dampen with water, and brush-coat the area to be patched with a bonding grout containing the specified bonding admixture. Place patching mortar after while bonding grout is still tacky.
- D. For exposed-to-view surfaces, blend white Portland cement and standard Portland cement so that, when dry, patching mortar will match color surrounding. Provide test areas at inconspicuous location to verify mixture and color match before proceeding with patching. Compact mortar in place and strike-off slightly higher than surrounding surface.
- E. Repair of Formed Surfaces: Remove and replace concrete having defective surfaces if defects cannot be repaired to satisfaction of Architect. Surface defects, as such, include color and texture irregularities, cracks, spalls, air bubbles, honeycomb, rock pockets; fins and other projections on surface; and stains and other discoloration's that cannot be removed by cleaning. Flush out form tie holes, fill with dry pack mortar, or pre-cast cement cone plugs secured in place with bonding agent.
- F. Repair concealed formed surfaces, where possible, that contain defects that affect the durability of concrete. If defects cannot be repaired, remove and replace concrete.
- G. Repair of Unformed Surfaces: Test unformed surfaces, such as monolithic slabs, for smoothness and verify surface plane to tolerances specified for each surface and finish. Correct low and high areas as herein specified. Test unformed surfaces sloped to drain for trueens of slope, in addition to smoothness, using a template having required slope.
- H. Repair finished unformed surfaces that contain defects, which affect durability of concrete. Surface defects, as such, include crazing, cracks in excess of 0.01" wide or which penetrate to reinforcement or completely through non-reinforced sections regardless of width, spalling, pop-outs, honeycomb, rock pockets, and other objectionable conditions.

- I. Correct high areas in unformed surfaces by grinding, after concrete has cured at least 14 days, except at hydrostatic slabs.
- J. Correct low areas in unformed surfaces during or immediately after completion of surface finishing operations by cutting out low areas and replacing with fresh concrete. Finish repaired areas to blend into adjacent concrete. The specified underlayment compound or repair topping may be used when acceptable to Architect.
- K. Repair defective areas, except random cracks and single holes not exceeding 1" diameter, by cutting out and replacing with fresh concrete. Remove defective areas to sound concrete with clean, square cuts and expose reinforcing steel with at least 3/4" clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding compound. Mix patching concrete of same materials to provide concrete of same type or class as original concrete. Place, compact and finish to blend with adjacent finished concrete. Cure in the same manner as adjacent concrete.
- L. Repair isolated random cracks and single holes not over 1" in diameter by dry-pack method. Groove top of cracks and cutout holes to sound concrete and clean of dust, dirt and loose particles. Dampen cleaned concrete surfaces and apply bonding compound. Mix dry-pack, consisting of one part Portland cement to 2-1/2 parts fine aggregate passing a No. 16 mesh sieve, using only enough water as required for handling and placing. Place dry-pack after bonding compound has dried. Compact dry-pack mixture in place and finish to match adjacent concrete. Keep patched area continuously moist for not less than 72 hours.
- M. Structural Repair: All structural repairs shall be made with prior approval of the Engineer of Record as to method and procedure, using the specified polymer repair mortar and/or specified epoxy adhesive. Where epoxy injection procedures must be used, an approved low viscosity epoxy made by the manufacturers previously specified shall be used. In addition, all cracks shall be filled with the specified crack sealer or other method as approved by the Engineer of Record. All garage slabs shall be repaired prior to the slab being treated with the specified penetrating anti-spalling sealer.
- N. Underlayment Application: Leveling of floors for subsequent finishes may be achieved by use of specified underlayment material. Underlayment application shall achieve the tolerances specified in "MONOLITHIC SLAB FINISHES" above.
- O. Specified Polymer Horizontal Repair Mortar: All exposed floors shall be leveled, where required, with the specified self-leveling repair topping.
- P. Repair Methods not specified above may be used, subject to acceptance of Architect.

3.21 FOUNDATION WALLS

- A. The contractor shall form and leave openings in walls as shown on drawings and approved shop drawings for work of other contractors. These openings shall be temporarily closed and when so directed, the contractor shall point up in solid and neat manner with waterproofed cement.

3.22 WORK IN CONNECTION WITH OTHER TRADES AND CONTRACTS

- A. Sleeves, pockets, openings, etc., shall be set in the concrete walls and arches as required for the mechanical trades as shown on approved shop drawings; these shall be encased or built into the concrete work and shall be properly placed and secured in position in the forms before concrete is placed.
- B. Provide all chases, pipe slots, etc., required for the mechanical trades (see mechanical drawings), constructed as shown on the approved shop drawings.
- C. Leave temporary access panels where required to install mechanical equipment as required by trade affected. Panels shall be formed with construction joints as specified. Details for such panels shall be submitted to Architect for approval.
- D. Coordinate all penetrations, cutting, and patching with waterproofing contractor.

3.23 CUTTING AND PATCHING

- A. Contractor for concrete work shall be responsible for all cutting, removing and patching work where concrete surfaces are not installed within the limits shown on the drawings or specified herein. All such work shall meet with the approval of the Architect or Engineer of Record.
- B. Where cutting and patching is required to accommodate the work of other subcontractors, such cutting shall be done at the expense of said subcontractors but shall be performed by the contractor for concrete work.
- C. The location and extent of cutting in completed concrete work and the patching thereof shall meet with the approval of the Architect or Engineer of Record.

3.24 QUALITY CONTROL TESTING DURING CONSTRUCTION

- A. The Owner will employ a testing laboratory to perform tests and to submit test reports.
- B. Provide special inspections per the applicable Building Code and the requirements of all applicable ACI standards.
- C. Sampling and testing for quality control during placement of concrete may include the following, as directed by Architect.
 - 1. Sampling Fresh Concrete: ASTM C 172, except modified for slump to comply with ASTM C 94.
 - 2. Slump: ASTM C 143; one test at point of discharge for each truck; additional tests when concrete consistency seems to have changed.
 - 3. Air Content: ASTM C 173, volumetric method for lightweight or normal weight concrete; ASTM C 231 pressure method for normal weight concrete; one for each truck of air-entrained concrete.
 - 4. Concrete Temperature: Test hourly when air temperature is 40oF (4oC) and below, and when 80oF (27oC) and above; and each time a set of compression test specimens made.
 - 5. Compression Test Specimen: ASTM C 31; one set of 5 standard cylinders for each compressive strength test, unless otherwise directed. Mold and store cylinders for laboratory cured test specimens except when field-cure test specimens are required.

6. Compressive Strength Tests: ASTM C 39; one set for each day's pour exceeding 25 cu. yds. plus additional sets for each 50 cu. yds. over and above the first 25 cu. yds. of each concrete class placed in any one day; one specimens tested at 7 days, three specimens tested at 28 days, and one specimens retained in reserve for later testing if required.
 - a. When frequency of testing will provide less than 5 strength tests for a given class of concrete, conduct testing from at least 5 randomly selected batches or from each batch if fewer than 5 are used.
 - b. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, evaluate current operations and provide corrective procedures for protecting and curing the in-place concrete.
 - c. Strength level of concrete will be considered satisfactory if averages of sets of three consecutive strength test results equal or exceed specified compressive strength, and no individual strength test result falls below specified compressive strength by more than 500 psi.
7. Water Cementitious Ratio Test: Check water content of concrete in accordance with AASHTO T 318 "Standard Method of Test for Water Content of Freshly Mixed Concrete Using Microwave Oven Drying". Frequency of this test shall be the same as that of compressive strength tests, noted above.
8. Floor Preparation to Receive Resilient Flooring: For any concrete that receives resilient flooring, test concrete in accordance with ASTM F 710 prior to acceptance by owner.
9. Test results will be reported in writing to Architect, Engineer of Record, and Contractor within 24 hours after tests. Reports of compressive strength tests shall contain the project identification name and number, date of concrete placement, name of concrete testing service, concrete type and class, location of concrete batch in structure, design compressive strength at 28 days, concrete mix proportions and materials; compressive breaking strength and type of break for both 7-day tests and 28-day tests.
 - a. Non Compliance: All test reports indicating non-compliance shall be faxed immediately to all parties on the test report distribution list and the hard copies submitted on different colored paper.
 - b. Nondestructive Testing: Windsor probes, sonoscope, or other non-destructive device may be permitted but shall not be used as the sole basis for acceptance or rejection.
10. Additional Tests: The testing service will make additional tests of in-place concrete when test results indicate specified concrete strengths and other characteristics have not been attained in the structure, as directed by Architect. Testing service may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42, or by other methods as directed. Contractor shall pay for such tests when unacceptable concrete is verified.

3.25 WASTE MANAGEMENT

- A. Separate and recycle waste materials in accordance with the Section 017419 Construction Waste Management and Disposal and to the maximum extent feasible.
- B. Collect cut off steel and discarded reinforcement steel and place in area for recycling.
- C. Place materials defined as hazardous or toxic waste in designated containers.
- D. Use trigger operated spray nozzles for water hoses and closed loop system to reduce water consumption.

- E. Reusable forms should be cleaned immediately after removal and non-reusable forms recycled to the maximum extent economically feasible.
- F. Incorporate crushed concrete or masonry materials in sub-base to the maximum extent feasible in accordance with sub-base specifications.
- G. Before concrete pours, designate location or uses for excess concrete. Options include:
 - 1. Additional paving
 - 2. Post footing anchorage
 - 3. Landscaping -- site concrete features
 - 4. Flowable fill
- H. To avoid contamination of the local landscape, before concrete pours, designate a location for cleaning out concrete trucks where run-off can be contained, reused or incorporated. Options include:
 - 1. Company owned site for that purpose
 - 2. On-site area to be paved later in project

END OF SECTION

SECTION 03 3500 - CONCRETE COLOR & FINISHING**PART ONE- GENERAL****1.1 SUMMARY****A. Section Includes:**

Provide finishes on cast-in-place concrete as called for on the Drawings, specified herein, and needed for a complete and proper installation

B. Related Sections:

03 30 00 Cast-in-Place Concrete

05 50 00 Metal Fabrications

07 92 00 Joint Sealants

1.2 SUBMITTALS**A. General:**

1. Comply with the pertinent provisions of Sections of 01 30 00 Administrative Requirements.
2. Within 45 calendar days after the Contractor has received the Owner's Notice to Proceed, submit all items listed below.

B. Product Data:

Within 30 calendar days after the Contractor has received the Owner's Notice to Proceed, submit:

1. A complete list of materials proposed to be furnished and installed under this Section.
2. Manufacturer's specifications and other data needed to demonstrate compliance with specified requirements.
3. Manufacturer's recommended installation procedures which, when approved by the Owner, will become the basis for accepting or rejecting actual installation procedures used on the work.

C. Sample Panels:

For each type of concrete paving including finish, color, aggregates and hardeners as specified:

1. Provide 2-foot by 2-foot mock-up under 01 45 00 Quality Control. Construct at least one month before start of other concrete work to allow concrete to cure before observation.
2. At location acceptable to owner, demonstrate methods used for construction, including forming and finishing conditions required for Project using materials, workmanship, joint treatments, and curing methods to be used throughout Project.
3. Modify per Owner's directions at no cost to the Owner.
4. Accepted mock-up provides visual standard for work of Section.

1.3 QUALITY ASSURANCE**A. Standards:**

Comply with pertinent provisions of following standards, in case of conflict between referenced standards, the more stringent requirements shall govern.

1. ACI 301, latest edition, "Specifications for Structural Concrete for Buildings".
2. International Building Code, latest edition, as amended by local authority.
3. American Society for Testing and Materials (ASTM), latest edition.
4. American Association of State Highway and Transportation Officials, Specifications for Materials (AASHTO), latest edition.
5. Americans with Disabilities Act (ADA)

B. Standard Specifications:

Conform to all applicable requirements of the local building code, latest edition.

C. Qualifications of Workers:

1. Provide at least one person trained in the skills required, who shall be: completely familiar with the design and application of work described for this section, present at all times during progress of the work, and shall direct all work performed under this section.
2. For finishing of portland cement concrete surfaces, and operation of the required equipment, use only personnel trained in the skills required.

1.4 DELIVERY, STORAGE AND HANDLING**A. General:****B. Comply with the pertinent provisions of Sections of 01 60 00 Product Requirements.****C. Protection:**

1. Use all means necessary to protect the materials of this section before, during, and after installation and to protect the work and materials of all other trades.
2. Protect cement concrete paving against vehicular traffic prior to and for 28 days following installation.

D. Color Additive: Deliver, store and handle in accordance with manufacturer's instructions.**PART TWO - PRODUCTS****GENERAL:****A. Carefully study the Drawings and these Specifications, and determine the location, extent, and type of required concrete finishes.****B. As required for the Work, provide the following materials, or equals approved by the owner.****2.1 CONCRETE MATERIALS****A. Comply with pertinent provisions of Section 03 3000, except as may be modified herein.****2.2 LIQUID BONDING AGENT:****A. "Sonobond" epoxy concrete bonding agent as manufactured by Sonneborn Building Products.****2.3 LIQUID CURING AGENTS:****A. Type conforming to ASTM C309, fully compatible with proposed finish coatings or coverings, or the application of such finish.****B. Where application of specified finish materials will be inhibited by use of curing agents, cure the surface by water only, do not use chemical cure.****C. "Sonosil" curing agent as manufactured by Sonneborn Building Products.****2.4 SEALER/HARDENER:****A. "Sonosil" curing, hardening, dust-proofer as manufactured by Sonneborn Building Products.****2.5 CURING AND PROTECTION PAPER:****A. Non-staining reinforced waterproof kraft paper conforming to ASTM C171.****B. Where concrete will be exposed and will be subjected to abrasion, such as floor slabs, use non-staining paper such as "Sisalkraft", "Seekure 896" or equal paper faced with polyethylene film.****2.6 BURLAP CLOTH:****A. Made from jute or kenaf and weighing approximately 305 grams per sq. m (9 oz. per sq. yd.) for moist curing. Conform to AASHTO M 182, use two layers.**

2.7 INTEGRAL CONCRETE COLORANTS

A. General:

1. All Finish Layers will be integrally colored.
2. Conform to ASTM C979.
3. UV stable:
Provide mineral pigments, which are UV stable, and completely colorfast for a minimum of 10-years following installation.
4. Concrete Mix Compatibility
Assure compatibility of selected pigments with proposed concrete mix design and admixtures.

B. Color:

Submit manufacturer's standard and custom concrete colors to Consultant for final color selections.

C. Manufacturer's Recommendations:

Conform to all manufacturer's recommendations for mixing, finishing, and curing colored concrete.

1. Approved Manufacturers:
2. Davis Colors, www.daviscolors.com.
3. Scofield 'Chromix' Color Admixtures, www.scofield.com.
4. 'BrickForm' Rafco Products: www.brickform.com.

2.8 GROUT

A. Non-Metallic, Non-Shrink Cement Grout:

"10K Grout" as manufactured by BASF Construction Chemicals, (800) 433-9517.

2.9 OTHER MATERIALS

A. General:

Provide other materials, not specifically described but required for a complete and proper installation, as selected by the Contractor subject to the approval of the Owner.

PART THREE - EXECUTION

3.1 SURFACE CONDITIONS

A. Existing Conditions:

Correct conditions detrimental to proper and timely completion of the work.

B. Unsatisfactory Conditions:

Do not proceed until unsatisfactory conditions have been corrected.

3.2 02 FINISHING OF FORMED SURFACES

A. General:

1. After removal of forms, give the concrete surfaces one or more of the finishes specified below where so indicated on the Drawings.
2. Revise the finishes as needed to secure the approval of the Owner.

B. As Cast Finish:

1. Rough Form Finish:
 - a) Provide as-cast rough form finish to all formed concrete surfaces that are to be concealed in the finish Work or by any other construction.

- b) Leave surfaces with the texture imparted by forms, except patch tie holes and defects with grout.
- c) Remove fins exceeding 1/4-inch in height.
- 2. Architectural finish:
 - a) Provide as-cast smooth form finish for all formed concrete surfaces in Animal Care areas or that are to be covered with a coating material other than cement plaster applied directly to the concrete.
 - b) Produce smooth form finish by selecting form material to impart a smooth, hard, uniform texture and arranging forms in an orderly and symmetrical manner with a minimum of seams in accordance with the requirements of section 03 10 00 Concrete Formwork.
 - c) Repair and patch defective areas with grout. remove and smooth all fins and other projections completely.
- 3. Related unformed surfaces:

At tops of walls, horizontal offsets, and similar unformed surfaces occurring adjacent to formed surfaces, strike off smooth and finish to match adjacent surface.

3.3 FINISHING SLABS

A. Definitions of Finishing Tolerances:

- 1. "Class A":

True plane within 1/8 inch (3.18 mm) in ten (10) feet as determined by a ten foot straight edge placed anywhere on the slab in any direction.
- 2. "Class B":

True plane within 1/4 inch (6.35 mm) in ten (10) feet as determined by a ten foot straight edge placed anywhere on the slab in any direction.
- 3. "Class C":

True plane within 1/8 inch (3.18 mm) in two (2) feet as determined by a two foot straight edge placed anywhere on the slab in any direction.

B. Screeds:

- 1. Set edge forms and intermediate screed strips accurately to produce the designed elevations and contours in the finished surface.
- 2. Screeds and forms will be sufficiently strong to support vibrating bridge screeds or roller pipe screeds if the nature of the finish specified requires the use of such equipment.
- 3. Align the concrete surface to the contours of screed strips by the use of strike-off templates or approved compacting type screeds.

C. Float finish:

- 1. General;

Apply float finish to monolithic slab surfaces that are to receive trowel finish and other finishes as specified, and to slab surfaces which are to be covered with insulation, and as otherwise shown on the Drawings or in the schedule.
- 2. After placing concrete slabs, do not work the surface further until ready for floating.
- 3. Begin floating when the surface water has disappeared and when the concrete has stiffened sufficiently to permit operation of a power-driven float, or both.
- 4. Consolidate the surface with power-driven floats, or by hand-floating if area is small or inaccessible to power units.
- 5. Check and level the surface plane with a ten-foot straightedge placed on the surface at not less than two different angles.
- 6. Cut down high spots and fill low spots to produce a surface with a Class B surface throughout.

7. Uniformly slope to drains where required.
 8. Immediately after leveling, refloat the surfaces to a smooth, uniform, granular texture.
- D. Trowel Finish:
1. General:
Apply troweled finish to monolithic slab surfaces that are to be exposed to view, unless otherwise shown, and to slab surfaces that are to be covered with resilient flooring, carpeting, paint, or other thin-film finish coating system.
 2. Provide Float finish as described above,
 3. Begin the first trowel finish operation using a power-driven trowel. Begin final troweling when the surface produces a ringing sound as the trowel is moved over the surface.
 4. Consolidate the concrete surface by the final hand troweling operation, free from trowel marks, uniform in texture and appearance, and with Class A surface finish throughout.
 5. For surfaces which are intended to receive floor coverings grind smooth those surface defects which would telegraph through applied floor covering system.
 6. Final leveling may require interior floor underlayment leveling material to achieve required finish.
- E. Non-slip Broom Finish:
1. Apply nonslip broom finish to exterior concrete platforms, interior and exterior steps, interior and exterior ramps, interior and exterior animal holding areas, and elsewhere as shown on the Drawings or in the schedules.
 2. Provide a floated finish as described above.
 3. Light Broom Finish:
Surface grooves or grains less than 1/16-inch deep.
 4. Medium Broom Finish:
Surface grooves or grains greater than 1/16-inch and less than 1/8-inch deep.
 5. Heavy Broom Finish:
Surface grooves or grains greater than 1/8-inch and less than 1/4-inch deep.
 6. Immediately after trowel finishing, uniformly texture the concrete surface by drawing a fiberbristle broom across the surface.
 7. Texture in the direction perpendicular to the main traffic route unless shown otherwise on the Drawings.
 8. Coordinate the required finish with Owner prior to application.

3.4 PROTECTION AND CURING

- A. General:
Protect freshly deposited concrete from premature drying and excessively hot or cold temperatures, and maintain without drying at relatively constant temperature for the period of time necessary for the hydration of the cement and proper hardening of the concrete.
- B. Preservation of Moisture:
Apply one of the following materials or methods to concrete not in contact with forms, immediately following placement:
1. Ponding or continuous sprinkling.
 2. Absorptive mat or fabric kept continuously wet.
 3. Sand or other covering kept continuously wet.
 4. Application of waterproof sheet material specified in part 2 of this Section.
 5. Application of curing agent specified in part 2 of this Section.
- C. Temperature, Wind, and Humidity:
1. Cold Weather:

- a) When the mean daily temperature outdoors is less than 40 degrees Fahrenheit (4.44 degrees Celsius), maintain the temperature of the concrete between 50 degrees Fahrenheit (10 degrees Celsius) and 70 degrees Fahrenheit (21.11 degrees Celsius) for the required curing period.
 - b) When necessary, provide proper and adequate heating system capable of maintaining the required heat without injury due to concentration of heat.
 - c) Do not use combustion heaters during the first 24 hours unless precautions are taken to prevent exposure of the concrete to exhaust gases which contain carbon dioxide.
2. Hot Weather:
When necessary, provide wind breaks, fog spraying, shading, sprinkling, ponding, or wet covering with a light colored material, applying as quickly as concrete hardening and finishing operations will allow.
 3. Rate of Temperature Change:
Keep the temperature of the air immediately adjacent to the concrete during and immediately following the curing period as uniform as possible and not exceeding a change of 5 degrees Fahrenheit (-15 degrees Celsius) in any one hour period, or 50 degrees Fahrenheit (10 degrees Celsius) in any 24 hour period.
- D. Duration of Curing:
1. Continue curing until the cumulative number of days or fractions thereof, not necessarily consecutive, during which temperature of the air in contact with the concrete is below 50 degrees Fahrenheit (10 degrees Celsius) has totaled seven days.
 2. If high early strength of concrete has been used, continue curing for a total of three days.
 3. Prevent rapid drying at the end of the curing period.
- E. Formed Surfaces:
- Forms in contact with the concrete during the final curing period shall be kept wet. If forms are to be removed during the curing period, employ immediately one of the above curing materials or methods. Continue for the remainder of the curing period.
- F. Protection from Mechanical Injury:
- During the curing period, protect the concrete from damaging mechanical disturbances, particularly load stresses, heavy shock, and excessive vibration. All finished concrete surfaces to be protected from damage caused by construction equipment, materials, or methods, and by rain or running water. Self-supporting structures shall not be loaded in such a way as to overstress the concrete.

3.5 SEALER HARDENER

A. Application:

Apply Sealer/Hardener to all exposed concrete surfaces except where other finishes are noted.

Apply sealer/hardener after complete curing and drying of the concrete surface and per manufacturer's recommendations for the specific application. DO NOT APPLY OVER SURFACES TO RECEIVE INCOMPATIBLE FINISHES.

1. Dilute the liquid hardener with water and apply three coats:
 - a) First Coat: 1/3 strength;
 - b) Second Coat: 1/2 strength;
 - c) Third Coat: 2/3 strength.
2. Apply all coats evenly and allow 24 hours drying time between coats.

PART FOUR - SCHEDULE OF FINISHES

4.1 SPECIFIC FINISHES

- A. General: Provide the finishes defined above in the following locations.
- B. Concrete Walls
 - 1. Concrete Retaining Walls Integral Color, Architectural Finish, Class B
 - 2. Concrete Stem Walls Integral Color, Architectural Finish, Class B
 - 3. Concrete Dig Barriers Integral Color, Architectural Finish; Stain Exposed Surface, Class C

END OF SECTION

FOR REFERENCE ONLY

SECTION 03 3713 - SHOTCRETE**PART 1 GENERAL****1.1 SECTION INCLUDES**

- A. Simulated natural rock, trees/logs, and earth forms, and paving using pneumatically projected concrete (shotcrete).
- B. Structure and finishes for planter walls, paving, trees, pools and waterproofing.
- C. Work in two steps:
 - 1. A reinforced shotcrete structural substrate.
 - 2. An integrally colored and textured finish coat.
- D. Work of this section includes:
 - 1. Free standing artificial rock and earth
 - 2. Planter walls finished as artificial rock and earth
 - 3. Pools and waterproofing finished as artificial rock and earth
 - 4. Barrier finished as artificial trees/logs
 - 5. Artificial Rockwork - Arabian Rock
- E. Related work described elsewhere
31 00 00 Earthwork

1.2 REFERENCE STANDARDS

- A. ACI SPEC-506.2 - Specification for Shotcrete; 2013 (Reapproved 2018).
- B. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2024.
- C. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete; 2024.
- D. ASTM C1602/C1602M - Standard Specification for Mixing Water Used in the Production of Hydraulic Cement Concrete; 2022.
- E. ASTM C33/C33M - Standard Specification for Concrete Aggregates; 2024a.
- F. ASTM C150/C150M - Standard Specification for Portland Cement; 2024.
- G. ASTM C260/C260M - Standard Specification for Air-Entraining Admixtures for Concrete; 2024.
- H. ASTM C494/C494M - Standard Specification for Chemical Admixtures for Concrete; 2024.
- I. NSF 61 - Drinking Water System Components - Health Effects; 2025, with Addendum
- J. NSF 372 - Drinking Water System Components - Lead Content; 2024.

1.3 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Coordinate components of the work of this section with work performed by other section in sufficient time to allow for other components of the work to incorporate requirements of this section without causing delay to the work, including the following:
 - 1. Foundations of adjacent structures.
 - 2. Remaining existing structures.
 - 3. Drains and piping for the pool.
- B. Pre-construction meeting: Arrange a site meeting attended by the Contractor's superintendent, the subcontractor's representative and foreman for this project, the consultant, materials supplier(s), and other relevant personal in accordance with section 01 General conditions before commencement of work for this section ; agenda for meeting will include the following:

1. Confirmation of specifications and details for the project.
2. Review of required fastening and joining methods.
3. Review of samples.
4. Review of finishing methods and proposed coatings.
5. Additional items that are required for identification of installation and fabrication concerns.

1.4 DEFINITIONS

- A. General: The words "Guniting" and "Shotcrete" may be used interchangeably in the Drawings or in the Specifications.
1. Wet Mix Process shall consist of premixed fine aggregate, cement, and water pneumatically applied by suitable mechanism.
 2. Dry Mix process shall consist of a mixture of fine aggregate and cement, pneumatically placed by a suitable mechanism and to which water is added immediately prior to discharge from the applicator.

1.5 SYSTEM DESCRIPTION:

- A. Delegated Design:
1. The work of this section requires professional design services or certifications by design professionals employed by the fabricator, and who are not the Consultant.
- B. Artistic Systems:
1. Provide artistic development and artistic interpretation of the concepts expressed on the drawings by completing the required models and submittals.
 2. Perform the fabrication of artificial rockwork and the placement and installation of finish details and exhibit accessories in such a manner as to replicate the natural geology and vegetation described by the written descriptions and reference photographs contained herein and shown on the drawings.
 3. Finishes:
 - a) Finishes are described in Part 4 of this section.
 - b) Finish locations are shown on the drawings.
- C. Standard of Quality:
1. Exhibit Design Drawings: The design, layout, and details referenced by this Section have been developed for the purposes of establishing a standard of quality for the work. At its option the Contractor may propose alternative means and methods of construction: including alternative materials, waterproofing systems, and structural systems.
 2. Alternative Means and Methods: Alternative means and methods will be considered only when fully described at the time of tendering, on the form provided on tender documents and when substantiated by the Contractor's submittal of the following information:
 - a) Manufacturer's specifications for proposed materials.
 - b) Minimum of three (3) projects where the proposed materials or structural systems have been used successfully.
 - c) Complete structural analysis and certification by a structural engineer registered in all pertinent jurisdictions with control over this project.
 3. Final selection of specific materials for each exhibit element must be approved by the Consultant.
 4. Provide appropriate documentation that all proposed materials meet the specific performance requirements specified below.
- D. Specific Performance Standards:

1. All materials and/or completed fabrications must have a twenty (20) year structural service life.
2. Materials must be capable of resisting any visible damage and wear for a 5-year active service life.
3. Exhibit materials located within the reach of visitors must be capable of resisting damage from normal touch or the forces that one might normally expect from the public for a period of no less than 10-years.
4. All integral and applied color must resist fading for a minimum of 5 years of active service life in the locations specified.
5. All exposed surfaces and finishes shall use non-toxic materials.
6. All materials shall be cleanable and UV resistant.
7. Grout voids solid or provide 31-inch (800mm) diameter access panels in locations concealed from any views of guests.

E. Structural Systems Design:

1. Structural Design:
 - a) Provide the structural engineering design of walls, structures, pools, and paving. Design the concrete mixes, concrete reinforcing, required concrete thicknesses, attachments, and support armatures.
 - b) Design drawings will be prepared, approved, signed and sealed by a Professional Engineer registered in the jurisdiction in which the project will be constructed.
2. Design Requirements:
 - a) Comply with this Specification Section, its referenced documents and all applicable Codes and Standards.
 - b) Design all elements for the following loads defined in the applicable building codes:
 - 1) Dead loads
 - 2) Loads due to snow and rain
 - 3) Wind loads
 - 4) Vehicle impact
 - 5) Earth retaining loads
 - 6) In addition to the above loads, design all elements for the following loads:
Concentrated gravity live load of 12 kips at any one location.
 - c) Design all elements using load combinations given in the building code applicable to the project.
 - d) Design the concrete mixes, concrete reinforcing, required concrete thicknesses, attachments, and support armatures.
 - e) Design foundations for all work of this Section as described in Foundation Design below.
3. Structural Design Coordination:
 - a) Design the openings and rebates required for the work of Section 08 80 00.
 - b) Design the inlet and outlet structures and the penetrations for pipe systems as required for the work of Section 22 55 00.
4. Geotechnical Investigations and Recommendations:
 - a) The following geotechnical investigations and recommendations provide the basis for the structural and foundation design of the work of this section:
 - b) Geotechnical Investigation, See 02 31 00 Soil Investigations
5. Foundation Design:
 - a) Design the foundations in accordance with all pertinent recommendations of the Geotechnical Investigations, and the following clarifications and additions.

- b) Design the foundations to limit movement due to frost heave or soil movement.
- 6. Subgrade and Backfill Design:
 - a) Design sub-grades and structural fills in accordance with all pertinent recommendations of the Geotechnical Investigations.
 - b) Provide all subgrades and structural fills required by the work of this section.
 - c) Provide all sub-drainage required by the work of this section.
- F. Electrical Bonding and Equipotential Plane:
 - 1. Equipotential Plane:
 - a) Provide an equipotential plane for all water holding basins and those concrete surfaces within 5-feet of those basins.
 - 2. Bond the equipotential plane in accordance with the US National Electrical Code Article 547 and 680.
 - 3. Bonding: Provide bonding for the equipotential plane and for all metal structures, surfaces, and fixed metal equipment per all requirements of the US National Electrical Code Article 547 and 680.
- G. Building Permits: The Contractor will obtain all required permits and approvals for proposed and alternative structural systems.

1.6 SUBMITTALS

- A. General:
 - 1. Comply with all requirements of Section 01 General Requirements.
 - 2. Thirty days prior to starting work, submit description of proposed equipment, and methods for the Owner's approval, including the following:
 - a) Sources for all materials.
 - b) Proposed equipment for use on this project.
 - c) Qualifications of the artificial rockwork company, foreman, nozzleman, artists, and crew as specified under quality assurance below.
 - d) Structural design drawings and calculations as required herein.
- B. Design Drawings:
 - 1. Delegated Design:
 - a) Submit complete drawings accurately indicating all proposed structures and equipment described in this Section, prepared in accordance with the following provisions:
 - b) Verify materials selection and sizes.
 - c) Verify fabrication and connection details for the structures or suggest alternative connection details.
 - d) Design system utilizing the system components specified in Part 2 of this Section.
 - e) Revise drawings as required by the permitting authorities and resubmit.
 - 2. Delegated Design Submittals:
 - a) Provide all submittals described in Section 01 33 50 – Delegated Design Submittals as required for the work of this Section.
 - 3. Design Notes and Calculations: Submit design notes and calculations; signed and sealed by Professional Engineer when requested by Consultant.
- C. Test Reports and Certificates: Thirty days prior to starting work submit for approval:
 - 1. Proposed mix design and test results that document the capability of the mix design to meet the specified requirements of this section.
 - 2. Mill certificates: Furnish certified copies of cement, silica-fume, and pozzolan mill test reports showing compliance with drawings and specifications.

3. Aggregate test reports: Furnish tests documenting that aggregate used in the work meets requirements specified herein.
 4. Admixture test report: Submit copies of tests showing conformance with requirements of ASTM C494.
- D. Shop Drawings: Forty-five days prior to starting work submit for approval:
1. Lift drawings describing the geometry of the structure, location of construction joints, expansion joints, pipe penetrations, anchor bolts, embedded electrical conduits, and other embedded items.
 2. Shop drawings that clearly show the location and size of all footings, thickness and reinforcing of all shotcrete structures.
 3. Drawings must be to scale and at an appropriate size for adequate review and signed and sealed by a professional engineer.
 4. Submit details for glazing rebates based upon dimensions provided by the glazing installer
- E. Product data: Thirty days prior to starting work submit for approval:
1. Furnish specifications and installation instructions for water stops, sealants, grouts, epoxies and curing compounds, anchor bolts, inserts and other embedded items.
 2. Color chart for integral color selection.
- F. Samples:
1. Prior to beginning work submit one sample panel (dimensions described in Part 4) for each specific texture coat finish as specified in Part 4 of this section, to the Owner for approval.
 2. Sample panels may not be used as part of the final work.
 3. Sample panels shall represent the finished surfaces, texturing, coloring, etching, etc. and specified structural capabilities & durability. Panels will be used as the basis for approval and acceptance of the work.
 4. Panels shall not be removed until the completion of all work.
 5. Rejected sample panels shall be re-submitted for approval at no additional cost to the Owner.
- G. Models: Within sixty days after the Contractor has received the Notice to Proceed, submit the following for approval of the Owner:
1. Provide a 1/2"= 1'-0" scale model(s) of the work shown on the drawings.
 2. The model(s) shall clearly show the shape, sizes, conformation and relationships between all elements.
 3. The model(s) shall clearly show the relationship between the Work of this Section and all related Work of other Contractors.
 4. Following the Owner's review provide one (1) set of modifications to the model.
 5. Following its approval, the model(s) will establish the three dimensional character which will govern all work of this Section.
 6. Model must be maintained on site - within view of the work - during construction as a working tool, available to artists and Owner. Protect from weather and construction damage. No modifications to the model can be made during construction without written approval of the Owner.

1.7 QUALITY ASSURANCE

- A. Codes:
1. International Building Code, Chapter 19 edition indicated on the Drawings and local amendments.
 2. Conform to all applicable requirements of the local building codes, latest editions.

3. All applicable requirements of the local building code, latest edition.
- B. Standards: Comply with pertinent provisions of following standards:
1. American Society for Testing and Materials (ASTM), latest edition.
 2. ACI (American Concrete Institute) 506R-05, Guide to Shotcrete (US)
 3. ACI 506.1R-08 Guide to Fiber Reinforced Shotcrete (US/CAN)
 4. ACI 506.2-95 Specification for Shotcrete (US/CAN)
 5. ACI 318 Building Code Requirements for Reinforced Concrete.
 6. ACI 305R Hot Weather Concreting (US)
 7. ACI 306R Cold Weather Concreting (US)
 8. CRSI "Manual of Standard Practice" (US)
 9. ACI 315, latest edition, "Manual of Standard Practice for Detailing Reinforcing Bars" (US)
- C. Consultant's Direction:
1. It is intended that the finished products of work in this section simulate natural formations of rock and earth.
 2. To achieve these simulations the Shotcrete Contractor will coordinate and cooperate fully with all other Contractors and with the Consultant.
 3. The Consultant explicitly reserves the right to monitor the work for aesthetic quality and to assume control of the work through direction of the Shotcrete contractor's project superintendent until specified effects are achieved.
- D. Qualifications of the Shotcrete Contractor:
- The Shotcrete Contractor must meet the following qualifications:
1. Established firm with a minimum of five (5) years experience in successfully constructing artificial earth and rock formations for natural habitat exhibits of similar nature to this project.
 2. Foreman:
Project Foreman with a minimum of 3000-hours experience in the management of similar project crews and experience in coordination with other trades in the completion of simulated artificial rockwork fabrication projects.
 3. Nozzleman:
Certified as required by ACI 506.3R with a minimum of 3000-hours and able to demonstrate by test their abilities to apply shotcrete as required by the specifications.
 4. Artists:
Provide artists skilled, to the Consultant's satisfaction, in the simulation of natural formations of rock, earth, and vegetation to supervise and perform the application of all aesthetic work.
 5. Project Personnel:
Provide full documentation of all construction crew members listing specific personnel to be used and detailing the experience of each person listed and their ability to perform all phases of the work to the Consultant's satisfaction.

1.8 TESTING

A. Responsibility for Testing

Routine testing services will be performed by a Testing Laboratory designated by the Owner. These testing services will be performed at the expense of the Owner.

B. Testing Services

The designated Testing Laboratory will:

1. Test the proposed materials, for compliance with specifications.
 2. Review proposed mix proportions and mix test results.
 3. Test preconstruction test specimens
- C. Secure production samples of materials at plants or stockpiles during construction and test for compliance with specifications. If the materials fail to meet approved requirements, aggregate will be rejected and the expense of testing shall be borne by Contractor.
1. Test strength of the Shotcrete as work progresses.
- D. Rejection of concrete:
1. The Owner may reject any batch of concrete which does not comply with the approved mix design, or which fails to comply with the Contract Documents when tested in accordance with the relevant codes.
 2. The Owner may reject any batch of concrete where a delivery docket containing all relevant information is not available, or is unsatisfactory, and may reject any concrete after placement because of unsatisfactory finish, incorrect position, or other failure to comply with the Contract Documents.

1.9 SURVEYING

- A. General
1. The Contractor will provide surveying for layout as frequently as is required to accurately locate all work of this section.
 2. Confirm locations, elevations, and profiles of work in progress or completed work by surveying regularly.
 3. Provide survey notes from a registered surveyor for each layout by the surveyor to the Consultant.
- B. Tolerance:
- Tolerance for location of any point on paving, pool bottoms or on walls defined on the drawing is 1-inch in both horizontal and vertical dimensions except where elements of the work require greater precision.

1.10 PRODUCT HANDLING

- A. General:
- Comply with the pertinent provisions of Sections of 01 General Requirements.
- B. Cement
1. Store cement in weather tight enclosures to protect against dampness and contamination.
 2. Discard cement that shows signs of deterioration unless testing demonstrates that it conforms with the requirements stated herein.
- C. Aggregates
- Prevent segregation and contamination of aggregates by proper arrangement and use of stockpiles.
- D. Admixtures
- E. Store admixtures properly to prevent contamination, evaporation, freezing, or other damage.

PART 2 PRODUCTS

2.1 SHOTCRETE FABRICATORS

- A. Acceptable Fabricators:
1. The following list of fabricators and installers is derived from previous projects indicating a successful record of fabrication and installation of similar complexity and extent as

required for this project and are subject to verification of their capabilities before starting work of this section by submittal of documentation indicating that they meet the specified qualifications:

- a) Cost of Wisconsin
Contact: Jeff Sheiber
Telephone: 407-816-2110 ext. 2101
Email: jsheiber@cost-inc.com
www.cost-inc.com
 - b) Edge Concrete, Woodinville, Washington
Contact: Wendy Endres
Telephone: 425-482-3343
Email: wendy@edgeconcretellc.com
www.edgeconcretellc.com
 - c) The Nassal Company, Orlando, Florida
Telephone: 407-648-0400
www.nassal.com
2. Substitute Fabricators:
- a) The Contractor may choose to select any of the listed fabricators or installers in accordance with Section 01 General conditions or elect to solicit additional fabricators/installers having similar qualifications, experience and proven capabilities as the acceptable installers listed above and provided that the contractor makes requests for substitution in accordance with Section 01 25 00 - Substitutions, a minimum of 10 (ten) days in advance of Bid closing as follows:
 - 1) Bidders wishing to use a fabricator or installer that is not identified in this section must have the proposed fabricator comply with qualification requirements listed herein and submit a letter of qualification, including references a minimum of five (5) 8 1/2" x 11" color photographs of previous comparable work for review and acceptance by the consultant.
 - 2) Fabricators wishing to be accepted for the work of this section may independently make application directly to the consultant as detailed above.
 - 3) Acceptance of substitute fabricators will be indicated by a subsequent addendum.
 - 4) The Consultant may require additional information and may request a visit to a completed work in order to make a final determination of the fabricator's qualifications.
 - 5) Acceptance of substitute fabricators will be indicated by a subsequent addendum.
 - 6) The Consultant may require additional information and may request a visit to a completed work in order to make a final determination of the fabricator's qualifications.

2.2 MATERIALS

- A. Cement: ASTM C150/C150M, Type I - Normal; white color.
- B. Aggregate: Normal weight, ASTM C33/C33M, 3/8 inch (9 mm) maximum size.
 1. Recycled Content:
Porcelain, concrete, stone, or other recycled content material conforming to requirements of mix design. Minimum 5% to 10% post-consumer recycled content, or minimum 30% pre-consumer recycled content at contractor's option.

2.3 ADMIXTURES: CHEMICAL TYPE COMPLYING WITH ASTM C494/C494M (WET MIX ONLY).**A. General:**

1. When the use of admixtures or cement containing additives is approved or specified, use strictly in accordance with the manufacturer's instructions and at approved dosage levels.
2. Admixtures shall not adversely affect the reinforcement or any protective coating thereon.

B. Silica-fume (micro silica):

1. Dry, densified dry, or slurry.
2. Comply with ASTM C1240

C. Superplasticizers

1. Meet requirements of ASTM C 484, Type F or G
2. Superplasticizers:
 - a) A synthesized sulfonated complex polymer type superplasticizer containing no chlorides or other corrosive chemicals, or alkalines.
 - b) Add to concrete mix at manufacturer's recommended dosage to allow placement with concrete temperatures up to 90 degrees F.
 - c) Provide performance on project by trial mixes or reduce temperature to below 80 degrees F by other means.
3. Manufacturer and product
 - a) Master Builders, Inc. Cleaveland, OH, Rheobuild
 - b) W. R. Grace & Co., Cambridge, MA, Daracem 100
 - c) Euclid Chemical Co., Cleaveland, OH, Eucon Super F or 537 G

D. Water Reducing Admixture:

1. ASTM C494, Type A or D, may be used at Contractor's option, subject to approval of mix design. AS 1478.

E. Fly Ash and pozzolanic admixtures:

1. Conforming to ASTM C 618 for Class F pozzolan. Report the chemical analysis of the fly ash in accordance with ASTM C311. Evaluate and classify fly ash in accordance with ASTM D5759.
2. The following limitations to ASTM C618 shall apply:
 - a) Loss of ignition maximum 3.0%
 - b) Fineness (percent retained #325 mesh) maximum 20%
 - c) Calcium oxide content maximum 10%
 - d) Sulfur trioxide content maximum 0.75%
3. Mercury Content:
 - a) Limited to less than 5.5 ppb (0.0055mg/L)
 - b) Comply with LEED for Healthcare's limits

F. Colorants

1. Pigments for coloring cement and concrete shall comply with ASTM C979 and ASTM C494 for water reducing admixtures.

G. Air-Entraining Admixture: Complying with ASTM C260/C260M (wet mix only).

1. Air entraining agent will result in an entrained air content of 4% +/- 1%

H. Corrosion Inhibitor

1. Calcium nitrite 30% plus or minus 2% by weight in aqueous solution.
2. Conform to ASTM C494, Type C.

3. Manufacturer and product:
 - a) W.R. Grace and Co., DCI or DCI-S
 - b) Master Builders, Rheocrete CNI
- I. Calcium Chloride:
 1. Conforming to ASTM D 98, in predissolved flake or pellet form. Use only upon written authorization of the Consultant.
- J. Waterproofing Admixture: Admixture formulated to reduce permeability to liquid water, with no adverse effect on concrete properties.
 1. Admixture Composition: Crystalline, functioning by growth of crystals in capillary pores.
 2. Potable Water Contact Approval: National Science Foundation (NSF) certification for use on structures holding potable water, based on testing in accordance with NSF 61 and NSF 372
 3. Manufacturers:
 - a) Aquafin IC ADMIX crystalline Admixture or Approved alternate. Install per manufacturer's instructions.. between the structural substrate and the textured finish coat.

2.4 REINFORCING BARS AND DOWELS:

ASTM A 615, Grade 60, unless otherwise noted.

- A. Reinforcing Mesh: ASTM A1064/A1064M steel welded wire reinforcement, plain type; W1.4 (w1.4), galvanized.
- B. Tie Wire: Annealed iron 1.25 diameter minimum
- C. Supports for reinforcement: Provide supports for reinforcement including bolsters, chairs, spacers and other devices for spacing supporting, and fastening reinforcement bars.

2.5 SYNTHETIC FIBER-REINFORCED CONCRETE

- A. Confirm that fibers will not be detrimental to the animals or the LSS system where shotcrete is in contact with water
- B. Fibers:
 1. 100 percent virgin polypropylene, multifilament fibers containing no reprocessed olefin materials and specifically manufactured for use as concrete secondary reinforcement.
 2. Comply with ASTM C-1116-91 Type 111
 3. Fiber manufacturer must document evidence of 5-year satisfactory performance history.

2.6 WATER:

- A. ASTM C1602; clean, potable, and not detrimental to shotcrete.
- B. Water free from oil, acid, organic matter or other substances deleterious to the concrete or its reinforcement.

2.7 WATERSTOPS

- A. PVC Bulb Type:
 1. 3/8-inch thick heavy-duty, ribbed center bulb type. Waterstops for expansion joints: 9 inches wide; all other waterstops: 6 inches wide.
 2. Polyvinyl chloride (PVC) plastic, meeting the following minimum requirements:
 - a) Tensile Strength 1,800 psi
 - b) Elongation 300%
 - c) Shore A Durometer 50
 3. Test in accordance with ASTM D 412. No reclaimed PVC will be allowed.
 4. Manufacturer: Greenstreak or equal: www.greenstreak.com

B. Active Waterstops:

1. General: Sodium bentonite and butyl rubber based water stops designed to stop water infiltration through cast-in-place concrete
2. Products and Manufacturers:
 - a) Volclay Waterstop - RX, 3 available shapes, manufactured by CETCO Building Material Group
 - b) Adcor 500s, manufactured by WR Grace

2.8 CEMENTITIOUS WATERPROOFING

A. Genral

1. Provide waterproofing on all surfaces, which are intended to contain water.
2. Provide waterproofing membranes in the following locations:
 - a) Pools and streams
3. Cementitious coating - Aquafin 2KM
 - a) Coating System: Aquafin 2KM flexible cementitious membrane or approved alternate.
 - b) Provide complete system including all of the manufacturer's recommended companion products whether or not specifically included herein.
 - c) Install in accordance with all of the manufacturer's recommendations.

2.9 SHOTCRETE MIX DESIGN

- A. Provide wet or dry mix design that gives good compaction and low percentage of rebound, is stiff enough not to sag.
- B. Design Objectives: The primary objectives to be satisfied by the Contractor in the selection, combination, and use of concrete materials are:
 1. Achievement of specified concrete strengths.
 2. Achievement of specified or implied durability requirements.
 3. Achievement of appropriate workability and consistency to permit placement as required by the work of this section.
 4. Strict compliance with the specified shrinkage l
 - a) Selection of appropriate sound aggregates having proven low shrinkage characteristics
 - b) Strict control of quality and cleanliness of all aggregates during production, supply and use, to minimize the content of deleterious fine materials.
 - c) Appropriate combination of materials to achieve minimum water demand.
- C. Design mix:
 1. Prepare the design mix for each type and strength of shotcrete by either laboraory trial batch or field experience methods as specified in ACI 301 an
 2. Submit recommended mix proportions in accordance with this section.
 3. Select proportions on the basis of compressive strength tests of specimens continuously moist cured until testing at 28 days.
- D. Design strength ad admixtures: (shotcrete holding water).
 1. Water holding structures: 24 inches above waterline - **Option A**
 - a) Compressive strength at 28 days 6,000psi (40 Mpa). 675lb/cyd total cement content with maximum water/cement ration of 0.40.
 - b) Maximum slump = 2 inches
 - c) Maximum aggregate size = 1/2 inch
 - d) Silica-fume: 68lb/cyd.

- e) Aquafin-IC ADMIX: manufacturer's recommended optimum mix percentage for maximum waterproofing.
- f) Synthetic fiber-reinforcement: 1.5lb/cyd (walls only).
- g) Superplasticiser as required.
- h) Corrosion inhibitor: 3 gallons per cubic yard.
- 2. Water holding structures: 24 inches above waterline - **Option B**
 - a) Compressive strength at 28 days 6,000psi
 - b) Maximum slump = 2 inches
 - c) Maximum aggregate size = 1/2 inch
 - d) Silica-fume: replace 5% to 10% of Portland cement. Mix in accordance with ASTM C94.
 - e) Fly ash; Replace 20% to 25%
 - f) Aquafin-IC ADMIX: manufacturer's recommended optimum mix percentage for maximum waterproofing.
 - g) Synthetic fiber-reinforcement: 1.5lb/cyd (walls only)
 - h) Water reducers and retarders to suit mix design
 - i) Superplasticiser as required.
 - j) Corrosion inhibitor: 3 gallons per cubic yard.
- 3. Structures not holding water:
 - a) Compression strength at 28 days 4,000psi (30Mpa), 675lb/cyd total cement content with maximum water/cement ration of 0.40.
 - b) Maximum slump = 2 inches
 - c) Maximum aggregate size = 1/2 inch
 - d) Silica-fume: 68lb/cyd
 - e) Synthetic fiber-reinforcement: 1.5lb/cyd
 - f) Water reducers and retarders to suit mix design
 - g) Superplasticiser as required.
- 4. Field trial mix:
 - a) After completion of mix design work and prior to concreting operations, establish, based upon the design mixes, field proportions for concrete to be used in the work. Manufacture the field trial concrete utilizing the equipment which will be used on the job.
 - b) The field trial concrete batch shall be 2 cubic yards mainimum per test. Adjust design mixes as required to provide a dense, homogeneous, durable concete with good workability and finishing qualities.
 - c) Obtain six standard test cylinders from each field trial mix and test as in mix design. Notify consultant in advance of any field trial mix work. No field trial mix shall be made without representatives of the consultant and the accepted testing laboratory being present.

2.10 MOISTURE RETAINING COVER

- A. Coverings:
 - 1. Apply absorptive mat or burlap fabric, sand, or other covering kept continuously wet for
 - 2. Layer of waterproof paper or plastic membrane as approved.
- B. Membrane forming curing compound:
 - 1. Cure the concrete by the application of an approved liquid curing membrane.
 - 2. Application shall be by means of a low-pressure spray at the rate recommended by the manufacturer.

3. On horizontal surfaces, apply the membrane immediately after finishing the concrete, and on vertical surfaces immediately after removing the formwork.
4. Insure that curing compounds do not interfere with the applicaiton of the texture coat to the structural substrate, or the application of finish colors and textures to the texture coat.

2.11 INTEGRAL CONCRETE COLORANTS

- A. General:
 1. All finish layers will be integrally colored.
 2. Conform to ASTM C979.
 3. UV stable Provide mineral pigments, which are UV stable and completely colorfast for a minimum of 10 years following installation.
 4. Concrete Mix compatibility: Assure compatibility of selected pigments with proposed concrete mix design and admixtures.
- B. Color: Submit manufacturer's standard and custom concrete colors to consultant for final color selections.
- C. Manufacturer's recommendations: Conform to all manufacturer's recommendations for mixing, finishing, and curing colored concrete.
- D. Approved manufacturer's:
 1. Davis Colors, www.daviscolors.com
 2. Sika 'Chromix' Color admixtures, www.usa.sika.com
 3. 'BrickForm' Rafco products, www.brickform.com

2.12 ACID REACTIVE STAINS

- A. Acid reactive stains:
 1. Reactive acid-based stain composed of inorganic metallic salts dissolved in an acid and water solution.
 2. The acid based stain reacts with the concrete forming a permanent chemical bond with the concrete,
 3. Colors
 - a) Provide a range of earth colors capable of achieving the effects specified in this secxtion and on the drawings.
 - b) Colors guaranteed for a minimum of 10 years with no more than 25% fade.
 4. Verify that proposed stains are appropriate for the condiditons that will affect the exhibit: local microclimate, and other bleaching or corrosive environments.

2.13 PAINTS

- A. General
 1. Provide painted finish to all appurtenances that penetrate or are otherwise integrated aesthetically with the shotcrete specified in this section.
 2. These include but are not limited to plastic and metal skimmers, exposed wall and pool penetrations, light fixtures, electrical boxes and cover.
- B. Materials
 1. Provide paint coatings appropriate for the material to be coated.
 2. Plastic and resin materials: For coating plastic materials use Krylon fusion. www.krylon.com

2.14 NATURAL STONE

- A. General:
 1. Provide a range of sizes of pieces of naturally weathered stone where necessary to achieve the finishes described in Part 4 of this section.

2. Match the color and textures of the natural stone to the finishes specified for artificial rockwork in Part 4 of this section.
 3. Material to be free from extraneous materials.
- B. Sources:
1. Comply with all requirements of Section 32 14 60 Select Boulders and cobbles.
 2. Provide samples to consultant for approval.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verify existing conditions before starting work.
- B. Verify that conditions are acceptable and are ready to receive work.
- C. Verify that field measurements are as indicated on drawings.
- D. Verify fabricated forms are:
 1. True to line and dimension.
 2. Adequately braced against vibration during placement.
 3. Constructed to permit escape of trapped air during gunning operations.
 4. Constructed to minimize rebound during gunning operations.
- E. Verify correct placement of reinforcement with sufficient clearances to permit complete encasement.
- F. Verify that embedded fittings, pipe, conduits, and other items are correctly and securely placed.
- G. Ensure easy access to shotcrete surfaces for screeding and finishing, and to permit uninterrupted application.

3.2 GENERAL

- A. Structural substrate: Provide a structural substrate, capable of maintaining the intended shape, containing water in pools, and supporting live and dead loads as specified herein or as required by codes.
- B. Texture Coat
 1. Produce the intended color and texture.
 2. Provide mix design appropriate for integral color, carving, and texturing, and other aesthetic treatment to create the specified finishes.
 3. Provide sufficient thickness to assure structural integrity and bonding to the structural substrate.
 4. Provide sufficient thickness to create the specified recreations of natural forms and finishes.
- C. Latex Molds:
 1. Make latex molds of natural rocks as approved in submittals.
 2. Use latex molds or latex skins to create fine texture surfaces either for cast rock panels or to create finish for texture coat at required areas.
 3. Provide sufficient thickness to create the specified recreations of natural forms and finishes.
- D. Placement of Cast Rock Panels:
 1. Where cast rock panels are specified or have been approved, place into proper position by shimming and bracing as necessary, then shoot seams between panels solid with texture coat.
 2. Carve seams to mimic surface of cast panels and vertical or horizontal line of formation.

3.3 PREPARATION

- A. Remove existing unsound concrete from substrate surfaces.
 - 1. Minimize abrupt changes in depth of area to be repaired.
 - 2. Remove square external corners from substrate by radiusing the edges.
- B. Sandblast surfaces to receive shotcrete.
- C. Clean and wet cementitious or absorptive substrate surfaces prior to receiving shotcrete. Keep porous surfaces damp for several hours prior to placement of shotcrete.
- D. Protect adjacent surfaces not receiving shotcrete.

3.4 APPLICATION

- A. Place reinforcement in accordance with ACI 506.2.
- B. Use mixing and delivery equipment capable of thoroughly mixing aggregate, cement, and water in sufficient quantity to maintain continuous and uniform placement.
- C. Build-up to required thickness in multiple passes to achieve layering. Encase reinforcement with the first pass.
- D. Remove rebound at construction and expansion joints.
- E. Remove rebound material that does not fall clear of work; discard salvaged rebound.

3.5 FORMING SHOTCRETE STRUCTURES

- A. Formwork costs:
 - 1. Include all forming costs in the contract price
 - 2. No extra will be paid for shotcrete forming that is required by the grading and layout plans as drawn.
- B. Formwork:
 - 1. Provide forms or any rigid material such as wood, steel, earth, paperbacked reinforcing mesh, or expanded metal lath.
 - 2. Adequately brace and secure formwork to prevent vibration or deflection during the application of shotcrete.
 - 3. Design formwork to provide for the escape of compressed air and rebound during shotcreting.
- C. Form coatings:
 - 1. Use form-coating material on removable forms to prevent absorption of moisture and to prevent bond with the shotcrete.
 - 2. Use a non-staining material for surfaces exposed to view when construction is completed.
 - 3. The form-coating material shall not interfere with subsequent bonding to the shotcrete when this is required.

3.6 PROVISIONS FOR OTHER TRADES

- A. General:
 - 1. Provide openings in shotcrete formwork to accommodate work of other trades. Determine size and location of openings, vents, weepholes, recesses, and chases from trades providing such items.
 - 2. All non-sleeved piping shall be set by the appropriate contractor.
 - 3. Sleeves shall be provided by the appropriate contractor and installed by the shotcrete contractor.
 - 4. Accurately place and securely support items built into forms.
- B. Interpretive components:

1. Provide openings, recesses, and provisions for attachment in shotcrete formwork and finish coats for installation of graphic panels, sculptures, embedded artwork, and interpretive props, as shown on the drawings or as referenced in the work of other contracts.

3.7 REINFORCING

A. General

1. Install reinforcing which complies with all requirements of ASI 506R-90 and these drawings and specifications.
2. Clean reinforcement of loose rust, mill scale, earth, ice, and other materials, which reduce or destroy bond with concrete.
3. Accurately position, support and secure reinforcement against displacement by concrete placement operations. Locate and support reinforcing by metal chairs, runners, bolsters, spacers and hangers, as required.
4. Notify consultant upon completion of reinforcing and prior to placing shotcrete.

B. Fibrous Concrete Reinforcement

1. Add fibrous concrete reinforcement to concrete materials at the time concrete is batched in amounts specified in accordance with approved submittals for each type of concrete required.
2. Mix concrete in strict accordance with fiber reinforcement manufacturer's instructions and recommendations for uniform and complete distribution.

3.8 BATCHING AND MIXING CONCRETE

A. Batching and Mixing Equipment:

1. Use batching and mixing equipment capable of proportioning and mixing all ingredients at a rate that will provide adequate production, and with an accuracy that will insure uniformity of batches.
2. Weighing equipment shall be capable of batching with the accuracy specified in ASTM C94.
3. Volumetric equipment shall be capable of batching with the accuracy specified in ASTM C685.

- #### B. Dry State Delivery: Ready-mixed concrete shall comply with ASTM C94, except that it may be delivered to the shotcrete equipment in the dry state if that equipment is capable of adding the water and mixing it satisfactorily with the dry ingredients, or with ASTM C685, in which case the ingredients are delivered dry and proportioned and mixed at the site.

3.9 PLACING SHOTCRETE

- #### A. General: Place shotcrete using suitable delivery equipment and procedures that will result in shotcrete in place meeting the requirements of this specification.

B. Placement Techniques:

1. Control thickness, method of support, air pressure, and/or water content of shotcrete to preclude sagging or sloughing off.
2. Discontinue shotcreting or provide suitable means to screen the nozzle stream if wind or air currents cause separation of the nozzle stream during placement.
3. Broom or scarify the surface of freshly placed shotcrete to which, after hardening, additional layers of shotcrete are to be bonded. Dampen surface just prior to application of succeeding layers.
4. First, fill the sound material all corners and any area where rebound cannot escape or be blown free. Complete the corners between the web and the flanges of structural steel before application to the flat areas.

5. Provide a supply of clean, dry air adequate for maintaining sufficient nozzle velocity for all parts of the work and, if required, for simultaneous operation of a suitable blow pipe for clearing away rebound.
- C. Placement Around Reinforcement:
 1. Hold the nozzle at such distance and angle to place material behind reinforcement before any material is allowed to accumulate on its face. In the dry mix process additional water may be added to the mix when encasing reinforcement to facilitate a smooth flow of material behind the bars.
- D. Do not place shotcrete through more than one layer of reinforcing steel rods or mesh in one application unless demonstrated by preconstruction tests that steel is properly encased. Test to ascertain if any voids or sand pockets have developed around or behind reinforcement by probing with an awl or other pointed tool after the shotcrete has achieved its initial set; by removal of randomly selected bars; or by coring or other suitable means.
- E. Cover of Reinforcement:
 1. Provide the following minimum cover over reinforcement:
 - a) For linings or coatings: 3/4 inch (18mm) for fine aggregate and 1 1/2 inch (36mm) for coarse aggregate.
 - b) For principal reinforcement in beams, girders, and columns: 2 inch (50mm).
 - c) For reinforcement in slabs and walls 3/4 inch (18mm) for fine aggregate and 1 1/2 inch (36mm) for coarse aggregate.
 - d) For reinforcement near surfaces that retain water: 2 1/2 inches.
 2. Minus tolerance on cover shall be 3/8 inch (10mm) except that it shall not be greater than one-third of the specified cover.
- F. Line and Thickness Control: Use adequate ground wires or other accepted means to establish the thickness, surface planes, and finish lines of the shotcrete. Maintain specified tolerances by keeping ground wires secure and taut.
- G. Placement Precautions:
 1. Do not place shotcrete if drying or stiffening of the mix takes place at any time prior to delivery to the nozzle.
 2. Do not use rebound or previously expended material in the shotcrete mix.
 3. Remove all overspray or rebound prior to final set and before placement of shotcrete material on such area.

3.10 JOINTS

- A. Construction Joints:
 1. Install construction joints in accordance with the contract documents and approved shop drawings.
 2. Taper construction joints to a shallow edge form, about 25mm (1-inch) thick, except where the joint will be subjected to compressive stress. In this case, use non tapered joints and take special care to avoid or remove trapped rebound at the joint.
 3. Thoroughly clean and wet entire joint prior to the application of additional shotcrete.
 4. Make joints perpendicular to the main reinforcement. Continue reinforcement across joints.
- B. Control Joints:
 1. Install control joints in accordance with the contract documents and approved shop drawings.
 2. Do not extend reinforcement or other embedded metal items, which are bonded to the shotcrete, continuously through control joints.

- C. Aesthetic Placement of Joints: Position construction and control joints to conform to the locations of cracks and joints in the simulated rock and earth forms as shown in drawings.

3.11 PREPARATION OF SURFACES FOR WATERPROOFING & FINISH COAT

- A. Repair of Surface Defects:
1. Remove and replace shotcrete which lacks uniformity, exhibits segregation, honeycombing, or lamination, or which contains any dry patches, slugs, voids, or sand pockets.
 2. Repair defective areas by a method acceptable to the Consultant.
 3. Repair core holes in accordance with Chapter 9 of ACI 301. Do not fill core holes with shotcrete.
 4. Replace any shotcrete, which subsides after placement.
- B. Cleaning:
1. Clean surfaces and remove all form coating compounds, laitance, dirt and other foreign matter.
 2. Remove by brooming, vacuum, or other methods as required by the manufacturer's suggested surface preparation.
- C. Preparation for Waterproofing:
1. Provide all surface preparation and repairs recommended by the waterproofing system manufacturer.
 2. Employ all recommended secondary products to prepare the substrate properly.

3.12 WATERPROOFING

- A. General:
1. Provide waterproofing on all structures, which will hold water, and as otherwise indicated on the drawings.
 2. Waterproofing to have (2) components:
 - a) Structural Substrate with Aquafin-IC ADMIX (described above) or approved substitute.
 - b) Cementitious Waterproofing applied between the structural and texture coat as shown in the drawings.
 3. Place waterproofing on the surface of the structural coat in a manner suitable for the placement of the texture coat.
- B. Installation of Waterproofing:
1. Install waterproofing in accordance with all of the manufacturer's recommendations.
 2. Provide additional precautions or provisions where project conditions require them for a successful installation.
 3. Insure that all surfaces have cured for the period recommended by the manufacturer.
 4. Prior to commencing installation obtain the owner's review of the substrate.
- C. Protection of Other Work:
1. Do not allow debris, liquid or mastic compounds to enter and clog drains and other openings.
 2. Prevent spillage and migration onto other surfaces of work, by masking or otherwise protecting adjoining work.
 3. Where work interfaces with that of other trades, coordinate activities.
- D. Hydrostatic Testing:
1. Following installation of the waterproofing and prior to the installation of the texture coat, fill all water containing shotcrete structures with water to operational level.

2. Mark the test water level and maintain without the addition of water for a period of 48-hours to test for leaks.
3. All leaks shall be analyzed and repaired by the Contractor by a method acceptable to the Consultant.
4. The same hydrostatic test shall be performed again after the texture coat has been installed.
5. The cost for repair shall be at the expense of the Contractor.
6. All repairs shall be tested again with the same requirements as the first test, until the problems are remedied and repairs accepted by the Consultant.

3.13 FINISHES

A. Structural Substrate:

1. Provide natural gun finish on all shotcrete, which does not receive texture.
2. Provide Broom Finish on all base layers which are to receive texture coat.
3. Do not scrape or cut to remove high spots until the shotcrete has become stiff enough to withstand pull of the cutting device.

B. Textured and Colored Finish Coat:

1. Provide an expert(s) to perform all texturing, shaping and coloring of the Finish Coat. See also System Description and Quality Assurance in Part One of this Section.
2. Finished product of the finish coat shall simulate natural formations of earth, rock, and vegetation as described in the drawings and photographs and as described under Specific Texture Coat Finishes in Part 4 below.
3. Where finish coat is applied over waterproofing or is otherwise isolated from the structural substrate, provide sufficient depth to allow finish coat to function as a separate structural layer.
4. Extend finish coat finish 18 inches below finish grades.
5. Apply finish coat finish to clean, dampened and sufficiently roughened surfaces.
6. Provide finish coat with approved integral colorant to provide a base color for finish stains.
7. Highlight and contrasting colors will be applied after installation with a medium that is non-toxic, durable and can withstand the environment in which the work is located.
8. Cracks and crevices between rock forms shall be colored darker than the rock surface to accentuate depth and contrast.

3.14 CURING AND PROTECTION

A. Initial Curing: Immediately after placing and finishing, keep each shotcrete installation continuously moist for at least 24 hours. Use one of the following materials or methods:

1. Ponding or continuous sprinkling.
2. Absorptive mat or burlap fabric, sand, or other covering kept continuously wet.
3. Continuous steam (not exceeding 65 C (150 F)) or vapor mist bath.
4. Curing compounds and application. On natural gun or flash finishes, use twice the normal application rate recommended by the manufacturer.
5. Do not use curing compounds on texture coat, structural substrate, which is to receive finish coat, or any surface against which additional shotcrete, color stains, or cementitious finishing materials are to be bonded.
6. Employ positive measures, such as sandblasting, to remove over-sprayed curing compounds completely prior to the application of such additional materials.

B. Final Curing:

1. General: Provide additional curing immediately following the initial curing and before the shotcrete has dried. Continue the method used in initial curing.
2. Formed Surfaces: If forms are removed during curing period, immediately use one of the curing materials or methods listed for initial curing. Continue such curing for the remainder of the curing period.
3. Duration of Curing:
 - a) Continue curing for the first 7-days after shotcrete placement, or for first 3-days if high-early-strength cement is used, or until specified strength is obtained.
 - b) During the curing period, maintain shotcrete above 5C (40F) and in a moist condition as specified for initial curing.
 - c) Prevent rapid drying at the end of the curing period.

3.15 STAINS AND PAINTS

- A. General:
 1. Provide a stained and painted finish to all work of this section.
 2. Employ the approved stains and paints to supplement the specified integral colors to produce the finishes described in Part 4 that follows.
- B. Appurtenances:
 1. Provide a painted finish to all appurtenances that penetrate or are otherwise integrated aesthetically with the artificial rockwork specified in this section.
 2. These include but are not limited to plastic and metal skimmers, exposed wall and pool penetrations, drain covers, electrical boxes and covers, light fixtures, etc.
- C. Application:
 1. Apply coatings so that the appurtenance matches the appearance of the adjacent work of this section.
 2. Camouflage: Coat large appurtenances with a camouflage pattern that assists in disguising the appurtenance
 3. Apply coatings to all portions of the appurtenance including the interior surfaces of pipes and skimmers that are visible from visitor viewing areas.

3.16 FIELD QUALITY CONTROL

- A. Provide additional test panels, as specified for mock-up, during the course of the work as may be requested by the testing agency.

3.17 PROTECTION

- A. Do not permit applied work to damage adjacent surfaces.

PART 4 - SCHEDULE OF FINISHES

4.1 FINISHES

- A. General: The textured and colored finish coat will produce the following finishes as shown on the Drawings. Finishes are to be produced using a special shotcrete mix, sand, earth, cobbles, stains and other materials as necessary to produce realistic simulations of natural earth banks, rock outcrops, boulders, rock fragments, and other forms as specified herein.
- B. Zones of Fidelity:
 1. General: The finish coat may vary in the fidelity of its reproduction of the specified natural rock and earth forms: massing, surface textures, and color detail as specified below.
 2. Three zones of fidelity are required:
 - a) High Fidelity: 0 to 12-feet from visitors,
 - b) Moderate Fidelity: more than 12-feet to 25-feet from visitors or below water surface

- c) Low Fidelity: more than 8m 25-feet from visitors.
- 3. Surface Variation:
 - a) High fidelity zone: provide large and small scale massing, variation in surface textures, depths of cracks, etc. that realistically replicate the massing and surface textures of the natural rock or earth to be replicated.
 - b) Low fidelity zone: provide a simplified version of the natural large scale massing. Simplify the small scale massing and eliminate all three-dimensional surface textures and cracks, providing these depth effects through the use of color to replicate the shadows of three dimensional detail.
 - c) Moderate fidelity zone: provide intermediate detail midway between the High and Low Fidelity, appropriate for the distance from visitors.
- 4. Samples:
- C. Americans with Disabilities Act:
 - 1. Comply with all relevant requirements for ADA.
 - 2. Limit the changes in grade and gaps or 'cracks' in the paving to the maximum allowed by the ADA.
 - 3. Use texture and color to accomplish apparent variation in levels that are not allowed by accessibility codes.
 - 4. Provide non-slip surfaces.
- D. Reference Photos:
 - 1. See also the reference photos on the drawings for information on color, texture, and form.
- E. Surface Performance:
 - 1. Finish Durability: Ensure that all textures and colors will be unaffected when cleaned with pressure washers.
- F. Related Items Included in Rockwork:
 - 1. Provide a painted finish on all Life Support System or other fixtures or items that are included in or adjacent to the artificial rockwork.
 - 2. Comply with all requirements of Section 09 94 16 Themed Finishes.
 - a) Plastic Items: Krylon Fusion Camouflage spray paint or approved alternate.

4.2 SPECIFIC FINISH COAT TEXTURES & COLORS

- A. General:
 - 1. Wadi Beach
 - a) Sample required 3'x3' demonstrating texture and color
 - 2. Wadi Pool - Eroded river bed
 - a) Sample required 3'x3' demonstrating texture and color.
 - 3. Arabian Rock - including: Overhead Animal Transfer, Viewing Shelter cave, Day room rock and back wall
 - a) Rounded, weathered rock at the top and angular edges forms matching the form and textures of the reference images shown on the drawings.
 - b) Provide fragments of natural rock at the base of the artificial rock forms to mimic the natural weathering processes and the effects of gravity on real rock outcrops.
 - c) Match the colors and textures of the natural rock with the colors and textures selected for the artificial rock forms. See reference images in the drawings
 - d) Samples required for each rock formation. 4' X 6' demonstrating texture form and color.

END OF SECTION

SECTION 04 2200 - CONCRETE UNIT MASONRY

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Concrete masonry units.
 - 2. Pre-faced concrete masonry units.
 - 3. Mortar and grout.
 - 4. Steel reinforcing bars.
 - 5. Embedded flashing.
 - 6. Miscellaneous masonry accessories.
 - 7. Masonry-cell fill.
- B. Products Installed but not Furnished under This Section:
 - 1. Cast-stone trim in concrete unit masonry.
- C. Related Requirements:
 - 1. Section 03 3000 "Cast-in-Place Concrete" for installing dovetail slots for masonry anchors.

1.2 DEFINITIONS

- A. CMU(s): Concrete masonry unit(s).
- B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
 - 1. Environmental Product Declaration: For each product.
 - 2. Health Product Declaration: For each product.
 - 3. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer
- C. Shop Drawings: For the following:
 - 1. Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.
 - 2. Reinforcing Steel: Detail bending, lap lengths, and placement of unit masonry reinforcing bars. Comply with ACI 315.[**Show elevations of reinforced walls.**]
 - 3. Fabricated Flashing: Detail corner units, end-dam units, and other special applications.
- D. Samples for Initial Selection:
 - 1. Pre-faced CMUs.
 - 2. Colored mortar.
 - 3. Weep holes/vents.

- E. Samples for Verification: For each type and color of the following:
 - 1. CMUs.
 - 2. Pre-faced CMUs.
 - 3. Pigmented colored-aggregate mortar. Make Samples using same sand and mortar ingredients to be used on Project.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For testing agency.
- B. Material Certificates: For each type and size of the following:
 - 1. Masonry units.
 - a. Include **[data on material properties] [material test reports substantiating compliance with requirements]**.
 - b. For masonry units **[used in structural masonry]**, include data and calculations establishing average net-area compressive strength of units.
 - 2. Cementitious materials. Include name of manufacturer, brand name, and type.
 - 3. Mortar admixtures.
 - 4. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
 - 5. Grout mixes. Include description of type and proportions of ingredients.
 - 6. Reinforcing bars.
 - 7. Joint reinforcement.
 - 8. Anchors, ties, and metal accessories.
- C. Mix Designs: For each type of mortar **[and grout]**. Include description of type and proportions of ingredients.
 - 1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C 109/C 109M for compressive strength, ASTM C 1506 for water retention, and ASTM C 91/C 91M for air content.
 - 2. Include test reports, according to ASTM C 1019, for grout mixes required to comply with compressive strength requirement.
- D. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to TMS 602/ACI 530.1/ASCE 6.
- E. Cold-Weather **[and Hot-Weather]** Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Qualified according to ASTM C 1093 for testing indicated.
- B. Sample Panels: Build sample panels to verify selections made under Sample submittals and to demonstrate aesthetic effects. Comply with requirements in Section 01 4000 "Quality Requirements" for mockups.

1. Build sample panels for **[each type of exposed unit masonry construction]** **[typical exterior wall]** **[typical interior wall]** **[typical exterior and interior walls]** in sizes approximately **[48 inches (1200 mm)]** **[60 inches (1500 mm)]** **<Insert dimension>** long by **[36 inches (900 mm)]** **[48 inches (1200 mm)]** **<Insert dimension>** high **[by full thickness]**.
 2. Build sample panels facing south.
 3. Where masonry is to match existing, build panels adjacent and parallel to existing surface.
 4. Protect approved sample panels from the elements with weather-resistant membrane.
 5. Approval of sample panels is for color, texture, and blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; aesthetic qualities of workmanship; and other material and construction qualities specifically approved by Architect in writing.
 - a. Approval of sample panels does not constitute approval of deviations from the Contract Documents contained in sample panels unless Architect specifically approves such deviations in writing.
- C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
1. Build mockup **[of typical wall area]** as shown on Drawings.
 2. Build mockups for **[each type of exposed unit masonry construction]** **[typical exterior wall]** **[typical interior wall]** **[typical exterior and interior walls]** in sizes approximately **[48 inches (1200 mm)]** **[60 inches (1500 mm)]** **[72 inches (1800 mm)]** **[96 inches (2400 mm)]** **<Insert dimension>** long by **[36 inches (900 mm)]** **[48 inches (1200 mm)]** **[60 inches (1500 mm)]** **[72 inches (1800 mm)]** **<Insert dimension>** high by full thickness, including face and backup wythes and accessories.
 - a. Include a sealant-filled joint at least 16 inches (400 mm) long in **[each]** **[exterior wall]** mockup.
 - b. Include lower corner of window opening at upper corner of exterior wall mockup. Make opening approximately 12 inches (300 mm) wide by 16 inches (400 mm) high.
 - c. Include through-wall flashing installed for a 24-inch (600-mm) length in corner of exterior wall mockup approximately 16 inches (400 mm) down from top of mockup, with a 12-inch (300-mm) length of flashing left exposed to view (omit masonry above half of flashing).
 3. Protect accepted mockups from the elements with weather-resistant membrane.
 4. Approval of mockups is for color, texture, and blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; and aesthetic qualities of workmanship.
 - a. Approval of mockups is also for other material and construction qualities specifically approved by Architect in writing.
 - b. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 5. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

- B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
- D. Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.
- E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.8 FIELD CONDITIONS

- A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
 - 1. Extend cover a minimum of 24 inches (600 mm) down both sides of walls, and hold cover securely in place.
- B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.
- C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
 - 1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
 - 2. Protect sills, ledges, and projections from mortar droppings.
 - 3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
 - 4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.
- D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.
 - 1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F (4 deg C) and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.
- E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.
- B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

2.2 PERFORMANCE REQUIREMENTS

- A. Provide[**structural**] unit masonry that develops indicated net-area compressive strengths at 28 days.
 - 1. Determine net-area compressive strength of masonry from average net-area compressive strengths of masonry units and mortar types (unit-strength method) according to TMS 602/ACI 530.1/ASCE 6.
 - 2. Determine net-area compressive strength of masonry by testing masonry prisms according to ASTM C 1314.

2.3 UNIT MASONRY, GENERAL

- A. Masonry Standard: Comply with TMS 602/ACI 530.1/ASCE 6 except as modified by requirements in the Contract Documents.
- B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects are exposed in the completed Work[**and will be within 20 feet (6 m) vertically and horizontally of a walking surface**].
- C. Fire-Resistance Ratings: Comply with requirements for fire-resistance-rated assembly designs indicated.
 - 1. Where fire-resistance-rated construction is indicated, units shall be listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction.

2.4 CONCRETE MASONRY UNITS

- A. Regional Materials: CMUs shall be manufactured within 100 miles (160 km) of Project site from aggregates[**and cement**] that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.
- B. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.
 - 1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
 - 2. Provide [**square-edged**] [**bullnose**] units for outside corners unless otherwise indicated.
- C. CMUs: ASTM C 90.

1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of .
 2. Density Classification: Normal weight.
 3. Size (Width): Manufactured to dimensions 3/8 inch (10 mm) less-than-nominal dimensions.
 4. Exposed Faces: Provide color and texture matching the range represented by Architect's sample.
 5. Faces To Receive Plaster: Where units are indicated to receive a direct application of plaster, provide textured-face units made with gap-graded aggregates.
- D. Pre-faced CMUs: Lightweight hollow concrete units complying with ASTM C 90, with manufacturer's standard smooth resinous facing complying with ASTM C 744.
1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 2. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of .
 3. Size: Manufactured to dimensions specified in "CMUs" Paragraph but with pre-faced surfaces having 1/16-inch- (1.5-mm-) wide returns of facing to create 1/4-inch- (6.5-mm-) wide mortar joints with modular coursing.
 4. Colors and Patterns: **[As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range].**
- 2.5 CONCRETE LINTELS
- A. General: Provide one of the following:
- B. Concrete Lintels: ASTM C 1623, matching CMUs in color, texture, and density classification; and with reinforcing bars indicated. **[Provide lintels with net-area compressive strength not less than that of CMUs.]**
- 2.6 MORTAR AND GROUT MATERIALS
- A. Regional Materials: Aggregate for mortar and grout[, **cement, and lime**] shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.
- B. Portland Cement: ASTM C 150/C 150M, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.
1. Alkali content shall not be more than 0.1 percent when tested according to ASTM C 114.
- C. Hydrated Lime: ASTM C 207, Type S.
- D. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.
- E. Masonry Cement: ASTM C 91/C 91M.

1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Cemex S.A.B. de C.V.; Brikset, Type N Citadel, Type S Dixie, Type S Kosmortar, Type N Richmortar Victor Plastic Cement.
 - b. Essroc, Italcementi Group; Brixment Flamingo Color Masonry Cement Velvet.
 - c. Holcim (US) Inc.; Mortamix Masonry Cement Rainbow Mortamix Custom Buff Masonry Cement White Mortamix Masonry Cement.
 - d. Lafarge North America Inc.; Magnolia Masonry Cement Lafarge Masonry Cement Trinity White Masonry Cement.
 - e. Lehigh Cement Company.; Lehigh Masonry Cement Lehigh White Masonry Cement.

- F. Mortar Cement: ASTM C 1329/C 1329M.
 1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Lafarge North America Inc.; Lafarge Mortar Cement Magnolia Superbond Mortar Cement.

- G. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979/C 979M. Use only pigments with a record of satisfactory performance in masonry mortar.
 1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Davis Colors; True Tone Mortar Colors.
 - b. Lanxess Corporation; Bayferrox Iron Oxide Pigments.
 - c. Solomon Colors, Inc.; SGS Mortar Colors.

- H. Colored Cement Products: Packaged blend made from portland cement and hydrated lime masonry cement or and mortar pigments, all complying with specified requirements, and containing no other ingredients.
 1. Colored Portland Cement-Lime Mix:
 - a. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) Essroc, Italcementi Group; Riverton Portland Cement Lime Custom Color.
 - 2) Holcim (US) Inc.; Rainbow Mortamix Custom Color Cement/Lime.
 - 3) Lafarge North America Inc.; Eaglebond Portland & Lime.
 - 4) Lehigh Cement Company.; Lehigh Custom Color Portland/Lime Cement.
 2. Colored Masonry Cement:
 - a. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) Cemex S.A.B. de C.V.; Richcolor Masonry Cement.
 - 2) Essroc, Italcementi Group; Brixment-in-Color Flamingo Color Masonry Cement.
 - 3) Holcim (US) Inc.; Rainbow Mortamix Custom Color Masonry Cement.
 - 4) Lafarge North America Inc.; U.S. Cement Custom Color Masonry Cement.
 - 5) Lehigh Cement Company.; Lehigh Custom Color Masonry Cement.

3. Formulate blend as required to produce color indicated or, if not indicated, as selected from manufacturer's standard colors.
 4. Pigments shall not exceed 10 percent of portland cement by weight.
 5. Pigments shall not exceed 5 percent of [masonry cement] [or] [mortar cement] by weight.
- I. Aggregate for Mortar: ASTM C 144.
1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
 2. For joints less than 1/4 inch (6 mm) thick, use aggregate graded with 100 percent passing the No. 16 (1.18-mm) sieve.
 3. White-Mortar Aggregates: Natural white sand or crushed white stone.
 4. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.
- J. Aggregate for Grout: ASTM C 404.
- K. Epoxy Pointing Mortar: ASTM C 395, epoxy-resin-based material formulated for use as pointing mortar for glazed or pre-faced masonry units (and approved for such use by manufacturer of units); in color indicated or, if not otherwise indicated, as selected by Architect from manufacturer's colors.
- L. Water: Potable.
- 2.7 REINFORCEMENT
- A. Uncoated Steel Reinforcing Bars: ASTM A 615/A 615M or ASTM A 996/A 996M, Grade 60 (Grade 420).
- B. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and to hold reinforcing bars in center of cells. Units are formed from 0.148-inch (3.77-mm) steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.
1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Heckmann Building Products Inc.; No. 376 Rebar Positioner.
 - b. Hohmann & Barnard, Inc.; #RB or #RB-Twin Rebar Positioner.
 - c. Wire-Bond; O-Ring or Double O-Ring Rebar Positioner.
- 2.8 TIES AND ANCHORS
- A. General: Ties and anchors shall extend at least 1-1/2 inches (38 mm) into masonry but with at least a 5/8-inch (16-mm) cover on outside face.
- B. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated:
1. Mill-Galvanized, Carbon-Steel Wire: ASTM A 82/A 82M, with ASTM A 641/A 641M, Class 1 coating.
 2. Hot-Dip Galvanized, Carbon-Steel Wire: ASTM A 82/A 82M, with ASTM A 153/A 153M, Class B-2 coating.

3. Stainless-Steel Wire: ASTM A 580/A 580M, [Type 304] [Type 316].
 4. Galvanized-Steel Sheet: ASTM A 653/A 653M, Commercial Steel, G60 (Z180) zinc coating.
 5. Steel Sheet, Galvanized after Fabrication: ASTM A 1008/A 1008M, Commercial Steel, with ASTM A 153/A 153M, Class B coating.
 6. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, [Type 304] [Type 316].
 7. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- C. Adjustable Anchors for Connecting to Concrete: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.
1. Connector Section: Dovetail tabs for inserting into dovetail slots in concrete and attached to tie section; formed from [0.060-inch- (1.52-mm-) **thick steel sheet, galvanized after fabrication**] [0.105-inch- (2.66-mm-) **thick steel sheet, galvanized after fabrication**] [0.062-inch- (1.59-mm-) **thick, stainless-steel sheet**] [0.109-inch- (2.78-mm-) **thick, stainless-steel sheet**].
 - a. [0.064-inch- (1.63-mm-)] [0.108-inch- (2.74-mm-)] thick, galvanized-steel sheet may be used at interior walls unless otherwise indicated.
 2. Tie Section: Triangular-shaped wire tie made from [0.187-inch- (4.76-mm-)] [0.25-inch- (6.35-mm-)] diameter, [**hot-dip galvanized steel**] [**stainless-steel**] wire. [**Mill-galvanized wire may be used at interior walls unless otherwise indicated.**]
 3. Corrugated-Metal Ties: Metal strips not less than 7/8 inch (22 mm) wide with corrugations having a wavelength of 0.3 to 0.5 inch (7.6 to 12.7 mm) and an amplitude of 0.06 to 0.10 inch (1.5 to 2.5 mm) made from [0.060-inch- (1.52-mm-) **thick steel sheet, galvanized after fabrication**] [0.075-inch- (1.90 mm-) **thick steel sheet, galvanized after fabrication**] [0.105-inch- (2.66-mm-) **thick steel sheet, galvanized after fabrication**] [0.062-inch- (1.59-mm-) **thick, stainless-steel sheet**] [0.078-inch- (1.98-mm-) **thick, stainless-steel sheet**] [0.109-inch- (2.78-mm-) **thick, stainless-steel sheet**] with dovetail tabs for inserting into dovetail slots in concrete.
 - a. [0.064-inch- (1.63-mm-)] [0.079-inch- (2.01-mm-)] [0.108-inch- (2.74-mm-)] thick, galvanized sheet may be used at interior walls unless otherwise indicated.
- D. Partition Top Anchors: 0.105-inch- (2.66-mm-) thick metal plate with a 3/8-inch- (9.5-mm-) diameter metal rod 6 inches (152 mm) long welded to plate and with closed-end plastic tube fitted over rod that allows rod to move in and out of tube. Fabricate from [**steel, hot-dip galvanized after fabrication**] [**stainless steel**].

2.9 EMBEDDED FLASHING MATERIALS

- A. Masonry flashing shall be metal, except as otherwise noted. Metal flashing shall be through-wall, where feasible, except where otherwise clearly shown or noted. Through-wall flashing shall be 2-piece, except where otherwise clearly shown or noted.
- B. Metal Flashing: Provide metal flashing complying with [SMACNA's "Architectural Sheet Metal Manual"] [Section 07 6200 "Sheet Metal Flashing and Trim"] and as follows:
1. Stainless Steel: ASTM A 240/A 240M or ASTM A 666, Type 304, 0.016 inch (0.40 mm) thick.
 2. Fabricate continuous flashings in sections 96 inches (2400 mm) long minimum, but not exceeding 12 feet (3.7 m). Provide splice plates at joints of formed, smooth metal flashing.
 3. Fabricate through-wall metal flashing embedded in masonry from stainless steel, with ribs at 3-inch (76-mm) intervals along length of flashing to provide an integral mortar bond.

- a. Products: Subject to compliance with requirements, **[provide the following]** **[provide one of the following]** **[available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) Cheney Flashing Company; Cheney Flashing (Dovetail) Cheney 3-Way Flashing (Sawtooth).
 - 2) Keystone Flashing Company, Inc.; Keystone 3-Way Interlocking Thruwall Flashing.
 4. Fabricate through-wall flashing with snaplock receiver on exterior face where indicated to receive counterflashing.
 5. Fabricate through-wall flashing with drip edge **[where]** **[unless otherwise]** indicated. Fabricate by extending flashing 1/2 inch (13 mm) out from wall, with outer edge bent down 30 degrees **[and hemmed]**.
 6. Fabricate through-wall flashing with sealant stop **[where]** **[unless otherwise]** indicated. Fabricate by bending metal back on itself 3/4 inch (19 mm) at exterior face of wall and down into joint 1/4 inch (6 mm) to form a stop for retaining sealant backer rod.
 7. Fabricate metal **[drip edges]** **[and]** **[sealant stops]** for ribbed metal flashing from plain metal flashing of same metal as ribbed flashing and extending at least 3 inches (76 mm) into wall with hemmed inner edge to receive ribbed flashing and form a hooked seam. Form hem on upper surface of metal so that completed seam sheds water.
 8. Fabricate metal drip edges from stainless steel. Extend at least 3 inches (76 mm) into wall and 1/2 inch (13 mm) out from wall, with outer edge bent down 30 degrees **[and hemmed]**.
 9. Fabricate metal sealant stops from stainless steel. Extend at least 3 inches (76 mm) into wall and out to exterior face of wall. At exterior face of wall, bend metal back on itself for 3/4 inch (19 mm) and down into joint 1/4 inch (6 mm) to form a stop for retaining sealant backer rod.
 10. Fabricate metal expansion-joint strips from **[stainless steel]** **[copper]** to shapes indicated.
 11. Solder metal items at corners.
- C. Flexible Flashing: Use **[one of]** the following unless otherwise indicated:
1. Copper-Laminated Flashing: [5-oz./sq. ft. (1.5-kg/sq. m)] [7-oz./sq. ft. (2-kg/sq. m)] copper sheet bonded between two layers of glass-fiber cloth. Use only where flashing is fully concealed in masonry.
 - a. Products: Subject to compliance with requirements, **[provide the following]** **[provide one of the following]** **[available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) Advanced Building Products Inc.; Copper Fabric Flashing Copper Sealtite 2000.
 - 2) Hohmann & Barnard, Inc.; Copper Fabric Flashing.
 - 3) York Manufacturing, Inc.; Multi-Flash 500.
 2. Asphalt-Coated Copper Flashing: [5-oz./sq. ft. (1.5-kg/sq. m)] [7-oz./sq. ft. (2-kg/sq. m)] copper sheet coated with flexible asphalt. Use only where flashing is fully concealed in masonry.
 - a. Products: Subject to compliance with requirements, **[provide the following]** **[provide one of the following]** **[available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) Advanced Building Products Inc.; Cop-R-Cote.
 - 2) Hohmann & Barnard, Inc.; Coated Copper Flashing.

3. Rubberized-Asphalt Flashing: Composite flashing product consisting of a pliable, adhesive rubberized-asphalt compound, bonded to a high-density, cross-laminated polyethylene film to produce an overall thickness of not less than [0.030 inch (0.76 mm)] [0.040 inch (1.02 mm)].
 - a. Products: Subject to compliance with requirements, **[provide the following]** **[provide one of the following]** **[available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) Advanced Building Products Inc.; Peel-N-Seal.
 - 2) Carlisle Coatings & Waterproofing; CCW-705-TWF Thru-Wall Flashing.
 - 3) Fiberweb, Clark Hammerbeam Corp.; Aquaflash 500.
 - 4) GCP Applied Technologies; Perm-A-Barrier Wall Flashing.
 - 5) Heckmann Building Products Inc.; No. 82 Rubberized-Asphalt Thru-Wall Flashing.
 - 6) Hohmann & Barnard, Inc.; Sando-Seal.
 - 7) Polyguard Products, Inc.; Polyguard 300 Polyguard 400.
 - 8) W. R. Meadows, Inc.; Air-Shield Thru-Wall Flashing.
 - 9) Williams Products, Inc.; Everlastic MF-40.
 - b. Accessories: Provide preformed corners, end dams, other special shapes, and seaming materials produced by flashing manufacturer.
4. Butyl Rubber Flashing: Composite, self-adhesive, flashing product consisting of a pliable, butyl rubber compound, bonded to a high-density polyethylene film, aluminum foil, or spunbonded polyolefin to produce an overall thickness of not less than [0.030 inch (0.76 mm)] [0.040 inch (1.02 mm)]. GCP Applied Technologies
 - a. Products: Subject to compliance with requirements, **[provide the following]** **[provide one of the following]** **[available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) DuPont Building Innovations; E. I. du Pont de Nemours and Company; DuPont Flashing Tape.
 - 2) GCP Applied Technologies; Vycor Butyl Self Adhered Flashing.
 - 3) Protecto Wrap Company; BT-25 XL.
 - 4) Raven Industries Inc.; Fortress Flashshield.
 - b. Accessories: Provide preformed corners, end dams, other special shapes, and seaming materials produced by flashing manufacturer.
5. Elastomeric Thermoplastic Flashing: Composite flashing product consisting of a polyester-reinforced ethylene interpolymer alloy.
 - a. Products: Subject to compliance with requirements, **[provide the following]** **[provide one of the following]** **[available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) DuPont (E. I. du Pont de Nemours and Company); Thru-Wall Flashing.
 - 2) Hohmann & Barnard, Inc.; Flex-Flash.
 - 3) Hyload, Inc.; Hyload Cloaked Flashing System.
 - 4) Mortar Net USA, Ltd.; Total Flash.
 - b. Monolithic Sheet: Elastomeric thermoplastic flashing, 0.040 inch (1.02 mm) thick.
 - c. Self-Adhesive Sheet: Elastomeric thermoplastic flashing, 0.025 inch (0.64 mm) thick, with a 0.015-inch- (0.38-mm-) thick coating of adhesive.
 - d. Self-Adhesive Sheet with Drip Edge: Elastomeric thermoplastic flashing, 0.025 inch (0.64 mm) thick, with a 0.015-inch- (0.38-mm-) thick coating of rubberized-asphalt adhesive. Where flashing extends to face of masonry, rubberized-asphalt coating is held back approximately 1-1/2 inches (38 mm) from edge.

- 1) Color: **[Gray] [White] [Tan/buff] [Black]**.
- e. Accessories: Provide preformed corners, end dams, other special shapes, and seaming materials produced by flashing manufacturer.
6. EPDM Flashing: Sheet flashing product made from ethylene-propylene-diene terpolymer, complying with ASTM D 4637/D 4637M, 0.040 inch (1.02 mm) thick.
 - a. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1) Carlisle Coatings & Waterproofing; Pre-Kleened EPDM Thru-Wall Flashing.
 - 2) Firestone Specialty Products; FlashGuard.
 - 3) Heckmann Building Products Inc.; No. 81 EPDM Thru-Wall Flashing.
 - 4) Hohmann & Barnard, Inc.; EPDM Flashing.
- D. Application: Unless otherwise indicated, use the following:
 1. Where flashing is indicated to receive counterflashing, use metal flashing.
 2. Where flashing is indicated to be turned down at or beyond the wall face, use metal flashing.
 3. Where flashing is partly exposed and is indicated to terminate at the wall face, use metal flashing **[with a drip edge] [with a sealant stop] [or flexible flashing with a metal drip edge] [or elastomeric thermoplastic flashing with a drip edge] [or flexible flashing with a metal sealant stop]**.
 4. Where flashing is fully concealed, use **[metal flashing] [or] [flexible flashing]**.
- E. Single-Wythe CMU Flashing System: System of CMU cell flashing pans and interlocking CMU web covers made from UV-resistant, high-density polyethylene. Cell flashing pans have integral weep spouts designed to be built into mortar bed joints and that extend into the cell to prevent clogging with mortar.
 1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. Mortar Net USA, Ltd.; Blok-Flash.
- F. Solder and Sealants for Sheet Metal Flashings: **[As specified in Section 07 6200 "Sheet Metal Flashing and Trim."]**
 1. Solder for Stainless Steel: ASTM B 32, **[Grade Sn60] [Grade Sn96]**, with acid flux of type recommended by stainless-steel sheet manufacturer.
 2. Solder for Copper: ASTM B 32, **[Grade Sn50] [with maximum lead content of 0.2 percent]**.
 3. Elastomeric Sealant: ASTM C 920, chemically curing **[urethane] [polysulfide] [silicone]** sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and remain watertight.
- G. Adhesives, Primers, and Seam Tapes for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.

2.10 MISCELLANEOUS MASONRY ACCESSORIES

- A. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene urethane or.
- B. Preformed Control-Joint Gaskets: Made from **[styrene-butadiene-rubber compound, complying with ASTM D 2000, Designation M2AA-805] [or] [PVC, complying with ASTM D 2287, Type PVC-65406]** and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.
- C. Bond-Breaker Strips: Asphalt-saturated felt complying with ASTM D 226/D 226M, Type I (No. 15 asphalt felt).

2.11 MASONRY-CELL FILL

- A. Loose-Fill Insulation: Perlite complying with ASTM C 549, Type II (surface treated for water repellency and limited moisture absorption) or Type IV (surface treated for water repellency and to limit dust generation).
- B. Lightweight-Aggregate Fill: ASTM C 331/C 331M.

2.12 MORTAR AND GROUT MIXES

- A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated.
 - 1. Do not use calcium chloride in mortar or grout.
 - 2. Use portland cement-lime masonry cement or mortar unless otherwise indicated.
 - 3. For exterior masonry, use portland cement-lime masonry cement or mortar.
 - 4. For reinforced masonry, use portland cement-lime masonry cement mortar cement mortar.
 - 5. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.
- B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.
- C. Mortar for Unit Masonry: Comply with ASTM C 270, **[Proportion] [Property]** Specification. Provide the following types of mortar for applications stated unless another type is indicated **[or needed to provide required compressive strength of masonry]**.
 - 1. For masonry below grade or in contact with earth, use **[Type M] [Type S]**.
 - 2. For reinforced masonry, use **[Type S] [Type N]**.
 - 3. For mortar parge coats, use **[Type S] [or] [Type N]**.
 - 4. For exterior, above-grade, load-bearing and nonload-bearing walls and parapet walls; for interior load-bearing walls; for interior nonload-bearing partitions; and for other applications where another type is not indicated, use Type N.
 - 5. For interior nonload-bearing partitions, Type O may be used instead of Type N.

- D. Pigmented Mortar: Use colored cement product[**or select and proportion pigments with other ingredients to produce color required. Do not add pigments to colored cement products**].
1. Pigments shall not exceed 10 percent of portland cement by weight.
 2. Pigments shall not exceed 5 percent of **[masonry cement]** **[or]** **[mortar cement]** by weight.
 3. Mix to match Architect's sample.
 4. Application: Use pigmented mortar for exposed mortar joints with the following units:
 - a. Pre-faced CMUs.
 - b. Cast-stone trim units.
- E. Colored-Aggregate Mortar: Produce required mortar color by using colored aggregates and natural color or white cement as necessary to produce required mortar color.
1. Mix to match Architect's sample.
 2. Application: Use colored-aggregate mortar for exposed mortar joints with the following units:
 - a. Pre-faced CMUs.
 - b. Cast-stone trim units.
- F. Grout for Unit Masonry: Comply with ASTM C 476.
1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with TMS 602/ACI 530.1/ASCE 6 for dimensions of grout spaces and pour height.
 2. Proportion grout in accordance with ASTM C 476, **[Table 1]** **[or]** **[paragraph 4.2.2 for specified 28-day compressive strength indicated, but not less than 2000 psi (14 MPa)]**.
 3. Provide grout with a slump of [8 to 11 inches (200 to 280 mm)] [10 to 11 inches (250 to 280 mm)] as measured according to ASTM C 143/C 143M.
- G. Epoxy Pointing Mortar: Mix epoxy pointing mortar to comply with mortar manufacturer's written instructions.
1. Application: Use epoxy pointing mortar for exposed mortar joints with pre-faced CMUs.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
 2. Verify that foundations are within tolerances specified.
 3. Verify that reinforcing dowels are properly placed.
 4. Verify that substrates are free of substances that would impair mortar bond.
- B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Build chases and recesses to accommodate items specified in this and other Sections.
- B. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match construction immediately adjacent to opening.
- C. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

3.3 TOLERANCES

- A. Dimensions and Locations of Elements:
 - 1. For dimensions in cross section or elevation, do not vary by more than plus 1/2 inch (12 mm) or minus 1/4 inch (6 mm).
 - 2. For location of elements in plan, do not vary from that indicated by more than plus or minus 1/2 inch (12 mm).
 - 3. For location of elements in elevation, do not vary from that indicated by more than plus or minus 1/4 inch (6 mm) in a story height or 1/2 inch (12 mm) total.
- B. Lines and Levels:
 - 1. For bed joints and top surfaces of bearing walls, do not vary from level by more than 1/4 inch in 10 feet (6 mm in 3 m), or 1/2-inch (12-mm) maximum.
 - 2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2-inch (12-mm) maximum.
 - 3. For vertical lines and surfaces do not vary from plumb by more than 1/4 inch in 10 feet (6 mm in 3 m), 3/8 inch in 20 feet (9 mm in 6 m), or 1/2-inch (12-mm) maximum.
 - 4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2-inch (12-mm) maximum.
 - 5. For lines and surfaces, do not vary from straight by more than 1/4 inch in 10 feet (6 mm in 3 m), 3/8 inch in 20 feet (9 mm in 6 m), or 1/2-inch (12-mm) maximum.
 - 6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet (6 mm in 3 m), or 1/2-inch (12-mm) maximum.
 - 7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch (1.5 mm).
- C. Joints:
 - 1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch (3 mm), with a maximum thickness limited to 1/2 inch (12 mm).
 - 2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch (3 mm).
 - 3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch (9 mm) or minus 1/4 inch (6 mm).
 - 4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch (3 mm).

3.4 LAYING MASONRY WALLS

- A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.
- B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in **[running bond]** **[bond pattern indicated on Drawings]**; do not use units with less-than-nominal 4-inch (100-mm) horizontal face dimensions at corners, jambs or other penetrations.
- C. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than [2 inches (50 mm)] [4 inches (100 mm)]. Bond and interlock each course of each wythe at corners. Do not use units with less-than-nominal 4-inch (100-mm) horizontal face dimensions at corners, jambs or other penetrations.
- D. Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.
- E. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.
- F. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.
- G. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below, and rod mortar or grout into core.
- H. Fill cores in hollow CMUs with grout 24 inches (600 mm) under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.
- I. Build nonload-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.
 - 1. Install compressible filler in joint between top of partition and underside of structure above.
 - 2. Fasten partition top anchors to structure above and build into top of partition. Grout cells of CMUs solidly around plastic tubes of anchors and push tubes down into grout to provide 1/2-inch (13-mm) clearance between end of anchor rod and end of tube. Space anchors [48 inches (1200 mm)] **<Insert spacing>** o.c. unless otherwise indicated.
 - 3. Wedge nonload-bearing partitions against structure above with small pieces of tile, slate, or metal. Fill joint with mortar after dead-load deflection of structure above approaches final position.
 - 4. At fire-rated partitions, treat joint between top of partition and underside of structure above to comply with Section 07 8443 "Joint Firestopping."

3.5 MORTAR BEDDING AND JOINTING

- A. Lay hollow CMUs as follows:

1. Bed face shells in mortar and make head joints of depth equal to bed joints.
 2. Bed webs in mortar in all courses of piers, columns, and pilasters.
 3. Bed webs in mortar in grouted masonry, including starting course on footings.
 4. Fully bed entire units, including areas under cells, at starting course on footings where cells are not grouted.
- B. Set cast-stone trim units in full bed of mortar with full vertical joints. Fill dowel, anchor, and similar holes.
1. Clean soiled surfaces with fiber brush and soap powder and rinse thoroughly with clear water.
 2. Wet joint surfaces thoroughly before applying mortar.
 3. Rake out mortar joints for pointing with sealant.
- C. Rake out mortar joints at pre-faced CMUs to a uniform depth of 1/4 inch (6 mm) and point with epoxy mortar to comply with epoxy-mortar manufacturer's written instructions.
- D. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.
- E. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.
- F. Cut joints flush where indicated to receive air barriers, dampproofing or waterproofing unless otherwise indicated.

3.6 MASONRY-CELL FILL

- A. Pour loose-fill insulation lightweight-aggregate fill into cavities to fill void spaces. Maintain inspection ports to show presence of fill at extremities of each pour area. Close the ports after filling has been confirmed. Limit the fall of fill to one story high, but not more than 20 feet (6 m).
- B. Install molded-polystyrene insulation units into masonry unit cells before laying units.

3.7 MASONRY-JOINT REINFORCEMENT

- A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch (16 mm) on exterior side of walls, 1/2 inch (13 mm) elsewhere. Lap reinforcement a minimum of 6 inches (150 mm).
1. Space reinforcement not more than 16 inches (406 mm) o.c.
 2. Space reinforcement not more than 8 inches (203 mm) o.c. in foundation walls and parapet walls.
 3. Provide reinforcement not more than 8 inches (203 mm) above and below wall openings and extending 12 inches (305 mm) beyond openings[**in addition to continuous reinforcement**].
- B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.
- C. Provide continuity at wall intersections by using prefabricated T-shaped units.
- D. Provide continuity at corners by using prefabricated L-shaped units.

- E. Cut and bend reinforcing units as directed by manufacturer for continuity at[**corners,**] returns, offsets, column fireproofing, pipe enclosures, and other special conditions.

3.8 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

- A. Anchor masonry to structural steel and concrete, where masonry abuts or faces structural steel or concrete, to comply with the following:
 - 1. Provide an open space not less than [1/2 inch (13 mm)] [1 inch (25 mm)] [2 inches (50 mm)] wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.
 - 2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
 - 3. Space anchors as indicated, but not more than 24 inches (610 mm) o.c. vertically and 36 inches (915 mm) o.c. horizontally.

3.9 CONTROL AND EXPANSION JOINTS

- A. General: Install control- and expansion-joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.
- B. Form control joints in concrete masonry [**as follows**] [**using one of the following methods**]:
 - 1. Fit bond-breaker strips into hollow contour in ends of CMUs on one side of control joint. Fill resultant core with grout, and rake out joints in exposed faces for application of sealant.
 - 2. Install preformed control-joint gaskets designed to fit standard sash block.
 - 3. Install interlocking units designed for control joints. Install bond-breaker strips at joint. Keep head joints free and clear of mortar, or rake out joint for application of sealant.
 - 4. Install temporary foam-plastic filler in head joints, and remove filler when unit masonry is complete for application of sealant.

3.10 LINTELS

- A. Provide concrete lintels where shown and where openings of more than 12 inches (305 mm) for brick-size units and 24 inches (610 mm) for block-size units are shown without structural steel or other supporting lintels.
- B. Provide minimum bearing of 8 inches (200 mm) at each jamb unless otherwise indicated.

3.11 FLASHING

- A. General: Install embedded flashing at ledges and other obstructions to downward flow of water in wall where indicated.
- B. Install flashing as follows unless otherwise indicated:
 - 1. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape[**as recommended by flashing manufacturer**].

2. At lintels, extend flashing a minimum of 6 inches (150 mm) into masonry at each end. At heads and sills, extend flashing 6 inches (150 mm) at ends and turn up not less than 2 inches (50 mm) to form end dams.
 3. Interlock end joints of ribbed sheet metal flashing by overlapping ribs not less than 1-1/2 inches (38 mm) or as recommended by flashing manufacturer, and seal lap with elastomeric sealant complying with requirements in Section 07 9200 "Joint Sealants" for application indicated.
 4. Install metal [**drip edges**] [**and**] [**sealant stops**] with ribbed sheet metal flashing by interlocking hemmed edges to form hooked seam. Seal seam with elastomeric sealant complying with requirements in Section 07 9200 "Joint Sealants" for application indicated.
 5. Install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch (13 mm) back from outside face of wall, and adhere flexible flashing to top of metal drip edge.
 6. Install metal flashing termination beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch (13 mm) back from outside face of wall, and adhere flexible flashing to top of metal flashing termination.
 7. Cut flexible flashing off flush with face of wall after masonry wall construction is completed.
- C. Install single-wythe CMU flashing system in bed joints of CMU walls where indicated to comply with manufacturer's written instructions. Install CMU cell pans with upturned edges located below face shells and webs of CMUs above and with weep spouts aligned with face of wall. Install CMU web covers so that they cover upturned edges of CMU cell pans at CMU webs and extend from face shell to face shell.
- D. Install reglets and nailers for flashing and other related construction where they are shown to be built into masonry.
- 3.12 REINFORCED UNIT MASONRY INSTALLATION
- A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.
1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
 2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other loads that may be placed on them during construction.
- B. Placing Reinforcement: Comply with requirements in TMS 602/ACI 530.1/ASCE 6.
- C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.
1. Comply with requirements in TMS 602/ACI 530.1/ASCE 6 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
 2. Limit height of vertical grout pours to not more than [60 inches (1520 mm)] [12.67 ft. (3.86 m)] <Insert height>.

3.13 FIELD QUALITY CONTROL

- A. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.
- B. Inspections: Special inspections according to Level [B] [C] in TMS 402/ACI 530/ASCE 5.
 - 1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
 - 2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
 - 3. Place grout only after inspectors have verified proportions of site-prepared grout.
- C. Testing Prior to Construction: One set of tests.
- D. Testing Frequency: One set of tests for each 5000 sq. ft. (464 sq. m) of wall area or portion thereof.
- E. Concrete Masonry Unit Test: For each type of unit provided, according to ASTM C 140 for compressive strength.
- F. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, according to ASTM C 780.
- G. Mortar Test (Property Specification): For each mix provided, according to ASTM C 780. Test mortar for [mortar air content] [and] [compressive strength].
- H. Grout Test (Compressive Strength): For each mix provided, according to ASTM C 1019.
- I. Prism Test: For each type of construction provided, according to ASTM C 1314 at [7 days and at]28 days.

3.14 PARGING

- A. Parge exterior faces of below-grade masonry walls, where indicated, in two uniform coats to a total thickness of 3/4 inch (19 mm). Dampen wall before applying first coat, and scarify first coat to ensure full bond to subsequent coat.
- B. If recommended by fluid-applied air barrier manufacturer, parge exterior faces of CMU and cast-in-place concrete surfaces indicated to receive air barrier. Apply in thickness as recommended by air barrier manufacturer. Dampen wall before applying.
- C. Use a steel-trowel finish to produce a smooth, flat, dense surface with a maximum surface variation of 1/8 inch per foot (3 mm per 300 mm). Form a wash at top of parging and a cove at bottom.
- D. Damp-cure parging for at least 24 hours and protect parging until cured.

3.15 REPAIRING, POINTING, AND CLEANING

- A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.
- B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.
- C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.
- D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
 - 1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
 - 2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
 - 3. Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
 - 4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
 - 5. Clean concrete masonry by applicable cleaning methods indicated in NCMA TEK 8-4A.

3.16 MASONRY WASTE DISPOSAL

- A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.
- B. Waste Disposal as Fill Material: Dispose of clean masonry waste, including excess or soil-contaminated sand, waste mortar, and broken masonry units, by crushing and mixing with fill material as fill is placed.
 - 1. Crush masonry waste to less than 4 inches (100 mm) in each dimension.
 - 2. Mix masonry waste with at least two parts of specified fill material for each part of masonry waste. Fill material is specified in Section 31 2000 "Earth Moving."
 - 3. Do not dispose of masonry waste as fill within 18 inches (450 mm) of finished grade.
- C. Masonry Waste Recycling: Return broken CMUs not used as fill to manufacturer for recycling.
- D. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above or recycled, and other masonry waste, and legally dispose of off Owner's property.

END OF SECTION

SECTION 04 4313.13 - ANCHORED STONE MASONRY VENEER**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
 - 1. Stone masonry anchored to concrete backup.
 - 2. Stone masonry anchored to unit masonry backup.
- B. Products Installed but Not Furnished under This Section Include:
 - 1. Steel lintels in unit masonry.
 - 2. Steel shelf angles for supporting unit masonry.
- C. Related Requirements:
 - 1. Section 04 2000 "Unit Masonry" for **[concealed flashing] [horizontal joint reinforcement] [and] [veneer anchors]**.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

- A. Product Data: For each variety of stone, stone accessory, and manufactured product.
- B. Sustainable Design Submittals:
 - 1. Environmental Product Declaration (EPD): For each product.
 - 2. Environmental Product Declaration: For each product.
 - 3. Third-Party Certifications: For each product.
 - 4. Third-Party Certified Life Cycle Assessment: For each product.
- C. Samples for Initial Selection: For colored mortar and other items involving color selection.
- D. Samples for Verification:
 - 1. For each stone type indicated. Include at least **[two] [three] [four] [five]** <Insert **number**> Samples in each set and show the full range of color and other visual characteristics in completed Work.
 - 2. For each color of mortar required. **[Label Samples to indicate types and amounts of pigments used.]**

1.4 INFORMATIONAL SUBMITTALS

- A. Sealant Compatibility and Adhesion Test Report: From sealant manufacturer indicating that sealants will not stain or damage stone. Include interpretation of test results and recommendations for primers and substrate preparation needed for adhesion.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs experienced stonemasons and stone fitters.

- B. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for materials and execution.
1. Build mockup of typical wall area as shown on Drawings.
 2. Build mockups for **[each type of stone masonry]** **[typical exterior wall]** in sizes approximately **[48 inches (1200 mm)]** **[60 inches (1500 mm)]** **[72 inches (1800 mm)]** **[96 inches (2400 mm)]** **<Insert dimension>** long by **[48 inches (1200 mm)]** **[60 inches (1500 mm)]** **[72 inches (1800 mm)]** **<Insert dimension>** high by full thickness, including face and backup wythes and accessories.
 - a. Include stone coping at top of mockup.
 - b. Include a sealant-filled joint at least 16 inches (400 mm) long in mockup.
 - c. Include through-wall flashing installed for a 24-inch (600-mm) length in corner of mockup approximately 16 inches (400 mm) down from top of mockup, with a 12-inch (300-mm) length of flashing left exposed to view (omit stone masonry above half of flashing).
 - d. Include **[metal]** **[wood]** studs, sheathing, veneer anchors, flashing, and weep holes in exterior masonry-veneer wall mockup.
 3. Protect accepted mockups from the elements with weather-resistant membrane.
 4. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 5. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- C. Provide the following upon request:
1. Qualification Data: For Installer.
 2. List of Materials Used in Constructing Mockups: List generic product names together with manufacturers, manufacturers' product names, supply sources, and other information as required to identify materials used. Include mix proportions for mortar and source of aggregates.
 - a. Neither receipt of list nor approval of mockups constitutes approval of deviations from the Contract Documents contained in mockups unless Architect approves such deviations in writing.
 3. Material Test Reports:
 - a. Stone Test Reports: For **[each]** stone variety proposed for use on Project, by a qualified testing agency, indicating compliance with required physical properties, other than abrasion resistance, according to referenced ASTM standards. Base reports on testing done within previous **[three]** **[five]** **<Insert number>** years.

1.6 PRECONSTRUCTION TESTING

- A. Preconstruction Sealant Compatibility and Adhesion Testing: Submit to joint-sealant manufacturers, for compatibility and adhesion testing according to sealant manufacturer's standard testing methods and Section 07 9200 "Joint Sealants," Samples of materials that will contact or affect joint sealants.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

- B. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
- C. Deliver preblended, dry mortar mix in moisture-resistant containers designed for use with dispensing silos. Store preblended, dry mortar mix in delivery containers on elevated platforms, under cover, in a dry location, or in covered weatherproof dispensing silos.
- D. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.8 FIELD CONDITIONS

- A. Protection of Stone Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed stone masonry when construction is not in progress.
 - 1. Extend cover a minimum of 24 inches (600 mm) down both sides and hold cover securely in place.
- B. Stain Prevention: Immediately remove mortar and soil to prevent them from staining stone masonry face.
 - 1. Protect base of walls from rain-splashed mud and mortar splatter using coverings spread on the ground and over the wall surface.
 - 2. Protect sills, ledges, and projections from mortar droppings.
 - 3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
 - 4. Turn scaffold boards near the wall on edge at end of each day to prevent rain from splashing mortar and dirt on completed stone masonry.
- C. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace stone masonry damaged by frost or freezing conditions. Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.
 - 1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F (4 deg C) and above and will remain so until masonry has dried, but not less than seven days after completing cleaning.
- D. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

1.9 COORDINATION

- A. Advise installers of adjacent Work about specific requirements for placement of reinforcement, veneer anchors, flashing, and similar items to be built into stone masonry.
- B. Coordinate locations of dovetail slots installed in concrete that are to receive stone anchors.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations for Stone: Obtain each variety of stone, regardless of finish, from single quarry, whether specified in this Section or in another Section of the Specifications, with resources to provide materials of consistent quality in appearance and physical properties.
- B. Source Limitations for Mortar Materials: Obtain mortar ingredients of uniform quality for each cementitious component from single manufacturer and each aggregate from single source or producer.
- C. Varieties and Sources: Subject to compliance with requirements, provide stone of varieties and from sources complying with Section 04 4200 "Exterior Stone Cladding."

2.2 QUARTZ-BASED STONE

- A. Material Standard: Comply with ASTM C616/C616M, Classification III Quartzite.
- B. Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.
- C. Varieties and Sources: Subject to compliance with requirements, provide the following:
 - 1. Tri-State Stone and Building Supply.
 - a. Carderock Ashlar - Brown tones.
- D. Match Architect's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.3 MORTAR MATERIALS

- A. Regional Materials: Aggregate for mortar and grout, cement, and lime shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.
- B. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Essroc.
 - b. Holcim (US) Inc.
 - c. Lafarge North America Inc.
 - d. Lehigh Hanson; HeidelbergCement Group.
 - e. Mutual Materials Co.
- C. Aggregate: ASTM C144 and as follows:
 - 1. For pointing mortar, use aggregate graded with 100 percent passing No. 16 (1.18-mm) sieve.

2. Colored Aggregates: Natural-colored sand or ground marble, granite, or other sound stone; of color necessary to produce required mortar color.
 - a. Match Architect's sample.

D. Water: Potable.

2.4 VENEER ANCHORS

- A. Size: Sufficient to extend at least halfway, but not less than 1-1/2 inches (38 mm), through stone masonry and with at least a 5/8-inch (16-mm) cover on exterior face.
- B. Adjustable Masonry-Veneer Anchors:
 1. General: Provide anchors that allow vertical adjustment but resist a 100-lbf (445-N) load in both tension and compression perpendicular to plane of wall without deforming or developing play in excess of 1/16 inch (1.5 mm).
 2. Fabricate sheet metal anchor sections and other sheet metal parts from [0.075-inch- (1.90-mm-) **thick steel sheet, galvanized after fabrication**] [0.105-inch- (2.66-mm-) **thick steel sheet, galvanized after fabrication**] [0.078-inch- (1.98-mm-) **thick, stainless steel sheet**] [0.109-inch- (2.78-mm-) **thick, stainless steel sheet**].
 3. Fabricate wire ties from [0.187-inch- (4.76-mm-)] [0.25-inch- (6.35-mm-)] diameter, [**hot-dip galvanized-steel**] [**stainless steel**] wire unless otherwise indicated.
 4. Fabricate wire connector sections from [0.187-inch- (4.76-mm-)] [0.25-inch- (6.35-mm-)] diameter, [**hot-dip galvanized-steel**] [**stainless steel**] wire.
 5. Contractor's Option: Unless otherwise indicated, provide any of the adjustable masonry-veneer anchors specified.

2.5 STONE TRIM ANCHORS

- A. Stone Trim Anchors: Units fabricated with tabs or dowels designed to engage kerfs or holes in stone trim units and holes for fasteners or postinstalled anchor bolts for fastening to substrates or framing as indicated.
 1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**] [**provide products by one of the following**] [**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:
 - a. Canaren Inc.
 - b. Heckmann Building Products, Inc.
 - c. Hohmann & Barnard, Inc.
 - d. Meadow Burke.
- B. Materials: Fabricate anchors from stainless steel, ASTM A240/A240M or ASTM A666, Type 304 Type 316. Fabricate dowels from stainless steel, ASTM A276, Type 304 Type 316.
- C. Fasteners for Stone Trim Anchors: Annealed stainless steel bolts, nuts, and washers; ASTM F593 (ASTM F738M) for bolts and ASTM F594 (ASTM F836M) for nuts, Alloy Group 1 (A1).

- D. Postinstalled Anchor Bolts for Fastening Stone Trim Anchors: Chemical anchors torque-controlled expansion anchors undercut anchors made from stainless steel components complying with ASTM F593 and ASTM F594, Alloy Group 1 or 2 (ASTM F738M and ASTM F836M, Alloy Group A1 or A4) for bolts and nuts; ASTM A666 or ASTM A276, Type 304 or Type 316, for anchors.

2.6 EMBEDDED FLASHING MATERIALS

- A. Metal Flashing: Provide metal flashing, where flashing is exposed or partly exposed and where indicated, complying with SMACNA's "Architectural Sheet Metal Manual" and as follows:
1. Copper: ASTM B370, Temper H00 or H01, cold-rolled copper sheet, 10-oz./sq. ft. (3-kg/sq. m) weight or 0.0135 inch (0.34 mm) thick for fully concealed flashing; 16-oz./sq. ft. (5-kg/sq. m) weight or 0.0216 inch (0.55 mm) thick elsewhere.
 2. Fabricate continuous flashings in sections 96 inches (2400 mm) long minimum, but not exceeding 12 feet (3.6 m). Provide splice plates at joints of formed, smooth metal flashing.
 3. Fabricate through-wall metal flashing embedded in masonry from **[stainless steel]** **[copper]**, with ribs at 3-inch (75-mm) intervals along length of flashing to provide an integral mortar bond.
 - a. Manufacturers: Subject to compliance with requirements, **[provide products by the following]** **[provide products by one of the following]** **[available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) Cheney Flashing Company.
 - 2) Hohmann & Barnard, Inc.
 - 3) Keystone Flashing Company, Inc.
 4. Fabricate through-wall flashing with snaplock receiver on exterior face where indicated to receive counterflashing.
 5. Fabricate through-wall flashing with drip edge **[where]** **[unless otherwise]** indicated. Fabricate by extending flashing 1/2 inch (13 mm) out from wall, with outer edge bent down 30 degrees **[and hemmed]**.
 6. Fabricate through-wall flashing with sealant stop **[where]** **[unless otherwise]** indicated. Fabricate by bending metal back on itself 3/4 inch (19 mm) at exterior wall face and down into joint 3/8 inch (10 mm) to form a stop for retaining sealant backer rod.
 7. Fabricate metal **[drip edges]** **[and]** **[sealant stops]** for ribbed metal flashing from plain metal flashing of same metal as ribbed flashing and extending at least 3 inches (75 mm) into wall with hemmed inner edge to receive ribbed flashing and form a hooked seam. Form hem on upper surface of metal so that completed seam will shed water.
 8. Metal Drip Edges: Fabricate from stainless steel. Extend at least 3 inches (75 mm) into wall and 1/2 inch (13 mm) out from wall, with outer edge bent down 30 degrees and hemmed.
 9. Metal Sealant Stops: Fabricate from stainless steel. Extend at least 3 inches (75 mm) into wall and out to exterior wall face. At exterior wall face, bend metal back on itself for 3/4 inch (19 mm) and down into joint 3/8 inch (10 mm) to form a stop for retaining sealant backer rod.
 10. Metal Expansion-Joint Strips: Fabricate from stainless steel copper to shapes indicated.
- B. Flexible Flashing: For flashing unexposed to the exterior, use the following unless otherwise indicated:

1. Copper-Laminated Flashing: 7-oz./sq. ft. (2-kg/sq. m) copper sheet bonded with asphalt between two layers of glass-fiber cloth. Use only where flashing is fully concealed in masonry.
 - a. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) Advanced Building Products Inc.
 - 2) Hohmann & Barnard, Inc.
 - 3) Phoenix Building Products.
 - 4) Sandell Manufacturing Co., Inc.
 - 5) Wire-Bond.
 - 6) York Manufacturing, Inc.
 - C. Application: Unless otherwise indicated, use the following:
 1. Where flashing is indicated to receive counterflashing, use metal flashing.
 2. Where flashing is indicated to be turned down at or beyond wall face, use metal flashing.
 3. Where flashing is partly exposed and is indicated to terminate at wall face, use metal flashing **[with a drip edge] [with a sealant stop] [or flexible flashing with a metal drip edge] [or elastomeric thermoplastic flashing with drip edge] [or flexible flashing with a metal sealant stop]**.
 4. Where flashing is fully concealed, use **[metal flashing] [or] [flexible flashing]**.
 - D. Solder and Sealants for Sheet Metal Flashings: As specified in Section 07 6200 "Sheet Metal Flashing and Trim."
 1. Solder for Stainless Steel: ASTM B32, Grade Sn60, with acid flux of type recommended by stainless steel sheet manufacturer.
 2. Solder for Copper: ASTM B32, Grade Sn50.
 3. Elastomeric Sealant: ASTM C920, chemically curing urethane polysulfide silicone sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
 - E. Adhesives, Primers, and Seam Tapes for Flexible Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.
- 2.7 MISCELLANEOUS MASONRY ACCESSORIES
- A. Compressible Filler: Premolded filler strips complying with ASTM D1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene urethane or PVC.
 - B. Cementitious Dampproofing for Limestone: Cementitious formulation recommended by ILI and nonstaining to stone, compatible with joint sealants, and noncorrosive to veneer anchors and attachments.
 - C. Asphalt Dampproofing: Cut-back asphalt complying with ASTM D4479/D4479M, Type I asphalt emulsion complying with ASTM D1227, Type III or Type IV.
 - D. Weep/Vent Products: Use one of the following unless otherwise indicated:

1. Mesh Weep Holes/Vents: Free-draining mesh; made from polyethylene strands, full width of head joint and 2 inches (50 mm) high by thickness of stone masonry; in color selected from manufacturer's standard.
 - a. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) CavClear/Archovations, Inc.
 - 2) Mortar Net Solutions.
 2. Aluminum Weep Holes/Vents: One-piece, L-shaped units made from painted sheet aluminum, designed to fit into head joint and consisting of vertical channel with louvers stamped in web and with top flap to keep mortar out of head joint.
 - a. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) Hohmann & Barnard, Inc.
 3. Vinyl Weep Holes/Vents: One-piece, offset, T-shaped units made from flexible, injection-molded PVC, designed to fit into head joint and consisting of louvered vertical leg, flexible wings to seal against ends of stone units, and top flap to keep mortar out of head joint; in color approved by Architect to match that of mortar.
 - a. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) Hohmann & Barnard, Inc.
 - 2) Williams Products, Inc.
 - 3) Wire-Bond.
- E. Cavity Drainage Material: Free-draining mesh, made from polymer strands that will not degrade within the wall cavity.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Advanced Building Products Inc.
 - b. CavClear/Archovations, Inc.
 - c. Mortar Net Solutions.
 2. Provide one of the following configurations:
 - a. Strips, full depth of cavity and 10 inches (250 mm) wide, with dovetail-shaped notches 7 inches (175 mm) deep that prevent mesh from being clogged with mortar droppings.
 - b. Strips, not less than [3/4 inch (19 mm)] [1-1/2 inches (38 mm)] thick and 10 inches (250 mm) wide, with dimpled surface designed to catch mortar droppings and prevent weep holes from being clogged with mortar.
 - c. Sheets or strips full depth of cavity and installed to full height of cavity.
 - d. Sheets or strips not less than [3/4 inch (19 mm)] [1 inch (25 mm)] **<Insert dimension>** thick and installed to full height of cavity with additional strips 4 inches (100 mm) high at weep holes and thick enough to fill entire depth of cavity and prevent weep holes from being clogged with mortar.

2.8 MASONRY CLEANERS

- A. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar and grout stains, efflorescence, and other new construction stains from stone masonry surfaces without discoloring or damaging masonry surfaces; expressly approved for intended use by cleaner manufacturer and stone producer.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Diedrich Technologies, Inc.; a Hohmann & Barnard company.
 - b. Dominion Restoration Products.
 - c. EaCo Chem, Inc.
 - d. Hydroclean; Hydrochemical Techniques, Inc.
 - e. PROSOCO, Inc.

2.9 FABRICATION

- A. General: Fabricate stone units in sizes and shapes required to comply with requirements indicated.
 - 1. For granite, comply with recommendations in NBGQA's "Specifications for Architectural Granite."
 - 2. For limestone, comply with recommendations in ILI's "Indiana Limestone Handbook."
- B. **[Cut] [Split] [Select]** stone to produce pieces of thickness, size, and shape indicated, including details on Drawings and pattern specified in "Setting Stone Masonry" Article.
 - 1. Shape stone specified to be laid in three-course, random range ashlar pattern with **[sawed] [split]** beds.
- C. Dress joints (bed and vertical) straight and at right angle to face unless otherwise indicated. Shape beds to fit supports.
- D. Cut and drill sinkages and holes in stone for anchors and supports.
- E. Carefully inspect stone at quarry or fabrication plant for compliance with requirements for appearance, material, and fabrication. Replace defective units before shipment.
 - 1. Clean sawed backs of stone to remove rust stains and iron particles.
- F. Thickness of Stone: Provide thickness indicated, but not less than the following:
 - 1. Thickness: 4 inches (100 mm) plus or minus [1/4 inch (6 mm)] [1/2 inch (13 mm)]. **[Thickness does not include projection of pitched faces.]**
- G. Finish exposed stone faces and edges to comply with requirements indicated for finish and to match approved samples **[and mockups]**.
 - 1. Finish: **[Split face] [Rock face (pitched face)] [Natural cleft] [Mixed split face and seam face] [Mixed split face, seam face, and rock face (pitched face)] [Smooth] [Sand rubbed] [As indicated].**
 - 2. Finish for Sills: **[Smooth] [Sand rubbed] [Split face with sand-rubbed washes] [Rock face (pitched face) with sand-rubbed washes] [Rock face (pitched face) with tooled (boasted) washes].**

3. Finish for Lintels: [Smooth] [Sand rubbed] [Split face] [Rock face (pitched face)].
4. Finish for Copings: [Smooth] [Sand rubbed] [Split face] [Rock face (pitched face), front and back; sand-rubbed top] [Rock face (pitched face), front and back; tooled (boasted) top].
 - a. Finish exposed ends of copings same as front and back faces.

2.10 MORTAR MIXES

- A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated.
 1. Do not use calcium chloride.
 2. Use [portland cement-lime] [masonry cement] [or] [mortar cement] mortar unless otherwise indicated.
 3. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.
 4. Mixing Pointing Mortar: Thoroughly mix cementitious and aggregate materials together before adding water. Then mix again, adding only enough water to produce a damp, unworkable mix that will retain its form when pressed into a ball. Maintain mortar in this dampened condition for one to two hours. Add remaining water in small portions until mortar reaches required consistency. Use mortar within 30 minutes of final mixing; do not retemper or use partially hardened material.
- B. Mortar for Stone Masonry: Comply with ASTM C270, Proportion Property Specification.
 1. Mortar for Setting Stone: Type S.
 2. Mortar for Pointing Stone: Type N.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces indicated to receive stone masonry, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of stone masonry.
- B. Examine substrate to verify that dovetail slots, inserts, reinforcement, veneer anchors, flashing, and other items installed in substrates and required for or extending into stone masonry are correctly installed.
- C. Examine wall framing, sheathing, and weather-resistant sheathing paper to verify that stud locations are suitable for spacing of veneer anchors and that installation will result in a weatherproof covering.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Accurately mark stud centerlines on face of weather-resistant sheathing paper before beginning stone installation.
- B. Coat concrete and unit masonry backup with asphalt dampproofing.

- C. Clean dirty or stained stone surfaces by removing soil, stains, and foreign materials before setting. Clean stone by thoroughly scrubbing with fiber brushes and then drenching with clear water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives.

3.3 INSTALLATION OF STONE MASONRY

- A. Perform necessary field cutting and trimming as stone is set.
 - 1. Use power saws to cut stone that is fabricated with saw-cut surfaces. Cut lines straight and true, with edges eased slightly to prevent snipping.
 - 2. Use hammer and chisel to split stone that is fabricated with split surfaces. Make edges straight and true, matching similar surfaces that were shop or quarry fabricated.
 - 3. Pitch face at field-split edges as needed to match stones that are not field split.
- B. Sort stone before it is placed in wall to remove stone that does not comply with requirements relating to aesthetic effects, physical properties, or fabrication, or that is otherwise unsuitable for intended use.
- C. Arrange stones in range ashlar pattern with course heights as indicated, **[uniform] [random]** lengths, and uniform joint widths, with offset between vertical joints as indicated.
- D. Arrange stones in broken-range ashlar pattern with uniform course heights, random lengths, and uniform joint widths.
- E. Arrange stones in three-course, random-range ashlar pattern with random course heights, random lengths (interrupted coursed), and uniform joint widths.
- F. Arrange stones in **[coursed] [uncoursed]** rubble pattern with joint widths within tolerances indicated. **[Insert small stones into spaces between larger stones as needed to produce joints as uniform in width as practical.]**
- G. Arrange stones with color and size variations uniformly dispersed for an evenly blended appearance.
- H. Install supports, fasteners, and other attachments indicated or necessary to secure stone masonry in place.
- I. Set stone accurately in locations indicated with edges and faces aligned according to established relationships and indicated tolerances.
- J. Install steel lintels where indicated. Provide minimum bearing of 8 inches (200 mm) at each jamb unless otherwise indicated.
- K. Maintain uniform joint widths except for variations due to different stone sizes and where minor variations are required to maintain bond alignment if any. Lay walls with joints not less than **[1/4 inch (6 mm)] [3/8 inch (10 mm)]** at narrowest points or more than **[3/8 inch (10 mm)] [1/2 inch (13 mm)] [5/8 inch (16 mm)] [1 inch (25 mm)] [1-1/2 inches (38 mm)]** at widest points.
- L. Provide sealant joints of widths and at locations indicated.
 - 1. Keep sealant joints free of mortar and other rigid materials.

2. Sealant joints are specified in Section 07 9200 "Joint Sealants."
- M. Install metal expansion strips in sealant joints at locations indicated. Build flanges of expansion strips into masonry by embedding in mortar between stone masonry and backup wythe. Lap each joint 4 inches (100 mm) in direction of water flow. Seal joints below grade and at junctures with horizontal expansion joints if any.
- N. Install embedded flashing[**and weep holes**] at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated.
1. At stud-framed walls, extend flashing through stone masonry, up sheathing face at least [8 inches (200 mm)] [12 inches (300 mm)] [16 inches (400 mm)], and behind weather barrier.
 2. At multiwythe masonry walls, including cavity walls, extend flashing through stone masonry, turned up a minimum of [4 inches (100 mm)] [8 inches (200 mm)] [12 inches (300 mm)] [16 inches (400 mm)], and extend into or through inner wythe to comply with requirements in Section 04 2000 "Unit Masonry."
 3. At concrete backing, extend flashing through stone masonry, turned up a minimum of [4 inches (100 mm)] [6 inches (150 mm)] [8 inches (200 mm)] [12 inches (300 mm)], and insert in reglet.[**Reglets are specified in Section 07 6200 "Sheet Metal Flashing and Trim."**]
 4. At lintels and shelf angles, extend flashing full length of angles but not less than 6 inches (150 mm) into masonry at each end.
 5. At sills, extend flashing not less than 4 inches (100 mm) at ends.
 6. At ends of head and sill flashing, turn up not less than 2 inches (50 mm) to form end dams.
 7. Interlock end joints of ribbed sheet metal flashing by overlapping ribs not less than 1-1/2 inches (38 mm) or as recommended by flashing manufacturer, and seal lap with elastomeric sealant complying with requirements in Section 07 9200 "Joint Sealants" for application indicated.
 8. Install metal drip edges sealant stops with ribbed sheet metal flashing by interlocking hemmed edges to form hooked seam. Seal seam with elastomeric sealant complying with requirements in Section 07 9200 "Joint Sealants" for application indicated.
 9. Extend sheet metal flashing 1/2 inch (13 mm) beyond masonry face at exterior, and turn flashing down to form a drip.
 10. Install metal drip edges beneath flexible flashing at exterior wall face. Stop flexible flashing 1/2 inch (13 mm) back from exterior wall face and adhere flexible flashing to top of metal drip edge.
 11. Install metal flashing termination beneath flexible flashing at exterior wall face. Stop flexible flashing 1/2 inch (13 mm) back from exterior wall face and adhere flexible flashing to top of metal flashing termination.
 12. Cut flexible flashing flush with wall face after completing masonry wall construction.
- O. Place weep holes and vents in joints where moisture may accumulate, including at base of cavity walls, above shelf angles, and at flashing.
1. Use wicking material round plastic tubing rectangular plastic tubing mesh weep holes/vents aluminum weep holes/vents vinyl weep holes/vents to form weep holes.
 2. Use wicking material to form weep holes above flashing in stone sills. Turn wicking down at lip of sill to be as inconspicuous as possible.
 3. Space weep holes [16 inches (400 mm)] [24 inches (600 mm)] o.c.
 4. Space weep holes formed from wicking material 16 inches (400 mm) o.c.
 5. Trim wicking material used in weep holes flush with exterior wall face after mortar has set.
 6. Place pea gravel in cavities as soon as practical to a height of not less than 2 inches (50 mm) above top of flashing, to maintain drainage.

7. Place cavity drainage material in cavities to comply with configuration requirements for cavity drainage material in "Miscellaneous Masonry Accessories" Article.
- P. Install vents in head joints at top of each continuous cavity at spacing indicated. Use round plastic tubing rectangular plastic tubing mesh weep holes/vents aluminum weep holes/vents vinyl weep holes/vents to form vents.
 1. Close cavities off vertically and horizontally with blocking in manner indicated. Install through-wall flashing and weep holes above horizontal blocking.
- Q. Coat limestone with cementitious dampproofing as follows:
 1. Stone at Grade: Beds, joints, and back surfaces to at least 12 inches (300 mm) above finish-grade elevations.
 2. Stone Extending below Grade: Beds, joints, back surfaces, and face surfaces below grade.
 3. Allow cementitious dampproofing formulations to cure before setting dampproofed stone. Do not damage or remove dampproofing in the course of handling and setting stone.

3.4 CONSTRUCTION TOLERANCES

- A. Variation from Plumb: For vertical lines and surfaces, do not exceed 1/4 inch in 10 feet (6 mm in 3 m), 3/8 inch in 20 feet (10 mm in 6 m), or 1/2 inch in 40 feet (13 mm in 12 m) or more. For external corners, expansion joints, control joints, and other conspicuous lines, do not exceed 1/4 inch in 20 feet (6 mm in 6 m) or 1/2 inch in 40 feet (13 mm in 12 m) or more.
- B. Variation from Level: For **bed joints and** lines of exposed lintels, sills, parapets, horizontal grooves, and other conspicuous lines, do not exceed 1/4 inch in 20 feet (6 mm in 6 m) or 1/2 inch in 40 feet (13 mm in 12 m) or more.
- C. Variation of Linear Building Line: For position shown in plan, do not exceed 1/2 inch in 20 feet (13 mm in 6 m) or 3/4 inch in 40 feet (19 mm in 12 m) or more.
- D. Measure variation from level, plumb, and position shown in plan as a variation of the average plane of each stone face from level, plumb, or dimensioned plane.
- E. Variation in Mortar-Joint Thickness: Do not vary from joint size range indicated.
- F. Variation in Plane between Adjacent Stones: Do not exceed one-half of tolerance specified for thickness of stone.

3.5 INSTALLATION OF ANCHORED STONE MASONRY

- A. Anchor stone masonry to concrete with corrugated-metal veneer anchors unless otherwise indicated. Secure anchors by inserting dovetailed ends into dovetail slots in concrete.
- B. Anchor stone masonry to unit masonry with veneer anchors unless otherwise indicated. Embed anchors in unit masonry mortar joints or grouted cells at a distance of at least one-half of unit masonry thickness.

- C. Anchor stone masonry to unit masonry with wire anchors unless otherwise indicated. Connect anchors to masonry joint reinforcement by inserting pintles into eyes of masonry joint reinforcement projecting from unit masonry.
- D. Anchor stone masonry to unit masonry with wire anchors unless otherwise indicated. Connect anchors to masonry joint reinforcement with vertical rods inserted through anchors and through eyes of masonry joint reinforcement projecting from unit masonry.
- E. Anchor stone masonry to unit masonry with **[adjustable, screw-attached]** **[seismic]** veneer anchors unless otherwise indicated. Fasten anchors to unit masonry with two screws.
- F. Anchor stone masonry to stud framing with **[adjustable, screw-attached]** **[seismic]** veneer anchors unless otherwise indicated. Fasten anchors through sheathing to framing with two screws.
- G. Anchor stone masonry to stud framing with screw-attached veneer anchors unless otherwise indicated.
- H. Anchor stone masonry to wood-stud framing with corrugated-metal veneer anchors unless otherwise indicated. Fasten anchors through sheathing to studs with corrosion-resistant roofing nails.
- I. Anchor stone masonry to wood-stud framing with wire anchors unless otherwise indicated. Fasten anchors through sheathing to wood studs with corrosion-resistant roofing nails.
- J. Anchor stone masonry to metal-stud framing with wire anchors unless otherwise indicated. Tie anchors to studs.
- K. Embed veneer anchors in mortar joints of stone masonry at least halfway, but not less than 1-1/2 inches (38 mm), through stone masonry and with at least a 5/8-inch (16-mm) cover on exterior face.
 - 1. Install continuous wire reinforcement in horizontal joints and attach to seismic veneer anchors as stone is set.
- L. Space anchors to provide not less than one anchor per 2 sq. ft. (0.2 sq. m) of wall area. Install additional anchors within 12 inches (300 mm) of openings, sealant joints, and perimeter at intervals not exceeding 12 inches (300 mm).
- M. Space anchors not more than 16 inches (400 mm) o.c. vertically and 24 inches (600 mm) o.c. horizontally. Install additional anchors within 12 inches (300 mm) of openings, sealant joints, and perimeter at intervals not exceeding 12 inches (300 mm).
- N. Space anchors not more than 18 inches (450 mm) o.c. vertically and 32 inches (800 mm) o.c. horizontally, with not less than one anchor per 2.67 sq. ft. (0.25 sq. m) of wall area. Install additional anchors within 12 inches (300 mm) of openings, sealant joints, and perimeter at intervals not exceeding 12 inches (300 mm).

- O. Anchor stone trim with stone trim anchors where indicated. Install anchors by fastening to substrate and inserting tabs and dowels into kerfs and holes in stone units. Provide compressible filler in ends of dowel holes and bottoms of kerfs to prevent end bearing of dowels and anchor tabs on stone. Fill remainder of anchor holes and kerfs with mortar.
- P. Set stone in full bed of mortar with full head joints unless otherwise indicated. Build anchors into mortar joints as stone is set.
- Q. Fill **[collar joint]** **[space between back of stone masonry and weather-resistant sheathing paper]** with mortar as stone is set.
- R. Provide **[1-inch (25-mm)]** **[2-inch (50-mm)]** cavity between stone masonry and backup construction unless otherwise indicated. Keep cavity free of mortar droppings and debris.
 - 1. Slope beds toward cavity to minimize mortar protrusions into cavity.
 - 2. Do not attempt to trowel or remove mortar fins protruding into cavity.
- S. Rake out joints for pointing with mortar to depth of not less than **[1/2 inch (13 mm)]** **[3/4 inch (19 mm)]** before setting mortar has hardened. Rake joints to uniform depths with square bottoms and clean sides.

3.6 POINTING

- A. Prepare stone-joint surfaces for pointing with mortar by removing dust and mortar particles. Where setting mortar was removed to depths greater than surrounding areas, apply pointing mortar in layers not more than 3/8 inch (10 mm) deep until a uniform depth is formed.
- B. Point stone joints by placing and compacting pointing mortar in layers of not more than 3/8 inch (10 mm) deep. Compact each layer thoroughly and allow to it become thumbprint hard before applying next layer.
- C. Tool joints, when pointing mortar is thumbprint hard, with a smooth jointing tool to produce the following joint profile:
 - 1. Joint Profile: **[Concave]** **[Smooth, flat face slightly below edges of stone]** **[Smooth, flat face recessed 1/4 inch (6 mm) below edges of stone (raked joint)]** **[Flush, with a 3/8-inch (10-mm) half-round raised bead in middle of joint]** **[As indicated]**.

3.7 ADJUSTING AND CLEANING

- A. Remove and replace stone masonry of the following description:
 - 1. Broken, chipped, stained, or otherwise damaged stone. Stone may be repaired if methods and results are approved by Architect.
 - 2. Defective joints.
 - 3. Stone masonry not matching approved samples and mockups.
 - 4. Stone masonry not complying with other requirements indicated.
- B. Replace in a manner that results in stone masonry matching approved samples and mockups, complying with other requirements, and showing no evidence of replacement.
- C. In-Progress Cleaning: Clean stone masonry as work progresses. Remove mortar fins and smears before tooling joints.

- D. Final Cleaning: After mortar is thoroughly set and cured, clean stone masonry as follows:
1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
 2. Test cleaning methods on mockup; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before cleaning stone masonry.
 3. Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent, polyethylene film, or waterproof masking tape.
 4. Wet wall surfaces with water before applying cleaner; remove cleaner promptly by rinsing thoroughly with clear water.
 5. Clean stone masonry by bucket and brush hand-cleaning method described in BIA Technical Note No. 20, Revised II, using job-mixed detergent solution.
 6. Clean stone masonry with proprietary acidic cleaner applied according to manufacturer's written instructions.
 7. Clean limestone masonry to comply with recommendations in ILI's "Indiana Limestone Handbook."

3.8 EXCESS MATERIALS AND WASTE

- A. Excess Stone: Stack excess stone where directed by Owner for Owner's use.
- B. Disposal as Fill Material: Dispose of clean masonry waste, including mortar and excess or soil-contaminated sand, by crushing and mixing with fill material as fill is placed.
1. Crush masonry waste to less than 4 inches (100 mm) in greatest dimension.
 2. Mix masonry waste with at least 2 parts of specified fill material for each part of masonry waste. Fill material is specified in Section 31 2000 "Earth Moving."
 3. Do not dispose of masonry waste as fill within 18 inches (450 mm) of finished grade.
- C. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above, and other waste, and legally dispose of off Owner's property.

END OF SECTION

SECTION 05 5000 - METAL FABRICATIONS**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
 - 1. Metal bollards.
- B. Products furnished, but not installed, under this Section include the following:
 - 1. Loose steel lintels.
 - 2. Steel weld plates and angles for casting into concrete for applications where they are not specified in other Sections.
 - 3. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.
- C. Related Requirements:
 - 1. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.
 - 2. Section 04 2000 "Unit Masonry" for installing loose lintels, anchor bolts, and other items built into unit masonry.
 - 3. Section 05 1200 "Structural Steel Framing" for steel framing, supports, elevator machine beams, hoist beams, divider beams, door frames, and other steel items attached to the structural-steel framing.

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of metal fabrications that are anchored to or that receive other work. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.3 ACTION SUBMITTALS

- A. Product Data:
 - 1. Nonslip aggregates and nonslip-aggregate surface finishes.
 - 2. Fasteners.
 - 3. Metal bollards.
- B. Shop Drawings: Show fabrication and installation details. **[Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.]** Provide Shop Drawings for the following:
 - 1. Elevator machine beams, hoist beams, and divider beams.
 - 2. Metal bollards.
 - 3. Loose steel lintels.

- C. Samples for Verification: For each type and finish of extruded **[nosing]** **[and]** **[tread]**.
- D. Delegated-Design Submittal: Refer to Section 01 3573 "Delegated Design Requirements and Procedures" for delegated design submittal procedures and requirements.
 - 1. Provide delegated-design submittals for the following:
 - a. Slotted channel framing.
 - b. Ladders.
 - c. Alternating tread devices.
 - d. Vehicular barrier cable.
- E. Sustainable Design Submittals:
 - 1. Environmental product declaration.
 - 2. Health Product Declaration (HPD): For each product.
 - 3. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

1.4 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following welding codes:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."
- B. Provide the following upon request:
 - 1. Mill Certificates: Signed by stainless steel manufacturers, certifying that products furnished comply with requirements.
 - 2. Welding certificates.
 - 3. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
 - 4. Research Reports: For post-installed anchors.
 - 5. Delegated design engineer qualifications.

1.5 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls, floor slabs, decks, and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a registered design professional, as defined in Section 01 3573 "Delegated Design Requirements and Procedures" to design **[slotted channel framing]** **[ladders]** **[alternating tread devices]** **[and]** **[vehicular barrier cable systems]**.
 - 1. Material properties indicated in this Section shall be considered as minimum properties.
- B. Structural Performance of Aluminum Ladders: Ladders**[, including landings,]** are to withstand the effects of loads and stresses within limits and under conditions specified in ANSI/ASC A14.3.

- C. Structural Performance of Alternating Tread Devices: Alternating tread devices are to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
1. Uniform Load: 100 lbf/sq. ft. (4.79 kN/sq. m).
 2. Concentrated Load: 300 lbf (1.33 kN) applied on an area of 4 sq. in. (2580 sq. mm).
 3. Uniform and concentrated loads need not be assumed to act concurrently.
 4. Alternating Tread Device Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
 5. Comply with applicable railing loadings in Section 05 5213 "Pipe and Tube Railings."
- D. Vehicular Barrier Cable Systems: Design vehicular barrier cable systems to resist a single [6000-lbf (28.7-kN)] **<Insert value>** service load and [10,000-lbf (47.9-kN)] **<Insert load>** ultimate load applied horizontally in any direction to the cable system, with anchorages or attachments capable of transferring this load to the structure. Limit deflection to 18 inches (457 mm). Design is to assume loads are applied at a height of [18 inches (457 mm)] **<Insert height>** above the floor or ramp surface on an area not to exceed 1 sq. ft. (0.09 sq. m).
- E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.2 METALS

- A. Recycled Content: Provide manufacturer documentation for recycled content, indicating postconsumer and preconsumer recycled content.
- B. Regional Materials: Products shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.
- C. Steel Plates, Shapes, and Bars: ASTM A36/A36M.

2.3 FASTENERS

- A. General: Unless otherwise indicated, provide stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
1. Provide stainless steel fasteners for fastening .
 2. Provide bronze fasteners for fastening bronze.
- B. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A307, Grade A (ISO 898-1, Property Class 4.6); with hex nuts, ASTM A563 (ASTM A563M); and, where indicated, flat washers.
- C. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, ASTM A563 (ASTM A563M); and, where indicated, flat washers.
1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.

- D. Cast-in-Place Anchors in Concrete: Either threaded or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A47/A47M malleable iron or ASTM A27/A27M cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F2329/F2329M.

2.4 MISCELLANEOUS MATERIALS

- A. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - 1. Use primer that contains pigments that make it easily distinguishable from zinc-rich primer.
- B. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

2.5 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- D. Form exposed work with accurate angles and surfaces and straight edges.
- E. Weld corners and seams continuously to comply with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing[**and contour of welded surface matches that of adjacent surface**].
- F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.
- G. Fabricate seams and other connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.

- I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.
- J. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 1/8 by 1-1/2 inches (3.2 by 38 mm), with a minimum 6-inch (150-mm) embedment and 2-inch (50-mm) hook, not less than 8 inches (200 mm) from ends and corners of units and 24 inches (600 mm) o.c., unless otherwise indicated.

2.6 METAL BOLLARDS

- A. Fabricate metal bollards from Schedule 40 steel pipe steel shapes, as indicated.
 - 1. Cap bollards with 1/4-inch- (6.4-mm-) thick, steel plate with domed top.
 - 2. Where bollards are indicated to receive controls for door operators, provide cutouts for controls and holes for wire.
 - 3. Where bollards are indicated to receive light fixtures, provide cutouts for fixtures and holes for wire.
- B. Fabricate sleeves for bollard anchorage from steel or stainless steel pipe with 1/4-inch- (6.4-mm-) thick, steel or stainless steel plate welded to bottom of sleeve. Make sleeves not less than 8 inches (200 mm) deep and 3/4 inch (19 mm) larger than OD of bollard.
- C. Prime steel bollards with primer specified in Section 09 9600 "High-Performance Coatings."
- D. Provide plastic protective sleeves for all pipe bollards. Unless otherwise shown, comply with the following:
 - 1. Low density polyethylene with UV inhibitors and:
 - a. Integral domed top.
 - b. Sleeve wall thickness: Minimum 1/4 inches (6 mm).
 - c. Circular in cross-section.
 - 2. Length of sleeve, not including domed top: Not more than 2 inches (50 mm) longer than height of bollard above grade or floor.
 - 3. Include manufacturer's recommended mounting tape or other materials.
 - 4. Manufacturer: Ideal Shield or approved comparable product.

2.7 LOOSE STEEL LINTELS

- A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.
- B. Size loose lintels to provide bearing length at each side of openings equal to one-twelfth of clear span, but not less than 8 inches (200 mm) unless otherwise indicated.
- C. Galvanize[**and prime**] loose steel lintels located in exterior walls.
- D. Prime loose steel lintels located in exterior walls with primer specified in Section 09 9600 "High-Performance Coatings."

2.8 STEEL WELD PLATES AND ANGLES

- A. Provide steel weld plates and angles not specified in other Sections, for items supported from concrete construction as needed to complete the Work. Provide each unit with no fewer than two integrally welded steel strap anchors for embedding in concrete.

2.9 GENERAL FINISH REQUIREMENTS

- A. Finish metal fabrications after assembly.
- B. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.10 STEEL AND IRON FINISHES

- A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
 - 1. Hot-dip galvanize steel fabrications [**exposed to weather**][**where indicated**].
 - 2. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- B. Preparation for Shop Priming Galvanized Items: After galvanizing, thoroughly clean galvanized surfaces of grease, dirt, oil, flux, and other foreign matter, and treat with metallic phosphate process.
- C. Shop prime iron and steel items[**not indicated to be galvanized**] unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.
 - 1. Shop prime with [**universal shop primer**] [**primers specified in Section 09 9113 "Exterior Painting"**] [**primers specified in Section 09 9123 "Interior Painting"**] unless [**zinc-rich primer is**] [**primers specified in Section 09 9600 "High-Performance Coatings"** are] indicated.
- D. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
 - 1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
- B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

- C. Field Welding: Comply with the following requirements:
1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.
- E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- F. Corrosion Protection: Coat concealed surfaces of aluminum that come into contact with grout, concrete, masonry, wood, or dissimilar metals with the following:
1. Cast Aluminum: Heavy coat of bituminous paint.
 2. Extruded Aluminum: Two coats of clear lacquer.

3.2 INSTALLATION OF METAL BOLLARDS

- A. Fill metal-capped bollards solidly with concrete and allow concrete to cure seven days before installing.
1. Do not fill removable bollards with concrete.
- B. Anchor bollards to existing construction with **[expansion anchors] [anchor bolts] [through bolts]**. Provide four 3/4-inch (19-mm) bolts at each bollard unless otherwise indicated.
1. Embed anchor bolts at least 4 inches (100 mm) in concrete.
- C. Anchor bollards in concrete **[with pipe sleeves preset and anchored into concrete] [in formed or core-drilled holes not less than 42 inches (1050 mm) deep and 3/4 inch (19 mm) larger than OD of bollard]**. Fill annular space around bollard solidly with shrinkage-resistant grout; mixed and placed to comply with grout manufacturer's written instructions. Slope grout up approximately 1/8 inch (3 mm) toward bollard.
- D. Anchor bollards in place with concrete footings. Center and align bollards in holes 3 inches (75 mm) above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace bollards in position until concrete has cured.
- E. Anchor internal sleeves for removable bollards in **[concrete by inserting in pipe sleeves preset into concrete] [formed or core-drilled holes not less than 42 inches (1050 mm) deep and 3/4 inch (19 mm) larger than OD of sleeve]**. Fill annular space around internal sleeves solidly with shrinkage-resistant grout; mixed and placed to comply with grout manufacturer's written instructions. Slope grout up approximately 1/8 inch (3 mm) toward internal sleeve.

- F. Place removable bollards over internal sleeves and secure with 3/4-inch (19-mm) machine bolts and nuts. After tightening nuts, drill holes in bolts for inserting padlocks. Owner furnishes padlocks.
- G. Fill bollards solidly with concrete, mounding top surface to shed water.
 - 1. Do not fill removable bollards with concrete.

3.3 REPAIRS

- A. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum 2.0-mil (0.05-mm) dry film thickness.
 - 2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in [Section 09 9113 "Exterior Painting."] [Section 09 9123 "Interior Painting."]
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

END OF SECTION

SECTION 05 5213 - PIPE AND TUBE RAILINGS**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
 - 1. Steel railings.
 - 2. Aluminum railings.
 - 3. Stainless steel railings.
- B. Related Requirements:
 - 1. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.
 - 2. Section 05 5113 "Metal Pan Stairs" for steel tube railings associated with metal pan stairs.
 - 3. Section 05 7300 "Decorative Metal Railings" for ornamental railings fabricated from pipes and tubes and guard-infill metals.
 - 4. Section 09 6900 "Access Flooring" for railings included with access flooring.

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.3 ACTION SUBMITTALS

- A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal. Ensure compliance with requirements included in Section 01 3300 "Submittal Procedures".
- B. Product Data:
 - 1. Manufacturer's product lines of mechanically connected railings.
 - 2. Expanded metal infill panels.
 - 3. Perforated metal infill panels.
 - 4. Woven-wire mesh infill panels.
 - 5. Fasteners.
 - 6. Post-installed anchors.
 - 7. Handrail brackets.
 - 8. Shop primer.
 - 9. Intermediate coats and topcoats.
 - 10. Bituminous paint.
 - 11. Nonshrink, nonmetallic grout.
 - 12. Anchoring cement.

- 13. Metal finishes.
- 14. Paint products.

C. Sustainable Design Submittals:

D. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

E. Samples for Initial Selection: For products involving selection of color, texture, or design, including mechanical finishes.

F. Samples for Verification: For each type of exposed finish required.

- 1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters, including finish.
- 2. Fittings and brackets.
- 3. Assembled Sample of railing system, made from full-size components, including top rail, post, handrail, and infill. Sample need not be full height.
 - a. Show method of connecting and finishing members at intersections.

G. Delegated-Design Submittal: Refer to Section 01 3573 "Delegated Design Requirements and Procedures" for delegated design submittal procedures and requirements.

- 1. Provide delegated-design submittals for railings.

1.4 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:

- 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
- 3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

B. Provide the following upon request:

- 1. Qualification Data: For delegated design professional engineer.
- 2. Welding certificates.
- 3. Mill Certificates: Signed by manufacturers of stainless steel products, certifying that products furnished comply with requirements.
- 4. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
- 5. Product Test Reports: For tests on railings performed by a qualified testing agency, in accordance with ASTM E894 and ASTM E935.
- 6. Research Reports: For post-installed anchors, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect mechanical finishes on exposed surfaces of railings from damage by applying a strippable, temporary protective covering before shipping.

1.6 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a registered design professional, as defined in Section 01 3573 "Delegated Design Requirements and Procedures" to design railings, including attachment to building construction.
 - 1. Material properties indicated in this Section shall be considered as minimum properties.
- B. Structural Performance: Railings, including attachment to building construction, withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Handrails and Top Rails of Guards:
 - a. Uniform load of 50 lbf/ ft. (0.73 kN/m) applied in any direction.
 - b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 - 2. Infill of Guards:
 - a. Concentrated load of 50 lbf (0.22 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
 - b. Infill load and other loads need not be assumed to act concurrently.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.2 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails unless otherwise indicated.
 - 1. Provide type of bracket with flange tapped for concealed anchorage to threaded hanger bolt and that provides 1-1/2-inch (38-mm) clearance from inside face of handrail to finished wall surface.

2.3 STEEL RAILINGS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Hollaender Mfg. Co.
 - 2. Kee Safety, Inc.
 - 3. R & B Wagner, Inc.
 - 4. Trex Commercial Products, Inc.
 - 5. TrueNorth Steel.
 - 6. Tuttle, a Dant Clayton Division.
 - 7. VIVA Railings, LLC.
- B. Source Limitations: Obtain each type of railing from single source from single manufacturer.

- C. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
 - D. Tubing: ASTM A500/A500M (cold formed) ASTM A513/A513M, Type 5.
 - E. Pipe: ASTM A53/A53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
 - 1. Provide galvanized finish for exterior installations and where indicated.
 - F. Plates, Shapes, and Bars: ASTM A36/A36M.
 - G. Cast Iron Fittings: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.
 - H. Expanded Metal Infill Panels: ASTM F1267, Type I (expanded) Type II (expanded and flattened), Class 1 (uncoated).
 - 1. Style Designation: 3/4 number 13 1-1/2 number 10 Insert designation.
 - I. Perforated-Metal Infill Panels:
 - 1. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, or hot-rolled steel sheet, ASTM A1011/A1011M, commercial steel, Type B, 0.060 inch (1.52 mm) Insert dimension thick, with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows Insert description.
 - a. Basis-of-Design Product: Provide product with perforations matching product indicated on Drawings.
 - 2. Galvanized-Steel Sheet: ASTM A653/A653M, G90 (Z275) coating, commercial steel Type B, 0.064 inch (1.63 mm) Insert dimension thick, with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows with 1/8-by-1-inch (3.2-by-25.4-mm) round end slotted holes in staggered rows Insert description.
 - a. Basis-of-Design Product: Provide product with perforations matching product indicated on Drawings.
 - J. Woven-Wire Mesh Infill Panels: Intermediate-crimp, diamond square pattern, 2-inch (50-mm) woven-wire mesh, made from 0.134-inch- (3.42-mm-) diameter steel wire complying with ASTM A510 (ASTM A510M).
 - 1. Basis-of-Design Product: Provide product with crimp pattern matching product indicated on Drawings.
- 2.4 ALUMINUM RAILINGS
- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. ATR Technologies, Inc.
 - 2. AZEK Building Products, Inc.
 - 3. Blum, Julius & Co., Inc.
 - 4. CraneVeyor Corp.
 - 5. Fixfast USA.
 - 6. Hollaender Mfg. Co.
 - 7. Kane Innovations, Inc.
 - 8. Kee Industrial Products, Inc.
 - 9. Moultrie Manufacturing Corporation.

10. R & B Wagner, Inc.
11. Superior Aluminum Products, Inc.
12. Thompson Fabricating, LLC.
13. Trex Commercial Products, Inc.
14. Tri Tech, Inc.
15. Tubular Specialties Manufacturing, Inc.
16. Tuttle, a Dant Clayton Division.

- B. Source Limitations: Obtain each type of railing from single source from single manufacturer.
- C. Aluminum, General: Provide alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability properties of alloy and temper designated below for each aluminum form required.
- D. Extruded Bars and Tubing: ASTM B221 (ASTM B221M), Alloy 6063-T5/T52.
- E. Extruded Structural Pipe and Round Tubing: ASTM B429/B429M, Alloy 6063-T6.
1. Provide Standard Weight (Schedule 40) pipe unless otherwise indicated.
- F. Drawn Seamless Tubing: ASTM B210/B210M, Alloy 6063-T832.
- G. Plate and Sheet: ASTM B209 (ASTM B209M), Alloy 6061-T6.
- H. Die and Hand Forgings: ASTM B247 (ASTM B247M), Alloy 6061-T6.
- I. Castings: ASTM B26/B26M, Alloy A356.0-T6.
- J. Perforated Metal Infill Panels: Aluminum sheet, ASTM B209 (ASTM B209M), Alloy 6061-T6, 0.063 inch (1.60 mm) Insert dimension thick, with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows Insert description.
1. Basis-of-Design Product: Provide product with perforations matching product indicated on Drawings.
- K. Woven-Wire Mesh Infill Panels: Intermediate-crimp, diamond square pattern, 2-inch (50-mm) woven-wire mesh, made from 0.162-inch- (4.1-mm-) diameter aluminum wire complying with ASTM B211/B211M, Alloy 6061-T94.
1. Basis-of-Design Product: Provide product with crimp pattern matching product indicated on Drawings.

2.5 STAINLESS STEEL RAILINGS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Blum, Julius & Co., Inc.
 2. CraneVeyor Corp.
 3. Kane Innovations, Inc.
 4. R & B Wagner, Inc.
 5. Stainless Fabricators, Inc.
 6. Trex Commercial Products, Inc.
 7. Tri Tech, Inc.
 8. Tubular Specialties Manufacturing, Inc.

9. Tuttle, a Dant Clayton Division.
 10. VIVA Railings, LLC.
- B. Source Limitations: Obtain each type of railing from single source from single manufacturer.
- C. Tubing: ASTM A554, Grade MT 304 Grade MT 316L.
- D. Pipe: ASTM A312/A312M, Grade TP 304 Grade TP 316L.
- E. Castings: ASTM A743/A743M, Grade CF 8 or CF 20 Grade CF 8M or CF 3M.
- F. Plate and Sheet: ASTM A240/A240M or ASTM A666, Type 304 Type 316L.
- G. Expanded Metal Infill Panels: ASTM F1267, Type I (expanded) Type II (expanded and flattened), Class 3 (corrosion-resistant steel), made from stainless steel sheet, ASTM A240/A240M or ASTM A666, Type 304 Type 316.
1. Style Designation: 3/4 number 13 1-1/2 number 10 Insert designation.
- H. Perforated Metal Infill Panels: Stainless steel sheet, ASTM A240/A240M or ASTM A666, Type 304 Type 316L, 0.062 inch (1.59 mm) Insert dimension thick, with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows Insert description.
1. Basis-of-Design Product: Provide product with perforations matching product indicated on Drawings.
- I. Woven-Wire Mesh Infill Panels: Intermediate-crimp, diamond square pattern, 2-inch (50-mm) woven-wire mesh, made from 0.141-inch- (3.57-mm-) diameter stainless steel wire complying with ASTM A580/A580M, Type 304 Type 316.
1. Basis-of-Design Product: Provide product with crimp pattern matching product indicated on Drawings.
- 2.6 FASTENERS
- A. Fastener Materials:
1. Ungalvanized-Steel Railing Components: Plated steel fasteners complying with ASTM F1941/F1941M, Class Fe/Zn 5 for zinc coating.
 2. Hot-Dip Galvanized Railing Components: Type 304 stainless steel or hot-dip zinc-coated steel fasteners complying with ASTM A153/A153M or ASTM F2329/F2329M for zinc coating.
 3. Aluminum Railing Components: Type 304 Type 316 stainless steel fasteners.
 4. Stainless Steel Railing Components: Type 304 Type 316 stainless steel fasteners.
 5. Finish exposed fasteners to match appearance, including color and texture, of railings.
- B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction and capable of withstanding design loads.
- C. Fasteners for Interconnecting Railing Components:
1. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless otherwise indicated.
 2. Provide Phillips tamper-resistant square or hex socket flat-head machine screws for exposed fasteners unless otherwise indicated.

- D. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 or ICC-ES AC308.
 - 1. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
 - 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 (A1) Group 2 (A4) stainless steel bolts, ASTM F593, and nuts, ASTM F594.

2.7 MISCELLANEOUS MATERIALS

- A. Handrail Brackets: Cast iron Cast aluminum, Cast stainless steel, Cast nickel-silver, center of handrail 2-1/2 inches (63.5 mm) 3-1/8 inches (79.4 mm) Insert dimension from face of railing wall.
- B. Welding Rods and Bare Electrodes: Select in accordance with AWS specifications for metal alloy welded.
 - 1. For aluminum stainless steel railings, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.
- C. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
- D. Galvanizing Repair Paint: High-zinc-dust-content paint, complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- E. Shop Primers: Provide primers that comply with Section 09 9113 "Exterior Painting." Section 09 9123 "Interior Painting." Section 09 9600 "High-Performance Coatings."
- F. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- G. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
- H. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.
- I. Intermediate Coats and Topcoats: Provide products that comply with Section 09 9113 "Exterior Painting." Section 09 9123 "Interior Painting." Section 09 9600 "High-Performance Coatings."
- J. Epoxy Intermediate Coat: Complying with MPI #77 and compatible with primer and topcoat.
- K. Polyurethane Topcoat: Complying with MPI #72 and compatible with undercoat.
- L. Bituminous Paint: Cold-applied asphalt emulsion, complying with ASTM D1187/D1187M.
- M. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout, complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

- N. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
1. Water-Resistant Product: At exterior locations where indicated on Drawings, provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.8 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.
- B. Shop assemble railings to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations.
1. Clearly mark units for reassembly and coordinated installation.
 2. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately.
1. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated.
 2. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that are exposed to weather in a manner that excludes water.
1. Provide weep holes where water may accumulate.
 2. Locate weep holes in inconspicuous locations.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Connections: Fabricate railings with welded connections unless otherwise indicated.
- H. Gates: Form gates from steel tube of same size and shape as top rails, with infill to match guards. Provide with spring hinges for fastening to wall and overlapping stop with rubber bumper to prevent gate from opening in direction opposite egress.
- I. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove flux immediately.
 4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Finish #1 welds; ornamental quality with no evidence of a welded joint.
- J. Welded Connections for Aluminum Pipe: Fabricate railings to interconnect members with concealed internal welds that eliminate surface grinding, using manufacturer's standard system of sleeve and socket fittings.

- K. Nonwelded Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
1. Fabricate splice joints for field connection, using an epoxy structural adhesive, if this is manufacturer's standard splicing method.
- L. Form changes in direction as follows:
1. As detailed.
 2. By bending or by inserting prefabricated elbow fittings.
 3. By flush bends or by inserting prefabricated flush-elbow fittings.
 4. By radius bends of radius indicated or by inserting prefabricated elbow fittings of radius indicated.
 5. By bending to smallest radius that will not result in distortion of railing member.
- M. Bend members in jigs to produce uniform curvature for each configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- N. Close exposed ends of hollow railing members with prefabricated cap and end fittings of same metal and finish as railings.
- O. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch (6 mm) or less.
- P. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.
- Q. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work.
1. Fabricate anchorage devices capable of withstanding loads imposed by railings.
 2. Coordinate anchorage devices with supporting structure.
- R. For railing posts set in concrete, provide stainless steel sleeves not less than 6 inches (150 mm) long with inside dimensions not less than 1/2 inch (13 mm) greater than outside dimensions of post, with metal plate forming bottom closure.
- S. For removable railing posts, fabricate slip-fit sockets from stainless steel tube or pipe whose ID is sized for a close fit with posts; limit movement of post without lateral load, measured at top, to not more than one-fortieth of post height.
1. Provide socket covers designed and fabricated to resist being dislodged.
 2. Provide chain with eye, snap hook, and staple across gaps formed by removable railing sections at locations indicated. Fabricate from same metal as railings.
- T. Expanded-Metal Infill Panels: Fabricate infill panels from expanded-metal sheet of same metal as railings.
1. Edge panels with U-shaped channels made from metal sheet, of same metal as expanded metal and not less than 0.043 inch (1.1 mm) thick.
 2. Orient expanded metal with long dimension of diamonds perpendicular to top rail.

- U. Perforated-Metal Infill Panels: Fabricate infill panels from perforated metal made from same metal as railings in which they are installed.
 - 1. Edge panels with U-shaped channels made from metal sheet, of same metal as perforated metal and not less than 0.043 inch (1.1 mm) thick.
 - 2. Orient perforated metal with pattern as indicated on Drawings.
- V. Woven-Wire Mesh Infill Panels: Fabricate infill panels from woven-wire mesh crimped into 1-by-1/2-by-1/8-inch (25-by-13-by-3-mm) metal channel frames.
 - 1. Fabricate wire mesh and frames from same metal as railings in which they are installed.
 - 2. Orient wire mesh with as indicated on Drawings.
- W. Toe Boards: Where indicated, provide toe boards at railings around openings and at edge of open-sided floors and platforms. Fabricate to dimensions and details indicated.

2.9 STEEL AND IRON FINISHES

- A. Galvanized Railings:
 - 1. Hot-dip galvanize exterior steel railings, including hardware, after fabrication.
 - 2. Comply with ASTM A123/A123M for hot-dip galvanized railings.
 - 3. Comply with ASTM A153/A153M for hot-dip galvanized hardware.
 - 4. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 - 5. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- B. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.
- C. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner and as follows.
 - 1. Comply with SSPC-SP 16.
- D. For nongalvanized-steel railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves; however, hot-dip galvanize anchors to be embedded in exterior concrete or masonry.
- E. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with SSPC-SP 6/NACE No. 3. SSPC-SP 3. requirements indicated below:
 - 1. Exterior Railings: SSPC-SP 6/NACE No. 3.
 - 2. Railings Indicated To Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3.
 - 3. Railings Indicated To Receive Primers Specified in Section 09 9600 "High-Performance Coatings": SSPC-SP 6/NACE No. 3.
 - 4. Other Railings: SSPC-SP 3.
- F. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1 for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.
 - 1. Shop prime uncoated railings with primers specified in Section 09 9113 "Exterior Painting" and Section 09 9123 "Interior Painting" unless primers specified in Section 09 9600 "High-Performance Coatings" are indicated.

2. Do not apply primer to galvanized surfaces.
- G. Shop-Painted Finish: Comply with Section 09 9113 "Exterior Painting." Section 09 9600 "High-Performance Coatings."
1. Color: As indicated by manufacturer's designations Match Architect's sample As selected by Architect from manufacturer's full range.
- H. High-Performance Coating: Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1 for shop painting. Apply at spreading rates recommended by coating manufacturer.
1. Color: As indicated by manufacturer's designations Match Architect's sample As selected by Architect from manufacturer's full range.
- 2.10 ALUMINUM FINISHES
- A. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- B. Mill Finish: AA-M12, nonspecular as fabricated.
- C. Clear Anodic Finish: AAMA 611, AA-M12C22A41 AA-M12C22A31.
- D. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44 AA-M12C22A32/A34.
1. Color: As selected by Architect from full range of industry colors and color densities.
- E. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: As indicated by manufacturer's designations Match Architect's sample As selected by Architect from manufacturer's full range Insert color and gloss.
- F. High-Performance Organic Finish, Two-Coat Polyvinylidene Fluoride (PVDF): Fluoropolymer finish complying with AAMA 2604 AAMA 2605 and containing not less than 50 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions .
1. Color and Gloss: As indicated by manufacturer's designations Match Architect's sample As selected by Architect from manufacturer's full range Insert color and gloss.
- 2.11 STAINLESS STEEL FINISHES
- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
1. Run grain with long dimension of each piece.
 2. When polishing is completed, passivate and rinse surfaces.
 3. Remove embedded foreign matter and leave surfaces chemically clean.

- C. Stainless Steel Pipe and Tubing Finishes:
 - 1. 180-Grit Polished Finish: Uniform, directionally textured finish.
- D. Stainless Steel Sheet and Plate Finishes:
 - 1. Directional Satin Finish: ASTM A480/A480, No. 4.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements are clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION, GENERAL

- A. Perform cutting, drilling, and fitting required for installing railings.
 - 1. Fit exposed connections together to form tight, hairline joints.
 - 2. Install railings level, plumb, square, true to line; without distortion, warp, or rack.
 - 3. Set railings accurately in location, alignment, and elevation; measured from established lines and levels.
 - 4. Do not weld, cut, or abrade surfaces of railing components that are coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 - 5. Set posts plumb within a tolerance of 1/16 inch in 3 feet (2 mm in 1 m).
 - 6. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet (6 mm in 3.5 m).
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
 - 1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- C. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- D. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

- A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws, using plastic cement filler colored to match finish of railings.
- B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article, whether welding is performed in the shop or in the field.

- C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve, extending 2 inches (50 mm) beyond joint on either side; fasten internal sleeve securely to one side; and locate joint within 6 inches (150 mm) of post.

3.4 ANCHORING POSTS

- A. Use stainless steel pipe sleeves preset and anchored into concrete for installing posts. After posts are inserted into sleeves, fill annular space between post and sleeve with nonshrink, nonmetallic grout anchoring cement, mixed and placed to comply with anchoring material manufacturer's written instructions.
- B. Form or core-drill holes not less than 5 inches (125 mm) deep and 3/4 inch (20 mm) larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink, nonmetallic grout anchoring cement, mixed and placed to comply with anchoring material manufacturer's written instructions.
- C. Cover anchorage joint with flange of same metal as post, welded to post after placing anchoring material.
- D. Leave anchorage joint exposed with 1/8-inch (3-mm) buildup, sloped away from post.
- E. Anchor posts to metal surfaces with flanges, angle type, or floor type, as required by conditions, connected to posts and to metal supporting members as follows:
 - 1. For steel railings, weld flanges to post and bolt to metal supporting surfaces.
 - 2. For aluminum railings, attach posts as indicated, using fittings designed and engineered for this purpose.
 - 3. For stainless steel railings, weld flanges to post and bolt to supporting surfaces.
- F. Install removable railing sections, where indicated, in slip-fit stainless steel sockets cast in concrete.

3.5 ATTACHING RAILINGS

- A. Anchor railing ends to concrete and masonry with sleeves concealed within railing ends and anchored to wall construction with anchors and bolts.
- B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and welded to railing ends or connected to railing ends, using nonwelded connections.
- C. Attach handrails to walls with wall brackets, except where end flanges are used. Provide brackets with 1-1/2-inch (38-mm) clearance from inside face of handrail and finished wall surface.
 - 1. Use type of bracket with flange tapped for concealed anchorage to threaded hanger bolt.
 - 2. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
- D. Secure wall brackets and railing end flanges to building construction as follows:
 - 1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.

2. For hollow masonry anchorage, use toggle bolts.
3. For wood stud partitions, use hanger or lag bolts set into studs or wood backing between studs. Coordinate with carpentry work to locate backing members.
4. For steel-framed partitions, use hanger or lag bolts set into fire-retardant-treated wood backing between studs. Coordinate with stud installation to locate backing members.
5. For steel-framed partitions, fasten brackets directly to steel framing or concealed steel reinforcements, using self-tapping screws of size and type required to support structural loads.
6. For steel-framed partitions, use toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.

E. Install railing gates level, plumb, and secure for full opening without interference.

1. Attach hardware using tamper-resistant or concealed means.
2. Adjust hardware for smooth operation.

3.6 REPAIR

A. Touchup Painting:

1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum 2.0-mil (0.05-mm) dry film thickness.
2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 09 9113 "Exterior Painting."

3.7 CLEANING

- A. Clean aluminum and stainless steel by washing thoroughly with clean water and soap and rinsing with clean water.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and repair galvanizing to comply with ASTM A780/A780M.

3.8 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.
- B. Restore finishes damaged during installation and construction period, so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION

SECTION 05 7800 – DECORATIVE METAL BATTENS

PART 1 - GENERAL

1.1 ADMINISTRATIVE REQUIREMENTS

- A. Pre-Installation Conference:
 - 1. Attendance: Architect, Contractor, installer, and related trades.
 - 2. Review: Project conditions, manufacturer requirements, delivery and storage, staging and sequencing, and protection of completed work.

1.2 SUBMITTALS

- A. Action Submittals:
 - 1. Shop Drawings: Illustrate products, installation, and relationship to adjacent construction.
 - 2. Product Data: Manufacturer's descriptive data and product attributes.
 - 3. Samples: [Selection samples.] [Verification samples.]
- B. Informational Submittals:
 - 1. Certificate of Compliance: Certification that installed products meet specified design and performance requirements.
- C. Closeout Submittals:
 - 1. Maintenance Data.
 - 2. Extra materials: [____] linear feet of profile and finish installed.

1.3 QUALITY ASSURANCE

- A. Installer Qualifications: Minimum [2] [____] years' experience in work of this Section or installer supervised by manufacturer's representative.
- B. Mockups: Each batten profile, minimum [8] [____] feet long. Approved mockups [may] [may not] remain as part of the Work.
- C. Fire Hazard Classification, tested to ASTM E84.
 - 1. Flame spread: 0.
 - 2. Smoke developed: Maximum 60.

1.4 WARRANTY

- A. Manufacturer's 15 year warranty against defects in materials.
- B. Installer's [5] [____] year warranty against defects in workmanship.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Contract Documents are based on products by Parallel Architectural Products.
www.parallelap.com

- B. Substitutions: Refer to Division 01.

2.2 COMPONENTS

- A. Decorative Metal Battens:

1. Description: Extruded aluminum profiles with powder coating on exposed surfaces.
2. Aluminum extrusions: ASTM B221, alloy and temper best suited to application.
3. Powder coating: TGIC-free polyester meeting performance requirements of AAMA 2604.
4. Profile: [Nominally [] inches wide x [] inches deep.] [Refer to Drawings.]
5. Color: [].] [To be selected from manufacturer's full range OF [Woodgrain – Standard] [Woodgrain - Non-Standard] [Solid – Standard] [Solid – Non-Standard] colors.]

2.3 ACCESSORIES

- A. Clips and Other Attachments: Extruded aluminum, size and profile to suit project conditions.
- B. Fasteners: [AISI 1016, zinc-plated steel.] [Fluoropolymer coated steel.] [Manufacturers' recommended fastener.]

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with manufacturer's instructions and approved Shop Drawings.

END OF SECTION

SECTION 06 1000 - ROUGH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Wood products.
 - 2. Fire-retardant-treated lumber.
 - 3. Miscellaneous lumber.
 - 4. Plywood backing panels.
- B. Related Requirements:
 - 1. Section 06 1600 "Sheathing" for sheathing, subflooring, and underlayment.

1.2 DEFINITIONS

- A. Boards or Strips: Lumber of less than 2 inches nominal (38 mm actual) size in least dimension.
- B. Dimension Lumber: Lumber of 2 inches nominal (38 mm actual) size or greater but less than 5 inches nominal (114 mm actual) size in least dimension.
- C. Exposed Framing: Framing not concealed by other construction.
- D. Lumber grading agencies, and abbreviations used to reference them, include the following:
 - 1. NeLMA: Northeastern Lumber Manufacturers Association.
 - 2. NLGA: National Lumber Grades Authority.
 - 3. SPIB: The Southern Pine Inspection Bureau.
 - 4. WCLIB: West Coast Lumber Inspection Bureau.
 - 5. WWPA: Western Wood Products Association.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
 - 1. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
 - 2. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency in accordance with ASTM D5664.
- B. Sustainable Design Submittals:
 - 1. Chain-of-Custody Qualification Data: For manufacturer and vendor.

1.4 QUALITY ASSURANCE

- A. Certified Wood: Provide an invoice including vendor's chain-of-custody number, product cost, and entity being invoiced.

- B. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.
- C. Provide the following upon request:
 - 1. Material Certificates:
 - a. For dimension lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by the ALSC Board of Review.
 - b. For preservative-treated wood products. Indicate type of preservative used and net amount of preservative retained.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Stack wood products flat with spacers beneath and between each bundle to provide air circulation. Protect wood products from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 WOOD PRODUCTS

- A. Regional Materials: Wood products shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.
- B. Lumber: Comply with DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, comply with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Grade lumber by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.
 - 1. Factory mark each piece of lumber with grade stamp of grading agency.
 - 2. For exposed lumber indicated to receive a stained or natural finish, [**mark grade stamp on end or back of each piece**] [or] [**omit grade stamp and provide certificates of grade compliance issued by grading agency**].
 - 3. Where nominal sizes are indicated, provide actual sizes required by DOC PS 20 for moisture content specified. Where actual sizes are indicated, they are minimum dressed sizes for dry wood products.
 - 4. Dress lumber, S4S, unless otherwise indicated.
- C. Maximum Moisture Content:
 - 1. Boards: 15 percent.
 - 2. Dimension Lumber: 15 percent unless otherwise indicated.

2.2 FIRE-RETARDANT-TREATED LUMBER

- A. General: Where fire-retardant-treated materials are indicated, materials are to comply with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.

- B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet (3.2 m) beyond the centerline of the burners at any time during the test.
 - 1. Treatment is not to promote corrosion of metal fasteners.
 - 2. Exterior Type: Treated materials are to comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering in accordance with ASTM D2898. Use for exterior locations and where indicated.
- C. Kiln-dry lumber after treatment to maximum moisture content of 19 percent.[**Kiln-dry plywood after treatment to maximum moisture content of 15 percent.**]
- D. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency and other information required by authorities having jurisdiction.
 - 1. For exposed lumber indicated to receive a stained or natural finish, [**mark end or back of each piece**] [**or**] [**omit marking and provide certificates of treatment compliance issued by testing agency**].
- E. For exposed items indicated to receive a stained or natural finish, chemical formulations are not to bleed through, contain colorants, or otherwise adversely affect finishes.
- F. Application: Treat items indicated on Drawings, and the following:
 - 1. Wood cants, nailers, curbs, equipment support bases, blocking, and similar members in connection with roofing.
 - 2. Plywood backing panels.

2.3 MISCELLANEOUS LUMBER

- A. Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:
 - 1. Blocking.
 - 2. Nailers.
- B. Dimension Lumber Items: Construction or No. 2 grade lumber of the following species:
 - 1. Spruce-pine-fir; NLGA.
 - 2. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.
- C. Concealed Boards: 15 percent maximum moisture content and [**any of**] the following species and grades:
 - 1. Spruce-pine-fir (south) or spruce-pine-fir; Construction or No. 2 Common grade; NeLMA, NLGA, WCLIB, or WWPA.
- D. Roofing Nailers: Structural- or No. 2-grade lumber or better; kiln-dried Douglas fir, southern pine, or wood having similar decay-resistant properties.
- E. For blocking not used for attachment of other construction, Utility, Stud, or No. 3 grade lumber of any species may be used provided that it is cut and selected to eliminate defects that will interfere with its attachment and purpose.

- F. For furring strips for installing plywood or hardboard paneling, select boards with no knots capable of producing bent-over nails and damage to paneling.

2.4 PLYWOOD BACKING PANELS

- A. Equipment Backing Panels: Plywood, DOC PS 1, Exterior, A-C , fire-retardant treated, in thickness indicated or, if not indicated, not less than 3/4-inch (19-mm) nominal thickness.

2.5 FASTENERS

- A. General: Fasteners are to be of size and type indicated and comply with requirements specified in this article for material and manufacture. Provide nails or screws, in sufficient length, to penetrate not less than 1-1/2 inches (38 mm) into wood substrate.
 - 1. Where rough carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners with hot-dip zinc coating complying with ASTM A153/A153M or ASTM F2329 of Type 304 stainless steel.
 - 2. For redwood, use brass/bronze stainless steel hot-dip galvanized-steel fasteners.
- B. Nails, Brads, and Staples: ASTM F1667.
- C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- D. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01 ICC-ES AC508 ICC-ES AC193 ICC-ES AC308 as appropriate for the substrate.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Framing Standard: Comply with AF&PA's WCD 1, "Details for Conventional Wood Frame Construction," unless otherwise indicated.
- B. Set work to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry accurately to other construction. Locate nailers, blocking, and similar supports to comply with requirements for attaching other construction.
- C. Install plywood backing panels by fastening to studs; coordinate locations with utilities requiring backing panels. [**Install fire-retardant-treated plywood backing panels with classification marking of testing agency exposed to view.**]
- D. Install sill sealer gasket/termite barrier in accordance with manufacturer's written instructions at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.
- E. Do not splice structural members between supports unless otherwise indicated.
- F. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.

1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than 16 inches (406 mm) o.c.
- G. Provide fire blocking in furred spaces, stud spaces, and other concealed cavities as indicated and as follows:
1. Fire block furred spaces of walls, at each floor level, at ceiling, and at not more than 96 inches (2438 mm) o.c. with solid wood blocking or noncombustible materials accurately fitted to close furred spaces.
 2. Fire block concealed spaces of wood-framed walls and partitions at each floor level, at ceiling line of top story, and at not more than 96 inches (2438 mm) o.c. Where fire blocking is not inherent in framing system used, provide closely fitted solid wood blocks of same width as framing members and 2-inch nominal (38-mm actual) thickness.
 3. Fire block concealed spaces between floor sleepers with same material as sleepers to limit concealed spaces to not more than 100 sq. ft. (9.3 sq. m) and to solidly fill space below partitions.
 4. Fire block concealed spaces behind combustible cornices and exterior trim at not more than 20 feet (6 m) o.c.
- H. Sort and select lumber so that natural characteristics do not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
- I. Comply with AWPAC M4 for applying field treatment to cut surfaces of preservative-treated lumber.
1. Use inorganic boron for items that are continuously protected from liquid water.
 2. Use copper naphthenate for items not continuously protected from liquid water.
- J. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.
- K. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
1. Table 2304.10.1, "Fastening Schedule," in ICC's International Building Code (IBC).
 2. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in ICC's International Residential Code for One- and Two-Family Dwellings.
 3. ICC-ES evaluation report for fastener.
- L. Securely attach roofing nailers to substrates by anchoring and fastening to withstand bending, shear, or other stresses imparted by Project wind loads and fastener-resistance loads as designed in accordance with ASCE/SEI 7.
- M. Use steel common nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood. Drive nails snug but do not countersink nail heads unless otherwise indicated.

3.2 INSTALLATION OF WOOD BLOCKING AND NAILERS

- A. Install where indicated and where required for[**screeding or**] attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.
- B. Attach wood blocking to substrates to support applied loading. Recess bolts and nuts flush with surfaces unless otherwise indicated.
- C. Attach wood roofing nailers securely to substrate to resist the designed outward and upward wind loads indicated on Drawings and in accordance with ANSI/SPRI ED-1, Tables A6 and A7.
- D. Provide permanent grounds of dressed, pressure-preservative-treated, key-beveled lumber not less than 1-1/2 inches (38 mm) wide and of thickness required to bring face of ground to exact thickness of finish material. Remove temporary grounds when no longer required.

3.3 PROTECTION

- A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION

SECTION 06 1600 - SHEATHING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Roof sheathing.
- B. Related Requirements:
 - 1. Section 06 1000 "Rough Carpentry" for plywood backing panels.

1.2 PRE-INSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review air-barrier and water-resistant glass-mat gypsum sheathing requirements and installation, special details, transitions, mockups, air-leakage testing, protection, and work scheduling that covers air-barrier and water-resistant glass-mat gypsum sheathing.

1.3 ACTION SUBMITTALS

- A. Product Data Submittals: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
 - 1. Include data for wood-preserved treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Indicate type of preservative used and net amount of preservative retained.
 - 2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Include physical properties of treated materials.
 - 3. For fire-retardant treatments, include physical properties of treated plywood both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency in accordance with ASTM D5516.
 - 4. For products receiving waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
 - 5. For air-barrier and water-resistant glass-mat gypsum sheathing, include manufacturer's technical data and tested physical and performance properties of products.
- B. Sustainable Design Submittals:
 - 1. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
 - 2. Chain-of-Custody Qualification Data: For manufacturer and vendor.
 - 3. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
 - 4. Product Data: For installation adhesives, indicating VOC content.
 - 5. Laboratory Test Reports: For installation adhesives, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings: For air-barrier and water-resistant glass-mat gypsum sheathing assemblies.
 - 1. Show locations and extent of sheathing, accessories, and assemblies specific to Project conditions.
 - 2. Include details for sheathing joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.

3. Include details of interfaces with other materials that form part of air barrier.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer of air-barrier and water-resistant glass-mat gypsum sheathing.
 1. Installer is to be licensed by ABAA in accordance with ABAA's Quality Assurance Program and is to employ ABAA-certified installers and supervisors on Project.
- B. Testing Agency Qualifications:
 1. For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
 2. For testing and inspecting agency providing tests and inspections related to air-barrier and water-resistant glass-mat gypsum sheathing: an independent agency, qualified in accordance with ASTM E329 for testing indicated, and certified by Air Barrier Association of America, Inc.
- C. Certified Wood: Provide an invoice including vendor's chain-of-custody number, product cost, and entity being invoiced.
- D. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.
- E. Provide the following upon request:
 1. Qualification Data: For Installer[, **including list of ABAA-certified installers and supervisors employed by Installer, who work on Project**] [and] [testing and inspecting agency].
 2. Product Certificates: From air-barrier and water-resistant glass-mat gypsum sheathing manufacturer, certifying compatibility of sheathing accessory materials with Project materials that connect to or that come in contact with the sheathing.
 3. Product Test Reports: For each air-barrier and water-resistant glass-mat gypsum sheathing assembly, indicating compliance with specified requirements, for tests performed by a qualified testing agency.
 4. Evaluation Reports: For the following, from ICC-ES:
 - a. Wood-preservative-treated plywood.
 - b. Fire-retardant-treated plywood.
 - c. Foam-plastic sheathing.
 - d. Air-barrier and water-resistant glass-mat gypsum sheathing.
 5. Field quality-control reports.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance Ratings: As tested in accordance with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.
- B. Air-Barrier and Water-Resistant Glass-Mat Gypsum Sheathing Performance: Air-barrier and water-resistant glass-mat gypsum sheathing assembly, and seals with adjacent construction, are to be capable of performing as a continuous air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies are to be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations[, **tie-ins to installed waterproofing**] [, **tie-ins to other installed air barriers**], and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

2.2 WOOD PANEL PRODUCTS

- A. Certified Wood: The following wood products shall comply with requirements of ASTM D7612-10 (FSC, SFI, ATSM, CSA or PEFC certifications are acceptable).
 - 1. Plywood.
 - 2. Oriented strand board.
 - 3. Particleboard underlayment.
 - 4. Hardboard underlayment.
- B. Thickness: As needed to comply with requirements specified, but not less than thickness indicated.
- C. Factory mark panels to indicate compliance with applicable standard.

2.3 FIRE-RETARDANT-TREATED PLYWOOD

- A. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
- B. Fire-Retardant-Treated Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet (3.2 m) beyond the centerline of the burners at any time during the test.
 - 1. Use treatment that does not promote corrosion of metal fasteners.
 - 2. Exterior Type: Treated materials are to comply with requirements specified above for fire-retardant-treated plywood by pressure process after being subjected to accelerated weathering in accordance with ASTM D2898. Use for exterior locations and where indicated.

- C. Kiln-dry material after treatment to a maximum moisture content of 15 percent. Do not use material that is warped or does not comply with requirements for untreated material.
- D. Identify fire-retardant-treated plywood with appropriate classification marking of qualified testing agency.

2.4 ROOF SHEATHING

- A. Plywood Sheathing, Roofs: , Exposure 1, Structural I sheathing.
 - 1. Span Rating: Not less than 16/0 .
 - 2. Nominal Thickness: Not less than 15/32 inch (11.9 mm) .

2.5 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
 - 1. For roof sheathing, provide fasteners with hot-dip zinc coating complying with ASTM A153/A153M .
 - 2. For roof parapet wall sheathing, provide fasteners with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours in accordance with ASTM B117.
- B. Nails, Brads, and Staples: ASTM F1667.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.
- B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.
- C. Securely attach to substrate by fastening as indicated, complying with the following:
 - 1. Table 2304.10.1, "Fastening Schedule," in the ICC's International Building Code.
 - 2. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in the ICC's International Residential Code for One- and Two-Family Dwellings.
 - 3. ICC-ES evaluation report for fastener.
- D. Use common wire nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections. Install fasteners without splitting wood.
- E. Coordinate [wall] [parapet] [and] [roof] sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.

- F. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.
- G. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.2 INSTALLATION OF WOOD STRUCTURAL PANEL

- A. General: Comply with applicable recommendations in APA Form No. E30, "Engineered Wood Construction Guide," for types of structural-use panels and applications indicated.
- B. Fastening Methods: Fasten panels as indicated below:
 - 1. Wall and Roof Sheathing:
 - a. **[Nail] [Nail or staple]** to wood framing.[**Apply a continuous bead of glue to framing members at edges of wall sheathing panels.**]
 - b. Screw to cold-formed metal framing.
 - c. Space panels 1/8 inch (3 mm) apart at edges and ends.

3.3 INSTALLATION OF HARDBOARD UNDERLAYMENT

- A. Comply with CPA's recommendations and hardboard manufacturer's written instructions for preparing and applying hardboard underlayment.
 - 1. Fastening Method: **[Nail] [Nail or staple]** underlayment to subflooring.

3.4 COMPOSITE NAIL BASE INSULATED ROOF SHEATHING INSTALLATION

- A. Mechanically fasten sheathing to deck in accordance with sheathing manufacturer's instructions.
- B. On metal deck, place boards perpendicular to flutes with sheathing ends bearing on deck flutes.
- C. Lay boards with edges in moderate contact without forcing. Cut sheathing to fit neatly to perimeter blocking and around penetrations through roof. Fill voids over 3/8 inch wide with scrap insulation.
- D. Do not apply more sheathing than can be covered with underlayment in same day.

3.5 FIELD QUALITY CONTROL

- A. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.
- B. Testing and Inspecting Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- C. Inspections: Air-barrier and water-resistant glass-mat gypsum sheathing, accessories, and installation are subject to inspection for compliance with requirements.[**Inspections may include the following:**]
 - 1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.

2. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
 3. Termination mastic has been applied on cut edges.
 4. Strips and transition strips have been firmly adhered to substrate.
 5. Compatible materials have been used.
 6. Transitions at changes in direction and structural support at gaps have been provided.
 7. Connections between assemblies (sheathing and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
 8. All penetrations have been sealed.
- D. Tests: As determined by testing agency from among the following tests:
1. Air-Leakage-Location Testing: Air-barrier sheathing assemblies will be tested for evidence of air leakage in accordance with [**ASTM E1186, chamber pressurization or depressurization with smoke tracers**] [**ASTM E1186, chamber depressurization using detection liquids**] <Insert requirement>.
 2. Air-Leakage-Volume Testing: Air-barrier assemblies will be tested for air-leakage rate in accordance with [**ASTM E783**] [**or**] [**ASTM E2357**].
- E. Air barriers will be considered defective if they do not pass tests and inspections.
- F. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.
- G. Prepare test and inspection reports.

END OF SECTION

SECTION 06 4116 - PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Plastic-laminate-clad architectural cabinets.
 - 2. Cabinet hardware and accessories.
 - 3. Miscellaneous materials.
- B. Related Requirements:
 - 1. Section 06 1000 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing cabinets that are concealed within other construction before cabinet installation.

1.2 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to support loads imposed by installed and fully loaded cabinets.
- B. Hardware Coordination: Distribute copies of approved hardware schedule specified in to manufacturer of architectural cabinets; coordinate Shop Drawings and fabrication with hardware requirements.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

- A. Product Data Submittals: For each product.
- B. Sustainable Design Submittals:
 - 1. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
 - 2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
 - 3. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings:
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Show large-scale details.
 - 3. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 - 4. Show locations and sizes of cutouts and holes for items installed in plastic-laminate architectural cabinets.
 - 5. Apply Program label to Shop Drawings.

- D. Samples: For each exposed product and for each color and texture specified, in manufacturer's or manufacturer's standard size.
- E. Samples for Initial Selection: For each type of exposed finish.
- F. Samples for Verification: For the following:
 - 1. Plastic Laminates: 8 by 10 inches (200 by 250 mm), for each type, color, pattern, and surface finish required.
 - a. Provide one sample applied to core material with specified edge material applied to one edge.
 - 2. Thermally Fused Laminate (TFL) Panels: 8 by 10 inches (200 by 250 mm), for each color, pattern, and surface finish.
 - a. Provide edge banding on one edge.
 - 3. Corner Pieces:
 - a. Cabinet-front frame joints between stiles and rails and at exposed end pieces, 18 inches (450 mm) high by 18 inches (450 mm) wide by 6 inches (150 mm) deep.
 - b. Miter joints for standing trim.
 - 4. Exposed Cabinet Hardware and Accessories: One full-size unit for each type and finish.

1.5 CLOSEOUT SUBMITTALS

- A. Quality Standard Compliance Certificates: certificates.

1.6 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Build mockups of typical architectural cabinets as shown on Drawings.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- C. Provide the following upon request:
 - 1. Qualification Data: For manufacturer and Installer.
 - 2. Product Certificates: For the following:
 - a. Composite wood products.
 - b. Thermally fused laminate panels.
 - c. High-pressure decorative laminate.
 - d. Adhesives.
 - 3. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.
 - 4. Field quality-control reports.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver cabinets until painting and similar finish operations that might damage architectural cabinets have been completed in installation areas. Store cabinets in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.8 FIELD CONDITIONS

- A. Environmental Limitations without Humidity Control: Do not deliver or install cabinets until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.
- B. Environmental Limitations with Humidity Control: Do not deliver or install cabinets until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F (16 and 32 deg C) and relative humidity between 25 and 55 percent during the remainder of the construction period.
- C. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed/concealed by construction, and indicate measurements on Shop Drawings.
- D. Established Dimensions: Where cabinets are indicated to fit to other construction, establish dimensions for areas where cabinets are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.1 PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS

- A. Architectural Woodwork Standards Grade: Custom .
- B. Regional Materials: Wood products shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.
- C. Certified Wood: Wood products shall comply with requirements of ASTM D7612-10 (FSC, SFI, ATSM, CSA or PEFC certifications are acceptable).
- D. Type of Construction: Frameless .
- E. Door and Drawer-Front Style: Flush overlay.
- F. High-Pressure Decorative Laminate (PL-01): ISO 4586-3, grades as indicated or if not indicated, as required by quality standard.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Formica Corporation.
 - b. Pionite; a Panolam Industries International, Inc. brand.
 - c. Wilsonart LLC.

G. Exposed Surfaces:

1. Plastic-Laminate Grade: VGS .
2. Edges: Grade VGS .
3. Pattern Direction: As indicated.

H. Semiexposed Surfaces:

1. Surfaces Other Than Drawer Bodies: .
 - a. Edges of Plastic-Laminate Shelves: PVC tape, 0.018-inch (0.460-mm) minimum thickness, matching laminate in color, pattern, and finish .
 - b. Edges of Thermally Fused Laminate Panel Shelves: PVC or polyester edge banding.
 - c. For semiexposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, ISO 4586-3, grade to match exposed surface.
2. Drawer Sides and Backs: Thermally fused laminate panels with PVC or polyester edge banding.
3. Drawer Bottoms: Thermally fused laminate panels.

I. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.

1. Join subfronts, backs, and sides with glued rabbeted joints supplemented by mechanical fasteners .

2.2 WOOD MATERIALS

A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.

1. Wood Moisture Content: 5 to 10 8 to 13 4 to 9 percent.

2.3 CABINET HARDWARE AND ACCESSORIES

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Accuride International Inc.
 - b. Grass America.
 - c. Julius Blum & Co., Inc.
 - d. Knappe & Vogt Manufacturing Company.

B. Frameless Concealed Hinges (European Type): ANSI/BHMA A156.9, B01602, 135 degrees of opening, self-closing.

C. Wire Pulls: Back mounted, solid metal , 5 inches (127 mm) long, 2-1/2 inches (63.5 mm) deep, and 5/16 inch (8 mm) in diameter.

- D. Adjustable Shelf Standards and Supports: ANSI/BHMA A156.9, B04071; with shelf rests, B04081 .
- E. Shelf Rests: ANSI/BHMA A156.9, B04013; metal .
- F. Drawer Slides: ANSI/BHMA A156.9.
 - 1. Heavy-Duty (Grade 1HD-100 and Grade 1HD-200): Side mount .
 - a. Type: Full overtravel extension.
 - b. Material: Stainless steel slides.
 - c. Motion Feature: Self-closing mechanism.
- G. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with ANSI/BHMA A156.18 for ANSI/BHMA finish number indicated.
 - 1. Dark, Oxidized, Satin Bronze, Oil Rubbed: ANSI/BHMA 613 for bronze base; ANSI/BHMA 640 for steel base; match Architect's sample.
- H. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in ANSI/BHMA A156.9.

2.4 MISCELLANEOUS MATERIALS

- A. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber , kiln-dried to less than 15 percent moisture content.
- B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.
- C. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- D. Adhesive for Bonding Plastic Laminate: Type I, waterproof type as selected by fabricator to comply with requirements.
 - 1. Adhesive for Bonding Edges: Hot-melt adhesive[**or adhesive specified above for faces**].

2.5 FABRICATION

- A. Fabricate architectural cabinets to dimensions, profiles, and details indicated.
- B. Complete fabrication, including assembly and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 - 1. Notify Architect seven days in advance of the dates and times architectural cabinet fabrication will be complete.

2. Trial fit assemblies at manufacturer's shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.
- C. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
- D. Install glass to comply with applicable requirements in Section 08 8000 "Glazing" and in GANA's "Glazing Manual."
 1. For glass in frames, secure glass with removable stops.
 2. For exposed glass edges, polish and grind smooth.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition cabinets to humidity conditions in installation areas for not less than 72 hours.

3.2 INSTALLATION

- A. Architectural Woodwork Standards Grade: Install cabinets to comply with quality standard grade of item to be installed.
- B. Assemble cabinets and complete fabrication at Project site to extent that it was not completed in the shop.
- C. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with wafer-head cabinet installation screws.
- D. Install cabinets level, plumb, and true in line to a tolerance of 1/8 inch in 96 inches (3 mm in 2400 mm) using concealed shims.
 1. Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
 2. Install cabinets without distortion so doors and drawers fit openings and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
 3. Fasten wall cabinets through back, near top and bottom, and at ends not more than 16 inches (400 mm) o.c. with No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish.

3.3 FIELD QUALITY CONTROL

- A. Inspections: Provide inspection of installed Work through certifying that woodwork, including installation, complies with requirements of the Architectural Woodwork Standards for the specified grade.

1. Inspection entity is to prepare and submit report of inspection.

3.4 ADJUSTING AND CLEANING

- A. Repair damaged and defective cabinets, where possible, to eliminate functional and visual defects. Where not possible to repair, replace architectural cabinets. Adjust joinery for uniform appearance.
- B. Clean, lubricate, and adjust hardware.
- C. Clean cabinets on exposed and semiexposed surfaces.

END OF SECTION

FOR REFERENCE ONLY

SECTION 07 1326 - SELF-ADHERING SHEET WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Pre-Applied Waterproofing Membrane.
 - 2. Post-Applied Waterproofing Membrane.
 - 3. Molded-sheet drainage panels.
 - 4. Insulation.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, adhesion to contaminated substrate (e.g. concrete curing compounds and form release agents), substrate curing period weather related restrictions during installation, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs. Include the following:
 - a. Before starting application of membrane waterproofing work, arrange a job-site meeting with the Architect, the Testing Agency and manufacturer representative to discuss the following:
 - 1) The waterproofing system, number of plies, termination and flashing requirements.
 - 2) Intermediate and final requirements of protecting the work.
 - 3) The different substrates that will receive the waterproofing and preparation requirements for each.
 - 4) Curing requirements for concrete.
 - 5) Concrete form release agent precautions.
 - 6) Verify admixtures and compatibility with waterproofing manufacturer.
 - 7) Adhering to coated surfaces, if applicable.
 - 8) Job specific recommendations on use of primers.
 - 9) Hot, cold and wet condition precautions.
 - 10) Scheduling and coordination with other construction, such as waterproofing overlaps that must be installed during construction of walls and footings both above and below grade.
 - 11) Protection of the work and repair procedures.
 - 12) Verify in writing to the Owner's representative, that the Contractor's full time on site foreman and crew etc. (as required) are certified, or meet the requirements of the manufacturer of the waterproofing, as installers.
 - b. Whenever the membrane waterproofing work is to be done, notify Testing Agency in sufficient time to arrange inspections.
 - c. Provide safe access to the location of the Work for proper inspection.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.

2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.

- B. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions. Include project specific details to demonstrate implementation of the waterproofing scope.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.
- B. Testing Agency: An approved company by the waterproofing manufacturer to provide independent observations for quality control and compliance with material and labor warranty requirements.
- C. Provide the following upon request:
 1. Qualification Data: For Installer.
 2. Qualification Data: For Testing Agency.
 3. Field quality-control reports.
- D. In-situ Pre-Applied Waterproofing Mockups: Build for each typical waterproofing installation including accessories to demonstrate surface preparation, crack and joint treatment, corner treatment, and protection.
 1. Size: 100 sq. ft. in area.
 2. Description: Each type of wall installation.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. In-situ Post-Applied Waterproofing Mockups: Build for each typical waterproofing installation including accessories to demonstrate surface preparation, crack and joint treatment, corner treatment, and protection.
 1. Size: 100 sq. ft. in area.
 2. Description: Each type of wall installation.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 FIELD CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.
 1. Do not apply waterproofing in snow, rain, fog, or mist.

- B. Maintain adequate ventilation during preparation and application of waterproofing materials.
- C. Compatibility:
 - 1. Where new work interfaces existing waterproofed construction, remove existing waterproofing as required to install new work. Interface new waterproofing with existing system to provide continuous system without leaks. Ensure compatibility of system materials.
 - 2. The waterproofing manufacturer shall submit a letter stating compatibility or concerns with existing, or adjacent, waterproofing.

1.6 WARRANTY

- A. Pre-Applied and Post-Applied Sheet Waterproofing Manufacturer's Watertightness Warranty: Manufacturer's material and labor warranty in which manufacturer agrees to cover labor and to furnish replacement waterproofing material for waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.
 - 1. Warranty Period: Fifteen years from date of Substantial Completion.
 - 2. Warranty Requirements:
 - a. Single source materials or materials approved by primary waterproofing manufacturer.
 - b. Pre-Installation Conference.
 - 3. Installation inspected by Testing Agency, minimum four phases of blindside installation for substrate, waterproofing installation, observation after reinforcement, and final inspection prior to concrete placement.
- B. Installer Warranty: Approved installer agrees to provide labor as part of waterproofing watertightness warranty complying with manufacturer's requirements for minimum of two years.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Source Limitations for Waterproofing System: Obtain waterproofing materials, protection course, and molded-sheet drainage panels from single source from single manufacturer.

2.2 POST-APPLIED SHEET WATERPROOFING

- A. Modified Bituminous Sheet: Minimum 60-mil (1.5-mm) nominal thickness, self-adhering sheet consisting of 56 mils (1.4 mm) of rubberized asphalt laminated on one side to a 4-mil- (0.10-mm-) thick, polyethylene-film reinforcement, and with release liner on adhesive side; formulated for application with primer that complies with VOC limits of authorities having jurisdiction.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. AVM Industries; 580-PL.
 - b. CETCO; Envirosheet.
 - c. GCP Applied Technologies Inc.; Bituthene 3000/Low Temperature.
 - 2. Application: Two (2) layers.

2.3 PRE-APPLIED SHEET WATERPROOFING

- A. Adhesive-Coated HDPE Sheet for Blindside Vertical Applications: Uniform, flexible, multilayered-composite sheet membrane consisting of an HDPE film coated with pressure-sensitive adhesive layers. The membrane is designed to create a permanent bond to poured concrete to prevent water migration at the interface of the membrane and structural concrete; with 0.075-inch minimum nominal thickness of the composite sheet membrane.
 - 1. AVM Industries; Aussie Skin 550G Single System.
- B. Adhesive-Coated HDPE Sheet for Blindside Vertical Applications: Uniform, flexible, multilayered-composite sheet membrane consisting of an HDPE film coated with a pressure-sensitive adhesive and protective release liner, total 46-mil (0.8-mm) thickness; with the following physical properties:
 - 1. Products: Subject to compliance with requirements, provide the following:
 - a. GCP Applied Technologies; Preprufe 300R Plus.
- C. Thermoplastic Sheet for Blindside Horizontal and Vertical Applications: 60 mil (1.5 mm) nominal thick PVC, Elvaloy KEE thermoplastic membrane reinforced with a 5.0 oz. weft inserted knit polyester fabric integrally bonded to an Active Polymer Core (APC).
 - 1. Products: Subject to compliance with requirements, provide the following:
 - a. CETCO; CoreFlex 60.

2.4 AUXILIARY MATERIALS

- A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.
 - 1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.
- B. Primer: Liquid primer recommended for substrate by sheet-waterproofing material manufacturer.
- C. Liquid Membrane: Elastomeric, two-component liquid, cold fluid applied, of trowel grade or low viscosity.
- D. Substrate Patching Membrane: Low-viscosity, two-component, modified asphalt coating.
- E. Sheet Strips: Self-adhering, rubberized-asphalt sheet strips of same material and thickness as sheet waterproofing.
- F. Mastic, Adhesives, and Detail Tape: Liquid mastic and adhesives, and adhesive tapes recommended by waterproofing manufacturer.
 - 1. Detail Tape: Two-sided, pressure-sensitive, self-adhering reinforced tape, 4-1/2 inches (114 mm) wide, with a tack-free protective adhesive coating on one side and release film on self-adhering side.
- G. Expansion Joints: Proprietary field fabricated expansion joints shall be used with manufacturers waterproofing or as recommended by the waterproofing manufacturer, unless stated otherwise.
- H. Metal Termination Bars:

1. Termination Bar: Stainless Steel 1 inch by 8 feet, 0.075-inch thick, with 5/16-inch holes 8 inches to 9 inches on center. Basis of design: Advanced Building Products Inc. Stainless Steel Termination Bar.
 2. Expansion Anchor: 1/4-inch x 2-inch expansion anchor consisting of a Type 304 Stainless Steel drive pin and an expanding body. Basis of design: Hilti Metal HIT Anchor.
- I. Protection Course:
1. Protection Board Vertical Applications: Extruded polystyrene board insulation, Type IV, 25 psi (173 kPa) minimum compressive resistance, shiplap edged.
 - a. Products: Subject to compliance with requirements, provide the following:
 - 1) Extruded Polystyrene; Kingspan GreenGuard; Type 4 Insulation Board.
 - b. Adhesive: 3M; Scotch-Weld.
- J. Reinforced Fluid Applied Flashing:
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Soprema; Alsan RS 230 Flash System.
- K. Self-Adhering Stainless Steel Flexible Flashing:
1. Subject to compliance with requirements, provide the following:
 - a. York Manufacturing Inc.; York 304 SS
 2. Characteristics:
 - a. Type: stainless steel with one stainless steel face (facing outward) with a butyl block co-polymer adhesive (inward facing).
 - b. Stainless steel: type 304, ASTM A240. Domestically sourced per DF ARS 252.225-7008 and/or DF ARS 252.225-7009.
- 2.5 MOLDED-SHEET DRAINAGE PANELS
- A. Type 1: Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panel consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21-mm) sieve laminated to one side of the core and a polymeric film bonded to the other side; and with a vertical flow rate of 9 to 18 gpm per ft. (112 to 220 L/min. per m112 to 220 L/min. per m).
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. American Hydrotech, Inc; Hydrodrain 400.
 - b. American Wick Drain Corporation; Amerdrain 520.
 - c. Carlisle Coatings & Waterproofing; CCW MiraDRAIN 6200.
 - d. GCP Applied Technologies Inc.; Hydroduct 220 (vertical), Hydroduct 660 (horizontal).
 - e. Insulation Solutions, Inc; AquaCheck DB 1500.
 - f. JDR Enterprises, Inc; J-Drain 420.
 - g. Liquid Plastics Inc; Deco-Drain 42.

2.6 INSULATION

- A. XPS – 1: Board Insulation: Extruded-polystyrene board insulation complying with ASTM C 578, Type VI, 40-psi (276-kPa) minimum compressive strength; unfaced; square or shiplap edged.
- B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. DiversiFoam Products.
 - 2. Dow Chemical Company (The).
 - 3. Owens Corning. Pactiv Corporation.
 - 4. T. Clear Corporation.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the waterproofing.
 - 1. Verify that concrete has cured and aged for minimum time period recommended in writing by waterproofing manufacturer.
 - 2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for capillary moisture by plastic sheet method in accordance with ASTM D 4263.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean, prepare, and treat substrates in accordance with manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.
- E. For masonry substrates, apply waterproofing over concrete block and brick with mortar joints struck flush or smooth trowel parge coat.
- F. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks in accordance with ASTM D 4258.
 - 1. Install sheet strips of width in accordance with manufacturer's written instructions and center over treated construction and contraction joints and cracks.

- G. Bridge and cover isolation joints expansion joints and discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips of widths in accordance with manufacturer's written instructions.
- H. Corners: Prepare, prime, and treat inside and outside corners in accordance with ASTM D 6135.
 - 1. Install membrane strips centered over vertical inside corners. Install 3/4-inch (19-mm) fillets of liquid membrane on horizontal inside corners and as follows:
 - a. At footing-to-wall intersections, extend liquid membrane in each direction from corner or install membrane strip centered over corner.
 - b. At plaza-deck-to-wall intersections, extend liquid membrane or sheet strips onto deck waterproofing and to finished height of sheet flashing.
- I. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions in accordance with ASTM D 6135.

3.3 POST-APPLIED SHEET-WATERPROOFING APPLICATION

- A. Install modified bituminous sheets in accordance with waterproofing manufacturer's written instructions and recommendations in ASTM D 6135.
- B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.
- C. Apply and firmly adhere sheets, 100% back rolled, over area to receive waterproofing. Accurately align sheets and maintain uniform 2-1/2-inch- (64-mm-) minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure watertight installation.
 - 1. When ambient and substrate temperatures range between 25 and 40 deg F (minus 4 and plus 5 deg C), install self-adhering, modified bituminous sheets produced for low-temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than 60 deg F (16 deg C).
- D. Two-Ply Application, as follows:
 - 1. Install detail strips per manufacturer's written installation instructions.
 - 2. Install first ply; install sheets to form a membrane with lap widths of a uniform 2-1/2-inch (64-mm) minimum.
 - 3. Install second ply; install sheets to form a membrane with lap widths of a uniform 2-1/2-inch (64-mm) minimum.
 - 4. Stagger seams of first ply and second ply. Do not align seams of first ply with second ply.
- E. Horizontal Application: Install Two-Ply Application, apply sheets from low to high points of decks to ensure that laps shed water.
- F. Apply continuous sheets over already-installed sheet strips, bridging substrate cracks, construction, and contraction joints.
- G. Seal edges of sheet-waterproofing terminations with mastic.
- H. Install sheet-waterproofing and auxiliary materials to tie into adjacent waterproofing.

- I. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending 6 inches (150 mm) beyond repaired areas in all directions.
- J. Immediately install protection course with butted joints over waterproofing membrane.

3.4 PRE-APPLIED SHEET-WATERPROOFING APPLICATION

- A. Install bonded blindside sheet waterproofing in accordance with manufacturer's written instructions.
- B. Place and secure molded-sheet drainage panels over substrate. Lap edges and ends of geotextile to maintain continuity.
- C. Vertical Applications: Install sheet with face against substrate. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required by membrane manufacturer. Overlap and seal seams, and stagger and tape end laps to ensure watertight installation. Mechanically fasten to substrate.
 - 1. Securely fasten top termination of membrane with continuous metal termination bar anchored into substrate and cover with detailing tape.
- D. Corners: Seal lapped terminations and cut edges of sheet waterproofing at inside and outside corners with detail tape.
- E. Seal penetrations through sheet waterproofing to provide watertight seal with detail tape patches or wraps and a liquid-membrane troweling.
- F. Install sheet-waterproofing and auxiliary materials to produce a continuous watertight tie into adjacent waterproofing.
- G. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Tape perimeter of damaged or nonconforming area extending 6 inches (150 mm) beyond repaired areas in all directions. Apply a patch of sheet waterproofing and firmly secure with detail tape.

3.5 MOLDED-SHEET DRAINAGE-PANEL INSTALLATION

- A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, in accordance with manufacturer's written instructions. Use adhesives or other methods that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.

3.6 INSULATION INSTALLATION

- A. Install one or more layers of board insulation to achieve required thickness over waterproofed surfaces. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.
- B. On vertical surfaces, set insulation units in adhesive or tape applied in accordance with manufacturer's written instructions.

3.7 FIELD QUALITY CONTROL

- A. Manufacturer's Site Representative: Engage a manufacturer's site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish daily reports to Architect.
- B. Testing Agency: Owner to Engage a qualified testing agency to inspect substrate conditions, surface preparation, waterproofing application, protection, and drainage components, and to furnish reports to Architect. Installation inspected by Testing Agency, minimum four phases of blindside installation for substrate, waterproofing installation, observation after reinforcement, and final inspection prior to concrete placement. Testing Agency to comply with requirement for material and labor warranty specified.

3.8 PROTECTION, REPAIR, AND CLEANING

- A. Do not permit foot or vehicular traffic on unprotected membrane.
- B. Protect waterproofing from damage and wear during remainder of construction period.
- C. Protect installed insulation from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- D. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.
- E. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

SECTION 07 1416 - COLD FLUID-APPLIED WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Modified asphalt waterproofing.
 - 2. Molded-sheet drainage panels.
 - 3. Insulation.
- B. Related Section:
 - 1. Section 07 9200 "Joint Sealants" for joint-sealant materials and installation.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's written instructions for evaluating, preparing, and treating substrate, technical data, and tested physical and performance properties of waterproofing.
- B. Sustainable Design Submittals:
 - 1. Environmental Product Declaration (EPD): For each product.
- C. Shop Drawings: Show locations and extent of waterproofing. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
 - 1. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.
- D. Samples: For the following products:
 - 1. Waterproofing System, 8 by 8 inches (200 by 200 mm), showing layering of membrane components (waterproofing membrane, reinforcing fabric, and protection course).
 - 2. Flashing sheet, 10 by 8 inches (250 by 200 mm).
 - 3. Membrane-reinforcing fabric, 10 by 8 inches (250 by 200 mm).
 - 4. Insulation, 10 by 8 inches (250 by 200 mm).
 - 5. Drainage panel, 4 by 4 inches (100 by 100 mm).

1.3 QUALITY ASSURANCE

- A. Installer Qualifications: A firm that is acceptable to waterproofing manufacturer for installation of waterproofing required for this Project.
- B. Source Limitations: Obtain waterproofing materials from single manufacturer or from manufacturer's approved by selected waterproofing manufacturer.
- C. Provide the following upon request:
 - 1. Qualification Data: For Installer.
 - 2. Product Test Reports: For waterproofing, based on evaluation of comprehensive tests performed by a qualified testing agency.
 - 3. Field quality-control reports.

- D. Mockups: Before beginning installation, install waterproofing to 100 sq. ft. (9.3 sq. m) of wall to demonstrate surface preparation, crack and joint treatment, corner treatment, thickness, texture, and execution quality.
1. For slopes greater than 2:12, mockup is required to test interface shear to determine the stability of the system sandwich.
 2. If Architect determines mockups do not comply with requirements, reapply waterproofing and reinstall overlaying construction until mockups are approved.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. Preinstallation Conference: Conduct conference at Project site.
1. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, adhesion to contaminated substrate (e.g. concrete curing compounds and form release agents), substrate curing period weather related restrictions during installation, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.
 - a. Before starting application of membrane waterproofing work, arrange a job-site meeting with the Architect, the Testing Agency and manufacturer representative to discuss the following:
 - 1) The waterproofing system, number of plies, termination and flashing requirements.
 - 2) Intermediate and final requirements of protecting the work.
 - 3) The different substrates that will receive the waterproofing and preparation requirements for each.
 - 4) Curing requirements for concrete.
 - 5) Concrete form release agent precautions.
 - 6) Verify admixtures and compatibility with waterproofing manufacturer.
 - 7) Adhering to coated surfaces, if applicable.
 - 8) Job specific recommendations on use of primers.
 - 9) Hot, cold and wet condition precautions.
 - 10) Scheduling and coordination with other construction, such as waterproofing overlaps that must be installed during construction of walls and footings both above and below grade.
 - 11) Protection of the work and repair procedures.
 - 12) Verify in writing to the Owner's representative, that the Contractor's full time on site foreman and crew etc. (as required) are certified, or meet the requirements of the manufacturer of the waterproofing, as installers.
 - b. Whenever the membrane waterproofing work is to be done, notify Testing Agency in sufficient time to arrange inspections.
 - c. Provide safe access to the location of the Work for proper inspection.
 - d. Post installation testing (e.g. Flood Testing or Electronic Field Vector Mapping.)

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver liquid materials to Project site in original containers with seals unbroken, labeled with manufacturer's name, product brand name and type, date of manufacture, shelf life, and directions for storing and mixing with other components.

- B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by waterproofing manufacturer.
- C. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- D. Protect stored materials from direct sunlight.

1.5 FIELD CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate, when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F (3 deg C) above dew point.
 - 1. Do not apply waterproofing in snow, rain, fog or mist, or when such weather conditions are imminent during application and curing period.
- B. Maintain adequate ventilation during application and curing of waterproofing materials.
- C. Compatibility:
 - 1. Where new work interfaces existing waterproofed construction, remove existing waterproofing as required to install new work. Interface new waterproofing with existing system to provide continuous system without leaks. Ensure compatibility of system materials.
 - 2. The waterproofing manufacturer shall submit a letter stating compatibility or concerns with existing, or adjacent, waterproofing.

1.6 WARRANTY

- A. Special Manufacturer's Warranty: Manufacturer's standard form in which waterproofing manufacturer and Installer agree to repair or replace waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.
 - 1. Warranty does not include failure of waterproofing due to failure of substrate prepared and treated in accordance with requirements or formation of new joints and cracks in substrate that exceed 1/16 inch (1.6 mm) in width.
 - 2. Warranty Period: Ten years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 WATERPROOFING

- A. Modified Asphalt Waterproofing: 55 mil thick sheet consisting of rubber modified asphalt filmed onto a woven glass or polyester fabric, set in a fluid applied proprietary adhesive to form a monolithic membrane.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Barrett Company; Black Pearl Waterproofing.
 - b. Laureco Waterproofing, Inc.

2.2 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials recommended by manufacturer to be compatible with one another and with waterproofing, as demonstrated by waterproofing manufacturer, based on testing and field experience.
- B. Primer: Manufacturer's proprietary, factory-formulated primer.
- C. Sheet Flashing: A single ply of modified asphalt membrane waterproofing or 50-mil- (1.3-mm-) minimum, nonstaining, uncured sheet neoprene.
 - 1. Adhesive: Manufacturer's recommended contact adhesive.
- D. Membrane-Reinforcing Fabric: Nonwoven, needle-punched white polyester fabric, manufacturer's standard weight.
- E. Joint Reinforcing Strip: Manufacturer's recommended fiberglass mesh or polyester fabric.
- F. Joint Sealant: Multicomponent polyurethane sealant, compatible with waterproofing, complying with ASTM C 920 Type M, Class 25; Grade NS for sloping and vertical applications or Grade P for deck applications; Use NT exposure; and as recommended by manufacturer for substrate and joint conditions.
 - 1. Backer Rod: Closed-cell polyethylene foam.
- G. Waterproofing Reinforcement: Provide manufacturer's recommended sheet flashing.
- H. Waterproofing Filler: Cementitious or bituminous filler recommended by waterproofing manufacturer for application and substrate.
- I. Waterproofing Flashing: Provide manufacturer's recommended sheet flashing.
- J. Expansion Joints: Proprietary field fabricated expansion joints shall be used with manufacturers waterproofing or as recommended by the waterproofing manufacturer, unless stated otherwise.
- K. Metal Termination Bar: Provide the following components.
 - 1. Termination Bar: Stainless Steel 1 inch by 8 feet, 0.075" thick, with 5/16" holes 8" to 9" on center. Basis of design: Advanced Building Products, Inc. Stainless Steel Termination Bar.
 - 2. Expansion Anchor: 1/4" x 2" expansion anchor consisting of a Type 304 Stainless Steel drive pin and an expanding body. Basis of design: Hilti Metal HIT Anchor.
 - 3. Butyl Sealant Tape: Adco Products, Inc.; ST-30A, or as approved, a 100 percent solids, non-hardening butyl rubber based extruded tape sealant, designed to not shrink or oxidize under long term aging, which will elongate and absorb compression within the sealant without breaking the adhesive bond to the substrate.
 - 4. Mastic: Trowel grade liquid mastic recommended by waterproofing manufacturer.
- L. Self-Adhering Stainless Steel Flexible Flashing:
 - 1. Subject to compliance with requirements, provide the following:
 - a. York Manufacturing Inc.; York 316 SS.
 - 1) Characteristics:

- a) Type: Stainless steel with one stainless steel face (facing outward) with a butyl block co-polymer adhesive (inward facing).
- b) Stainless steel: Type 316, ASTM A240. Domestically sourced per DF ARS 252.225-7008 and/or DF ARS 252.225-7009.

2.3 PROTECTION COURSE

- A. Protection Course Horizontal and Vertical Applications: ASTM D 6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners, 1/8-inch (3 mm) nominal thickness.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American Hydrotech, Inc; Hydroflex 30.
 - b. Barrett Company; Ram 200 Heavy Duty Protection Course.
 - c. Carlisle; Protection HS.
 - d. Henry Company; G100 SS.
 - e. Laurenco Waterproofing; Premium Protection Sheet.
 - 2. Adhesive: Rubber-based solvent type recommended by waterproofing manufacturer for type of protection course.

2.4 MOLDED-SHEET DRAINAGE PANELS

- A. Type 2: Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panels consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding No. 45 (0.43-mm) sieve, laminated to one side of the core, with a polymeric film bonded to the other side; and with a horizontal flow rate of not less than 2.8 gpm per ft. (35 L/min. per m).
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. American Hydrotech, Inc; Hydrodrain 700.
 - b. American Wick Drain Corporation; Amerdrain 650.
 - c. Carlisle Coatings & Waterproofing, Inc; CCW MiraDRAIN 9000.
 - d. GCP Applied Technologies; Hydroduct 225.
 - e. JDR Enterprises, Inc.; J-Drain 700.

2.5 INSULATION

- A. Type XPS — 1: Board Insulation: Extruded-polystyrene board insulation complying with ASTM C 578, Type VI, 40-psi (276-kPa) minimum compressive strength; unfaced; square or shiplap edged.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. DiversiFoam Products.
 - b. Dow Chemical Company (The).
 - c. Owens Corning. Pactiv Corporation.
 - d. T. Clear Corporation.

PART 3 - EXECUTION

3.1 GENERAL

- A. Comply with waterproofing manufacturer's written recommendations and warranty requirements.

3.2 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance.
 - 1. Verify that concrete has cured and aged for minimum time period recommended by waterproofing manufacturer.
 - 2. Perform testing as required by waterproofing manufacturer for test type, rate, and quantity to validate that substrate is acceptable, dry, and free of moisture.
 - 3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 SURFACE PREPARATION

- A. Clean and prepare substrate in accordance with manufacturer's written recommendations. Provide clean, dust-free, and dry substrate for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage or overspray affecting other construction.
- C. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.
- D. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, acid residues, and other penetrating contaminants or film-forming coatings from concrete.
 - 1. Abrasive blast clean concrete surfaces uniformly to expose top surface of fine aggregate in accordance with ASTM D 4259 with a self-contained, recirculating, blast-cleaning apparatus. Remove material to provide a sound surface free of laitance, glaze, efflorescence, curing compounds, concrete hardeners, or form-release agents. Remove remaining loose material and clean surfaces in accordance with ASTM D 4258.
- E. Remove fins, ridges, and other projections and fill honeycomb, aggregate pockets, and other voids.

3.4 PREPARATION AT TERMINATIONS AND PENETRATIONS

- A. Prepare vertical and horizontal surfaces at terminations and penetrations through waterproofing and at expansion joints, drains, and sleeves in accordance with ASTM C 898 and ASTM C 1471 and manufacturer's written instructions.
- B. Prime substrate unless otherwise instructed by waterproofing manufacturer.
- C. Apply waterproofing in two separate applications, and embed a joint reinforcing strip in the first preparation coat when recommended by waterproofing manufacturer.

1. Provide sealant cants around penetrations and at inside corners of deck-to-wall butt joints when recommended by waterproofing manufacturer.

3.5 JOINT AND CRACK TREATMENT

- A. Prepare, treat, rout, and fill joints and cracks in substrate in accordance with ASTM C 898 and ASTM C 1471 and waterproofing manufacturer's written instructions. Remove dust and dirt from joints and cracks, complying with ASTM D 4258, before coating surfaces.
 1. Comply with ASTM C 1193 for joint-sealant installation.
 2. Apply bond breaker between sealant and preparation strip.
 3. Prime substrate and apply a single thickness of preparation strip extending a minimum of 3 inches (75 mm) along each side of joint. Apply waterproofing in two separate applications and embed a joint reinforcing strip in the first preparation coat.
- B. Install sheet flashing and bond to deck and wall substrates where indicated or required in accordance with waterproofing manufacturer's written instructions.
 1. Extend sheet flashings onto perpendicular surfaces and other work penetrating substrate in accordance with ASTM C 898.

3.6 WATERPROOFING APPLICATION

- A. Apply waterproofing in accordance with ASTM C 898 and ASTM C 1471 and manufacturer's written instructions.
- B. Start installing waterproofing in presence of manufacturer's technical representative.
- C. Apply primer over prepared substrate.
- D. Installation of Modified Asphalt Waterproofing: Each ply shall consist of a 55 mil thick sheet set in adhesive.
 1. Mud Mats:
 - a. Two plies.
 - b. Waterproofing on a mud mat requires a layer of Laurencio adhesive dusted with cement applied to the second ply prior to construction traffic and placement of topping slab.
 2. Vertical Walls:
 - a. Intermediate waterheads to 50 feet: one ply.
 - b. Water heads 50 to 100 feet: two plies.
 - c. Water heads of 100 feet or more: three plies.
 3. Earth Retention System:
 - a. Water heads to 50 feet: two plies using the second ply as a protection course.
 - b. Water heads 50 to 100 feet: three plies using the third ply as a protection course.
 - c. Water heads of 100 feet or more: four plies using the forth ply as a protection course.
- E. Expansion Joint: Install appropriate proprietary expansion joint per manufacturer's instructions at locations shown.
- F. Install protection course with butted joints over nominally cured membrane before starting subsequent construction operations.

1. Board insulation may be used in place of a separate protection course to vertical applications when approved by waterproofing manufacturer.

3.7 MOLDED-SHEET DRAINAGE PANEL INSTALLATION

- A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, in accordance with manufacturer's written instructions. Do not penetrate waterproofing with fasteners. Lap edges and ends of geotextile fabric to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
 1. For vertical applications, install protection course and board insulation before installing drainage panels.

3.8 INSULATION INSTALLATION

- A. Install one or more layers of board insulation to achieve required thickness over waterproofed surfaces. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.
- B. On waterproofing surfaces, set insulation units into adhesive in accordance with manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

3.9 FIELD QUALITY CONTROL

- A. Site Representative: Engage a full time site representative qualified by the waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, and application of the membrane, flashings, protection, and drainage components, and to furnish daily reports to Architect.
 1. Site representative shall measure membrane thickness with pin tester or other suitable device at least once for every 100 sq. ft. (10 sq. m) and include measurements in reports.
- B. Testing Agency: Engage a qualified testing agency to inspect substrate conditions, surface preparation, waterproofing application, protection, and drainage components, and to furnish reports to Architect.
- C. Post Installation Testing: All waterproofed surfaces.
 1. Flood Testing: Flood test each deck area for leaks, in accordance with recommendations in ASTM D 5957, after completing waterproofing but before overlaying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
 - a. Flood to an average depth of 2-1/2 inches (64 mm) with a minimum depth of 1 inch (25 mm) and not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (50 mm) of clearance from top of sheet flashings.
 - b. Flood each area for 48 hours.
 - c. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.
 2. Electric Field Vector Mapping (EFVM): EFVM technician shall survey entire waterproofing area for potential leaks using EFVM.
 - a. Install a permanent leak detection system by one of the following or approved equal:
 - 1) International Leak Detection, Ltd, Ontario, Canada
 - 2) Honza Group Incorporated, Columbia, Maryland

- b. Engage a company experienced in detecting breaches in the waterproofing using an electronic detection system.
 - c. If breaches are discovered, repair the breach and retest the affected area. Repeat this process until no breach is detected.
 3. Engage an independent testing agency to observe testing. If breaches are discovered, the independent testing agency shall observe repairs and retesting of discovered breaches.
 - D. Post Installation Testing of Penetrations, Drains, and, Horizontal Expansion Joints.
 1. Flood test each horizontal expansion joint, in accordance with recommendations in ASTM D 5957, after installation of the expansion joint but before overlaying construction is placed. Install temporary containment assemblies, plug or dam drains as required, and flood with potable water.
 2. Flood to an average depth of 2-1/2 inches (64 mm) with a minimum depth of 1 inch (25 mm) and not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (50 mm) of clearance from top of sheet flashings.
 3. Flood each area for 48 hours.
 4. After flood testing, repair leaks, repeat flood tests, and make further repairs until expansion joint installation is watertight.
 5. Provided test reports upon completion of flood testing.
- 3.10 CURING, PROTECTION, AND CLEANING
- A. Cure waterproofing in accordance with manufacturer's written recommendations, taking care to prevent contamination and damage during application stages and curing.
 1. Do not permit foot or vehicular traffic on unprotected membrane.
 - B. Protect waterproofing from damage and wear during remainder of construction period.
 - C. Protect installed board insulation from damage due to ultraviolet light, harmful weather exposures, physical abuse, and other causes. Immediately after installation, provide temporary coverings where insulation will be subject to abuse and cannot be concealed and protected by permanent construction.
 - D. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

SECTION 07 2100 - THERMAL INSULATION**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
 - 1. Extruded polystyrene foam-plastic board insulation.
 - 2. Mineral-wool board insulation.
 - 3. Glass-fiber blanket insulation.
 - 4. Mineral-wool blanket insulation.
 - 5. Loose-fill insulation.
- B. Related Requirements:
 - 1. Section 04 2200 "Concrete Unit Masonry" for insulation installed in masonry cells.
 - 2. Section 06 1600 "Sheathing" for foam-plastic board sheathing over wood or steel framing.
 - 3. Section 07 1416 "Cold Fluid-Applied Waterproofing" for insulated drainage panels installed with waterproofing.
 - 4. Section 07 2726 "Fluid-Applied Membrane Air Barriers for air and water barriers specified as a part of these systems.
 - 5. Section 07 8443 "Joint Firestopping" for insulation installed as part of a perimeter fire-resistive joint system.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Sustainable Design Submittals:
 - 1. Product Data: For adhesives, indicating VOC content.
 - 2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
 - 3. Laboratory Test Reports: For insulation, indicating compliance with requirements for low-emitting materials.
- C. Fire Test Reports: Provide NFPA 285 assembly test report.

1.3 INFORMATIONAL SUBMITTALS

- A. Installer's Certification: Listing type, manufacturer, and R-value of insulation installed in each element of the building thermal envelope.
 - 1. For blown-in or sprayed fiberglass and cellulosic-fiber loose-fill insulation, indicate initial installed thickness, settled thickness, settled R-value, installed density, coverage area, and number of bags installed.
 - 2. Sign, date, and post the certification in a conspicuous location on Project site.
- B. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- C. Research Reports: For foam-plastic insulation, from ICC-ES.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to the Project site in their original containers or packages or bundles bearing label clearly identifying manufacturer's name, brand, grade, UL listing, and other pertinent information.
- B. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.
- C. Protect foam-plastic board insulation as follows:
 - 1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
 - 2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site before installation time.
 - 3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

PART 2 - PRODUCTS

2.1 EXTRUDED POLYSTYRENE FOAM-PLASTIC BOARD INSULATION

- A. Type XPS-1: Extruded-Polystyrene Board Insulation: ASTM C 578, of type and minimum compressive strength indicated below; thickness and width indicated and manufacturer's standard length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84 manufactured with non-halogenated fire-retardants.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. DiversiFoam Products.
 - b. DuPont.
 - c. Owens Corning.
 - 2. Thermal Resistance: As indicated on drawings.
 - 3. Type X, 15 psi (104 kPa).
 - 4. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width.
- B. Type XPS-3: Geotextile-Faced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type IV, 25-psi (173-kPa) or Type VI, 40-psi (276-kPa) minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with nonwoven geotextile filter fabric; thickness and width indicated and manufacturer's standard length as required to suit job conditions manufactured with non-halogenated fire-retardants.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Owens Corning.
 - 2. Thermal Resistance: Of total thickness required to provide a minimum thermal resistance of R-4.4 (deg. F.h.sf/Btu).

3. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width.

2.2 MINERAL-WOOL BOARD INSULATION

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Johns Manville.
 2. Owens Corning; Thermafiber.
 3. ROCKWOOL (formerly Roxul).
- B. Insulation shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- C. Insulation shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 16.5 mcg/cu. m or 13.5 ppb, whichever is less, except for insulation manufactured without formaldehyde.
- D. Insulation shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- E. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- F. Type MW-1: Unfaced, Mineral-Wool Board Insulation: ASTM C 612; thickness as indicated with width and length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of 15 and zero, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
 1. Nominal density of 4 lb/cu. ft. (64 kg/cu. m), Types IA and IB, thermal resistivity of 4 deg F x h x sq. ft./Btu x in. at 75 deg F (27.7 K x m/W at 24 deg C).
 2. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width.
- G. Type MW-3: Unfaced, Mineral-Wool Rain Screen/Cavity Wall Insulation: ASTM C 612; thickness as indicated with width and length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of zero and zero, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics. Required for use in exterior rain screen/cavity wall applications.
 1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Owens Corning Thermafiber; , RainBarrier Dark.
 - b. ROCKWOOL.; CavityRock Black.
 - c. Johns Manville; Cladstone 60.
 2. Thermal Resistance: Of total thickness required to provide a minimum thermal resistance of R-30 (deg. F.h.sf/Btu).
 3. Facer Color: Darkened, where indicated.

4. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width.

2.3 GLASS-FIBER BLANKET INSULATION

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. CertainTeed Corporation.
 2. Johns Manville.
 3. Owens Corning.
- B. Insulation shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- C. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent
- D. Type FG-9: Unfaced, Glass-Fiber Blanket Insulation: ASTM C 665, Type I; thickness as indicated with width and length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
 1. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width.

2.4 MINERAL-WOOL BLANKET INSULATION

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Johns Manville.
 2. Owens Corning - Thermafiber (Basis of Design).
 3. Rockwool International.
- B. Insulation shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- C. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- D. Type MW-1: Unfaced, Mineral-Wool Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; thickness as indicated with width and length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Johns Manville.
 - b. Owens Corning - ThermaFiber RainBarrier (Basis of Design).
 - c. Rockwool International.

2. Minimum thermal resistivity (R) of 3.1deg F x h x sq. ft./Btu x in. (21.7 K x m/W) at mean temperature of 75 degrees F (24 degrees C).
 3. Thermal Resistance: Of total thickness indicated required to provide a minimum thermal resistance of R-10 insert value (deg. F.h.sf/Btu).
 4. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width.
- E. Type MW-2: Unfaced, Mineral-Wool Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; thickness as indicated with width and length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Johns Manville.
 - b. Owens Corning - ThermaFiber Fire & Sound Guard Plus (Basis of Design).
 - c. Rockwool International.
 2. Minimum density of 4.0 lbs. per cubic foot (16 kg per cubic meter).
 3. Minimum thermal resistivity (R) of 3.1deg F x h x sq. ft./Btu x in. (21.7 K x m/W) at mean temperature of 75 degrees F (24 degrees C).
 4. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width.

2.5 LOOSE-FILL INSULATION

- A. Insulation shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- C. Cellulosic-Fiber Loose-Fill Insulation: ASTM C 739, chemically treated for flame-resistance, processing, and handling characteristics.
 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than Insert number percent.
 2. Thermal Resistance: As indicated on drawings.

2.6 INSULATION FASTENERS

- A. Adhesively Attached, Angle-Shaped, Spindle-Type Anchors: Angle welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.
 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Gemco; 90-Degree Insulation Hangers.
 2. Angle: Formed from 0.030-inch- (0.762-mm-) thick, perforated, galvanized carbon-steel sheet with each leg 2 inches (50 mm) square.
 3. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch (2.67 mm) in diameter; length to suit depth of insulation indicated.

- B. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick galvanized-steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than 1-1/2 inches (38 mm) square or in diameter.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. AGM Industries, Inc.; RC150.
 - b. Gemco; R-150.
- C. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates indicated without damaging insulation, air barrier, fasteners, and substrates. When in contact with air barrier, provide adhesive and chemical compatible material that is acceptable by the air barrier manufacturer.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. AGM Industries, Inc.
 - b. Gemco.
 - 2. Adhesion Strength: 15 lbf/sq. in. (207 kPa) minimum.

2.7 ACCESSORIES

- A. Insulation for Miscellaneous Voids:
 - 1. Glass-Fiber Insulation: ASTM C764, Type II, loose fill; with maximum flame-spread and smoke-developed indexes of 5, per ASTM E84.
 - 2. Spray Polyurethane Foam Insulation: ASTM C1029, Type II, closed cell, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E84.

END OF SECTION

SECTION 07 2600 - VAPOR RETARDERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Polyethylene vapor retarders.
 - 2. Reinforced-polyethylene vapor retarders.
 - 3. Fire-retardant, reinforced-polyethylene vapor retarders.
- B. Related Requirements:
 - 1. Section 03 3000 "Cast-in-Place Concrete" for under-slab vapor retarders.
 - 2. Section 07 2100 "Thermal Insulation" for vapor retarders integral with insulation products.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.3 QUALITY ASSURANCE

- A. Provide the following upon request:
 - 1. Product Test Reports: For each product, for tests performed by a qualified testing agency.

PART 2 - PRODUCTS

2.1 POLYETHYLENE VAPOR RETARDERS

- A. Type VR-1: Polyethylene Vapor Retarders: ASTM D 4397, 10-mil- (0.25-mm-) thick sheet, with maximum permeance rating of 0.1 perm (5.7 ng/Pa x s x sq. m).

2.2 REINFORCED-POLYETHYLENE VAPOR RETARDERS

- A. Type VR-2: Reinforced-Polyethylene Vapor Retarders: Sheet with outer layers of polyethylene film laminated to an inner reinforcing layer consisting of either nylon cord or polyester scrim and weighing not less than 20 lb/1000 sq. ft. (9 kg/100 sq. m), with maximum permeance rating of 0.1 perm (5.7 ng/Pa x s x sq. m).
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Insulation Solutions, Inc.
 - b. Raven Industries Inc.
 - c. Reef Industries, Inc.

2.3 FIRE-RETARDANT, REINFORCED-POLYETHYLENE VAPOR RETARDERS

- A. Type VR-3: Fire-Retardant, Reinforced-Polyethylene Vapor Retarders: Sheet with outer layers of polyethylene film laminated to an inner reinforcing layer consisting of either nonwoven grid of nylon cord or polyester scrim and weighing not less than 20 lb/1000 sq. ft. (9 kg/100 sq. m), with maximum permeance rating of 0.1 perm (5.7 ng/Pa x s x sq. m).
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Raven Industries Inc.
 - b. Reef Industries, Inc.
 - 2. Surface-Burning Characteristics: Maximum flame-spread and smoke-developed indexes of 75 and 200, respectively, per ASTM E 84.

2.4 ACCESSORIES

- A. Vapor-Retarder Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
- B. Adhesive for Vapor Retarders: Product recommended by vapor-retarder manufacturer and has demonstrated capability to bond vapor retarders securely to substrates indicated.
- C. Vapor-Retarder Fasteners: Pancake-head, self-tapping steel drill screws; with fender washers.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean substrates of substances that are harmful to vapor retarders, including removing projections capable of puncturing vapor retarders.

3.2 INSTALLATION OF VAPOR RETARDERS ON FRAMING

- A. Place vapor retarders on side of construction indicated on Drawings.
- B. Extend vapor retarders to extremities of areas to protect from vapor transmission. Secure vapor retarders in place with adhesives, vapor retarder fasteners, or other anchorage system as recommended by manufacturer. Extend vapor retarders to cover miscellaneous voids in insulated substrates, including those filled with loose-fiber insulation.
- C. Seal vertical joints in vapor retarders over framing by lapping no fewer than two studs and sealing with vapor-retarder tape in accordance with vapor-retarder manufacturer's written instructions. Locate all joints over framing members or other solid substrates.
- D. Seal joints caused by pipes, conduits, electrical boxes, and similar items penetrating vapor retarders with vapor-retarder tape to create an airtight seal between penetrating objects and vapor retarders.
- E. Repair tears or punctures in vapor retarders immediately before concealment by other work. Cover with vapor-retarder tape or another layer of vapor retarders.

3.3 INSTALLATION OF VAPOR RETARDERS IN CRAWL SPACES

- A. Install vapor retarders over prepared grade. Lap joints a minimum of 12 inches (305 mm) and seal with manufacturer's recommended tape. Install second layer over pathways to equipment.
- B. Extend vapor retarder over footings and seal to foundation wall or grade beam with manufacturer's recommended tape.
 - 1. Extend vapor retarder vertically minimum 24 inches (610 mm) above top of footing.
- C. Seal around penetrations such as utilities and columns in order to create a monolithic, airtight membrane at grade surface, perimeter, and all vertical penetrations.

3.4 PROTECTION

- A. Protect vapor retarders from damage until concealed by permanent construction.

END OF SECTION

FOR REFERENCE ONLY

SECTION 07 2726 - FLUID-APPLIED MEMBRANE AIR BARRIERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes fluid-applied, and vapor-permeable membrane air barriers, that incorporates the ABAA Quality Assurance Program (QAP).
- B. Related Requirements:
 - 1. Section 06 1600 "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.

1.2 DEFINITIONS

- A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.
- B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.
- C. Air-Barrier Assembly: The collection of air-barrier materials and accessory materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Include installers of other construction connecting to air barrier, including roofing, waterproofing, masonry, sealants.
 - 2. Review air barrier requirements including surface preparation, substrate condition and pretreatment, minimum substrate curing period, forecasted weather conditions, special details and sheet flashings, mockups, installation procedures, sequence of installation, testing and inspecting procedures, materials approved for use, compatibility of materials, coordination with installation of adjacent and covering materials, and protection and repairs.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of air barrier.
 - 1. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of products.
 - 2. Submit letter from primary materials manufacturer indicating approval of products not manufactured by primary manufacturer.
 - 3. Include statement that materials are compatible with adjacent materials proposed for use and the following.
 - a. For materials that the air barrier system will bond to, provide letters as necessary from each manufacturer confirming materials and substrates for the air barrier system is chemically and adhesively compatible with the air barrier system and the bonded to material.

- b. For materials that are proposed to bond to the air barrier system, provide letters as necessary from each manufacturer confirming materials proposed to bond to the air barrier system are chemically and adhesively compatible with the air barrier system.
 4. Submit reports indicating that field peel-adhesion test on all materials to which sealants are adhered have been performed and the changes made, if required, to other approved materials, in order to achieve successful adhesion.
- B. Shop Drawings: For air-barrier assemblies.
 1. Show locations and extent of air barrier. Include project specific details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
 2. Indicate total area (sq. ft.) of air barrier to be installed.
 3. Include project specific details of interfaces with other materials that form part of the air barrier.
 4. Include letter from manufacturer indicating that the project specific details and shop drawings have been reviewed and are approved for use.
- C. Samples: Submit clearly labeled samples, 3 by 4 inch (75 mm by 100 mm) minimum size of each material specified.
- D. Field Test Results: Submit mockup and in-situ test results of air leakage test and water leakage test with specified standards, including retesting if initial results are not satisfactory.
- E. Qualification Data: For Installer. Include list of ABAA-certified installers and supervisors employed by the Installer, who work on Project.
 1. Provide evidence from the manufacturer that the firm is approved, authorized, or licensed to install the specified products and is eligible to receive manufacturer's special warranty.
 2. Provide evidence that the installing firm is experienced in applying air barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
 3. Provide a manual that describes Installers and Manufacturers Quality Assurance / Quality Control program and procedures.
 4. Sample of Installers Daily Work Sheet.
 5. Submit evidence of current accreditation and certification under the Air Barrier Association of America's (ABAA) Quality Assurance Program. Submit accreditation number of manufacturer and certification number of installers.
- F. Product Certificates: From air-barrier manufacturer, certifying permanent chemical and adhesive compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with the barrier, and certifying that cleaning materials used during installation are chemically compatible with each of the adjacent materials proposed for use.
- G. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.
- H. Fire Test Reports: Provide NFPA 285 assembly test report.
- I. Sample Warranty: Manufacturer and Installer sample warranty.

- J. ABAA Audit Schedule: Submit number of ABAA audits planned based on the QAP requirements and total area of installed air barrier. Indicate anticipated timeframe of audits.
- K. Installation Reports: Provide ABAA Audit Reports and Installer Daily Worksheet for project record. Provide reports weekly to Architect for each week installation of air barrier system occurs.

1.5 QUALITY ASSURANCE

A. Installer Qualifications:

- 1. A qualified firm that is approved, authorized, or licensed by the manufacturer to install manufacturer's product, that is eligible to receive manufacturer's special warranty, and is experienced in applying air barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
- 2. A firm that is an ABAA-licensed contractor and employs certified and registered installers.
- 3. A firm that complies with ABAA's Quality Assurance Program.
- 4. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.

B. Manufacturer Qualifications: A qualified manufacturer regularly engaged in manufacturing air barrier membranes.

C. Quality Assurance / Quality Control Program:

- 1. Implement the ABAA Quality Assurance Program requirements. Cooperate with ABAA inspectors and independent testing and inspection agencies engaged by the Owner. Do not cover air barrier until it has been inspected, tested and accepted.
- 2. Notify Architect seven days in advance of the dates and times when ABAA Audits are performed.
- 3. Daily Inspection:
 - a. Visual inspection of the substrate prior to the application of membrane to confirm the substrate is in accordance with the manufacturer's instructions.
 - b. Visual inspection on the completed air barrier for that day and fix any deficiencies.
 - c. Verification of manufactures specific Wet film thickness of installed work.
 - d. Adhesion Test as indicated in Field Quality Control.
- 4. Daily Work Sheet: Include requirements of the ABAA QAP and the following:
 - a. Listing of installers
 - b. Project name
 - c. Type of air barrier installed
 - d. Air barrier product name and lot/batch number
 - e. Primer product name and lot/batch number
 - f. Substrate type
 - g. Substrate preparation required
 - h. Installation locations (gridlines, elevations, etc)
 - i. Results of visual inspection
 - j. Results of verification of wet film thickness, include photo documentation
 - k. Results of verification of adhesion testing, include photo documentation
 - l. Document and photograph observed deficiencies and corrective actions preformed
 - m. Date and Time of installation

- n. Substrate moisture content
- o. Weather Conditions including but not limited to ambient temperature, relative humidity, and precipitation.
- 5. Testing, Inspection, and Reporting as indicated in the Field Quality control.
- D. Mockups: Before beginning installation of air barrier, build mockups to set quality standards for materials and execution and for preconstruction testing.
 - 1. Build mockups of exterior wall assembly as shown on Drawings, incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.
 - a. Coordinate construction of mockups to permit inspection by Owner's testing agency of air barrier before external insulation and cladding are installed.
 - b. Include junction with roofing vapor retarder, building corner condition, and below-grade waterproofing where applicable.
 - c. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: Owner will engage a qualified testing agency to perform preconstruction testing on field mockups.
- B. Mockup Testing: Air-barrier assemblies shall comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.
 - 1. Qualitative Air-Leakage Testing: Mockups will be tested for evidence of air leakage according to ASTM E 1186, chamber depressurization with detection liquids.
 - a. Test Locations: For each substrate type, provide three tests for each penetration type.
 - b. Test Pressure: 500 Pa.
 - c. Pass/Fail Criteria: Visual observation of air leakage evidenced by continuous foaming "bubbling" of detection liquid is considered a failed test.
 - d. Provide an inspection report that indicates results.
 - 2. Qualitative Air-Leakage-Location Testing: Air-barrier assemblies will be tested for evidence of air leakage according to ASTM E 1186, chamber pressurization or depressurization with smoke tracers.
 - a. Testing to be performed concurrent with Water Penetration Testing indicated below.
 - b. Testing to be performed after cladding attachment system is installed but prior to cladding installation.
 - c. Test Pressure: 6.24 lbf/sq.ft.
 - d. Failure Criteria: Visual evidence of air leakage by means of observations of smoke infiltration or exfiltration.
 - e. Provide an inspection report that indicates results.

3. Qualitative Water Infiltration Testing: Perform testing prior to installation of the cladding, but after cladding attachment systems have been installed. Air barrier systems shall be tested according to ASTM E 1105 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft., and shall not evidence water infiltration.
 - a. Test Locations: Perform one test for each wall assembly type.
 - b. Test Size: 100 sq. ft. minimum.
 - c. Perform tests after cladding attachments have been installed but prior to the installation of cladding/veneer material.
 - d. Water Infiltration Failure Criteria:
 - 1) Water leakage to the interior of the building is a failure.
 - 2) Water observed on interior surfaces of the system is a failure.
 - 3) Water observed on interior surfaces of adjacent systems, originating from the wall system or the transition to the adjacent systems, is a failure.
 - e. Provide an inspection report that indicates results.
4. Water Spray Test: Areas designated by the Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
 - a. Perform tests at transitions to adjacent exterior enclosure assemblies, deflection joints, and expansion joints.
 - b. Perform tests at a representative sample of each condition.
 - c. Water Penetration Failure Criteria:
 - 1) Water leakage to the interior of the building is a failure.
 - 2) Water observed on interior surfaces of the system is a failure.
 - 3) Water observed on interior surfaces of adjacent systems, originating from the wall system or the transition to the adjacent systems, is a failure.
 - d. Provide an inspection report that indicates results.
5. Adhesion Testing: Mockups will be tested for minimum air-barrier adhesion of 16 lbf/sq. in. (207 kPa) or to manufacturer's minimum adhesion level per substrates, whichever is greater, according to ABAA T0002. Perform test after curing period recommended by the manufacturer. Record mode of failure and area which failed in accordance with referenced standard.
 - a. Test Locations: Perform 1 test per substrate type. (Each test site includes 3 pull tests)
 - b. Provide an inspection report that indicates results.
6. Wet Film Thickness Test (to be performed by installer at time of installation and included on ABAA QAP daily worksheet):
 - a. Test material using wet film gauge to confirm that membrane meets manufacturer's indicated wet film thickness requirements.
 - b. Minimum one per coat per substrate type.
 - c. Failure Criteria:
 - 1) A measurement less than manufacturer's required wet film thickness is considered a failure.
 - d. Provide an inspection report indicating results and include photo documentation.
7. Dry Film Thickness Test:
 - a. Test material in accordance with manufacturer's requirements to confirm that cured membrane meets manufacturer's indicated dry film thickness requirements.
 - b. Three 1 inch x 4 inch samples removed from separate areas with gypsum facer intact to avoid stretching membrane.
 - c. Failure Criteria:
 - 1) A measurement less than manufacturer's required dry film thickness is considered a failure.
 - d. Provide an inspection report indicating results and include photo documentation.

8. Air barriers will be considered defective if they do not pass tests and inspections.
 - a. Wet Film Thickness: Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
 - b. Upon failure of Dry Film Testing or Adhesion Testing:
 - 1) Determine cause of failure.
 - 2) Provide one additional test for each occurrence of failure on the mockup.
 - 3) Repair deficient air barrier components per manufacturer's recommendations.
 - 4) Repair tested areas per manufacturer's recommendations.
 - c. Upon failure of E1186 and E1105 testing:
 - 1) Determine cause of failure.
 - 2) Repair per manufacturer's recommendations and retest deficient air barrier components.
9. Notify Architect 14 days in advance of the dates and times when mockups will be tested.
10. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.
11. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- B. Protect stored materials from direct sunlight.

1.8 FIELD CONDITIONS

- A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended by air-barrier manufacturer.
 1. Protect substrates from environmental conditions that affect air-barrier performance.
 2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

1.9 WARRANTY

- A. Manufacturer's Warranty: Provide manufacturer's standard product warranty, for a minimum 10 years from date of Substantial Completion.
- B. Special Installer's Warranty: Provide air barrier installer's 2 year warranty from date of Substantial Completion, including all components of the air barrier assembly, against failures including loss of air tight seal, loss of watertight seal, loss of adhesion, loss of cohesion, failure to cure properly.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Source Limitations: Obtain primary ABAA evaluated materials and air-barrier accessories from single source ABAA evaluated manufacturer. Additional accessory products are acceptable for use provided they are approved by the primary air barrier manufacturer.

- B. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.

2.2 PERFORMANCE REQUIREMENTS

- A. General: Air barrier shall be capable of performing as a continuous vapor-retarding permeable air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.
- B. Air-Barrier Assembly Air Leakage: Maximum 0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft. (0.2 L/s x sq. m of surface area at 75 Pa), when tested according to ASTM E 2357.
- C. Provide an air barrier assembly that withstands combined positive and negative design wind, fan and stack pressures on the envelope without damage or displacement, that transfers the load to the structure, and that does not displace adjacent materials under full load. Join air barrier system materials in an airtight and flexible manner to adjacent assemblies, allowing for the relative movement of assemblies due to thermal and moisture variations and creep, and anticipated seismic movement.

2.3 VAPOR-RETARDING MEMBRANE AIR BARRIER

- A. Fluid-Applied, Vapor-Retarding Membrane Air Barrier:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coating & Waterproofing; Fire Resist Barritech NP.
 - b. GCP, Applied Technologies; Perm-A-Barrier NPL.
 - c. Henry Company; Air-Bloc 16MR.
 2. Physical and Performance Properties:
 - a. Air Permeance: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa) pressure difference; ASTM E 2178.
 - b. Vapor Permeance: Maximum 0.1 perm; ASTM E 96/E 96M.
 - c. Ultimate Elongation: Minimum 300 percent; ASTM D 412, Die C.
 - d. Structural Test Performance: Test according to ASTM E 330 or ASTM E1233 at a positive or negative pressure of 30 psf.
 - 1) No cracking within the field of the panel, substrate joints and at interface of flashing.
 - e. Water Penetration under Static Pressure: No evidence of water penetration through the air barrier assembly when tested according to ASTM E 331 at a minimum static-air-pressure differential of 6.24 lbf/sq.ft.
 - 1) Water Penetration: Water leakage to the interior of the building is a failure. Water observed on interior surfaces of the system or adjacent wall systems is a failure.

2.4 VAPOR-PERMEABLE MEMBRANE AIR-BARRIER

- A. Fluid-Applied, Vapor-Permeable Membrane Air Barrier:
1. Silicone Based Technology Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corp.; Defend Air 200.

- b. Momentive Performance Materials; Elemax 2600 AWB.
- 2. STPE Based Technology Products: Subject to compliance with requirements, provide one of the following:
 - a. DuPont; Tyvek Fluid Applied WB +.
 - b. GCP, Applied Technologies; Perm-A-Barrier VPL 50 RS.
 - c. Prosoco; CAT 5.
- 3. Physical and Performance Properties:
 - a. Air Permeance: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa) pressure difference; ASTM E 2178.
 - b. Vapor Permeance: Minimum 10 perms (580 ng/Pa x s x sq. m); ASTM E 96/E 96M.
 - c. Ultimate Elongation: Minimum 200 percent; ASTM D 412, Die C.
 - d. Structural-Test Performance: Test according to ASTM E 330 or ASTM E1233 at a positive or negative pressure of 30psf.
 - 1) No cracking within the field of the panel, substrate joints and at interface of flashing.
 - e. Water Penetration under Static Pressure: No evidence of water penetration through the air barrier assembly when tested according to ASTM E 331 at a minimum static-air-pressure differential of 6.24 lbf/sq.ft..
 - 1) Water Penetration: Water leakage to the interior of the building is a failure. Water observed on interior surfaces of the system or adjacent wall systems is a failure.

2.5 ACCESSORY MATERIALS

- A. General: Accessory materials recommended by air-barrier manufacturer to produce a complete air-barrier assembly and compatible with primary air-barrier material.
- B. Transition Membrane: Between Air Barrier Membrane and Other Adjacent Materials: Comply with both air barrier manufacturer's recommendations and adjacent material manufacturer's recommendations.
 - 1. Fluid-Applied Flashing: Manufacturer's standard trowel grade liquid flashing.
 - a. Joint Reinforcing Strip: Air-barrier manufacturer's glass-fiber-mesh tape.
 - 2. High Temperature Modified Bituminous Strip: 40 mils (1.0 mm) thick, smooth surfaced, self-adhering; consisting of 36 mils (0.9 mm) of rubberized asphalt laminated to a 4-mil- (0.1-mm-) thick polyethylene film with release liner backing.
 - a. For use under metal copings and flashings directly exposed to the exterior.
 - 3. Foil Faced Modified Bituminous Strip: 40 mils (1.0 mm) thick, smooth surfaced, self-adhering; consisting of 36 mils (0.9 mm) of rubberized asphalt laminated to a 4-mil- (0.1-mm-) thick polyethylene film with release liner backing.
 - 4. Preformed Silicone-Sealant Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.
 - a. Dow Corning Corporation; Silicone Transition Strip System.
 - b. Momentive Performance Materials Inc.; US11000 UltraSpan.
 - c. Tremco Incorporated; Proglaze ETA Connections.
 - 5. Self-Adhering Stainless Steel Flexible Flashing:
 - a. Subject to compliance with requirements, provide the following:
 - 1) York Manufacturing Inc.; York 316.
 - b. Characteristics:

- 1) Type: Stainless steel with one stainless steel face (facing outwards) with a butyl block co-polymer adhesive (inward facing).
 - 2) Stainless Steel: Type 304 or 316, ASTM A240. Domestically sourced per DF ARS 252.225-7008 and/or DF ARS 252.225-7009.
- C. Primer: Liquid primer recommended for substrate by air-barrier material manufacturer.
- D. Substrate-Patching Membrane: Manufacturer's standard trowel-grade substrate filler.
- E. Adhesive and Tape: Air-barrier manufacturer's standard adhesive and pressure-sensitive adhesive tape.
- F. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, 0.0187 inch (0.5 mm) thick, and Series 300 stainless-steel fasteners.
- G. Sprayed Polyurethane Foam Sealant: One- or two-component, foamed-in-place, polyurethane foam sealant, 1.5- to 2.0-lb/cu. ft (24- to 32-kg/cu. m) density; flame-spread index of 25 or less according to ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.
- H. Joint Sealant: ASTM C 920, single-component, neutral-curing silicone; Class 100/50 (low modulus), Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O. Comply with Section 07 9200 "Joint Sealants."
- I. CMU Block Filler: Manufacturer's standard filler.
- J. Concrete Filler: Manufacturer's standard filler.
- K. Termination Mastic: Air-barrier manufacturer's standard cold fluid-applied elastomeric liquid; trowel grade.
- L. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchor spacing of 9" on center minimum unless otherwise required by the manufacturer. Provide galvanized sheet metal backup plate at locations where adequate substrate is not available for securing the termination bar.
- M. Provide galvanized sheet metal backup plate at locations where adequate substrate is not available for securing the cladding accessories and attachments, flashings, and termination bars.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
 2. Provide verification in writing from the air-barrier manufacturer that concrete has cured and aged for minimum time period required by air-barrier manufacturer.
 3. Verify that concrete is visibly dry and free of moisture.

4. Perform moisture testing as required by air-barrier manufacturer for test type, rate, and quantity to validate that substrate is acceptable, dry, and free of moisture.
5. Verify that the minimum concrete drying period recommended by air barrier system manufacturer has passed. Perform moisture content testing as required by the air barrier system manufacturer to verify concrete is acceptable for installation of air barrier.
6. Verify that masonry joints are flush and completely filled with mortar.
7. Verify sealants used in sheathing are compatible with membrane proposed for use. Perform field peel-adhesion test on materials to which sealants are adhered.
8. Verify that metal strapping has been installed where required for securing accessories such as termination bars and flashings.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean, prepare, treat, and seal substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air-barrier application.
- B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.
- E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
- F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.
- G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.3 JOINT TREATMENT

- A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and air-barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces.
 1. Prime substrate and apply air-barrier manufacturer's recommended thickness, number of coats, and reinforcement extending a minimum of 3 inches (75 mm) along each side of joints and cracks. Apply a double thickness of fluid air-barrier material and embed a joint reinforcing strip in preparation coat.
- B. Gypsum Sheathing: Fill joints greater than 1/4 inch (6 mm) with sealant according to ASTM C 1193 and air-barrier manufacturer's written instructions. Apply first layer of fluid air-barrier material at joints. Tape joints with joint reinforcing strip after first layer is dry. Apply a second layer of fluid air-barrier material over joint reinforcing strip.

3.4 TRANSITION MEMBRANE INSTALLATION

- A. General: Install transition membrane and accessory materials according to air-barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.
 - 1. Coordinate the installation of air barrier with installation of roofing membrane, below grade waterproofing, and base flashing to ensure continuity of air barrier with roofing membrane.
 - 2. Install manufacturer's recommended transition strip on roofing membrane or base flashing so that a minimum of 3 inches (75 mm) of coverage is achieved over each substrate.
- B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.
 - 1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.
- C. Connect and seal exterior wall air-barrier material continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials as recommended by manufacturer.
- D. At end of each working day, seal top edge of transition membrane to substrate with termination mastic.
- E. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.
- F. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply transition membrane so that a minimum of 3 inches (75 mm) of coverage is achieved over each substrate. Maintain 3 inches (75 mm) of full contact over firm bearing surface.
 - 1. Provide fluid-applied membranes for manufacturer's that offer it as part of the air barrier system.
 - 2. For manufacturers that do not offer a liquid flashing, use transition membrane method that is acceptable to the air barrier manufacturer and that is chemically and adhesively compatible with the adjacent construction.
 - a. Self-Adhering Stainless Steel Flexible Flashing Transition Strip: Roll firmly to enhance adhesion.
 - b. Preformed Silicone-Sealant Extrusion: Set in full bed of silicone sealant applied to walls, frame, and air-barrier material. Tool sealant along edges of extrusion.
- G. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air-barrier material with foam sealant.
- H. Seal transition membrane around masonry reinforcing or ties and penetrations with termination mastic.

- I. Seal top of through-wall flashings to air barrier with an additional 6-inch- (150-mm-) wide, transition membrane.
- J. Seal exposed edges of transition membrane at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.
- K. Repair punctures, voids, and deficient lapped seams in transition membrane. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches (150 mm) beyond repaired areas in strip direction.

3.5 FLUID AIR-BARRIER MEMBRANE INSTALLATION

- A. General: Apply fluid air-barrier material to form a seal with transition membrane and to achieve a continuous air barrier according to air-barrier manufacturer's written instructions. Apply fluid air-barrier material within manufacturer's recommended application temperature ranges.
 - 1. Apply primer to substrates at required rate and allow it to dry.
 - 2. Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.
 - 3. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats as recommended by the manufacturer and as needed to achieve required bond, with adequate drying time between coats.
- B. Membrane Air Barriers: Apply a continuous unbroken air-barrier membrane to substrates according to the following thickness. Apply air-barrier membrane in full contact around protrusions such as masonry ties.
 - 1. Apply to a total wet film thickness as required by the membrane manufacturer to meet the performance requirements indicated.
- C. Apply transition membrane according to air-barrier manufacturer's written instructions.
- D. Provide air barrier and accessories that are acceptable for use at horizontal surfaces without detrimental effects to material.
- E. For exterior cladding and veneer attachment devices and accessories such as clips, thermal breaks, brick ties, flashings, stone/metal coping fasteners, and metal panel anchors:
 - 1. Set device in a full bed of sealant after air barrier is cured.
 - 2. Seal over fastener heads after device is secured.
 - 3. Seal top edge of accessories installed in the horizontal orientation.
- F. Do not cover air barrier until it has been tested and inspected by Owner's testing agency.
- G. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

- B. Owner's Inspection and Testing/ABAA Audits: Cooperate with Owner's testing agency and ABAA auditors. Allow access to work areas and staging. Notify Owner's testing agency/ABAA auditor in writing of schedule for Work of this Section to allow sufficient time for testing and inspection. Daily inspection and testing may be required. Do not cover Work of this Section until testing and inspection is accepted.
- C. Periodic Inspections: Provide for air barrier system manufacturer's technical personnel to inspect installation weekly during periods of ongoing installation.
- D. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. Inspections may include the following:
1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
 2. Air-barrier dry film thickness.
 3. Air-barrier wet film thickness (to be performed by installer at time of installation and included on ABAA QAP daily worksheet).
 4. Continuous structural support of air-barrier system has been provided.
 5. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
 6. Site conditions for application temperature and dryness of substrates have been maintained.
 7. Maximum exposure time of materials to UV deterioration has not been exceeded.
 8. Surfaces have been primed, if applicable.
 9. Laps in transition membranes have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
 10. Termination mastic has been applied on cut edges.
 11. Transition membranes are firmly adhered to substrate.
 12. Compatible materials have been used.
 13. Transitions at changes in direction and structural support at gaps have been provided.
 14. Connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
 15. All penetrations have been sealed.
- E. Field Tests:
1. Allow sufficient time for testing and inspection and provide a schedule in advance to the Testing Agency.
 2. Whenever Work is to be done, notify Testing Agency in sufficient time to provide inspections.
 3. Provide to the Owner copies of Quality Assurance Program documentation including daily site reports completed by installers.
 4. Submit test results in accordance with specified standards, including retesting if initial results are not satisfactory.
 5. Test to be distributed uniformly across all elevations.

6. Membrane Adhesion Test: Test materials for a minimum air-barrier adhesion of 16 lbf/sq. in. or to manufacturer's minimum adhesion level per substrates, whichever is greater in accordance with ABAA T0002. Perform test after curing period recommended by the manufacturer. Record mode of failure and area which failed in accordance with referenced standard. To be performed by installer and included on ABAA QAP daily worksheet.
 - a. Test Site Locations: Perform 1 test once daily per substrate during installation and a minimum of 4 test sites per major elevation per substrate. (Each test site includes 3 pull tests).
 - 1) Perform one test for the first 2500 sq. ft. of installed material for each wall assembly type.
 - b. Provide an inspection report in accordance with referenced standard that indicates whether or not the air barrier material has met the minimum adhesion level requirement and include photo documentation.
 - c. Provide reports within 3 days of test completion.
7. Qualitative Air-Leakage-Location Testing: Air-barrier assemblies will be tested for evidence of air leakage according to ASTM E 1186, chamber depressurization using detection liquids.
 - a. Test Locations: Provide ten tests for each penetration type per 2500 sq. ft. of each substrate. Distribute test locations across all elevations.
 - b. Test Pressure: 500 Pa.
 - c. Pass/Fail Criteria: Visual observation of air leakage evidenced by continuous foaming "bubbling" of detection liquid is considered a failed test.
 - d. Provide an inspection report that indicates results and include photo documentation.
8. Qualitative Air-Leakage-Location Testing: Air-barrier assemblies will be tested for evidence of air leakage according to ASTM E 1186, chamber pressurization or depressurization with smoke tracers.
 - a. Testing to be performed concurrent with Qualitative Water Infiltration Testing below.
 - b. Pass/Fail Criteria: Visual observation of air leakage evidenced by smoke tracer penetrating air barrier system is considered a failed test.
 - c. Provide an inspection report that indicates results, including photos.
9. Qualitative Water Infiltration Testing: Perform testing prior to installation of the cladding, but after cladding attachment systems have been installed. Air barrier systems shall be tested according to ASTM E 1105 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft., and shall not evidence water infiltration.
 - a. Test Locations:
 - 1) Perform one test for the first 2500 sq. ft. of installed material for each wall assembly type.
 - 2) Perform one subsequent test for every 5000 sq. ft. of installed material for each wall assembly type.
 - 3) Test locations to be selected by Architect.
 - b. Test Size: 100 sq. ft. minimum.
 - c. Perform tests after cladding attachments have been installed but prior to the installation of cladding/veneer material.
 - d. Pass/Fail Criteria:
 - 1) Water infiltration/leakage to the interior of the building which is not controlled by a weep/drainage system that is integral to the system is a failure.
 - 2) Water observed on interior surfaces of the systems is a failure.

- 3) Water observed on interior surfaces of the adjacent systems, originating from the wall system or the transition to the adjacent systems, is a failure.
- e. Provide an inspection report that indicates results and include photo documentation.
10. Water Spray Test: Before installation of interior finishes has begun, areas designated by the Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
 - a. Perform tests at transitions to adjacent wall assemblies, control joints, deflection joints, and expansion joints.
 - b. Test 250 linear feet of all joint locations.
 - c. Water Infiltration:
 - 1) Water leakage to the interior of the building is a failure.
 - 2) Water observed on interior surfaces of the system is a failure.
 - 3) Water observed on interior surfaces of adjacent systems, originating from the wall system or the transition to the adjacent systems, is a failure.
11. Wet Film Thickness Test (to be performed by installer at time of installation and included on ABAA QAP daily worksheet):
 - a. Test material using wet film gauge to confirm that membrane meets manufacturer's indicated wet film thickness requirements.
 - b. Regularly check per coat per substrate type during installation per ABAA QAP.
 - c. Failure Criteria:
 - 1) A measurement less than manufacturer's required wet film thickness is considered a failure.
 - 2) Provide an inspection report indicating results and include photo documentation.
 - 3) Provide inspection report indicating results and include photo documentation.
12. Dry Film Thickness Test:
 - a. Test material in accordance with manufacturer's requirements to confirm that cured membrane meets manufacturer's indicated dry film thickness requirements.
 - b. Three 1 inch x 4 inch samples removed from separate areas with gypsum facer intact to avoid stretching membrane.
 - c. Test Locations: Once daily per substrate during installation and a minimum of 1 test per major elevation per substrate.
 - 1) Perform one test for the first 2500 sq. ft. of installed material for each wall assembly type.
 - 2) Provide an inspection report in accordance with referenced standard that indicates whether or not the air barrier material has met the minimum adhesion level requirement and include photo documentation.
 - 3) Provide reports within 3 days of test completion.
 - d. Failure Criteria:
 - 1) A measurement less than manufacturer's required dry film thickness is considered a failure.
 - e. Provide an inspection report indicating results and include photo documentation.
13. Infrared Evaluation:
 - a. In general accordance with ASTM E1186 to evaluate air leakage related to the wall assemblies in locations such as but not limited to transitions to adjacent exterior enclosure assemblies, penetrations, and terminations.
 - 1) If anomalies are identified, provide proposed plan to confirm source of anomalies.

- 2) If deficiencies are identified during confirmation process, notify design team, manufacturer, and Owner of cause and extent of deficiencies.
 - 3) Submit manufacturer approved corrective action plan for Owner and Architect's review and approval.
 - 4) Perform infrared evaluation to confirm that deficiencies have been corrected.
14. Air barriers will be considered defective if they do not pass tests and inspections.
- a. Wet Film Thickness: Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
 - b. Upon failure of dry film testing or Adhesion Testing:
 - 1) Determine cause of failure.
 - 2) Provide one additional test for each occurrence of failure.
 - 3) Repair deficient air barrier components per manufacturer's recommendations.
 - 4) Repair tested areas per manufacturer's recommendations.
 - c. Upon failure of E1186 and E1105 testing:
 - 1) Determine cause of failure.
 - 2) Repair per manufacturer's recommendations and retest deficient air barrier components.
 - 3) Determine if deficient conditions are present elsewhere on the building and repair per manufacturer's recommendations.
 - 4) Provide two additional tests for each occurrence of failure.
- F. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.
- G. Clean air barrier materials that were affected by testing procedures to a level equal to or better than the original condition after testing is complete using cleaning agents and procedures recommended by manufacturer of affected construction.
- H. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.
- 3.7 CLEANING AND PROTECTION
- A. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.
1. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. If exposed to these conditions for longer than allowed by manufacturer, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed membrane according to air-barrier manufacturer's written instructions.
 2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.
- B. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended by manufacturer of affected construction.
- C. Remove masking materials after installation.

SmithGroup Project No. 00100084

END OF SECTION

FOR REFERENCE ONLY

SECTION 07 3116 - METAL SHINGLES**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
 - 1. Metal shingles.
 - 2. Underlayment materials
 - 3. Sheet metal flashing and trim.
 - 4. Ridge vents.
- B. Disturbance of Existing Roofing:
 - 1. The existing roofing is covered by an existing roofing **[bond] [warranty] [maintenance agreement]**. Contact the roofing manufacturing and installation/maintenance companies for the existing roofing, and ensure that the parties involved are given the opportunity to fulfill their requirements and maintain their interests. Do not disturb the existing roofing until the existing roofing companies and the Owner are in agreement with the plans for addressing disturbance of existing roofing. Document and distribute the agreement to all appropriate parties. Engage existing roofing installation/maintenance firm as necessary.
 - 2. The existing roofing installation/maintenance firm is: **[provide name and contact information]**.
 - 3. Contact the Owner to determine the status of existing roofing warranty/maintenance agreement, and the firm(s) involved.
- C. Related Requirements:
 - 1. Section 07 4113.13 "Formed Metal Roof Panels" for sheet metal roofing panels that are installed as single panels extending from eave to ridge.
 - 2. Section 07 7253 "Snow Guards" for prefabricated devices designed to hold snow on the roof surface, allowing it to melt and drain off slowly.

1.2 ALLOWANCES

- A. See Section 01 2100 "Allowances" for description of allowances affecting items specified under this Section.

1.3 UNIT PRICES

- A. See Section 01 2200 "Unit Prices" for description of unit prices affecting items specified under this Section.

1.4 ALTERNATES

- A. See Section 01 2300 "Alternates" for description of alternates affecting items specified under this Section.

1.5 DEFINITIONS

- A. Roofing Terminology: See ASTM D1079 for definitions of terms related to roofing Work in this Section.

1.6 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. <Insert participant requirements>.

1.7 ACTION SUBMITTALS

- A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required **[Product Data submittal]** and **[Samples submittal]**. Ensure compliance with requirements included in **[Section 01 3300 "Submittal Procedures."] [Section 07 0413 "Common Submittal Requirements for Thermal and Moisture Protection."]**
- B. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each of the following:
 - 1. Metal shingles.
 - 2. Underlayment materials.
 - 3. Ridge vents.
 - 4. Sealant.
- C. Sustainable Design Submittals:
 - 1. Product Test Reports: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirements.
 - 2. Environmental Product Declaration: For each product.
 - 3. Health Product Declaration: For each product.
 - 4. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
- D. Shop Drawings: For metal shingles. Include roof plans; sections at hips, gables, ridges, valleys, and eaves; details of metal shingles and joint patterns, flashing, trim, accessories, and attachments to other Work.
- E. Samples: For each exposed product and for each color and texture specified, in manufacturer's standard size.
- F. Samples for Initial Selection:
 - 1. For each type of metal shingle.
 - 2. For each type of accessory involving color selection.
- G. Samples for Verification: Full-size Samples of each type and finish of metal shingle indicated.

1.8 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal shingles to include in maintenance manuals.
- B. Materials warranties.
- C. Roofing Installer's warranty.

1.9 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Metal Shingles: [100 sq. ft. (9.3 sq. m)] **<Insert area>** of exposed area, in each type and color, in unbroken bundles.

1.10 QUALITY ASSURANCE

- A. Provide the following upon request:
 - 1. Product Test Reports: For metal shingles, for tests performed by a qualified testing agency.
 - 2. Evaluation Reports: From **[an agency acceptable to authorities having jurisdiction]** **[ICC-ES]** **<Insert evaluation agency>**, indicating that product is suitable for intended use under applicable building codes for the following:
 - a. Polymer-modified bitumen sheet underlayment.
 - b. Synthetic underlayment.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Build mockups of metal shingles, including related roofing materials.
 - a. Size: [48 inches (1219 mm) **long by** 96 inches (2438 mm) **wide**] **<Insert dimensions>**.
 - b. Include gutter and downspout complying with requirements in **[Section 07 6200 "Sheet Metal Flashing and Trim.]"** **[Section 07 7100 "Roof Specialties.]"**
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Store metal shingle materials in a dry, well-ventilated location protected from weather and moisture in accordance with manufacturer's written instructions. Do not allow metal shingles to contact with other materials that might cause staining, denting, or other surface damage. Store metal shingle materials away from uncured and wet concrete and masonry.
 - 1. Retain strippable protective covering on metal shingles during installation.
- B. Store underlayment rolls in a dry, well-ventilated location protected from weather, sunlight, and moisture in accordance with manufacturer's written instructions.
 - 1. Store on end, on pallets or other raised surfaces.
 - 2. Do not double-stack rolls.
- C. Protect unused underlayment from weather, sunlight, and moisture when left overnight or when roofing Work is not in progress.
- D. Handle, store, and place roofing materials in a manner to prevent damage to roof deck or structural supporting members.

1.12 FIELD CONDITIONS

- A. Environmental Limitations: Proceed with installation only when existing and forecasted weather conditions permit product installation and related Work to be performed in accordance with manufacturer's written instructions and warranty requirements.
1. Install self-adhering, polymer-modified bitumen sheet underlayment within the range of ambient and substrate temperatures recommended in writing by manufacturer.

1.13 WARRANTY

- A. Materials Warranty: Manufacturer agrees to repair or replace metal shingles and accessories that fail within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Structural failures including wind uplift.
 - b. Water penetration[**and hail perforation**].
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - d. High-Performance Organic Coating: Deterioration of fluoropolymer finish including, but not limited to, the following:
 - 1) Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - 2) Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - 3) Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - e. **<Insert failure modes>**.
 2. Metal Shingle Warranty Period: [15] [25] [50] **<Insert number>** years from date of Substantial Completion.
 3. High-Performance Organic Coating Warranty Period: [10] [20] **<Insert number>** years from date of Substantial Completion.
- B. Roofing Installer's Warranty: On warranty form at end of this Section, signed by Installer, in which Installer agrees to repair or replace components of metal shingle roofing that fail in materials or workmanship within specified warranty period.
1. Warranty Period: [Two] [Five] **<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain each type of product from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Exterior Fire-Test Exposure: Provide metal shingles and related roofing materials identical to those of assemblies tested for Class A fire resistance in accordance with ASTM E108 or UL 790 by Underwriters Laboratories or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.

- B. Wind-Uplift Resistance: Provide metal shingle assemblies that comply with the following wind-uplift requirements:
 - 1. Class: [15] [30] [60] [90] when tested in accordance with UL 580.
 - 2. Uplift Resistance: [75 lbf/sq. ft. (3.6 kPa)] [120 lbf/sq. ft. (5.75 kPa)] [165 lbf/sq. ft. (7.9 kPa)] <Insert value> when tested in accordance with UL 1897.
- C. Impact Resistance: [Class 3] [Class 4] <Insert class designation> when tested in accordance with UL 2218.
- D. Energy Performance, ENERGY STAR: Provide metal shingles that are listed on the DOE's "ENERGY STAR Roof Product List" for steep-slope roof products.
- E. Heat Island Effect - Steep Roof: Three-year-aged SRI not less than 32 or initial SRI not less than 39 when calculated in accordance with ASTM E1980 based on testing identical products by a qualified testing agency.

2.3 METAL SHINGLES

- A. Copper, Individual Shingles: Factory-formed, interlocking rectangular units.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. ATAS International, Inc.
 - b. Reinke Shakes; Division of Jame Kari LLC.
 - c. Zappone Manufacturing.
 - 2. Material: Copper sheet, minimum 16 oz./sq. ft. (0.55 mm thick) .
 - 3. Exposure: 12 by 8 inches (305 by 203 mm) 13-1/2 by 13-1/2 inches (343 by 343 mm) 14-1/2 by 8-1/8 inches (368 by 206 mm) .
 - 4. Features: **[Polystyrene backing]** <Insert requirements>.
 - 5. Finish: Pre-patinated dark brown .
- B. Finish Protection: Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2.4 SHEET METAL MATERIALS

- A. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert value> percent.
- B. Copper Sheet: ASTM B370; Temper H00, cold rolled unless Temper 060 is required for forming.
 - 1. Pre-Patinated Finish: Pre-patinated in accordance with ASTM B882.

2.5 UNDERLAYMENT MATERIALS

- A. Asphalt-Saturated Felt: Organic felt, nonperforated and complying with the following.
 - 1. ASTM D226/D226M: Type I Type II.

- B. Polymer-Modified Bitumen Sheet, Mechanically Fastened: Styrene-butadiene-styrene- (SBS) modified asphalt, glass-fiber-mat-reinforced sheet; minimum 55-mil (1.4-mm) nominal thickness; recommended in writing by manufacturer and acceptable to authorities having jurisdiction for use as underlayment in metal steep-slope roofing systems; designed for mechanical fastening; and with manufacturer's standard non-abrasive, slip-resistant surface that will not scratch the underside of metal shingles. Granular or sand surfacings are unacceptable.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Atlas Roofing Corporation - Polyiso.
 - b. Boral USA; Boral Roofing LLC.
 - c. G.A.P. Roofing, Inc.
 - d. GMC Roofing & Building Paper Products, Inc.
 - e. Tarco.
 2. **<Insert testing requirements>.**

2.6 SHEET METAL FLASHING AND TRIM

- A. Sheet Metal Flashing and Trim: Metal shingle manufacturer's flashing and trim components matching shingle material, color, and finish unless otherwise specified in this Section, indicated on Drawings, or recommended in writing by metal shingle manufacturer. Fabricate to sizes and configurations required for a weathertight installation. Unless otherwise specified in this Section or indicated on Drawings, fabricate sheet metal flashing and trim to comply with recommendations that apply to design, dimensions, metal, and other characteristics of the item in SMACNA's "Architectural Sheet Metal Manual."
1. Valley Flashing: Fabricate to extend not less than 8 inches (203 mm) from the centerline of the valley with a splash-diverter rib not less than 3/4 inch (19 mm) high at the flowline formed as part of the flashing.

2.7 RIDGE VENTS

- A. Ridge Vents: Metal shingle manufacturer's continuous vented ridge caps matching material and finish of metal shingles with insect screen or insect-resisting geotextile filter strips ; for use with specified metal shingles.
1. Minimum Net Free Area: **<Insert free area>.**
 2. Accessories: Splices, end caps, and other accessories matching metal and finish.

2.8 ACCESSORIES

- A. Sealant: ASTM C920, Type S, Grade NS, one-part, non-sag elastomeric polymer joint sealant as recommended in writing by metal shingle manufacturer for installation indicated; of class and use classifications required to seal joints and remain watertight. Where sealant is exposed, provide in color matching shingle.
- B. Sheet Metal Fasteners: Noncorrosive screws, nails, and anchors designed to withstand design loads and recommended in writing by metal shingle manufacturer.
1. Blind Fasteners: High-strength aluminum or stainless steel rivets suitable for metal being fastened.
 2. Fasteners for Copper Sheet: Copper, hardware bronze, or Series 300 stainless steel.

- C. Underlayment Nails: Aluminum, stainless steel, or hot-dip galvanized-steel wire nails with low-profile metal or plastic caps, 1-inch- (25-mm-) minimum diameter.
 - 1. Provide with minimum 0.0134-inch- (0.34-mm-) thick metal cap, 0.010-inch- (0.25-mm-) thick power-driven metal cap, or 0.035-inch- (0.89-mm-) thick plastic cap; and with minimum 0.083-inch- (2.11-mm-) thick ring shank or 0.091-inch- (2.31-mm-) thick smooth shank of length to penetrate at least 3/4 inch (19 mm) into roof sheathing or to penetrate through roof sheathing less than 3/4 inch (19 mm) thick.
 - 2. Where nails are in contact with metal shingles or flashing, use nails made from same metal as metal shingles.
- D. <Insert snow-guard requirements>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 - 1. Examine roof sheathing to verify that sheathing joints are supported by framing and blocking, that tops of fasteners are flush with surface, and that installation is within flatness tolerances.
 - 2. Verify that substrate is sound, dry to the maximum moisture content recommended in writing by metal shingle manufacturer, smooth, clean, sloped for drainage, and completely anchored and that provisions have been made for flashings and penetrations through metal shingles.
 - 3. Verify that vent stacks and other penetrations through roofing are installed and securely fastened.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF UNDERLAYMENT MATERIALS

- A. Comply with metal shingle and underlayment manufacturers' written installation instructions and with recommendations in NRCA's "The NRCA Roofing Manual: Steep-Slope Roof Systems" applicable to products and applications indicated unless more stringent requirements are specified in this Section or indicated on Drawings.
- B. Asphalt-Saturated Felt: Install on roof deck parallel with and starting at eaves and fasten with underlayment nails.
 - 1. Single-Layer Installation:
 - a. Lap sides a minimum of [2 inches (51 mm)] [4 inches (102 mm)] over underlying course.
 - b. Lap ends a minimum of 4 inches (102 mm).
 - c. Stagger end laps between succeeding courses at least 72 inches (1829 mm).
 - 2. Double-Layer Installation:
 - a. Install a 19-inch- (483-mm-) wide starter course at eaves and completely cover with a 36-inch- (914-mm-) wide second course.

- b. Install succeeding 36-inch- (914-mm-) wide courses lapping previous courses 19 inches (483 mm) in shingle fashion.
 - c. Lap ends a minimum of 4 inches (102 mm).
 - d. Stagger end laps between succeeding courses at least 72 inches (1829 mm).
 - e. Apply a continuous layer of asphalt roofing cement over starter course and on felt surface to be concealed by succeeding courses as each felt course is installed. Apply **[over entire roof] [at locations indicated on Drawings]**.
 - 3. Install felt underlayment on roof deck not covered by self-adhering, polymer-modified bitumen sheet unless otherwise specified in this Section or indicated on Drawings.
 - a. Lap sides of felt over self-adhering sheet not less than 4 inches (102 mm) in direction that sheds water.
 - b. Lap ends of felt not less than 6 inches (152 mm) over self-adhering sheet underlayment.
 - 4. Install fasteners in a grid pattern of 12 inches (305 mm) between side laps with 6-inch (152-mm) spacing at side and end laps.
 - 5. Terminate felt **[flush] [extended up not less than 4 inches (102 mm)]** **<Insert requirements>** against sidewalls, curbs, chimneys, and other roof projections.
- C. Polymer-Modified Bitumen Sheet, Mechanically Fastened: Install on roof deck parallel with and starting at eaves. Fasten with underlayment nails.
 - 1. Single-Layer Installation:
 - a. Lap sides a minimum of [2 inches (51 mm)] [4 inches (102 mm)] over underlying course.
 - b. Lap ends a minimum of 6 inches (152 mm).
 - c. Stagger end laps between succeeding courses at least 72 inches (1829 mm).
 - 2. Double-Layer Installation:
 - a. Install in overlapping layers with a half-width plus 1-inch- (25-mm-) wide starter course at eaves completely covered by full-width second course. Install succeeding courses lapping previous courses by a half-width plus 1 inch (25 mm) in shingle fashion.
 - b. Lap ends a minimum of 6 inches (152 mm).
 - c. Stagger end laps between succeeding courses at least 72 inches (1829 mm).
 - 3. Install mechanically fastened sheet on roof deck not covered by self-adhering, polymer-modified bitumen sheet unless otherwise specified in this Section or indicated on Drawings.
 - a. Lap sides of mechanically fastened sheets over self-adhering sheet not less than 4 inches (102 mm) in direction to shed water.
 - b. Lap ends of mechanically fastened sheets not less than 6 inches (152 mm) over self-adhering sheets.
 - 4. Install fasteners in a grid pattern of 12 inches (305 mm) between side laps with 6-inch (152-mm) spacing at side and end laps.
 - 5. Terminate sheets **[flush] [extended up not less than 4 inches (102 mm)]** **<Insert requirements>** against sidewalls, curbs, chimneys, and other roof projections.
- D. Valley Underlayment: Install one layer of 36-inch- (914-mm-) wide underlayment centered in valley, running full length of valley, and on top of underlayment on field of roof that is woven through valley. Install all layers of underlayment in and through valley tight with no bridging.
 - 1. Use same underlayment as installed on field of roof.
 - 2. Lap ends at least 12 inches (305 mm) in direction that sheds water, and seal with asphalt roofing cement.

3. Fasten to roof deck with underlayment nails located as far from valley center as possible and only to extent necessary to hold underlayment in place until installation of valley flashing.
4. Solidly cement valley underlayment to roof-field underlayment that is woven through valley using asphalt roofing cement.

3.3 INSTALLATION OF SHEET METAL FLASHINGS AND TRIM

- A. Install metal flashings and trim in accordance with manufacturer's written instructions and recommendations in NRCA's "The NRCA Roofing Manual: Steep-Slope Roof Systems" unless more stringent requirements are specified in this Section or indicated on Drawings.
 1. Install with minimum 4-inch (102-mm) end laps.

3.4 INSTALLATION OF RIDGE VENTS

- A. Install ridge vents with end closures at locations indicated on Drawings in accordance with manufacturers' written instructions unless more stringent requirements are specified in this Section or indicated on Drawings.

3.5 INSTALLATION OF ACCESSORIES

- A. Install accessories in accordance with manufacturers' written instructions unless more stringent requirements are specified in this Section or indicated on Drawings.
- B. Battens: Install battens in accordance with metal shingle manufacturer's written instructions.
- C. Metal Protection: Where dissimilar metals contact each other, protect against galvanic action by painting contact surfaces with bituminous coating, by applying self-adhering, polymer-modified bitumen sheet to each contact surface, or by other means of permanent separation recommended in writing by manufacturer of metal shingles or of the metals in contact.

3.6 INSTALLATION OF METAL SHINGLES

- A. Install metal shingles in accordance with manufacturer's written instructions true in line.
- B. Maintain uniform exposure and coursing of metal shingles throughout roof.
- C. Apply sealant between shingles, flashing, trim, and exposed fasteners to achieve a weathertight system.
- D. Interlock and overlap shingles, and [stagger end joints from] [align joints of tile-form] shingle courses above and below.
- E. Metal Protection: Where dissimilar metals contact each other, protect against galvanic action by painting contact surfaces with bituminous coating, by applying self-adhering, polymer-modified bitumen sheet to each contact surface, or by other means of permanent separation recommended in writing by manufacturer of metal shingles or of the metals in contact.
 1. Do not use graphite pencils to mark metal surfaces.

3.7 ADJUSTING

- A. Remove and replace damaged or deformed metal shingles. Replace shingles with damaged or deteriorated finishes and other components of the Work that cannot be successfully repaired by finish touchup or similar minor repair procedures.
- B. Remove temporary protective coverings and strippable films as metal shingles are installed unless otherwise indicated in manufacturer's written installation instructions.
- C. On completion of installation, touch up minor nicks and abrasions in finish, in accordance with manufacturer's written instructions.
- D. Remove excess sealants.

3.8 ROOFING INSTALLER'S WARRANTY

- A. WHEREAS **<Insert name>** of **<Insert address>**, herein called the "Roofing Installer," has performed roofing and associated work ("the work") on the following project:
 - 1. Owner: **<Insert name of Owner>**.
 - 2. Owner Address: **<Insert address>**.
 - 3. Building Name/Type: **<Insert information>**.
 - 4. Building Address: **<Insert address>**.
 - 5. Area of the Work: **<Insert information>**.
 - 6. Acceptance Date: **<Insert date>**.
 - 7. Warranty Period: **<Insert time>**.
 - 8. Expiration Date: **<Insert date>**.
- B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant the work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
- C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that, during Warranty Period, Roofing Installer will, at Roofing Installer's own cost and expense, make or cause to be made such repairs to or replacements of the work as are necessary to correct faulty and defective work and as are necessary to maintain the work in a watertight condition.
- D. This Warranty is made subject to the following terms and conditions:
 - 1. Specifically excluded from this Warranty are damages to the work and other parts of the building, and to building contents, caused by:
 - a. Lightning;
 - b. Peak gust wind speed exceeding **<Insert wind speed>** mph (m/s);
 - c. Fire;
 - d. Failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. Faulty construction of copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. Vapor condensation on bottom of roofing; and

- g. Activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
 2. When the work has been damaged by any of foregoing causes, Warranty is to be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
 3. Roofing Installer is responsible for damage to the work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of the work.
 4. During Warranty Period, if Owner allows alteration of the work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty becomes null and void on date of the alterations, but only to the extent the alterations affect the work covered by this Warranty. If Owner engages Roofing Installer to perform the alterations, Warranty does not become null and void unless Roofing Installer, before starting the alterations, notified Owner in writing, showing reasonable cause for claim, that the alterations would likely damage or deteriorate the work, thereby reasonably justifying a limitation or termination of this Warranty.
 5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a use or service more severe than originally specified, this Warranty becomes null and void on date of the change, but only to the extent the change affects the work covered by this Warranty.
 6. Owner promptly notifies Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and affords reasonable opportunity for Roofing Installer to inspect the work and to examine evidence of such leaks, defects, or deterioration.
 7. This Warranty is recognized to be the only warranty of Roofing Installer on the work and does not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty does not operate to relieve Roofing Installer of responsibility for performance of the work in accordance with requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.
- E. IN WITNESS THEREOF, this instrument has been duly executed this **<Insert day>** day of **<Insert month>**, **<Insert year>**.
1. Authorized Signature: **<Insert signature>**.
 2. Name: **<Insert name>**.
 3. Title: **<Insert title>**.

END OF SECTION

SECTION 07 6200 - SHEET METAL FLASHING AND TRIM**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes: Custom flashing and trim fabrications, made from the following:
 - 1. Sheet metal materials.
 - 2. Underlayment.
 - 3. Miscellaneous materials.
- B. Related Requirements:
 - 1. Section 06 1000 "Rough Carpentry" for wood nailers, curbs, and blocking.
 - 2. Section <Insert Section number> "<Insert Section title>" for [materials and]installation of manufactured sheet metal through-wall flashing and trim integral with masonry.
 - 3. Section <Insert Section number> "<Insert Section title>" for [materials and]installation of sheet metal flashing and trim integral with roofing.
 - 4. Section <Insert Section number> "<Insert Section title>" for sheet metal flashing and trim integral with metal wall panels.
 - 5. Section 07 7100 "Roof Specialties" for manufactured copings, roof-edge specialties, roof-edge drainage systems, reglets, and counterflashings.
 - 6. Section 07 7200 "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.
 - 7. Section 07 9513.13 "Interior Expansion Joint Cover Assemblies" for manufactured expansion-joint cover assemblies for interior floors, walls, and ceilings.
 - 8. Section 07 9513.16 "Exterior Expansion Joint Cover Assemblies" for manufactured expansion-joint cover assemblies for exterior building walls, soffits, and parapets.
 - 9. Section 07 9513.19 "Parking Deck Expansion Joint Cover Assemblies" for manufactured expansion-joint cover assemblies subject to vehicular traffic.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review construction schedule. Verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 2. Review special roof details, roof drainage, roof-penetration flashing, equipment curbs, and condition of other construction that affect sheet metal flashing and trim.
 - 3. Review requirements for insurance and certificates if applicable.
 - 4. Review sheet metal flashing observation and repair procedures after flashing installation.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For sheet metal flashing and trim.
 - 1. Plans, elevations, sections, and attachment details.
 - 2. Fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled Work.
 - 3. Identification of material, thickness, weight, and finish for each item and location in Project.

4. Details for forming, including profiles, shapes, seams, and dimensions.
 5. Details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.
 6. Details of termination points and assemblies.
 7. Details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.
 8. Details of roof-penetration flashing.
 9. Details of edge conditions, including eaves, ridges, valleys, rakes, crickets, flashings, and counterflashings.
 10. Details of special conditions.
 11. Details of connections to adjoining work.
 12. Formed flashing and trim at scale of not less than 1-1/2 inches per 12 inches (1:10).
- C. Samples: For each exposed product and for each color and texture specified, 12 inches (300 mm) long by actual width.
- D. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of exposed finish.
- E. Samples for Verification: Actual sample of finished products for each type of exposed finish for sheet metal and other metal accessories.
1. Sheet Metal Flashing and Trim: [**Manufacturers' standard size**] <Insert size>. Include finished seam with required profile. Include fasteners, cleats, clips, closures, and other attachments.
 2. Anodized Aluminum Samples: Samples to show full range to be expected for each color required.
- F. Sustainable Design Submittals:
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert value> percent.
- 1.4 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For sheet metal flashing and trim, and its accessories.
- 1.5 QUALITY ASSURANCE
- A. Fabricator Qualifications: Entity that employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.
- B. Installer Qualifications: Entity that employs [**a supervisor who is an NRCA ProCertified Roofing Foreman or installers who are NRCA ProCertified Architectural Metal Flashings and Accessories Installers**] [**a supervisor who is an NRCA ProCertified Roofing Foreman**] [**a supervisor who is an NRCA ProCertified Roofing Foreman and not less than 20 percent of installers who are NRCA ProCertified Architectural Metal Flashings and Accessories Installers**].
- C. For roof edge flashings and copings that are ANSI/SPRI/FM 4435/ES-1 tested[**and FM Approvals approved**], shop is to be listed as able to fabricate required details as tested and approved.

D. Provide the following upon request:

1. Certificates: For each type of coping and roof edge flashing that is [**ANSI/SPRI/FM 4435/ES-1 tested**] [**and**] [**FM Approvals approved**].
2. Product Test Reports: For each product, for tests performed by a qualified testing agency.
3. Research Reports: For copings and roof edge flashing, from [**an agency acceptable to authority having jurisdiction**] [**ICC-ES**] <Insert evaluation agency> showing compliance with ANSI/SPRI/FM 4435/ES-1.
4. Qualification Statements: For fabricator.

1.6 MOCKUPS

A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Build mockup of typical roof [**edge**] [**eave**], including [**built-in gutter**] [**fascia**] [**fascia trim**] [**apron flashing**] <Insert item>, approximately [10 ft. (3.0 m)] <Insert dimension> long, including supporting construction cleats, seams, attachments, [**underlayment**], and accessories.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.

1. Store sheet metal flashing and trim materials away from uncured concrete and masonry.
2. Protect stored sheet metal flashing and trim from contact with water.

B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

1.8 COORDINATION

A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.

B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

1.9 WARRANTY

A. Special Warranty on Finishes: Manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.

- b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
- c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
- 2. Finish Warranty Period: [20] [10] <Insert number> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Sheet metal flashing and trim assemblies, including cleats, anchors, and fasteners, are to withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim are not to rattle, leak, or loosen, and are to remain watertight.
- B. Sheet Metal Standard for Flashing and Trim: Comply with [NRCA's "**The NRCA Roofing Manual: Architectural Metal Flashing, Condensation and Air Leakage Control, and Reroofing**"] [and] [SMACNA's "**Architectural Sheet Metal Manual**"] requirements for dimensions and profiles shown unless more stringent requirements are indicated.
- C. Sheet Metal Standard for Copper: Comply with CDA's "Copper in Architecture Design Handbook." Conform to dimensions and profiles shown unless more stringent requirements are indicated.
- D. SPRI Wind Design Standard: Manufacture and install roof edge flashings and copings tested in accordance with ANSI/SPRI/FM 4435/ES-1 and capable of resisting the following design pressure:
 - 1. Design Pressure: As indicated on Drawings.
- E. FM Approvals Listing: Manufacture and install roof edge flashings and copings that comply with requirements in FM Approvals 4471 as part of a roofing system and that are listed in FM Approvals' "Approval Guide" and approved for windstorm classification, [Class 1A-60] [Class 1A-75] [Class 1A-90] [Class 1A-105] [Class 1A-120] <Insert class>. Identify materials with name of fabricator and design approved by FM Approvals.
- F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.2 SHEET METAL MATERIALS

- A. Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.
- B. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with minimum ASTM A653/A653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with minimum ASTM A792/A792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A755/A755M.

1. Nominal Thickness: 0.022 inch (0.56 mm) 0.028 inch (0.71 mm) 0.034 inch (0.86 mm) 0.040 inch (1.02 mm) 0.052 inch (1.32 mm).
 2. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert value> percent.
 3. Surface: Smooth, flat Embossed and mill phosphatized for field painting and with manufacturer's standard clear acrylic coating on both sides.
 4. Exposed Coil-Coated Finish:
 - a. Two-Coat Fluoropolymer: Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 - b. Three-Coat Fluoropolymer: Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 - c. Mica Fluoropolymer: Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 - d. Metallic Fluoropolymer: Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 - e. FEVE Fluoropolymer: Two-coat fluoropolymer finish containing 100 percent FEVE resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 - f. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
 5. Color: As indicated by manufacturer's designations Match Architect's sample As selected by Architect from manufacturer's full range Insert color.
 6. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil (0.013 mm).
- C. Aluminum Sheet: Coil-coated sheet, ASTM B209/B209M, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
1. Thickness: 0.032 inch (0.81 mm) 0.040 inch (1.02 mm) 0.050 inch (1.27 mm) 0.063 inch (1.60 mm).
 2. Surface: Smooth, flat Embossed.
 3. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert value> percent.
 4. Exposed Coil-Coated Finish:
 - a. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.

- b. Three-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 - c. Mica Fluoropolymer: AAMA 2605. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 - d. Metallic Fluoropolymer: AAMA 2605. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 - e. FEVE Fluoropolymer: AAMA 2605. Two-coat fluoropolymer finish containing 100 percent FEVE resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 - f. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
- 5. Color: As indicated by manufacturer's designations Match Architect's sample As selected by Architect from manufacturer's full range Insert color.
 - 6. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil (0.013 mm).
 - 7. Clear Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A41, Class I, 0.018 mm AA-M12C22A31, Class II, 0.010 mm or thicker.
 - 8. Color Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm AA-M12C22A32/A34, Class II, 0.010 mm or thicker.
 - a. Color: Champagne Light bronze Medium bronze Dark bronze Black Match Architect's sample As selected by Architect from full range of industry colors and color densities Insert color.
 - b. Color Range: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
 - 9. As-Milled Finish: Mill One-side bright mill Standard one-side bright Standard two-side bright.
 - 10. Alclad Finish: Metallurgically bonded surfacing alloy on both sides, forming aluminum sheet with reflective luster.
 - 11. Factory Prime Coating: Where painting after installation is required, pretreat metal with white or light-colored, factory-applied, baked-on epoxy primer coat; minimum dry film thickness of 0.2 mil (0.005 mm).
- D. Stainless Steel Sheet: ASTM A240/A240M, Type 304 Type 316, dead soft, fully annealed.
- 1. Nominal Thickness: 0.0156 inch (0.396 mm) 0.0188 inch (0.477 mm) 0.0250 inch (0.635 mm) 0.0313 inch (0.795 mm) 0.0375 inch (0.952 mm) 0.0500 inch (1.270 mm).
 - 2. Surface: Smooth, flat Embossed.

3. Exterior Finish: ASTM A480/A480M, No. 2B (bright, cold rolled) ASTM A480/A480M, No. 2D (dull, cold rolled) ASTM A480/A480M, No. 3 (coarse, polished directional satin) ASTM A480/A480M No. 4 Insert finish.
 - a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 - b. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1) Run grain of directional finishes with long dimension of each piece.
 - 2) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 4. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- E. Copper Sheet: ASTM B370, cold-rolled copper sheet, H00 or H01 temper.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Hussey Copper Ltd.
 - b. Revere Copper Products, Inc.
 2. Thickness: 16 oz./sq. ft. (0.55 mm) 20 oz./sq. ft. (0.68 mm) 24 oz./sq. ft. (0.82 mm).
 3. Nonpatinated, Exposed Finish: Mill.
- F. Zinc-Tin Alloy-Coated Copper Sheet: ASTM B370, cold-rolled copper sheet, H00 temper; coated on both sides with zinc-tin alloy (50 percent zinc, 50 percent tin).
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Revere Copper Products, Inc.
 2. Thickness: 16 oz./sq. ft. (0.55 mm) 20 oz./sq. ft. (0.68 mm) 24 oz./sq. ft. (0.82 mm) 25 oz./sq. ft. (0.87 mm thick).
 3. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- G. Zinc Sheet: 99.995 percent electrolytic high-grade zinc with alloy additives of copper (0.08 to 0.20 percent), titanium (0.07 to 0.12 percent), and aluminum (0.015 percent) Zinc, 99 percent pure, alloyed with 0.08 to 1.00 percent copper, 0.06 to 0.20 percent titanium, and up to 0.015 percent aluminum; with manufacturer's standard factory-applied, flexible, protective back coating.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Artazn LLC.
 - b. Rheinzink America.
 2. Thickness: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) 0.048 inch (1.25 mm) 0.059 inch (1.50 mm).
 3. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
 4. Finish: Bright rolled Preweathered gray Preweathered black Insert finish.

- H. Copper-Clad Stainless Steel Sheet: ASTM B506, annealed Temper O61.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Heyco Metals.
 - b. SEMCO Southeastern Metals, A Gibraltar Industries Company.
 2. Thickness: 0.016 inch (0.40 mm) 0.018 inch (0.46 mm) 0.027 inch (0.69 mm).
 3. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
 4. Nonpatinated, Exposed Finish: Mill.
- I. Lead Sheet: ASTM B749 lead sheet.
1. Thickness: 4 lb (1.8 kg).

2.3 UNDERLAYMENT

- A. Synthetic Underlayment: Laminated or reinforced, woven polyethylene or polypropylene, synthetic roofing underlayment; bitumen free; slip resistant; suitable for high temperatures over 220 deg F (111 deg C); and complying with physical requirements of ASTM D226/D226M for Type I and Type II felts.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Atlas Molded Products, a division of Atlas Roofing Corporation.
 - b. Intertape Polymer Group.
 - c. Kirsch Building Products.
 - d. SDP Advanced Polymer Products Inc.
- B. Self-Adhering, High-Temperature Sheet Underlayment: Provide self-adhering, cold-applied, sheet underlayment, a minimum of 30 mils (0.76 mm) thick, specifically designed to withstand high metal temperatures beneath metal roofing. Provide primer when recommended by underlayment manufacturer.
1. Thermal Stability: Stable after testing at 240 deg F (116 deg C); ASTM D1970/D1970M.
 2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (minus 29 deg C) or lower; ASTM D1970/D1970M.
 3. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. ATAS International, Inc.
 - b. Carlisle WIP Products; a brand of Carlisle Construction Materials.
 - c. GCP Applied Technologies Inc.
 - d. Henry Company; a Carlisle company.
 - e. Owens Corning.
 - f. Polyglass U.S.A., Inc.
 - g. Protecto Wrap Company.
 - h. SDP Advanced Polymer Products Inc.

- C. Felt: ASTM D226/D226M, Type II (No. 30), asphalt-saturated organic felt; nonperforated.
- D. Slip Sheet: Rosin-sized building paper, 3 lb/100 sq. ft. (0.16 kg/sq. m) minimum, of type required for application.

2.4 MISCELLANEOUS MATERIALS

- A. Provide materials and types of fasteners[, **solder**], protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal[**or manufactured item**] unless otherwise indicated.
- B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal[**or manufactured item**].
 - 1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
 - a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.
 - b. Blind Fasteners: High-strength aluminum or stainless steel rivets suitable for metal being fastened.
 - c. Spikes and Ferrules: Same material as gutter; with spike with ferrule matching internal gutter width.
 - 2. Fasteners for Zinc-Coated (Galvanized) or Aluminum-Zinc Alloy-Coated Steel Sheet: Series 300 stainless steel or hot-dip galvanized steel in accordance with ASTM A153/A153M or ASTM F2329/F2329M.
 - 3. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
 - 4. Fasteners for Stainless Steel Sheet: Series 300 stainless steel.
 - 5. Fasteners for Copper, Zinc-Tin Alloy-Coated Copper, or Copper-Clad Stainless Steel Sheet: Copper, hardware bronze or passivated Series 300 stainless steel.
 - 6. Fasteners for Zinc Sheet: Series 300 stainless steel[**or hot-dip galvanized steel in accordance with ASTM A153/A153M or ASTM F2329/F2329M**].
- C. Solder:
 - 1. For Zinc-Coated (Galvanized) Steel: ASTM B32, Grade Sn50, 50 percent tin and 50 percent lead or Grade Sn60, 60 percent tin and 40 percent lead with maximum lead content of 0.2 percent.
 - 2. For Stainless Steel: ASTM B32, Grade Sn60 Grade Sn96, with acid flux of type recommended by stainless steel sheet manufacturer.
 - 3. For Copper or Copper-Clad Stainless Steel: ASTM B32, Grade Sn50, 50 percent tin and 50 percent lead with maximum lead content of 0.2 percent.
 - 4. For Zinc-Tin Alloy-Coated Copper: ASTM B32, 100 percent tin, with maximum lead content of 0.2 percent, as recommended by sheet metal manufacturer.
 - 5. For Zinc: ASTM B32, 40 percent tin and 60 percent lead with low antimony, with maximum lead content of 0.2 percent, as recommended by zinc manufacturer.
- D. Sealant Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.

- E. Elastomeric Sealant: ASTM C920, elastomeric polyurethane polysulfide silicone polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
- F. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.
- G. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.
- H. Bituminous Coating: Cold-applied asphalt emulsion in accordance with ASTM D1187/D1187M.
- I. Asphalt Roofing Cement: ASTM D4586/D4586M, asbestos free, of consistency required for application.
- J. Reglets: Units of type, material, and profile required, formed to provide secure interlocking of separate reglet and counterflashing pieces, and compatible with flashing indicated with factory-mitered and -welded corners and junctions with interlocking counterflashing on exterior face, of same metal as reglet.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Cheney Flashing Company.
 - b. Fry Reglet Corporation.
 - c. Heckmann Building Products, Inc.
 - d. Hohmann & Barnard, Inc.
 - e. Keystone Flashing Company, Inc.
 - f. Metal-Era, Inc.
 - g. OMG Roofing Products; a Division of OMG, Inc.
 - 2. Material: Galvanized steel, 0.022 inch (0.56 mm) thick Aluminum, 0.024 inch (0.61 mm) thick Stainless steel, 0.0188 inch (0.477 mm) thick Copper, 16 oz./sq. ft. (0.55 mm thick).
 - 3. Surface-Mounted Type: Provide with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
 - 4. Stucco Type: Provide with upturned fastening flange and extension leg of length to match thickness of applied finish materials.
 - 5. Concrete Type: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.
 - 6. Masonry Type: Provide with offset top flange for embedment in masonry mortar joint.
 - 7. Accessories:
 - a. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where Drawings show reglet without metal counterflashing.
 - b. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing's lower edge.

8. Finish: Mill With manufacturer's standard color coating Insert finish.

2.5 FABRICATION, GENERAL

- A. Custom fabricate sheet metal flashing and trim to comply with details indicated and recommendations in cited sheet metal standard that apply to design, dimensions, geometry, metal thickness, and other characteristics of item required.
 1. Fabricate sheet metal flashing and trim in shop to greatest extent possible.
 2. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
 3. Verify shapes and dimensions of surfaces to be covered and obtain field measurements for accurate fit before shop fabrication.
 4. Form sheet metal flashing and trim to fit substrates without excessive oil-canning, buckling, and tool marks; true to line, levels, and slopes; and with exposed edges folded back to form hems.
 5. Conceal fasteners and expansion provisions where possible. Do not use exposed fasteners on faces exposed to view.
- B. Fabrication Tolerances:
 1. Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 ft. (6 mm in 6 m) on slope and location lines indicated on Drawings and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.
 2. Fabricate sheet metal flashing and trim that is capable of installation to tolerances specified.
- C. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.
 1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with butyl sealant concealed within joints.
 2. Use lapped expansion joints only where indicated on Drawings.
- D. Sealant Joints: Where movable, nonexpansion-type joints are required, form metal in accordance with cited sheet metal standard to provide for proper installation of elastomeric sealant.
- E. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.
- F. Fabricate cleats and attachment devices of sizes as recommended by cited sheet metal standard[**and by FM Global Property Loss Prevention Data Sheet 1-49**] for application, but not less than thickness of metal being secured.
- G. Seams:
 1. Fabricate nonmoving seams with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 2. Fabricate nonmoving seams with flat-lock seams. Form seams and seal with elastomeric sealant unless otherwise recommended by sealant manufacturer for intended use.[**Rivet joints where necessary for strength.**]
 3. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer.[**Rivet joints where necessary for strength.**]
- H. Do not use graphite pencils to mark metal surfaces.

- I. Cap Flashing/Counterflashing Fabrication - General: Provide two-piece metal cap flashings, consisting of an upper receiver portion and a lower portion extending over the composition flashing, unless otherwise specified or indicated.
 1. Cap Flashing/Counterflashing Fabrication - Two Piece
 - a. Fabricate the receiver portion with outer edge formed into a double fold turned down one inch (25 mm), unless otherwise indicated, and as follows:
 - 1) At new masonry walls, extend the receiver portion into the wall as indicated, terminated with 1/4 inch (6 mm) upstand edge, unless indicated to be higher.
 - 2) At walls faced with metal siding or pre-formed metal panels, extend the receiver portion into the wall as indicated, and terminated with edge folded over support.
 - 3) At concrete and existing masonry walls, extend the receiver portion into an embedded reglet, sawcut in the profile indicated for a reglet, or form the receiver portion to retain sealant as indicated, using a 3/16 by one inch (5 by 25 mm) stainless steel clamping bar.
 - 4) At parapet, extend the receiver portion over wood blocking as indicated.
 - 5) At parapet, extend the receiver portion as indicated and form the upper edge to engage the double fold of coping
 - b. Form the upper edge of the lower portion of metal cap flashing to engage in the double fold of receiver portion, bent to provide spring action against the base flashing, fold the lower edge folded back 1/2 inch (13 mm) and lap composition base flashing not less than 4 inches (100 mm).
 - c. Lap ends of each length of both portions of metal cap flashing not less than 3 inches (75 mm). Weld or solder corner joints. Return ends at roof edge into reglet or wall.
 2. Cap Flashing/Counterflashing Fabrication - One Piece: Provide one-piece cap flashing at roof curbs, with top edge formed to retain metal joint sealant and bottom edge folded 1/2 inch (13 mm) to provide drip.

2.6 ROOF-DRAINAGE SHEET METAL FABRICATIONS

- A. Hanging Gutters:
 1. Fabricate to cross section required, complete with end pieces, outlet tubes, and other accessories as required.
 2. Fabricate in minimum 96-inch- (2400-mm-) long sections.
 3. Furnish flat-stock gutter brackets and **[flat-stock] [twisted]** gutter spacers and straps fabricated from same metal as gutters, of size recommended by cited sheet metal standard, but with thickness not less than **[twice the gutter thickness] [dimension indicated on Drawings] <Insert dimension>**.
 4. Fabricate expansion joints, expansion-joint covers, **[gutter bead reinforcing bars,]** and gutter accessories from same metal as gutters. **[Shop fabricate interior and exterior corners.]**
 5. Gutter Profile: Style A Style B Style C Style D Style E Style F Style G Style H Style I Style J Style K Style L in accordance with cited sheet metal standard.
 6. Expansion Joints: Lap type Butt type Butt type with cover plate Built in.
 7. Accessories: Continuous, removable leaf screen with sheet metal frame and hardware cloth screen Wire-ball downspout strainer Valley baffles.
 8. Gutters with Girth up to 15 Inches (380 mm): Fabricate from the following materials:
 - a. Galvanized Steel: [0.022 inch (0.56 mm)] **<Insert dimension>** thick.
 - b. Aluminum-Zinc Alloy-Coated Steel: [0.022 inch (0.56 mm)] **<Insert dimension>** thick.

- c. Aluminum: [0.032 inch (0.81 mm)] <Insert dimension> thick.
- d. Stainless Steel: [0.0156 inch (0.396 mm)] <Insert dimension> thick.
- e. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
- f. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
- g. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
- h. Copper-Clad Stainless Steel: [0.016 inch (0.40 mm)] <Insert dimension> thick.
- 9. Gutters with Girth 16 to 20 Inches (410 to 510 mm): Fabricate from the following materials:
 - a. Galvanized Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
 - b. Aluminum-Zinc Alloy-Coated Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
 - c. Aluminum: [0.040 inch (1.02 mm)] <Insert dimension> thick.
 - d. Stainless Steel: [0.0188 inch (0.477 mm)] <Insert dimension> thick.
 - e. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 - f. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 - g. Zinc: 0.039 inch (1.00 mm) 0.048 inch (1.25 mm) Insert dimension thick.
 - h. Copper-Clad Stainless Steel: [0.018 inch (0.46 mm)] <Insert dimension> thick.
- 10. Gutters with Girth 21 to 25 Inches (530 to 640 mm): Fabricate from the following materials:
 - a. Galvanized Steel: [0.034 inch (0.86 mm)] <Insert dimension> thick.
 - b. Aluminum-Zinc Alloy-Coated Steel: [0.034 inch (0.86 mm)] <Insert dimension> thick.
 - c. Aluminum: [0.050 inch (1.27 mm)] <Insert dimension> thick.
 - d. Stainless Steel: [0.0250 inch (0.635 mm)] <Insert dimension> thick.
 - e. Copper: [20 oz./sq. ft. (0.68 mm thick)] <Insert value>.
 - f. Zinc-Tin Alloy-Coated Copper: [20 oz./sq. ft. (0.68 mm thick)] <Insert value>.
 - g. Zinc: 0.048 inch (1.25 mm) 0.059 inch (1.50 mm) Insert dimension thick.
 - h. Copper-Clad Stainless Steel: [0.027 inch (0.69 mm)] <Insert dimension> thick.
- 11. Gutters with Girth 26 to 30 Inches (660 to 760 mm): Fabricate from the following materials:
 - a. Galvanized Steel: [0.040 inch (1.02 mm)] <Insert dimension> thick.
 - b. Aluminum-Zinc Alloy-Coated Steel: [0.040 inch (1.02 mm)] <Insert dimension> thick.
 - c. Aluminum: [0.063 inch (1.60 mm)] <Insert dimension> thick.
 - d. Stainless Steel: [0.0313 inch (0.795 mm)] <Insert dimension> thick.
 - e. Copper: [24 oz./sq. ft. (0.82 mm thick)] <Insert value>.
 - f. Zinc-Tin Alloy-Coated Copper: [24 oz./sq. ft. (0.82 mm thick)] <Insert value>.
- 12. Gutters with Girth 31 to 35 Inches (790 to 890 mm): Fabricate from the following materials:
 - a. Galvanized Steel: [0.052 inch (1.32 mm)] <Insert dimension> thick.
 - b. Aluminum-Zinc Alloy-Coated Steel: [0.052 inch (1.32 mm)] <Insert dimension> thick.
 - c. Stainless Steel: [0.0375 inch (0.952 mm)] <Insert dimension> thick.
 - d. Copper: [24 oz./sq. ft. (0.82 mm thick)] <Insert value>.
 - e. Zinc-Tin Alloy-Coated Copper: [25 oz./sq. ft. (0.87 mm thick)] <Insert value>.

B. Built-in Gutters:

- 1. Fabricate to cross section required, with riveted and soldered joints, complete with end pieces, outlet tubes, and other special accessories as required.

2. Fabricate in minimum 96-inch- (2400-mm-) long sections. Fabricate expansion joints and accessories from same metal as gutters unless otherwise indicated.
 3. Fabricate gutters with built-in expansion joints[**and gutter-end expansion joints at walls**].
 4. Accessories: Continuous, removable leaf screen with sheet metal frame and hardware cloth screen Bronze wire-ball downspout strainer Wire-ball downspout strainer.
 5. Fabricate from the following materials:
 - a. Stainless Steel: [0.0156 inch (0.396 mm)] **<Insert dimension>** thick.
 - b. Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
 - c. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
 - d. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
 - e. Copper-Clad Stainless Steel: [0.016 inch (0.40 mm)] **<Insert dimension>** thick.
- C. Downspouts: Fabricate round rectangular open-face downspouts to dimensions indicated on Drawings, complete with mitered elbows. Furnish with metal hangers from same material as downspouts and anchors Insert material.[**Shop fabricate elbows.**]
1. Fabricated Hanger Style: Fig. 1-35A Fig. 1-35B Fig. 1-35C Fig. 1-35D Fig. 1-35E Fig. 1-35F Fig. 1-35G Fig. 1-35H Fig. 1-35I Fig. 1-35J in accordance with SMACNA's "Architectural Sheet Metal Manual."
 2. Fabricate from the following materials:
 - a. Galvanized Steel: [0.022 inch (0.56 mm)] **<Insert dimension>** thick.
 - b. Aluminum-Zinc Alloy-Coated Steel: [0.022 inch (0.56 mm)] **<Insert dimension>** thick.
 - c. Aluminum: [0.024 inch (0.61 mm)] **<Insert dimension>** thick.
 - d. Stainless Steel: [0.0156 inch (0.396 mm)] **<Insert dimension>** thick.
 - e. Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
 - f. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
 - g. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
 - h. Copper-Clad Stainless Steel: [0.016 inch (0.40 mm)] **<Insert dimension>** thick.
- D. Parapet Scuppers: Fabricate scuppers to dimensions required, with closure flange trim to exterior, 4-inch- (100-mm-) wide wall flanges to interior, and base extending 4 inches (100 mm) beyond cant or tapered strip into field of roof.[**Fasten gravel guard angles to base of scupper.**] Fabricate from the following materials:
1. Galvanized Steel: [0.028 inch (0.71 mm)] **<Insert dimension>** thick.
 2. Aluminum-Zinc Alloy-Coated Steel: [0.028 inch (0.71 mm)] **<Insert dimension>** thick.
 3. Aluminum: [0.032 inch (0.81 mm)] **<Insert dimension>** thick.
 4. Stainless Steel: [0.0188 inch (0.477 mm)] **<Insert dimension>** thick.
 5. Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
 6. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
 7. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
 8. Copper-Clad Stainless Steel: [0.018 inch (0.46 mm)] **<Insert dimension>** thick.
- E. Conductor Heads: Fabricate conductor heads with flanged back and stiffened top edge and of dimensions and shape required, complete with outlet tubes, exterior flange trim, built-in overflows. Fabricate from the following materials:
1. Galvanized Steel: [0.028 inch (0.71 mm)] **<Insert dimension>** thick.
 2. Aluminum-Zinc Alloy-Coated Steel: [0.028 inch (0.71 mm)] **<Insert dimension>** thick.
 3. Aluminum: [0.032 inch (0.81 mm)] **<Insert dimension>** thick.
 4. Stainless Steel: [0.0156 inch (0.396 mm)] **<Insert dimension>** thick.

5. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
6. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
7. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
8. Copper-Clad Stainless Steel: [0.016 inch (0.40 mm)] <Insert dimension> thick.

F. Splash Pans: Fabricate to dimensions and shape required and from the following materials:

1. Aluminum: [0.040 inch (1.02 mm)] <Insert dimension> thick.
2. Stainless Steel: [0.0188 inch (0.477 mm)] <Insert dimension> thick.
3. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
4. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
5. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
6. Copper-Clad Stainless Steel: [0.018 inch (0.46 mm)] <Insert dimension> thick.

2.7 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

A. Roof Edge Flashing (Gravel Stop) and Fascia Cap: Fabricate in minimum 96-inch- (2400-mm-) long, but not exceeding 12 ft. (3.6 m) long sections. Furnish with 6-inch- (150-mm-) wide, joint cover plates. [**Shop fabricate interior and exterior corners.**]

1. Joint Style: Overlapped, 4 inches (100 mm) wide Butted with expansion space and 6-inch- (150-mm-) wide, concealed backup plate Butted with expansion space and 6-inch- (150-mm-) wide, exposed cover plate Insert description.
2. Fabricate with scuppers spaced [10 ft. (3 m)] <Insert dimension> apart, to dimensions required with 4-inch- (100-mm-) wide flanges and base extending 4 inches (100 mm) beyond cant or tapered strip into field of roof. Fasten gravel guard angles to base of scupper.
3. Fabricate from the following materials:
 - a. Galvanized Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
 - b. Aluminum-Zinc Alloy-Coated Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
 - c. Aluminum: [0.050 inch (1.27 mm)] <Insert dimension> thick.
 - d. Stainless Steel: [0.0188 inch (0.477 mm)] <Insert dimension> thick.
 - e. Copper: [20 oz./sq. ft. (0.68 mm thick)] <Insert value>.
 - f. Zinc-Tin Alloy-Coated Copper: [20 oz./sq. ft. (0.68 mm thick)] <Insert value>.
 - g. Zinc: 0.048 inch (1.25 mm) 0.059 inch (1.50 mm) Insert dimension thick.
 - h. Copper-Clad Stainless Steel: [0.018 inch (0.46 mm)] <Insert dimension> thick.

B. Copings: Fabricate in minimum 96-inch- (2400-mm-) long, but not exceeding 12 ft.- (3.6 m) long, sections. Fabricate joint plates of same thickness as copings. Furnish with continuous cleats to support edge of external leg and drill elongated holes for fasteners on interior leg. Miter corners, fasten and seal solder or weld watertight. Shop fabricate interior and exterior corners.

1. Coping Profile: Fig. 3-4A Fig. 3-4B Fig. 3-4C Fig. 3-4D Fig. 3-4E Fig. 3-4F Fig. 3-4G in accordance with SMACNA's "Architectural Sheet Metal Manual."
2. Joint Style: Butted with expansion space and 6-inch- (150-mm-) wide, concealed backup plate Butted with expansion space and 6-inch- (150-mm-) wide, exposed cover plate Insert description.
3. Fabricate from the following materials:
 - a. Galvanized Steel: [0.040 inch (1.02 mm)] <Insert dimension> thick.
 - b. Aluminum-Zinc Alloy-Coated Steel: [0.040 inch (1.02 mm)] <Insert dimension> thick.
 - c. Aluminum: [0.050 inch (1.27 mm)] <Insert dimension> thick.
 - d. Stainless Steel: [0.0250 inch (0.635 mm)] <Insert dimension> thick.

- e. Copper: [24 oz./sq. ft. (0.82 mm thick)] <Insert value>.
 - f. Zinc-Tin Alloy-Coated Copper: [24 oz./sq. ft. (0.82 mm thick)] <Insert value>.
 - g. Zinc: 0.048 inch (1.25 mm) 0.059 inch (1.50 mm) Insert dimension thick.
 - h. Copper-Clad Stainless Steel: [0.027 inch (0.69 mm)] <Insert dimension> thick.
- C. Expansion-Joint Cover: Shop fabricate interior and exterior corners. Fabricate roof roof-to-wall transition roof-to-roof edge-flashing (gravel-stop) transition roof-to-roof edge-flashing (gravel-stop) and fascia-cap transition expansion-joint cover from the following materials:
- 1. Galvanized Steel: [0.034 inch (0.86 mm)] <Insert dimension> thick.
 - 2. Aluminum-Zinc Alloy-Coated Steel: [0.034 inch (0.86 mm)] <Insert dimension> thick.
 - 3. Aluminum: [0.050 inch (1.27 mm)] <Insert dimension> thick.
 - 4. Stainless Steel: [0.0250 inch (0.635 mm)] <Insert dimension> thick.
 - 5. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 - 6. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 - 7. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
 - 8. Copper-Clad Stainless Steel: [0.027 inch (0.69 mm)] <Insert dimension> thick.
- D. Base Flashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:
- 1. Galvanized Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
 - 2. Aluminum-Zinc Alloy-Coated Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
 - 3. Aluminum: [0.040 inch (1.02 mm)] <Insert dimension> thick.
 - 4. Stainless Steel: [0.0188 inch (0.477 mm)] <Insert dimension> thick.
 - 5. Copper: [20 oz./sq. ft. (0.68 mm thick)] <Insert value>.
 - 6. Zinc-Tin Alloy-Coated Copper: [20 oz./sq. ft. (0.68 mm thick)] <Insert value>.
 - 7. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
 - 8. Copper-Clad Stainless Steel: [0.018 inch (0.46 mm)] <Insert dimension> thick.
- E. Counterflashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:
- 1. Galvanized Steel: [0.022 inch (0.56 mm)] <Insert dimension> thick.
 - 2. Aluminum-Zinc Alloy-Coated Steel: [0.022 inch (0.56 mm)] <Insert dimension> thick.
 - 3. Aluminum: [0.032 inch (0.81 mm)] <Insert dimension> thick.
 - 4. Stainless Steel: [0.0188 inch (0.477 mm)] <Insert dimension> thick.
 - 5. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 - 6. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 - 7. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
 - 8. Copper-Clad Stainless Steel: [0.018 inch (0.46 mm)] <Insert dimension> thick.
- F. Flashing Receivers: Fabricate from the following materials:
- 1. Galvanized Steel: [0.022 inch (0.56 mm)] <Insert dimension> thick.
 - 2. Aluminum-Zinc Alloy-Coated Steel: [0.022 inch (0.56 mm)] <Insert dimension> thick.
 - 3. Aluminum: [0.032 inch (0.81 mm)] <Insert dimension> thick.
 - 4. Stainless Steel: [0.0156 inch (0.396 mm)] <Insert dimension> thick.
 - 5. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 - 6. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 - 7. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
 - 8. Copper-Clad Stainless Steel: [0.016 inch (0.40 mm)] <Insert dimension> thick.
- G. Roof-Penetration Flashing: Fabricate from the following materials:

1. Galvanized Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
2. Aluminum-Zinc Alloy-Coated Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
3. Stainless Steel: [0.0188 inch (0.477 mm)] <Insert dimension> thick.
4. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
5. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
6. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
7. Copper-Clad Stainless Steel: [0.018 inch (0.46 mm)] <Insert dimension> thick.
8. Lead: [4 lb (1.8 kg)] <Insert weight>.

H. Roof-Drain Flashing: Fabricate from the following materials:

1. Stainless Steel: [0.0156 inch (0.396 mm)] <Insert dimension> thick.
2. Copper: [12 oz./sq. ft. (0.41 mm thick)] <Insert value>.
3. Copper-Clad Stainless Steel: [0.016 inch (0.40 mm)] <Insert dimension> thick.

2.8 STEEP-SLOPE ROOF SHEET METAL FABRICATIONS

A. Apron, Step, Cricket, and Backer Flashing: Fabricate from the following materials:

1. Galvanized Steel: [0.022 inch (0.56 mm)] <Insert dimension> thick.
2. Aluminum-Zinc Alloy-Coated Steel: [0.022 inch (0.56 mm)] <Insert dimension> thick.
3. Aluminum: [0.032 inch (0.81 mm)] <Insert dimension> thick.
4. Stainless Steel: [0.0156 inch (0.396 mm)] <Insert dimension> thick.
5. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
6. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
7. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
8. Copper-Clad Stainless Steel: [0.016 inch (0.40 mm)] <Insert dimension> thick.

B. Valley Flashing: Fabricate from the following materials:

1. Galvanized Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
2. Aluminum-Zinc Alloy-Coated Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
3. Stainless Steel: [0.0188 inch (0.477 mm)] <Insert dimension> thick.
4. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
5. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
6. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
7. Copper-Clad Stainless Steel: [0.018 inch (0.46 mm)] <Insert dimension> thick.

C. Drip Edges: Fabricate from the following materials:

1. Galvanized Steel: [0.022 inch (0.56 mm)] <Insert dimension> thick.
2. Aluminum-Zinc Alloy-Coated Steel: [0.022 inch (0.56 mm)] <Insert dimension> thick.
3. Aluminum: [0.032 inch (0.81 mm)] <Insert dimension> thick.
4. Stainless Steel: [0.0156 inch (0.396 mm)] <Insert dimension> thick.
5. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
6. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
7. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
8. Copper-Clad Stainless Steel: [0.016 inch (0.40 mm)] <Insert dimension> thick.

D. Eave, Rake, Ridge, and Hip Flashing: Fabricate from the following materials:

1. Galvanized Steel: [0.022 inch (0.56 mm)] <Insert dimension> thick.
2. Aluminum-Zinc Alloy-Coated Steel: [0.022 inch (0.56 mm)] <Insert dimension> thick.
3. Aluminum: [0.032 inch (0.81 mm)] <Insert dimension> thick.
4. Stainless Steel: [0.0156 inch (0.396 mm)] <Insert dimension> thick.

5. Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
6. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
7. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
8. Copper-Clad Stainless Steel: [0.016 inch (0.40 mm)] **<Insert dimension>** thick.

E. Counterflashing: **[Shop fabricate interior and exterior corners.]** Fabricate from the following materials:

1. Galvanized Steel: [0.022 inch (0.56 mm)] **<Insert dimension>** thick.
2. Aluminum-Zinc Alloy-Coated Steel: [0.022 inch (0.56 mm)] **<Insert dimension>** thick.
3. Aluminum: [0.032 inch (0.81 mm)] **<Insert dimension>** thick.
4. Stainless Steel: [0.0188 inch (0.477 mm)] **<Insert dimension>** thick.
5. Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
6. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
7. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
8. Copper-Clad Stainless Steel: [0.018 inch (0.46 mm)] **<Insert dimension>** thick.

F. Flashing Receivers: Fabricate from the following materials:

1. Galvanized Steel: [0.022 inch (0.56 mm)] **<Insert dimension>** thick.
2. Aluminum-Zinc Alloy-Coated Steel: [0.022 inch (0.56 mm)] **<Insert dimension>** thick.
3. Aluminum: [0.032 inch (0.81 mm)] **<Insert dimension>** thick.
4. Stainless Steel: [0.0156 inch (0.396 mm)] **<Insert dimension>** thick.
5. Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
6. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
7. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
8. Copper-Clad Stainless Steel: [0.016 inch (0.40 mm)] **<Insert dimension>** thick.

G. Roof-Penetration Flashing: Fabricate from the following materials:

1. Galvanized Steel: [0.028 inch (0.71 mm)] **<Insert dimension>** thick.
2. Aluminum-Zinc Alloy-Coated Steel: [0.028 inch (0.71 mm)] **<Insert dimension>** thick.
3. Stainless Steel: [0.0188 inch (0.477 mm)] **<Insert dimension>** thick.
4. Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
5. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
6. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
7. Copper-Clad Stainless Steel: [0.018 inch (0.46 mm)] **<Insert dimension>** thick.
8. Lead: [4 lb (1.8 kg)] **<Insert weight>**.

2.9 WALL SHEET METAL FABRICATIONS

A. Through-Wall Flashing: Fabricate continuous flashings in minimum 96-inch- (2400-mm-) long, but not exceeding 12 ft. (3.6 m) long, sections, under copings, and at shelf angles. Fabricate discontinuous lintel, sill, and similar flashings to extend 6 inches (150 mm) beyond each side of wall openings; and form with 2-inch- (50-mm-) high, end dams. Fabricate from the following materials:

1. Stainless Steel: [0.0156 inch (0.396 mm)] **<Insert dimension>** thick.
2. Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
3. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] **<Insert value>**.
4. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
5. Copper-Clad Stainless Steel: [0.016 inch (0.40 mm)] **<Insert dimension>** thick.

- B. Opening Flashings in Frame Construction: Fabricate head, sill, [jamb,] and similar flashings to extend [4 inches (100 mm)] <Insert dimension> beyond wall openings. Form head and sill flashing with 2-inch- (50-mm-) high, end dams. Fabricate from the following materials:
1. Galvanized Steel: [0.022 inch (0.56 mm)] <Insert dimension> thick.
 2. Aluminum-Zinc Alloy-Coated Steel: [0.022 inch (0.56 mm)] <Insert dimension> thick.
 3. Aluminum: [0.032 inch (0.81 mm)] <Insert dimension> thick.
 4. Stainless Steel: [0.0156 inch (0.396 mm)] <Insert dimension> thick.
 5. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 6. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 7. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
 8. Copper-Clad Stainless Steel: [0.016 inch (0.40 mm)] <Insert dimension> thick.
- C. Wall Expansion-Joint Cover: Fabricate from the following materials:
1. Galvanized Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
 2. Aluminum-Zinc Alloy-Coated Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
 3. Aluminum: [0.040 inch (1.02 mm)] <Insert dimension> thick.
 4. Stainless Steel: [0.0188 inch (0.477 mm)] <Insert dimension> thick.
 5. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 6. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 7. Zinc: 0.032 inch (0.80 mm) 0.039 inch (1.00 mm) Insert dimension thick.
 8. Copper-Clad Stainless Steel: [0.018 inch (0.46 mm)] <Insert dimension> thick.

2.10 MISCELLANEOUS SHEET METAL FABRICATIONS

- A. Equipment Support Flashing: Fabricate from the following materials:
1. Galvanized Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
 2. Aluminum-Zinc Alloy-Coated Steel: [0.028 inch (0.71 mm)] <Insert dimension> thick.
 3. Stainless Steel: [0.0188 inch (0.477 mm)] <Insert dimension> thick.
 4. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 5. Zinc-Tin Alloy-Coated Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert value>.
 6. Copper-Clad Stainless Steel: [0.018 inch (0.46 mm)] <Insert dimension> thick.
- B. Overhead-Piping Safety Pans: Fabricate from the following materials:
1. Galvanized Steel: [0.040 inch (1.02 mm)] <Insert dimension> thick.
 2. Aluminum-Zinc Alloy-Coated Steel: [0.040 inch (1.02 mm)] <Insert dimension> thick.
 3. Stainless Steel: [0.0250 inch (0.635 mm)] <Insert dimension> thick.
 4. Copper: [24 oz./sq. ft. (0.82 mm thick)] <Insert value>.
 5. Zinc-Tin Alloy-Coated Copper: [24 oz./sq. ft. (0.82 mm thick)] <Insert value>.
 6. Copper-Clad Stainless Steel: [0.027 inch (0.69 mm)] <Insert dimension> thick.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, substrates, and other conditions affecting performance of the Work.
1. Verify compliance with requirements for installation tolerances of substrates.

2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
3. Verify that air- or water-resistant barriers have been installed over substrate to prevent air infiltration or water penetration.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF UNDERLAYMENT

- A. Synthetic Underlayment: Install synthetic underlayment, wrinkle free, in accordance with manufacturers' written instructions, and using adhesive where possible to minimize use of mechanical fasteners under sheet metal.
1. Lap horizontal joints not less than 4 inches (100 mm).
 2. Lap end joints not less than 12 inches (300 mm).
- B. Self-Adhering, High-Temperature Sheet Underlayment:
1. Install self-adhering, high-temperature sheet underlayment; wrinkle free.
 2. Prime substrate if recommended by underlayment manufacturer.
 3. Comply with temperature restrictions of underlayment manufacturer for installation; use primer for installing underlayment at low temperatures.
 4. Apply in shingle fashion to shed water, with end laps of not less than 6 inches (150 mm) staggered 24 inches (600 mm) between courses.
 5. Overlap side edges not less than 3-1/2 inches (90 mm). Roll laps and edges with roller.
 6. Roll laps and edges with roller.
 7. Cover underlayment within 14 days.
- C. Felt Underlayment: Install felt underlayment, wrinkle free, using adhesive to minimize use of mechanical fasteners under sheet metal flashing and trim.
1. Install in shingle fashion to shed water.
 2. Lap joints not less than 2 inches (50 mm).
- D. Install slip sheet, wrinkle free, ~~over underlayment~~ **[directly on substrate]** <Insert requirement> before installing sheet metal flashing and trim.
1. Install in shingle fashion to shed water.
 2. Lapp joints not less than 4 inches (100 mm).

3.3 INSTALLATION OF SHEET METAL FLASHING AND TRIM, GENERAL

- A. Install sheet metal flashing and trim to comply with details indicated and recommendations of cited sheet metal standard that apply to installation characteristics required unless otherwise indicated on Drawings.
1. Install fasteners[, **solder**], protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.
 2. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of [**solder**] [**welds**] [**sealant**].
 3. Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement.
 4. Install sheet metal flashing and trim to fit substrates and to result in watertight performance.
 5. Install continuous cleats with fasteners spaced not more than 12 inches (300 mm) o.c.

6. Space individual cleats not more than 12 inches (300 mm) apart. Attach each cleat with at least two fasteners. Bend tabs over fasteners.
 7. Install exposed sheet metal flashing and trim with limited oil-canning, and free of buckling and tool marks.
 8. Do not field cut sheet metal flashing and trim by torch.
 9. Do not use graphite pencils to mark metal surfaces.
- B. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.
1. Coat concealed side of **[uncoated-aluminum] [and] [stainless steel]** sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.
 2. Underlayment: Where installing sheet metal flashing and trim directly on cementitious or wood substrates, install underlayment and cover with slip sheet.
- C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim.
1. Space movement joints at maximum of [10 ft. (3 m)] **<Insert dimension>** with no joints within 24 inches (600 mm) of corner or intersection.
 2. Form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with sealant concealed within joints.
 3. Use lapped expansion joints only where indicated on Drawings.
- D. Fasteners: Use fastener sizes that penetrate **[wood blocking or sheathing not less than 1-1/4 inches (32 mm) for nails and not less than 3/4 inch (19 mm) for wood screws]** **[substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance]** **<Insert size requirement>**.
- E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.
- F. Seal joints as required for watertight construction.
1. Use sealant-filled joints unless otherwise indicated.
 - a. Embed hooked flanges of joint members not less than 1 inch (25 mm) into sealant.
 - b. Form joints to completely conceal sealant.
 - c. When ambient temperature at time of installation is between 40 and 70 deg F (4 and 21 deg C), set joint members for 50 percent movement each way.
 - d. Adjust setting proportionately for installation at higher ambient temperatures.
 - 1) Do not install sealant-type joints at temperatures below 40 deg F (4 deg C).
 2. Prepare joints and apply sealants to comply with requirements in Section 07 9200 "Joint Sealants."
- G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter.
1. Pretin edges of sheets with solder to width of 1-1/2 inches (38 mm); however, reduce pretinning where pretinned surface would show in completed Work.
 2. Do not solder **[metallic-coated steel] [and] [aluminum]** sheet.
 3. Do not pretin zinc-tin alloy-coated copper.
 4. Do not use torches for soldering.
 5. Heat surfaces to receive solder, and flow solder into joint.

- a. Fill joint completely.
- b. Completely remove flux and spatter from exposed surfaces.
- 6. Stainless Steel Soldering:
 - a. Tin edges of uncoated sheets, using solder for stainless steel and acid flux.
 - b. Promptly remove acid-flux residue from metal after tinning and soldering.
 - c. Comply with solder manufacturer's recommended methods for cleaning and neutralization.
- 7. Copper Soldering: Tin edges of uncoated sheets, using solder for copper.
- 8. Copper-Clad Stainless Steel Soldering: Tin edges of uncoated sheets, using solder for copper-clad stainless steel.

H. Rivets: Rivet joints in **[uncoated aluminum]** **[zinc]** where necessary for strength.

3.4 INSTALLATION OF ROOF-DRAINAGE SHEET METAL FABRICATIONS

- A. Install sheet metal roof-drainage items to produce complete roof-drainage system in accordance with cited sheet metal standard unless otherwise indicated. Coordinate installation of roof perimeter flashing with installation of roof-drainage system.
- B. Hanging Gutters:
 - 1. Join sections with **[riveted and soldered joints]** **[or]** **[joints sealed with sealant]**.
 - 2. Provide for thermal expansion.
 - 3. Attach gutters at eave or fascia to firmly anchor them in position.
 - 4. Provide end closures and seal watertight with sealant.
 - 5. Slope to downspouts.
 - 6. Fasten gutter spacers to front and back of gutter.
 - 7. Anchor and loosely lock back edge of gutter to continuous **[cleat]** **[eave or apron flashing]**.
 - 8. Anchor back of gutter that extends onto roof deck with cleats spaced not more than [24 inches (600 mm)] **<Insert dimension>** apart.
 - 9. Anchor gutter with **[gutter brackets]** **[straps]** **[twisted straps]** spaced not more than [24 inches (600 mm)] [30 inches (760 mm)] [36 inches (910 mm)] **<Insert dimension>** apart to roof deck unless otherwise indicated, and loosely lock to front gutter bead.
 - 10. Anchor gutter with spikes and ferrules spaced not more than [24 inches (600 mm)] [30 inches (760 mm)] **<Insert dimension>** apart.
 - 11. Install gutter with expansion joints at locations indicated on Drawings, but not exceeding, [50 ft. (15.2 m)] **<Insert dimension>** apart. Install expansion-joint caps.
 - 12. Install continuous gutter screens on gutters with noncorrosive fasteners, **[removable]** **[hinged to swing open]** for cleaning gutters.
- C. Built-in Gutters:
 - 1. Join sections with **[riveted and soldered joints]** **[or]** **[joints sealed with sealant]**.
 - 2. Provide for thermal expansion.
 - 3. Slope to downspouts.
 - 4. Provide end closures and seal watertight with sealant.
 - 5. Install underlayment layer in built-in gutter trough and extend to drip edge at eaves and under underlayment on roof sheathing.
 - a. Lap sides minimum of 2 inches (50 mm) over underlying course.
 - b. Lap ends minimum of 4 inches (100 mm).
 - c. Stagger end laps between succeeding courses at least 72 inches (1830 mm).
 - d. Fasten with roofing nails.

- e. Install slip sheet over underlayment.
 - 6. Anchor and loosely lock back edge of gutter to continuous [**cleat**] [**eave or apron flashing**].
 - 7. Anchor back of gutter that extends onto roof deck with cleats spaced not more than [18 inches (460 mm)] <**Insert dimension**> apart.
 - 8. Install gutter with expansion joints at locations indicated on Drawings, but not exceeding, [50 ft. (15.2 m)] <**Insert dimension**> apart. Install expansion-joint caps.
 - D. Downspouts:
 - 1. Join sections with 1-1/2-inch (38-mm) telescoping joints.
 - 2. Provide hangers with fasteners designed to hold downspouts securely to walls.
 - 3. Locate hangers at top and bottom and at approximately 60 inches (1500 mm) o.c.
 - 4. Provide elbows at base of downspout to direct water away from building.
 - 5. Connect downspouts to underground drainage system.
 - E. Splash Pans:
 - 1. Install where downspouts discharge on [**low-slope roofs**] <**Insert surface**>.
 - 2. Set in [**asphalt roofing cement**] [**or**] [**elastomeric sealant**] compatible with the substrate.
 - F. Parapet Scuppers:
 - 1. Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.
 - 2. Anchor scupper closure trim flange to exterior wall and [**solder**] [**or**] [**seal with elastomeric sealant**] to scupper.
 - 3. Loosely lock front edge of scupper with conductor head.
 - 4. [**Solder**] [**or**] [**seal with elastomeric sealant**] exterior wall scupper flanges into back of conductor head.
 - G. Conductor Heads: Anchor securely to wall, with elevation of conductor head rim at minimum of 1 inch (25 mm) below [**scupper**] [**or**] [**gutter**] discharge.
 - H. Expansion-Joint Covers: Install expansion-joint covers at locations and of configuration indicated on Drawings. Lap joints minimum of 4 inches (100 mm) in direction of water flow.
- 3.5 INSTALLATION OF SLOPED ROOF SHEET METAL FABRICATIONS

- A. Install sheet metal flashing and trim to comply with performance requirements[, **sheet metal manufacturer's written installation instructions**,] and cited sheet metal standard.
 - 1. Provide concealed fasteners where possible, and set units true to line, levels, and slopes.
 - 2. Install work with laps, joints, and seams that are permanently watertight and weather resistant.
- B. Roof Edge Flashing:
 - 1. Install roof edge flashings in accordance with ANSI/SPRI/FM 4435/ES-1.
 - 2. Anchor to resist uplift and outward forces in accordance with recommendations in cited sheet metal standard unless otherwise indicated. Interlock bottom edge of roof edge flashing with continuous cleat anchored to substrate at [**staggered 3-inch (75-mm)**] <**Insert spacing**> centers.

3. Anchor to resist uplift and outward forces in accordance with recommendations in FM Global Property Loss Prevention Data Sheet 1-49 for FM Approvals' listing for required windstorm classification.
- C. Copings:
1. Install copings in accordance with ANSI/SPRI/FM 4435/ES-1.
 2. Anchor to resist uplift and outward forces in accordance with recommendations in cited sheet metal standard unless otherwise indicated.
 - a. Interlock exterior bottom edge of coping with continuous cleat anchored to substrate at [24-inch (600-mm)] [16-inch (400-mm)] **<Insert dimension>** centers.
 - b. Anchor interior leg of coping with washers and screw fasteners through slotted holes at [24-inch (600-mm)] **<Insert dimension>** centers.
 3. Anchor to resist uplift and outward forces in accordance with recommendations in FM Global Property Loss Prevention Data Sheet 1-49 for specified FM Approvals' listing for required windstorm classification.
- D. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending minimum of 4 inches (100 mm) over base flashing. Install stainless steel draw band and tighten.
- E. Counterflashing: Coordinate installation of counterflashing with installation of base flashing.
1. Insert counterflashing in reglets or receivers and fit tightly to base flashing.
 2. Extend counterflashing 4 inches (100 mm) over base flashing.
 3. Lap counterflashing joints minimum of 4 inches (100 mm).
 4. Secure in waterproof manner by means of [**snap in installation and sealant or lead wedges and sealant**] [**interlocking folded seam or blind rivets and sealant**] [**anchor and washer spaced at 12 inches (300 mm) o.c. along perimeter and 6 inches (150 mm) o.c. at corners areas**] **<Insert requirement>** unless otherwise indicated.
- F. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Seal with elastomeric butyl sealant and clamp flashing to pipes that penetrate roof.
- 3.6 INSTALLATION OF WALL SHEET METAL FABRICATIONS
- A. Install sheet metal wall flashing to intercept and exclude penetrating moisture in accordance with cited sheet metal standard unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.
- B. Opening Flashings in Frame Construction: Install continuous head, sill, [**jamb,**] and similar flashings to extend [4 inches (100 mm)] **<Insert dimension>** beyond wall openings.
- C. Reglets: Installation of reglets is specified in [**Section 03 3000 "Cast-in-Place Concrete."**] [**Section 04 2000 "Unit Masonry."**] [**Section <Insert Section number> "<Insert Section title>."**]
- 3.7 INSTALLATION OF MISCELLANEOUS SHEET METAL FABRICATIONS
- A. Equipment Support Flashing:
1. Coordinate installation of equipment support flashing with installation of roofing and equipment.

2. Weld or seal flashing with elastomeric sealant to equipment support member.

B. Overhead-Piping Safety Pans:

1. Suspend pans from structure above, independent of other overhead items such as equipment, piping, and conduit, unless otherwise indicated on Drawings.
2. Pipe and install drain line to plumbing waste or drainage system.

3.8 INSTALLATION TOLERANCES

- A. Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 ft. (6 mm in 6 m) on slope and location lines indicated on Drawings and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

3.9 CLEANING

- A. Clean and neutralize flux materials. Clean off excess solder.
- B. Clean off excess sealants.

3.10 PROTECTION

- A. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended in writing by sheet metal flashing and trim manufacturer.
- C. Maintain sheet metal flashing and trim in clean condition during construction.
- D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures, as determined by Architect.

END OF SECTION

SECTION 07 7253 - SNOW GUARDS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Pad-type, flat-mounted metal snow guards.
 - 2. Rail-type, flat-mounted snow guards.
 - 3. Rail-type, seam-mounted snow guards.
- B. Related Requirements:
 - 1. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product, include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: Include roof plans showing layouts and attachment details of snow guards.
 - 1. Include details of rail-type snow guards.
- C. Samples:
 - 1. Pad-Type Snow Guards: Full-size unit with installation hardware.
 - a. For units with factory-applied finishes, submit specified color.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For professional engineer's experience with providing delegated design engineering services of the kind indicated, including documentation that the engineer is licensed in the **[jurisdiction]** **[state]** in which the Project is located.

1.4 QUALITY ASSURANCE

- A. Provide the following upon request:
 - 1. Product Test Reports: For each type of snow guard, for tests performed by a qualified testing agency, indicating load at failure of attachment to roof system identical to roof system used on this Project.

1.5 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit adhesive-mounted snow guards to be installed, and adhesive cured, in accordance with adhesive manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Performance Requirements: Provide snow guards that withstand exposure to weather and resist thermally induced movement without failure, rattling, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
 - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- B. Structural Performance: Snow guards shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated.
 - 1. Snow Loads: As indicated on Drawings.

2.2 PAD-TYPE SNOW GUARDS

- A. Pad-Type, Flat-Mounted Metal Snow Guards:
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Alpine SnowGuards, a division of Vermont Slate & Copper Services, Inc.
 - b. Berger Building Products, Inc.
 - c. IceBlox Inc.
 - d. Rocky Mountain Snow Guards, Inc.
 - e. Sieger Snow Guards Inc.
 - f. TRA SNOW AND SUN, INC.
 - g. Zaleski Snow-Guard and Roofing Specialties Inc.
 - 2. Material:
 - a. ASTM B370 copper sheet, not less than 16 oz./sq. ft. (0.55 mm thick).
 - 3. Attachment: Manufacturer's tested system, capable of resisting design loads.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, snow guard attachment, and other conditions affecting performance of the Work.
 - 1. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean and prepare substrates for bonding snow guards.
- B. Prime substrates in accordance with snow guard manufacturer's written instructions.

3.3 INSTALLATION

- A. Install snow guards in accordance with manufacturer's written instructions.
 - 1. Space rows as indicated on Drawings.
 - 2. Space rows as recommended by manufacturer.
- B. Attachment for Batten-Seam Metal Roofing:
 - 1. Install per manufacturer's instructions.

END OF SECTION

FOR REFERENCE ONLY

SECTION 07 9200 - JOINT SEALANTS**PART 1 - GENERAL****1.1 SUMMARY****A. Section Includes:**

1. Silicone joint sealants.
2. Weather barrier sealants.
3. Urethane joint sealants.
4. Latex joint sealants.
5. Butyl rubber joint sealants.
6. Mildew-resistant joint sealants.

B. Related Requirements:

1. Section 04 2000 "Unit Masonry" for masonry control and expansion joint fillers and gaskets.
2. Section 07 9100 "Preformed Joint Seals" for **[preformed, foam joint seals] precured, extruded-silicone joint seals**.
3. Section 07 9219 "Acoustical Joint Sealants" for acoustical sealants used in sound rated partitions.
4. Sections 079513.13 "Interior Expansion Joint Cover Assemblies," 079513.16 "Exterior Expansion Joint Cover Assemblies," and 079513.19 "Parking Deck Expansion Joint Cover Assemblies" for building expansion joints.
5. Section 07 8443 "Joint Firestopping" for sealing joints in fire-resistance-rated construction.
6. Section 08 4400 "Glazed Curtain Walls" for structural and other glazing sealants used in curtain wall assemblies.
7. Section 08 8000 "Glazing" for glazing sealants.
8. Section 08 8400 "Plastic Glazing" for plastic glazing sealants.
9. Section 09 2613 "Gypsum Veneer Plastering" for sealing perimeter joints and penetrations.
10. Section 09 2900 "Gypsum Board" for sealing perimeter joints and penetrations.
11. Section 09 3000 "Tiling" for sealing tile joints and penetrations.
12. Section 09 5113 "Acoustical Panel Ceilings" Section 09 5123 "Acoustical Tile Ceilings" for sealing edge moldings at perimeters with acoustical sealant.
13. Section 09 6313.35 "Chemical-Resistant Brick Flooring" for sealing flooring joints.
14. Section 32 1373 "Concrete Paving Joint Sealants" for sealing joints in pavements, walkways, and curbing.

1.2 PRECONSTRUCTION TESTING**A. Preconstruction Compatibility and Adhesion Testing:** Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.

1. Use **[ASTM C 1087] [manufacturer's standard test method]** to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
2. Submit not fewer than **[eight] <Insert number>** pieces of each kind of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.

3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
4. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures including use of specially formulated primers.
5. Testing will not be required if joint-sealant manufacturers submit joint preparation data that are based on previous testing, not older than 24 months, of sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those submitted.

B. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:

1. Locate test joints where indicated on Project or, if not indicated, as directed by Architect.
2. Conduct field tests for each application indicated below:
 - a. Each kind of sealant and joint substrate indicated.
3. Notify Architect seven days in advance of dates and times when test joints will be erected.
4. Arrange for tests to take place with joint-sealant manufacturer's technical representative present.
 - a. Test Method: Test joint sealants in accordance with Method A, Field Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.
 - 1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
5. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
6. Evaluation of Preconstruction Field-Adhesion Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.3 ACTION SUBMITTALS

- A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal. Ensure compliance with requirements included in Section 01 3300 "Submittal Procedures" Section 07 0413 "Common Submittal Requirements for Thermal and Moisture Protection".
- B. Product Data: For each joint-sealant product indicated.
- C. Sustainable Design Submittals:
 1. Product Data: For sealants, indicating VOC content.
 2. Laboratory Test Reports: For sealants, indicating compliance with requirements for low-emitting materials
- D. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.
- E. Samples for Verification: For each kind and color of joint sealant required, provide Samples with joint sealants in 1/2-inch- (13-mm-) wide joints formed between two 6-inch- (150-mm-) long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

- F. Joint-Sealant Schedule: Include the following information:
 - 1. Joint-sealant application, joint location, and designation.
 - 2. Joint-sealant manufacturer and product name.
 - 3. Joint-sealant formulation.
 - 4. Joint-sealant color.

1.4 INFORMATIONAL SUBMITTALS

- A. Preconstruction Compatibility and Adhesion Test Reports: From sealant manufacturer, indicating the following:
 - 1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
 - 2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
- B. Preconstruction Field-Adhesion Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on testing specified in "Preconstruction Testing" Article.
- C. Field-Adhesion Test Reports: For each sealant application tested.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- B. Source Limitations: Obtain each kind of joint sealant from single source from single manufacturer.
- C. Product Testing: Test joint sealants using a qualified testing agency.
 - 1. Testing Agency Qualifications: An independent testing agency qualified in accordance with ASTM C 1021 to conduct the testing indicated.
 - 2. Test in accordance with SWRI's Sealant Validation Program for compliance with requirements specified by reference to ASTM C 920 for adhesion and cohesion under cyclic movement, adhesion-in-peel, and indentation hardness.
- D. Provide the following upon request:
 - 1. Qualification Data: For qualified [**Installer**] [and] [**testing agency**].
 - 2. Product Certificates: For each kind of joint sealant and accessory, from manufacturer.
 - 3. Sealant, Waterproofing, and Restoration Institute (SWRI) Validation Certificate: For each sealant specified to be validated by SWRI's Sealant Validation Program.
 - 4. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that sealants comply with requirements.
- E. Mockups: Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.
- F. Preinstallation Conference: Conduct conference at Project site.

1.6 PROJECT CONDITIONS

- A. Do not proceed with installation of joint sealants under the following conditions:
1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer[**or are below** 40 deg F (5 deg C)].
 2. When joint substrates are wet.
 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.7 WARRANTY

- A. Special Installer's Warranty: Manufacturer's standard form in which Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
1. Warranty Period: [**Five**] <Insert number> years from date of Substantial Completion.
- B. Special Manufacturer's Warranty: Manufacturer's standard form in which joint-sealant manufacturer agrees to furnish joint sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.
1. Warranty Period: < **Insert number** > years from date of Substantial Completion.
- C. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:
1. Movement of the structure caused by structural settlement or errors attributable to design or construction resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
 2. Disintegration of joint substrates from natural causes exceeding design specifications.
 3. Mechanical damage caused by individuals, tools, or other outside agents.
 4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.
- B. VOC Content: Verify sealants and sealant primers comply with the following:
1. Architectural sealant shall have a VOC content of 250 g/L or less.
 2. Sealants and sealant primers for nonporous substrates have a VOC content of 250 g/L or less.
 3. Sealants and sealant primers for porous substrates have a VOC content of 775 g/L or less.
 4. Verify sealant complies with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

- C. Liquid-Applied Joint Sealants: Comply with ASTM C 920 and other requirements indicated for each liquid-applied joint sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.
1. Suitability for Immersion in Liquids. Where sealants are indicated for Use I for joints that will be continuously immersed in liquids, provide products that have undergone testing in accordance with ASTM C 1247. Liquid used for testing sealants is deionized water, unless otherwise indicated.
- D. Stain-Test-Response Characteristics: Where sealants are specified to be nonstaining to porous substrates, provide products that have undergone testing in accordance with ASTM C 1248 and have not stained porous joint substrates indicated for Project.
- E. Suitability for Contact with Food: Where sealants are indicated for joints that will come in repeated contact with food, provide products that comply with 21 CFR 177.2600.
- F. Colors of Exposed Joint Sealants: [**As indicated by manufacturer's designations**] [**Match Architect's samples**] [**As selected by Architect from manufacturer's full range**].

2.2 SILICONE JOINT SEALANTS

- A. Sealant JS-S1 - Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT.
1. Products: Subject to compliance with requirements, provide products from the following table that has a validation certificate from the Sealant, Waterproofing and Restoration Institute (SWRI).

Manufacturer	Product	Manufacturer Rated Movement Capability (CLASS)	Substrate Primer Required: Yes/No/Test			
			Morta r*	Anod. Alum.	Uncoated Glass	Other*
Dow Inc.	Dowsil 791	± 50%	Yes	Test	No	Test
Dow Inc.	Dowsil 795	± 50%	No	Yes	No	Test
Dow Inc.	Dowsil 756 SMS	± 50%	No	Yes	No	Test
Momentive Performance Materials, Inc.	Silpruf SCS2000	± 50%	Yes	Test	No	Test
Momentive Performance Materials, Inc.	SCS9000 Silpruf NB	± 50%	Yes	Test	No	Test
Pecora Corporation	864	± 50%	Yes	Test	No	Test
Pecora Corporation	895	± 50%	Yes	Test	No	Test
Tremco Incorporated	Spectrem 3	± 50%	Yes	Test	No	Test
Tremco Incorporated	Spectrem 4-TS	± 50%	Yes	Test	No	Test

Table Notes:

* Indicates substrates with a cement component, such as concrete, that require use of a primer.

** Indicates that other substrates shall be tested for adhesion to determine if a primer will be required.

- B. Sealant JS-S2 - Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use NT.

1. Products: Subject to compliance with requirements, provide products from the following table that has a validation certificate from the Sealant, Waterproofing and Restoration Institute (SWRI).

Manufacturer	Product	Manufacturer Rated Movement Capability (CLASS)	Substrate Primer Required: Yes/No/Test			
			Morta r*	Anod. Alum.	Uncoated Glass	Other*
Dow Inc.	Dowsil 790	+ 100/- 50%	No	Yes	No	Test
Momentive Performance Materials, Inc.	SCS2700 Silpruf LM	+ 100/- 50%	Yes	Test	No	Test
Pecora Corporation	890	+ 100/- 50%	Yes	Test	No	Test
Tremco Incorporated	Spectrem 1	+ 100/- 50%	Yes	Test	No	Test

Table Notes:

* Indicates substrates with a cement component, such as concrete, that require use of a primer.

** Indicates that other substrates shall be tested for adhesion to determine if a primer will be required.

2.3 WEATHER BARRIER SEALANTS

- A. Sealant JS-W1 - Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT; tested and marketed specifically for sealing air barrier and vapor retarder sheets to common building materials, such as aluminum, vinyl, PVC, powder coat, paint and fluoropolymer coatings; UV resistant..

1. Products: Subject to compliance with requirements, [**provide the following**] [**provide one of the following**] [**available products that may be incorporated into the Work include, but are not limited to, the following**]:
- a. Dow Corp.; Dowsil 758.

2.4 URETHANE JOINT SEALANTS

- A. Sealant JS-U1 - Multicomponent, Pourable, Traffic-Grade, Urethane Joint Sealant: ASTM C 920. Type M, Grade P, Class 25, for Use T and I.

1. Products: Subject to compliance with requirements, [**provide the following**] [**provide one of the following**] [**available products that may be incorporated into the Work include, but are not limited to, the following**]:
 - a. LymTal International, Inc.; Iso-Flex 880 GB.
 - b. Sika Corporation; Sikaflex-2c SL.
 - c. Tremco Incorporated; Vulkem 445SSL.
- B. Sealant JS-U2 - Multicomponent, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use T.
 1. Products: Subject to compliance with requirements, [**provide the following**] [**provide one of the following**] [**available products that may be incorporated into the Work include, but are not limited to, the following**]:
 - a. Master Builders Solutions; MasterSeal NP 2.
 - b. LymTal International, Inc.; [**Iso-Flex 881**] [**or**] [**Iso-Flex 885 SG**].
 - c. Pacific Polymers International, Inc.; [**Elasto-Thane 227 High Shore Type II**] [**or**] [**Elasto-Thane 227 Type II**].
 - d. Pecora Corporation; DynaTred.
 - e. Sika Corporation, Construction Products Division; [**Sikaflex-2c NS**] [**or**] [**Sikaflex-2c EZ Mix**].
 - f. Tremco Incorporated; Vulkem 116 + catalyst.

2.5 LATEX JOINT SEALANTS

- A. Sealant JS-L1 - Latex Joint Sealant: Acrylic latex or siliconized acrylic latex, ASTM C 834.
 1. Products: Subject to compliance with requirements, [**provide the following**] [**provide one of the following**] [**available products that may be incorporated into the Work include, but are not limited to, the following**]:
 - a. Bostik, Inc.; Chem-Calk 600.
 - b. DAP Products Inc.; Dynaflex 230.
 - c. Pecora Corporation; AC-20 + Silicone.
 - d. Schnee-Morehead, Inc.; Acryl-R SM8200.
 - e. Tremco Incorporated; Tremflex 834.

2.6 BUTYL RUBBER JOINT SEALANTS

- A. Sealant JS-B1 - Butyl-Rubber-Based Joint Sealant: ASTM C 1311.
 1. Products: Subject to compliance with requirements, [**provide the following**] [**provide one of the following**] [**available products that may be incorporated into the Work include, but are not limited to, the following**]:
 - a. Bostik, Inc.; Chem-Calk 300.
 - b. Pecora Corporation; BC-158.
 - c. Tremco Incorporated; Tremco Butyl Sealant.

2.7 MILDEW-RESISTANT JOINT SEALANTS

- A. Sealant JS-M1 - Mildew-Resistant, Single-Component, Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
 1. Products: Subject to compliance with requirements, [**provide the following**] [**provide one of the following**] [**available products that may be incorporated into the Work include, but are not limited to, the following**]:
 - a. Dow Inc.; Dowsil 786 Silicone Sealant.

- b. GE Silicones; SCS1700 Sanitary.
- c. Pecora Corporation; 898NST.
- d. Tremco Incorporated; Tremsil 200.

2.8 JOINT SEALANT BACKING

- A. General: Provide sealant backings of material that are nonstaining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
- B. Cylindrical Sealant Backings: ASTM C 1330, [**Type C (closed-cell material with a surface skin)**] [**Type O (open-cell material)**] [**Type B (bicellular material with a surface skin)**] [**or any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated**], and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.
- C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.9 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
- C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
 2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:
 - a. Concrete.
 - b. Masonry.
 - c. Unglazed surfaces of ceramic tile.
 - d. Exterior insulation and finish systems.
 - e. **<Insert other porous joint substrate>.**
 3. Remove laitance and form-release agents from concrete.
 4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:
 - a. Metal.
 - b. Glass.
 - c. Porcelain enamel.
 - d. Glazed surfaces of ceramic tile.
 - e. **<Insert other nonporous joint substrate>.**
- B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
- C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.
- ### 3.3 INSTALLATION OF JOINT SEALANTS
- A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.
- B. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.
- C. Do not extend exterior sealants and primers into building interior (that is, inside the weatherproofing system) unless first verifying compliance with VOC requirements.
- D. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
1. Do not leave gaps between ends of sealant backings.
 2. Do not stretch, twist, puncture, or tear sealant backings.

3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.
- E. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.
- F. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
 1. Place sealants so they directly contact and fully wet joint substrates.
 2. Completely fill recesses in each joint configuration.
 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- G. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants in accordance with requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
 1. Remove excess sealant from surfaces adjacent to joints.
 2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces. Water-based tooling agents are unacceptable.
 3. Provide concave joint profile per Figure 8A in ASTM C 1193, unless otherwise indicated.
 4. Provide flush joint profile where indicated per Figure 8B in ASTM C 1193.
 5. Provide recessed joint configuration of recess depth and at locations indicated per Figure 8C in ASTM C 1193.
 - a. Use masking tape to protect surfaces adjacent to recessed tooled joints.

3.4 FIELD QUALITY CONTROL

- A. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:
 1. Extent of Testing: Test completed and cured sealant joints as follows:
 - a. Perform [10] <Insert number> tests for the first [1000 feet (300 m)] <Insert dimension> of joint length for each kind of sealant and joint substrate.
 - b. Perform 1 test for each [1000 feet (300 m)] <Insert dimension> of joint length thereafter or 1 test per each floor per elevation.
 2. Test Method: Test joint sealants in accordance with Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.
 - a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
 3. Inspect tested joints and report on the following:
 - a. Whether sealants filled joint cavities and are free of voids.
 - b. Whether sealant dimensions and configurations comply with specified requirements.
 - c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion passes sealant manufacturer's field-adhesion hand-pull test criteria.

4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant fill, sealant configuration, and sealant dimensions.
5. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

- B. Evaluation of Field-Adhesion Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.5 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.6 PROTECTION

- A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.7 JOINT-SEALANT SCHEDULE

- A. Joint-Sealant Application: Exterior joints in horizontal traffic surfaces; Type JS-U1JS-U2.

1. Joint Locations:
 - a. Control and expansion joints in brick pavers.
 - b. Isolation and contraction joints in cast-in-place concrete slabs.
 - c. Joints between plant-precast architectural concrete paving units.
 - d. Joints in stone paving units[, **including steps**].
 - e. Tile control and expansion joints.
 - f. Joints between different materials listed above.
 - g. **<Insert other joints>**.
 - h. Other joints as indicated.
2. Joint-Sealant Color: [**As indicated by manufacturer's designations**] [**Match Architect's sample**] [**As selected by Architect from manufacturer's full range of colors**] **<Insert color>**.

- B. Joint-Sealant Application: Exterior joints in vertical surfaces and horizontal nontraffic surfaces; Type JS-S1 and.

1. Joint Locations:
 - a. Construction joints in cast-in-place concrete.
 - b. Joints between plant-precast architectural concrete units.
 - c. Control and expansion joints in unit masonry.
 - d. Joints in dimension stone cladding.

- e. Joints in glass unit masonry assemblies.
 - f. Joints in exterior insulation and finish systems.
 - g. Joints between metal panels.
 - h. Joints between different materials listed above.
 - i. Perimeter joints between materials listed above and frames of **[doors]** **[windows]** **[and]** **[louvers]**.
 - j. Control and expansion joints in **[ceilings]** **[and other]** **[overhead surfaces]**.
 - k. **<Insert other joints>**.
 - l. Other joints as indicated.
2. Joint-Sealant Color: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range of colors]** **<Insert color>**.
- C. Joint-Sealant Application: Exterior weather barrier joints; Type JS-W1.
- D. Joint-Sealant Application: Interior joints in horizontal traffic surfaces; Type JS-U1 and.
- 1. Joint Locations:
 - a. Isolation joints in cast-in-place concrete slabs.
 - b. Control and expansion joints in stone flooring.
 - c. Control and expansion joints in brick flooring.
 - d. Control and expansion joints in tile flooring.
 - e. **<Insert other joints>**.
 - f. Other joints as indicated.
 - 2. Joint-Sealant Color: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range of colors]** **<Insert color>**.
- E. Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces; Type JS-L1 JS-B1.
- 1. Joint Locations:
 - a. Control and expansion joints on exposed interior surfaces of exterior walls.
 - b. Perimeter joints of exterior openings where indicated.
 - c. Tile control and expansion joints.
 - d. Vertical joints on exposed surfaces of **[interior unit masonry]** **[concrete]** **[walls]** **[and]** **[partitions]**.
 - e. Joints on underside of plant-precast structural concrete **[beams]** **[and]** **[planks]**.
 - f. Perimeter joints between interior wall surfaces and frames of **[interior doors]** **[windows]** **[and]** **[elevator entrances]**.
 - g. **<Insert other joints>**.
 - h. Other joints as indicated.
 - 2. Joint-Sealant Color: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range of colors]** **<Insert color>**.
- F. Joint-Sealant Application: Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces; Type JS-M1.
- 1. Joint Sealant Location:
 - a. Joints between plumbing fixtures and adjoining walls, floors, and counters.
 - b. Tile control and expansion joints where indicated.
 - c. **<Insert other joints>**.
 - d. Other joints as indicated.

June 15, 2026

Smithsonian OPDC Project No. 2533105

SmithGroup Project No. 00100084

2. Joint-Sealant Color: [**As indicated by manufacturer's designations**] [**Match Architect's sample**] [**As selected by Architect from manufacturer's full range of colors**] <Insert color>.

END OF SECTION

FOR REFERENCE ONLY

SECTION 07 9219 - ACOUSTICAL JOINT SEALANTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Acoustical joint sealants.
- B. Related Requirements:
 - 1. Section 07 9200 "Joint Sealants" joint sealants for nonacoustical applications.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants, showing full range of available colors for each product exposed to view.
- C. Samples for Verification: For each type and color of acoustical joint sealant required.
 - 1. Size: 1/2-inch- (13-mm-) wide sealant joints formed between two 6-inch- (150-mm-) long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.
- D. Acoustical Joint-Sealant Schedule: Include the following information:
 - 1. Joint-sealant application, joint location, and designation.
 - 2. Joint-sealant manufacturer and product name.
 - 3. Joint-sealant formulation.
 - 4. Joint-sealant color.

1.3 INFORMATIONAL SUBMITTALS

- A. Test and Evaluation Reports:
 - 1. Product Test Reports: For each type of acoustical joint sealant, for tests performed by manufacturer and witnessed by a qualified testing agency.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained between 40 and 95 deg F (4 and 35 deg C).
 - 1. Maintain containers in clean condition, free of foreign materials and residue.
 - 2. Remove rags and waste from storage areas daily.

1.5 FIELD CONDITIONS

- A. Apply coatings only when temperature of surfaces to be coated and ambient air temperatures are between 60 and 90 deg F (16 and 32 deg C).

1.6 WARRANTY

- A. Installer's Special Warranty: Installer agrees to repair or replace acoustical joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.
- B. Manufacturer's Special Warranty: Manufacturer agrees to furnish acoustical joint sealants to repair or replace those joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
 1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 ACOUSTICAL JOINT SEALANTS

- A. Acoustical joint-sealant products that effectively reduce airborne sound transmission through perimeter joints and openings in building construction, as demonstrated by testing representative assemblies in accordance with ASTM E90.
- B. Acoustical Sealant for Exposed and Concealed Joints: Manufacturer's standard nonsag, paintable, nonstaining latex acoustical sealant complying with ASTM C834.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DAP Products Inc.
 - b. Everkem Diversified Products, Inc.
 - c. Franklin International.
 - d. Grabber Construction Products, Inc.
 - e. Hilti, Inc.
 - f. OSI Sealants; Henkel Corporation.
 - g. Pecora Corporation.
 - h. Specified Technologies Inc.
 2. Colors of Exposed Acoustical Joint Sealants: As selected by Architect from manufacturer's full range of colors.

2.2 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by acoustical joint-sealant manufacturer where required for adhesion of sealant to joint substrates.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
- C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine joints indicated to receive acoustical joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing acoustical joint sealants to comply with joint-sealant manufacturer's written instructions.
- B. Joint Priming: Prime joint substrates where recommended by acoustical joint-sealant manufacturer. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
- C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF ACOUSTICAL JOINT SEALANTS

- A. Comply with acoustical joint-sealant manufacturer's written installation instructions unless more stringent requirements apply.
- B. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical joint sealant. Install acoustical joint sealants at both faces of partitions, at perimeters, and through penetrations. Comply with ASTM C919, ASTM C1193, and manufacturer's written instructions for closing off sound-flanking paths around or through assemblies, including sealing partitions to underside of floor slabs above acoustical ceilings.
- C. Acoustical Ceiling Areas: Apply acoustical joint sealant at perimeter edge moldings of acoustical ceiling areas in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.

3.4 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of acoustical joint sealants and of products in which joints occur.

3.5 PROTECTION

- A. Protect acoustical joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated acoustical joint sealants immediately so installations with repaired areas are indistinguishable from original work.

END OF SECTION

SECTION 07 9513.16 - EXTERIOR EXPANSION JOINT COVER ASSEMBLIES**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
 - 1. Exterior expansion joint covers.
- B. Related Requirements:
 - 1. Section 07 7129 "Manufactured Roof Expansion Joints" for factory-fabricated roof expansion joint cover assemblies.
 - 2. Section 07 9100 "Preformed Joint Seals" for preformed foam and extruded-silicone joint seals.
 - 3. Section 07 9513.19 "Parking Deck Expansion Joint Cover Assemblies" for expansion joint cover assemblies subject to vehicular traffic.

1.2 ACTION SUBMITTALS

- A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal and Samples submittal. Ensure compliance with requirements included in Section 01 3300 "Submittal Procedures."Section 07 0413 "Common Submittal Requirements for Thermal and Moisture Protection".
- B. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for expansion joint cover assemblies.
 - 1. Exterior expansion joint covers.
- C. Shop Drawings: For each expansion joint cover assembly.
 - 1. Include plans, elevations, sections, details, splices, block-out requirement, attachments to other work, and line diagrams showing entire route of each expansion joint.
 - 2. Where expansion joint cover assemblies change planes, provide isometric or clearly detailed drawing depicting how components interconnect.
- D. Samples: For each exposed expansion joint cover assembly and for each color and texture specified, full width by 6 inches (150 mm) long in size.
- E. Samples for Initial Selection: For each type of exposed finish.
 - 1. Include manufacturer's color charts showing the full range of colors and finishes available for each exposed metal and elastomeric seal material.
- F. Samples for Verification: For each type of expansion joint cover assembly, full width by 6 inches (150 mm) long in size.
- G. Expansion Joint Cover Assembly Schedule: Prepared by or under the supervision of the supplier. Include the following information in tabular form:
 - 1. Manufacturer and model number for each expansion joint cover assembly.
 - 2. Expansion joint cover assembly location cross-referenced to Drawings.
 - 3. Nominal, minimum, and maximum joint width.
 - 4. Movement direction.

5. Materials, colors, and finishes.
6. Product options.
7. Fire-resistance ratings.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each fire-resistance-rated expansion joint cover assembly, for tests performed by **[manufacturer and witnessed by a qualified testing agency]** **[a qualified testing agency]**.

1.4 MOCKUPS

- A. Build mockups to demonstrate aesthetic effects and to set quality standards for materials and execution.
 1. Build mockup of typical expansion joint cover assembly as shown on Drawings.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTION

- A. Furnish units in longest practicable lengths to minimize field splicing.
- B. Include factory-fabricated closure materials and transition pieces, T-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous expansion joint cover assemblies.

2.2 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Expansion joint cover assemblies shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- B. Fire-Resistance Ratings: Provide expansion joint cover assemblies with fire barriers identical to those of systems tested for fire resistance according to **[UL 2079]** **[or]** **[ASTM E1966]** by a qualified testing agency.
 1. Hose Stream Test: Wall-to-wall and wall-to-soffit assemblies shall be subjected to hose stream testing.
- C. Expansion Joint Design Criteria **<Insert drawing designation>**:
 1. Type of Movement: **[Thermal]** **[Wind sway]**.
 - a. Nominal Joint Width: **[As indicated on Drawings]** **<Insert width>**.
 - b. Minimum Joint Width: **[As indicated on Drawings]** **<Insert width>**.
 - c. Maximum Joint Width: **[As indicated on Drawings]** **<Insert width>**.
 2. Seismic Movement:
 - a. Joint Movement: As indicated on Drawings.

2.3 EXTERIOR EXPANSION JOINT COVERS

- A. Exterior Metal-Plate Joint Cover <Insert drawing designation>: Assembly consisting of sliding metal cover plate in continuous contact with gaskets mounted on metal frames fixed to sides of joint gap.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Architectural Art Manufacturing; a division of Pittcon Architectural Metals, LLC.
 - b. Balco; a CSW Industrials Company.
 - c. Construction Specialties, Inc.
 - d. MM Systems Corporation.
 - e. Nystrom, Inc.
 - f. Watson Bowman Acme Corp.
 - g. inpro Corporation.
 2. Application: Wall to wall Wall to soffit Soffit to soffit.
 3. Installation: Surface mounted.
 4. Fire-Resistance Rating: Not less than that indicated on Drawings that of adjacent construction 1 hour 2 hours Insert rating.
 5. Exposed Metal:
 - a. Aluminum: Mill Clear anodic, Class I Clear anodic, Class II Color anodic, Class I Color anodic, Class II Manufacturer's standard Insert finish.
 - 1) Color: Light bronze Dark bronze Match Architect's sample As selected by Architect from full range of industry colors and color densities Insert color.
 - b. Stainless Steel: No. 2B No. 4 Manufacturer's standard Insert finish.
 - c. Bronze: Mill Manufacturer's standard Insert finish.
 - d. Brass: Mill Manufacturer's standard Insert finish.
- B. Exterior Elastomeric-Seal Joint Cover <Insert drawing designation>: Assembly consisting of elastomeric seal anchored to surface-mounted frames fixed to sides of joint gap.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Architectural Art Manufacturing; a division of Pittcon Architectural Metals, LLC.
 - b. Balco; a CSW Industrials Company.
 - c. Construction Specialties, Inc.
 - d. MM Systems Corporation.
 - e. Nystrom, Inc.
 - f. Watson Bowman Acme Corp.
 - g. inpro Corporation.
 2. Application: Wall to wall Wall to soffit Soffit to soffit.
 3. Installation: Surface-mounted Recessed.
 4. Fire-Resistance Rating: Not less than that indicated on Drawings that of adjacent construction 1 hour 2 hours Insert rating.
 5. Exposed Metal:
 - a. Aluminum: Mill Clear anodic, Class I Clear anodic, Class II Color anodic, Class I Color anodic, Class II Manufacturer's standard Insert finish.

- 1) Color: Light bronze Dark bronze Match Architect's sample As selected by Architect from full range of industry colors and color densities Insert color.
 - b. Stainless Steel: No. 2B No. 4 Manufacturer's standard Insert finish.
 - c. Bronze: Mill Manufacturer's standard Insert finish.
 - d. Brass: Mill Manufacturer's standard Insert finish.
 6. Seal: Preformed elastomeric membrane or extrusion.
 - a. Color: Black Gray As selected by Architect from manufacturer's full range Insert color.
 - C. Preformed Foam Joint Seals: Manufacturer's standard joint seal manufactured from urethane or EVA (ethylene vinyl acetate) foam with minimum density of 10 lb/cu. ft. (160 kg/cu. m) and impregnated with a nondrying, water-repellent agent. Factory produce in precompressed sizes in roll or stick form to fit joint widths based on design criteria indicated, with factory- or field-applied adhesive for bonding to substrates.
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Balco; a CSW Industrials Company.
 - b. EMSEAL Joint Systems, Ltd.
 - c. LymTal International, Inc.
 - d. MM Systems Corporation.
 - e. Nystrom, Inc.
 - f. Pecora Corporation.
 - g. Schul International Company, LLC.
 - h. Watson Bowman Acme Corp.
 - i. Willseal LLC.
 2. Design Criteria:
 - a. Nominal Joint Width: **[As indicated on Drawings] <Insert dimension>.**
 - b. Minimum Joint Width: **[As indicated on Drawings] <Insert dimension>.**
 - c. Maximum Joint Width: **[As indicated on Drawings] <Insert dimension>.**
 3. Joint Seal Color: As indicated by manufacturer's designations Match Architect's sample As selected by Architect from full range of industry colors Insert color.
- 2.4 MATERIALS
- A. Aluminum: ASTM B221 (ASTM B221M), Alloy 6063-T5 for extrusions; ASTM B209 (ASTM B209M), Alloy 6061-T6 for sheet and plate.
 1. Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.
 - B. Stainless Steel: ASTM A240/A240M or ASTM A666, Type 304 for plates, sheet, and strips.
 - C. Brass: ASTM B36/B36M, UNS Alloy C26000 for half hard sheet and coil.
 - D. Bronze: ASTM B455, Alloy C38500 for extrusions; Alloy C23000 red brass for plates.
 - E. Elastomeric Seals: Manufacturer's standard preformed elastomeric membranes or extrusions to be installed in metal frames.

F. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint and to comply with performance criteria for required fire-resistance rating.

G. Moisture Barrier: Manufacturer's standard, flexible elastomeric material.

2.5 ALUMINUM FINISHES

A. Mill finish.

B. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm AA-M12C22A31, Class II, 0.010 mm or thicker.

C. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm AA-M12C22A32/A34, Class II, 0.010 mm or thicker.

2.6 STAINLESS STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.
2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
3. Directional Satin Finish: No. 4.

C. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

2.7 COPPER-ALLOY FINISHES

A. Buffed Finish: M21 (Mechanical Finish: buffed, smooth specular).

B. Medium-Satin Finish: M32 (Mechanical Finish: directionally textured, medium satin).

2.8 ACCESSORIES

A. Moisture Barriers: Manufacturer's standard continuous, waterproof membrane within joint and attached to substrate on sides of joint.

1. Provide where indicated on Drawings.

B. Manufacturer's standard stainless steel attachment devices. Include anchors, clips, fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces where expansion joint cover assemblies will be installed for installation tolerances and other conditions affecting performance of the Work.

- B. Notify Architect where discrepancies occur that will affect proper expansion joint cover assembly installation and performance.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to expansion joint cover assembly manufacturer's written instructions.
- B. Coordinate and furnish anchorages, setting drawings, and instructions for installing expansion joint cover assemblies. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of expansion joint cover assemblies.

3.3 INSTALLATION

- A. Comply with manufacturer's written instructions for storing, handling, and installing expansion joint cover assemblies and materials unless more stringent requirements are indicated.
- B. Metal Frames: Perform cutting, drilling, and fitting required to install expansion joint cover assemblies.
 - 1. Install in true alignment and proper relationship to joints and adjoining finished surfaces measured from established lines and levels.
 - 2. Adjust for differences between actual structural gap and nominal design gap due to ambient temperature at time of installation.
 - 3. Cut and fit ends to accommodate thermal expansion and contraction of metal without buckling of frames.
 - 4. Install frames in continuous contact with adjacent surfaces.
 - a. Shimming is not permitted.
 - 5. Locate anchors at interval recommended by manufacturer, but not less than 3 inches (75 mm) from each end and not more than 24 inches (600 mm) o.c.
- C. Elastomeric Seals: Install elastomeric seals and membranes in frames to comply with manufacturer's written instructions. Install with minimum number of end joints.
 - 1. Provide in continuous lengths for straight sections.
 - 2. Seal transitions. Vulcanize or heat-weld field-spliced joints as recommended by manufacturer.
 - 3. Mechanically lock seals into frames or adhere to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.
- D. Preformed Foam Joint Seals: Install in compliance with manufacturer's written instructions. Install with minimum number of end joints.
 - 1. Install each length of seal immediately after removing protective wrapping.
 - 2. Firmly secure compressed joint seals to joint gap side to obtain full bond using exposed pressure-sensitive adhesive or field-applied adhesive as recommended by manufacturer.
 - 3. Do not pull or stretch material. Produce seal continuity at splices, ends, turns, and intersections of joints.
 - 4. For applications at low ambient temperatures, heat foam joint seal material in compliance with manufacturer's written instructions.

- E. Install with hairline mitered corners where expansion joint cover assemblies change direction or abut other materials.
- F. Terminate exposed ends of expansion joint cover assemblies with field- or factory-fabricated termination devices.
- G. Fire-Resistance-Rated Assemblies: Coordinate installation of expansion joint cover assembly materials and associated work so complete assemblies comply with performance requirements.
 - 1. Fire Barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and field splices.
- H. Moisture Barrier Drainage: If indicated, provide drainage fitting and connect to drains.

3.4 CONNECTIONS

- A. Transition to Roof Expansion Joint Covers: Coordinate installation of exterior wall and soffit expansion joint covers with roof expansion joint covers specified in Section 07 7129 "Manufactured Roof Expansion Joints." **[Install factory-fabricated units at transition between exterior walls and soffits and roof expansion joint cover assemblies.]**

3.5 PROTECTION

- A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.
- B. Protect the installation from damage by work of other Sections.

END OF SECTION

SECTION 08 1613 - FIBERGLASS (FRP) DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Doors and frames of FRP composite construction. Door and frame products of aluminum, steel or wood construction that use FRP face sheets are not acceptable.
- B. Related Requirements:
 - 1. Section 08 7100 "Door Hardware."

1.2 COORDINATION

- A. Coordinate anchorage installation for FRP frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

1.3 ACTION SUBMITTALS

- A. Product Data: Provide catalog cut of FRP door detailing internal construction and reinforcements, materials used and description of assembly process.
- B. Shop Drawings: To include the following specific information:
 - 1. Specifications relating to FRP door thickness, resin type, core material, method of construction, finish color, type of glass and glazing, anchor systems, joint construction and complete warranty information.
 - 2. Complete schedules or drawings of FRP doors and frames (and associated Builders Hardware) showing identifying mark numbers, door and frame types, typical elevations, nominal sizes, handing, actual dimensions and clearances, and required hardware preps and reinforcements.
 - 3. Supporting reference drawings pertaining to frame mounting details, door light or louver installation, hardware locations, and factory hardware cutouts and reinforcements.
- C. Color Samples: Provide a complete set of available finish colors from the manufacturer for color selection upon request.

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Manufacturer shall have been engaged in the manufacture of FRP door and frame systems for a minimum of five years documented experience prior to the start of this work, and who has a history of successful production of work of this section.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Deliver FRP doors and frames to site in boxes with foam sheet separations. Factory mark all doors and frames using a chemical resistant plastic tag or indelible marker with identifying number, keyed to shop drawings, prior to shipment.

- B. Store doors indoors in a vertical position, clear of the floor, with blocking between the doors to permit air circulation between the doors and prevent damage to the door faces. Rain/water or condensation must not be allowed to collect or lay between stored doors. Do not wrap in plastic sheeting as it will promote condensation formation within. Permanent discoloration can result. Failure to comply with the receiving and reporting instructions shall void the warranty.
- C. Use care in handling FRP doors and frames to prevent damage to factory finishes. Wear protective gloves and do not slide or drag doors or frames against one another.

1.6 WARRANTY

- A. Special Warranty: Manufacturer shall provide limited written warranty for FRP doors and frames as follows:
 - 1. Failure Due To Corrosion: Life of installation.
 - 2. Defective Workmanship: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Overly/Tiger Door.
 - 2. Special-Lite; FRP Flush Door (Basis-of-Design).
 - 3. CECO Door Products.

2.2 PERFORMANCE REQUIREMENTS

- A. Pultruded structural shapes for stiles, rails, frames, and astragals shall exhibit the following minimum longitudinal coupon properties:
 - 1. Tensile Strength: 30,000 psi tested in accordance with ASTM D638.
 - 2. Comprehensive Strength: 30,000 psi tested in accordance with ASTM D695.
 - 3. Flexural Strength: 30,000 psi tested in accordance with ASTM D790.
 - 4. Flexural Modulus: 1,600,000 psi tested in accordance with ASTM D790.
 - 5. Shear Strength: 4,500 psi tested in accordance with ASTM D2846.
 - 6. Impact, Notched: 25 ft-lb/in tested in accordance with ASTM D256.
 - 7. Barcol Hardness: 50 tested in accordance with D2853.
- B. Core material shall exhibit the following minimum coupon properties (per ASTM):
 - 1. Core material must comply with the International Building Code (IBC) chapter 26 requirements for use with a plastic skin.
 - 2. Shear strength, longitudinal direction: 68.2 psi tested in accordance with ASTM C273.
 - 3. Shear strength, transverse direction: 25.8 psi tested in accordance with ASTM C273.
 - 4. Shear modulus, longitudinal direction: 6940 psi tested in accordance with ASTM C273.
 - 5. Shear modulus, transverse direction: 1878 psi tested in accordance with ASTM C273.
 - 6. Shear elongation, longitudinal direction: 1.79 percent tested in accordance with ASTM C393 short beam.
 - 7. Shear elongation, transverse direction: 2.72 percent tested in accordance with ASTM C393 short beam.

8. Maximum facing stress, longitudinal direction: 735 psi tested in accordance with ASTM C393 short beam.
 9. Maximum facing stress, transverse direction: 289 psi tested in accordance with ASTM C393 short beam.
 10. Maximum core shear stress, longitudinal direction: 63.8 psi tested in accordance with ASTM C393 short beam.
 11. Maximum core shear stress, transverse direction: 24.9 psi tested in accordance with ASTM C393 short beam.
 12. Modulus of elasticity (EI) per 1 inch width, longitudinal direction: 4.92E+04 psi tested in accordance with ASTM C393 short beam.
 13. Modulus of elasticity (EI) per 1 inch width, transverse direction: 1.97E+04 psi tested in accordance with ASTM C393 short beam.
 14. Maximum facing stress, longitudinal direction: 9,011 psi tested in accordance with ASTM C393 long beam.
 15. Maximum facing stress, transverse direction: 4,727 psi tested in accordance with ASTM C393 long beam.
 16. Maximum core shear stress, longitudinal direction: (C393 long beam) 48.3 psi tested in accordance with ASTM C393 long beam.
 17. Maximum core shear stress, transverse direction: 23.5 psi tested in accordance with ASTM C393 long beam.
 18. Modulus of elasticity (EI) per 1 inch width, longitudinal direction: 1.14E+05 psi tested in accordance with ASTM C393 long beam.
 19. Modulus of elasticity (EI) per 1 inch width, transverse direction: 7.23E+05 psi tested in accordance with ASTM C393 long beam.
 20. Stiffness "D", longitudinal direction: 379,270 psi tested in accordance with ASTM C393 long beam.
 21. Stiffness "D", longitudinal direction: 260,608 psi tested in accordance with ASTM C393 long beam.
 22. Compressive strength: 53 psi tested in accordance with ASTM C365.
 23. Compressive modulus: 2,110 psi tested in accordance with ASTM C365
 24. Density: 2.42 lb/ft³ tested in accordance with ASTM C271.
- C. Adhesive for bonding pultrusions shall exhibit the following minimum coupon properties:
1. Tensile Strength: Minimum 2,000 psi tested in accordance with ASTM D882-83A modified.
 2. 8 day 25° C at 100% humidity Cross Peel: Minimum 330 psi tested in accordance with SAE J1553.
 3. 7 day immersion in seawater Cross Peel: Minimum 330 psi tested in accordance with SAE J1553.
 4. 30 day immersion in saltwater Cross Peel: Minimum 330 psi tested in accordance with SAE J1553.
 5. 72 hour immersion in gasoline Cross Peel: Minimum 330 psi tested in accordance with SAE J1553.
 6. 72 hour immersion in 20 percent sulfuric acid Cross Peel: Minimum 300 psi tested in accordance with SAE J1553.

2.3 FRP DOORS

- A. Commercial Duty Non-fire rated FRP Doors:

1. Design: FRP doors shall be of seamless construction. Laminated FRP face sheets shall be bonded to an internal door stile and rail channel subframe/core assembly. The composite door panel must be bonded over its entire surface area, not just adhesive-bonded at perimeter stiles and rails.
2. Stiles & Rails: A 1-3/4 inches wide x 1-1/2 inches deep x 5/8 inch web pultruded FRP channel subframe is to be provided within the door. All connections shall be chemically welded. No mechanical fasteners will be allowed. The use or inclusion of aluminum, steel, gypsum or wood into stile and rail construction is not permitted.
3. Core: For maximum rigidity and compressive strength a triangular shaped 3/8 inch cell phenolic resin impregnated kraft paper honeycomb. Molding pressure and adhesive gel time shall be sufficient to allow for penetration of resin into the cellular structure of the core to maximize shear and peel strengths at the skin/core interface. The honeycomb is to be completely enclosed within the stile and rail subframe. Use of foam or balsa wood is not permitted.
4. Internal Reinforcement: High-density polymer compression blocks, or plastic compression blocking at all hardware locations. No wood blocking, steel or aluminum reinforcing plates, ribs or fittings shall be used. A minimum of 900 lbs of pullout strength is required for each factory supplied hinge screw.
5. Faces: Door facings shall utilize a chemical resistant modified polyester copolymer resin system with fiber reinforcing layers. Supplier shall furnish door faces as shown on the drawings and in the door elevations. Structural reinforcement of the face skin shall be in the form of random chopped fiberglass roving.
6. Finish: The exposed FRP door faces shall have a 3-4 mils (wet) factory applied two-part aliphatic polyurethane fully cured coating of industrial urethane. Coating shall have a minimum hardness of H to 2H.
 - a. Texture: As selected by Architect.
 - b. Color: As selected by Architect.
7. Astragals: All pairs of doors shall be furnished with an astragal from door manufacturer made of same pultruded FRP material as door stile, rail and edge as required. Astragal shall be located on the meeting stile edge of each inactive leaf of double door pairs. Architect shall advise active leaf of door, and astragal shall be installed to cover meeting stile gap to effect seal and security.
8. Lights: Glass per job specification shall be factory furnished, glazed and installed. Centered glazing shall be installed between 45 degree pultruded FRP glazing stops and vinyl foam tape with concealed compression retainers for ' glazing. No exposed fasteners or exposed silicone will be allowed for securing ' glazing. Stainless steel screws may be allowed for other glazing thicknesses. Offset glazing shall be installed against a molded-in 5/8" inch wide exterior face flange with a bed of tape caulk, square 5/8" inch pultruded glazing stops with stainless steel screws shall complete the installation to secure the glazing in place and cover all unsightly caulking. Double flush glazing shall be installed with vinyl foam tape and silicone sealant at all edges to complete flush appearance. All glazing stop material shall be pultruded FRP with a minimum fiberglass content of 50 percent. Metal, pvc, or vinyl glass kit type lights are not acceptable for non-fire rated openings.

9. Louvers: Fiberglass inverted V blade privacy or flat blade louvers shall be factory furnished and installed. All louvers and louver trim shall be manufactured exclusively from pultruded FRP profiles with a minimum fiberglass content of 50 percent. All louvers shall be coated to match door in color and sheen. Inverted V blade minimum thickness shall be 3/32 inch thick, flat blade louver minimum thickness shall be 3/16 inch thick. Adhesives for louver assembly shall meet or exceed all requirements set forth in Mechanical Properties and Test Performance article below. Metal, pvc, vinyl or other non-fiberglass louvers are not acceptable for non-fire rated openings.
10. Provisions for lights and louvers shall be performed during manufacture and shall not be attempted in the field. Cutouts are to be totally enclosed by pultruded FRP stiles and rails incorporated into the door structure. Light and louver cutouts that expose core material are not acceptable.

2.4 FRP FRAMES

A. FRP Frames:

1. Design: FRP Door frames furnished under this specification shall utilize a high-modulus pultruded structural FRP shape. The frame section shall be standard double rabbeted 5-3/4 inches deep x 2 inches face, 3/16 inch thick, with integral 5/8 inch doorstop with 1-15/16 inch soffits, or as required to match typical hollow metal configurations.
2. Corner Joints: Frame jambs and header shall be joined at corners via miter connections with hidden FRP angle clips and associated fasteners. Post and beam corners will not be acceptable. Exposed fasteners for miter connections will not be acceptable except for wrap wall applications.
3. Hardware Reinforcements: FRP reinforcing shall be chemically welded to door frame material at required locations. Minimum screw pullout strength of 1100 lb per #12 x 1" sheet metal screw is required. Mechanically fastened reinforcements are not permitted.
4. Anchors:
 - a. Bolt-In Type: Provide manufacturer's required number of 3/8 inch diameter x 4 inches long flat head stainless steel sleeve anchors for masonry openings, 3/8 inch diameter x 4 inches machine screw with nut and washers for structural steel openings, #14 x 4" stainless steel flat head sheet metal screws for wood or steel stud openings. Include extra anchors for additional frame height in two foot increments above 8'-0". Provide single bolt anchor at center of all headers over four feet in nominal width. Stainless Steel fasteners shall be furnished by the factory.
 - b. Grout-In Type: Provide manufacturer's required number of wire or strap type masonry anchors for installation into block wall. Fill frame cavity with grout.
5. Finish: Frames shall have a 3-4 mils (wet) factory applied two-part aliphatic polyurethane fully cured coating of industrial urethane. Industrial urethane chemical coating color topcoat, to match the color and sheen of the doors, for superior weatherability. Gelcoat may not be sprayed onto the frame as a secondary coating.
 - a. Texture: As selected by Architect.
 - b. Color: As selected by Architect.

2.5 FASTENERS

- A. All fasteners for all hardware shall be type 304 CRSS (18-8 series corrosion resistant stainless steel). No carbon steel or aluminum components shall be used.

2.6 HARDWARE

- A. Doors shall be factory mortised and drilled for mortise template butt hinges, with #12x2 inches long stainless steel screws provided for hinge attachment. Provide 161 cylindrical lock bore, rim deadbolt, ANSI 86 mortise lock edge prep and pocket, or flushbolt cutouts as required.
- B. Frames shall be factory machined and drilled for all hardware requiring mortises, with #12x1 inch long stainless steel screws pre-installed for hinge attachment.
- C. Hardware: Specified in Section 08 7100 "Door Hardware."
- D. Provide manufacturer's standard templates, installation instructions, or full size approved door and frame preparation instructions as approved by the architect and as required by door and frame manufacturer prior to door and frame factory initiated manufacture. Standard factory lead-time for production of FRP doors and frames shall commence only and when all distributor required preparation information is received and acknowledged by the door and frame manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify actual dimensions of openings by field measurements before door fabrication; show recorded measurements on shop drawings.
- B. Do not begin installation until substrates have been properly prepared.

3.2 PREPARATION

- A. Clean and prepare substrates in accordance with manufacturer's instructions.

3.3 INSTALLATION

- A. Install frames in accordance with manufacturer's written instructions. Set plumb and square, using shims for bolt-in of existing openings, or wood bracing prior to grouting of jambs. Use at least two 2x6 wood spreaders inside frame to maintain critical opening dimensions during grouting.
- B. Hang doors in accordance with manufacturer's written instructions using special screws provided for hinge attachment. Install doors to swing freely and to stand open at any angle. After installation make final adjustments to hardware to allow for proper door operation and latching. All surface applied hardware shall be through bolted.
- C. Set units plumb, level, and true-to-line, without warping or racking doors.
- D. Repair or replace damaged products.

3.4 ADJUSTING

- A. Lubricate, test, and adjust doors to operate easily, free from warp, twist or distortion, and to fit watertight for entire perimeter.
- B. Adjust hardware for smooth and quiet operation.
- C. Adjust doors to fit snugly and close without sticking or binding.

3.5 CLEANING

- A. Clean exposed surfaces of FRP doors and frames with a mild, non-abrasive cleaner and water as recommended by door manufacturer.

3.6 PROTECTION

- A. Protect installed products from subsequent construction operations.

END OF SECTION

FOR REFERENCE ONLY

SECTION 08 3453 - ANIMAL ENCLOSURE CAGING & DOORS**PART ONE - GENERAL****1.1 REFERENCE STANDARDS**

- A. AAMA 2603 - Voluntary Specification, Performance Requirements and Test Procedures for Pigmented Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2026.
- B. AAMA 2604 - Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2026.
- C. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength; 2021.
- D. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; 2023.
- E. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.
- F. ASTM B632/B632M - Standard Specification for Aluminum-Alloy Rolled Tread Plate; 2024.
- G. ASTM D3451 - Standard Guide for Testing Coating Powders and Powder Coatings; 2024.
- H. SSPC-SP 1 - Solvent Cleaning; 2015, with Editorial Revision (2016).

1.2 SUMMARY

- A. Section Includes:
 - 1. Provide all animal caging and keeper access doors.
 - 2. Caging systems consist of metal door and caging frames, solid, mesh, and HDPE panels, and door hardware.
 - 3. Fabricate and install caging and door systems, as shown on the drawings, specified herein, or needed for a complete and proper installation.
 - 4. Folding FRP/HDPE platform with Metal supports
- B. Related Sections:
 - 1. Section 03 30 00 Cast-in-Place Concrete
 - 2. Section 04 20 00 Unit Masonry
 - 3. Section 06 10 00 Rough Carpentry
 - 4. Section 08 80 00 Glazing
 - 5. Section 09 91 00 Painting

1.3 SYSTEM DESCRIPTION:

- A. Delegated Design:
 - 1. The work of this section requires professional design services or certifications by a design professional employed by the fabricator, and who is not the Consultant.
 - 2. Complete the design of the doors, frames, panels, and connections.
 - 3. Maintain the general design concept shown.
 - 4. Do not change member sizes or alter profiles and alignment, except as outlined in the design processes of this section.
- B. Performance Standards:
 - 1. The work this section must fulfill the minimum material requirements described in Part 2 of this section.

2. The fabricator is free to propose an alternate framing system to support the mesh, doors, and animal doors specified in section 08 34 56 Animal Access Doors.
 3. Materials specified herein are intended to establish the standards of quality required for the Work of this Section.
 4. Provide appropriate documentation that all proposed materials meet the specific performance and structural requirements specified below.
 5. All materials and/or completed fabrications must have a twenty (20) year structural service life.
 6. All materials must be capable of resisting the loads and all potential wear and abrasions inherent in their position within the completed exhibits.
 7. The Owner will make final approval of the proposed system.
- C. Structural Systems Design:
1. Structural Design:
 - a) Provide the structural engineering design for the doors, frames, hardware, fixed panels, and all connections.
 - b) Drawings and Calculations:
Provide complete design, calculations, and drawings, prepared and signed in accordance with pertinent provisions of division one of these Specifications.
 - c) Licensed Engineer:
Design drawings will be prepared, approved, signed and sealed by a professional engineer licensed in the jurisdiction in which the project will be constructed.
 2. General Design Loads:
Design all elements for the following loads:
 - a) Dead loads,
 - b) Live loads due to animals and keeper staff,
 - c) Wind loads as required by local code.
 3. Animal Design Criteria:
 - a) All Animals:
 - 1) Horizontal Force is 500 lbs.
 - 2) Impact occurs 4-ft above bottom of panel.
 - 3) Impact occurs over 1-ft².
- D. Approvals and Permits:
1. General:
Secure the approval of governmental agencies having jurisdiction prior to submitting for the Consultant's approval.
 2. Building Permits:
Obtain all required permits and approvals for proposed systems.

1.4 SUBMITTALS

- A. General:
1. Comply with the pertinent provisions of Sections of 01 30 00 Administrative Requirements.
 2. Within 45 calendar days after the Contractor has received the Owner's Notice to Proceed, submit all items listed below.
- B. Design Drawings:
1. Delegated Design:

- a) Submit complete drawings accurately showing proposed all the fabrications and equipment described in this section, prepared in accordance with the following provisions:
- b) Verify materials selection and sizes.
- c) Verify fabrication and connection details for the fabrications or suggest alternative connection details.
- d) Design system utilizing the system components specified in Part 2 of this specification.
- e) Revise drawings as required by the Owner and resubmit.
- 2. Delegated Design Submittals:
 - a) Provide all submittals described in Section 01 33 50 as required for the work of this section.
- 3. Design Notes and Calculations:
 - a) When requested by Consultant, submit design notes and calculations, signed and sealed by the Professional Engineer.
- C. Product Data:
 - 1. A complete list of materials proposed to be furnished and installed under this Section.
 - 2. Manufacturer's specifications and other data needed to demonstrate compliance with specified requirements.
 - 3. Manufacturer's recommended installation procedures which, when approved by the Owner, will become the basis for accepting or rejecting actual installation procedures used on the work.
 - 4. All stainless steel items require manufacturer's certification of type of stainless steel used.
- D. Shop Drawings:
 - 1. Submit fully detailed layout, fabrication, and erection drawings of all materials specified herein for approval.
 - 2. Drawings shall show all members, shop cuts, and holes, erection sequences, and tolerances.
 - 3. Provide templates for anchor and bolt installation by other trades.
 - 4. No fabrication or Work shall be commenced until Shop Drawings have been reviewed and returned to the Contractor.
 - 5. Fabricate from reviewed drawings only.
 - 6. Provide engineered drawings stamped by a structural engineer licensed in the jurisdiction in which the project is located.
- E. Samples:
 - 1. Provide a 2-ft length or square piece of each type, size, finish, and grade of each specified material.
 - 2. Provide a sample of each piece of hardware specified.

1.5 QUALITY ASSURANCE

- A. Standards:
 - 1. Building Codes:
 - a) International Building Code, latest edition, as modified by the local jurisdiction.
 - b) Relevant Building Code for the jurisdiction in which the project is being constructed.
 - 2. Materials and Fabrication Standards:
 - a) 'Specification for the Design, Fabrication, and Erection of Structural Steel for Buildings' by AISC, latest edition.
 - b) AISC "Specifications for Design, Fabrication, and Erection of Structural Steel for Buildings", 8th Edition;

- c) AISC "Code of Standard Practice";
- d) AISC "Specification for Structural Joints Using ASTM A325 or A490 Bolts".
- 3. American Society for Testing and Materials (ASTM):
 - a) ASTM A27-10, Standard Specification for Steel Castings, Carbon, for General Application
 - b) ASTM A47-99(2009)/A47M-99(2009), Standard Specification for Ferritic Malleable Iron Castings
 - c) ASTM A53-10, Standard Specification for Pipe, Steel, Black and Hot Dipped, Zinc Coated, Welded and Seamless
 - d) ASTM A123-09/A123M-09, Standard Specification for Zinc (Hot Dip Galvanized) Coatings on Iron and Steel Products
 - e) ASTM A153-09/A153M-09, Standard Specification for Zinc Coating (Hot Dip) on Iron and Steel Hardware
 - f) ASTM A500/A500M-10a, Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes
 - g) ASTM A572-07/A572M-07, Standard Specification for High Strength Low Alloy Columbium Vanadium Structural Steel
 - h) ASTM A780-09/A780M-09, Standard Practice for Repair of Damaged and Uncoated Areas of Hot Dip Galvanized Coatings
- 4. Welding:
 - a) Perform welding with electric arc process and in accordance with AWS "Code for Arc and Gas Welding in Building Construction."
 - b) Qualify welding processes and welding operators in accordance with AWS "Standard Qualification Procedures".
 - c) Welder shall be certified in conformance with (AWS) (WABO) requirements.
- B. Qualifications:
 - 1. Established firm or individual with a minimum of five (5) years' experience in successfully constructing elements of similar nature to the work of this section.
 - 2. Provide resumes for key personnel performing the work.
 - 3. Submit references and photographic documentation of previous projects documenting the experience and ability to construct the work of this section.

1.6 PRODUCT HANDLING

- A. General:

Comply with the pertinent provisions of Sections of 01 60 00 Product Requirements.
- B. Protection:

Use all means necessary to protect the materials of this section before, during, and after installation and to protect the Work and materials of all other trades.
- C. Replacements:

In the event of damage, immediately make all repairs and replacements necessary to the approval of the Owner at no additional cost to the Owner.

1.7 PROJECT CONDITIONS

- A. Field Measurements:

Secure all field measurements required for proper and adequate fabrication and installation of the work.
- B. Templates:

Furnish templates for exact location of items to be embedded in concrete and masonry and setting instructions required for all installation work.

PART TWO - PRODUCTS

2.1 ACCEPTABLE CAGING FABRICATORS

A. Acceptable Fabricators:

The following list of fabricators and installers is derived from previous projects indicating a successful record of fabrication and installation of similar complexity and extent as required for this project and are subject to verification of their capabilities before starting work of this section by submittal of documentation indicating that they meet the specified qualifications:

B. Acceptable Caging Contractors:

1. LGL Animal Care Products, Inc
(979) 690-3434
Contact: John Eppes
jeppes@lgacp.com
www.lgacp.com
2. Thermeq
(419) 878-4400
info@thermeq.com
www.thermeq.com
3. Corners Limited
1-800-456-4400
www.cornerslimited.com
4. Duwe Metals
262-781-5775 (Justin Warzala)
jwarzala@duwemetal.com

C. Substitute Fabricators:

1. The Contractor may choose to select any of the listed fabricators or installers in accordance with Section 01 62 00 – Product Options or elect to solicit additional fabricators installers having similar qualifications, experience and proven capabilities as the acceptable installers listed above and provided that the Contractor makes requests for substitution in accordance with Section 01 25 00 – Substitutions a minimum of ten (10) days in advance of Bid Closing as follows:
 - a) Bidders wishing to use a fabricator or installer that is not identified in this Section must have the proposed fabricator comply with qualification requirements listed herein and submit a letter of qualification, including references a minimum of five (5) 8½” x 11” color photographs of previous comparable work for review and acceptance by the Consultant.
 - b) Fabricators wishing to be accepted for the work of this section may independently make application directly to the Consultant as detailed above.
 - c) Acceptance of substitute fabricators will be indicated by a subsequent addendum.
 - d) The Consultant may require additional information and may request a visit to a completed work in order to make a final determination of the fabricator’s qualifications.

2.2 MATERIAL STANDARDS

A. Surface Quality:

For fabrication of the Work of this Section, which will be exposed to view, use only those materials, which are smooth and free from surface blemishes including pitting, seam marks, roller marks, rolled trade names, and roughness.

B. Stainless Steel:

All materials shall comply with:

1. Stainless Steel Tube/Pipe:
 - a) Cold-formed, round, seamless stainless steel tubing complying with ASTM A511. Grade B.
 - b) Schedule 40 or 80 stainless steel pipe, Type 304/304L, ASTM A312
2. Plates and Bars:

Stainless steel conforming to ASTM A480, Type 304/304L.
3. Stainless steel tube:
 - a) ASTM A269, Type 316L.
4. Stainless steel rod:

ASTM A564, Type 316L. Class A finish.
5. Stainless steel plate:

ASTM A480, Type 316L. Number 1 finish.
6. BS EN 10263-1:2001, Stainless steel.
7. BS EN 10263-5:2001, Stainless steel.
8. BS 3111:Pt.2, Stainless steel fasteners.
9. BS EN ISO 3506 Pt1-3 Mechanical properties of corrosion-resistant stainless-steel fasteners.
10. BS 4320 & BS 4464, Stainless steel washers.
11. BS 6323, Stainless steel tubes for structural and general engineering purposes, Pt 1 & Pt 8, Type 316.
12. BS EN 919:1995, Fibre ropes

C. Bronze:

1. Bushings and Thrust Washers.
2. Iron bronze sintered bearings (oil impregnated) ASTM B612-91, Oilite Bronze or equal.

D. Aluminum:

All materials shall comply with:

- a) Aluminum tube:

Type 5052.
- b) Aluminum Sheet:

Type 5052-H32 or 6061-T6, 3.2mm (1/8-inch, 8-gauge) minimum thickness.
- c) Aluminum Extrusions: In accordance with ASTM B221/B221M, alloy 6063-T6
- d) Aluminum Alloy Rolled Tread Plate: In accordance with ASTM B632/B632M, alloy 6061-T6

E. Fasteners:

1. General:
 - a) Provide stainless steel fasteners.
 - b) Select fasteners for the type, grade, and class required.
2. Standards:

All fasteners listed below shall comply with ASTM A307 and as follows:

 - a) Bolts and nuts: Regular hexagon-head type, Grade A.
 - b) High strength bolts: ASTM A325N bearing type and ASTM A325F friction type.
 - c) Stainless steel bolts, screws, studs: ASTM F738M, Type 316.

- d) Stainless steel nuts: ASTM F836M-91, Type 316.
- e) Plain washers: Round, carbon steel, complying with Fed Spec FF-W-92.
- f) Masonry anchorage devices: Expansion shields complying with Fed Spec FF-S-325.
- g) Concrete Inserts:
 - 1) Threaded or wedge type, galvanized ferrous castings, either malleable iron ASTM A47 or cast steel ASTM A27.
 - 2) Provide bolts, washers, and shims as required, hot-dip galvanized, ASTM A153.
 - 3) Fastener to be compatible with bolt and installed condition to prevent electrolytic-reaction induced corrosion

F. Grout:

- 1. General:
 - a) Provide non-Metallic, non-shrink cement grout, meeting all requirements of ASTM C1107.
- 2. Acceptable Manufacturers:
 - a) "SonogROUT" as manufactured by Sonneborn Building Products or approved.
- 3. Provide grout specifically recommended by manufacturer for type of application.
- 4. Pre-mixed, factory-packaged, non-staining, non-corrosive, non-gaseous grout complying with CE CRD-C621.

2.3 ANIMAL CAGING AND DOORS

A. Door and Panel Frames:

- 1. Steel Angle Frame and Sliding Door Channel Options:
 - a) Light Strength
1-3/16 inch equal legs and .2-inch wall thickness
 - b) Moderate Strength
1-5/8 inch equal legs and .2-inch wall thickness
 - c) Heavy Strength
2 inch equal legs and .2-inch wall thickness
- 2. Connections:
 - a) All frames are miter cut and welded with wire feed.
 - b) Provide bolted connections to adjacent frames, panels, or concrete substrates.

B. Door and Panel Bar Infill

- 1. Round Tube:
 - a) 3/4-in. diameter
 - b) Continuously weld at frame and periodically where it passes through flat bar.
- 2. Flat Bar:
 - a) 1/2" x 2"
 - b) Weld to frame continuously at each end.
- 3. All welds shall be deburred, and materials shall be acid washed.

C. Wire Mesh Panels

- 1. 2" Mesh panels,
 - a) Material: type 304 stainless steel woven and crimped wire mesh
 - b) Opening 2 inch by 2 inch

2.4 HARDWARE

A. General:

- 1. See Section 08 71 00 for requirements for general quality, keying and cores, and installation.

- B. Acceptable Manufacturers:
 - 1. AssaAbloy, www.assaabloy.com
 - 2. Richards Wilcox, www.rwhardware.com, Aurora, Illinois, tel: (800) 253-5668.
 - 3. McKinney, www.mckinneyhinge.com.
 - 4. Stanley, www.stanley.com.
 - 5. Yale Padlock (AssaAbloy), www.yalecommercial.com
 - 6. Best Padlock, www.bestaccess.com.
 - 7. Master Lock Padlock, www.masterlock.com.
 - 8. Schaefer Marine, www.hardware.schaefermarine.com/
 - 9. Ajustlock, www.ajustlock.com/
- C. Cane Bolt:
 - 1. Stanley Cane Bolt
 - 2. 300mm length, 13mm bolt diameter.
 - 3. Type 304 Stainless Steel.
 - 4. Provide Cane Bolt receptacle in both open and closed gate positions.
- D. Sliding Padlock Bolt:
 - 1. Ajustlock Slide Bolt Lock
 - 2. Type 304 Stainless Steel
- E. Handle:
 - 1. Aluminum or Stainless-Steel Bow Handle, 6.5 inch (165.1 mm) long
- F. Heavy Weight Bearing Hinge:
 - 1. McKinney 5 Knuckle, Heavy Weight, Ball Bearing Hinges
 - 2. Model T4B 3386
 - 3. Full mortise, heavy weight, stainless steel base material, and pin, ball bearing hinges.
 - 4. Attach with stainless steel fasteners of the appropriate grade
- G. Pintle and Gudgeon Hinge:
 - 1. Shaefer Marine Pintle:
 - a) SCH8046: Upper 1-in with ½-in Pin
 - b) Type 304 Stainless Steel
 - 2. Shaefer Marine Gudgeon:
 - a) SCH8143: ½-in Pin
 - b) Type 304 Stainless Steel
 - 3. Attach with stainless steel fasteners of the appropriate grade
- H. Padlock:
 - 1. Best Padlock 41B Series
 - 2. Case machined from solid brass, 626 satin chromium plated.
 - 3. Width: 1-15/16-inch, Length: 2-1/16-inch.
 - 4. Thickness: 7/8-inch.
 - 5. Stainless steel shackle: 3/8-inch diameter, 7/8-inch opening.
 - 6. Non-key retaining.
 - 7. Keyed per Zoo's keying system
- I. Sliding Door Track, Truck and Hanger Assemblies & Accessories
 - 1. Track, truck and hander assembly, size as required for weight of door.
 - 2. Accessories:
 - a) Floor Stay Guides
 - b) Bumper Shoes

- c) Guide Roller Strip
 - d) End Stops
- 3. All non-corrosive components: Stainless Steel or Aluminum.
- J. Stops:
 - 1. Stainless Steel or Aluminum stops for both open and closed positions.
 - 2. Match finish of gate frames.
 - 3. Provide product information for manufactured stops: provide shop drawings for custom stops.
 - 4. Provide rubber cushion on metal stop.

2.5 REMOTE DOOR OPERATOR SYSTEMS

A. General:

Construct remote operator systems of non-corrosive components as shown on the drawings.

- 1. Maximum operating force is 30 lbs
- 2. Design door operators with materials and material sizes appropriate for the animals being contained.
- 3. Provide all covers or other protection required for the safety of both humans and animals.
- 4. Design system so that each door can be locked in either an open or closed position.
- 5. Provide conduit for cables

B. Crank Operator:

- 1. Sprocket and chain system with a rotating handle, which operates the wire rope cable system, which is attached to the door.
- 2. Verify all required clearances for the system during the systems design and prototyping of the system.
- 3. Overall size of operator (including handle) no greater than 15" deep.
- 4. Verify all required clearances for the system during the systems design and prototyping of the system.

C. Hydraulic Operator:

- 1. Atos Hydraulic cylinders with adjustable proximity sensor and remote operator, or equal

D. Wire Rope Cable:

- 1. Manufacturers:
United States Steel (USS), Tiger Brand wire rope, WireCo, www.wirecoworldgroup.com,
Loos & Co, www.loosco.com, Hackensack or approved equal.
- 2. Materials:
6 by 42 Tiller rope, galvanized improved plow steel, 2.4mm (3/32-inch) diameter or size as shown.

E. Wire Rope Blocks:

- 1. Manufacturers:
 - a) The MRO Group, Block Division Inc, www.blockdivision.com
 - b) J. Henry Holland Corp, www.jhenryholland.com,
 - c) Or approved equal.
- 2. Materials:
 - a) Standard flat blocks, zinc plated steel with plated steel sheaves and oil impregnated bronze bushings, grooved for wire rope.
 - b) 62mm (2-1/2-inch blocks): Model 02558.
 - c) 88mm (3-1/2-inch blocks): Model 03558.
 - d) Use the largest block diameters appropriate for the constraints of the space available.

- F. Nylon Wire Rope Blocks:
1. Nylon Sheave Manufacturers:
 - a) Ronstan, www.ronstan.com
 - b) Essinger, www.essingercastnylon.com
 - c) Timco, www.timco-eng.com
 - d) Approved equal.
 2. Materials:
 - a) General: Nylon sheaves with zinc plated or stainless steel mounting structure.
 - b) Material: cast nylon 6 or extruded nylon 6/6.
 - c) Bearings: ball bearing or oilite bronze bearings with hardened stainless steel shaft.
 - d) Minimum Sheave Size: 3-inch (76mm) diameter at wire rope cable.
 - e) Use the largest block diameters appropriate for the constraints of the space available.
- G. Wire Rope Clamp Plate:
1. Description:
 - a) Stainless steel plate assembly, both plates grooved to secure wire rope.
 - b) Connect the steel plates with metal tabs on one side and two threaded fasteners on the other to secure the wire rope with friction.
 - c) Join the clamp plate to the guillotine doors or other hardware as shown on the drawings and the approved shop drawings.
- H. Steel Guide Rail and Track Roller:
1. Description:
 - a) Stainless guide rail track, secured to the top of the two combination keeper / animal doors,
 - b) Provide a stainless steel track roller appropriate in size for the track.
 - c) The track roller will have a stainless steel pin at the top to provide a connection to the wire rope clamp plate for this assembly.
 - d) Provide a secure connection between the track roller pin and clamp plate to prevent their separation under the load provided above.

2.6 HARDWARE GROUPS:

- A. HWG - 01 – Swing Doors
- 2 pair Hinges
 - 1 ea Cane Bolt
 - 1 ea Sliding Padlock Bolt
 - 1 ea Handle
 - 2 ea Door Stops with Rubber Pad in Open and Closed positions
 - 1 ea Padlock
- B. HWG - 02 – Horizontal Sliding - Remote operation
- 1 ea Track, Trucks, Hanger Assembly & Accessories
 - 1 ea Door pull
 - 1 ea Remote door operator
- C. HWG - 03 – Horizontal Sliding - Remote Hydraulic operation
- 1 ea Track, Trucks, Hanger Assembly & Accessories
 - 1 ea Door Pull
 - 1 ea Remote Hydraulic operator
- D. HWG - 04 – Vertical Sliding - Guillotine - Remote operation
- 1 ea Sheaves, cables, hanger assembly

- 1 ea Remote door operator
- E. HWG - 05 – Vertical Sliding - Guillotine - Remote hydraulic operation
 - 1 ea Sheaves, cables, hanger assembly
 - 1 ea Remote Hydraulic operator

2.7 GENERAL FABRICATION:

A. Quality

1. Conform to the Quality Assurance standards for this work.
2. Use materials of size and thickness shown or, if not shown, of required size and thickness to produce strength and durability of connecting material in the finished product.
3. Work to dimensions shown or accepted on the Shop Drawings, using proven details of fabrication and support.
4. Use type of materials shown or specified for the various components of the Work.
5. Form exposed Work true to line and level, with accurate angles and surfaces and with straight sharp edges.
6. Ease the exposed edges to a radius of approximately 0.03 inch (0.8 mm) unless otherwise shown.
7. Weld corners and seams continuously, complying with welding standards recommendations.
8. At exposed connections, grind exposed welds smooth and flush; match and blend with adjoining surfaces.
9. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners wherever possible.
10. Provide for anchorage of the type shown. Coordinate with supporting structure. Fabricate and space the anchoring devices to provide adequate support for intended use.
11. Cut, reinforce, drill, and tap the work as indicated to receive finish hardware and similar items.

B. Loose Bearing and Leveling Plates:

1. Provide loose bearing and leveling plates for steel items bearing on concrete construction, made flat, free from warps or twists, and of required thickness and bearing area.
2. Drill plates to receive anchor bolts and for grouting as required.

C. Fastening:

1. General.
 - a) Provide malleable iron washers for heads and nuts, which bear on wood structural connections; elsewhere furnish steel washers.
 - b) Cut, drill, and tap units to receive hardware.
 - c) Equip units with integrally welded anchors for casting into concrete or building, into masonry, and furnish inserts if units must be installed after concrete is placed.
 - d) Space anchors 600mm (24-in) on centers, except where shown otherwise on the drawings.
2. Hardware:
 - a) Manufactured Hardware:
 - 1) Fasten to substrates and frames using stainless steel screws, and bolts, using the sizes as recommended by the hardware manufacturer.
 - b) Custom Hardware:
 - 1) Fasten to substrates and frames as shown in the reviewed design and shop drawings.

2.8 FINISHES

A. Galvanizing:

1. Galvanize all steel following fabrication in compliance with the following specifications:
2. ASTM A 153 for galvanizing iron and steel hardware.
3. ASTM A 123 for galvanizing rolled, pressed, and forged steel shapes, plates, bars, and strip 0.12 inch (3 mm) thick and heavier.
4. ASTM A 386 for galvanizing assembled steel products.
5. AS/NZS 4680 Hot Dip Galvanized (zinc) Coatings
6. AS/NZS 1627 Preparation and Pre-treatment of Surfaces
7. All galvanized work to be performed true to line and level as required in shop before delivery to the job site.

B. Field Galvanizing Repair

1. Use a high zinc dust content paint for re-galvanizing welds in galvanized steel, complying with MIL-P-21035.
2. Repair in accordance with applicable requirements of ASTM A780
3. Apply and repair in accordance with AS/NZS 4680 Hot Dip Galvanized (zinc) Coatings
4. Products:
"Galvicon" by Galvicon Corp., "Drygalv" by Anchor Brand Co., "Tot-Rust" (with aluminum color added) by Wilbur & Williams Co. or equal. OTHER MATERIALS Provide other materials, not specifically described but required for a complete and proper installation, as selected by the Contractor subject to the approval of the Owner.

2.9 OTHER MATERIALS

- A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the Contractor subject to the approval of the Owner.

PART THREE - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions:

1. Examine the areas and conditions under which doors, frames, and panels are to be installed, and correct conditions detrimental to the proper and timely completion of the Work.
2. Do not proceed until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General:

1. Furnish setting drawings, diagrams, templates, instructions, and directions for installation of anchorages, such as concrete inserts, anchor bolts, and miscellaneous items having integral anchors, which are to be embedded in concrete construction. Coordinate delivery of such items to project site.

3.3 INSTALLATION

A. Shop Drawings:

1. Install the work of this section in strict accordance with the Shop Drawings as approved by the consultant.

B. General:

1. Install doors and hardware in accordance with manufacturer's data, and as specified herein.

C. Placing Supports and Frames:

1. Place supports and frames prior to construction of enclosing structure.
2. Set supports and frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set.

D. Door Installation:

1. Fit doors accurately in their respective frames.
2. Clearances between doors and posts or frames shall vary from 9.6mm (3/8-inch) minimum to 19mm (3/4-inch) maximum.

3.4 ADJUST AND CLEAN

A. Final Adjustments:

1. Leave Work in complete and proper operating condition.
2. Remove and replace defective Work, including gates or frames, which are warped, bowed or otherwise damaged.

B. Finishes:

1. Galvanized Finish:
2. Clean abraded areas and apply galvanizing repair paint to comply with ASTM A780
3. Hot Dip Galvanized (zinc) Coatings.
4. Powder Coated Finish:
5. Repair powder coated finishes with products and procedures that achieve the closest possible match with the shop applied powder coat.

END OF SECTION

SECTION 08 4313 - ALUMINUM-FRAMED STOREFRONTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes aluminum-framed storefront systems.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. <Insert requirements>.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Sustainable Design Submittals:
 - 1. Product Data: For sealants, indicating VOC content.
 - 2. Laboratory Test Reports: For sealants, indicating compliance with requirements for low-emitting materials.
 - 3. Environmental Product Declaration (EPD): For each product.
 - 4. Health Product Declaration: For each product.
 - 5. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
- C. Shop Drawings: For aluminum-framed storefronts. Include plans, elevations, sections, full-size details, and attachments to other work.
 - 1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
 - 2. Include full-size isometric details of each type of vertical-to-horizontal intersection of aluminum-framed storefronts, showing the following:
 - a. Joinery, including concealed welds.
 - b. Anchorage.
 - c. Expansion provisions.
 - d. Glazing.
 - e. Flashing and drainage.
 - 3. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
- D. Samples for Initial Selection: For units with factory-applied color finishes.
- E. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- F. Fabrication Sample: Of each vertical-to-horizontal intersection of assemblies, made from 12-inch (300-mm) lengths of full-size components and showing details of the following:
 - 1. Joinery, including concealed welds.
 - 2. Anchorage.
 - 3. Expansion provisions.

4. Glazing.
5. Flashing and drainage.

- G. Delegated-Design Submittal: Refer to Section 01 3573 "Delegated Design Requirements and Procedures" for delegated design submittal procedures and requirements.
 1. Provide delegated-design submittals for aluminum-framed storefronts.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For aluminum-framed storefronts to include in maintenance manuals.
- B. Maintenance Data for Structural Sealant: For structural-sealant-glazed storefront to include in maintenance manuals. Include ASTM C1401 recommendations for post-installation-phase quality-control program.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer and that employs a qualified glazing contractor for this Project who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AGM) contractors and that employs glazing technicians certified under the Architectural Glass and Metal Technician (AGMT) certification program.
- B. Testing Agency Qualifications: Qualified in accordance with ASTM E699 for testing indicated and acceptable to Owner and Architect.
- C. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
 1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.
- D. Structural-Sealant Glazing: Comply with ASTM C1401 for design and installation of storefront systems that include structural glazing.
- E. Provide the following upon request:
 1. Qualification Data:
 - a. For Installer.
 - b. For professional engineer's experience with providing delegated-design engineering services of the type indicated, including documentation that engineer is licensed in the [jurisdiction] [state] in which Project is located.
 2. Energy Performance Certificates: For aluminum-framed storefronts, accessories, and components, from manufacturer.
 - a. Basis for Certification: NFRC-certified energy performance values for each aluminum-framed storefront.
 3. Product Test Reports: For aluminum-framed storefronts, for tests performed by manufacturer and witnessed by a qualified testing agency.

4. Quality-Control Program: Developed specifically for Project, including fabrication and installation, in accordance with recommendations in ASTM C1401. Include periodic quality-control reports.

1.6 MOCKUPS

- A. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 1. Build mockup of typical wall area as shown on Drawings.
 2. Testing shall be performed on mockups in accordance with requirements in "Field Quality Control" Article.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: Owner will engage a qualified testing agency to perform preconstruction testing on laboratory mockups.
 1. Build preconstruction laboratory mockups at testing agency facility; use personnel, products, and methods of construction that will be used at Project site.
 2. Size and Configuration: As indicated on Drawings.
 3. Notify Architect seven days in advance of the dates and times when preconstruction laboratory mockups will be constructed and tested.
- B. Preconstruction Laboratory Mockup Testing: Test preconstruction laboratory mockups in accordance with requirements in "Performance Requirements" Article. Perform the following tests in the following order:
 1. Structural, 50 percent: ASTM E330/E330M at 50 percent of positive test load.
 2. Air Leakage: ASTM E283.
 3. Water Penetration under Static Pressure: ASTM E331.
 4. Water Penetration under Dynamic Pressure: AAMA 501.1.
 5. Structural, 100 percent: ASTM E330/E330M at 100 percent of positive and negative test loads. Repeat the following:
 - a. Air Leakage: ASTM E283.
 - b. Water Penetration under Static Pressure: ASTM E331.
 6. Thermal Cycling: In accordance with AAMA 501.5. Repeat the following:
 - a. Air Leakage: ASTM E283.
 - b. Water Penetration under Static Pressure: ASTM E331.
 7. Structural, 100 and 150 percent: ASTM E330/E330M at 100 and 150 percent of positive and negative test loads. Repeat the following:
 - a. Air Leakage: ASTM E283.
 - b. Water Penetration under Static Pressure: ASTM E331.
- C. Preconstruction Adhesion and Compatibility Testing: Submit to structural glazing sealant manufacturer, for testing indicated below, Samples of each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member that is in close proximity to or is touching the structural or nonstructural sealants of a structural glazed system.
 1. Compatibility: Test materials or components using ASTM C1087.

2. Adhesion: Test for adhesion or lack of adhesion of a structural sealant to the surface of another material or component using ASTM C1135.
3. Submit no fewer than eight pieces of each type of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
5. For materials failing tests, obtain sealant manufacturer's written instructions for corrective measures, including the use of specially formulated primers.
6. Testing will not be required if data based on previous testing of current sealant products match those submitted.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of aluminum-framed storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures, including, but not limited to, excessive deflection.
 - b. Noise or vibration created by wind and thermal and structural movements.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - d. Water penetration through fixed glazing and framing areas.
 - e. Failure of operating components.
 2. Warranty Period: 10 years from date of Substantial Completion.
- B. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.
 1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D 4214.
 - c. Cracking, peeling, or chipping.
 2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Arcadia, Inc.
 2. Kawneer North America, an Arconic company.
 3. Oldcastle BuildingEnvelope (OBE); CRH Americas.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a registered design professional, as defined in Section 01 3573 "Delegated Design Requirements and Procedures" to design aluminum-framed storefronts.
 1. Material properties indicated in this Section shall be considered as minimum properties.

- B. General Performance: Comply with performance requirements specified, as determined by testing of aluminum-framed storefronts representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
1. Aluminum-framed storefronts shall withstand movements of supporting structure, including, but not limited to, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
 2. Failure also includes the following:
 - a. Thermal stresses transferring to building structure.
 - b. Glass breakage.
 - c. Noise or vibration created by wind and thermal and structural movements.
 - d. Loosening or weakening of fasteners, attachments, and other components.
 - e. Failure of operating units.
- C. Structural Loads:
1. Wind Loads: As indicated on Drawings.
 2. Other Design Loads: As indicated on Drawings.
- D. Deflection of Framing Members Supporting Glass: At design wind load, as follows:
1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans of up to 13 feet 6 inches (4.1 m) and to 1/240 of clear span plus 1/4 inch (6.35 mm) for spans greater than 13 feet 6 inches (4.1 m).
 2. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch (3.2 mm).
 - a. Operable Units: Provide a minimum 1/16-inch (1.6-mm) clearance between framing members and operable units.
 3. Cantilever Deflection: Limited to 2/175 at unsupported cantilevers.
- E. Structural: Test in accordance with ASTM E330/E330M as follows:
1. When tested at positive and negative wind-load design pressures, storefront assemblies do not evidence deflection exceeding specified limits.
 2. When tested at 150 percent of positive and negative wind-load design pressures, storefront assemblies, including anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
 3. Test Durations: As required by design wind velocity, but not less than 10 seconds.
- F. Water Penetration under Static Pressure: Test in accordance with ASTM E331 as follows:
1. No evidence of water penetration through fixed glazing and framing areas when tested in accordance with a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft. (300 Pa).
- G. Water Penetration under Dynamic Pressure: Test in accordance with AAMA 501.1 as follows:
1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft. (300 Pa).
 2. Maximum Water Leakage: In accordance with AAMA 501.1. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.

- H. Energy Performance: Certified and labelled by manufacturer for energy performance as follows:
1. Thermal Transmittance (U-factor):
 - a. Fixed Glazing and Framing Areas: U-factor for the system of not more than [0.41 Btu/sq. ft. x h x deg F (2.33 W/sq. m x K)] [0.45 Btu/sq. ft. x h x deg F (2.55 W/sq. m x K)] [0.57 Btu/sq. ft. x h x deg F (3.23 W/sq. m x K)] [0.69 Btu/sq. ft. x h x deg F (3.92 W/sq. m x K)] **<Insert value>** as determined in accordance with NFRC 100.
 - b. Venting Windows: Whole window U-factor of not more than [0.37 Btu/sq. ft. x h x deg F (2.10 W/sq. m x K)] [0.43 Btu/sq. ft. x h x deg F (2.44 W/sq. m x K)] [0.45 Btu/sq. ft. x h x deg F (2.55 W/sq. m x K)] [0.60 Btu/sq. ft. x h x deg F (3.40 W/sq. m x K)] [0.65 Btu/sq. ft. x h x deg F (3.69 W/sq. m x K)] **<Insert value>** as determined in accordance with NFRC 100.
 2. Solar Heat Gain Coefficient (SHGC):
 - a. Fixed Glazing and Framing Areas: SHGC for the system of not more than [0.26] [0.35] [0.40] [0.45] **<Insert value>** as determined in accordance with NFRC 200.
 - b. Venting Windows: Whole window SHGC of not more than [0.22] [0.27] [0.30] [0.40] **<Insert value>** as determined in accordance with NFRC 200.
 3. Air Leakage:
 - a. Fixed Glazing and Framing Areas: Air leakage for the system of not more than [0.06 cfm/sq. ft. (0.30 L/s per sq. m)] **<Insert value>** at a static-air-pressure differential of [1.57 lbf/sq. ft. (75 Pa)] [6.24 lbf/sq. ft. (300 Pa)] **<Insert value>** when tested in accordance with ASTM E283.
 - b. Venting Windows: Whole window air leakage of not more than [0.3 cfm/sq. ft. (0.30 L/s per sq. m)] **<Insert value>** at a static-air-pressure differential of [6.24 lbf/sq. ft. (300 Pa)] **<Insert value>** when tested in accordance with AAMA/WDMA/CSA 101/I.S.2/A440.
 4. Condensation Resistance: Design the wall and its components to not develop any visible interior condensation on framing members or glazing when the exterior air dry bulb temperature is **<insert value>** degrees F (**<insert value>** degrees C) and the interior air dry bulb temperature is **<insert value>** degrees F (**<insert value>** degrees C) with a **<insert value>** percent relative humidity.
 5. Condensation Resistance Factor (CRF):
 - a. Fixed Glazing and Framing Areas: CRF for the system of not less than [35] [55] [70] **<Insert value>** as determined in accordance with AAMA 1503.
 - b. Venting Windows: Whole window CRF of not less than [45] [52] [55] **<Insert value>** as determined in accordance with AAMA 1503.
- I. Noise Reduction: Test in accordance with ASTM E90, with ratings determined by ASTM E1332, as follows.
1. Outdoor-Indoor Transmission Class: Minimum [26] [30] [34] **<Insert number>**.
- J. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes.
1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
 2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested in accordance with AAMA 501.5.
 - a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of 180 deg F (82 deg C).
 - b. Low Exterior Ambient-Air Temperature: 0 deg F (minus 18 deg C).

c. Interior Ambient-Air Temperature: [75 deg F (24 deg C)] <Insert temperature>.

K. Structural-Sealant Joints:

1. Designed to carry gravity loads of glazing.

L. Structural Sealant: ASTM C1184. Capable of withstanding tensile and shear stresses imposed by structural-sealant-glazed, aluminum-framed storefronts without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.

1. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
2. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate, because sealant-to-substrate bond strength exceeds sealant's internal strength.

2.3 ALUMINUM-FRAMED STOREFRONT SYSTEMS

A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.

1. Exterior Framing Construction: Thermally broken .
2. Glazing System: Retained mechanically with gaskets on four sides .
3. Glazing Plane: Front.
4. Finish: Color anodic finish .
5. Fabrication Method: Field-fabricated stick system.
6. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
7. Steel Reinforcement: As required by manufacturer.

B. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.

C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

2.4 GLAZING

A. Glazing: Comply with Section 08 8000 "Glazing."

2.5 MATERIALS

A. Sheet and Plate: ASTM B209 (ASTM B209M).

B. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221 (ASTM B221M).

C. Structural Profiles: ASTM B308/B308M.

D. Steel Reinforcement:

1. Structural Shapes, Plates, and Bars: ASTM A36/A36M.
2. Cold-Rolled Sheet and Strip: ASTM A1008/A1008M.
3. Hot-Rolled Sheet and Strip: ASTM A1011/A1011M.

- E. Steel Reinforcement Primer: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods in accordance with recommendations in SSPC-SP COM, and prepare surfaces in accordance with applicable SSPC standard.
- F. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] <Insert value> percent.
- G. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] [50] <Insert value> percent.
- H. Regional Materials: Products shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

2.6 ACCESSORIES

- A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
 - 1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 - 2. Reinforce members as required to receive fastener threads.
 - 3. Use exposed fasteners with countersunk Phillips screw heads[, **finished to match framing system**][, **fabricated from 300 series stainless steel**].
- B. Anchors: Three-way adjustable anchors with minimum adjustment of [1 inch (25.4 mm)] <Insert dimension> that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
 - 1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A123/A123M or ASTM A153/A153M requirements.
- C. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials .

2.7 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Fabricate components that, when assembled, have the following characteristics:
 - 1. Profiles that are sharp, straight, and free of defects or deformations.
 - 2. Accurately fitted joints with ends coped or mitered.
 - 3. Physical and thermal isolation of glazing from framing members.
 - 4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
 - 5. Provisions for field replacement of glazing from [exterior] [interior] [interior for vision glass and exterior for spandrel glazing or metal panels].

- 6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
 - D. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
 - E. Storefront Framing: Fabricate components for assembly using [**shear-block system**] [**screw-spline system**] [**head-and-sill-receptor system with shear blocks at intermediate horizontal members**] <Insert system>.
 - F. After fabrication, clearly mark components to identify their locations in Project in accordance with Shop Drawings.
- 2.8 ALUMINUM FINISHES
- A. Color Anodic Finish: AAMA 611, AA-M12C22A32/A34, Class II, 0.010 mm or thicker.
 - 1. Color: Dark bronze .
- 2.9 SOURCE QUALITY CONTROL
- A. Structural Sealant: Perform quality-control procedures complying with ASTM C1401 recommendations, including, but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Comply with manufacturer's written instructions.
- B. Do not install damaged components.
- C. Fit joints to produce hairline joints free of burrs and distortion.
- D. Rigidly secure nonmovement joints.
- E. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
- F. Seal perimeter and other joints watertight unless otherwise indicated.
- G. Metal Protection:
 - 1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or by installing nonconductive spacers.

2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- H. Set continuous sill members and flashing in full sealant bed, as specified in Section 07 9200 "Joint Sealants," to produce weathertight installation.
- I. Install joint filler behind sealant as recommended by sealant manufacturer.
- J. Install components plumb and true in alignment with established lines and grades.

3.3 INSTALLATION OF GLAZING

- A. Install glazing as specified in Section 08 8000 "Glazing."

3.4 INSTALLATION OF WEATHERSEAL SEALANT

- A. After structural sealant has completely cured, remove temporary retainers and insert backer rod between lites of glass as recommended by sealant manufacturer.
- B. Install weatherseal sealant to completely fill cavity, in accordance with sealant manufacturer's written instructions, to produce weatherproof joints.

3.5 ERECTION TOLERANCES

- A. Install aluminum-framed storefronts to comply with the following maximum tolerances:
 1. Plumb: 1/8 inch in 10 feet (3.2 mm in 3 m); 1/4 inch in 40 feet (6.35 mm in 12.2 m).
 2. Level: 1/8 inch in 20 feet (3.2 mm in 6 m); 1/4 inch in 40 feet (6.35 mm in 12.2 m).
 3. Alignment:
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch (12.7 mm) wide, limit offset from true alignment to 1/16 inch (1.6 mm).
 - b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch (12.7 to 25.4 mm) wide, limit offset from true alignment to 1/8 inch (3.2 mm).
 - c. Where surfaces are separated by reveal or protruding element of 1 inch (25.4 mm) wide or more, limit offset from true alignment to 1/4 inch (6 mm).
 4. Location: Limit variation from plane to 1/8 inch in 12 feet (3.2 mm in 3.6 m); 1/2 inch (12.7 mm) over total length.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Field Quality-Control Testing: Perform the following test on representative areas of aluminum-framed storefronts.
 1. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Architect shall be tested in accordance with AAMA 501.2 and shall not evidence water penetration.
 - a. Perform a minimum of three tests in areas as directed by Architect.
 2. Air Leakage: ASTM E783 at 1.5 times the rate specified for laboratory testing in "Performance Requirements" Article but not more than 0.09 cfm/sq. ft. (0.45 L/s per sq. m) at a static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa).
 - a. Perform a minimum of three tests in areas as directed by Architect.

3. Water Penetration: ASTM E1105 at a minimum [**uniform**] [**and**] [**cyclic**] static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than 6.24 lbf/sq. ft. (300 Pa), and shall not evidence water penetration.
- C. Aluminum-framed storefronts will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

END OF SECTION

FOR REFERENCE ONLY

SECTION 08 4400 - GLAZED CURTAIN WALLS**PART 1 - GENERAL****1.1 SUMMARY****A. Section includes:**

1. X121 - Stick Built Assembly, 2-Sided Horizontal Structural Sealant Glazed, Aluminum Frame
2. X131 - Stick Built Assembly, 2-Sided Vertical Structural Sealant Glazed, Aluminum Frame
3. X151 - Stick Built Assembly, 4-Sided Captured, Aluminum Frame
4. X211 - Factory Glazed Unitized Assembly, 4-Sided Structural Sealant Glazed, Aluminum Frame
5. X221 - Factory Glazed Unitized Assembly, 2-Sided Horizontal Structural Sealant Glazed, Aluminum Frame
6. X231 - Factory Glazed Unitized Assembly, 2-Sided Vertical Structural Sealant Glazed, Aluminum Frame
7. X241 - Factory Glazed Unitized Assembly, Structural Sealant Glazed and Captured, Aluminum Frame
8. X251 - Factory Glazed Unitized Assembly, 4-Sided Captured, Aluminum Frame
9. X311 - Factory Glazed Cassette Assembly, 4-Sided Structural Sealant Glazed, Aluminum Frame
10. X321 - Factory Glazed Cassette Assembly, 2-Sided Horizontal Structural Sealant, Aluminum Frame
11. X331 - Factory Glazed Cassette Assembly, 2-Sided Vertical Structural Sealant Glazed, Aluminum Frame
12. X341 - Factory Glazed Cassette Assembly, Structural Sealant Glazed and Captured, Aluminum Frame
13. X351 - Factory Glazed Cassette Assembly, 4-Sided Captured, Aluminum Frame

B. Related Requirements:

1. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.
2. Section 01 4339 "Mockups" for preconstruction laboratory mockup testing.
3. Section 01 9119.43 "Exterior Enclosure Commissioning."
4. Section 05 1200 "Structural Steel"
5. Section 05 4000 "Cold Formed Metal Framing"
6. Section 05 5000 "Metal Fabrications".
7. Section 07 4210.11 "Composite Framing Support System"
8. Section 07413.16 "Metal Plate Wall Panels"
9. Section 07 8443 "Joint Firestopping" for perimeter fire-containment systems field installed with structural-sealant-glazed curtain walls.
10. Section 07 9200 "Joint Sealants" for installation of joint sealants installed with glazed aluminum curtain walls and for sealants to the extent not specified in this Section.
11. Section 08 4433 "Sloped Glazing Assemblies" for sloped glazing.
12. Section 08 8000 "Glazing."
13. **<Insert Section>**

1.2 DEFINITIONS

A. Water Penetration:

1. Water retained within the wetzone of the system without means of drainage is a failure.
2. Water leakage to the interior of the building which is not controlled by a weep/drainage system that is integral to the fenestration system is a failure.
3. Water observed on interior surfaces of the fenestration system is a failure.
4. Water observed on adjacent wall systems, originating from the fenestration system or the transition to the adjacent wall system, is a failure.

1.3 ALLOWANCES

- A. [Preconstruction laboratory mockup] [Source quality-control] [and] [field quality-control] testing is part of testing and inspecting allowance.

1.4 PRE-FABRICATION MEETINGS

A. Pre-fabrication Meeting: Conduct each meeting at **[Project site]** <Insert location>.

1. Meeting shall be held at least four weeks prior to fabrication of curtain wall system. Arrange meeting at fabrication or Project site with the glazier, sealant, and gasket manufacturers' technical representatives and any others necessary to review procedures, products to be used, and schedule for the Work. Give at least two weeks notice to Architect and other concerned parties.
2. Discuss Laboratory Mockup Testing Procedures.
3. Discuss Shop QAQC procedures.
4. Discuss substrates to be sealed, discuss as fabricated and installed condition of substrate, sealant application, flashing details, and other preparatory work.
5. Review joint sealant requirements: drawings, specifications, and other contract documents.
6. Review joint sealant testing, types, primers, and substrates.
7. Review required submittals, both complete and incomplete.
8. Review weather and forecasted weather conditions and procedures for working with unfavorable conditions.
9. Review schedule and intended sequence of work.
10. Review the purpose and method of integration of field quality assurance programs developed by Contractor and suppliers/subcontractors responsible for the Work.
11. Review purpose and method of integration of field quality assurance program administered by the Testing and Inspection Agency.

1.5 PREINSTALLATION MEETING

A. Preinstallation Meeting: Conduct each meeting at **[Project site]** <Insert location>.

1. Meeting shall be held at least two weeks prior to installation of curtain wall system. Arrange meeting(s) at fabrication or Project site with the Architect, Contractor, glazier, testing agency, sealant manufacturer's technical representative, and any others necessary to review procedures, products to be used, and schedule for the Work. Give at least two weeks notice to Architect and other concerned parties.
2. Discuss Field QAQC procedures.
3. Discuss substrates to be sealed, discuss as fabricated and installed condition of substrate, sealant application, flashing details, and other preparatory work.

4. Review joint sealant requirements: drawings, specifications, and other contract documents.
5. Review joint sealant testing, types, primers, and substrates.
6. Review transitions to adjacent exterior envelope assemblies.
7. Review required submittals, both complete and incomplete.
8. Review weather and forecasted weather conditions and procedures for working with unfavorable conditions.
9. Review schedule and intended sequence of work.
10. Review changes arising from the pre-construction mock-up and performance testing program.
11. Review the purpose and method of integration of field quality assurance programs developed by Contractor and suppliers/subcontractors responsible for the Work.
12. Review purpose and method of integration of field quality assurance program administered by the Testing and Inspection Agency.

1.6 ACTION SUBMITTALS

- A. Delegated-Design Submittal: Refer to Section 01 3573 "Delegated Design Requirements and Procedures" for delegated design submittal procedures and requirements.
 1. Provide delegated design submittals for the following:
 - a. For glazed aluminum curtain walls indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation. Include the following items, but not limited to, in the Delegated Design Submittal:
 - 1) Project [and Mockup] Shop Drawings
 - 2) Structural Calculations
 - 3) Demonstration of thermal movement accommodation
 - 4) Verification of meeting Deflection Criteria
 - 5) Energy Performance Submittals
 - 6) Thermal/Heat Stress Analysis
 - 7) Differential Shading Analysis
 - 8) Probability of Glass Breakage
 - 9) Accommodation for drainage of the System
 - 10) [Material test results]
 - 11) [Calculated Structural Sealant Glazing Dimensions]
 - 12) [Condensation Resistance Reports]
 - 13) [Acoustic Analysis]
 - 14) [Laboratory Test Reports for Mockup Testing]
 - 15) [Structural Sealant Test Reports and Approval from Manufacturer]
 - 16) [Noise or vibration control]
 - 17) [Rope Descent Facade Access Equipment Integration]
 - 18) [Implementation of BIPV and PV Fin]
- B. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required [Product Data submittal][and][Samples submittal]. Ensure compliance with requirements included in [Section 01 3300 "Submittal Procedures"] [Section 08 0413 "Common Submittal Requirements for Openings"].
- C. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- D. Sustainable Design Submittals:
1. Product Data: For sealants, indicating VOC content.
 2. Laboratory Test Reports: For sealants, indicating compliance with requirements for low-emitting materials.
 3. Product Certificates: For materials manufactured within 100 miles (160 km) of Project, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each raw material.
 4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
 5. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
 6. Environmental Product Declaration: For each product.
 7. Health Product Declaration: For each product.
 8. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
 9. Environmental Product Declaration: For each product.
 10. Environmental Product Declaration: For each product.
 11. Environmental Product Declaration: For each product.
 12. Third-Party Certifications: For each product.
 13. Third-Party Certified Life Cycle Assessment: For each product.
- E. Product Test Reports: For glazed curtain walls, for tests performed by **[manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**. Based on evaluation of comprehensive tests performed by a qualified preconstruction testing agency, for glazed aluminum curtain walls, indicating compliance with performance requirements.
- F. Shop Drawings: For glazed curtain walls. Include project specific plans, elevations, sections, full-size details, transitions to adjacent enclosure assemblies, and attachments to other work.
1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
 2. Illustrate connection to and continuity with adjacent thermal, weather, air, and vapor barriers for other enclosure systems.
 3. Include full-size isometric details of each vertical-to-horizontal intersection of structural-sealant-glazed curtain walls, showing the following:
 - a. Joinery, including concealed welds.
 - b. Anchorage.
 - c. Expansion provisions.
 - d. Glazing.
 - e. Flashing and drainage.
 4. Details of weeping and venting of spandrel and shadowbox conditions.
 5. Include laboratory mockup Shop Drawings, prepared by a qualified preconstruction testing agency, showing details of laboratory mockup.
 - a. Submit mockup system Shop Drawings only after approval of wall system Shop Drawings.
 - b. Resubmit Shop Drawings with changes made to glazed aluminum curtain walls to successfully complete preconstruction testing.

6. Include Site Mockup Shop Drawings, prepared by a qualified preconstruction testing agency, showing details of laboratory mockup.
 - a. Submit mockup system Shop Drawings only after approval of wall system Shop Drawings.
 - b. Resubmit Shop Drawings with changes made to glazed aluminum curtain walls to successfully complete preconstruction testing.
 7. Include Deglaze / Reglaze procedures for each unique glazing unit type and associated obstructions.
- G. Engineering Calculations
1. Submit engineering calculations as described hereinafter and in the General Conditions.
 2. Engineering calculations shall be submitted concurrently with the corresponding shop drawings.
 3. All calculations shall bear the stamp of a professional engineer registered in the State of **[Insert State Name]**.
- H. Samples for Initial Selection: For units with factory-applied color finishes. Include 2 or more samples in each set, indicating limits of variation.
- I. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- J. Fabrication Sample: Of each vertical-to-horizontal intersection of assemblies, made from 12-inch (300-mm) lengths of full-size components and showing details of the following:
1. Joinery, including concealed welds.
 2. Anchorage.
 3. Expansion provisions.
 4. Glazing.
 5. Flashing and drainage.
 6. Cross-sectional sample of curtain wall showing thermal break construction.
- K. Samples of Terra Cotta for color range approval.
- L. Samples of the Aluminum Fins and attachment device.
- M. Samples of **[insert other components that require samples]**.
- N. Preconstruction Site and Laboratory Mockup Testing Submittals:
1. Testing Program: Developed specifically for Project that includes the testing agencies preconstruction testing sequence for **[Laboratory]** **[and Site Mockup]** Testing.
 2. Test Reports: Prepared by a qualified preconstruction testing agency for each mockup test. Test and performance data shall be dated no later than one year earlier than the date for receipt of bids.
 - a. Laboratory Test reports older than one year may be acceptable if certified by the manufacturer that no changes, alterations or modifications have occurred that would materially affect the performance values or performance of the system.
 3. Record Drawings: As-built drawings of preconstruction laboratory mockups showing changes made during preconstruction laboratory mockup testing.
 4. Photographs:
 - a. Take a photographs at locations and intervals as required by Architect.

- b. Submit digital color images of mockup before, during, and after preconstruction testing.
- O. Site Testing Submittals:
 - 1. Testing Program: Developed specifically for Project that includes the testing agencies testing sequence and test plan for each test location.
 - 2. Test Reports: Prepared by a qualified preconstruction testing agency for each test.
 - 3. Photographs:
 - a. Take a photographs at locations and intervals as required by Architect.
 - b. Submit digital color images before, during, and after testing.
- P. Condensation Resistance Reports: Provide a report that demonstrates all curtain wall assemblies are capable of meeting the performance requirements.
 - 1. Provide computer analysis using THERM and Windows software as developed by Lawrence Berkeley National Laboratory.
 - 2. Include in the analysis and report all typical mullions, such as but not limited to, sill, jamb, and head, intermediate horizontal mullion, and intermediate vertical mullion conditions for vision, spandrel, and shadow box areas for each curtain wall type.
 - a. The number of conditions required to be included in the analysis may be reduced if the following information is provided:
 - 1) An engineering evaluation that demonstrates the conditions included in the analysis will perform worse than the conditions proposed to not be included.
 - b. The analysis and engineering evaluation must be performed by experts experienced in hygrothermal analysis of fenestration assemblies utilizing appropriate engineering means of analysis.
 - c. The analysis must be signed and sealed by an professional engineer.
 - 3. Include the transition to adjacent enclosure assemblies in the thermal models.
 - a. The extent of the adjacent enclosure assembly to include in the model:
 - 1) 12 inches minimum, or
 - 2) as determined by where the isothermal lines obtain a uniform pattern.
 - 4. Include models for each curtain wall assembly at all adjacent exterior enclosure assemblies.
 - 5. Include the following information in the submitted report:
 - a. Component Material color legend
 - b. Image of THERM Model viewed with isotherm overlay.
 - c. Image of THERM Model viewed with infrared overlay.
 - d. Image and detail number of Corresponding Architectural Reference Detail
 - e. Indication of multiple temperatures on both model images.
 - f. Indication of the cold point temperature on both model images.
 - g. Indication of allowable dewpoint based on project specific requirements.
 - h. If the cold point temperature is below project specific dewpoint, then indicate the corresponding RH in which condensation would occur at the cold point temperature.
- Q. Energy Performance Submittals:
 - 1. Provide NFRC-certified approved label certificate.
 - 2. Provide U-factor calculations and results for each vision and opaque curtain wall type separately in compliance with NFRC 100.
 - a. Calculations shall take into account all thermal bridging elements including those that are discontinuous.

- R. Manufacturer's system and project specific installation instructions and glazing manual.
- S. Acoustical Test Report: Submit acoustical test results indicating the OITC rating of the curtain wall system (glass and frame).
 - 1. Test data shall be produced from an accredited independent acoustical laboratory.
 - 2. Reports shall indicate that the test was performed on the window assembly of the type to be supplied in conformance with the requirements of the test method.
- T. Quality Assurance / Quality Control (QA/QC) Program: Developed specifically for Project, including fabrication and installation, according to recommendations in ASTM C 1401. Include periodic quality-control reports.
 - 1. Provide a comprehensive project specific QA/QC program that conforms to the recommendations in ASTM C1401 developed specifically for this project that includes shop and installation procedures documented in a QA/QC manual printed on manufacturer's letterhead.
 - 2. Provide permanent individual labeling for each unit that includes traceable batch information for the materials used in the specific unit construction.
 - 3. Provide recorded documentation that is produced throughout the QA/QC program to the Owner.
 - 4. Provide periodic quality control reports.
 - 5. Include the following, but not limited to, in the QA/QC program / manual.
 - a. Storage conditions of materials and finished product.
 - b. Delivery of materials and finished product.
 - c. Confirmation of material tolerances and damages.
 - d. Example of Permanent Unit Labeling/Numbering system keyed to installation location on elevations including date and weather conditions when installed.
 - e. Sample production unit checklist that includes types and lot/batch information for each component.
 - f. Gasket installation methods.
 - g. IGU inspection.
 - h. IGU orientation.
 - i. Edge Deletion inspection.
 - j. Glass placement tolerances.
 - k. Cleaning procedures.
 - l. SSG spacer placement and SSG sealant profile verification.
 - m. Primer requirements and curing validation method.
 - n. Masking / Taping procedures for Primers and Sealants.
 - o. Shelf life of materials.
 - p. Method to ensure SSG does not bleed between glass and gaskets.
 - q. SSG cure time before moving units.
 - r. Temporary IGU retention during SSG installation.
 - s. Metal Backpan Sealant Installation.
 - t. Venting of Shadow Boxes.
 - u. Sealant joinery at penetrations through air/water line.
 - v. Periodic Shop Testing including frequency, test description, log of tests, and photo documentation.
 - 1) SSG Adhesion Test
 - 2) Weather Sealant Adhesion Test
 - 3) Butterfly Test
 - 4) Snap Test

- 5) Completed Unit Water Test
 - 6) Completed Unit Air Test
 - 7) Completed Unit Wind Load Test
 - w. Deglazing Procedures
 - 1) Minimum Frequency
 - a) 1 in first 10
 - b) 1 in next 40
 - c) 1 in next 50
 - d) 1 in 100 thereafter
 - 2) Log of Deglazing
 - 3) SSG inspection/testing.
 - a) Dimension of glass bite
 - b) Thickness of sealant
 - c) Adhesion testing
 - d) Bond profile
 - e) Bubbles/voids in the sealant profile
 - f) Sealant is installed full depth
 - g) Sealant is not squeezing out from the gasket plane
 - 4) Photo documentation.
 - x. Site dam/flood testing at stack joint / split vertical interface.
 - y. Site verification method for engagement of split vertical mullions.
 - z. Site verification of proper stack joint gasket final placement.
 - aa. Deglaze / Reglaze procedures for each unit type.
 - bb. Site verification of curtain wall anchor placement.
 - cc. Site verification of anti-walk clip installation.
 - U. Quality-Control Program: Developed specifically for Project, including fabrication and installation, in accordance with recommendations in ASTM C 1401 for design and installation of curtain wall assemblies. Include periodic quality-control reports.
 - V. Quality-Control Program: Developed specifically for Project, including fabrication and installation for design and installation of curtain wall assemblies. Include periodic quality-control reports.
 - W. Quality Assurance Submittals
 - 1. Qualification Data: For qualified Installer, Manufacturer, preconstruction testing agency, and testing agency.
 - 2. Seismic Qualification Certificates: For glazed aluminum curtain walls, accessories, and components, from manufacturer.
 - 3. Welding certificates.
 - 4. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified preconstruction testing agency, for glazed aluminum curtain walls, indicating compliance with performance requirements.
 - 5. Source quality-control reports.
 - 6. Field quality-control reports.
- 1.7 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For glazed curtain walls to include in maintenance manuals.

- B. Maintenance Data for Structural Sealant: For structural-sealant-glazed curtain walls to include in maintenance manuals. Include ASTM C 1401 recommendations for post installation-phase quality-control program.

1.8 QUALITY ASSURANCE

- A. Manufacturer Qualifications: An entity capable of fabricating structural-sealant-glazed curtain wall systems that meet or exceed energy performance requirements indicated, and capable of documenting performance requirements by certification, labeling and inclusion lists.
- B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- C. Preconstruction Mockup Testing Agency Qualifications: Qualified in accordance with ASTM E 699 for testing indicated **[and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025]**.
- D. Testing Agency Qualifications: Qualified in accordance with ASTM E 699 for testing indicated **[and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025]**.
- E. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
 - 1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.
- F. Welding certificates.
 - 1. Welding Qualifications: Qualify procedures and personnel in accordance with the following.
 - a. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - b. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
- G. Structural-Sealant Glazing: Comply with ASTM C 1401 for design and installation of curtain-wall assemblies.
- H. Energy Performance Certificates:
 - 1. Comply with NFRC for minimum standards of energy performance, materials, components, accessories, and fabrication. Comply with more stringent requirements if indicated.
 - 2. Basis for Certification: NFRC-certified energy performance values for each glazed curtain wall type.

1.9 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service:
 - 1. **[Owner will engage] [Engage]** a qualified testing agency to perform preconstruction testing on mockups.

2. Build mockups using personnel, materials, and methods of construction that will be used at Project site.
- B. Preconstruction Laboratory Testing Requirements:
1. Provide glazed aluminum curtain walls that comply with test-performance requirements indicated, as evidenced by reports based on Project-specific preconstruction testing or previous laboratory testing performed on manufacturer's standard assemblies by a qualified testing agency.
 - a. The curtain wall assembly included in the previous Laboratory Testing is required to include identical components as the project specific details.
 - b. The previously tested laboratory test specimen is required to be of similar size and anchorage as the project specific conditions.
 - c. Test and performance data shall be dated no later than 1 year earlier than the date for receipt of bids.
 - d. Laboratory Test reports older than 1 year may be acceptable if certified by the manufacturer that no changes, alterations or modifications have occurred that would materially affect the performance values or performance of the system.
 - C. Pretesting: Testing prior to official testing by the Testing Agency is allowed provided a representative of the Testing Agency is present to witness the testing and documents the results. If modifications are required based on unsatisfactory test results, such modifications must be documented in a formal report and incorporated into the project documentation/submittals such as shop drawings, calculations, and/or quality control measures.
 1. This requirement applies to:
 - a. On-Building Performance Mockups
 - b. Off-Building Onsite Performance Mockups
 - c. Preconstruction Laboratory Mockups
- 1.10 MOCKUPS
- A. Mockups shall have all details complete and identical to those approved on the wall system shop drawings. Mockup shall demonstrate quality of materials, finish, and workmanship, as well as compliance with performance requirements.
 - B. Provide schedule for mockup fabrication, erection, glazing, sealing and testing a minimum of 30 days in advance of fabrication to permit owner and Architect to coordinate monitoring and observation.
 - C. Comply with **[Section 01 4339 "Exterior Wall Mockups"] [Section 01 4339.13 "Exterior Wall Enclosure Assembly Mockup and Testing"]**.
 - D. Visual Mockup:
 1. Visual Mockups are constructed to demonstrate aesthetic effects and are composed from the approved "Samples for Initial Selection" submittal process. The materials on this Mockup will serve as "Samples for Verification".
 2. Prior to ordering exterior materials and prior to commencing exterior construction, build a freestanding Visual Mockup that includes exterior materials. Coordinate installation of exterior envelope materials and products for which mockups are required along with supporting materials.
 - a. Mockup Size:
 - 1) Panel Size: As indicated on Drawings.

- 2) Individual Sample Size: As indicated on Drawings.
 - b. Sample Materials to include on Visual Mockup: As indicated on Drawings.
 - c. Review Process and Timing:
 - 1) Approve mockup prior to ordering final building materials.
 - d. Allow for time to review alternate materials.
 - e. Allow for time in the event materials are rejected and require resubmission and approval.
 - f. Locate the mockup panel such that it remains on-site in the same location through the duration of construction until the first certificate of occupancy.
- E. On-Building Performance Mockups: Build mockups to set quality standards for fabrication and installation, and for onsite performance testing. Mockup shall demonstrate quality of materials, finish, tolerances, and workmanship, as well as compliance with performance requirements.
- 1. Furnish all labor and materials to completely erect mockup unit[s] of sufficient size and configuration to demonstrate the performance capabilities of the vertical wall system. Schedule mockup erection and testing sufficiently in advance of wall system fabrication to cause no delay.
 - 2. Ensure that transitions to adjacent exterior envelope assemblies are complete and have had adequate time to cure prior to testing.
 - 3. After completion of mockup construction and prior to start of testing sequence **[one] [two]** vision glass lite[s] **[and] [one] [two] [spandrel panels]** are to be removed and replaced to successfully demonstrate project reglazing procedures.
 - 4. Build mockup of typical wall area as shown on Drawings.
 - a. Exact configuration will be determined during wall system shop drawing review. For purposes of bidding, include costs for a vertical mockup **<Insert number>** feet (**<Insert number>** meters) high by **<Insert number>** feet (**<Insert number>** meters) wide with an **[inside] [and] [outside]** corner.
 - b. Mockup shall have all details complete and identical to those approved on the wall system shop drawings. Mockup shall demonstrate quality of materials, finish, and workmanship, as well as compliance with performance requirements.
 - 5. Provide schedule for mockup fabrication, erection, glazing, sealing and testing a minimum of 30 days in advance of fabrication to permit owner and Architect to coordinate monitoring and observation.
 - 6. Notify Architect **[seven] <Insert number>** days in advance of the dates and times when construction mockups will be constructed and tested.
 - 7. Testing shall be performed on mockups in accordance with requirements in "Field Quality Control" Article.
 - a. In the event of failure to meet the performance requirements:
 - b. Determine Cause of Failure.
 - c. Provide a remediation plan for review prior to performing the remediation and retesting.
 - d. Repair per manufacturer's recommendations.
 - e. Retest mockup with previously agreed upon modifications or changes.
 - f. The Architect in consultation with the testing service will determine at which step in the testing procedure retesting shall resume.
 - g. Incorporate agreed upon modifications into project submittals for record.
 - h. If Cause of Failure was due to issues related to the quality of installation or failure to follow installation instructions or shop drawings, incorporate method to ensure future compliance into the fabrication and installation quality assurance and control programs.

- i. All fees and expenses incurred by the Owner associated with the participation of the Architect, Owner, and Owner's designated technical representatives to observe both the repair/reconstruction of the mock-up, re-testing of same mockup, in whole or in part, shall be the sole responsibility of the Contractor.
 - 8. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 9. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- F. Off-Building Onsite Performance Mockups: Build mockups to **[verify selections made under Sample submittals], [to demonstrate aesthetic effects]**, set quality standards for fabrication and installation, and for onsite performance testing. Mockup shall demonstrate quality of materials, finish, tolerances, and workmanship, as well as compliance with performance requirements.
- 1. Furnish all labor and materials to completely erect mockup unit[s] of sufficient size and configuration to demonstrate the performance capabilities of the wall system. Schedule mockup erection and testing sufficiently in advance of wall system fabrication to cause no delay. Do not install mockup materials as part of the wall system.
 - 2. After completion of mockup construction and prior to start of testing sequence, remove and reinstall **[one] [two]** vision glass lite[s] **[and] [one] [two] [spandrel panel][s]** to successfully demonstrate project reglazing procedures.
 - 3. Build mockup of typical wall area as shown on Drawings.
 - a. Exact configuration will be determined during wall system shop drawing review.
 - b. Mockup shall have all details complete and identical to those approved on the wall system shop drawings.
 - 4. Provide schedule for mockup fabrication, erection, glazing, sealing and testing a minimum of 30 days in advance of fabrication to permit owner and Architect to coordinate monitoring and observation.
 - 5. Notify Architect **[seven] <Insert number>** days in advance of the dates and times when construction mockups will be constructed and tested.
 - 6. Testing shall be performed on mockups in accordance with requirements in "Field Quality Control" Article.
 - a. In the event of failure to meet the performance requirements:
 - 1) Determine Cause of Failure.
 - 2) Provide a remediation plan for review prior to performing the remediation and retesting.
 - 3) Repair per manufacturer's recommendations.
 - 4) Retest mockup with previously agreed upon modifications or changes.
 - 5) The Architect in consultation with the testing service will determine at which step in the testing procedure retesting shall resume.
 - 6) Incorporate agreed upon modifications into project submittals for record.
 - 7) If Cause of Failure was due to issues related to the quality of installation or failure to follow installation instructions or shop drawings, incorporate method to ensure future compliance into the fabrication and installation quality assurance and control programs.
 - 8) All fees and expenses incurred by the Owner associated with the participation of the Architect, Owner, and Owner's designated technical representatives to observe both the repair/reconstruction of the mock-up, re-testing of same mockup, in whole or in part, shall be the sole responsibility of the Contractor.

7. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
8. Locate the mockup such that it remains on-site in the same location through the duration of construction until the first certificate of occupancy.

G. Preconstruction Laboratory Mockups:

1. Build mockups to **[verify selections made under Sample submittals], [to demonstrate aesthetic effects]**, set quality standards for fabrication and installation, and for performance testing. Mockup shall demonstrate quality of materials, finish, tolerances, and workmanship, as well as compliance with performance requirements.
 - a. Furnish all labor and materials to completely erect mockup unit[s] of sufficient size and configuration to demonstrate the performance capabilities of the wall system. Schedule mockup erection and testing sufficiently in advance of wall system fabrication to cause no delay. Do not install mockup materials as part of the wall system.
 - b. After completion of mockup construction and prior to start of testing sequence, remove and reinstall **[one] [two]** vision glass lite[s] **[and] [one] [two] [spandrel panel][s]** to successfully demonstrate project reglazing procedures.
 - c. Build mockup of typical wall area as shown on Drawings.
 - 1) Exact configuration will be determined during wall system shop drawing review.
 - 2) Mockup shall have all details complete and identical to those approved on the wall system shop drawings.
 - 3) Build preconstruction laboratory mockups at testing agency facility; use personnel, products, and methods of construction that will be used at Project site.
 - d. Provide schedule for mockup fabrication, erection, glazing, sealing and testing a minimum of 30 days in advance of fabrication to permit owner and Architect to coordinate monitoring and observation.
 - e. Notify Architect **[seven] <Insert number>** days in advance of the dates and times when preconstruction laboratory mockups will be constructed and tested.
2. Preconstruction Testing Service: **[Owner will engage] [Engage]** a qualified testing agency to perform testing on preconstruction laboratory mockups.
3. Preconstruction Laboratory Mockup Testing Program: Test preconstruction laboratory mockups in accordance with requirements in "Performance Requirements" Article. Perform the following tests in the following order:
 - a. Structural: ASTM E 330 at 50 percent of positive test load.
 - b. Air Infiltration: ASTM E 283.
 - c. Water Penetration under Static Pressure: ASTM E 331.
 - d. Water Penetration under Dynamic Pressure: AAMA 501.1.
 - e. Structural: ASTM E 330 at 100 percent of positive and negative test loads.
 - 1) Failure Criteria:
 - a) All functions remain unimpaired with no visible damage.
 - b) No glass breakage or glass fallout is allowed.
 - c) Post displacement performance testing remains within specified requirements.
 - d) Components cannot fall off. Trim cannot be disengaged.
 - e) Deflections in excess of those specified are not acceptable.
 - f. Water Penetration under Static Pressure: ASTM E 331.

- g. Interstory Drift: AAMA 501.4 at 100 percent of design displacement (elastic movement) in 4 directions.
 - 1) Failure Criteria:
 - a) All functions remain unimpaired with no visible damage.
 - b) No glass breakage or glass fallout is allowed.
 - c) Post displacement performance testing remains within specified requirements.
 - d) Components cannot fall off. Trim cannot be disengaged.
- h. Water Penetration under Static Pressure: ASTM E 331.
- i. Vertical Interstory Movement: AAMA 501.7 at design displacement.
 - 1) Failure Criteria:
 - a) All functions remain unimpaired with no visible damage.
 - b) No glass breakage or glass fallout is allowed.
 - c) Post displacement performance testing remains within specified requirements.
 - d) Components cannot fall off. Trim cannot be disengaged.
 - 2) Maintain the test specimen at the maximum open joint position for the balance of testing.
- j. Water Penetration under Static Pressure: ASTM E 331.
- k. Water Penetration under Dynamic Pressure: AAMA 501.1.
- l. Structural: ASTM E 330 at 150 percent of positive and negative test loads.
 - 1) Failure Criteria:
 - a) Glass is retained completely in the glazed opening with no glass fallout or breakage.
 - b) Components cannot fall off.
 - c) Permanent damage to panels is not allowed.
 - d) Do not evidence material failures or structural distress.
 - e) Permanent deformation to wall framing members not to exceed 0.2 percent of the clear span.
 - f) Trim can be disengaged but cannot fall off.
- m. Interstory Drift: AAMA 501.4 at inelastic design displacement in 4 directions.
 - 1) Failure Criteria:
 - a) Glass is retained completely in the glazed opening with no glass fallout.
 - b) Components cannot fall off.
 - c) Visible damage and minor distortion is allowed.
 - d) Do not evidence material failures or structural distress.
 - e) Trim can be disengaged but cannot fall off.
- 4. Preconstruction Laboratory Mockup Testing Program: Test preconstruction laboratory mockups in accordance with requirements in "Performance Requirements" Article. Perform the following tests in the following order:
 - a. Structural: ASTM E 330 at 50 percent of positive test load.
 - b. Air Infiltration: ASTM E 283.
 - c. Water Penetration under Static Pressure: ASTM E 331.
 - d. Water Penetration under Dynamic Pressure: AAMA 501.1.
 - e. Structural: ASTM E 330 at 100 percent of positive and negative test loads.
 - 1) Failure Criteria:
 - a) All functions remain unimpaired with no visible damage.
 - b) No glass breakage or glass fallout is allowed.
 - c) Post displacement performance testing remains within specified requirements.

- d) Components cannot fall off. Trim cannot be disengaged.
 - e) Deflections in excess of those specified are not acceptable.
- f. Water Penetration under Static Pressure: ASTM E 331.
- g. Interstory Drift: AAMA 501.4 at 100 percent of design displacement (elastic movement) in 4 directions.
 - 1) Failure Criteria:
 - a) All functions remain unimpaired with no visible damage.
 - b) No glass breakage or glass fallout is allowed.
 - c) Post displacement performance testing remains within specified requirements.
 - d) Components cannot fall off. Trim cannot be disengaged.
- h. Water Penetration under Static Pressure: ASTM E 331.
- i. Vertical Interstory Movement: AAMA 501.7 at design displacement.
 - 1) Failure Criteria:
 - a) All functions remain unimpaired with no visible damage.
 - b) No glass breakage or glass fallout is allowed.
 - c) Post displacement performance testing remains within specified requirements.
 - d) Components cannot fall off. Trim cannot be disengaged.
 - 2) Maintain the test specimen at the maximum open joint position for the balance of testing.
- j. Water Penetration under Static Pressure: ASTM E 331.
- k. Periodic Maintenance Equipment Load (Continuous Tie-in Guides):
 - 1) Apply <insert load> normal to the plane of the wall (<insert value> times of equipment load plus 1/3 of inward acting design wind load).
 - 2) Apply <insert load> horizontally parallel to the plane of the wall (<insert value> times of equipment load plus 1/3 of inward acting design wind load).
 - 3) Failure Criteria:
 - a) There shall be no permanent deformation of the anchorage connector.
 - b) There shall be no permanent deformation of the glazed curtain wall assembly.
 - c) No glass breakage or glass fallout is allowed.
 - d) Post displacement performance testing remains within specified requirements.
 - e) Components cannot fall off. Trim cannot be disengaged.
- l. Periodic Maintenance-Equipment Load (Intermittent Stabilization):
 - 1) Apply <insert load> side load (parallel to plane of wall) in all four directions (left, right, up, and down).
 - 2) Apply <insert load> outward load (perpendicular to the plane of the wall).
 - 3) Failure Criteria:
 - a) There shall be no permanent deformation of the anchorage connector.
 - b) There shall be no permanent deformation of the glazed curtain wall assembly.
 - c) No glass breakage or glass fallout is allowed.
 - d) Post displacement performance testing remains within specified requirements.
 - e) Components cannot fall off. Trim cannot be disengaged.
- m. Water Penetration under Static Pressure: ASTM E 331.
- n. Water Penetration under Dynamic Pressure: AAMA 501.1.
- o. Structural: ASTM E 330 at 150 percent of positive and negative test loads.
 - 1) Failure Criteria:

- a) Glass is retained completely in the glazed opening with no glass fallout or breakage.
 - b) Components cannot fall off.
 - c) Permanent damage to panels is not allowed.
 - d) Do not evidence material failures or structural distress.
 - e) Permanent deformation to wall framing members not to exceed 0.2 percent of the clear span.
 - f) Trim can be disengaged but cannot fall off.
- p. Interstory Drift: AAMA 501.4 at inelastic design displacement in 4 directions.
 - 1) Failure Criteria:
 - a) Glass is retained completely in the glazed opening with no glass fallout.
 - b) Components cannot fall off.
 - c) Visible damage and minor distortion is allowed.
 - d) Do not evidence material failures or structural distress.
 - e) Trim can be disengaged but cannot fall off.
- q. Periodic Maintenance Equipment Overload (Continuous Tie-in Guides):
 - 1) Apply <insert load> normal to the plane of the wall (<insert value> times of equipment load plus 1/3 of inward acting design wind load).
 - 2) Apply <insert load> horizontally parallel to the plane of the wall (<insert value> times of equipment load plus 1/3 of inward acting design wind load).
 - 3) Failure Criteria:
 - a) The anchorage connector shall not detach.
 - b) Components of the glazed curtain wall assembly shall not detach.
 - c) Glass is retained completely in the glazed opening with no glass fallout.
- r. Periodic Maintenance-Equipment Overload (Intermittent Stabilization):
 - 1) Apply <insert load> side load (parallel to plane of wall) in all four directions (left, right, up, and down).
 - 2) Apply <insert load> outward load (perpendicular to the plane of the wall).
 - 3) Failure Criteria:
 - a) The anchorage connector shall not detach.
 - b) Components of the glazed curtain wall assembly shall not detach.
 - c) Glass is retained completely in the glazed opening with no glass fallout.
- 5. Preconstruction Laboratory Mockup Testing Program: Test preconstruction laboratory mockups in accordance with requirements in "Performance Requirements" Article. Perform the following tests in the following order:
 - a. Structural: ASTM E 330 at 50 percent of positive test load.
 - b. Air Infiltration: ASTM E 283.
 - c. Thermal Cycling: According to AAMA 501.5.
 - d. Air Infiltration: ASTM E 283.
 - e. Water Penetration under Static Pressure: ASTM E 331.
 - f. Water Penetration under Dynamic Pressure: AAMA 501.1.
 - g. Structural: ASTM E 330 at 100 percent of positive and negative test loads.
 - 1) Failure Criteria:
 - 2) All functions remain unimpaired with no visible damage.
 - 3) No glass breakage or glass fallout is allowed.
 - 4) Post displacement performance testing remains within specified requirements.
 - 5) Components cannot fall off. Trim cannot be disengaged.

- 6) Deflections in excess of those specified are not acceptable.
- h. Water Penetration under Static Pressure: ASTM E 331.
- i. Interstory Drift: AAMA 501.4 at 100 percent of design displacement (elastic movement) in 4 directions.
 - 1) Failure Criteria:
 - a) All functions remain unimpaired with no visible damage.
 - b) No glass breakage or glass fallout is allowed.
 - c) Post displacement performance testing remains within specified requirements.
 - d) Components cannot fall off. Trim cannot be disengaged.
- j. Water Penetration under Static Pressure: ASTM E 331.
- k. Vertical Interstory Movement: AAMA 501.7 at design displacement.
 - 1) Failure Criteria:
 - a) All functions remain unimpaired with no visible damage.
 - b) No glass breakage or glass fallout is allowed.
 - c) Post displacement performance testing remains within specified requirements.
 - d) Components cannot fall off. Trim cannot be disengaged.
 - 2) Maintain the test specimen at the maximum open joint position for the balance of testing.
- l. Water Penetration under Static Pressure: ASTM E 331.
- m. Water Penetration under Dynamic Pressure: AAMA 501.1.
- n. Structural: ASTM E 330 at 150 percent of positive and negative test loads.
 - 1) Failure Criteria:
 - a) Glass is retained completely in the glazed opening with no glass fallout or breakage.
 - b) Components cannot fall off.
 - c) Permanent damage to panels is not allowed.
 - d) Do not evidence material failures or structural distress.
 - e) Permanent deformation to wall framing members not to exceed 0.2 percent of the clear span.
 - f) Trim can be disengaged but cannot fall off.
- o. Interstory Drift: AAMA 501.4 at inelastic design displacement in 4 directions.
 - 1) Failure Criteria:
 - a) Glass is retained completely in the glazed opening with no glass fallout.
 - b) Components cannot fall off.
 - c) Visible damage and minor distortion is allowed.
 - d) Do not evidence material failures or structural distress.
 - e) Trim can be disengaged but cannot fall off.
- 6. Preconstruction Laboratory Mockup Testing Program: Test preconstruction laboratory mockups in accordance with requirements in "Performance Requirements" Article. Perform the following tests in the following order:
 - a. Structural: ASTM E 330 at 50 percent of positive test load.
 - b. Air Infiltration: ASTM E 283.
 - c. Thermal Cycling: According to AAMA 501.5.
 - d. Air Infiltration: ASTM E 283.
 - e. Water Penetration under Static Pressure: ASTM E 331.
 - f. Water Penetration under Dynamic Pressure: AAMA 501.1.
 - g. Structural: ASTM E 330 at 100 percent of positive and negative test loads.
 - 1) Failure Criteria:

- a) All functions remain unimpaired with no visible damage.
 - b) No glass breakage or glass fallout is allowed.
 - c) Post displacement performance testing remains within specified requirements.
 - d) Components cannot fall off. Trim cannot be disengaged.
 - e) Deflections in excess of those specified are not acceptable.
- h. Water Penetration under Static Pressure: ASTM E 331.
- i. Interstory Drift: AAMA 501.4 at 100 percent of design displacement (elastic movement) in 4 directions.
 - 1) Failure Criteria:
 - a) All functions remain unimpaired with no visible damage.
 - b) No glass breakage or glass fallout is allowed.
 - c) Post displacement performance testing remains within specified requirements.
 - d) Components cannot fall off. Trim cannot be disengaged.
- j. Water Penetration under Static Pressure: ASTM E 331.
- k. Vertical Interstory Movement: AAMA 501.7 at design displacement.
 - 1) Failure Criteria:
 - a) All functions remain unimpaired with no visible damage.
 - b) No glass breakage or glass fallout is allowed.
 - c) Post displacement performance testing remains within specified requirements.
 - d) Components cannot fall off. Trim cannot be disengaged.
 - 2) Maintain the test specimen at the maximum open joint position for the balance of testing.
- l. Water Penetration under Static Pressure: ASTM E 331.
- m. Periodic Maintenance Equipment Load (Continuous Tie-in Guides):
 - 1) Apply <insert load> normal to the plane of the wall (<insert value> times of equipment load plus 1/3 of inward acting design wind load).
 - 2) Apply <insert load> horizontally parallel to the plane of the wall (<insert value> times of equipment load plus 1/3 of inward acting design wind load).
 - 3) Failure Criteria:
 - a) There shall be no permanent deformation of the anchorage connector.
 - b) There shall be no permanent deformation of the glazed curtain wall assembly.
 - c) No glass breakage or glass fallout is allowed.
 - d) Post displacement performance testing remains within specified requirements.
 - e) Components cannot fall off. Trim cannot be disengaged.
- n. Periodic Maintenance-Equipment Load (Intermittent Stabilization):
 - 1) Apply <insert load> side load (parallel to plane of wall) in all four directions (left, right, up, and down).
 - 2) Apply <insert load> outward load (perpendicular to the plane of the wall).
 - 3) Failure Criteria:
 - a) There shall be no permanent deformation of the anchorage connector.
 - b) There shall be no permanent deformation of the glazed curtain wall assembly.
 - c) No glass breakage or glass fallout is allowed.
 - d) Post displacement performance testing remains within specified requirements.
 - e) Components cannot fall off. Trim cannot be disengaged.

- o. Water Penetration under Static Pressure: ASTM E 331.
- p. Water Penetration under Dynamic Pressure: AAMA 501.1.
- q. Structural: ASTM E 330 at 150 percent of positive and negative test loads.
 - 1) Failure Criteria:
 - a) Glass is retained completely in the glazed opening with no glass fallout or breakage.
 - b) Components cannot fall off.
 - c) Permanent damage to panels is not allowed.
 - d) Do not evidence material failures or structural distress.
 - e) Permanent deformation to wall framing members not to exceed 0.2 percent of the clear span.
 - f) Trim can be disengaged but cannot fall off.
- r. Interstory Drift: AAMA 501.4 at inelastic design displacement in 4 directions.
 - 1) Failure Criteria:
 - a) Glass is retained completely in the glazed opening with no glass fallout.
 - b) Components cannot fall off.
 - c) Visible damage and minor distortion is allowed.
 - d) Do not evidence material failures or structural distress.
 - e) Trim can be disengaged but cannot fall off.
- s. Periodic Maintenance Equipment Overload (Continuous Tie-in Guides):
 - 1) Apply <insert load> normal to the plane of the wall (<insert value> times of equipment load plus 1/3 of inward acting design wind load).
 - 2) Apply <insert load> horizontally parallel to the plane of the wall (<insert value> times of equipment load plus 1/3 of inward acting design wind load).
 - 3) Failure Criteria:
 - a) The anchorage connector shall not detach.
 - b) Components of the glazed curtain wall assembly shall not detach.
 - c) Glass is retained completely in the glazed opening with no glass fallout.
- t. Periodic Maintenance Equipment Overload (Intermittent Stabilization):
 - 1) Apply <insert load> side load (parallel to plane of wall) in all four directions (left, right, up, and down).
 - 2) Apply <insert load> outward load (perpendicular to the plane of the wall).
 - 3) Failure Criteria:
 - a) The anchorage connector shall not detach.
 - b) Components of the glazed curtain wall assembly shall not detach.
 - c) Glass is retained completely in the glazed opening with no glass fallout.
- u. Glass Delta Fallout Displacement: AAMA 501.6 at design level lateral story displacement x 1.25 x 1.5 (ASCE 7-05 Section 13.5.9.1, Eqn. 13.5-1).
- 7. In the event of failure to meet the performance requirements:
 - a. Determine Cause of Failure.
 - b. Provide a remediation plan for review prior to performing the remediation and retesting.
 - c. Repair per manufacturer's recommendations.
 - d. Retest mockup with previously agreed upon modifications or changes.
 - e. The Architect in consultation with the testing service will determine at which step in the testing procedure retesting shall resume.
 - f. Incorporate agreed upon modifications into project submittals for record.

- g. If Cause of Failure was due to issues related to the quality of installation or failure to follow installation instructions or shop drawings, incorporate method to ensure future compliance into the fabrication and installation quality assurance and control programs.
- h. Retesting: Where manufacturing or installation methods require modification in order to meet specified performance requirements, the Contractor shall, at no additional cost to the Owner, modify, rebuild and retest mock-ups until the specified performance requirements are met. Show the required modifications on the project Shop Drawings and resubmit shop drawings as required.
 - 1) If the mockup fails to meet the specified requirements Contractor is required to pay the additional laboratory fees.
 - 2) Mock-up materials and assemblies, as tested and approved, govern the materials and assemblies furnished for field erection.
 - 3) At completion of testing, dismantle and dispose of mock-ups.
 - 4) All fees and expenses incurred by the Owner associated with the participation of the Architect, Owner, and Owner's designated technical representatives to observe both the repair/reconstruction of the mock-up, or re-testing of same, in whole or in part, shall be the sole responsibility of the Contractor.
- 8. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
- 9. Notify Architect **[seven]** <Insert number> days in advance of the dates and times when preconstruction laboratory mockups will be dismantled and disposed.
- H. Preconstruction Sealant Testing: Perform sealant manufacturer's standard tests for compatibility and adhesion of each material that will come in contact with sealants for each condition.
 - 1. Test a minimum five production-run samples each of metal, glazing, and other material.
 - 2. Prepare samples using techniques and primers required for installed assemblies.
 - 3. Perform tests under environmental conditions that duplicate those under which assemblies will be installed.
 - 4. For materials that fail tests, determine corrective measures necessary to prepare each material to ensure compatibility with and adhesion of sealants including, but not limited to, specially formulated primers. After performing these corrective measures on the minimum number of samples required for each material, retest materials.
 - 5. Preconstruction Terra Cotta Testing:
 - a. Execute a testing program to confirm material properties of custom terra cotta tiles and baguettes in the profiles, sizes, color, and finish specified for the project and ensure that acceptable material properties are maintained throughout production.
 - b. Testing shall be conducted by an independent certified testing laboratory. Test reports shall be submitted for approval by the Architect and shall indicate the laboratory name, address, date of testing, method of testing and the description and number of test specimens for each test.
 - c. Terra cotta testing shall be completed and test reports submitted prior to curtain wall performance mock-up testing.
 - d. The following material properties shall be identified for the terra cotta tile, tested in accordance with the requirements of ASTM C67-01, Standard Test Methods for Sampling and Testing Brick and Structural Clay Tile.
 - 1) Modulus of Rupture (minimum 20 specimens)
 - 2) Compressive Strength (minimum 5 specimens)

- 3) Absorption: 24-hour Submersion and 5-hour Boiling Tests (separate sets of specimens, minimum 5 specimens each)
 - a) absorption by submersion not exceed 5% average, 6% individual specimen.
 - b) absorption by boiling not exceed 7% average, 8% individual specimen.
- 4) Freezing and Thawing (minimum 5 specimens, minimum 50 cycles each).
No specimen shall lose more than 0.5% of its original dry weight. No specimen shall crack, crumble, or fracture. Specimens shall conform to the approved color range samples before and after testing.
- 5) Efflorescence (minimum 10 specimens), specimens to be rated "non-efflorescence"
- 6) Weight per Unit Area (minimum 5 specimens)
- 7) Breaking Load (according to modified ASTM C67). Minimum 5 specimens. Supports shall be the actual hardware used for the project. Apply load at mid-span between supports. Report shall include breaking load, calculated section modules at mid-span, and calculated breaking stress.
- e. In accordance with ASTM C126-99 Ceramic Glazed Structural Clay Facing Tile, Facing Brick, and Solid Masonry Unit, glazed tiles are for 3.1.8 Exterior Use. Properties of finish shall be in accordance with section 7 and tested per methods called out in section 16.
- f. Glazed tiles shall be tested in accordance with the requirements of ASTM C484, Standard Test Method for Thermal Shock Resistance of Glazed Ceramic Tile. Minimum 5 specimens. Specimens shall pass one cycle.

1.11 FIELD CONDITIONS

- A. Verify actual locations of structural supports for glazed curtain walls by field measurements before fabrication and indicate measurements on Shop Drawings.

1.12 WARRANTY

- A. Special Warranty: Installer agrees to repair or replace components of glazed aluminum curtain wall that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Noise or vibration created by wind and thermal and structural movements.
 - c. Deterioration of metals[, metal finishes,] and other materials beyond normal weathering.
 - d. Water penetration through fixed glazing and framing areas.
 - e. Failure of operating components.
 2. Warranty Period: **[Two] [Five] [10] <Insert number>** years from date of Substantial Completion.
- B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
 1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested in accordance with ASTM D 2244.

- b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
- 2. Warranty Period: **[Five] [10] [20] <Insert number>** years from date of Substantial Completion.
- C. Any other warranties of manufacturers for materials as set forth in Sections 079200 and 088000.
- D. Terra Cotta Warranty:
 - 1. Manufacturer shall warrant that terra cotta units shall not develop any defects which may affect the appearance of the product or may otherwise compromise the requirements of the system for a period of ten (10) years.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a registered design professional, as defined in Section 01 3573 "Delegated Design Requirements and Procedures" to design glazed curtain walls and connection to building structure including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
 - 1. Material properties indicated in this Section shall be considered as minimum properties.
- B. General Performance: Comply with performance requirements specified, as determined by testing of glazed curtain walls representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
 - 1. Glazed aluminum curtain walls shall withstand all movements of supporting structure indicated on Drawings including, but not limited to, story drift, rotation, twist, column shortening, shrinkage, long-term creep, live loads, wind loads, deflection from uniformly distributed and concentrated live loads, cantilevered beam behavior (deflections in both upwards and downwards directions and resultant rotations), and loads , interim and otherwise, resulting from means and methods.
 - 2. Failure also includes the following:
 - a. Thermal stresses transferring to building structure.
 - b. Glass breakage.
 - c. Noise or vibration created by wind and thermal and structural movements.
 - d. Loosening or weakening of fasteners, attachments, and other components.
 - e. Failure of operating units.
- C. Structural Loads:
 - 1. Wind Loads: As indicated on Drawings.
 - 2. Snow and Ice Loads: **[As indicated on Drawings].**
 - 3. Other Design Loads: **[As indicated on Drawings] <Insert loads>.**
 - 4. Periodic Maintenance-Equipment Loads:
 - a. Minimum **<Insert loads> [250 pounds]** point load any place on mullions.
 - b. Equipment Specific Loads: **<Insert loads>.**
 - c. Facade Anchorage Loads as indicated in Section **<Insert Section Number and Title>.**
 - 5. Structural-Test Performance: Test according to ASTM E 330 as follows:

- a. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
 - b. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
 - c. Test Durations: As required by design wind velocity, but not less than 10 seconds.
6. Deflection:
- a. Deflection Normal to Wall Plane: Limited to **[edge of glass in a direction perpendicular to glass plane not exceeding 1/175 of the glass edge length for each individual glazing lite] [1/175 of clear span for spans up to 13 feet 6 inches (4.1 m) and to 1/240 of clear span plus 1/4 inch (6.35 mm) for spans greater than 13 feet 6 inches (4.1 m)] <Insert deflection limit>** or an amount that restricts edge deflection of individual glazing lites to 3/4 inch (19.1 mm), whichever is less.
 - b. Deflection Parallel to Glazing Plane: Limited to **[1/360 of clear span or 1/8 inch (3.2 mm), whichever is smaller] [amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch (3.2 mm)]**.
 - c. Operable Units: Provide a minimum 1/16-inch (1.6-mm) clearance between framing members and operable units.
 - d. Cantilever Deflection: Where framing members overhang an anchor point, as follows:
 - 1) Perpendicular to Plane of Wall: No greater than 1/240 of clear span plus 1/4-inch (6.35-mm) for spans greater than 11 feet 8-1/4 inches (3.6 m) or 1/175 times span, for spans less than 11 feet 8-1/4 inches (3.6 m).
 - e. Twisting (rotation) of horizontal members due to the weight of the glass should not exceed 1° measured between ends and center of each span.
 - f. Deflection due to dead load at sloped glazing and canopies: Limit to L/500.
 - g. Design to resist each of the load combinations indicated in ASCE/SEI 7 and limit deflection of sloped glazing and canopies to L/240 or 3/4 inch, whichever is less.
 - h. Deflection of horizontal Fins due to dead load: Limit to L/240.
 - i. Deflection of horizontal Fins due to worst case of snow or ice load: Limit to L/240.
 - j. Stresses resulting from thermal expansion/contraction, shall not cause permanent deformation of Fin assemblies or disengagement from the glazed system.
 - k. Exposed Metal Panels and Shadow Box Panel:
 - 1) Center of Panel Deflection of vertical metal panels between supports or stiffeners not to exceed L/120.
 - l. Deflection of vertical fins:
 - 1) Along the fin between anchor points: L/360, L=distance between anchor points.
 - 2) Pivot relative to anchor point: L/120, L=depth of the fin.
 - m. PV FIN Loads: Refer to Specification Section **<Insert Section Number and Title>**
 - n. Guard Rail Structural Performance: Where the curtain wall system, and its attachment to structure, functions as a Guard Railing, it shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1) Top Rails of Guards:

- a) Uniform load of 50 lbf/ft. (0.73 kN/m) applied in any direction.
 - b) Concentrated load of 200 lbf (0.89 kN) applied in any direction.
 - c) Uniform and concentrated loads need not be assumed to act concurrently.
- 7. Interstory Drift: Accommodate design displacement of adjacent stories indicated.
 - a. Design Displacement: **[As indicated on Drawings] <Insert design displacement>**.
 - b. Test Performance: Complying with criteria for passing based on building occupancy type when tested in accordance with AAMA 501.4 at elastic **[and inelastic]** design displacement.
- 8. Seismic Performance: Glazed curtain walls shall withstand the effects of earthquake motions determined in accordance with **[ASCE/SEI 7] <Insert requirement>**.
 - a. Component Importance Factor as indicated on drawings.
 - b. Seismic Drift Causing Glass Fallout: Complying with criteria for passing based on building occupancy type when tested in accordance with AAMA 501.6.
- 9. Vertical Interstory Movement: Complying with criteria for passing based on building occupancy type when tested in accordance with AAMA 501.7 at design displacement.
- 10. Air Infiltration: Test in accordance with ASTM E 283 for infiltration as follows:
 - a. Fixed Framing and Glass Area:
 - 1) Maximum air leakage of **[0.06 cfm/sq. ft. (0.30 L/s per sq. m)] <Insert value>** at a static-air-pressure differential of **[6.24 lbf/sq. ft. (300 Pa)] <Insert value>**.
- D. Water Penetration under Static Pressure: Test in accordance with ASTM E 331 as follows:
 - 1. No evidence of water penetration through fixed glazing and framing areas when tested in accordance with a minimum static-air-pressure differential of **[6.24 lbf/sq. ft. (300 Pa)] [10 lbf/sq. ft. (480 Pa)] [15 lbf/sq. ft. (720 Pa)] <Insert value>**.
- E. Water Penetration under Dynamic Pressure: Test in accordance with AAMA 501.1 as follows:
 - 1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to **[6.24 lbf/sq. ft. (300 Pa)] [10 lbf/sq. ft. (480 Pa)] [15 lbf/sq. ft. (720 Pa)] <Insert value>**.
- F. Energy Performance: Certify and label energy performance in accordance with NFRC as follows:
 - 1. Thermal Transmittance (U-factor):
 - a. Fixed vision glazing and framing areas:
 - 1) Total product U-factor of not more than **<Insert Value>** Btu/sq. ft. x h x deg F as determined according to NFRC 100.
 - b. Fixed Opaque glazing and framing areas:
 - 1) Total product U-factor of not more than **<Insert Value>** Btu/sq. ft. x h x deg F as determined according to NFRC 100.
- G. Condensation Resistance:
 - 1. Design the wall and its components to not develop any visible interior condensation on or within any part of the fenestration system that is inboard of the manufacturer's defined airtightness plane of the curtain wall assembly framing members or glazing under the following conditions:
 - a. Exterior air dry bulb temperature: **<insert value>** degrees F.
 - b. Interior air dry bulb temperature: **<insert value>** degrees F.
 - c. Interior Relative Humidity: **<insert value>** % RH.

2. Fixed glazing and framing areas shall have an NFRC-certified condensation resistance rating of no less than **[15] [25] [35] [45] <Insert value>** as determined in accordance with NFRC 500.
- H. Self Generated Noise:
1. Design and install glazing systems and component parts to minimize noise caused by movement of the system. The system shall not generate noise due to creaking, drumming, or rattle.
 2. Metal to metal contact between inter-locking members is not permitted unless specifically indicated on the structural drawings.
- I. Noise Reduction: Test in accordance with ASTM E 90, with ratings determined by ASTM E 1332, as follows.
1. Outdoor-Indoor Transmission Class: Minimum **[26] [30] [34] <Insert number>**.
- J. Blast Resistance:
1. Hazard Rating: **[No Break] [No Hazard] [Minimal Hazard] [Very Low Hazard] [Low Hazard] [High Hazard]** per ASTM F 1642.
 2. Performance Condition: **[1] [2] [3a] [3b] [4] [5]** per GSA-TS01.
- K. Windborne-Debris Impact Resistance: Pass missile-impact and cyclic-pressure tests when tested in accordance with ASTM E 1886 and testing information in ASTM E 1996 for **[Wind Zone 1] [Wind Zone 2] [Wind Zone 3] [Wind Zone 4]**.
1. Large-Missile Test: For glazed openings located within 30 feet (9.1 m) of grade.
 2. Small-Missile Test: For glazed openings located more than 30 feet (9.1 m) above grade.
- L. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:
1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
 2. Test Interior Ambient-Air Temperature: 72 deg F
 3. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested in accordance with AAMA 501.5.
 - a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of **[180 deg F (82 deg C)] <Insert temperature>**.
 - b. Low Exterior Ambient-Air Temperature: **[0 deg F (minus 18 deg C)] <Insert temperature>**.
- M. Structural-Sealant Joints:
1. Designed to produce tensile or shear stress of less than 20 psi (138 kPa).
 2. A glass or panel unit shall not be attached by structural silicone on both sides of a frame expansion joint.
- N. Structural Sealant: Capable of withstanding tensile and shear stresses imposed by structural-sealant-glazed curtain walls without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.
1. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.

2. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate because sealant-to-substrate bond strength exceeds sealant's internal strength.

2.2 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, [**provide products by one of the following**] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 1. Arcadia, Inc.
 2. EFCO Corporation.
 3. Kawneer North America; an Arconic company.
 4. Oldcastle BuildingEnvelope.
 5. Pittco Architectural Metals, Inc.
 6. Schuco USA
 7. TGP.
 8. Tubelite Inc.
 9. Wausau Window and Wall Systems.
 10. YKK AP America Inc.
 11. <Insert Manufacturer>.
- B. Source Limitations: Obtain all components of curtain-wall system, including framing [venting windows] [entrances] [sun control] and accessories, from single manufacturer.

2.3 FRAMING

- A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
 1. Fabrication Method: Factory-fabricated system.
 2. Construction: Thermally broken.
- B. Thermally Broken Construction:
 1. Provide one of the following types of thermal break construction for use in separating aluminum components from the interior to the exterior:
 - a. Insulbar: A glass-reinforced polyamide 6/6 nylon, with glass fibers oriented in three directions, mechanically crimped into dual dovetail-shaped slots in the aluminum extrusions.
 - b. Azon or similar construction as approved: A poured and debridged polyurethane construction with mechanically abraded surfaces that lock in the polyurethane minimizing dry shrinkage and fracturing of the polyurethane.
 - c. Pressure Bar: A continuous extruded aluminum member anchored to the window framing system with mechanical fasteners and separated from the framing by an insulating non-metallic spacer.
- C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.
 1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.

- D. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials or Dead-soft, 0.018-inch- (0.457-mm-) thick stainless steel, ASTM A 240/A 240M of type recommended by manufacturer.
- E. Framing Sealants: Manufacturer's standard sealants with VOC content of 250g/L or less when calculated in accordance with 40 CFR 59, Subpart D (EPA method 24).

2.4 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 - 1. Sheet and Plate: ASTM B 209 (ASTM B 209M).
 - 2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221 (ASTM B 221M).
 - 3. Extruded Structural Pipe and Tubes: ASTM B 429.
 - 4. Structural Profiles: ASTM B 308/B 308M.
 - 5. Welding Rods and Bare Electrodes: AWS A5.10/A5.10M.
- B. Steel Reinforcement:
 - 1. Structural Shapes, Plates, and Bars: ASTM A 36/A 36M.
 - 2. Cold-Rolled Sheet and Strip: ASTM A 1008/A 1008M.
 - 3. Hot-Rolled Sheet and Strip: ASTM A 1011/A 1011M.
- C. Steel Reinforcement Primer: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods in accordance with recommendations in SSPC-SP COM, and prepare surfaces in accordance with applicable SSPC standard.
- D. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] <Insert value> percent.
- E. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] [50] <Insert value> percent.
- F. Regional Materials: Products shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.
- G. Indigenous Materials: Products shall be manufactured within 500 miles (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles (800 km) of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- H. Regional Materials: Products shall be manufactured within 500 miles (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles (800 km) of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

2.5 VENTING WINDOWS

- A. Aluminum Windows: As specified in Section 08 5113 "Aluminum Windows."
- B. Aluminum Windows: Manufacturer's standard units, complying with AAMA/WDMA/CSA 101/I.S.2/A440, with self-flashing mounting fins, and as follows:
1. Window Type: **[Horizontal sliding] [Awning] [Single hung] [As indicated on Drawings] <Insert type>**.
 2. Minimum Performance Class: **[CW] [AW] <Insert class>**.
 3. Minimum Performance Grade: **[30] [35] [40] [45] [50] [As indicated on Drawings] <Insert number>**.
 4. Aluminum Extrusions: ASTM B 221/ASTM B 221M, alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than 0.064-inch (1.63-mm) thickness at any location for main frame and sash members.
 5. Mullions: Between adjacent windows, fabricated of extruded aluminum matching finish of window units.
 6. Fasteners, Anchors, and Clips: Nonmagnetic stainless steel, aluminum, or other noncorrosive material, compatible with aluminum window members, trim, hardware, anchors, and other components of window units. Fasteners shall not be exposed, except for attaching hardware.
 - a. Reinforcement: Where fasteners screw-anchor into aluminum less than 0.128 inch (3.26 mm) thick, reinforce interior with aluminum or nonmagnetic stainless steel to receive screw threads, or provide standard, noncorrosive, pressed-in, spline grommet nuts.
 7. Hardware: Manufacturer's standard; of aluminum, stainless steel, die-cast steel, malleable iron, or bronze; including the following:
 - a. Cam-action sweep sash lock and keeper at meeting rails.
 - b. Spring-loaded, snap-type lock at jambs.
 - c. Pole-operated, cam-action locking device on meeting rail where rail is more than 72 inches (1830 mm) above floor.
 - d. Lift handles for single-hung units.
 - e. Nylon sash rollers for horizontal-sliding units.
 - f. Steel or bronze operating arms.
 8. Sliding-Type Weather Stripping: Woven-pile weather stripping of wool, polypropylene, or nylon pile and resin-impregnated backing fabric; complying with AAMA 701/702.
 9. Insect Screens: Provide removable insect screen on each operable exterior sash, with screen frame finished to match window unit, complying with SMA 1004 or SMA 1201, and as follows:
 - a. Aluminum Wire Fabric: 18-by-18 (1.1-by-1.1-mm), 18-by-16 (1.1-by-1.3-mm), or 18-by-14 (1.1-by-1.5-mm) mesh of 0.013-inch- (0.3-mm-) diameter, coated aluminum wire.
 - b. Glass-Fiber Mesh Fabric: 18-by-16 (1.1-by-1.3-mm) or 18-by-14 (1.1-by-1.5-mm) mesh of PVC-coated, glass-fiber threads, woven and fused to form a fabric mesh; complying with ASTM D 3656.
 - c. Fabric: Manufacturer's standard aluminum wire fabric or glass-fiber mesh fabric.
 10. Glazing: **[Same as adjacent glazed curtain-wall glazing] <Insert glazing>**.
 11. Finish: **[Match adjacent glazed curtain-wall finish] <Insert finish>**.

2.6 ENTRANCES

- A. Entrances: Comply with [Section 08 4113 "Aluminum-Framed Entrances and Storefronts."] <Insert Section.>

2.7 SUN CONTROL

- A. Sunshades: Assemblies consisting of manufacturer's standard outrigger brackets, louvers, and fascia, designed for attachment to curtain wall with mechanical fasteners.
1. Orientation: [Horizontal] [Vertical].
 2. Projection from Wall: [As indicated on Drawings] [20 inches (508 mm)] [25 inches (635 mm)] [30 inches (762 mm)] [35 inches (889 mm)] <Insert projection>.
 3. Outriggers: [Straight with square edges] [Straight with rounded edge] [Curved] [Wedge] <Insert shape>.
 4. Louvers:
 - a. Number: [Three] [Four] [Five] <Insert number> louvers per unit.
 - b. Shape: [Planar] [Arched] [Circular] [Airfoil] [Square].
 - c. Width: [6 inches (152 mm)] [8 inches (203 mm)] [10 inches (254 mm)] <Insert dimension>.
 - d. Mounting Angle: [25] [30] [35] <Insert number> degrees.
 5. Fascia: [Rectangular] [Bullnose] [Angular] [Circular].
 6. Finish: [Match adjacent glazed curtain wall] <Insert finish>.
- B. Light Shelves: Light-reflecting assemblies consisting of manufacturer's standard support brackets or channels, and aluminum tray, designed for attachment to interior of curtain wall with mechanical fasteners.
1. Projection from Wall: [As indicated on Drawings] [20 inches (508 mm)] [25 inches (635 mm)] [30 inches (762 mm)] [35 inches (889 mm)] <Insert projection>.
 2. Finish: [glazed curtain wall] <Insert finish>.
- C. Materials:
1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 - a. Sheet and Plate: ASTM B 209/ASTM B 209M.
 - b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221/ASTM B 221M.
 - c. Extruded Structural Pipe and Tubes: ASTM B 429/B 429.
 - d. Structural Profiles: ASTM B 308/B 308M.

2.8 GLAZING

- A. Glazing: Comply with Section 08 8000 "Glazing."
- B. Structural Glazing Sealants: ASTM C 1184, chemically curing silicone formulation that is compatible with system components with which it comes in contact, specifically formulated and tested for use as structural sealant and approved by structural-sealant manufacturer for use in curtain-wall assembly indicated.
1. Color: Black.

- C. Weatherseal Sealants: ASTM C 920 for Type S; Grade NS; Class 25 (minimum); Uses NT, G, A, and O; chemically curing silicone formulation that is compatible with structural sealant and other system components with which it comes in contact; recommended by structural-sealant, weatherseal-sealant, and structural-sealant-glazed curtain-wall manufacturers for this use.
 - 1. Color: Black.
- D. Glazing Gaskets: **[Manufacturer's standard sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.] [Comply with Section 08 8000 "Glazing."]**
 - 1. Provide gaskets that are compatible with glazing sealants and will provide for silicone adhesion.
- E. Glazing Sealants: Comply with Section 08 8000 "Glazing."
 - 1. Sealant shall have a VOC content of 250 g/L or less.
 - 2. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 3. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 - 4. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 5. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

2.9 EXTERIOR ALUMINUM FINIS

- A. Exterior Aluminum Fins: Assemblies consisting of manufacturer's standard outrigger brackets and custom profile fins designed for attachment to curtain wall with mechanical fasteners.
 - 1. Orientation: Vertical.
 - 2. Projection from Wall: As indicated on Drawings.
 - 3. Outriggers: Straight with square edges.
 - 4. Fins:
 - a. Shape: As indicated on Drawings.
 - b. Width: As indicated on Drawings.
- B. Materials:
 - 1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 - a. Sheet and Plate: ASTM B 209 (ASTM B 209M).
 - b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221 (ASTM B 221M).

- c. Extruded Structural Pipe and Tubes: ASTM B 429/B 429.
- 2. Structural Profiles: ASTM B 308/B 308M.

C. Supports and Fixings

- 1. Each Fin shall be supported and reinforced within frame of a single curtain wall unit with mechanical connections securely attached to the back-up framing structure.
- 2. All support clips and framing members shall be aluminum and shall conform to requirements for aluminum specified herein.
- 3. The width of joints between installed Fins shall be consistent and as shown on the Drawings.
- 4. Clips and support framing shall be concealed unless indicated otherwise on the Drawings.
- 5. The support system shall be designed and installed such that the replacement of individual damaged Fins is possible using simple methods and without disturbing adjacent Fins.
- 6. Provide 1/4-inch minimum edge clearance between the edge of IGU and support bracket.

2.10 TERRA COTTA

A. General:

- 1. Provide custom extruded hollow terra cotta clay baguettes with the profiles and dimensions indicated on the Drawings.
- 2. Thickness shall be as required to meet the design and performance requirements.
- 3. Custom through-body color clay with a fired finish for all surfaces exposed to view to match finish approved on the aesthetic mockup.
- 4. Terra cotta baguettes shall be flat with no noticeable warpage, buckling, or other surface irregularities, and within the following tolerances.
 - a. width of baguettes: +/- 1/16 inch
 - b. depth of baguettes: +/- 1/16 inch for 4" depth, +/- 3/32 inch for 8" depth, +/- 1/8 inch for 12" depth
 - c. height of baguettes: +/- 1/16 inch
 - d. thickness of baguettes: +/- 1/16 inch
 - e. flatness across exposed face: +/- 0.25% of length in direction of measurement

B. Supports and Fixings

- 1. Each terra cotta baguette shall be supported and reinforced within frame of a single curtain wall unit with mechanical connections securely attached to the back-up framing structure.
- 2. All support clips and framing members shall be aluminum or stainless steel, shall be approved for use by the manufacturer of the terra cotta, and shall conform to requirements for aluminum and/or stainless steel specified herein.
- 3. Support clips and framing shall incorporate continuous neoprene gaskets and setting pads to prevent terra cotta baguettes from contacting metal components and to prevent from rattling in the wind.
- 4. The width of joints between installed terra cotta baguettes shall be consistent and as shown on the Drawings.
- 5. Clips and support framing shall be concealed unless indicated otherwise on the Drawings.
- 6. The support system shall be designed and installed such that the replacement of individual damaged baguettes is possible using simple methods and without disturbing adjacent baguettes.
- 7. Provide ¼ inch minimum edge clearance between the edge of IGU and support bracket.

- C. The following are approved terra cotta manufacturers: Alternate fabricators are subject to approval:
1. Boston Valley Terra cotta
 2. Shildan USA, Inc.
 3. NBK North America
 4. **<Insert Manufacturer>**

2.11 ACCESSORIES

- A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 2. Reinforce members as required to receive fastener threads.
 3. No exposed fastenings will be permitted in aluminum work, unless otherwise specified or indicated.
 4. In certain locations where it is impossible or highly impractical, or in locations where exposed but hidden from view, consideration will be given to exposed fastenings where such fastenings are Phillips, flat head, or countersunk machine screws[, **finished to match framing system**][, **fabricated from 300 series stainless steel**].
- B. Anchors: Three-way adjustable anchors with minimum adjustment of **[1 inch (25.4 mm)]** **<Insert dimension>** that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.
- C. Concealed Flashing: **[Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials] [or] [Dead-soft, 0.018-inch-(0.457-mm-) thick stainless steel, ASTM A 240/A 240M of type recommended by manufacturer]**.
- D. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil (0.762-mm) thickness per coat.
- E. Slide Bearings (At slip-joints in exterior wall): Wherever materials are subject by engineering design to movement, provide suitable low friction material(s) such as:
1. Polytetrafluoroethylene fluoropolymer: ASTM D4894, Teflon as manufactured by Dupont or equal.
 2. Acetal homopolymer: ASTM D6100, Delrin as manufactured by Dupont or equal.
 3. Nylon: ASTM D4066.
 4. Low-friction materials shall be dimensionally-stable, impact-resistant and impervious to moisture.
 5. Mating surfaces: PTFE/AHP and PTFE/AHP or PTFE/AHP and mirror finish stainless steel.
- F. Bond Breaker Tape: Lithographer tape as manufactured by the 3M Company.

- G. Weep Hole Baffle: PVC-coated, reticulated open-cell urethane foam, 45 pores per 1 linear inch; filter to be installed compressed to 50 percent of original width.
- H. Self-adhering Stainless Steel Flexible Flashing:
1. Basis of Design: York Manufacturing, Inc.; York [304SA] [316SA]
 2. Characteristics:
 - a. Type: stainless steel core with one stainless steel face (outward facing) with a butyl block co-polymer adhesive (inward facing).
 - b. Stainless steel: type 304 or 316, ASTM A240. Domestically sourced per DFARS 252.225-7008 and/or DFARS 252.225-7009.
- I. Preformed Silicone-Sealant Extrusion: Manufacturer's standard system consisting of translucent cured low-modulus silicone extrusion with preformed inside and outside corners, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.
1. Dow Corning Corporation; Silicone Transition Strip System.
 2. Momentive Performance Materials Inc.; UST2200 UltraSpan.
 3. Prosoco; SureSpan EX
 4. Tremco; Proglaze ETA
- J. Spandrel Insulation
1. Provide one of the following:
 - a. Un-Faced Thermafiber FireSpan 90.
 - b. Un-Faced Rockwool Curtainrock 80
 2. Thickness: **[Insert Thickness]** minimum or as required to meet the total product thermal performance and fire rated joint requirements.
 3. Provide one of the following:
 - a. Foil-Faced Thermafiber FireSpan 90.
 - b. Foil-Faced Rockwool Curtainrock 80
 4. Thickness: **[Insert Thickness]** minimum or as required to meet the total product thermal performance and fire rated joint requirements.
- K. Shadow Box Panel: For use on the exterior side of the spandrel insulation.
1. 1/8 inch minimum aluminum plate
 2. Provide concealed stiffeners and attachment clips as required to provide a flat surface free of distortion, buckling, and oil-canning to and meet performance requirements.
 3. Provide extruded aluminum stiffeners or alternate panel stiffening devices designed to prevent "telegraphing" or "read through" of the stiffening device on the exposed face of the panel.
 4. Color: **[Insert Color]**.
 5. Shop Coated post-fabrication.
 6. Comply with 074213.16 "Formed Metal Wall Panels" for requirements not listed in this section.
- L. Interior Aluminum Panel: For use on the interior side of opaque curtain wall areas exposed to view.
1. 1/8 inch thick minimum aluminum plate.
 2. Interior Location Color: **[Insert Color]**.
 3. Shop Coated post-fabrication.

4. Provide concealed stiffeners and attachment clips as required to provide a flat surface free of distortion, buckling, and oil-canning.
 5. **[Form perimeters by route and return.]**
 6. Provide concealed splice plates, finished to match.
 7. Provide extruded aluminum stiffeners or alternate panel stiffening devices designed to prevent “telegraphing” or “read through” of the stiffening device on the exposed face of the panel.
 8. Comply with 074213.16 "Formed Metal Wall Panels" for requirements not listed in this section.
- M. Exterior Aluminum Spandrel Panel: For use on the exterior side of opaque curtain wall areas.
1. 1/8 inch thick minimum aluminum plate.
 2. Exterior Location Color: **[Insert Color]**.
 3. Shop Coated post-fabrication.
 4. Provide concealed stiffeners and attachment clips as required to provide a flat surface free of distortion, buckling, and oil-canning.
 5. **[Form perimeters by route and return.]**
 6. Provide extruded aluminum stiffeners or alternate panel stiffening devices designed to prevent “telegraphing” or “read through” of the stiffening device on the exposed face of the panel.
 7. Comply with 074213.16 "Formed Metal Wall Panels" for requirements not listed in this section.
- N. Interior Aluminum Backpan: For use on the interior side of opaque curtain wall areas exposed to view.
1. 1/8 inch thick minimum aluminum plate.
 2. Interior Location Color: **[Insert Color]**.
 3. Shop Coated post-fabrication.
 4. Provide concealed stiffeners and attachment clips as required to provide a flat surface free of distortion, buckling, and oil-canning.
 5. **[Form perimeters by route and return.]**
 6. Provide concealed splice plates, finished to match.
 7. Provide extruded aluminum stiffeners or alternate panel stiffening devices designed to prevent “telegraphing” or “read through” of the stiffening device on the exposed face of the panel.
 8. Comply with 074213.16 "Formed Metal Wall Panels" for requirements not listed in this section.
- O. Galvanized Metal Backpan: For use at the interior side of the spandrel insulation in concealed locations. 22GA minimum galvanized steel or as required to meet the performance requirements indicated.
- P. Provide aluminum end closures at all horizontal and vertical caps and projections with provisions for drainage.
- Q. Aluminum Trim and Closure Panels: Formed and Extruded aluminum profiles of thickness required and reinforced as required to support imposed loads.
1. Profile: as indicated on drawings.
 2. Fully weld end caps to provided surface for sealant joint installation and a watertight installation.

3. Provide concealed extruded aluminum splice plates, with concealed bed seals on all surfaces.
4. Finish to match curtain wall.

2.12 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Factory fabricate all curtain wall components. Field fabrication is not acceptable.
- D. Fabricate components that, when assembled, have the following characteristics:
 1. Profiles that are sharp, straight, and free of defects or deformations.
 2. Accurately fitted joints with ends coped or mitered.
 3. Physical and thermal isolation of glazing from framing members.
 4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
 5. Provisions for field replacement of glazing from **[exterior] [interior] [interior for vision glass and exterior for spandrel glazing or metal panels]**.
 6. Provisions for safety railings mounted **[on interior face of mullions] [between mullions at interior]**.
 7. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
 8. Components curved to indicated radii. Provide framing members that have adequate surface to accommodate two lines of air and water sealant joints between curtain walls and adjacent construction.
 9. Primary seal shall be both an air and water seal.
 - a. Secondary seal shall be water seal.
 - b. Provide watertight caps at perimeter framing members to accommodate sealant joints between curtain walls and adjacent construction.
 10. Touch-up all aluminum cut edges that will be exposed to view with color similar to curtain wall finish.
 11. Provide closed back mullions at perimeter conditions.
 12. Provide mullions with closed tongue back wall profile.
- E. Factory-Assembled Frame Units:
 1. Rigidly secure nonmovement joints.
 2. Prepare surfaces that are in contact with structural sealant in accordance with sealant manufacturer's written instructions, to ensure compatibility and adhesion.
 3. Preparation includes, but is not limited to, cleaning and priming surfaces.
 4. Seal joints watertight unless otherwise indicated.
 5. Install glazing to comply with requirements in Section 08 8000 "Glazing."
- F. Fabricate components that, when assembled, have the following characteristics:
 1. Internal guttering system or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.

2. Pressure-equalized system or double barrier design with primary air and vapor barrier at interior side of glazed aluminum curtain wall and secondary seal weeped and vented to exterior.
3. After fabrication, clearly mark components to identify their locations in Project in accordance with Shop Drawings.

2.13 ALUMINUM FINISHES

- A. Where aluminum surfaces are concealed and are a substrate for liquid applied sealants, provide a Class 1A chemical conversion coating complying with Mil-C-5541.
- B. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm]** or thicker.
- C. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
 1. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Champagne] [Black] <Insert color>**.
- D. Color: **[Match Architect's sample] [As selected by Architect from full range of industry colors and color densities]**.
- E. Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.
- F. Thermosetting Acrylic Enamel: Factory applied finish for exposed interior aluminum surfaces in accordance with AAMA 2603, equivalent to PPG Industries, Inc. "Duracron" or "Polycron III", with a dry film thickness of 0.025 mm (1.0 mil).
 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.
- G. High-Performance Organic Finish, Two-Coat PVDF: Fluoropolymer finish complying with AAMA 2604 and containing not less than 50 percent PVDF resin by weight in color coat.
 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 2. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.
- H. Superior-Performance Organic Finish, Two-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat.
 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.

2. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.**
- I. Superior-Performance Organic Finish, Three-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 2. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.**
 - J. Superior-Performance Organic Finish, Four-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
 2. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.**
 - K. Superior-Performance Organic Finish, Single-Coat FEVE: Fluoropolymer finish complying with AAMA 2605.
 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.**
 - L. Superior-Performance Organic Finish, Two-Coat FEVE: Fluoropolymer finish complying with AAMA 2605.
 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 2. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.**
- 2.14 SOURCE QUALITY CONTROL
- A. Structural Sealant: Perform quality-control procedures complying with ASTM C 1401 recommendations including, but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.
 - B. Manufacturer performed periodic Shop Wind, Air, and Water Testing
 1. Wind Load Test per ASTM C1401 at design pressure.
 2. Air infiltration when tested according to ASTM E 283 at the specified pressure.
 3. Water penetration under the specified static pressure when tested according to ASTM E 331.
 4. Test Frequency (per unitized curtain wall type)
 - a. Test one (1) unit prior to completion of the first 25 units.

- b. Test one (1) unit for every 150 completed units thereafter.
- 5.

PART 3 - EXECUTION

3.1 MOCKUP APPROVAL

- A. Do not proceed with fabrication or erection of curtain wall work before completion and approval of mockups.

3.2 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Prepare surfaces that are in contact with sealant in accordance with sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

3.4 INSTALLATION

- A. General:
 - 1. Comply with manufacturer's written instructions.
 - 2. Do not install damaged components.
 - 3. Fit joints to produce hairline joints free of burrs and distortion.
 - 4. Rigidly secure nonmovement joints.
 - 5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
 - 6. Where welding is required, weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding. Perform field welding under the same requirements as for shop welding.
 - 7. Thoroughly clean welds and adjacent burned areas on primed surfaces and paint the areas with priming paint of type used for shop coats, or zinc rich paint for galvanized steel.
 - 8. Seal joints watertight unless otherwise indicated.
- B. Anchors and Connections
 - 1. Connections between different materials shall be designed to allow for the differential thermal movement of the respected materials.
 - 2. Anchors and connections that are designed for movement shall be of such construction that friction is low enough to allow for such movement without buckling and other damage and without causing binding and noises.
 - 3. Metal surfaces shall be separated in such a manner that metal does not move on metal. Materials used for this purpose shall be low friction components, sealants or gaskets as applicable.
 - 4. Anchorages to Structural Steel shall not induce rotational forces in supporting members if not designed for these forces.

5. All component parts to be installed for noiseless movement caused by thermal expansion, and when subject to dynamic load caused by external wind pressure
 6. Avoid excess shimming that may induce additional stress on fasteners. The total thickness (t) of a shim pack shall not exceed a dimension equal to the diameter (d) of the fastener/anchor. Where $t > d$, the fastener/anchor shall be recalculated to take into account the additional stress from bending on the fastener with the assumption that the shim does not contribute to resistance to fastener bending.
 7. Shim packs that resist compressive forces only may be high-impact plastic. Shim packs subject to shear forces shall be stainless steel plates pinned together to form a monolithic shim.
- C. Metal Protection:
1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with primer, applying sealant or tape, or installing nonconductive spacers as recommended by manufacturer for this purpose.
 2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- D. Install components plumb and true in alignment with established lines and grades.
- E. Install operable units level and plumb, securely anchored, and without distortion. Adjust weather-stripping contact and hardware movement to produce proper operation.
- F. Install glazing as specified in Section 08 8000 "Glazing."
1. Prepare surfaces that are in contact with structural sealant in accordance with sealant manufacturer's written instructions, to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
- G. Install weatherseal sealant in accordance with Section 07 9200 "Joint Sealants" and in accordance with sealant manufacturer's written instructions, to produce weatherproof joints. Install joint filler behind sealant as recommended by sealant manufacturer.
- H. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
- I. Shadow Box Panel:
1. Install aluminum shadow box panel with concealed clips and fasteners.
 2. Seal fasteners in shadow box area.
 3. Provide accommodation for curtain movement.
 4. Provide accommodation to prevent noise due to panel movement.
 5. Weep and vent shadow box area to the exterior as required by glazing manufacturer.
 6. Seal shadow box panel to curtain wall frame.
 7. Provide weeps through bottom sealant.
 8. Seal interfaces of vertical and horizontal framing members full depth of mullion at shadow box and spandrel areas.
 9. Provide a means for long term securement of panel that prevents future dislodging or displacement.
- J. **[Aluminum] [or] [Galvanized Metal] Backpan:**
1. Install backpan in a manner to provide an air and vapor tight seal to the curtain wall framing and per manufacturer's installation instructions.

2. Apply a bead of sealant (min 3/8") to inside corner of backpan flange.
3. Apply sealant onto curtain wall mullion. Insert backpan into opening, maintaining equal space all around.
4. Fasten at 18 inches on center minimum or as required to meet performance requirement.
5. Seal over all screw heads and apply fillet bead of sealant between edge of backpan and curtain wall framing.
6. Apply fillet bead of sealant at the interface of vertical and horizontal mullions within the spandrel area. Connect seal to perimeter seal between backpan and framing.
7. Seal penetrations through backpans in an air and watertight manner.
8. Where required at curtain anchors, provide accommodation for movement.
9. Where required at curtain wall expansion joints, provide accommodation for movement in the backpan.

K. Spandrel Insulation: Install board insulation in curtain-wall construction where indicated on Drawings according to curtain-wall manufacturer's written instructions and as required to meet perimeter fire stopping requirements.

1. Hold insulation in place by securing metal clips and straps or integral pockets within curtain wall frames, spaced at intervals recommended in writing by insulation manufacturer to hold insulation securely in place without touching spandrel glass. Maintain cavity width of dimension indicated between insulation and glass.

L. Install insulation where it contacts perimeter fire-containment system to prevent insulation from bowing under pressure from perimeter fire-containment system.

3.5 ERECTION TOLERANCES

A. Erection Tolerances: Install glazed curtain walls to comply with the following maximum tolerances:

1. Plumb: 1/8 inch in 10 feet (3.2 mm in 3 m); 1/4 inch in 40 feet (6 mm in 12 m).
2. Level: 1/8 inch in 20 feet (3.2 mm in 6 m); 1/4 inch in 40 feet (6 mm in 12 m).
3. Alignment:
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch (12.7 mm) wide, limit offset from true alignment to 1/16 inch (1.6 mm).
 - b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch (12.7 to 25.4 mm) wide, limit offset from true alignment to 1/8 inch (3.2 mm).
 - c. Where surfaces are separated by reveal or protruding element of 1 inch (25.4 mm) wide or more, limit offset from true alignment to 1/4 inch (6 mm).
4. Location: Limit variation from plane to 1/8 inch in 12 feet (3.2 mm in 3.7 m); 1/2 inch (12.7 mm) over total length.
5. Terra Cotta Baguette Assembly/Installation Tolerance:
 - a. Where surfaces of two pieces of terra cotta abut in line, limit offset from true alignment to 1/16 inch.
 - b. Where surface of terra cotta baguette abuts with aluminum end cap, limit offset from true alignment to 1/16 inch.
 - c. For joints between baguette assemblies installed on the same curtain wall unit, limit offset from true alignment to 1/16 inch.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.

- B. Periodic Manufacturer Inspections: Arrange for curtain wall system manufacturer's technical personnel to inspect installation during periods of ongoing installation. Provide a report of observations from the curtain wall manufacturer for each site visit.
- C. Testing Services: Testing and inspecting of representative areas of glazed aluminum curtain walls shall take place as installation proceeds to determine compliance of installed assemblies with specified requirements.
- D. Field Quality-Control Testing: Perform the following tests.
1. Perform tests before installation of interior finishes has begun.
 2. Include a minimum of 6 inches of adjacent wall construction in the testing area for each test location.
 - a. The performance of the transition to the adjacent wall assembly is considered part of the test specimen.
 3. Perform testing prior to installation of veneer cladding.
 4. Pretesting: Testing of designated test locations prior to official testing by the Testing Agency is not allowed.
 5. Additional Testing due to Rework: If rework of curtain wall areas is required to repair deficient conditions or components, additional testing above and beyond the testing list below will be required.
 - a. Number of Tests:
 - 1) Minimum number of Tests: One additional test per test type listed below.
 - 2) Maximum number of Tests: No more than 15% of the rework area.
 - 3) Final determination of test locations and quantities is at the discretion of the Architect and Owner.
 - 4) Failure criteria listed below applies to testing of rework areas.
- E. **[On-Building] [Off-Building] Performance Mockup Testing**
1. Qualitative Air-Leakage-Location Testing: Assemblies will be tested for evidence of air leakage according to ASTM E 1186, chamber pressurization or depressurization with smoke tracers.
 - a. Test Pressure: 6.24 lbf/sq.ft.
 - b. Failure Criteria: Visual evidence of air leakage by means of observations of unanticipated smoke infiltration or exfiltration.
 2. Water Penetration: Each Curtain Wall Area installed on the Site Mockup shall be tested according to ASTM E 1105 at a minimum static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than **<Insert Value>** lbf/sq. ft., and shall not evidence water penetration.
 3. Water Spray Test: Areas designated by the Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
 - a. Test the transitions at adjacent exterior enclosure assemblies, inside/outside curtain wall corners, horizontal stack joints, split vertical mullion, sun shade brackets, and at changes in the plane of the curtain wall systems.
 4. Structural-Sealant Adhesion: Test structural sealant according to recommendations in ASTM C 1401, Destructive Test Method A, "Hand Pull Tab (Destructive)," Appendix X2.
 - a. Test a minimum of 2 areas on each Curtain Wall System type.
 - b. Repair installation areas damaged by testing.

F. In-Situ Testing

1. Water Penetration: Areas shall be tested according to ASTM E1105 at a minimum uniform static air pressure differential of 0.67 times the static air pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than <Insert Value> lb/sf, and shall not evidence water penetration.
 - a. ASTM E1105 Test Areas and Number of Tests:
 - 1) Distribute tests evenly across elevations.
 - 2) <Insert Curtain Wall Type>
 - a) Perform three (3) tests in areas as selected by the Architect.
 - b) Perform a test prior to 10 percent completion of the curtain wall installation.
 - c) Perform the second test after 10 percent completion but prior to 40 percent completion of the curtain wall installation.
 - d) Perform the third test after 40 percent completion but prior to prior to 75% completion of the curtain wall installation.
 - e) Specimen size Per Test: one unit (story) high by 2 full lites wide, including 3 full vertical mullions. **[Include the horizontal stack joint in the test area.]**
 - 3) <Insert Curtain Wall Type>
 - a) Perform three (3) tests in areas as selected by the Architect.
 - b) Perform a test prior to 10 percent completion of the curtain wall installation.
 - c) Perform the second test after 10 percent completion but prior to 40 percent completion of the curtain wall installation.
 - d) Perform the third test after 40 percent completion but prior to prior to 75% completion of the curtain wall installation.
 - e) Specimen size Per Test: one unit (story) high by 2 full lites wide, including 3 full vertical mullions. **[Include the horizontal stack joint in the test area.]**
2. Water Spray Test: Areas designated by the Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
 - a. Test the transitions at adjacent exterior enclosure assemblies, inside/outside curtain wall corners, horizontal stack joints, split vertical mullion, sun shade brackets and at changes in the plane of the curtain wall systems.
 - b. Test amount: <Insert Value> linear feet total for all systems.
 - c. Distribute tests evenly across all elevations.
3. Splice Joint Dam Test: Areas designated by the Architect shall be tested according to AAMA 502-02 "Sill Dam Test". Testing shall not evidence water penetration. Water loss through the splice joinery during the test duration is considered a failure.
 - a. Test Locations: Splice joints in the bottom half of the horizontal stack joint mullion.
 - b. Number of Tests: Test 1% of the splice joints but not less than five.
 - c. Static Head Height: equal to specified water penetrate test pressure.
 - d. Test Duration: 15 minutes.
 - e. Distribute tests evenly across all elevations.
4. Structural-Sealant Adhesion: Test structural sealant according to recommendations in ASTM C 1401, Destructive Test Method A, "Hand Pull Tab (Destructive)," Appendix X2.
 - a. Test a minimum of four areas on each system type on each building facade.
 - b. Repair installation areas damaged by testing.

5. Infrared Evaluation:
 - a. In general accordance with ASTM C1060 to evaluate for IGU failures and missing spandrel insulation.
 - 1) If anomalies are identified, provide proposed plan to confirm source of anomalies.
 - 2) If deficiencies are identified during confirmation process, notify design team, manufacturer, and Owner of cause and extent of deficiencies.
 - 3) Submit manufacturer approved corrective action plan for Owner and Architect's review and approval.
 - 4) Perform infrared evaluation to confirm that deficiencies have been corrected.
 - b. In general accordance with ASTM E1186 to evaluate air leakage related to the curtain wall assemblies in locations such as but not limited to transitions to adjacent exterior enclosure assemblies, penetrations through spandrels, and joints within the curtain wall assembly.
 - 1) If anomalies are identified, provide proposed plan to confirm source of anomalies.
 - 2) If deficiencies are identified during confirmation process, notify design team, manufacturer, and Owner of cause and extent of deficiencies.
 - 3) Submit manufacturer approved corrective action plan for Owner and Architect's review and approval.
 - 4) Perform infrared evaluation to confirm that deficiencies have been corrected.
6. Embedded Anchor Testing:
 - a. Site Test representatives of each anchor type embedded into concrete.
 - b. Conduct testing at each floor prior to installation of curtain wall units.
 - c. Test each anchor type for shear, tension, and shear and tension combined.
 - d. Test to 1.5 times the design load.
 - e. Comply with ASTM E 488.
 - f. Test a minimum of 1 percent but no less than five (5) anchors of each anchor type.
 - g. Where anomalies in the construction are detected during visual inspections or there are failures during embed testing, test an additional minimum of 5 percent but no less than ten (10) anchors of that anchor type for that floor.
 - h. Failure or permanent deformation to the anchor or the concrete is not acceptable.
 - i. Perform tests by an approved independent testing authority. Provide plan of test areas, test procedures, remediation measures (if required) and test results for review.
- G. Glazed curtain walls will be considered defective if they do not pass tests and inspections.
 1. Upon failure of any tests:
 - a. Mockup Testing:
 - 1) Determine Cause of Failure.
 - 2) Repair per manufacturer's recommendation.
 - 3) Provide a remediation plan for review prior to performing the remediation and retesting.
 - 4) Retest specimen after repairs are complete.
 - b. In-situ Testing:
 - 1) Determine Cause of Failure.
 - 2) Provide a remediation plan for review prior to performing the remediation and retesting.
 - 3) Repair per manufacturer's recommendation.

- 4) Retest specimen after repairs are complete.
 - 5) Determine if deficient conditions are present elsewhere on the building and repair per manufacturer's recommendations.
 - 6) If Cause of Failure was due to issues related to the quality of installation or failure to follow installation instructions or shop drawings, incorporate method to ensure future compliance into the fabrication and installation quality assurance and control programs.
 - 7) Provide an additional two tests for each occurrence of a failure.
- H. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.
- I. All fees and expenses incurred by the Owner associated with the participation of the Architect, Owner, and Owner's designated technical representatives for the following conditions shall be the sole responsibility of the Contractor.
1. Observation of the repair/reconstruction of deficient conditions.
 2. Observation of re-testing of in-situ testing.
 3. Observation of additional testing at rework areas.
- J. Prepare test and inspection reports with photographs included.

END OF SECTION

SECTION 087100 - DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes commercial door hardware for the following:
 - 1. Swinging doors.
 - 2. Other doors to the extent indicated.
- B. Door hardware includes, but is not necessarily limited to, the following:
 - 1. Mechanical door hardware.
- C. Related Sections:
 - 1. Division 01 Section "General Conditions".
 - 2. Division 06 Section "Rough Carpentry".
 - 3. Division 06 Section "Finish Carpentry".
 - 4. Division 08 Section "Operations and Maintenance".
 - 5. Division 08 Section "Hollow Metal Doors and Frames".
 - 6. Division 08 Section "Flush Wood Doors".
 - 7. Division 26 Section "Electrical".
- D. Codes and References: Comply with the version adopted by the Authority Having Jurisdiction.
 - 1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
 - 2. ICC/IBC - International Building Code.
 - 3. NFPA 70 - National Electrical Code.
 - 4. NFPA 80 - Fire Doors and Windows.
 - 5. NFPA 101 - Life Safety Code.
 - 6. NFPA 105 - Installation of Smoke Door Assemblies.
 - 7. State Building Codes, Local Amendments.
- E. Standards: All hardware specified herein shall comply with the following industry standards as applicable. Any undated reference to a standard shall be interpreted as referring to the latest edition of that standard:
 - 1. ANSI/BHMA Certified Product Standards - A156 Series.
 - 2. UL10C - Positive Pressure Fire Tests of Door Assemblies.
 - 3. ANSI/UL 294 - Access Control System Units.
 - 4. UL 305 - Panic Hardware.
 - 5. ANSI/UL 437- Key Locks.

1.3 SUBMITTALS

- A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.
- B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing, fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
 2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
 3. Content: Include the following information:
 - a. Type, style, function, size, label, hand, and finish of each door hardware item.
 - b. Manufacturer of each item.
 - c. Fastenings and other pertinent information.
 - d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
 - e. Explanation of abbreviations, symbols, and codes contained in schedule.
 - f. Mounting locations for door hardware.
 - g. Door and frame sizes and materials.
 - h. Warranty information for each product.
 - i. Operational narratives for electrified hardware.
 4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.
- C. Shop Drawings: Details of electrified access control hardware indicating the following:
1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:
 - a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
 2. Point to Point Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:
 - a. Complete (risers, point-to-point) access control system block wiring diagrams.
 - b. Wiring instructions for each electronic component scheduled herein.

3. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.
 4. Provide engineered diagrams specific to each opening. Individual wiring instructions shipped with devices are not considered a complete diagram.
- D. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.
- E. Informational Submittals:
1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

1.4 CLOSEOUT SUBMITTALS

- A. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Procedures.
- B. Project Record Documents: Provide record documentation of as-built door hardware sets in digital format (.pdf, .docx, .xlsx, .csv) and as required in Division 01, Project Record Documents.

1.5 QUALITY ASSURANCE

- A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.
- B. Certified Products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).
- C. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
- D. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

- E. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.
1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.
 2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.
- F. Each unit to bear third party permanent label indicating compliance with the referenced testing standards.
- G. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:
1. Function of building, purpose of each area and degree of security required.
 2. Plans for existing and future key system expansion.
 3. Requirements for key control storage and software.
 4. Installation of permanent keys, cylinder cores and software.
 5. Address and requirements for delivery of keys.
- H. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.
1. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
 2. Review sequence of operation narratives for each unique access controlled opening.
 3. Review and finalize construction schedule and verify availability of materials.
 4. Review the required inspecting, testing, commissioning, and demonstration procedures
- I. Pre-Installation Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for installing door hardware.
1. Prior to installation of door hardware, door hardware supplier shall conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
 2. Hardware supplier shall engage factory personnel for installation training on locks, exit devices and door closers.
- J. At completion of installation, provide written documentation that components were applied according to manufacturer's instructions and recommendations and according to approved schedule.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.
- B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.
- C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.7 COORDINATION

- A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.
- B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.
- C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.8 WARRANTY

- A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.
- B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:
 - 1. Structural failures including excessive deflection, cracking, or breakage.
 - 2. Faulty operation of the hardware.
 - 3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - 4. Electrical component defects and failures within the systems operation.
- C. Warranty Period: Unless otherwise indicated, warranty shall be one year from date of Substantial Completion.

PART 2 - PRODUCTS**2.1 MATERIALS**

- A. Hardware shall not have any visible manufacturer names on exposed materials, except cylinders, when the door is in a closed position.

2.2 BUTT HINGES

- A. Hinges: ANSI/BHMA A156.1 butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.
1. Quantity: Provide the following hinge quantity:
 - a. Two Hinges: For doors with heights up to 60 inches.
 - b. Three Hinges: For doors with heights 61 to 90 inches.
 - c. Four Hinges: For doors with heights 91 to 120 inches.
 - d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.
 2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:
 - a. Widths up to 3'0": 4-1/2" standard or heavy weight as specified.
 - b. Sizes from 3'1" to 4'0": 5" standard or heavy weight as specified.
 3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:
 - a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
 - b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.
 4. Hinge Options: Comply with the following:
 - a. Non-removable Pins: With the exception of electric through wire hinges, provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for all out-swinging lockable doors.
 5. Manufacturers:
 - a. Hager Companies (HA) - BB Series, 5-knuckle.
 - b. Ives (IV) - 5BB Series, 5-knuckle.
 - c. McKinney (MK) - TA/T4A Series, 5-knuckle.

2.3 POWER TRANSFER DEVICES

- A. Electrified Quick Connect Transfer Hinges: Provide electrified transfer hinges with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets with a 1-year warranty. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.
1. Manufacturers:
 - a. Hager Companies (HA) - ETW-QC (# wires) Option.
 - b. Ives (IV) - Connect.
 - c. McKinney (MK) - QC (# wires) Option.

- B. Concealed Quick Connect Electric Power Transfers: Provide concealed wiring pathway housing mortised into the door and frame for low voltage electrified door hardware. Furnish with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.
1. Manufacturers:
 - a. Pemko (PE) - EL-CEPT Series.
 - b. Securitron (SU) - EL-CEPT Series.
 - c. Von Duprin (VD) - EPT-10 Series.
- C. Electric Door Wire Harnesses: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.
1. Provide one each of the following tools as part of the base bid contract:
 - a. McKinney (MK) - Electrical Connecting Kit: QC-R001.
 - b. McKinney (MK) - Connector Hand Tool: QC-R003.
 2. Manufacturers:
 - a. Hager Companies (HA) - Quick Connect.
 - b. McKinney (MK) - QC-C Series.
 - c. Von Duprin (VD) - Connect.

2.4 DOOR OPERATING TRIM

- A. Flush Bolts and Surface Bolts: Provide products conforming to ANSI/BHMA A156.3 and A156.16, Grade 1.
1. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately six feet from the floor.
 2. Furnish dust proof strikes for bottom bolts.
 3. Surface bolts to be minimum 8" in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.
 4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.
 5. Manufacturers:
 - a. Ives (IV).
 - b. Rockwood (RO).
 - c. Trimco (TC).

2.5 CYLINDERS AND KEYING

- A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.

- B. Cylinder Types: Original manufacturer cylinders able to supply the following cylinder formats and types:
1. Threaded mortise cylinders with rings and cams to suit hardware application.
 2. Rim cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
 3. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
 4. Keyway: Match Facility Standard.
- C. Small Format Interchangeable Cores: Provide small format interchangeable cores (SFIC) as specified, core insert, removable by use of a special key; usable with other manufacturers' cylinders.
- D. Keying System: Each type of lock and cylinders to be factory keyed.
1. Supplier shall conduct a "Keying Conference" to define and document keying system instructions and requirements.
 2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
 3. New System: Key locks to the existing key system as directed by the Owner.
- E. Key Quantity: Provide the following minimum number of keys:
1. Change Keys per Cylinder: Two (2)
 2. Master Keys (per Master Key Level/Group): Five (5).
 3. Construction Keys: Ten (10).
 4. Construction Control Keys: Two (2).
 5. Permanent Control Keys: Two (2).
- F. Construction Keying: Provide temporary keyed construction cores.
- G. Key Registration List (Bitting List):
1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
 2. Provide transcript list in writing or electronic file as directed by the Owner.

2.6 KEY CONTROL

- A. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150% of the number of locks required for the project.
1. Manufacturers:
 - a. Lund Equipment (LU).
 - b. MMF Industries (MM).
 - c. Telkee (TK).

2.7 MORTISE LOCKS AND LATCHING DEVICES

- A. Mortise Locksets, Grade 1 (Heavy Duty): Provide ANSI/BHMA A156.13, Series 1000, Operational Grade 1 Certified Products Directory (CPD) listed mortise locksets. Listed manufacturers shall meet all functions and features as specified herein.
1. Manufacturers:
 - a. Corbin Russwin Hardware (RU) - ML2000 Series.
 - b. Sargent Manufacturing (SA) - 8200 Series.
 - c. Schlage (SC) - L9000 Series.

2.8 LOCK AND LATCH STRIKES

- A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:
1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
 2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
- B. Standards: Comply with the following:
1. Strikes for Mortise Locks and Latches: BHMA A156.13.
 2. Dustproof Strikes: BHMA A156.16.

2.9 CONVENTIONAL EXIT DEVICES

- A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:
1. Exit devices shall have a five-year warranty.
 2. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.
 3. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer's catalog and template book for specific requirements.
 4. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.
 5. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.
 6. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.
 - a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
 - b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.

7. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.
 8. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2" wide stiles.
 9. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.
 10. Rail Sizing: Provide exit device rails factory sized for proper door width application.
 11. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.
- B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed exit devices. Listed manufacturers shall meet all functions and features as specified herein.
1. Manufacturers:
 - a. Corbin Russwin Hardware (RU) - ED5000 Series.
 - b. Sargent Manufacturing (SA) - 80 Series.
 - c. Von Duprin (VD) - 98 Series.

2.10 SURFACE DOOR CLOSERS

- A. All door closers specified herein shall meet or exceed the following criteria:
1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers.
 2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.
 3. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the Americans with Disabilities Act, provide units complying with ANSI ICC/A117.1.
 4. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
 5. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
 6. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.
- B. Door Closers, Surface Mounted (Large Body Cast Iron): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control.
1. Manufacturers:
 - a. Corbin Russwin Hardware (RU) - DC8000 Series.
 - b. LCN Closers (LC) - 4040XP Series.
 - c. Sargent Manufacturing (SA) - 281 Series.

2.11 SURFACE MOUNTED CLOSER HOLDERS

- A. Electromagnetic Door Holders: ANSI A156.15, Grade 1 electromagnetic door holder/releases with a minimum 25 to 40 pounds holding power and fail-safe operation; power failure releases door to close.
 - 1. Manufacturers:
 - a. LCN Door Closers (LC) - SEM7800 Series.
 - b. Norton Rixson (NO) - 900 Series.
 - c. Sargent Manufacturing (SA) - 1560 Series.

2.12 ARCHITECTURAL TRIM AND ACCESSORIES

- A. Door, Frame and Wall Protective Trim: ANSI/BHMA A156.6, protective products as specified in the hardware sets. Door protection plates shall be not more than 2" less than door width on stop side and 1" less door width on the pull side or on stop side of pairs of doors. Listed manufacturers shall meet all functions and features as specified herein.
 - 1. Provide protective trim with functions and features as follows:
 - a. Meets ADA requirements for smooth bottom door surfaces.
 - b. UL Classified options for use on fire-rated doors up to 3 hours.
 - c. Fabricated from stainless steel, brass, bronze, aluminum, or high-impact plastic.
 - d. Available in a variety of sizes, finishes, and profiles to suit aesthetic and functional requirements.
 - e. Designed to protect doors, frames, and adjacent walls from damage due to impact, abrasion, or traffic.
 - f. Fasteners included; adhesive-backed options available for select models.
 - g. Ten-year limited warranty.
 - 2. Manufacturers:
 - a. Ives (IV).
 - b. Rockwood (RO).
 - c. Trimco (TC).

2.13 DOOR STOPS AND HOLDERS

- A. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.
 - 1. Manufacturers:
 - a. Ives (IV).
 - b. Rockwood (RO).
 - c. Trimco (TC).

2.14 ARCHITECTURAL SEALS

- A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

- B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.
 - 1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.
- C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.
 - 1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NFPA 252, Standard Methods of Fire Tests of Door Assemblies.
- D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.
- E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.
- F. Manufacturers:
 - 1. Pemko (PE).
 - 2. Reese Enterprises, Inc. (RE).
 - 3. Zero (ZE).

2.15 FABRICATION

- A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.16 FINISHES

- A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.
- B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware
- C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

- B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

- A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.
- B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

- A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.
 - 1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.
- B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
 - 1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
 - 2. DHI TDH-007-20: Installation Guide for Doors and Hardware.
 - 3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
 - 4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.
- C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.
- D. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."
- E. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

- A. Field Inspection (Punch Report): Reference Division 01 Sections "Closeout Procedures". Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.

1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

3.5 ADJUSTING

- A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

- A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.
- B. Clean adjacent surfaces soiled by door hardware installation.
- C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

- A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

- A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.
 1. Quantities listed are for each pair of doors, or for each single door.
 2. The supplier is responsible for handing and sizing all products.
 3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.
- B. Manufacturer's Abbreviations:

1. IV - Ives
2. VO - Von Duprin
3. RO - Rockwood
4. SC - Schlage
5. SA - SARGENT

- 6. NO - Norton Rixson
- 7. PE - Pemko
- 8. MK - McKinney
- 9. OT - Other

Hardware Sets

Set: 1.0

Doors: 100A, 101A, 100B (SINGLE DOOR, SIMILAR)

Description: Pair Exterior Service Dock (CR, MHO)

5 Hinge, Full Mortise, Hvy Wt	5BB1HW 4-1/2" x 4-1/2" NRP	630	IV
1 Hinge, Full Mortise, Hvy Wt	5BB1HW 4-1/2" x 4-1/2" TWxx CON	630	IV
2 Flush Bolt	555	US26D	RO
1 Dust Proof Strike	570	US26D	RO
1 Fail Secure Lock	L9092EU H 06A 10-072-7/8 RX	630	SC
1 Permanent Core	By Owner	626	SC
2 Surface Closer	281 P10	EN	SA
2 Kick Plate	K1050 10" x 2" LDW CSK BEV	US32D	RO
2 Stop Holder	494S	US26D	RO
1 Astragal	357SP		PE
1 Gasketing	2891AS (Head)		PE
1 Gasketing	290AS (Jambs)		PE
1 Rain Guard	346C		PE
2 Sweep	315CN		PE
1 Threshold	2705AT		PE
1 Wire Harness	CON Series x Length as Req'd (Door)		SC
1 Wire Harness	CON Series x Length as Req'd (Jamb)		SC
1 Card Reader	Provided by ACS		OT
1 Door Position Switch	Provided by ACS		OT
1 Power Supply	Provided by ACS		OT

Notes: Install perimeter seal prior to closer. Special templating required. Template closer for 180 degrees. Mount astragal on pull side of active leaf and size doors for 1/8" clearance between leaves.

Operation:

- Doors electrically unlocked or locked during established time zones as programmed by the access control system. When outside lever is locked the card reader grants access upon presentation of a valid credential. Locksets mechanically lock during power failure with a mechanical key override entry.
- Egress always free from inside by depressing inside lever.
- Request to exit switch in lever to signal authorized egress to the access control system.
- Door position switch to signal door open/closed to the access control system.

Notes: Mount astragal on pull side of active leaf and size doors for 1/8" clearance between leaves. Install perimeter seal prior to closer. Special templating required.

Operation:

1. Doors electrically unlocked or locked during established time zones as programmed by the access control system. When outside lever is locked the card reader grants access upon presentation of a valid credential. Locksets mechanically lock during power failure with a mechanical key override entry.
2. Egress always free from inside by depressing inside lever.
3. Request to exit switch in lever to signal authorized egress to the access control system.
4. Door position switch to signal door open/closed to the access control system.

END OF SECTION

SECTION 08 8000 - GLAZING**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes glazing for the following products and applications, including those specified in other Sections where glazing requirements are specified by reference to this Section:
 - 1. Windows.
 - 2. Doors.
 - 3. Glazed curtain walls.
 - 4. Storefront framing.
 - 5. Interior borrowed lites.
 - 6. Glazing sealants and accessories.
- B. Related Requirements:
 - 1. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.
 - 2. Section 08 4400 "Glazed Curtain Walls" for structural glazing sealants used in structural-sealant-glazed curtain walls.
 - 3. Section 08 8853 "Security Glazing."

1.2 DEFINITIONS

- A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
- B. Glass Fabrication: Using primary glass in the production of single pane glass products such as coated, laminated and heat treated glass. Can be done by either the Glass Manufacturer or the Glazing Product Manufacturer.
- C. Glazing Product Manufacturer: Firm that uses fabricated glass in the production of insulating glass (multiple panes of glass).
- D. Glass Thicknesses: Indicated by thickness designations in millimeters in accordance with ASTM C1036.
- E. IBC: International Building Code.
- F. Interspace: Space between lites of an insulating-glass unit.
- G. Large Glass Lites and Insulating Glass Units: Over 55 SF.
- H. Structural Glazing Product Manufacturer: Firm that produces insulating glass for use in a structural glazing system.
- I. Wildland-Urban Interface (WUI): The zone of transition between unoccupied land and human development. It is the line, area or zone where structures and other human development meet or intermingle with undeveloped wildland or vegetative fuels. (FEMA definition)

1.3 COORDINATION

- A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 2. Review temporary protection requirements for glazing during and after installation.
 - 3. Review glazing systems included in Project and specified in other Sections.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of glass product and glazing material specified.
- B. Sustainable Design Submittals:
 - 1. Product Data: For sealants, indicating VOC content.
 - 2. Laboratory Test Reports: For sealants, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings:
 - 1. Submit shop drawings of glazing details. Draw details minimum full size (twice full size preferred) and indicate dimensions, tolerances, and materials.
 - 2. Submit shop drawings for structural sealant glazing after review and approval of shop drawings by sealant and glass product manufacturers.
- D. Glass Samples:
 - 1. Each type of monolithic[**and laminated glass**], except clear monolithic glass, no less than 3 by 6 inches (75 by 160 mm).
 - 2. Each type of insulating[**and insulating laminated glass**], no less than 12 by 12 inches (300 by 300 mm), including type of edge seal, spacer, and corner construction of spacer. Identify specific type of reflective and Low-e coated glass, coated surfaces, and exterior face of unit.
 - 3. Each type of spandrel glass, no less than 12 by 12 inches (300 by 300 mm).
- E. Exposed Glazing Accessory Samples: For gaskets, sealants, and colored spacers, in 12 inch (300 mm) lengths. Install sealant samples between two strips of material representative in color of the adjoining framing system after sealant color selections have been made.
- F. Other Glazing Accessory Samples:
 - 1. Corner construction of compression gasket for dry glazing with each leg approximately 6 inches (150 mm) long.
 - 2. Tape sealant, 6 inches (150 mm) long.
 - 3. Compression wedge, 6 inches (150 mm) long.
 - 4. Channel gasket, 6 inches (150 mm) long.
 - 5. Bed gasket, 6 inches (150 mm) long.
 - 6. Face shim or spacer.
 - 7. Setting block.

8. Edge block.
 9. Compressible filler.
 10. Open cell filler.
- G. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.
- H. Delegated-Design Submittal: Refer to Section 01 3573 "Delegated Design Requirements and Procedures" for delegated design submittal procedures and requirements.
1. Provide delegated-design submittals for glass.
- I. Qualification Data: For **[Installer]** **[manufacturers of insulating-glass units with sputter-coated, low-E coatings]** **[glass testing agency]** **[and]** **[sealant testing agency]**.
- J. Product Certificates:
1. Submit statement from glazing product manufacturer stating that glazing products meet the requirements of the specified standards, the project specifications, and that there is no incompatibility of glazing materials with the insulating glass unit sealants.
 2. Provide glass fabrication manufacturer's statement that they have reviewed and approved the application of the glazing details for the project.
 3. Upon request, submit reports indicating results of distortion and flatness monitoring and inspection for laminated and heat treated glass and for continuous on-line color measurement via spectrophotometer inspection device.
 4. Submit statement from structural glazing product manufacturer indicating the following:
 - a. The details of construction have been reviewed and are approved for use with the glass products.
 - b. The secondary seal of insulating glass units has been designed and sized to resist the applied loads.
 - c. The Contractor's quality assurance program has been reviewed and is approved.
 5. Submit statement from structural glazing sealant manufacturer indicating that structural sealants have been tested prior to installation and conform to the requirements of the Contract Documents and the following:
 - a. The structural sealant meets ASTM C1184.
 - b. The structural sealant is compatible with specified sealant backing and spacer materials as determined by ASTM C1087.
 - c. The structural sealant is compatible with and does not adhere to specified bond breaker and spacer materials as determined by ASTM C1087.
 - d. The structural sealant is compatible with the insulating glass unit edge seal.
 - e. The structural sealant is compatible with and has been tested for adequate adhesion to each respective substrate.
 - f. The details of construction have been reviewed and are approved for use with the structural sealant.
 - g. The design stress of the sealant due to the application of the primary forces does not exceed 20 psi (138 kPa).
 6. If any of the above required statements involve more than one manufacturer, submit certificates from each of those manufacturers.
- K. Glazing Analysis:

1. For exterior glazing, provide statement, analysis methods, and calculations that demonstrates the products meet the specified glass breakage probability requirements for indicated and anticipated in-service applied loads and demonstrating that expected thermal stressing of products is acceptable. All such analysis shall be performed by experts experienced in analyzing thermal stressing of glazing due to in service environmental conditions utilizing appropriate engineering means of thermal stress analysis.
2. For exterior glazing, provide an analysis confirming all in service thermal stressing of the glass has been evaluated and that expected thermal stressing will not exceed the strength capacity of the glass and the glass is acceptable for the anticipated in-service conditions of exposure. All such analysis shall be performed by experts experienced in analyzing thermal stressing of glazing due to in service environmental conditions utilizing appropriate engineering means of thermal stress analysis.
 - a. Provide copy of analysis and summary report.
 - b. Analysis shall include consideration for the following conditions where applicable:
 - 1) Thermal properties of the glass units, including laminate interlayers, coatings and applied frits, and thermal spacers in the case of insulated units.
 - 2) Geographic and weather conditions of the building site.
 - 3) Solar orientation of the glass units.
 - 4) Impact of shading by adjacent structures.
 - 5) Glazing system's properties that may impact temperature differentials within the glass units.
 - 6) Highly reflective surfaces in the immediate area which may impact temperature differentials within the glass units.
 - 7) Shading of glass units by properties of the building configuration including, but not limited to, fins, projections, changes in building lines in plan, overhangs, projections, and similar physical attributes.
 - 8) Glazing conditions including spandrels and shadow boxes including back pans and insulation layers on the inboard side of the glass.
 - 9) Interior conditions nearby the glass which may impact glazing unit temperatures including pockets resulting from interior configurations, interior shading or other window treatment devices, and mechanical heating or cooling systems.
 - 10) Consideration for potential loss of strength of glass due to application of frits or coatings.
 - 11) Industry standard ranges of strength for annealed, heat strengthened, or tempered glass units unless fabricator/manufacturer can demonstrate strength properties outside of these ranges.
 - 12) Consideration for predictability of post fabrication heat forming of glass units.
 - 13) Heated framing systems.
- L. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for **[tinted glass]** **[coated glass]** **[insulating glass]** **[glazing sealants]** **[and]** **[glazing gaskets]**.
 1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.
- M. Preconstruction adhesion and compatibility test report.
- N. Quality Assurance Program (QAP):

1. Glass fabrication: Written QAP including but not limited to reference of applicable ASTM testing methodology, type and frequency of in-line monitoring of glass fabrication, and reporting and documentation. Test sample lite of glass, at Contractor's expense, for conformance to:
 - a. Bow and warp.
 - b. Localized distortion/roller wave.
 - c. Concavity/convexity.
 - d. Compression strength.
 - e. Distortion and Flatness Monitoring and Inspection Device for Laminated and Heat Treated Glass: Osprey 8 by LiteSentry.
2. Installation: Written QAP to monitor quality of products such as cleaners, solvents, primers, and sealants; and sealant workmanship including, cleaning, priming, joint opening preparation, and sealant installation.
 - a. Include as part of program random adhesion and compatibility testing of production run products.
 - b. Do not install sealant work prior to review of program.
 - c. Submit quality assurance program to glass and sealant manufacturers for review and approval prior to submission to Architect.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. At Owner's direction, and prior to construction completion, furnish for future maintenance and repair, the following glass types for attic stock:
 1. **<Insert Types>**.
 2. Furnish **<Insert>** percent of quantity for each size and type but not less than 1, nor more than **<Insert>** units for each size of each type of rectangular shaped units.
- B. Units for attic stock shall be adequately crated and identified as to storage conditions, unit type, size, surface to be glazed to exterior, and any other pertinent information to assist the Owner in future maintenance.

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications for Insulating-Glass Units with Sputter-Coated, Low-E Coatings: A qualified insulating-glass manufacturer who is approved[**and certified**] by coated-glass manufacturer.
- B. Glass Testing Agency Qualifications: A qualified independent testing agency accredited in accordance with the NFRC CAP 1 Certification Agency Program.
- C. Sealant Testing Agency Qualifications: An independent testing agency qualified in accordance with ASTM C1021 to conduct the testing indicated.
- D. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and to set quality standards for materials and execution.
 1. Glazing mock-up: Produce **[three]** **<insert number>** full-sized IGUs for review and approval by the Architect before full production run.
 2. Install glazing in mockups specified in Division 08 Section "[**Aluminum-Framed Entrances and Storefronts**] [**Aluminum Windows**] [**Glazed Aluminum Curtain Walls**] **<Insert Section title>**" to match glazing systems required for Project, including glazing methods.

3. Approved sample installation may become part of the completed Work if undisturbed at time of Substantial Completion.
4. Place mockup where reflection from adjacent buildings or other structures with a regular pattern can be used to gauge overall appearance / distortion of the glass.

1.8 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each glass product, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.
 1. Testing is not required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
 2. Use ASTM C1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
 3. Test no fewer than **[eight]** **<Insert number>** Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
 4. Schedule enough time for testing and analyzing results to prevent delaying the Work.
 5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect glazing materials in accordance with manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with insulating-glass manufacturer's written instructions for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
 1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or are below 40 deg F (4.4 deg C). Do not install sealants to wet or frost covered surfaces.

1.11 WARRANTY

- A. General: During the warranty period, restore defective Work to the standard of the Contract Documents, including all labor, materials, refinishing and other costs incidental to the Work. Restore Work found to be defective as defined in the Contract Documents. The warranty period starts at the date of Substantial Completion.
- B. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: [10] <Insert number> years from date of Substantial Completion.
- C. Manufacturer's Special Warranty for Laminated Glass: Manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
 1. Warranty Period: [Five] [10] <Insert number> years from date of Substantial Completion.
- D. Manufacturer's Special Warranty for Insulating Glass: Manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.
 1. Warranty Period: [10] <Insert number> years from date of Substantial Completion.
- E. Manufacturer's Special Warranty for Heat Soaking of Tempered Glass: Manufacturer agrees to replace heat soaked tempered glass units that fail. Warrant that heat soaked tempered glass will not spontaneously break as a result of nickel sulfide (NiS) inclusions at a rate exceeding 0.3 percent (3/1000).
 1. Warranty Period: 10 years from date of Substantial Completion.
- F. Installation: Glazing systems installation shall be warranted for a period of five years against defective materials and workmanship.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND FABRICATORS

- A. Glazing and Coating Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. AGC Glass Company North America, Inc.
 2. Cardinal Glass Industries.
 3. Gardner Glass, Inc.
 4. GGI, General Glass International.
 5. Guardian Glass.
 6. Pilkington North America.
 7. Schott North America, Inc.
 8. Vetrotech Saint-Gobain.
 9. Saint-Gobain.
 10. Viracon, Inc.
 11. Vitro Architectural Glass.
- B. Glazing Unit Fabricators: Subject to compliance with requirements, provide products by one of the following:
 1. Agnora.
 2. Cardinal Glass Industries.
 3. Cristacurva.

4. Dlubak Corporation.
5. GGI; General Glass International.
6. Glasswerks LA, Inc.
7. JE Berkowitz, LP.
8. Northwestern Industries, Inc.
9. Oldcastle BuildingEnvelope.
10. Pilkington North America.
11. Rochester Insulating Glass.
12. Trulite Glass & Aluminum Solutions, LLC.
13. Tvitec.
14. Vetrotech Saint-Gobain.
15. Viracon, Inc.

- C. Source Limitations for Glass: Obtain from single source from single manufacturer for each glass type.
 1. Obtain tinted glass from single source from single manufacturer.
 2. Obtain reflective-coated glass from single source from single manufacturer.
- D. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

2.2 PERFORMANCE REQUIREMENTS

- A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Delegated Design: Engage a registered design professional, as defined in Section 01 3573 "Delegated Design Requirements and Procedures" to design glazing.
 1. Material properties indicated in this Section shall be considered as minimum properties.
- C. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined in accordance with the IBC and ASTM E1300.
 1. Design Wind Pressures:
 - a. As indicated on Drawings.
 - b. Design Wind Pressures: Determine design wind pressures applicable to Project in accordance with ASCE/SEI 7, based on heights above grade indicated on Drawings.
 - 1) Wind Design Data: As indicated on Drawings.
 - 2) Basic Wind Speed: [85 mph (38 m/s)] [90 mph (40 m/s)] [100 mph (44 m/s)] [110 mph (49 m/s)] <Insert value>.
 - 3) Importance Factor: [1.0] <Insert factor>.
 - 4) Exposure Category: [B] [C] [D].
 2. Design Snow Loads: <Insert design snow load> [As indicated on Drawings].
 3. Thickness of Patterned Glass: Base design of patterned glass on thickness at thinnest part of the glass.
 4. Probability of Breakage for Sloped Glazing: For glass surfaces sloped more than 15 degrees from vertical, design glass for a probability of breakage not greater than 0.001.

5. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch (25 mm), whichever is less.
 6. Differential Shading: Design glass to resist thermal stresses induced by differential shading within individual glass lites.
- D. Windborne-Debris Impact Resistance: Exterior glazing shall pass ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone [1] [2] [3] [4] for [basic] [enhanced] protection.
1. Large-Missile Test: For glazing located within [30 feet (9.1 m)] <Insert dimension> of grade.
 2. Small-Missile Test: For glazing located between 30 feet (9.1 m) and [60 feet (18.3 m)] <Insert dimension> above grade.
- E. Safety Glazing:
1. CPSC 16 CFR part 1201, testing requirements of ANSI Z97.1, and listed in the SGCC Certified Products Directory with appropriate SGCC certification mark or label permanently affixed.
 2. Furnish safety glass for glass occurring in doors and sidelights, and where indicated and further required by authorities having jurisdiction.
- F. Sound Control Glazing: Products with air borne sound transmission loss as measured by ASTM E90 and STC rating as classified by ASTM E413.
- G. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
1. For monolithic-glass lites, properties are based on units with lites [6 mm thick] [of thickness indicated].
 2. For laminated-glass lites, properties are based on products of construction indicated.
 3. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
 4. U-Factors: Center-of-glazing values, in accordance with NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F (W/sq. m x K).
 5. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, in accordance with NFRC 200 and based on LBL's WINDOW 5.2 computer program.
 6. Visible Reflectance: Center-of-glazing values, in accordance with NFRC 300.

2.3 GLASS PRODUCTS, GENERAL

- A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
1. GANA Publications: "Laminated Glazing Reference Manual" and "Glazing Manual."
 2. AAMA Publications: AAMA GD5G-1, "Glass Design for Sloped Glazing," and AAMA TIR A7, "Sloped Glazing Guidelines."
 3. IGMA Publication for Sloped Glazing: IGMA TB-3001, "Guidelines for Sloped Glazing."
 4. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."

- B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC the SGCC or another certification agency acceptable to authorities having jurisdiction or manufacturer. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- C. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.
- D. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than the thickness indicated.
 - 1. Minimum Glass Thickness for Exterior Lites: 6 mm Insert thickness designation.
 - 2. Thickness of Tinted Glass: Provide same thickness for each tint color indicated throughout Project.
- E. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass[**as needed to comply with "Performance Requirements" Article**]. Where heat-strengthened float glass is indicated, provide heat-strengthened float glass or fully tempered float glass[**as needed to comply with "Performance Requirements" Article**]. Where fully tempered float glass is indicated, provide fully tempered float glass.
- F. Low-E Coatings: For glazing requiring low-e coatings, comply with the following.
 - 1. Provide a minimum of 95 percent edge deletion of low-e coating around the entire perimeter of the unit to ensure proper seal in insulated unit.
 - 2. Utilize coated glass produced using continuous in-line color measurement via spectrophotometer inspection device.
 - 3. Tolerance for color variation to be no greater than a total range of 4.5 delta E for color incident and at angle, based on measurement protocol described in ASTM C1376.
 - 4. Transmitted and reflected color for all coated glass shall be consistent and fall on the same side of the neutral axis of the color spectrum as defined in ASTM D2244.

2.4 GLASS PRODUCTS

- A. Fully Tempered Float Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
 - 1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
 - 2. Heat Soak Testing: For all fully tempered glass, provide heat soak testing conforming to EN14179 which includes a 2 hour dwell at 290 deg C, +/- 10 deg C.
- B. Heat-Strengthened Float Glass: ASTM C1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
 - 1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
 - 2. For uncoated glass, comply with requirements for Condition A.
 - 3. For coated vision glass, comply with requirements for Condition C (other coated glass).
 - 4. Limit Kind HS surface compression to upper end of ASTM C 1048 range, 7,500 psi.
 - 5. Distortion Tolerances:

- a. Roller Wave: Maximum 0.003 inch (0.076 mm) from peak to valley within the main body of the sheet and maximum 0.008 inch (0.20 mm) within 10.5 inches of a leading or trailing edge.
 - b. Localized Warp: Maximum 0.03 inch (0.80 mm) over any 12 inch (305 mm) span, but limited to 0.31 inch (8.00 mm).
- C. Low-E / Reflective-Coated Vision Glass: ASTM C1376.
- D. Low-E / Reflective-Coated Ceramic Spandrel Glass: ASTM C1376, Kind CS, coated by **[pyrolytic process][vacuum deposition (sputter-coating) process]**, ASTM C1048, Condition B, Type I, Quality-Q3, and complying with other specified requirements.

2.5 LAMINATED GLASS

- A. Laminated Glass: ASTM C1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
- 1. Construction: Laminate glass with polyvinyl butyral interlayer to comply with interlayer manufacturer's written instructions.
 - 2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
 - 3. Interlayer Color: Clear unless otherwise indicated.
 - 4. Glass Edge Alignment Tolerances:
 - a. Concealed Laminated Glass Edge Offset:
 - 1) Edge length less than 80-inches: ± 0.04 inch.
 - 2) Edge length greater than 80-inches: ± 0.08 inch.
 - b. Exposed Laminated Glass Edge Offset: The edges of the laminated glass plies shall be flush and level ± 0.04 -inch.

2.6 INSULATING GLASS

- A. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified in accordance with ASTM E2190.
- 1. Sealing System: Dual seal, with manufacturer's standard primary and secondary seal, and with soldered, welded, and/or bent spacer corner construction.
 - a. Units for Structural Sealant Glazing: Dual seal construction of a polyisobutylene primary seal and silicone secondary seal, and with soldered, welded, and/or bent spacer corner construction.
 - b. Secondary Seal: Continuous, free of skips and voids.
 - 2. Perimeter Spacer: Manufacturer's standard spacer material and construction.
 - a. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) Technoform Glass Insulation NA, Inc.
 - 2) Thermix; a brand of Ensinger USA.
 - 3. Desiccant: Molecular sieve or silica gel, or a blend of both.
 - 4. Units which will be shipped through or glazed at altitudes of 5000 feet (1520 meters) or more above sea level, fabricated with breather or capillary tubes, to permit air space pressure equalization. Provide same warranty as for non-breather or capillary tube units. Pinch tubes during glazing if required by glass manufacturer.

5. Flatness Tolerance: Manufacturer units so that maximum out-of-plane concavity/convexity, at center of each lite, does not exceed the following when ambient temperature is 70 degrees Fahrenheit and glass surface temperature is within +/- 5 degrees Fahrenheit of ambient temperature. Measure flatness with units installed in vertical position.
 - a. Units 20 square feet and longer in area: + / - 1/16-inch maximum.
 - b. Units smaller than 20 square feet: + / - 1/32-inch maximum.
 - c. If units are manufactured at geodetic elevation higher or lower than that of the Project, take measures to assure that flatness tolerance are met. If filling or deflating is used at time of manufacture to compensate for elevation difference, it shall be done after full curing of glass edge seals.

2.7 GLAZING GASKETS

- A. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal, made from **[one of]** the following:
 1. Neoprene complying with ASTM C 864.
 2. EPDM complying with ASTM C 864.
 3. Silicone complying with ASTM C 1115.
 4. Thermoplastic polyolefin rubber complying with ASTM C 1115.
 5. Compression wedge for dry glazing system: of shape and size to compress the exterior compression gasket a minimum of 25 percent, and as recommended by glazing and sealing systems manufacturer.
 6. Provide gaskets that are compatible with glazing sealants and will provide for silicone adhesion.
- B. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned **[neoprene]** **[EPDM]** **[silicone]** **[or]** **[thermoplastic polyolefin rubber]** gaskets complying with ASTM C 509, Type II, black; of profile and hardness required to maintain watertight seal.
 1. Bed gasket for wet glazing system: continuous with pressure sensitive adhesive 1 side, designed to be compressed 25-40 percent in the opening.
 2. Compression gasket for dry glazing system: shape as required to be compressed in place a minimum of 25 percent and of one-piece construction with factory-assembled frames with injection-molded, vulcanized corners; produced oversize in opening dimension, as determined by measurements, to insure compression at corners but within limits so that compression does not create a "pucker".
 3. Channel gasket: continuous channel of shape and dimensions for application in the opening with specified glazing.
 4. Provide gaskets that are compatible with glazing sealants and will provide for silicone adhesion.

2.8 GLAZING SEALANTS

- A. General:
 1. Compatibility: Compatible with one another and with other materials they contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
 2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.

3. Sealant shall have a VOC content of 250 g/L or less.
4. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
5. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range.

B. Glazing Sealant:

1. Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 100/50, Use NT.
 - a. Manufacturers: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) Dow Corning Corporation; 790.
 - 2) GE Construction Sealants; Momentive Performance Materials Inc.; SilPruf LM SCS2700.
 - 3) Tremco Incorporated; Spectrem 1.
 - b. Applications: **<Describe types of glazing applications where this sealant is required>.**
2. See Section 08 4423 "Structural-Sealant-Glazed Curtain Walls for information on structural sealant.

2.9 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800 for products indicated below:
1. AAMA 804.3 tape, where indicated.
 2. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
 3. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.
- B. For openings up to 75 united inches (1900 united mm), use unshimmed tape. For openings over 75 united inches (1900 united mm), use pre-shimmed tape.

2.10 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, with requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

1. Each block shall be properly sized for load, as wide or wider than glazing, no less than 4 inches (100 mm) long; profile to permit friction fit, dart insertion into metal chair, or pressure sensitive adhesive one side to fix block in glazing opening.
 - D. Spacers: Elastomeric blocks or continuous extrusions of 40 to 60 Shore "A" durometer hardness to maintain glass lites in place for installation indicated.
 1. Profile to permit friction fit, dart insertion or pressure sensitive adhesive one side to fix shim or spacer in location.
 - E. Edge Blocks: Elastomeric material of 40 to 60 Shore "A" durometer hardness to limit glass lateral movement (side walking).
 1. Each block shall be a minimum of 4 inches (100 mm) long, as wide as glazing, placed in the vertical glazing channel, and sized to allow a nominal 1/8-inch (3-mm) clearance between glass edge and installed block; profile to permit friction fit or pressure sensitive adhesive one side to fix block in glazing opening.
 - F. Cylindrical Glazing Sealant Backing: ASTM C1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.
 - G. Open Cell Filter: Reticulated flexible polyester urethane foam having 20 pores per inch, sized at least 1 inch (25 mm) larger in dimension than weephole, of cross section to provide 15 to 25 percent compression for friction fit and as manufactured by Foam Division, Scott Paper Co.; H-O Products Corp. or approved comparable product.
 - H. Bond Breaker : Heavy duty, 11-mil (0.28-mm) minimum thickness, colored, polyethylene or teflon, self-adhesive bond breaker of type recommended by sealant manufacturer and suitable for conditions of usage. Liquid bond breaker is not permitted.
- 2.11 FABRICATION OF GLAZING UNITS
- A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
 1. Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
 - a. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
 - B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.
 - C. Grind smooth and polish exposed glass edges[**and corners**].
 - D. Speaking Holes: 4 inches (100 mm) in diameter, unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
 - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
 - 2. Presence and functioning of weep systems.
 - 3. Minimum required face and edge clearances.
 - 4. Effective sealing between joints of glass-framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.
- B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that leave visible marks in the completed Work.

3.3 GLAZING, GENERAL

- A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
 - 1. Ensure approved Quality Assurance Program is implemented.
- B. Adjust glazing channel dimensions as required by Project conditions during installation to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances
- C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass includes glass with edge damage or other imperfections that, when installed, could weaken glass, impair performance, or impair appearance.
- D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
 - 1. Locate one quarter of glass width from each corner, but with block edge nearest corner no closer than 6 inches (150 mm) from corner, unless otherwise specified or required by glass manufacturer.
 - 2. Insulating glass used in sloped glazing shall have both panes supported by setting blocks.

- F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
 - G. Provide spacers for glass lites where length plus width is larger than 50 inches (1270 mm).
 - 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
 - 2. Provide 1/8-inch (3-mm) minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
 - H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and in accordance with requirements in referenced glazing publications.
 - I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
 - J. Set glass lites with proper orientation so that coatings face exterior or interior as specified.
 - K. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.
 - L. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.
 - M. Where butted glass without mullions is indicated, seal open joints with silicone sealant in accordance with sealant and glass manufacturer's written instructions. Set glass so that joint is plumb and glass edges are aligned to provide for a uniform joint width of 3/8 inch maximum. Mask edges of glass to confine sealant to joints and to avoid contact with either face of glass. Use primer where required. Neatly tool joints to slightly concave surface using recommended tooling agent. Remove masking from glass and clean glass surfaces completely free of sealant material.
- 3.4 TAPE GLAZING
- A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
 - B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
 - C. Cover vertical framing joints by applying tapes to heads and sills first, then to jambs. Cover horizontal framing joints by applying tapes to jambs, then to heads and sills.
 - D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
 - E. Do not remove release paper from tape until right before each glazing unit is installed.

- F. Apply heel bead of elastomeric sealant.
- G. Center glass lites in openings on setting blocks, and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
- H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.5 GASKET GLAZING (DRY)

- A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
- B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
- C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- E. Install gaskets so they protrude past face of glazing stops.

3.6 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or backings in place and in position to control location and depth of installed sealant for required sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a smooth surface and on exterior applications provide a wash away from glass.

3.7 STRUCTURAL SEALANT GLAZING

- A. Install continuous spacers between glass lites and glazing channels to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Perform no structural sealant glazing prior to written certification of adhesion and compatibility test results, review and written approval of glazing details by glass and sealant manufacturers, and acceptance of written quality assurance program.
- C. Install glass in metal windows or framing with continuous spacer installed between glass and window or frame, setting blocks properly sized and located and structural sealant installed in properly sized and located cavity formed by glass, spacer and window or frame.
- D. Provide installation that maintains glass face clearances and prevents sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or backings in place and in position to control location and depth of installed sealant for required sealant performance.
- E. Perform installation procedures per written sealant and glass manufacturers' requirements and written quality assurance program.
- F. Force sealants into glazing channels to eliminate voids and to ensure complete wetting and bond of sealant to glass and channel surfaces.
- G. Tool exposed surfaces of sealants to provide a smooth surface and on exterior applications provide a wash away from glass.
- H. Do not allow sealant to bleed into the interface between the glass and glazing spacer.
- I. Structural sealant work shall be shop-glazed.

3.8 CLEANING AND PROTECTION

- A. Immediately after installation remove nonpermanent labels and clean surfaces.
- B. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels and clean surfaces.
- C. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
 - 1. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer. Remove and replace glass that cannot be cleaned without damage to coatings.

- D. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.
- E. Remove and replace glass that is damaged during construction period.
- F. Wash glass on both exposed surfaces not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

3.9 LAMINATED GLASS SCHEDULE: IGL-1

3.10 INSULATING GLASS SCHEDULE:

END OF SECTION

FOR REFERENCE ONLY

SECTION 08 8813 - GLASS VIEWING PANELS**PART ONE – GENERAL****1.1 SUMMARY**

- A. Section Includes:
1. Provide all glass viewing panels, as shown on the Drawings, as specified herein, and as needed for a complete and proper installation.
 2. Works Includes:
 - a) Panel at Viewing
 - b) Glazing engineering of panel composition
 - c) Structural support for the panels above
 3. Coordination:
 - a) Panel Rebates: coordinate the work of this section with the work of Section 03 30 00 Cast-in-Place Concrete or 03 37 13 Artificial Rockwork.
 - b) Structural Support: coordinate the work of this section with the work of Section 03 30 00 Cast-in-Place Concrete or 03 37 13 Artificial Rockwork.
- B. Related Sections:
- 03 30 00 Cast-in-Place Concrete
 - 03 37 13 Artificial Rockwork
 - 05 50 00 Metal Fabrications

1.2 ADMINISTRATIVE REQUIREMENTS:

- A. Coordination:
- Coordinate components of the work of this Section with work performed by other Sections in sufficient time to allow for other components of the work to incorporate requirements of this Section without causing delay to the work, including the following:
- B. Pre-Installation Conference:
- a) Conduct a pre-installation conference with the consultant, general contractor, the manufacturer's technical advisor(s), and the Installer of the glass viewing panels and representatives of the trades who will be conducting work in the immediate areas during the installation.
 - b) Coordinate installation procedures and specifically inform the other trades working in the area of the protection measures required during and after the installation of the viewing panels.

1.3 DEFINITIONS

- A. Manufacturers of Glass Products:
- Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
- B. Glass Thicknesses:
- Indicated by thickness designations in inches, and millimeters according to ASTM C 1036.
- C. Deterioration of Laminated Glass:
- Defects are those developed from normal use that are attributed to the manufacturing process and not to causes such as glass breakage and practices for maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, fogging, and blemishes exceeding those allowed by referenced laminated-glass standard.

D. Deterioration of Anti-Reflective Coating:

Defects are those developed from normal use that are attributed to the manufacturing process and not to causes such as glass breakage and practices for maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include separation of the coating materially obstructing vision through glass.

1.4 SYSTEM DESCRIPTION:**A. Delegated Design:**

1. The work of this section requires professional design services or certifications by a design professional employed by the fabricator, and who is not the Consultant.
2. Complete the design of the viewing panels and rebates.
3. Maintain the general design concept shown.
4. Do not change member sizes or alter profiles and alignment, except as outlined in the design processes of this section.

B. Structural Systems Design:

1. Structural Engineering:
 - a) Provide the structural engineering design for viewing panels and rebates.
 - b) Drawings and Calculations:
Provide complete design, calculations, and drawings, prepared and signed in accordance with pertinent provisions of division one of these Specifications.
 - c) Licensed Engineer:
Design drawings will be prepared, approved, signed and sealed by a licensed professional engineer.
2. Design:
 - a) Panels:
Design panels to withstand the design pressures without failure of the viewing panel, failure of the waterproof seal between panel and structure, deterioration of the glazing materials, or other defects in the work.
 - b) Glazing Deflection:
Limit deflections to flexure limit of glazing, providing for full recovery of glazing.
 - c) Varying Conditions:
Design panels for the maximum thermal variation of the project installation, and wind and animal impact loads.
 - d) Rebate Design:
Design the proper profile and depth for the rebate that will receive the viewing panels.
 - e) Safety Factor:
 - 1) Glass thickness designations indicated in the documents are minimums and are for detailing only.
 - 2) Provide actual glass thicknesses by analyzing project loads and in-service conditions.
 - 3) Design to a theoretic risk of breakage equal to 1.0% or less.
 - f) Waterproofing:
 - 1) Provide design of connection and waterproof seal of the pool vessel water proofing system to the viewing panel.
 - 2) Overlap the waterproofing specified in section 03 37 13 Artificial Rockwork, with the panel rebate and sealant to provide assurance against water leakage.
3. General Design Loads:
Design all elements for the following loads:

- a) Dead loads
- b) Live loads due to animals and keeper staff
- c) Wind loads where applicable
- 4. Design Criteria:
 - a) Maximum panel height is as shown on drawings.
 - b) Minimum panel width is as shown on the drawings.
 - c) Maximum height of water against the panel is: N/A
 - d) Panels are supported as shown on the details
 - e) Temperature Range: Washington D.C., 95°F to 0°F
- 5. Animal Load Design Criteria:
 - a) Jaguar maximum mass equals 70lbs
 - b) Impact occurs 3-ft above bottom of panel.
 - c) Impact occurs over 1 sq foot (0.00108 sq cm).
- C. Performance Requirements:
 - 1. General:
 - a) Corrosion:
All materials must be corrosion resistant in the pool vessel operating environment.
 - b) Materials specified herein are intended to establish the standards of quality required for the Work of this Section.
 - c) All materials and/or completed fabrications must have a twenty (20) year structural service life.
 - d) Glazing Deflection:
Limit deflections to flexure limit of glazing, providing for full recovery of glazing.
- D. Approvals and Permits:
 - 1. General:
Secure the approval of governmental agencies having jurisdiction prior to submitting for the Consultant's approval.
 - 2. Building Permits:
Obtain all required permits and approvals for proposed systems.

1.5 SUBMITTALS

- A. General:
 - 1. Comply with the pertinent provisions of Sections of 01 30 00 Administrative Requirements.
 - 2. Within 45 calendar days after the Contractor has received the Owner's Notice to Proceed, submit the following:
- B. Design Drawings:
 - 1. Delegated Design:
 - a) Submit complete drawings accurately showing proposed all of the fabrications described in this section, prepared in accordance with the following provisions:
 - b) Verify materials selection and sizes.
 - c) Verify fabrication and connection details for the fabrications or suggest alternative connection details.
 - d) Design system utilizing the system components specified in Part 2 of this specification.
 - e) Revise drawings as required by the Owner and resubmit.
 - 2. Delegated Design Submittals:

- a) Provide all submittals described in Section 01 33 50 as required for the work of this section.
- 3. Design Notes and Calculations:
 - a) When requested by Consultant, submit design notes and calculations, signed and sealed by the Professional Engineer.
- C. Manufacturer's Product Data:
 - 1. Complete materials list showing all items proposed to be furnished and installed under this section.
 - 2. Manufacturers technical literature describing the polymer, sealants, and other material proposed for this application.
 - 3. Names of manufacturer's technical advisors.
 - 4. Manufacturer's recommended installation procedures which, when accepted by the Consultant, will become the basis for accepting or rejecting actual installation procedures used on the Work.
- D. Construction Narrative and Schedule:
 - 1. Provide detailed narrative plan describing installation process, equipment requirements, manpower requirements, physical and environmental conditions required during installation and curing period, plan for protection and testing of installation, and all other related process required to complete this section
 - 2. Provide schedule of viewing panel submittals, delivery, and installation. Interface with all corresponding activities of the construction schedule for the entire project.
 - 3. Carefully schedule the arrival, installation, curing, and testing of the panel by tank filling, draining, and final filling so as not to delay the project in any manner.
 - 4. Allow adequate time for repair of leaks and the refilling and retesting of the tank.
 - 5. Adjust schedule as required by Consultant and general contractor to meet the requirements of the entire project.
- E. Shop Drawings and Design Calculations:
 - 1. Provide design engineering calculations specifying the viewing panel thickness, proposed glazing systems, and the interface of the viewing panel with the supporting structure and rebates.
 - 2. Provide Shop Drawings and details completely showing the fabrication, installation, and anchorage of the viewing panel, and the interface of the work of this section with the work of adjacent trades.
- F. Shop and Field Measurements:
 - 1. Due to the fast track construction schedule and the lead-time for manufacturing of the viewing panels, field measurements of the viewing panel openings may not be available at the time of panel manufacture.
 - 2. If the viewing panels must be fabricated prior to completion of the viewing panel rebates. submit actual shop measurements of the fabricated viewing panels to the General Contractor. The General Contractor shall then be responsible for constructing the viewing panel opening to the shop measurements. These measurements shall include but not be limited to deviation from prescribed plumbness, squareness, level, size, and thickness.
 - 3. If the viewing panel rebates are completed prior to the manufacturing of viewing panel, the General Contractor shall provide the Viewing Panel Manufacturer with field measurements of the concrete openings prior to fabrication of the panels.
- G. Samples:

Accompanying the above product data, submit:

 - 1. Viewing Panel:

Provide one sample of viewing panel 600mm by 600mm (24-inches by 24-inches) by the designed thickness for each viewing panel condition demonstrating clarity, finish, visual color and surface finish as delivered.

2. Sealant:

Samples, at least 300mm (12-inches) long, of each type of sealant proposed to be used, installed between samples of the material to be glazed, fully cured.

1.6 QUALITY ASSURANCE

A. Standards:

1. Regulatory Requirements:

- a) International Building Code, latest edition, as modified by the local jurisdiction.
- b) Relevant Building Code for the jurisdiction in which the project is being constructed.
- c) Comply with all current applicable requirements of state and local Fire Marshall.
- d) ANSI / NFPA 101 Life Safety Code, current edition
- e) ANSI / NFPA 150 Animal Standard on Fire & Life Safety in Animal Housing Facilities, current edition

2. Industry Standards:

- a) GANA, Glazing Manual
 - b) GANA, Laminated Glazing Reference Manual
 - c) Flat Glass Marketing Association "Glazing Sealing Systems Manual",
 - d) Flat Glass Marketing Association "Glazing Manual"
 - e) ULI (Underwriters' Laboratories, Inc.) Building Materials List, for labeled openings.
3. ISO 12453-6, Glass in Buildings – Laminated Glass and Laminated Safety Glass (defines allowable visual defects)

B. Manufacturer's Qualifications:

Manufacturer of the laminated glass viewing panels shall provide evidence of having experience, for the last five (5) years, in the manufacture, shipping and installation of laminated glass viewing panels of similar size and configuration to those required by this project.

C. Installer's Qualifications:

1. Manufacturer shall provide evidence that the installation technical advisors to be used for this project have experience, for the last five (5) years, in the installation of laminated glass viewing panels of similar size and configuration to those required by this project.
2. Provide a minimum of two (2) manufacturer's technical advisors to be present at the time of panel installation and sealant application.
3. Use skilled glaziers and laborers who are trained and experienced in laminated glass panel glazing and practices required for underwater pool vessel installations, and who are familiar with the specified requirements and the methods needed for proper performance of the Work of this Section.

D. Concrete Opening Certification:

The viewing panel Contractor shall inspect and certify in writing the acceptance of the concrete sill, jamb and header conditions at each location as suitable for installation of laminated glass viewing panels.

1.7 PRODUCT HANDLING

A. General:

Comply with the pertinent provisions of Sections of 01 60 00 Product Requirements.

B. Protection

1. Use all means necessary to protect the materials of this Section before, during, and after installation and to protect the Work and materials of all other trades.
 2. During storage and handling of glass, provide cushions at edges to prevent impact damage.
- C. Packing and Shipping:
1. The manufacturer shall design special packing and shipping procedures to ensure that the viewing panels are not damaged during shipping.
 2. Protect the viewing panel with protective plywood and an appropriate separator sheet that will remain in place through-out shipping and installation. This will require that the edges of the protective crate be removed just prior to the installation of the panel into its opening.
- D. Acceptance at Site:
1. The Consultant and Owner will inspect the viewing panel upon delivery to the site for obvious damage to the protective packaging.
 2. Remove and replace damaged items.
- E. Storage and protection:
1. Store protected viewing panels in accordance with the manufacturer's requirements.
 2. Make every effort to protect the viewing panels prior to and following installation until final acceptance.
- F. Replacements:
1. Panels Damaged by the Viewing Panel Contractor:
 - a) Viewing panels broken or damaged during the course of the Work by viewing panel Contractor's workers or due to manufacturing defects or inadequate protection are the responsibility of the viewing panel Contractor.
 - b) In the event of such damage, immediately make all repairs and replacements necessary.
 2. Panels Damaged by Other Causes:
 - a) Costs of replacing or repairing glazing broken or damaged by other Contractors during the Work are the responsibility of the Contractor causing the damage.
 - b) Costs of replacing or repairing viewing panels broken or damaged by natural causes, accidents, or vandalism are the responsibility of the General Contractor.
 - c) In the event of such damage, the viewing panel Contractor will repair or remove and replace the viewing panels that are broken or damaged.

1.8 WARRANTY

- A. Manufacturer's Special Warranty on Laminated Glass:
1. Manufacturer's standard form made out to Owner and signed by laminated-glass manufacturer agreeing to replace laminated-glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
 2. Warranty Period:
10 years from date of Substantial Completion.
- B. Installer's Special Warranty on installations subject to partial or full water immersion:
1. Installer shall warrant that the installation shall be free of leaks and agreeing to remove and reinstall the glass and glazing materials as required in order to make it water tight.
 2. Warranty Period:
 3. 5 years from date of Substantial Completion.
- C. Manufacturer's Special Warranty on Anti-Reflective Coating:

1. Manufacturer's standard form made out to Owner and signed by laminated-glass manufacturer agreeing to replace laminated-glass units with anti-reflective coating that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
2. Warranty Period:
10 years from date of Substantial Completion.

PART TWO - PRODUCTS

2.1 GLAZING PANEL:

A. General:

See Delegated Design requirements

1. Laminated Glass Interlayers:
 - a) Polyvinyl butryl (pvb), polycarbonate, or acrylic interlayers, thickness as recommended by the glass manufacturer and system design.
 - b) Ionoplast interlayers, thickness as recommended by the glass manufacturer and the system design.
2. Low-Iron Clear Float Glass:
As produced by the referenced manufacturer's products below.
3. Non-Reflective Coating:
Provide proprietary non-reflective coatings as specified by the individual manufacturer's noted below.

B. Acceptable Products and Manufacturers:

Low iron and non-reflective

1. Pilkington 'Optiview'
2. Schott, 'Amiran', Water-white
3. PPG SOLARPHIRE(R) Anti-Reflective Glass
4. St Gobains SGG Vision-Lite Anti-Reflective Glass

C. Fabrication:

1. Fabricate glass as shown on the Drawings.
2. Grind and polish edges as required for butt glazing at the angles shown on the Drawings.

2.2 GLAZING ACCESSORIES

A. General:

1. Provide all glazing accessories required to supplement those accessories which accompany the items to be glazed, and as needed to provide a complete installation, including glazing points, clips, shims, angles, beads, setting blocks, and spacer strips.
2. Use only stainless steel or FRP accessories.

B. FRP Mounting Clips, angles, plates, and rebate embeds:

1. Designed and supplied by the Glazing Panel Manufacturer or their approved vendor.

C. Back-up Material:

Polyethylene foam rod of non-adhering type recommended by sealant manufacturer.

D. Silicone Sealant:

1. As recommended by viewing panel manufacturer and which has been successfully used at other similar installations.
2. Provide compatible primer where required.
3. Approved Sealant Products:

Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

- a) Shinetsue, 70-6x, 2-part silicone sealant
 - b) Toray, SH 792, 2-part silicone sealant
 - c) PRC, PR-383, 2-part polysulfide sealant
 - d) Dow Corning, 999, 1-part silicone sealant
 - e) Dow Corning, 795, 1-part silicone sealant
 4. Dow Corning No. 781, clear silicone sealant for sealant in frames,
 5. Dow Corning No. 732, silicone sealant for butt joints, color black.
 6. Apply sealant leaving no voids.
- E. Neoprene Bearing Pads:
1. Glass Panels:
 - a) Shore Hardness 40-50 with continuous corners.
 - b) At corner vulcanize or glue joints to 50% of native strength minimum.
 - c) Glue pads to substrate surfaces to prevent slippage.
- F. Neoprene Setting Blocks:
1. Glass Panels:
 - a) Shore Hardness 70-90,
 - b) Size as recommended by installer.
 - c) Two at each sill at quarter points.
- G. Sealant Protection from Animals:
- Provide custom stainless-steel joint protection at all sealant joints which will be exposed to animals in the completed construction.
1. Embed stainless steel strip firmly in sealant and recess 3-4mm below the face of the glazing panels.
- H. Edge Protection:
- Provide stainless steel edge protection or Manufacturer's standard weather protection at all laminated glass edges exposed to weather or moisture.

PART THREE - EXECUTION

3.1 INSPECTION

A. General:

Examine the areas and conditions under which Work of this Section will be performed. Correct conditions detrimental to the proper and timely completion of the Work. Do not proceed until unsatisfactory conditions have been corrected.

B. Responsibilities:

1. Insure that pool vessel and water-proofing are complete prior to beginning the work of this section. Leakage at the viewing panel and viewing panel rebate are the responsibility of the viewing panel Contractor.
2. Leakage at the waterproofed pool vessel is the responsibility of the General Contractor.

3.2 INSTALLATION

A. Inspection:

Inspect each piece of glass immediately prior to start of installation.

1. Do not install items which are improperly sized, have damaged edges, or are scratched, abraded, or damaged in any other manner.
2. Do not remove labels from glass until so directed by the Consultant.

3. Install glass so distortion waves, if present, run in the horizontal direction.
- B. Cleaning Rebates and Glazing Channels:
1. Surfaces must be clean, free of old coatings and should be either acid etched or sand blasted.
 2. All cracks and holes in concrete are to be epoxy injected and patched with epoxy waterproof sealant and sanded smooth.
 3. Install epoxy injection and waterproof sealant according to viewing panel manufacturer's instructions.
 4. Clean the rabbet area to be sealed with epoxy waterproofing with a cloth soaked with toluene.
 5. Clean area to be sealed on the viewing panel with a cloth soaked with methyl-alcohol.
 6. Cut the polyethylene foam sheet backer into appropriate sizes and insert it into the joint slot.
 7. Apply masking tape on both sides of all joints.
 8. Clean the sealing area again on both the epoxy waterproofing and the viewing panel.
- C. Primers:
1. Apply primers to joint surfaces required for adhesion of sealants as determined by preconstruction sealant-substrate testing.
 2. Apply primers on clean, oil-free surfaces and never touch the treated area.
 3. Carefully apply the primers so that there will be no application to adjacent surfaces.
 4. Air-dry the treated primers for not less than 30 minutes or more than 36 minutes.
 5. The primers are flammable. Keep them away from heat, sparks and flame. Use them only in well-ventilated area. (No smoking allowed.)
 6. Take care not to touch the concrete and acrylic viewing panel surfaces after they have been cleaned in accordance with these specifications.
- D. Setting Blocks and Spacers:
1. Install setting blocks of proper size, locate one quarter of panel width from each corner, but no closer than 150mm (6-inches), unless otherwise required at intermediate points specified by acrylic viewing panel Manufacturer.
 2. Set blocks in thin course of sealant which is acceptable for heel bead use.
 3. Provide spacers of correct size and spacing to preserve required face clearances, and use thickness equal to sealant width.
 4. Provide edge blocking to comply with requirements of referenced glazing standard, except where otherwise required by acrylic viewing panel Manufacturer.
- E. Bond Breakers:
- Provide compressible filler rods or equivalent back-up materials and bond breakers, as recommended by sealant and viewing panel manufacturer, to prevent sealant from adhering to joints back surface and to control depth of sealant for optimum performance.
- F. Butt Joint Glazing
1. Field verify dimensions for installation of glazing with butt joints prior to cutting the glass into the shapes as shown on the Drawings.
 2. Fabricate glass as required for each installation.
 3. Unless otherwise approved or shown on the Drawings, install with uniform 1/8" gap between glass sheets at butt joints
 4. Finish joints with silicone sealant per sealant manufacturer's recommendations.
 5. Install with clear silicone sealant at all butt joints except for glass panels at aquatic exhibits.

6. Install with black silicone sealant at aquatic exhibits.
7. Install clear sealant at all butt joints between glass and Artificial Rockwork not in contact with pools.

3.3 PROTECTION AND CLEANING

A. Viewing Panel Protection:

1. Protect viewing panels from damage immediately upon installation by use of temporary partitions and the specified protection attached to framing held away from glazing.
2. Do not apply markers to surfaces of view window. Remove non-permanent labels and clean surfaces.

B. Contamination by Foreign Substances:

1. Protect glazing from contact with contaminating substances resulting from construction.
2. If contaminating substances do come into contact with view window, remove immediately by the method recommended by viewing panel manufacturer.

C. Final Cleaning and Polishing:

1. Clean viewing panel on both faces not more than 12-hours prior to date scheduled for visual inspections intended to establish date of substantial completion in each area of project.
2. Using cleaning methods recommended by the viewing panel manufacturer.

END OF SECTION

SECTION 08 8853 - SECURITY GLAZING**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes:
 - 1. Laminated-glass security glazing
 - 2. Insulating security glazing.

1.2 DEFINITIONS

- A. Glazing Manufacturers: Firms that produce primary glass, monolithic plastic glazing, or fabricated security glazing, as defined in referenced glazing publications.
- B. Interspace: Space between lites of air-gap security glazing or insulating security glazing.

1.3 COORDINATION

- A. Coordinate glazing channel dimensions to provide necessary bite on security glazing, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 2. Review temporary protection requirements for security glazing during and after installation.

1.5 ACTION SUBMITTALS

- A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required **[Product Data submittal]** **and** **[Samples submittal]**. Ensure compliance with requirements included in **[Section 01 3300 "Submittal Procedures"]** **[Section 08 0413 "Common Submittal Requirements for Openings"]**.
- B. Product Data: For each type of product.
- C. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of **[glass tint]** **[glass coating]** **[colored interlayer]** **[sealant]** **and** **[colored spacer]**.
- D. Samples for Verification:
 - 1. Glazing: Actual sample of finished products for each type of security glazing.
 - a. Size: **[Manufacturers' standard size]** **<Insert size>**.
 - 2. Glazing Accessories: Actual sample of **[sealants]** **and** **[colored spacers]**. **[Install sealant Samples between two strips of material representative in color of the adjoining framing system.]**
 - 3. Size: **[Manufacturers' standard size]** **<Insert size>**.

- E. Security Glazing Schedule: List security glazing types and thicknesses for each size opening and location. Use same designations indicated on Drawings. Indicate coordinated dimensions of security glazing and construction that receives security glazing, including clearances and glazing channel dimensions.
- F. Sustainable Design Submittals:
 - 1. Product Data: For sealants, indicating VOC content.
 - 2. Laboratory Test Reports: For sealants, indicating compliance with requirements for low-emitting materials.

1.6 INFORMATIONAL SUBMITTALS

- A. Test and Evaluation Reports:
 - 1. Product Test Reports:
 - a. For each type of security glazing, for tests performed by **[qualified testing agency][manufacturer and witnessed by a qualified testing agency]**.
 - b. For each type of glazing sealant, for tests performed by a qualified testing agency.
 - 1) Provide test reports based on testing current sealant formulations within previous 36-month period.
 - 2. Preconstruction Test Reports: For preconstruction adhesion and compatibility testing.
- B. Qualification Statements: For **[installers][manufacturers of insulating or air-gap security glazing with sputter-coated, low-e coatings][glazing testing agency][and][sealant testing agency]**.

1.7 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Manufacturers: For insulating or air-gap security glazing units with sputter-coated, low-e coatings, a qualified insulating glazing manufacturer who is approved **[and certified]** by coated-glass manufacturer.
 - 2. Installers: **[Fabricator of products][Entity that employs installers and supervisors who are trained and approved by manufacturer][Authorized representative who is trained and approved by manufacturer]**.
 - 3. Delegated Design Engineer: A professional engineer who is legally qualified to practice in **[state]<Insert jurisdiction>** where Project is located and who is experienced in providing engineering services of type indicated.
 - 4. Security Glazing Testing Agency: Subject to compliance with requirements, testing agency is one of the following:
 - a. Intertek.
 - b. Underwriters Laboratories, Inc.
 - c. Wiss, Janney, Elstner Associates, Inc.
 - d. **<Insert testing agency name>**.
 - 5. Sealant Testing Agency: An independent testing agency qualified in accordance with ASTM C1021 to conduct the testing indicated.

1.8 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each security glazing type, tape sealant, gasket, glazing accessory, and glazing-framing member for adhesion to and compatibility with elastomeric glazing sealants.
1. Testing will not be required if data based on previous testing of current sealant products and glazing materials match those submitted.
 2. Use ASTM C1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to security glazing, tape sealants, gaskets, and glazing channel substrates.
 3. Test no fewer than **[eight]<Insert number>** Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
 4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures, including the use of specially formulated primers.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect security glazing and glazing materials in accordance with manufacturer's written instructions. Prevent damage from condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with insulating security glazing and with air-gap security glazing manufacturers' written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F (4.4 deg C).

1.11 WARRANTY

- A. Special Warranty, Coated Glass: Manufacturer agrees to replace coated glass that fails in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Defects developed in coated glass from normal use that is not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.
 2. Warranty Period: **[10]<Insert number>** years from date of Substantial Completion.
- B. Special Warranty, Laminated-Glass Security Glazing: Manufacturer agrees to replace laminated-glass security glazing that fails in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:

- a. Defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated-glass security glazing contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
 2. Warranty Period: [Five][10]<Insert number> years from date of Substantial Completion.
- C. Special Warranty, Monolithic Polycarbonate Security Glazing: Manufacturer agrees to replace monolithic polycarbonate security glazing that fails in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Defects developed from normal use that are not attributed to maintaining and cleaning monolithic polycarbonate security glazing contrary to manufacturer's written instructions. Defects include yellowing and loss of light transmission.
 2. Warranty Period: [10]<Insert number> years from date of Substantial Completion.
- D. Special Warranty, Laminated-Polycarbonate Security Glazing: Manufacturer agrees to replace laminated-polycarbonate security glazing that fails in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Defects developed from normal use that are not attributed to maintaining and cleaning laminated-polycarbonate security glazing contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced standard, yellowing, and loss of light transmission.
 2. Warranty Period: [Five][10]<Insert number> years from date of Substantial Completion.
- E. Special Warranty, Glass-Clad Polycarbonate Security Glazing: Manufacturer agrees to replace glass-clad polycarbonate security glazing that fails in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning glass-clad polycarbonate security glazing contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced polycarbonate standard, yellowing, and loss of light transmission.
 2. Warranty Period: [Five][10]<Insert number> years from date of Substantial Completion.
- F. Special Warranty, Laminated-Glass and -Polycarbonate Security Glazing: Manufacturer agrees to replace laminated-glass and -polycarbonate security glazing that fails in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 2. Defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated-glass and -polycarbonate security glazing contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced polycarbonate standard, yellowing, and loss of light transmission.

3. Warranty Period: **[Five][10]<Insert number>** years from date of Substantial Completion.
- G. Special Warranty, Insulating Security Glazing: Manufacturer agrees to replace insulating security glazing that fails in materials and workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Defects in individual lites developed from normal use or failure of hermetic seal under normal use. Defects in individual lites or failure of hermetic seal that is attributed to glass breakage or to maintaining and cleaning insulating security glazing contrary to manufacturer's written instructions are not included.
 - b. Defects in coated-glass lites include peeling, cracking, and other indications of deterioration in coating.
 - c. Defects in laminated-glass lites include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
 - d. Defects in glass-clad polycarbonate lites include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced glass-clad polycarbonate standard, yellowing, and loss of light transmission.
 - e. Evidence of hermetic seal failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glazing.
 2. Warranty Period: **[Five][10]<Insert number>** years from date of Substantial Completion.
- H. Special Warranty, Air-Gap Security Glazing: Manufacturer agrees to replace air-gap security glazing that fails in materials and workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Defects in individual lites developed from normal use or failure of hermetic seal under normal use. Defects in individual lites or failure of hermetic seal that is attributed to glass breakage or to maintaining and cleaning air-gap security glazing contrary to manufacturer's written instructions are not included.
 - b. Defects in coated-glass lites include peeling, cracking, and other indications of deterioration in coating.
 - c. Defects in laminated-glass lites include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
 - d. Defects in laminated-polycarbonate lites include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced standard, yellowing, and loss of light transmission.
 - e. Evidence of hermetic seal failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glazing.
 2. Warranty Period: **[Five][10]<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain each type of security glazing from single source from single manufacturer.
 1. Obtain **[tinted][and][coated]** glass from single source from single manufacturer.

- B. Obtain glazing [sealants][and][gaskets] from single source from single manufacturer for each product and installation method.

2.2 PERFORMANCE REQUIREMENTS

- A. General:
 - 1. Installed security glazing will withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or breakage attributable to defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
 - 2. Installed security glazing will withstand security-related loads and forces without damage to the glazing beyond that allowed by referenced standards.
- B. Structural Performance: Glazing will withstand the following design loads within limits and under conditions indicated.
 - 1. Design Procedure for Glass: ASTM E1300 and the IBC.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
- D. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- E. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.

2.3 SECURITY GLAZING, GENERAL

- A. Glazing Publications: Comply with published recommendations of security glazing and glazing material manufacturers and organizations below unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.
 - 1. IGMA Publication for Insulating Glass: SIGMA TM-3000.
 - 2. NGA Publications: "Laminated Glazing Reference Manual" and "GANA Glazing Manual."
- B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the Safety Glazing Certification Council or another certification agency acceptable to authorities having jurisdiction or manufacturer. Label will indicate manufacturer's name, type of glazing, glass thickness, and safety glazing standard with which glazing complies.
- C. Insulating Glazing Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of the Insulating Glass Certification Council.
- D. Thermal and Optical Performance Properties: Provide security glazing with performance properties specified, as indicated in manufacturer's published test data, based on construction products indicated and on procedures indicated below:
 - 1. U-Factors: Center-of-glazing values, in accordance with NFRC 100 and based on most current non-beta version of LBL's WINDOW computer program, expressed as Btu/sq. ft. x h x deg F (W/sq. m x K).

2. SHGC and Visible Transmittance: Center-of-glazing values, in accordance with NFRC 200 and based on most current non-beta version of LBL's WINDOW 7.7 computer program.
3. Visible Reflectance: Center-of-glazing values, in accordance with NFRC 300.

2.4 GLASS PRODUCTS

- A. Heat-Treated Float Glass: ASTM C1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.
 1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
 2. For heat-strengthened float glass, comply with requirements for Kind HS.
 3. For fully tempered float glass, comply with requirements for Kind FT.
 4. For uncoated glass, comply with requirements for Condition A.
 5. For coated vision glass, comply with requirements for Condition C (other coated glass).

2.5 LAMINATED-GLASS SECURITY GLAZING (IGL-2)

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Dlubak Specialty Glass Corporation.
 2. Global Security Glazing.
 3. Oldcastle BuildingEnvelope (OBE); CRH Americas.
 4. Standard Bent Glass Corp.
- B. Laminated-Glass Security Glazing: ASTM C1172. Two or more glass lites bonded with interlayer. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
 1. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
 2. Interlayer Color: Clear unless otherwise indicated.

2.6 INSULATING SECURITY GLAZING (EGL-1)

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Dlubak Specialty Glass Corporation.
 2. Global Security Glazing.
 3. Viracon, Inc.
- B. Insulating Security Glazing: Factory-assembled units, consisting of sealed lites of glazing material indicated separated by a dehydrated interspace, qualified in accordance with ASTM E2190
 1. Sealing System: Dual seal, with manufacturer's standard primary and secondary sealants.
 2. Spacer: Manufacturer's standard spacer material and construction.
 3. Desiccant: Molecular sieve or silica gel, or blend of both.

2.7 GLAZING SEALANTS

- A. General:

1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they contact, including security glazing, seals of insulating security glazing and air-gap security glazing, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
2. Suitability: Comply with sealant and security glazing manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
3. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
4. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range of Industry colors.

B. Glazing Sealant:

1. Neutral-Curing Silicone Glazing Sealant, Class 100/50: Complying with ASTM C920, Type S, Grade NS, Use NT.
 - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) GE Construction Sealants; Momentive Performance Materials Inc.
 - 2) May National Associates, Inc.; a subsidiary of Sika Corporation.
 - 3) Pecora Corporation.
 - 4) Sika Corporation.
 - 5) The Dow Chemical Company.
 - 6) Tremco Incorporated.
 - b. Applications: **<Describe types of glazing applications where this sealant is required>.**

C. Security Sealant: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with low movement complying with ASTM C920, Grade NS, Class 12.5 or 25, Use NT, and with a Shore A hardness of at least 45 when tested in accordance with ASTM C661.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Master Builders Solutions.
 - b. Pecora Corporation.

2.8 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and security glazing manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800 for products indicated below:

1. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
2. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

- B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:
 - 1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
 - 2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.9 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, recommended in writing by manufacturers of security glazing and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- C. Setting Blocks:
 - 1. EPDM with Shore A durometer hardness of 85, plus or minus 5.
 - 2. Type recommended in writing by sealant or glass manufacturer.
- D. Spacers:
 - 1. [Neoprene]<Insert type> blocks or continuous extrusions of hardness required by security glazing manufacturer to maintain security glazing lites in place for installation indicated.
 - 2. Type recommended in writing by sealant or security glazing manufacturer.
- E. Edge Blocks:
 - 1. EPDM with Shore A durometer hardness in accordance with manufacturer's written instructions.
 - 2. Type recommended in writing by sealant or security glazing manufacturer.
- F. Cylindrical Glazing Sealant Backing: ASTM C1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

2.10 FABRICATION OF SECURITY GLAZING

- A. Fabricate security glazing in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
- B. Grind smooth and polish exposed security glazing edges and corners.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine framing for security glazing, with Installer present, for compliance with the following:
 - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.

2. Presence and functioning of weep system.
3. Minimum required face or edge clearances.
4. Minimum required bite.
5. Effective sealing between joints of framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean glazing channels and other framing members receiving security glazing immediately before glazing. Remove coatings not firmly bonded to substrates.
- B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that will leave visible marks in the completed work.

3.3 GLAZING, GENERAL

- A. Comply with combined written instructions of manufacturers of security glazing, sealants, gaskets, and other glazing materials unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Protect edges of security glazing from damage during handling and installation. Remove damaged security glazing from Project site and legally dispose of it off Project site. Damaged security glazing includes units with edge or face damage or other imperfections that, when installed, could weaken security glazing and impair performance and appearance.
- C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications unless otherwise required by glazing unit manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- E. Do not exceed edge pressures stipulated by security glazing manufacturers for installing lites.
- F. Provide spacers for security glazing lites where the length plus width is larger than 50 inches (1270 mm).
 1. Locate spacers directly opposite each other on both inside and outside faces of security glazing. Install correct size and spacing to preserve required face clearances unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with performance requirements.
 2. Provide 1/8-inch (3-mm) minimum bite of spacers on glazing lites and use thickness equal to sealant width. With glazing tape, use thickness of slightly less than final compressed thickness of tape.
- G. Provide edge blocking where indicated or needed to prevent security glazing from moving sideways in glazing channel, as recommended in writing by security glazing manufacturer and in accordance with requirements in referenced glazing publications.
- H. Set security glazing in each series with uniform pattern, draw, bow, and similar characteristics.

- I. Set coated security glazing with proper orientation so that coatings and films face exterior or interior as specified.
- J. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.
- K. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended in writing by gasket manufacturer.

3.4 TAPE GLAZING

- A. Position tapes on fixed stops so that, when compressed by security glazing, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until just before each glazing unit is installed.
- F. Apply heel bead of elastomeric sealant.
- G. Center security glazing in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
- H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.5 GASKET GLAZING (DRY)

- A. Cut compression gaskets to lengths recommended in writing by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
- B. Insert soft compression gasket between glazing unit and frame or fixed stop, so it is securely in place with joints miter cut and bonded together at corners.
- C. Installation with Drive-in Wedge Gaskets: Center security glazing in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in security glazing. Seal gasket joints with sealant recommended in writing by gasket manufacturer.

- D. Installation with Pressure-Glazing Stops: Center security glazing in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in security glazing. Seal gasket joints with sealant recommended in writing by gasket manufacturer.
- E. Install gaskets so they protrude past face of glazing stops.

3.6 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between security glazing and glazing stops to maintain face clearances and to prevent sealant from extruding into glazing channel and blocking weep systems. Secure spacers, or spacers and backings, in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to security glazing and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from security glazing.

3.7 CLEANING AND PROTECTION

- A. Immediately after installation remove nonpermanent labels and clean surfaces.
- B. Protect security glazing from contact with contaminating substances resulting from construction operations, including weld splatter. Examine security glazing surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
 - 1. If, despite such protection, contaminating substances do contact with security glazing, remove substances immediately as recommended in writing by security glazing manufacturer. Remove and replace security glazing that cannot be cleaned without damage.
- C. Wash security glazing on both exposed surfaces not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash security glazing as recommended in writing by security glazing manufacturer.

3.8 LAMINATED-GLASS SECURITY GLAZING SCHEDULE

3.9 INSULATING SECURITY GLAZING SCHEDULE

END OF SECTION

SECTION 08 9119 - FIXED LOUVERS**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
 - 1. Fixed extruded-aluminum louvers.

1.2 DEFINITIONS

- A. Louver Terminology: Definitions of terms for metal louvers contained in AMCA 501 apply to this Section unless otherwise defined in this Section or in referenced standards.
- B. Horizontal Louver: Louver with horizontal blades (i.e., the axis of the blades are horizontal).
- C. Vertical Louver: Louver with vertical blades (i.e., the axis of the blades are vertical).
- D. Drainable-Blade Louver: Louver with blades having gutters that collect water and drain it to channels in jambs and mullions, which carry it to bottom of unit and away from opening.
- E. Wind-Driven-Rain-Resistant Louver: Louver that provides specified wind-driven-rain performance, as determined by testing in accordance with AMCA 500-L.
- F. Windborne-Debris-Impact-Resistant Louver: Louver that provides specified windborne-debris-impact resistance, as determined by testing in accordance with AMCA 540.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.
- B. Sustainable Design Submittals:
 - 1. Environmental Product Declaration: For each product.
 - 2. Health Product Declaration: For each product.
 - 3. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
- C. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.
 - 1. Show weep paths, gaskets, flashings, sealants, and other means of preventing water intrusion.
 - 2. Show mullion profiles and locations.
- D. Samples: For each type of metal finish required.

1.4 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
 - 1. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

B. Provide the following upon request:

1. Product Test Reports: Based on evaluation of comprehensive tests performed in accordance with AMCA 500-L by a qualified testing agency or by manufacturer and witnessed by a qualified testing agency, for each type of louver and showing compliance with performance requirements specified.

1.5 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.6 WARRANTY

A. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of baked enamel, powder coat, or organic finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Warranty Period: **[Five]** **[10]** **[20]** **<Insert number>** years from date of Substantial Completion.

B. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, peeling, or chipping.
2. Warranty Period: **[Five]** **[10]** **<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain fixed[**and operable**] louvers from single source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.

2.2 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Louvers withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver-blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures are considered to act normal to the face of the building.
1. Wind Loads:
 - a. Determine loads based on pressures as indicated on Drawings.
 - b. Determine loads based on a uniform pressure of [20 lbf/sq. ft. (957 Pa)] [30 lbf/sq. ft. (1436 Pa)] **<Insert value>**, acting inward or outward.
 - c. Determine loads based on pressures indicated below:
 - 1) Corner Zone: Within **<Insert distance>** of building corners, uniform pressure of **<Insert design wind pressure>**, acting inward, and **<Insert design wind pressure>**, acting outward.
 - 2) Other Than Corner Zone: Uniform pressure of **<Insert design wind pressure>**, acting inward, and **<Insert design wind pressure>**, acting outward.
- B. Windborne-Debris-Impact Resistance: Louvers located within 30 feet (9.1 m) of grade pass **[basic]** **[enhanced]** protection, when tested in accordance with AMCA 540.
- C. Seismic Performance:
 1. As indicated on Drawings.
 2. Louvers, including attachments to other construction, withstand the effects of earthquake motions determined in accordance with [ASCE/SEI 7] **<Insert requirement>**.
 - a. Design earthquake spectral response acceleration, short period (Sds) for Project is **<Insert value>**.
 - b. Component Importance Factor: **[1.5]** **[1.0]**.
- D. Louver Performance Ratings: Provide louvers complying with requirements specified, as demonstrated by testing manufacturer's stock units identical to those provided, except for length and width in accordance with AMCA 500-L.
- E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- F. SMACNA Standard: Comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" for fabrication, construction details, and installation procedures.

2.3 FIXED EXTRUDED-ALUMINUM LOUVERS

- A. Horizontal, Wind-Driven-Rain-Resistant Louver, Extruded Aluminum **<Insert drawing designation>**:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following]** **[provide products by one of the following]** **[available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. Air Balance; a division of MESTEK, Inc.
- b. Air Flow Company, Inc.
- c. Airline Louvers; a division of Mestek, Inc.
- d. Airolite Company, LLC (The).
- e. All-Lite Architectural Products.
- f. American Warming and Ventilating; a Mestek Architectural Group company.
- g. Architectural Louvers; Harray, LLC.
- h. Arrow United Industries.
- i. Construction Specialties, Inc.
- j. Greenheck Fan Corporation.
- k. Industrial Louvers Inc.
- l. NCA Manufacturing, Inc.
- m. Pottorff.
- n. Reliable Products, Inc.
- o. Ruskin Company.
- p. Safe Air - Dowco Products.
- q. United Enertech.
- 2. Louver Depth: Insert dimension.
- 3. Frame and Blade Nominal Thickness: Not less than 0.060 inch (1.52 mm) for blades and 0.080 inch (2.03 mm) for frames.
- 4. Louver Performance Ratings:
 - a. Free Area: Not less than Insert value for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 - b. Air Performance: Not more than Insert value static pressure drop at Insert value free-area exhaust intake velocity.
 - c. Wind-Driven Rain Performance: Not less than 95 percent effectiveness when subjected to a rainfall rate of 3 inches (75 mm) per hour and a wind speed of 29 mph (13 m/s) at a core-area intake velocity of Insert value.
- 5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

2.4 LOUVER SCREENS

- A. General: Provide screen at each exterior louver .
 - 1. Screen Location for Fixed Louvers: Interior face.
 - 2. Screening Type: Insect screening.
- B. Secure screen frames to louver frames with [**stainless steel machine screws**] [**machine screws with heads finished to match louver**], spaced a maximum of 6 inches (150 mm) from each corner and at 12 inches (300 mm) o.c.
- C. Louver Screen Frames: Fabricate with mitered corners to louver sizes indicated.
 - 1. Metal: Same type and form of metal as indicated for louver to which screens are attached.[**Reinforce extruded-aluminum screen frames at corners with clips.**]
 - 2. Finish: Same finish as louver frames to which louver screens are attached .
 - 3. Type: Rewirable frames with a driven spline or insert .
- D. Louver Screening for Aluminum Louvers:
 - 1. Bird Screening, Aluminum: 1/2-inch- (13-mm-) square mesh, 0.063-inch (1.60-mm) wire.
 - 2. Bird Screening, Stainless Steel: 1/2-inch- (13-mm-) square mesh, 0.047-inch (1.19-mm) wire.
 - 3. Bird Screening, Flattened, Expanded Aluminum: 3/4 by 0.050 inch (19 by 1.27 mm) thick.

4. Insect Screening, Aluminum: 18-by-16 (1.4-by-1.6-mm) mesh, 0.012-inch (0.30-mm) wire.
5. Insect Screening, Stainless Steel: 18-by-18 (1.4-by-1.4-mm) mesh, 0.009-inch (0.23-mm) wire.

2.5 MATERIALS

- A. Aluminum Extrusions: ASTM B221 (ASTM B221M), Alloy 6063-T5, T-52, or T6.
- B. Aluminum Sheet: ASTM B209 (ASTM B209M), Alloy 3003 or 5005, with temper as required for forming, or as otherwise recommended by metal producer for required finish.
- C. Galvanized-Steel Sheet: ASTM A653/A653M, G60 (Z180) G90 (Z275) zinc coating, mill phosphatized.
- D. Stainless Steel Sheet: ASTM A240/A240M, Type 304, No. 2B finish No. 2D finish No. 4 finish, with grain running parallel to length of blades and frame members No. 4 finish, with grain running perpendicular to length of blades and frame members No. 4 finish, with grain running perpendicular to length of blades and parallel to length of frame members No. 6 finish.
- E. Fasteners: Use types and sizes to suit unit installation conditions.
 1. Use [**Phillips flat-head**] [**hex-head or Phillips pan-head**] [**tamper-resistant**] screws for exposed fasteners unless otherwise indicated.
 2. For fastening aluminum, use aluminum or 300 series stainless steel fasteners.
 3. For fastening galvanized steel, use hot-dip-galvanized-steel or 300 series stainless steel fasteners.
 4. For fastening stainless steel, use 300 series stainless steel fasteners.
 5. For color-finished louvers, use fasteners with heads that match color of louvers.
- F. Postinstalled Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, fabricated from stainless steel components, with allowable load or strength design capacities calculated in accordance with ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing in accordance with ASTM E488/E488M conducted by a qualified testing agency.
- G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- H. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] <Insert value> percent.
- I. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] [50] <Insert value> percent.
- J. Regional Materials: Products shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

2.6 FABRICATION

- A. Factory assemble louvers to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

- B. Vertical Assemblies: Where height of louver units exceeds fabrication and handling limitations, fabricate units to permit field-bolted assembly with close-fitting joints in jambs and mullions, reinforced with splice plates.
 - 1. Continuous Vertical Assemblies: Fabricate units without interrupting blade-spacing pattern [**unless horizontal mullions are indicated**] [**where indicated**].
 - 2. Horizontal Mullions: Provide horizontal mullions at joints [**unless continuous vertical assemblies are indicated**] [**where indicated**].
 - C. Maintain equal louver blade spacing[, **including separation between blades and frames at head and sill,**] to produce uniform appearance.
 - D. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
 - 1. Frame Type: [**Channel**] [**Exterior flange**] [**Interior flange**] unless otherwise indicated.
 - E. Include supports, anchorages, and accessories required for complete assembly.
 - F. Provide vertical mullions of type and at spacings indicated, but not more than is recommended by manufacturer, or 72 inches (1830 mm) o.c., whichever is less.
 - 1. Fully Recessed Mullions: Where indicated, provide mullions fully recessed behind louver blades. Where length of louver exceeds fabrication and handling limitations, fabricate with close-fitting blade splices designed to permit expansion and contraction.
 - 2. Semirecessed Mullions: Where indicated, provide mullions partly recessed behind louver blades, so louver blades appear continuous. Where length of louver exceeds fabrication and handling limitations, fabricate with interlocking split mullions and close-fitting blade splices designed to permit expansion and contraction.
 - 3. Exposed Mullions: Where indicated, provide units with exposed mullions of same width and depth as louver frame. Where length of louver exceeds fabrication and handling limitations, provide interlocking split mullions designed to permit expansion and contraction.
 - 4. Exterior Corners: Prefabricated corner units with mitered [**and welded blades**] [**blades with concealed close-fitting splices**] and with [**fully recessed**] [**semirecessed**] mullions at corners.
 - G. Provide [**subsills made of same material as louvers**] [**or**] [**extended sills**] for recessed louvers.
 - H. Join frame members to each other and to fixed louver blades with fillet welds [**concealed from view**] [, **threaded fasteners, or both, as standard with louver manufacturer**] unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.
- 2.7 ALUMINUM FINISHES
- A. Finish louvers after assembly.
 - B. Color Anodic Finish: AAMA 611, AA-M12C22A32/A34, Class II, 0.010 mm or thicker.
 - 1. Color: Dark bronze .

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.3 INSTALLATION

- A. Locate and place louvers level, plumb, and at indicated alignment with adjacent work.
- B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
- C. Form closely fitted joints with exposed connections accurately located and secured.
- D. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
- E. Protect unpainted galvanized- and nonferrous-metal surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
- F. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Section 07 9200 "Joint Sealants" for sealants applied during louver installation.

3.4 ADJUSTING AND CLEANING

- A. Clean exposed louver surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.
- B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.
- C. Restore louvers damaged during installation and construction, so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.
 - 1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

END OF SECTION

FOR REFERENCE ONLY

SECTION 09 0561.13 - MOISTURE VAPOR EMISSION CONTROL

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes fluid-applied, resin-based, membrane-forming systems that control the moisture-vapor-emission rate of high-moisture, interior concrete to prepare it for floor covering installation.
- B. Contractor's Responsibility: Suitability of concrete slab to meet vapor emission limits as required by scheduled floor finish materials is the responsibility of the Contractor. Where concrete slab vapor emission exceeds limits, apply topical vapor retarders specified in this section.
- C. Related Requirements:
 - 1. Section 03 0513 "Common Work Results for Cast-in-Place Concrete Slabs."
 - 2. Section 03 3000 "Cast-in-Place Concrete" for concrete floor slabs.
 - 3. Section 09 6723 "Resinous Flooring."

1.2 DEFINITIONS

- A. MVE: Moisture vapor emission.
- B. MVER: Moisture vapor emission rate.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
 - 1. Product Data: For coatings, indicating VOC content.
 - 2. Laboratory Test Reports: For coatings, indicating compliance with requirements for low-emitting materials.

1.4 INFORMATIONAL SUBMITTALS

- A. Certifications: Furnish written certification that the manufacturer has verified the compatibility between the vapor retarder provided and the flooring product scheduled to be applied, including adhesives and floor leveling materials.
- B. Flooring Manufacturer Acceptance of Vapor Retarder Application: Furnish a signed written statement obtained from flooring manufacturer, stating that the water vapor emission levels, after application of vapor retarders, are acceptable and suitable for their flooring application.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Employs factory-trained personnel who are available for consultation and Project-site inspection.

- B. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.
- C. Provide the following upon request:
 - 1. Qualification Data: For installer and manufacturer.
 - 2. Product Test Reports: For each MVE-control system, for tests performed by manufacturer and witnessed by a qualified testing agency.
 - 3. Preinstallation testing reports.
 - 4. Field quality-control reports.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating directions for storage and mixing with other components.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Comply with MVE-control system manufacturer's written instructions for substrate and ambient temperatures, humidity, ventilation, and other conditions affecting system installation.
 - 1. Store system components in a temperature-controlled environment and protected from weather and at ambient temperature of not less than 65 deg F (18 deg C) and not more than 85 deg F (29.4 deg C) at least 48 hours before use.
 - 2. Maintain ambient temperature and relative humidity in installation areas within range recommended in writing by MVE-control system manufacturer, but not less than 65 deg F (18 deg C) or more than 85 deg F (29.4 deg C) and not less than 40 or more than 60 percent relative humidity, for 48 hours before installation, during installation, and for 48 hours after installation unless longer period is recommended in writing by manufacturer.
 - 3. Install MVE-control systems where concrete surface temperatures will remain a minimum of 5 deg F (3 deg C) higher than the dew point for ambient temperature and relative humidity conditions in installation areas for 48 hours before installation, during installation, and for 48 hours after installation unless longer period is recommended in writing by manufacturer.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. MVE-Control System Capabilities: Capable of suppressing MVE without failure where installed on concrete that exhibits the following conditions:
 - 1. MVER: Maximum 25 lb of water/1000 sq. ft. (11.34 kg of water/92.9 sq. m) when tested according to ASTM F1869.
 - 2. Relative Humidity: Maximum 100 percent when tested according to ASTM F2170 using in situ probes.
- B. Water-Vapor Transmission: Through MVE-control system, maximum 0.10 perm (5.75 ng/Pa x s x sq. m) when tested according to ASTM E96/E96M.
- C. Tensile Bond Strength: For MVE-control system, greater than 200 psi (1.38 MPa) with failure in the concrete according to ASTM D7234.

2.2 MVE-CONTROL SYSTEM

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Advanced Moisture Control, Inc.
 - 2. ARDEX Americas.
 - 3. LATICRETE SUPERCAP, LLC.
 - 4. MAPEI Corporation.
 - 5. USG Corporation.
- B. MVE-Control System: ASTM F3010-qualified, fluid-applied, two-component, epoxy-resin, membrane-forming system; formulated for application on concrete substrates to reduce MVER to level required for installation of floor coverings indicated and acceptable to manufacturers of floor covering products indicated, including adhesives.
 - 1. Substrate Primer: Provide MVE-control system manufacturer's concrete-substrate primer if required for system indicated by substrate conditions.
 - 2. Cementitious Underlayment Primer: If required for subsequent installation of cementitious underlayment products, provide MVE-control system manufacturer's primer to ensure adhesion of products to MVE-control system.
 - 3. VOC Content: Provide coating with VOC content of 100 g/L or less.
 - 4. Low-Emitting Materials: Coating shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.3 ACCESSORIES

- A. Patching and Leveling Material: Moisture-, mildew-, and alkali-resistant product recommended in writing by MVE-control system manufacturer and with minimum of 3000-psi (20.68-MPa) compressive strength after 28 days when tested according to ASTM C109/C109M.
- B. Crack-Filling Material: Resin-based material recommended in writing by MVE-control system manufacturer for sealing concrete substrate crack repair.
- C. Cementitious Underlayment: If required to maintain manufacturer's warranty, provide MVE-control system manufacturer's hydraulic cement-based underlayment.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for maximum moisture content, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
 - 1. Installation of system indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Preinstallation Testing:
1. Testing Agency: Owner will engage a qualified testing agency to perform tests.
 2. Alkalinity Testing: Perform pH testing according to ASTM F710. Install MVE-control system in areas where pH readings are less than 7.0 and in areas where pH readings are greater than 8.5.
 3. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Anhydrous Calcium Chloride Test: ASTM F1869. Install MVE-control system in locations where concrete substrate MVER exceeds 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 - b. Internal Relative Humidity Test: Using in situ probes, ASTM F2170. Install MVE-control system in locations where concrete substrates exhibit relative humidity level greater than 75 percent.
 4. Tensile-Bond-Strength Testing: For typical locations indicated to receive installation of MVE-control system, install minimum 100-sq. ft. (9.29-sq. m) area of MVE-control system to prepared concrete substrate and test according to ASTM D7234.
 - a. Proceed with installation only where tensile bond strength is greater than 200 psi (1.38 MPa) with failure in the concrete.
- B. Concrete Substrates: Prepare and clean substrates according to MVE-control system manufacturer's written instructions to ensure adhesion of system to concrete.
1. Remove coatings and other substances that are incompatible with MVE-control system and that contain soap, wax, oil, or silicone, using mechanical methods recommended in writing by MVE-control system manufacturer. Do not use solvents.
 2. Provide concrete surface profile complying with ICRI 310.2R CSP 3 by shot blasting using apparatus that abrades the concrete surface with shot, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 3. After shot blasting, repair damaged and deteriorated concrete according to MVE-control system manufacturer's written instructions.
 4. Protect substrate voids and joints to prevent resins from flowing into or leaking through them.
 5. Fill surface depressions and irregularities with patching and leveling material.
 6. Fill surface cracks, grooves, control joints, and other nonmoving joints with crack-filling material.
 7. Allow concrete to dry, undisturbed, for period recommended in writing by MVE-control system manufacturer after surface preparation, but not less than 24 hours.
 8. Before installing MVE-control systems, broom sweep and vacuum prepared concrete.
- C. Protect walls, floor openings, electrical openings, door frames, and other obstructions during installation.

3.3 INSTALLATION

- A. Install MVE-control system according to ASTM F3010 and manufacturer's written instructions to produce a uniform, monolithic surface free of surface deficiencies such as pin holes, fish eyes, and voids.
1. Install primers as required to comply with manufacturer's written instructions.

- B. Do not apply MVE-control system across substrate expansion, isolation, and other moving joints.
- C. Apply system, including component coats if any, in thickness recommended in writing by MVE-control system manufacturer for MVER indicated by preinstallation testing.
- D. Cure MVE-control system components according to manufacturer's written instructions. Prevent contamination or other damage during installation and curing processes.
- E. After curing, examine MVE-control system for surface deficiencies. Repair surface deficiencies according to manufacturer's written instructions.
- F. Install cementitious underlayment over cured membrane if required to maintain manufacturer's warranty and in thickness required to maintain the warranty.

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform installation inspections.
- B. Installation Inspections: Inspect substrate preparation and installation of system components to ensure compliance with manufacturer's written instructions and to ensure that a complete MVE-control system is installed without deficiencies.
 - 1. Verify that surface preparation meets requirements.
 - 2. Verify that component coats and complete MVE-control-system film thicknesses comply with manufacturer's written instructions.
 - 3. Verify that MVE-control-system components and installation areas that evidence deficiencies are repaired according to manufacturer's written instructions.
- C. MVE-control system will be considered defective if it does not pass inspections.

3.5 PROTECTION

- A. Protect MVE-control system from damage, wear, dirt, dust, and other contaminants before floor covering installation. Use protective methods and materials, including temporary coverings, recommended in writing by MVE-control system manufacturer.
- B. Do not allow subsequent preinstallation examination and testing for floor covering installation to damage, puncture, or otherwise compromise the MVE-control system membrane.

END OF SECTION

SECTION 09 2116.23 - GYPSUM BOARD SHAFT WALL ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

1. Section includes gypsum board shaft wall assemblies.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 1. Review requirements for control joint locations.

1.3 ACTION SUBMITTALS

- A. Product Data: For each component of gypsum board shaft wall assembly.
- B. Sustainable Design Submittals:
 1. Environmental Product Declaration (EPD): For each product.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and support them on risers on a flat platform to prevent sagging.

1.5 FIELD CONDITIONS

- A. Environmental Limitations: Comply with gypsum-shaftliner-board manufacturer's written instructions.
- B. Do not install finish panels until installation areas are enclosed and conditioned. Use moisture- and mold-resistant panels or moisture- and mold-resistant fiberglass-mat faced panels if installation must take place prior to installation area being enclosed and conditioned.
- C. Do not install panels that are wet, moisture damaged, or mold damaged.
 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or spotty surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.
- B. STC-Rated Assemblies: Provide materials and construction identical to those of assemblies tested according to ASTM E90 and classified according to ASTM E413 by a testing and inspecting agency.

- C. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- D. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- E. Regional Materials: Products shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

2.2 GYPSUM BOARD SHAFT WALL ASSEMBLIES

- A. Fire-Resistance Rating: As indicated on Drawings 1 hour 2 hours 3 hours 4 hours Insert rating.
- B. STC Rating: As indicated on Drawings 51, minimum Insert rating.
- C. Gypsum Shaftliner Board:
 - 1. Type X: ASTM C1396/C1396M; manufacturer's proprietary fire-resistive liner panels with paper faces, 1 inch (25.4 mm) thick, with double beveled long edges.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) American Gypsum.
 - 2) CertainTeed Corporation.
 - 3) Georgia-Pacific Gypsum LLC.
 - 4) National Gypsum Company.
 - 5) USG Corporation.
 - 2. Moisture- and Mold-Resistant Type X: ASTM C1396/C1396M; manufacturer's proprietary fire-resistive liner panels with ASTM D3273 mold-resistance score of 10 as rated according to ASTM D3274, 1 inch (25.4 mm) thick, and with double beveled long edges.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) American Gypsum.
 - 2) CertainTeed Corporation.
 - 3) CertainTeed Gypsum.
 - 4) Georgia-Pacific Gypsum LLC.
 - 5) National Gypsum Company.
 - 6) USG Corporation.
- D. Non-Load-Bearing Steel Framing, General: Complying with ASTM C645 requirements for metal unless otherwise indicated and complying with requirements for fire-resistance-rated assembly indicated.
 - 1. Protective Coating: ASTM A653/A653M, G60 (Z180), hot-dip galvanized unless otherwise indicated.
- E. Studs: Manufacturer's standard profile for repetitive, corner, and end members as follows:
 - 1. Depth: As indicated.
 - 2. Minimum Base-Metal Thickness: As indicated.

- F. Runner Tracks: Manufacturer's standard J-profile track with manufacturer's standard long-leg length, but at least 2 inches (51 mm) long and matching studs in depth.
1. Minimum Base-Metal Thickness: As indicated.
- G. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CEMCO; California Expanded Metal Products Co.
 - b. ClarkDietrich.
 - c. Fire Trak Corp.
 - d. MarinoWARE.
 - e. Metal-Lite.
 - f. SCAFCO Steel Stud Company.
 - g. Steel Construction Systems.
 - h. The Steel Network, Inc.
- H. Finish Panels: As indicated. .

2.3 AUXILIARY MATERIALS

- A. Provide auxiliary materials that comply with shaft wall manufacturer's written instructions.
- B. Trim Accessories: Cornerbead, edge trim, and control joints of material and shapes as specified in Section 09 2900 "Gypsum Board" Section 09 2613 "Gypsum Veneer Plastering" that comply with gypsum board shaft wall assembly manufacturer's written instructions for application indicated.
- C. Steel Drill Screws: ASTM C1002 unless otherwise indicated.
- D. Track Fasteners: Power-driven fasteners of size and material required to withstand loading conditions imposed on shaft wall assemblies without exceeding allowable design stress of track, fasteners, or structural substrates in which anchors are embedded.
1. Expansion Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E488/E488M conducted by a qualified testing agency.
 2. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E1190 conducted by a qualified testing agency.
- E. Acoustical Sealant: Section 07 9219 "Acoustical Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Sprayed Fire-Resistive Materials: Coordinate with gypsum board shaft wall assemblies so both elements of Work remain complete and undamaged. Patch or replace sprayed fire-resistive materials removed or damaged during installation of shaft wall assemblies to comply with requirements specified in Section 07 8100 "Applied Fire Protection."
- B. After sprayed fire-resistive materials are applied, remove only to extent necessary for installation of gypsum board shaft wall assemblies and without reducing the fire-resistive material thickness below that which is required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

3.3 INSTALLATION

- A. General: Install gypsum board shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated and manufacturer's written installation instructions.
- B. Do not bridge building expansion joints with shaft wall assemblies; frame both sides of expansion joints with furring and other support.
- C. Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, wall-mounted door stops, and similar items that cannot be supported directly by shaft wall assembly framing.
 - 1. Reinforcing: Provide where items attach directly to shaft wall assembly as indicated on Drawings; accurately position and secure behind at least one layer of face panel.
- D. Penetrations: At penetrations in shaft wall, maintain fire-resistance rating of shaft wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons and floor indicators, and similar items.
- E. Isolate perimeter of gypsum panels from building structure to prevent cracking of panels while maintaining continuity of fire-rated construction.
- F. Firestop Tracks: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.

- G. Control Joints: Install control joints according to ASTM C840, including compliance with ASTM 20.3.1 - 20.4 for control joint spacing, whether or not such joints are indicated on Drawings, in specific locations approved by Architect and as follows, while maintaining fire-resistance rating of gypsum board shaft wall assemblies.
 - 1. Install at changes in backup material.
 - 2. Framed Openings (Both Sides of Partition):
 - a. Doors: Install above both jambs unless indicated or directed otherwise.
 - b. Glazed Openings: Install above and below both jambs unless indicated or directed otherwise.
 - 3. Install at other locations indicated on Drawings.
- H. Sound-Rated Shaft Wall Assemblies: Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly.
- I. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch (3 mm) from the plane formed by faces of adjacent framing.

3.4 PROTECTION

- A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- B. Remove and replace panels that are wet, moisture damaged, or mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

SECTION 09 2216 - NON-STRUCTURAL METAL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Framing systems.
 - 2. Suspension systems.
 - 3. Grid suspension systems.

1.2 ACTION SUBMITTALS

- A. Product Data:
 - 1. Framing systems.
- B. Sustainable Design Submittals:
 - 1. Recycled Content: Provide manufacturer documentation for recycled content, indicating postconsumer and preconsumer recycled content.

1.3 QUALITY ASSURANCE

- A. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Certified Steel Stud Association the Steel Framing Industry Association the Steel Stud Manufacturers Association or the Supreme Steel Framing System Association.
- B. Provide the following upon request:
 - 1. Product Certificates: For each type of code-compliance certification for studs and tracks.
 - 2. Evaluation Reports: For firestop tracks post-installed anchors and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Notify manufacturer of damaged materials received prior to installation.
- B. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.
- C. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling as required by AISI S202, "Code of Standard Practice for Cold-Formed Steel Structural Framing."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated, in accordance with ASTM E119 by an independent testing agency.

- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated on Drawings, in accordance with ASTM E90 and classified in accordance with ASTM E413 by an independent testing agency.
- C. Design framing systems in accordance with AISI S220, "North American Specification for the Design of Cold-Formed Steel Framing - Nonstructural Members," unless otherwise indicated.
- D. Design Loads: As indicated on architectural Drawings or 5 lbf/sq. ft. (239 Pa) minimum as required by the IBC.

2.2 FRAMING SYSTEMS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Framing Members, General: Comply with AISI S220 for conditions indicated.
 - 1. Steel Sheet Components: Comply with AISI S220 requirements for metal unless otherwise indicated
 - 2. Protective Coating: Comply with [ASTM C645] [AISI S220]; ASTM A653/A653M, G60 (Z180); or coating with equivalent corrosion resistance. Galvannealed products are unacceptable.
 - a. Coating demonstrates equivalent corrosion resistance with an evaluation report acceptable to authorities having jurisdiction.
- C. Studs and Track: AISI S220.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CEMCO; California Expanded Metal Products Co.
 - b. ClarkDietrich.
 - c. Custom Stud.
 - d. Jaimes Industries.
 - e. MarinoWARE.
 - f. MBA Building Supplies.
 - g. MRI Steel Framing, LLC.
 - h. Phillips Manufacturing Co.
 - i. SCAFCO Steel Stud Company.
 - j. Steel Construction Systems.
 - k. Steel Network, Inc. (The).
 - l. Telling Industries.
 - 2. Minimum Base-Steel Thickness: As indicated on Drawings .
 - 3. Depth: As indicated on Drawings .
- D. Slip-Type Head Joints: Where indicated, provide one of the following:
 - 1. Clip System: Clips designed for use in head-of-wall deflection conditions that provide a positive attachment of studs to tracks while allowing 2-inch (51-mm) minimum vertical movement.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) CEMCO; California Expanded Metal Products Co.
 - 2) ClarkDietrich.

- 3) Fire Trak Corp.
 - 4) MarinoWARE.
 - 5) SCAFCO Steel Stud Company.
 - 6) Steel Construction Systems.
 - 7) Steel Network, Inc. (The).
 - 8) Super Stud Building Products Inc.
2. Single Long-Leg Track System: Top track with 2-inch- (51-mm-) deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top track and with continuous bridging located within 12 inches (305 mm) of the top of studs to provide lateral bracing.
 3. Double-Track System: Top outer tracks, inside track with 2-inch- (51-mm-) deep flanges in thickness not less than indicated for studs and fastened to studs, and outer track sized to friction-fit over inner track.
 4. Deflection Track: Steel sheet top track manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) CEMCO; California Expanded Metal Products Co.
 - 2) ClarkDietrich.
 - 3) MarinoWARE.
 - 4) MBA Building Supplies.
 - 5) Metal-Lite.
 - 6) SCAFCO Steel Stud Company.
 - 7) Steel Construction Systems.
 - 8) Steel Network, Inc. (The).
 - 9) Telling Industries.
- E. Firestop Tracks: Top track manufactured to allow partition heads to expand and contract with movement of structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ClarkDietrich.
 - b. Fire Trak Corp.
 - c. MarinoWARE.
 - d. Metal-Lite.
- F. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ClarkDietrich.
 - b. MarinoWARE.
 - c. MBA Building Supplies.
 - d. MRI Steel Framing, LLC.
 - e. SCAFCO Steel Stud Company.
 - f. Steel Construction Systems.
 - g. Steel Network, Inc. (The).
 2. Minimum Base-Steel Thickness: As indicated on Drawings .

- G. Cold-Rolled Channel Bridging: Steel, 0.0538-inch (1.367-mm) minimum base-steel thickness, with minimum 1/2-inch- (13-mm-) wide flanges.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ClarkDietrich.
 - b. MarinoWARE.
 - c. MBA Building Supplies.
 - d. MRI Steel Framing, LLC.
 - e. SCAFCO Steel Stud Company.
 - f. Steel Construction Systems.
 2. Depth: As indicated on Drawings .
 3. Clip Angle: Not less than 1-1/2 by 1-1/2 inches (38 by 38 mm), 0.068-inch- (1.72-mm-) thick, galvanized steel.
- H. Hat-Shaped, Rigid Furring Channels:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ClarkDietrich.
 - b. Jaimes Industries.
 - c. MarinoWARE.
 - d. MBA Building Supplies.
 - e. MRI Steel Framing, LLC.
 - f. SCAFCO Steel Stud Company.
 - g. Steel Construction Systems.
 2. Minimum Base-Steel Thickness: As indicated on Drawings .
 3. Depth: As indicated on Drawings .
- I. Cold-Rolled Furring Channels: 0.053-inch (1.34-mm) uncoated-steel thickness, with minimum 1/2-inch- (13-mm-) wide flanges.
1. Depth: As indicated on Drawings .
 2. Furring Brackets: Adjustable, corrugated-edge-type steel sheet with minimum uncoated-steel thickness of 0.0329 inch (0.8 mm).
 3. Tie Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.062-inch- (1.59-mm-) diameter wire, or double strand of 0.048-inch- (1.21-mm-) diameter wire.
- J. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches (32 mm), wall attachment flange of 3/4 inch (19 mm), minimum uncoated-steel thickness of 0.0179 inch (0.455 mm), and depth required to fit insulation thickness indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ClarkDietrich.
 - b. MarinoWARE.
 - c. MBA Building Supplies.
 - d. MRI Steel Framing, LLC.
 - e. SCAFCO Steel Stud Company.
 - f. Steel Construction Systems.
 - g. Steel Network, Inc. (The).

2.3 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards.
 - 1. Fasteners for Steel Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.
- B. Isolation Strip at Exterior Walls: Provide one of the following:
 - 1. Asphalt-Saturated Organic Felt: ASTM D226/D226M, Type I (No. 15 asphalt felt), nonperforated.
 - 2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch (3.2 mm) thick, in width to suit steel stud size.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
 - 1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.
- B. Coordination with Sprayed Fire-Resistive Materials:
 - 1. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling tracks to surfaces indicated to receive sprayed fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches (610 mm) o.c.
 - 2. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of non-load-bearing steel framing. Do not reduce thickness of fire-resistive materials below that are required for fire-resistance ratings indicated. Protect adjacent fire-resistive materials from damage.

3.3 INSTALLATION, GENERAL

- A. Installation Standard: ASTM C754.
 - 1. Gypsum Board Assemblies: Also comply with requirements in ASTM C840 that apply to framing installation.
- B. Install framing and accessories plumb, square, and true to line, with connections securely fastened.

- C. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.
- D. Install bracing at terminations in assemblies.
- E. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

3.4 INSTALLATION OF FRAMING SYSTEMS

- A. Install framing system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
 - 1. Single-Layer Application: As required by horizontal deflection performance requirements unless otherwise indicated.
 - 2. Multilayer Application: As required by horizontal deflection performance requirements unless otherwise indicated.
 - 3. Tile Backing Panels: As required by horizontal deflection performance requirements unless otherwise indicated.
- B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
- C. Install studs so flanges within framing system point in same direction.
- D. Install tracks at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts that penetrate partitions above ceiling.
 - 1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
 - 2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install track section (for cripple studs) at head and secure to jamb studs.
 - a. Install two studs at each jamb unless otherwise indicated.
 - b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch (13-mm) clearance from jamb stud to allow for installation of control joint in finished assembly.
 - c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
 - 3. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
 - 4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
 - a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
 - 5. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
- E. Direct Furring:

1. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches (610 mm) o.c.
- F. Z-Shaped Furring Members:
1. Erect insulation, specified in Section 07 2100 "Thermal Insulation," vertically and hold in place with Z-shaped furring members spaced 24 inches (610 mm) o.c.
 2. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches (610 mm) o.c.
 3. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space second member no more than 12 inches (305 mm) from corner and cut insulation to fit.
- G. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch (3 mm) from the plane formed by faces of adjacent framing.
- 3.5 FIELD QUALITY CONTROL
- A. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet (3 mm in 3.6 m) measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

END OF SECTION

SECTION 09 2900 - GYPSUM BOARD

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Interior gypsum board.
 - 2. Exterior gypsum board for ceilings and soffits.
 - 3. Backing panels.
- B. Related Requirements:
 - 1. Section 06 1600 "Sheathing" for gypsum sheathing for exterior walls.
 - 2. Section 07 9219 "Acoustical Joint Sealants" for acoustical joint sealants installed in gypsum board assemblies.
 - 3. Section 09 2116.23 "Gypsum Board Shaft Wall Assemblies" for metal shaft-wall framing, gypsum shaft liners, and other components of shaft-wall assemblies.
 - 4. Section 09 2216 "Non-Structural Metal Framing" for non-structural steel framing and suspension systems that support gypsum board panels.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review requirements for control joint locations.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Show locations and installation of control and expansion joints, including plans, elevations, sections, details of components, and attachments to other work.
- C. Sustainable Design Submittals:
 - 1. Environmental Product Declaration (EPD): For each product.
 - 2. Product Data: For adhesives and sealants, indicating VOC content.
 - 3. Laboratory Test Reports: For adhesives and sealants, indicating compliance with requirements for low-emitting materials.
 - 4. Laboratory Test Reports: For ceiling and wall materials, indicating compliance with requirements for low-emitting materials.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.5 FIELD CONDITIONS

- A. Environmental Limitations: Comply with ASTM C840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.

- B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned. Use mold-resistant gypsum board or glass-mat interior gypsum board if installation must take place prior to installation areas being enclosed and conditioned.
- C. Do not install panels that are wet, moisture damaged, and mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain each type of gypsum panel and joint finishing material from single source with resources to provide products of consistent quality in appearance and physical properties.

2.2 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E90 and classified according to ASTM E413 by an independent testing agency.
- C. Ceiling and wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.3 GYPSUM BOARD, GENERAL

- A. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Regional Materials: Products shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.
- C. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.4 INTERIOR GYPSUM BOARD (GWB-01, GWB-02)

- A. Gypsum Board, Type X: ASTM C1396/C1396M.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Gypsum.
 - b. Certaineed; SAINT-GOBAIN.

- c. Georgia-Pacific Gypsum LLC.
- d. National Gypsum Company.
- e. USG Corporation; EcoSmart Panels Firecode X (Basis-of-Design).
- 2. Thickness: 5/8 inch (15.9 mm).
- 3. Long Edges: Tapered .

B. Mold-Resistant Gypsum Board: ASTM C1396/C1396M. With moisture- and mold-resistant core and paper surfaces.

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Gypsum.
 - b. Certaineed; SAINT-GOBAIN.
 - c. Georgia-Pacific Gypsum LLC.
 - d. National Gypsum Company.
 - e. USG Corporation.
- 2. Core: 5/8 inch (15.9 mm), Type X.
- 3. Long Edges: Tapered.
- 4. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.5 SPECIALTY GYPSUM BOARD

A. Glass-Mat Interior Gypsum Board: ASTM C1658/C1658M. With fiberglass mat laminated to both sides. Specifically designed for interior use.

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Georgia-Pacific Gypsum LLC.
 - b. National Gypsum Company.
 - c. USG Corporation.
- 2. Core: 5/8 inch (15.9 mm), Type X .
- 3. Long Edges: Tapered.
- 4. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.6 EXTERIOR GYPSUM BOARD FOR CEILINGS AND SOFFITS

A. Exterior Gypsum Soffit Board: ASTM C1396/C1396M, with manufacturer's standard edges.

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Gypsum.
 - b. Certaineed; SAINT-GOBAIN.
 - c. Continental Building Products, LLC.
 - d. Georgia-Pacific Gypsum LLC.
 - e. USG Corporation.
- 2. Core: 5/8 inch (15.9 mm), Type X.

2.7 BACKING PANELS

A. Glass-Mat, Water-Resistant Backing Board: ASTM C1178/C1178M, with manufacturer's standard edges.

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Certaineed; SAINT-GOBAIN.

- b. Georgia-Pacific Gypsum LLC.
- c. National Gypsum Company.
- d. USG Corporation.
- 2. Core: As indicated on Drawings .
- 3. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.8 TRIM ACCESSORIES

- A. Interior Trim: ASTM C1047.
 - 1. Material: Galvanized or aluminum-coated steel sheet, rolled zinc, plastic, or paper-faced galvanized-steel sheet .
 - 2. Shapes:
 - a. Cornerbead.
 - b. LC-Bead: J-shaped; exposed long flange receives joint compound.
 - c. L-Bead: L-shaped; exposed long flange receives joint compound.
 - d. U-Bead: J-shaped; exposed short flange does not receive joint compound.
 - e. Expansion (control) joint.
- B. Acoustical Mullion Trim Covers.
 - 1. General: Provide sound barrier mullion trim caps of design, basic profile, materials, and operation indicated. Provide units with capability to accommodate variations in adjacent surfaces.
 - a. Furnish units in lengths of sufficient additional length to allow for field trimming to required length to match variations in construction tolerances of adjacent systems.
- C. Exterior Trim: ASTM C1047.
 - 1. Material: Hot-dip galvanized-steel sheet, plastic, or rolled zinc.
 - 2. Shapes:
 - a. Cornerbead.
 - b. LC-Bead: J-shaped; exposed long flange receives joint compound.
 - c. Expansion (Control) Joint: One-piece, rolled zinc with V-shaped slot and removable strip covering slot opening.

2.9 JOINT TREATMENT MATERIALS

- A. General: Comply with ASTM C475/C475M.
- B. Joint Tape:
 - 1. Interior Gypsum Board: Paper.
 - 2. Exterior Gypsum Soffit Board: Paper.
 - 3. Glass-Mat Gypsum Sheathing Board: 10-by-10 glass mesh.
 - 4. Backing Panels: As recommended by panel manufacturer.
- C. Joint Compound for Interior Gypsum Board: For each coat, use formulation that is compatible with other compounds applied on previous or for successive coats.
 - 1. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping compound.
 - a. Use setting-type compound for installing paper-faced metal trim accessories.
 - 2. Fill Coat: For second coat, use drying-type, all-purpose compound.
 - 3. Finish Coat: For third coat, use drying-type, all-purpose compound.

- D. Joint Compound for Exterior Applications:
 - 1. Exterior Gypsum Soffit Board: Use setting-type taping compound and setting-type, sandable topping compound.
- E. Joint Compound for Backing Panels:
 - 1. Glass-Mat, Water-Resistant Backing Panel: As recommended by backing panel manufacturer.
 - 2. Cementitious Backer Units: As recommended by backer unit manufacturer.

2.10 AUXILIARY MATERIALS

- A. Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.
- B. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.
 - 1. Adhesives shall have a VOC content of 50 g/L or less.
 - 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- C. Steel Drill Screws: ASTM C1002 unless otherwise indicated.
 - 1. Use screws complying with ASTM C954 for fastening panels to steel members from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick.
 - 2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.
- D. Sound-Attenuation Blankets: ASTM C665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
 - 1. Manufacturers and Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Owens Corning; Thermafiber SAFB
 - b. Johns Manville; MinWool SAFB.
 - c. Rockwool; Safe'n'Sound.
 - 2. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
 - 3. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- E. Acoustical Sealant: As specified in Section 07 9219 "Acoustical Joint Sealants."
 - 1. Sealant shall have a VOC content of 250 g/L or less.
 - 2. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- F. Thermal Insulation: As specified in Section 07 2100 "Thermal Insulation."
- G. Vapor Retarder: As specified in Section 07 2600 "Vapor Retarders."

- H. Firestop Putty Pads for Electrical Boxes: Listed intumescent moldable firestop putty pads.
 - 1. Product: Subject to compliance with requirements, provide one of the following:
 - a. Hilti Corporation; CP 617 6" x 7" Putty Pad or CP 617L 7" x 7" Putty Pad.
 - b. Kinetics Noise Control; IsoBacker.
 - c. RectorSeal Firestop Solutions; Metacaulk Box Guard.
 - d. Specified Technologies Inc. (STI); SpecSeal Series SSP Putty Pad.
- I. Acoustic Putty Pads for Electrical Boxes: Asbestos-free, putty pads composed of polybutene-butyl and inert fillers.
 - 1. Product: Subject to compliance with requirements, provide one of the following:
 - a. Kinetics Noise Control; IsoBacker.
 - b. QuietRock; QuietPutty.
 - c. Specified Technologies Inc. (STI); SpecSeal Series SSP Putty Pad.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and substrates including welded hollow-metal frames and support framing, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION AND FINISHING OF PANELS, GENERAL

- A. Comply with ASTM C840.
- B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
- C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch (1.5 mm) of open space between panels. Do not force into place.
- D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.
- E. Form control and expansion joints with space between edges of adjoining gypsum panels.
- F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
 - 1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. (0.7 sq. m) in area.

2. Fit gypsum panels around ducts, pipes, and conduits.
 3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch- (6.4- to 9.5-mm-) wide joints to install sealant.
- G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch- (6.4- to 12.7-mm-) wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.
- H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.
- I. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C919 and with manufacturer's written instructions for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.
- J. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

3.3 INSTALLATION OF INTERIOR GYPSUM BOARD

- A. Install interior gypsum board in the following locations:
1. Type X: As indicated on Drawings.
 2. Mold-Resistant Type: As indicated on Drawings.
 3. Glass-Mat Interior Type: As indicated on Drawings.
- B. Single-Layer Application:
1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing unless otherwise indicated.
 2. On partitions/walls, apply gypsum panels horizontally (perpendicular to framing) unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
 - a. Stagger abutting end joints not less than one framing member in alternate courses of panels.
 - b. At stairwells and other high walls, install panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.
 3. On Z-shaped furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
 4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.
- C. Multilayer Application:
1. On ceilings, apply gypsum board indicated for base layers before applying base layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints one framing member, 16 inches (400 mm) minimum, from parallel base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly.

2. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
 3. On Z-shaped furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.
 4. Fastening Methods: Fasten base layers and face layers separately to supports with screws.
- D. Laminating to Substrate: Where gypsum panels are indicated as directly adhered to a substrate (other than studs, joists, furring members, or base layer of gypsum board), comply with gypsum board manufacturer's written instructions and temporarily brace or fasten gypsum panels until fastening adhesive has set.
- 3.4 INSTALLATION OF EXTERIOR GYPSUM PANELS FOR CEILINGS AND SOFFITS
- A. Apply panels perpendicular to supports, with end joints staggered and located over supports.
1. Install with 1/4-inch (6.4-mm) open space where panels abut other construction or structural penetrations.
 2. Fasten with corrosion-resistant screws.
- 3.5 INSTALLATION OF BACKING PANELS
- A. Glass-Mat, Water-Resistant Backing Panels: Comply with manufacturer's written installation instructions and install at non-wet locations indicated to receive tile or other indicated finish materials. Install with 1/4-inch (6.4-mm) gap where panels abut other construction or penetrations.
- B. Cementitious Backer Units: ANSI A108.11, at wet area locations indicated to receive tile or other indicated finish materials.
- C. Where backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.
- 3.6 INSTALLATION OF TRIM ACCESSORIES
- A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.
- B. Control Joints: Install control joints according to ASTM C 840, including compliance with ASTM 20.3.1 - 20.4 for control joint spacing, whether or not such joints are indicated on Drawings, in specific locations approved by Architect for visual effect and as follows.
1. Install at changes in backup material.
 2. Framed Openings (Both Sides of Partition):
 - a. Doors: Install above both jambs unless indicated or directed otherwise.
 - b. Glazed Openings: Install above and below both jambs unless indicated or directed otherwise.
 3. Install at other locations indicated on Drawings.

- C. Interior Trim: Install in the following locations:
 - 1. Cornerbead: Use at outside corners unless otherwise indicated.
 - 2. LC-Bead: Use at exposed panel edges.
 - 3. L-Bead: Use where indicated on Drawings.
 - 4. U-Bead: Use where indicated on Drawings.
- D. Exterior Trim: Install in the following locations:
 - 1. Cornerbead: Use at outside corners.
 - 2. LC-Bead: Use at exposed panel edges.
- E. Firestop Putty Pads: Install at power, audio/visual, data, light and similar boxes located in fire-rated partitions. Install in accordance with pad manufacturer's instructions.
- F. Acoustic Putty Pads: Install at power, audio/visual, data, light and similar boxes located in acoustic-rated partitions. Install in accordance with pad manufacturer's instructions.

3.7 FINISHING OF GYPSUM BOARD

- A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.
- B. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.
- C. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C840:
 - 1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.
 - 2. Level 2: Where indicated on Drawings.
 - 3. Level 3: Where indicated on Drawings.
 - 4. Level 4: At panel surfaces that will be exposed to view unless otherwise indicated.
 - a. Primer and its application to surfaces are specified in Section 09 9123 "Interior Painting."
 - 5. Level 5: Where indicated on Drawings.
 - a. Primer and its application to surfaces are specified in Section 09 9123 "Interior Painting."
- D. Glass-Mat Faced Panels: Finish according to manufacturer's written instructions.

3.8 PROTECTION

- A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.
- B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- C. Remove and replace panels that are wet, moisture damaged, and mold damaged.

June 15, 2026

Smithsonian OPDC Project No. 2533105

SmithGroup Project No. 00100084

1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

FOR REFERENCE ONLY

SECTION 09 3013 - CERAMIC TILING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Glazed wall tile.
 - 2. Setting material.
 - 3. Grout materials.
- B. Related Requirements:
 - 1. Section 09 2900 "Gypsum Board" for tile backing panels.

1.2 DEFINITIONS

- A. General: Definitions in ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.
- B. Face Size: Actual tile size, excluding spacer lugs.
- C. Module Size: Actual tile size plus joint width indicated.
- D. Wet Area: The term "wet area" refers to shower rooms and other areas with similar usages. It does not refer to toilet rooms and other similar areas where water on the floor is seldom encountered.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review requirements in ANSI A108.01 for substrates and for preparation by other trades.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Show locations, plans, and elevations, of each type of tile and tile pattern. Show widths, details, and locations of movement joints in tile substrates and finished tile surfaces.
- C. Samples for Initial Selection: For tile, grout, and accessories involving color selection or shade variation.
- D. Samples for Verification:
 - 1. Full-size units of each type and composition of tile and for each color and finish required.
 - 2. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required. Make samples at least 36 inches (900 mm) square, but not fewer than four tiles. Use grout of type and in color or colors approved for completed Work.
 - 3. Full-size units of each type of trim and accessory[**for each color and finish required**].

- E. Sustainable Design Submittals:
 1. Environmental Product Declaration: For each product.
 2. Health Product Declaration: For each product.
 3. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
 4. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Extra Stock Material: Furnish extra materials, from the same production run, to Owner that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed for each type, composition, color, pattern, and size indicated.
 2. Grout: Furnish quantity of grout equal to 3 percent of amount installed for each type, composition, and color indicated.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications:
 1. Installer is a Five-Star member of the National Tile Contractors Association or a Trowel of Excellence member of the Tile Contractors' Association of America.
- B. Provide the following upon request:
 1. Qualification Data: For Installer.
 2. Master Grade Certificates: For each shipment, type, and composition of tile, signed by tile manufacturer and Installer.
 3. Product Certificates: For each type of product, including product use classification.
 4. Product Test Reports:
 - a. Tile-setting and -grouting products.
 - b. Certified porcelain tile.
 - c. Slip-resistance test reports from qualified independent testing agency.
 5. Field Quality-Control Reports: Water test reports of membrane in wet areas.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.
- D. Store liquid materials in unopened containers and protected from freezing.

1.8 FIELD CONDITIONS

- A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Tile: Obtain tile of each type and color or finish from single source or producer.
 - 1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.

2.2 PRODUCTS, GENERAL

- A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
 - 1. Provide tile complying with Standard Grade requirements unless otherwise indicated.
- B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.
- C. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.
- D. Factory-Applied Temporary Protective Coating: Where indicated under tile type, protect exposed surfaces of tile against adherence of mortar and grout by precoating with continuous film of petroleum paraffin wax, applied hot. Do not coat unexposed tile surfaces.

2.3 GLAZED WALL TILE

- A. Glazed Wall Tile Type (TL-01):
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Daltile; a brand of Dal-Tile Corporation.
 - 2. Basis-of-Design Products: As scheduled; refer to Finish Schedule.
 - 3. Module Size: Insert dimensions.
 - 4. Face Size Variation: Rectified.
 - 5. Thickness: 5/16 inch (8 mm).
 - 6. Tile Color and Pattern: As indicated by manufacturer's designations .
 - 7. Grout Color: As selected by Architect from manufacturer's full range .
 - 8. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as follows, selected from manufacturer's standard shapes:

- a. External Corners for Thinset Mortar Installations: Surface bullnose; same size as adjoining flat tile.

2.4 BACKING PANELS

- A. Backing Panels: Specified in Section 09 2900 "Gypsum Board."

2.5 CRACK ISOLATION MEMBRANES

- A. General: Manufacturer's standard product, selected from the following, that complies with ANSI A118.12 for high performance and is recommended by manufacturer for application indicated. Include reinforcement and accessories recommended by manufacturer.
- B. Crack Isolation Membrane, Polyethylene Sheet: Polyethylene faced on both sides with polyester fabric.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Custom Building Products.
 - b. Laticrete International, Inc.
 - c. MAPEI Corporation.
 - d. Noble Company (The).
- C. Crack Isolation Membrane, Asphaltic Sheet: Self-adhering, modified-asphalt sheet with fabric reinforcement facing.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Boiardi Products Corporation; a QEP company.
 - b. Custom Building Products.
 - c. MAPEI Corporation.
 - d. National Applied Construction Products, Inc.
 - e. Sika Corporation; Flooring.
- D. Crack Isolation Membrane, Fluid Applied: Liquid-latex rubber or elastomeric polymer with continuous fabric reinforcement.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bostik; Arkema.
 - b. C-Cure.
 - c. Custom Building Products.
 - d. H.B. Fuller Construction Products Inc. / TEC.
 - e. Jamo Inc.
 - f. Laticrete International, Inc.
 - g. MAPEI Corporation.
 - h. Parex USA, Inc.
 - i. Siena Tile & Stone Installation Products; Omega Products International.
 - j. Sika Corporation.
 - k. Southern Grouts & Mortars, Inc.

2.6 SETTING MATERIALS

- A. Improved Modified Dry-Set Mortar (Thinset): ANSI A118.15.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ARDEX Americas.
 - b. Custom Building Products.
 - c. H.B. Fuller Construction Products Inc. / TEC.
 - d. Laticrete International, Inc.
 - e. MAPEI Corporation.
 - f. Parex USA, Inc.
 - g. Siena Tile & Stone Installation Products; Omega Products International.
2. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
3. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to other requirements in ANSI A118.15.

2.7 GROUT MATERIALS

A. High-Performance Tile Grout: ANSI A118.7.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ARDEX Americas.
 - b. Bostik; Arkema.
 - c. Custom Building Products.
 - d. H.B. Fuller Construction Products Inc. / TEC.
 - e. Laticrete International, Inc.
 - f. MAPEI Corporation.
 - g. Parex USA, Inc.
 - h. Southern Grouts & Mortars, Inc.
 - i. Summitville Tiles, Inc.
2. Polymer Type:
 - a. Dry, redispersible form, prepackaged with other dry ingredients.

2.8 MISCELLANEOUS MATERIALS

- A. Trowelable Underlayment and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting and adhesive materials for installations indicated.
- B. Vapor-Retarder Membrane: Polyethylene sheeting, ASTM D4397, 4.0 mils (0.1 mm) thick.
- C. Metal Edge Trim: Profile designed for wall terminations and edge protection.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Blanke Corporation.
 - b. Custom Building Products.
 - c. Dural USA, Inc.
 - d. Profiline Corp.
 - e. Progress Profiles America Inc.
 - f. Schluter Systems L.P.
 2. Description: L-shaped .
 3. Terminations: End caps matching edge-protection profile.
 4. Material and Finish: Insert finish exposed-edge material.

- a. Color: Insert color.
- D. Temporary Protective Coating: Formulated to protect exposed surfaces of tile against adherence of mortar and grout; compatible with tile, mortar, and grout products and easily removable after grouting is completed without damaging grout or tile.
- E. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.
- F. Grout Sealer: Grout manufacturer's standard product for sealing grout joints that does not change color or appearance of grout.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 - 1. Verify that substrates for setting tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
 - 2. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.
 - 3. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove coatings, including curing compounds or other coatings, that are incompatible with tile-setting materials.
- B. Where indicated, prepare substrates to receive waterproof membrane by applying a reinforced mortar bed that complies with ANSI A108.1 and is sloped 1/4 inch per foot (1:50) toward drains.
- C. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.
- D. Substrate Flatness:
 - 1. For tile shorter than 15 inches (381 mm), confirm that structure or substrate is limited to variation of 1/4 inch in 10 ft. (6.4 mm in 3 m) from the required plane, and no more than 1/16 inch in 12 inches (1.5 mm in 300 mm) when measured from tile surface high points.

- E. Field-Applied Temporary Protective Coating: If indicated under tile type or needed to prevent grout from staining or adhering to exposed tile surfaces, precoat them with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.

3.3 INSTALLATION OF CERAMIC TILE SYSTEM

- A. Install waterproof membrane to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness that is bonded securely to substrate.
 - 1. Allow waterproof membrane to cure and verify by testing that it is watertight before installing tile or setting materials over it.
- B. Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness that is bonded securely to substrate.
 - 1. Allow crack isolation membrane to cure before installing tile or setting materials over it.
- C. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
 - 1. Add materials, water, and additives in accurate proportions.
 - 2. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.
- D. Install tile in accordance with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of ANSI A108 series that are referenced in TCNA installation methods and specified in tile installation schedules, and apply to types of setting and grouting materials used.
 - 1. For the following installations, follow procedures in ANSI A108 series of tile installation standards for providing 95 percent mortar coverage:
 - a. Exterior tile floors and walls.
 - b. Tile floors in wet areas.
 - c. Tile swimming pool decks.
 - d. Tile floors in laundries.
 - e. Tile floors consisting of tiles 8 by 8 inches (200 by 200 mm) or larger.
 - f. Tile floors consisting of rib-backed tiles.
 - 2. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.
 - 3. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.
 - 4. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.
 - 5. Where accent tile differs in thickness from field tile, vary setting-bed thickness so that tiles are flush.
 - 6. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.

- a. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets, so joints between sheets are not apparent in finished Work.
 - b. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
 - c. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.
 7. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.
 8. Joint Widths: Install tile with joint widths indicated on Drawings, or if not indicated, as directed by Architect.
 - E. Movement Joints: Provide movement joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated on Drawings. Form joints during installation of setting materials, mortar beds, and tile. Keep joints free of dirt, debris, and setting materials prior to filling with sealants. Do not saw-cut joints after installing tiles.
 1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.
 2. Prepare joints and apply sealants to comply with requirements in Section 07 9200 "Joint Sealants."
 3. Comply with requirements of the TCNA Handbook for Ceramic, Glass, and Stone Tile Installation; "EJ171 - Movement Joint Guidelines for Ceramic, Glass, and Stone":
 - a. Movement Joints: Maximum spacing of joints in interior tile shall be 20 to 25 feet in each direction. Fill joints with sealant matching grout color.
 - F. Metal Wall Trim: Install at locations indicated on Drawings.
 - G. Grout Sealer: Apply grout sealer to cementitious grout joints in accordance with manufacturer's written instructions. As soon as sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.
- 3.4 FIELD QUALITY CONTROL
- A. Nonconforming Work:
 1. Waterproof membrane will be considered defective if water level has dropped.
 2. Remove and replace defective components and retest.
- 3.5 ADJUSTING AND CLEANING
- A. Remove and replace tile that is damaged or that does not match adjoining tile. Provide new matching units, installed as specified and in a manner to eliminate evidence of replacement.
 - B. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
 1. Remove grout residue from tile as soon as possible.
 2. Clean grout smears and haze from tile in accordance with tile and grout manufacturer's written instructions. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.

3.6 PROTECTION

- A. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.
- B. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.
- C. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

3.7 INTERIOR CERAMIC TILE INSTALLATION SCHEDULE

- A. Interior Wall Installations, Metal Studs or Furring:
 - 1. TCNA W245 : Thinset mortar on glass-mat, water-resistant gypsum backer board.
 - a. Ceramic Tile Type: TL-01
 - b. Thinset Mortar: Modified dry-set mortar.
 - c. Grout: High-performance unsanded cement grout.

END OF SECTION

SECTION 09 5113 - ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Acoustical panels.
 - 2. Metal suspension system.
 - 3. Metal edge moldings and trim.
- B. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

- A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal. Ensure compliance with requirements included in Section 01 3300 "Submittal Procedures".
- B. Product Data:
 - 1. Acoustical panels.
 - 2. Metal suspension system.
 - 3. Metal edge moldings and trim.
- C. Sustainable Design Submittals:
 - 1. Recycled Content: Provide manufacturer documentation for recycled content, indicating postconsumer and preconsumer recycled content.
 - 2. Product Certificates: For materials manufactured within 100 miles (160 km) of Project, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each raw material.
 - 3. Environmental Product Declaration: For each product.
 - 4. Health Product Declaration: For each product.
 - 5. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
 - 6. Health Product Declaration (HPD): Provide documentation indicating that manufacturer has screened and publicly provided ingredient disclosure to 1000 ppm, and has developed an action plan to mitigate known hazards.
 - 7. Laboratory Test Reports: For ceiling products, indicating compliance with requirements for low-emitting materials.
- D. Shop Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Ceiling suspension-system members.
 - 2. Structural members to which suspension systems will be attached.
 - 3. Method of attaching hangers to building structure.
 - a. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.

4. Carrying channels or other supplemental support for hanger-wire attachment where conditions do not permit installation of hanger wires at required spacing.
5. Size and location of initial access modules for acoustical panels.
6. Items penetrating finished ceiling and ceiling-mounted items including the following:
 - a. Lighting fixtures.
 - b. Diffusers.
 - c. Grilles.
 - d. Speakers.
 - e. Sprinklers.
 - f. Access panels.
 - g. Perimeter moldings.
7. Show operation of hinged and sliding components covered by or adjacent to acoustical panels.
8. Minimum Drawing Scale: 1/4 inch = 1 foot (1:48) .

E. Samples: For each exposed product and for each color and texture specified, 6 inches (150 mm) in size.

F. Samples for Initial Selection: For components with factory-applied finishes.

G. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of sizes indicated below:

1. Acoustical Panels: Set of full-size Samples of each type, color, pattern, and texture.
2. Exposed Suspension-System Members, Moldings, and Trim: Set of 6-inch- (150-mm-) long Samples of each type, finish, and color.
3. Clips: Full-size hold-down clips.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Acoustical Ceiling Units: Full-size panels equal to 2 percent of quantity installed.
2. Suspension-System Components: Quantity of each exposed component equal to 2 percent of quantity installed.
3. Hold-Down Clips: Equal to 2 percent of quantity installed.
4. Impact Clips: Equal to 2 percent of quantity installed.

1.6 QUALITY ASSURANCE

A. Provide the following upon request:

1. Qualification Data: For testing agency.
2. Product Test Reports: For each acoustical panel ceiling, for tests performed by manufacturer and witnessed by a qualified testing agency.
3. Evaluation Reports: For each acoustical panel ceiling suspension system and anchor and fastener type, from ICC-ES.
4. Field quality-control reports.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical panels, suspension-system components, and accessories to Project site and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

1.8 FIELD CONDITIONS

- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
 - 1. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical panel ceiling installation.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Source Limitations for Ceiling System: Obtain each type of acoustical ceiling panel and its supporting suspension system from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Ceiling products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame Spread Index: Class A in accordance with ASTM E1264.
 - 2. Smoke Developed Index: 450 or less.
- C. Fire-Resistance Ratings: Comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL or from the listings of another qualified testing agency.

2.3 ACOUSTICAL PANELS (ACT-01)

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Armstrong Ceiling & Wall Solutions.
 - 2. Certainteed; SAINT-GOBAIN.
 - 3. Rockfon; ROCKWOOL International.
 - 4. USG Corporation.

- B. Basis-of-Design Products: As scheduled; refer to Finish Schedule.
- C. Acoustical Panel Standard: Provide manufacturer's standard panels in accordance with ASTM E1264 and designated by type, form, pattern, acoustical rating, and light reflectance unless otherwise indicated.
- D. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- E. Classification: Provide fire-resistance-rated panels as follows:
 - 1. Pattern: as indicated by manufacturer's designation .
- F. Color: As indicated in a schedule .
- G. Edge/Joint Detail: As indicated by manufacturer's designation .
- H. Thickness:
 - 1. As indicated in a schedule .
- I. Modular Size: As indicated in a schedule .
- J. Antimicrobial Treatment: Manufacturer's standard broad spectrum, antimicrobial formulation that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria and showing no mold, mildew, or bacterial growth when tested in accordance with ASTM D3273, ASTM D3274, or ASTM G21 and evaluated in accordance with ASTM D3274 or ASTM G21.

2.4 METAL SUSPENSION SYSTEM (ACT-01)

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Armstrong Ceiling & Wall Solutions.
 - 2. Certainteed; SAINT-GOBAIN.
 - 3. Rockfon; ROCKWOOL International.
 - 4. USG Corporation.
- B. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip galvanized, G30 (Z90) coating designation; with prefinished 15/16-inch- (24-mm-) wide metal caps on flanges.
 - 1. Fire Rating: As indicated on Drawings.
 - 2. Structural Classification: Heavy-duty system.
 - 3. End Condition of Cross Runners: Override (stepped) type.
 - 4. Face Design: Flat, flush.
 - 5. Cap Material: Cold-rolled steel .
 - 6. Cap Finish: Painted to match color indicated by manufacturer's designation .

2.5 ACCESSORIES

- A. Attachment Devices: Size for five times the design load indicated in ASTM C635/C635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.

1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing in accordance with ASTM E488/E488M or ASTM E1512 as applicable, conducted by a qualified testing and inspecting agency.
 - a. Type: Postinstalled expansion anchors.
 - b. Corrosion Protection, Carbon Steel: Components zinc plated in accordance with ASTM B633, Class SC 1 (mild) service condition.
 2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing in accordance with ASTM E1190, conducted by a qualified testing and inspecting agency.
- B. Wire Hangers, Braces, and Ties: Provide wires as follows:
1. Zinc-Coated, Carbon-Steel Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper.
 2. Size: Wire diameter sufficient for its stress at three times hanger design load (ASTM C635/C635M, Table 1, "Direct Hung") will be less than yield stress of wire, but not less than 0.135-inch- (3.5-mm-) diameter wire.
 3. Size:
 - a. Hanger Wire Size: 0.106 inch (No. 12-gauge) (2.68 mm) diameter wire.
 - b. Seismic Bracing Wire Size: 0.106 inch (No. 12-gauge) (2.68 mm) diameter wire.
 - c. Slack Safety Wire Size: 0.106 inch (No. 12-gauge) (2.68 mm) diameter wire.
- C. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.
- D. Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.
- E. Angle Hangers: Angles with legs not less than 7/8 inch (22 mm) wide; formed with 0.04-inch- (1-mm-) thick, galvanized-steel sheet complying with ASTM A653/A653M, G90 (Z275) coating designation; with bolted connections and 5/16-inch- (8-mm-) diameter bolts.
- F. Hold-Down Clips: Manufacturer's standard hold-down.
- G. Stabilizer Clips: Manufacturer's standard stabilizer clips designed for use with large format ceiling panels.
- 2.6 METAL EDGE MOLDINGS AND TRIM <Insert drawing designation>
- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Armstrong Ceiling & Wall Solutions.
 2. Certainteed; SAINT-GOBAIN.
 3. Rockfon; ROCKWOOL International.
 4. USG Corporation.

- B. Roll-Formed, Sheet-Metal Edge Moldings: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.
 - 1. Edge moldings to fit acoustical panel edge details and suspension systems indicated and match width and configuration of exposed runners unless otherwise indicated.
 - a. Provide 2-inch (50 mm) wide wall angles.
 - 2. For lay-in panels with reveal edge details, provide stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member.
 - 3. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.

2.7 ACOUSTICAL SEALANT

- A. Acoustical Sealant: As specified in Section 07 9219 "Acoustical Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.
- B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders unless otherwise indicated, and comply with layout shown on reflected ceiling plans.
- B. Layout openings for penetrations centered on the penetrating items.

3.3 INSTALLATION OF ACOUSTICAL PANEL CEILINGS

- A. Install acoustical panel ceilings in accordance with ASTM C636/C636M and manufacturer's written instructions.
 - 1. Fire-Rated Assembly: Install fire-rated ceiling systems in accordance with tested fire-rated design.
- B. Suspend ceiling hangers from building's structural members and as follows:
 - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.

2. Splay hangers only where required and, if permitted with fire-resistance-rated ceilings, to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
 4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly to structure or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
 5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
 6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 8. Do not attach hangers to steel deck tabs.
 9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 10. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches (200 mm) from ends of each member.
 11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.
- C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
- D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
 2. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends. Miter corners accurately and connect securely.
 3. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- E. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- F. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide precise fit.
1. Arrange directionally patterned acoustical panels as follows:
 - a. As indicated on reflected ceiling plans.

- b. Install panels with pattern running in one direction parallel to [long] [short] axis of space.
- c. Install panels in a basket-weave pattern.
- 2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension-system runners and moldings.
- 3. For reveal-edged panels on suspension-system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.
- 4. For reveal-edged panels on suspension-system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension-system surfaces and panel faces flush with bottom face of runners.
- 5. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
- 6. Install hold-down clips in areas indicated; space in accordance with panel manufacturer's written instructions unless otherwise indicated.
 - a. Hold-Down Clips: Space o.c. on all cross runners.
- 7. Install stabilizer clips in areas receiving ceiling panels with a dimension of 48 inches or more on one or more sides. Install in accordance with manufacturer's instructions, at ceiling panel mid-points. At ceiling panels with a dimension greater than 48 inches, provide stabilizer clips at 24 inches o.c. maximum.
- 8. Install clean-room gasket system in areas indicated, sealing each panel and fixture as recommended by panel manufacturer's written instructions.
- 9. Protect lighting fixtures and air ducts in accordance with requirements indicated for fire-resistance-rated assembly.

3.4 ERECTION TOLERANCES

- A. Suspended Ceilings: Install main and cross runners level to a tolerance of 1/8 inch in 12 feet (3 mm in 3.6 m), non-cumulative.
- B. Moldings and Trim: Install moldings and trim to substrate and level with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3 mm in 3.6 m), non-cumulative.

3.5 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
 - 1. Periodic inspection during the installation of suspended ceiling grids in accordance with ASCE/SEI 7.
- B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- C. Perform the following tests and inspections of completed installations of acoustical panel ceiling hangers and anchors and fasteners in successive stages and when installation of ceiling suspension systems on each floor has reached 20 percent completion, but no panels have been installed. Do not proceed with installations of acoustical panel ceiling hangers for the next area until test results for previously completed installations of acoustical panel ceiling hangers show compliance with requirements.

1. Within each test area, testing agency will select one of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 200 lbf (890 N) of tension; it will also select one of every two postinstalled anchors used to attach bracing wires to concrete and will test them for 440 lbf (1957 N) of tension.
 2. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.
- D. Acoustical panel ceiling hangers, anchors, and fasteners will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.
- 3.6 CLEANING
- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.
- B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION

SECTION 09 6723 - RESINOUS FLOORING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Resinous flooring.
 2. Integral cove base accessories.
- B. Related Sections:
 1. Section 07 1800 "Traffic Coatings" for vehicular-traffic-bearing, elastomeric flooring systems.
 2. Section 09 6623 "Resinous Matrix Terrazzo Flooring" for thinset, epoxy-matrix terrazzo.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 1. Review manufacturer's written instructions for substrate preparation and environmental conditions affecting resinous flooring installation.
 2. Review details of integral cove bases.
 3. Review manufacturer's written instructions for installing resinous flooring systems.
 4. Review protection measures for adjacent construction and installed flooring, floor drainage requirements, curbs, base details, and so forth.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 1. Include manufacturer's technical data, installation instructions, and recommendations for each resinous flooring component required.
- B. Sustainable Design Submittals:
 1. Environmental Product Declaration: For each product.
 2. Health Product Declaration: For each product.
 3. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
 4. Multi-Attribute Optimization: For each product, provide documentation of third-party certification, indicating impact reduction in global warming potential, depletion of stratospheric ozone layer, acidification of land and water sources, eutrophication, and/or formation of tropospheric ozone.
 5. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
 6. Supply Chain Optimization: For each product, provide documentation demonstrating that manufacturer practices comply with supply chain optimization requirements.
 7. Laboratory Test Reports: For flooring products, indicating compliance with requirements for low-emitting materials.
 8. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
- C. Samples: For each resinous floor system required and for each color and texture specified, 6 inches (150 mm) square in size, applied to a rigid backing by Installer for this Project.
- D. Samples for Initial Selection: For each type of exposed finish required.

- E. Samples for Verification: For each resinous flooring system required and for each color and texture specified, 6 inches (150 mm) square, applied to a rigid backing by Installer for this Project.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For resinous flooring to include in maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.
 - 1. Engage an installer who is certified in writing by resinous flooring manufacturer as qualified to apply resinous flooring systems indicated.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Apply full-thickness mockups on 96-inch- (2400-mm-) square floor area indicated on Drawings.
 - a. Include 96-inch (2400-mm) length of integral cove base with inside and outside corner.
 - 2. Simulate finished lighting conditions for Architect's review of mockups.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- C. Provide the following upon request:
 - 1. Qualification Data: For Installer.
 - 2. Material Certificates: For each resinous flooring component.
 - 3. Material Test Reports: For each resinous flooring system, by a qualified testing agency.
 - 4. Field quality-control reports.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Comply with resinous flooring manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting resinous flooring installation.
- B. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous flooring installation.

- C. Close spaces to traffic during resinous flooring installation and for 24 hours after installation unless manufacturer recommends a longer period.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Flooring products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Flammability: Self-extinguishing in accordance with ASTM D635.

2.2 RESINOUS FLOORING (FL-01)

- A. Resinous Flooring System: Abrasion-, impact-, and chemical-resistant, aggregate-filled, resin-based monolithic floor surfacing designed to produce a seamless floor[**and integral cove base**].
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Stonhard, Inc. - STONGARD MR
 - 2. Basis-of-Design Products: As indicated on Drawings.
- B. Source Limitations: Obtain primary resinous flooring materials, including primers, resins, hardening agents, grouting coats, and topcoats, from single source from single manufacturer. Obtain secondary materials, including patching and fill material, joint sealant, and repair materials, of type and from manufacturer recommended in writing by manufacturer of primary materials.
- C. System Characteristics:
 - 1. Color and Pattern: As indicated by manufacturer's product designation .
 - 2. Wearing Surface: Manufacturer's standard wearing surface .
 - 3. Overall System Thickness: 40 mils (1.0 mm).
- D. Primer: Type recommended in writing by resinous flooring manufacturer for substrate and resinous flooring system indicated.
- E. Waterproofing Membrane: Type recommended in writing by resinous flooring manufacturer for substrate and resinous flooring system indicated.
- F. Reinforcing Membrane: Flexible resin formulation that is recommended in writing by resinous flooring manufacturer for substrate and resinous flooring system indicated and that inhibits substrate cracks from reflecting through resinous flooring.
- G. Patching and Fill Material: Resinous product of or approved by resinous flooring manufacturer and recommended in writing by manufacturer for installation indicated.
- H. Body Coats:
 - 1. Resin: Epoxy Urethane.

2. Formulation Description: High solids .
3. Type: Pigmented .
4. Installation Method: Self-leveling slurry with broadcast aggregates .
5. Number of Coats: Two .
6. Thickness of Coats: 8 mils (0.2 mm) 1/16 inch (1.6 mm) 1/8 inch (3.2 mm).
7. Aggregates: Manufacturer's standard .

I. Grout Coat:

1. Resin: Epoxy Urethane .
2. Formulation Description: High solids.
3. Type: Clear Pigmented.
4. Thickness of Coat: 8 mils (0.2 mm) 1/16 inch (1.6 mm) 1/8 inch (3.2 mm).

J. Topcoats: Sealing or finish coats.

1. Resin: Epoxy Urethane .
2. Formulation Description: [100 percent solids] [High solids] [Water based] <Insert requirements>.
3. Type: Clear.
4. Number of Coats: Two.
5. Thickness of Coats: 8 mils (0.2 mm) 1/16 inch (1.6 mm) 1/8 inch (3.2 mm).
6. Finish: Matte.

2.3 INTEGRAL COVE BASE ACCESSORIES

A. Precast, Integral Cove Base: Impact-resistant, polymer-resin, cove base moldings with a grit profile to promote adhesion of resinous flooring and recommended in writing by resinous flooring manufacturer.

1. Radius Cove Base: 6-inch- (152-mm-) high base molding that provides approximately 1-inch (25-mm) radius cove at floor-to-wall joint; for adhesive installation as substrate for resinous flooring system to form an integral cove base.

B. Installation Adhesive: As recommended in writing by accessory manufacturer.

1. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resinous flooring systems.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare and clean substrates in accordance with resinous flooring manufacturer's written instructions for substrate indicated to ensure adhesion.
- B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.
 - 1. Roughen concrete substrates as follows:
 - a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 - b. Comply with requirements in SSPC-SP 13/NACE No. 6, with a Concrete Surface Profile of 3 or greater in accordance with ICRI Technical Guideline No. 310.2R, unless manufacturer's written instructions are more stringent.
 - 2. Repair damaged and deteriorated concrete in accordance with resinous flooring manufacturer's written instructions.
 - 3. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 - b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
 - c. If water moisture tests exceed stated limits, apply vapor retarder for moisture vapor emission control as specified in Section 09 0561.13.
 - 4. Alkalinity and Adhesion Testing: Perform tests recommended in writing by resinous flooring manufacturer. Proceed with installation only after substrate alkalinity is not less than 6 or more than 8 pH unless otherwise recommended in writing by flooring manufacturer.
- C. Patching and Filling: Use patching and fill material to fill holes and depressions in substrates in accordance with manufacturer's written instructions.
 - 1. Control Joint Treatment: Treat control joints and other nonmoving substrate cracks to prevent cracks from reflecting through resinous flooring in accordance with manufacturer's written instructions.
- D. Resinous Materials: Mix components and prepare materials in accordance with resinous flooring manufacturer's written instructions.

3.3 INSTALLATION

- A. Apply components of resinous flooring system in accordance with manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness specified.
 - 1. Coordinate installation of components to provide optimum adhesion of resinous flooring system to substrate, and optimum intercoat adhesion.
 - 2. Cure resinous flooring components in accordance with manufacturer's written instructions. Prevent contamination during installation and curing processes.

3. Expansion and Isolation Joint Treatment: At substrate expansion and isolation joints, comply with resinous flooring manufacturer's written instructions.
- B. Primer: Apply primer over prepared substrate at spreading rate recommended in writing by manufacturer.
- C. Waterproofing Membrane: Apply waterproofing membrane where indicated on Drawings, in thickness recommended in writing by manufacturer.
 1. Apply waterproofing membrane to integral cove base substrates.
- D. Reinforcing Membrane: Apply reinforcing membrane to Insert requirements.
- E. Integral Cove Base Accessories: Adhesively install precast accessories before applying flooring coats and in accordance with manufacturer's written instructions.
- F. Self-Leveling Body Coats: Apply self-leveling slurry body coats in thickness specified for flooring system.
 1. Aggregates: Broadcast aggregates at rate recommended in writing by manufacturer. After resin is cured, remove excess aggregates to provide surface texture indicated.
- G. Grout Coat: Apply grout coat to fill voids in surface of final body coat.
- H. Topcoats: Apply topcoats in number indicated for flooring system specified, at spreading rates recommended in writing by manufacturer, and to produce wearing surface specified.

3.4 FIELD QUALITY CONTROL

- A. Material Sampling: Owner may, at any time and any number of times during resinous flooring installation, require material samples for testing for compliance with requirements.
 1. Owner will engage an independent testing agency to take samples of materials being used. Material samples will be taken, identified, sealed, and certified in presence of Contractor.
 2. Testing agency will test samples for compliance with requirements, using applicable referenced testing procedures or, if not referenced, using testing procedures listed in manufacturer's product data.
 3. If test results show applied materials do not comply with specified requirements, pay for testing, remove noncomplying materials, prepare surfaces coated with unacceptable materials, and reinstall flooring materials to comply with requirements.
- B. Core Sampling: At Owner's direction and at locations designated by Owner, take one core sample per 1000 sq. ft. (92.9 sq. m) of resinous flooring, or portion of, to verify thickness. For each sample that fails to comply with requirements, take two additional samples. Repair damage caused by coring. Correct deficiencies in installed flooring as indicated by testing.

3.5 PROTECTION

- A. Protect resinous flooring from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by resinous flooring manufacturer.

END OF SECTION

FOR REFERENCE ONLY

SECTION 09 9123 - INTERIOR PAINTING**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes surface preparation and the application of paint systems on the following interior substrates:
 - 1. Gypsum board.
- B. Related Requirements:
 - 1. Section 09 9600 "High-Performance Coatings" for tile-like coatings.

1.2 DEFINITIONS

- A. MPI Gloss Level 3 (Eggshell Finish): 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
 - 1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
 - 2. Indicate VOC content.
- B. Sustainable Design Submittals:
 - 1. Product Data: For paints and coatings, indicating VOC content.
 - 2. Laboratory Test Reports: For paints and coatings, indicating compliance with requirements for low-emitting materials.
 - 3. Environmental Product Declaration: For each product.
 - 4. Health Product Declaration: For each product.
 - 5. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
 - 6. Manufacturer Inventory: For each product, provide manufacturer's manifest of ingredients.
- C. Samples for Initial Selection: For each type of topcoat product.
- D. Samples for Verification: For each type of paint system and in each color and gloss of topcoat.
 - 1. Submit Samples on rigid backing, 8 inches (200 mm) square.
 - 2. Apply coats on Samples in steps to show each coat required for system.
 - 3. Label each coat of each Sample.
 - 4. Label each Sample for location and application area.
- E. Product List: Use same designations indicated on Drawings and in the Interior Painting Schedule to cross-reference paint systems specified in this Section. Include color designations.

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Paint: 5 percent, but not less than 1 gal. (3.8 L) of each material and color applied.

1.5 QUALITY ASSURANCE

- A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 1. Architect will select one surface to represent surfaces and conditions for application of each paint system.
 - a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).
 - b. Other Items: Architect will designate items or areas required.
 2. Final approval of color selections will be based on mockups.
 - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).
 1. Maintain containers in clean condition, free of foreign materials and residue.
 2. Remove rags and waste from storage areas daily.

1.7 FIELD CONDITIONS

- A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F (10 and 35 deg C).
- B. Do not apply paints when relative humidity exceeds 85 percent; at temperatures of less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Behr Paint Company; Behr Process Corporation.
 2. Benjamin Moore & Co.
 3. Dunn-Edwards Corporation (a Nippon Paint Holdings Co. Ltd. company).
 4. PPG Paints.
 5. Pratt & Lambert.
 6. Sherwin-Williams Company (The).

2.2 PAINT, GENERAL

- A. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products List."
 - 1. Provide products from manufacturer's premium or professional product line.
- B. Material Compatibility:
 - 1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
 - 2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.
- C. VOC Content: For field applications that are inside the weatherproofing system, paints and coatings shall comply with VOC content limits of authorities having jurisdiction and the following VOC content limits:
 - 1. Nonflat Paints and Coatings: 50 g/L.
 - 2. Primers, Sealers, and Undercoaters: 100 g/L.
- D. Low-Emitting Materials: For field applications that are inside the weatherproofing system, 90 percent of paints and coatings shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- E. Colors: As indicated in finish schedule.
 - 1. Items Not Included in Finish Schedule: As selected by Architect.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 - 1. Gypsum Board: 12 percent.
- C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
- D. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.
- E. Proceed with coating application only after unsatisfactory conditions have been corrected.
 - 1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and paint systems indicated.

- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
 - 1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
- C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
 - 1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.

3.3 INSTALLATION

- A. Apply paints according to manufacturer's written instructions and to recommendations in "MPI Manual."
 - 1. Use applicators and techniques suited for paint and substrate indicated.
 - 2. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
 - 3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
 - 4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
 - 5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.
 - 6. Paint latex sealants color as directed by Architect.
- B. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.
- C. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.
- D. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
 - 1. Paint the following work where exposed in occupied spaces:
 - a. Equipment, including panelboards.
 - b. Uninsulated metal piping.
 - c. Uninsulated plastic piping.
 - d. Pipe hangers and supports.
 - e. Metal conduit.
 - f. Plastic conduit.
 - g. Duct, equipment, and pipe insulation having cotton or canvas insulation covering or other paintable jacket material.
 - h. Other items as directed by Architect.
 - 2. Paint portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets that are visible from occupied spaces.

3.4 FIRE-RATED AND SMOKE CONTAINMENT ASSEMBLIES

- A. Fire walls, fire barriers, fire partitions, smoke barriers and smoke partitions or any other wall required to have protected openings or penetrations shall be effectively and permanently identified with signs or stenciling. Such identification shall:
 - 1. Be located in accessible concealed floor, floor-ceiling or attic spaces; and
 - 2. Be located within 15 feet of each end of each wall and repeated at intervals not exceeding 30 feet measured horizontally along both sides of the wall or partition; and
 - 3. Include lettering not less than 3 inches in height, incorporating the suggested wording: "FIRE AND/OR SMOKE BARRIER-PROTECT ALL OPENINGS" or other wording approved or required by AHJ (Authority Having Jurisdiction).
 - 4. Apply a minimum one-inch wide bright red horizontal line, both sides of wall, interrupted for approved text, at the required interval.

3.5 FIELD QUALITY CONTROL

- A. Dry-Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry-film thickness.
 - 1. Contractor shall touch up and restore painted surfaces damaged by testing.
 - 2. If test results show that dry-film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry-film thickness that complies with paint manufacturer's written recommendations.

3.6 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.7 INTERIOR PAINTING SCHEDULE

- A. Gypsum Board Substrates: (P-01)
 - 1. Institutional Low-Odor/VOC Latex System, MPI INT 9.2M:
 - a. Prime Coat: Primer sealer, interior, institutional low odor/VOC, MPI #149.
 - b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
 - c. Topcoat: Latex, interior, institutional low odor/VOC, eggshell (MPI Gloss Level 3), MPI #145.

END OF SECTION

SECTION 09 9600 - HIGH-PERFORMANCE COATINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes surface preparation and the application of high-performance coating systems
 - 1. Interior Substrates:
 - a. Concrete, vertical and horizontal surfaces.
 - b. Cement board.
 - c. Concrete masonry units (CMUs).
 - d. Gypsum board.
- B. Related Requirements:
 - 1. Section 09 9123 "Interior Painting" for general field painting.

1.2 DEFINITIONS

- A. MPI Gloss Level 5 (Semi-Gloss Finish): 35 to 70 units at 60 degrees, according to ASTM D 523.
- B. MPI Gloss Level 6 (Gloss Finish): 70 to 85 units at 60 degrees, according to ASTM D 523.
- C. MPI Gloss Level 7 (High-Gloss Finish): More than 85 units at 60 degrees, according to ASTM D 523.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product, include preparation requirements and application instructions.
 - 1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
 - 2. Indicate VOC content.
- B. Sustainable Design Submittals:
 - 1. Product Data: For paints and coatings, indicating VOC content.
- C. Samples for Initial Selection: For each type of topcoat product indicated.
- D. Samples for Verification: For each type of coating system and each color and gloss of topcoat indicated.
 - 1. Submit Samples on rigid backing, 8 inches (200 mm) square.
 - 2. Apply coats on Samples in steps to show each coat required for system.
 - 3. Label each coat of each Sample.
 - 4. Label each Sample for location and application area.
- E. Product List: Cross-reference to coating system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Coatings: 5 percent, but not less than 1 gal. (3.8 L) of each material and color applied.

1.5 QUALITY ASSURANCE

- A. Mockups: Apply mockups of each coating system indicated to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Architect will select one surface to represent surfaces and conditions for application of each coating system.
 - a. Wall and Ceiling Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).
 - b. Other Items: Architect will designate items or areas required.
 - 2. Final approval of color selections will be based on mockups.
 - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).
 - 1. Maintain containers in clean condition, free of foreign materials and residue.
 - 2. Remove rags and waste from storage areas daily.

1.7 FIELD CONDITIONS

- A. Apply coatings only when temperature of surfaces to be coated and ambient air temperatures are between 50 and 95 deg F (10 and 35 deg C).
- B. Do not apply coatings when relative humidity exceeds 85 percent; at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.
- C. Do not apply exterior coatings in snow, rain, fog, or mist.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Product: (P-02, P-03) Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - 1. STONHARD - Stoneglaze VSR
 - 2. Tnemec Company, Inc.

2.2 HIGH-PERFORMANCE COATINGS, GENERAL

- A. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products Lists."
 - 1. Provide products from manufacturer's premium or professional product line.
- B. Material Compatibility:
 - 1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
 - 2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.
 - 3. Products shall be of same manufacturer for each coat in a coating system.
- C. VOC Content: For field applications that are inside the weatherproofing system, paints and coatings shall comply with VOC content limits of authorities having jurisdiction and the following VOC content limits:
 - 1. Nonflat Paints and Coatings: 50 g/L.
 - 2. Primers, Sealers, and Undercoaters: 100 g/L.
- D. Low-Emitting Materials: For field applications that are inside the weatherproofing system, 90 percent of paints and coatings shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- E. Colors: As indicated in color schedule .

2.3 SOURCE QUALITY CONTROL

- A. Testing of Coating Materials: Owner reserves the right to invoke the following procedure:
 - 1. Owner will engage the services of a qualified testing agency to sample coating materials. Contractor will be notified in advance and may be present when samples are taken. If coating materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
 - 2. Testing agency will perform tests for compliance with product requirements.
 - 3. Owner may direct Contractor to stop applying coatings if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials. Contractor will be required to remove rejected materials from previously coated surfaces if, on recoating with complying materials, the two coatings are incompatible.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 - 1. Concrete: 12 percent.
 - 2. Fiber-Cement Board: 12 percent.
 - 3. Masonry (Clay and CMUs): 12 percent.
 - 4. Gypsum Board: 12 percent.
- C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
- D. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.
- E. Proceed with coating application only after unsatisfactory conditions have been corrected.
 - 1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and coating systems indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
 - 1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
- C. Clean substrates of substances that could impair bond of coatings, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
 - 1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce coating systems indicated.
- D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.
 - 1. Clean surfaces with pressurized water. Use pressure range of 1500 to 4000 psi (10 350 to 27 580 kPa) at 6 to 12 inches (150 to 300 mm).
 - 2. Abrasive blast clean surfaces to comply with SSPC-SP 7/NACE No. 4.
- E. Masonry Substrates: Remove efflorescence and chalk. Do not coat surfaces if moisture content, alkalinity of surfaces, or alkalinity of mortar joints exceeds that permitted in manufacturer's written instructions.
 - 1. Clean surfaces with pressurized water. Use pressure range of 1500 to 4000 psi (10 350 to 27 580 kPa) at 6 to 12 inches (150 to 300 mm).

3.3 APPLICATION

- A. Apply high-performance coatings according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."
 - 1. Use applicators and techniques suited for coating and substrate indicated.

2. Coat surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, coat surfaces behind permanently fixed equipment or furniture with prime coat only.
 3. Coat backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
 4. Do not apply coatings over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
- B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of the same material are to be applied. Tint undercoats to match color of finish coat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.
 - C. If undercoats or other conditions show through final coat, apply additional coats until cured film has a uniform coating finish, color, and appearance.
 - D. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Produce sharp glass lines and color breaks.

3.4 FIELD QUALITY CONTROL

- A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test coatings for dry film thickness.
 1. Contractor shall touch up and restore coated surfaces damaged by testing.
 2. If test results show that dry film thickness of applied coating does not comply with coating manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with coating manufacturer's written recommendations.

3.5 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from coating operation. Correct damage to work of other trades by cleaning, repairing, replacing, and recoating, as approved by Architect, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced coated surfaces.

END OF SECTION

SECTION 10 2800 - TOILET, BATH, AND LAUNDRY ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Public-use washroom accessories.
 - 2. Underlavatory guards.
- B. Related Requirements:
 - 1. Section 09 3013 "Ceramic Tiling" for ceramic toilet and bath accessories.

1.2 COORDINATION

- A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
- B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

1.3 ACTION SUBMITTALS

- A. Product Data Submittals: For each product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Include anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
 - 3. Include electrical characteristics.
- B. Samples: For each exposed product and for each finish specified, full size.
 - 1. Approved full-size Samples will be returned and may be used in the Work.
- C. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.
 - 1. Identify locations using room designations indicated.
 - 2. Identify accessories using designations indicated.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For accessories to include in maintenance manuals.

1.5 WARRANTY

- A. Manufacturer's Special Warranty for Mirrors: Manufacturer agrees to repair or replace mirrors that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, visible silver spoilage defects.
 - 2. Warranty Period: 15 years from date of Substantial Completion.

- B. Manufacturer's Special Warranty for Toilet-Compartment Occupancy-Indicator Systems: Manufacturer agrees to repair or replace toilet-compartment occupancy-indicator systems that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Design accessories and fasteners to comply with the following requirements:
 - 1. Grab Bars: Installed units are able to resist 250 lbf (1112 N) concentrated load applied in any direction and at any point.

2.2 PUBLIC-USE WASHROOM ACCESSORIES

- A. Source Limitations: Obtain public-use washroom accessories from single source from single manufacturer.
- B. Combination Toilet Tissue Dispenser (TA-06):
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ASI-American Specialties, Inc.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
 - 2. Description: Combination unit with double-roll toilet tissue dispenser and the following:
 - a. Removable sanitary-napkin waste receptacle with self-closing, disposal-opening cover.
 - b. Seat-cover dispenser with minimum capacity of 500 single or half-fold seat covers.
 - 3. Mounting: Recessed.
 - 4. Toilet Tissue Dispenser Capacity: 4-1/2- or 5-inch- (114- or 127-mm-) diameter tissue rolls.
 - 5. Toilet Tissue Dispenser Operation: Noncontrol delivery with theft-resistant spindles.
 - 6. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).
 - 7. Lockset: Tumbler type.
- C. Combination Towel (Roll) Dispenser/Waste Receptacle (TA-05):
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ASI-American Specialties, Inc.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
 - 2. Description: Combination unit for dispensing preset length of roll paper towels, with removable waste receptacle.
 - 3. Towel Mechanism: Lever.
 - 4. Mounting: Recessed.
 - 5. Minimum Towel-Dispenser Capacity: 8-inch- (203-mm-) wide, 800-foot- (244-m-) long roll.
 - 6. Minimum Waste Receptacle Capacity: 12 gal. (45.4 L).
 - 7. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).
 - 8. Liner: Reusable, vinyl waste-receptacle liner.

9. Lockset: Tumbler type for towel dispenser compartment and waste receptacle.

D. Soap Dispenser :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ASI-American Specialties, Inc.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
2. Description: Designed for manual operation and dispensing soap in liquid or lotion form.
3. Mounting: Vertically oriented, surface mounted .
4. Lockset: Tumbler type.
5. Refill Indicator: Window type.

E. Grab Bar(TA-01, TA-02, TA-03) :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ASI-American Specialties, Inc.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 0.05 inch (1.3 mm) thick.
 - a. Finish: Smooth, ASTM A480/A480M No. 4 finish (satin) on ends and slip-resistant texture in grip area.
4. OD: 1-1/2 inches (38 mm).
5. Configuration and Length: As indicated on Drawings.

F. Mirror Unit (TA-04) :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ASI-American Specialties, Inc.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
2. Frame: Stainless steel channel .
 - a. Corners: Manufacturer's standard .
3. Size: As indicated on Drawings.
4. Hangers: Manufacturer's standard rigid, tamper and theft resistant.

2.3 UNDERLAVATORY GUARDS

A. Underlavatory Guard :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Buckaroos, Inc.
 - b. Plumberex Specialty Products, Inc.
 - c. Truebro; IPS Corporation.
2. Description: Insulating pipe covering for supply and drain piping assemblies that prevents direct contact with and burns from piping; allow service access without removing coverings.
3. Material and Finish: Antimicrobial, molded plastic, white.

2.4 MATERIALS

- A. Stainless Steel: ASTM A240/A240M or ASTM A666, Type 304, 0.031-inch- (0.8-mm-) minimum nominal thickness unless otherwise indicated.
- B. Steel Sheet: ASTM A1008/A1008M, Designation CS (cold rolled, commercial steel), 0.036-inch- (0.9-mm-) minimum nominal thickness.
- C. Fasteners: Screws, bolts, and other devices of same material as accessory unit, unless otherwise recommended by manufacturer or specified in this Section, and tamper and theft resistant where exposed, and of stainless or galvanized steel where concealed.
- D. Chrome Plating: ASTM B456, Service Condition Number SC 2 (moderate service).
- E. Mirrors: ASTM C1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.

2.5 FABRICATION

- A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.
- B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install accessories in accordance with manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.
 - 1. Remove temporary labels and protective coatings.
- B. Grab Bars: Install to comply with specified structural-performance requirements.
- C. Shower Seats: Install to comply with specified structural-performance requirements.

3.2 ADJUSTING AND CLEANING

- A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
- B. Clean and polish exposed surfaces in accordance with manufacturer's written instructions.

END OF SECTION

SECTION 11 1313 - LOADING DOCK BUMPERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes loading dock bumpers.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of loading dock bumper.
- B. Shop Drawings: For dock bumpers. Include plans, elevations, sections, and attachment details.

PART 2 - PRODUCTS

2.1 LOADING DOCK BUMPERS

- A. General: Surface-mounted bumpers; of type, size, and construction indicated; designed to absorb kinetic energy and minimize damage to loading dock structure.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. American Floor Products Company, Inc.
 - b. Beacon Industries, Inc.
 - c. Chalfant Sewing Fabricators, Inc.
 - d. Durable Corporation.
 - e. Hugger Dock Equipment Company; Columbus Foam Products, Inc.
 - f. Kelley; An Entrematic brand.
 - g. Pioneer Dock Equipment.
 - h. Rite-Hite Corporation.
 - i. Rotary Products Inc.
 - j. Serco; An Entrematic brand.
 - k. Super Seal Mfg. Ltd.
 - l. Vestil Manufacturing Company.
 - 2. Source Limitations: Obtain from single source from single manufacturer.
- B. Laminated-Tread Loading Dock Bumper : Fabricated from multiple, uniformly thick plies cut from fabric-reinforced rubber tires. Laminate plies under pressure on not less than two 3/4-inch- (19-mm-) diameter, steel supporting rods that are welded at one end to 1/4-inch- (6-mm-) thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than 1 inch (25 mm) of tread plies extending beyond the face of closure angles.
 - 1. Thickness: As indicated on Drawings .
 - 2. Horizontal Style: high by length indicated on Drawings .
- C. Anchorage Devices: Galvanized-steel anchor bolts, nuts, washers, bolts, sleeves, cast-in-place plates, and other anchorage devices as required to fasten bumpers securely in place and to suit installation type indicated. Hot-dip galvanized according to ASTM A153/A153M or ASTM F2329/F2329M.

- D. Materials: ASTM A36/A36M for steel plates, shapes, and bars. Hot-dip galvanize according to ASTM A123/A123M.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Loading Dock Bumpers: Attach loading dock bumpers to face of loading dock in a manner that complies with requirements indicated for spacing, arrangement, and position relative to top of platform and anchorage.
 - 1. Welded Attachment: Plug-weld anchor holes in contact with steel inserts and fillet weld at other locations.
 - 2. Bolted Attachment: Attach dock bumpers to preset anchor bolts embedded in concrete or to cast-in-place inserts or threaded studs welded to embedded-steel plates or angles. If preset anchor bolts, cast-in-place inserts, or threaded studs welded to embedded-steel plates or angles are not provided, attach dock bumpers by drilling and anchoring with expansion anchors and bolts.
 - 3. Screw Attachment: Attach dock bumpers to wood construction with lag bolts as indicated.

3.3 ADJUSTING

- A. After completing installation of exposed, factory-finished dock bumpers, inspect exposed finishes and repair damaged finishes.

END OF SECTION

SECTION 11 3013 - RESIDENTIAL APPLIANCES**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
 - 1. Cooking appliances.
 - 2. Refrigeration appliances.
- B. Related Requirements:
 - 1. Section 22 4100 "Residential Plumbing Fixtures" for kitchen sinks, dishwasher air-gap fittings, waste (garbage) disposers, and instant hot-water dispensers.

1.2 ALLOWANCES

- A. Furnish residential appliances as part of residential appliance allowance.
- B. Furnish **<Insert item and drawing designation>** as part of **[residential appliance] <Insert allowance designation>** allowance.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

- A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required **[Product Data submittal]** **and** **[Samples submittal]**. Ensure compliance with requirements included in **[Section 01 3300 "Submittal Procedures."]** **[Section 11 0413 "Common Submittal Requirements for Equipment."]**
- B. Product Data Submittals: For each product.
 - 1. Include installation details, material descriptions, dimensions of individual components, and finishes for each appliance.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
- C. Sustainable Design Submittals:
 - 1. ENERGY STAR: Product Data for indicated products, showing compliance with requirements for ENERGY STAR product labeling.
- D. Samples: For each exposed product and for each color and texture specified, in **[manufacturer's standard] <Insert dimensions>** size.
- E. Product Schedule: For appliances. **[Use same designations indicated on Drawings.]**

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each residential appliance to include in operation and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Maintains, within <Insert miles (km)> of Project site, a service center capable of providing training, parts, and emergency maintenance repairs.
- B. Gas-Fuel Conversion: Provide gas-fueled appliances with manufacturer's [**high-altitude**] [**and**] [**propane**] conversion kit installed by a qualified service agency according to manufacturer's written instructions for Project location and type of fuel.
- C. Provide the following upon request:
 - 1. Qualification Data: For manufacturer.
 - 2. Product Certificates: For each type of appliance.
 - 3. Field quality-control reports.

1.7 WARRANTY

- A. Special Warranties: Manufacturer agrees to repair or replace residential appliances or components that fail in materials or workmanship within specified warranty period[.][**except as qualified below:**]
 - 1. Warranty Period: [**Two**] [**Five**] <Insert number> years from date of Substantial Completion.
- B. Microwave Oven: [**Full warranty, including parts and labor,**] [**Limited warranty, including parts and labor for first year and parts thereafter,**] for on-site service [**on the magnetron tube**] <Insert requirement>.
 - 1. Warranty Period: [**Two**] [**Five**] <Insert number> years from date of Substantial Completion.
- C. Refrigerator/Freezer, Freezer, and Ice maker, Sealed System: [**Full warranty, including parts and labor,**] [**Limited warranty, including parts and labor for first year and parts thereafter,**] for on-site service on the product.
 - 1. Warranty Period for [**Sealed Refrigeration System**] <Insert item>: [**Two**] [**Five**] <Insert number> years from date of Substantial Completion.
 - 2. Warranty Period [**for Other Components**] <Insert requirement>: [**Two**] <Insert number> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain [**residential appliances from single source**] [**and**] [**each type of residential appliance from single manufacturer**].

2.2 PERFORMANCE REQUIREMENTS

- A. Electrical Appliances: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- B. Accessibility: Where residential appliances are indicated to comply with accessibility requirements, comply with applicable provisions in [the DOJ's 2010 ADA Standards for Accessible Design] [the ABA standards of the Federal agency having jurisdiction] [and] [ICC A117.1] <Insert requirement>.

2.3 COOKING APPLIANCES

A. Microwave Oven <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Amana; Whirlpool Corporation.
 - b. Bosch US; BSH Home Appliances Corporation.
 - c. Dacor, Inc.
 - d. DCS Appliances; Fisher and Paykel Appliances Ltd.
 - e. Fisher & Paykel Appliances Ltd.
 - f. Frigidaire.
 - g. Gaggenau; BSH Home Appliances Corporation.
 - h. GE Appliances; Haier Group.
 - i. Jennair; Whirlpool Corporation.
 - j. Kenmore; Transformco SR Brands LLC.
 - k. KitchenAid; Whirlpool Corporation.
 - l. LG Electronics USA, Inc.; LG Electronics Inc.
 - m. Maytag; Whirlpool Corporation.
 - n. Miele.
 - o. Samsung Electronics America, Inc. (SEA); Samsung Electronics Co., Ltd. (SEC).
 - p. Sharp Electronics Corp.
 - q. Thermador; BSH Home Appliances Corporation.
 - r. Viking Range, LLC; Middleby Corporation.
 - s. Whirlpool Corporation.
 - t. Wolf; Sub-Zero Group, Inc.
2. Mounting: Undercabinet Wall cabinet Insert requirement.
3. Type: Conventional Convection Insert type.
4. Dimensions:
 - a. Width: [24 inches (610 mm)] [30 inches (762 mm)] [As indicated on Drawings] <Insert dimension>.
 - b. Depth: [19-1/2 inches (495 mm)] [As indicated on Drawings] <Insert dimension>.
 - c. Height: [14 inches (356 mm)] [18 inches (457 mm)] [As indicated on Drawings] <Insert dimension>.
5. Capacity: 1.5 cu. ft. (0.04 cu. m) 2.0 cu. ft. (0.06 cu. m) Insert capacity.
6. Oven Door: Door with observation window [and pull handle] [and pushbutton latch release] <Insert requirement>.
7. Exhaust Fan: [Variable] [Two] [Four]-speed fan, [vented to outside] [nonvented, recirculating type with charcoal filter] and with [manufacturer's standard] [300 cfm (140 L/s)] <Insert value> capacity.
8. Microwave Power Rating: [Manufacturer's standard] [1000 W] <Insert power rating>.

- a. Convection Element Power Rating: [Manufacturer's standard] [1450 W] <Insert power rating>.
- 9. Electric Power Supply: [120 V, 60 Hz, 1 phase, 15 A] [As indicated on Drawings] <Insert requirement>.
- 10. Controls: Digital panel controls and timer display.
- 11. Other Features: [Turntable] [temperature probe] [and] [lock-out feature] <Insert feature>.
- 12. Material: Porcelain-enameled steel Stainless steel Manufacturer's standard Insert material.
 - a. Color/Finish: [White] [Black] <Insert color or finish>.

2.4 REFRIGERATION APPLIANCES

- A. Refrigerator/Freezer <Insert drawing designation>: One-door refrigerator with freezer compartment inside Two-door, side-by-side refrigerator/freezer Two-door refrigerator/freezer with freezer on top Two-door refrigerator/freezer with freezer on bottom Insert description and complying with AHAM HRF-1.
 - 1. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Amana; Whirlpool Corporation.
 - b. Bosch US; BSH Home Appliances Corporation.
 - c. Dacor, Inc.
 - d. DCS Appliances; Fisher and Paykel Appliances Ltd.
 - e. Fisher & Paykel Appliances Ltd.
 - f. Frigidaire.
 - g. Gaggenau; BSH Home Appliances Corporation.
 - h. GE Appliances; Haier Group.
 - i. Jennair; Whirlpool Corporation.
 - j. Kenmore; Transformco SR Brands LLC.
 - k. KitchenAid; Whirlpool Corporation.
 - l. LG Electronics USA, Inc.; LG Electronics Inc.
 - m. Maytag; Whirlpool Corporation.
 - n. Miele.
 - o. Samsung Electronics America, Inc. (SEA); Samsung Electronics Co., Ltd. (SEC).
 - p. Thermador; BSH Home Appliances Corporation.
 - q. Viking Range, LLC; Middleby Corporation.
 - r. Whirlpool Corporation.
 - s. Wolf; Sub-Zero Group, Inc.
 - 2. Type: Freestanding Built in Undercounter.
 - 3. Dimensions:
 - a. Width: [16 inches (406 mm)] [24 inches (610 mm)] [27 inches (686 mm)] [30 inches (762 mm)] [36 inches (914 mm)] [42 inches (1067 mm)] [48 inches (1219 mm)] [As indicated on Drawings] <Insert dimension>.
 - b. Depth: [24 inches (610 mm)] [27 inches (686 mm)] [33-1/4 inches (845 mm)] [As indicated on Drawings] <Insert dimension>.
 - c. Height: [34-1/2 inches (876 mm)] [70 inches (1778 mm)] [73 inches (1854 mm)] [84 inches (2134 mm)] [As indicated on Drawings] <Insert dimension>.
 - 4. Storage Capacity:

- a. Refrigeration Compartment Volume: [15.6 cu. ft. (0.44 cu. m)] <Insert volume>.
- b. Freezer Volume: [5.13 cu. ft. (0.15 cu. m)] <Insert volume>.
- c. Shelf Area: [Three] <Insert number> adjustable [wire] [glass] shelves, [26 sq. ft. (2.42 sq. m)] <Insert area>.
- d. <Insert storage requirement>.
- 5. General Features:
 - a. Door Configuration: [Framed] [Overlay].
 - b. Dispenser in door for [ice] [and] [cold water] [with dispenser lock].
 - c. Built-in water-filtration system.
 - d. Dual refrigeration systems.
 - e. Separate [touch-pad] temperature controls for each compartment.
 - f. <Insert feature>.
- 6. Refrigerator Features:
 - a. Interior light in refrigeration compartment.
 - b. Compartment Storage: [Wine racks] [vegetable crisper] [and] [meat compartment] <Insert requirement>.
 - c. Door Storage: [Glazed door without storage] [Modular compartments] [1 gal. (3.8 L) milk-container storage] <Insert requirement>.
 - d. Temperature-controlled meat/deli bin.
 - e. <Insert feature>.
- 7. Freezer Features: [One] [Two] <Insert number> freezer compartment(s) [with door(s)] [configured as pull-out drawer(s)].
 - a. [Automatic] [Manual] defrost.
 - b. Interior light in freezer compartment.
 - c. Automatic icemaker and storage bin.
 - d. <Insert feature>.
- 8. Front Panel(s): [Manufacturer's standard] [Wood panel(s) to match kitchen cabinets] [Porcelain enamel] [Stainless steel] [Wood-panel insert(s) specified in Section 06 4113 "Wood-Veneer-Faced Architectural Cabinets" to match kitchen cabinets] [Wood-panel insert(s) specified in Section 12 3530 "Residential Casework" to match kitchen cabinets] [Reversible panel(s) with choice of colors] <Insert description>.
 - a. Panel Color: [White] [Black] <Insert color(s)>.
- 9. Appliance Color/Finish: [White] [Black] [Stainless steel] <Insert color or finish>.

2.5 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, power connections, and other conditions affecting installation and performance of residential appliances.

- B. Examine roughing-in for piping systems to verify actual locations of piping connections before appliance installation.
- C. Examine walls, ceilings, and roofs for suitable conditions where [**overhead exhaust hoods**] [**downdraft exhaust**] [**and**] [**microwave ovens with vented exhaust fans**] will be installed.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install appliances according to manufacturer's written instructions.
- B. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and that rough openings are completely concealed.
- C. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.
- D. Range Anti-Tip Device: Install at each range according to manufacturer's written instructions.

3.3 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Perform visual, mechanical, and electrical inspection and testing for each appliance according to manufacturers' written recommendations. Certify compliance with each manufacturer's appliance-performance parameters.
 - 2. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After installation, start units to confirm proper operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.
- B. An appliance will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain residential appliances.

END OF SECTION

SECTION 11 4000 - FOODSERVICE EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fabricated equipment.
 - 2. Self-contained refrigeration equipment.

1.2 COORDINATION

- A. Coordinate foodservice equipment layout and installation with other work, including layout and installation of lighting fixtures, HVAC equipment, and fire-suppression system components.
- B. Coordinate locations and requirements of utility service connections.
- C. Coordinate sizes, locations, and requirements of the following:
 - 1. Overhead equipment supports.
 - 2. Equipment bases.
 - 3. Floor depressions.
 - 4. Insulated floors.
 - 5. Floor areas with positive slopes to drains.
 - 6. Floor sinks and drains serving foodservice equipment.
 - 7. Roof curbs, equipment supports, and penetrations.

1.3 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of construction contiguous with foodservice equipment by field measurements before fabrication. Indicate measurements on Coordination Drawings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. NSF Standards: Provide equipment that bears NSF Certification Mark or UL Classification Mark certifying compliance with applicable NSF standards.
- B. BISSC Standards: Provide bakery equipment that complies with BISSC/Z50.2.
 - 1. Provide BISSC-certified equipment[, **with certification verified by a third-party agency**].
- C. UL Certification: Provide electric and fuel-burning equipment and components that are evaluated by UL for fire, electric shock, and casualty hazards according to applicable safety standards, and that are UL certified for compliance and labeled for intended use.
- D. Steam Equipment: Provide steam-generating and direct-steam heating equipment that is fabricated and labeled to comply with 2013 ASME Boiler and Pressure Vessel Code.

- E. Regulatory Requirements: Install equipment to comply with the following:
 - 1. ASHRAE 15, "Safety Code for Mechanical Refrigeration."
 - 2. NFPA 54, "National Fuel Gas Code."
 - 3. NFPA 70, "National Electrical Code."
 - 4. NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."
- F. Seismic Restraints: Comply with SMACNA's "Kitchen Ventilation Systems and Food Service Equipment Fabrication and Installation Guidelines," Appendix A, "Seismic Restraint Details," unless otherwise indicated.

2.2 FABRICATED EQUIPMENT

- A. Stainless Steel Tables ST-01):
 - 1. Description: Flat-countertop table.
 - a. Tops: Stainless steel, Type 304, 0.062 inch (1.59 mm) thick, reinforced and sound deadened.
 - 1) Back Splash: Manufacturer's standard height.
 - 2) Edge: Bullnose on four sides.
 - b. Welded Undershelf: Stainless steel, Type 304, 0.050 inch (1.27 mm) thick.
 - c. Crossbracing: Stainless steel tubing, [bolted] [welded] to legs.
 - d. Sink: Stainless steel, Type 304, 0.078 inch (1.98 mm) thick, welded into tabletop and including the following:
 - 1) Faucet and Spout: .
 - 2) Vacuum breaker.
 - 3) Leverwaste.
 - 4) Basket strainer.
 - 5) Tail piece.
 - e. Legs: Stainless steel tubing.
 - f. Feet: Stainless steel adjustable bullets.
 - 2. Materials:
 - a. Stainless Steel Sheet: ASTM A240/A240M, austenitic stainless steel, type as indicated.
 - b. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B, with minimum G90 (Z275) coating.
 - 3. Stainless Steel Finish: Directional satin finish, ASTM A480/A480M, No. 4.

2.3 SELF-CONTAINED REFRIGERATION EQUIPMENT

- A. Refrigeration Equipment <Insert drawing designation>: Refrigerators Freezers.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Insert manufacturer's name.
 - 2. Description: Reach-in Roll-in Pass-through type.
 - a. Exterior Finish: Stainless steel.
 - b. Interior Finish: [Stainless steel] [Manufacturer's standard].
 - c. Doors: [Full length] [Half-length] [In configuration shown on Drawings].
 - d. Accessories:
 - 1) Casters.

- 2) Stainless steel back with rear louvers.
 - 3) Re-hinging feature for doors.
 - 4) Hinged glass doors and fluorescent fixtures.
 - 5) Tray Slides: For <Insert description> sheet pans.
 - 6) [Chrome-Plated] [Stainless steel] Shelves: <Insert quantity>.
 - 7) Loading Rack: <Insert requirements>.
 - 8) Transfer Carriage: <Insert requirements>.
 - e. Electrical Service: Equip unit with plug and cord for [service indicated on Drawings] <Insert requirements>.
- B. Undercounter Refrigeration Equipment <Insert drawing designation>: Refrigerators Freezers.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Insert manufacturer's name.
 2. Description: Compact unit with rear-mounted, self-contained refrigeration system.
 - a. Accessories:
 - 1) Stainless steel top with backsplash.
 - 2) Stainless steel back panel.
 - 3) Casters: [6 inches (152 mm)] [4 inches (102 mm)] [3-1/2 inches (89 mm)] high.
 - 4) Utility Base: 6 inches (152 mm) high.
 - 5) Shelves: <Insert description and quantity>.
 - 6) Stacking kit.
 - b. Electrical Service: Equip unit with plug and cord for [service indicated on Drawings] <Insert requirements>.
- C. Merchandiser Refrigeration Units <Insert drawing designation>:
1. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Insert manufacturer's name.
 2. Description: Curved-glass, self-contained refrigerator Sliding-glass, self-contained refrigerator Sliding-glass, self-contained freezer Insert description.
 - a. Exterior Finish: [Manufacturer's standard] [Stainless steel] <Insert requirements>.
 - b. Interior Finish: [Manufacturer's standard] [Stainless steel] [White] <Insert requirements>.
 - c. Accessories:
 - 1) Door locks.
 - 2) Fluorescent Light Fixtures: <Insert quantity>.
 - 3) Base: <Insert requirements>.
 - 4) Casters: <Insert requirements>.
 - 5) Legs: <Insert requirements>.
 - 6) Chrome-Plated Shelves: <Insert quantity>.
 - d. Electrical Service: Equip unit with plug and cord for [service indicated on Drawings] <Insert requirements>.
- D. Ice-Making Machine <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Insert manufacturer's name.
2. Description: Undercounter Freestanding units.
 - a. Production: Ice **[cubes] [cubes, dice] [cubes, half-dice] [flakes] [chipelets (compacted flake ice)]**.
 - b. Capacity: **<Insert lb (kg)>** per 24-hour period.
 - c. Accessories:
 - 1) Storage Bin: **<Insert requirements>**.
 - a) Storage Capacity: **<Insert lb (kg)>**.
 - 2) Stainless steel stand and legs.
 - 3) Water filter.
 - d. Electrical Service: Equip unit for connection to **[service indicated on Drawings] <Insert requirements>**.

2.4 MISCELLANEOUS MATERIALS

- A. Installation Accessories, General: NSF certified for end-use application indicated.
- B. Elastomeric Joint Sealant: ASTM C920; silicone. Type S (single component), Grade NS (nonsag), Class 25, Use NT (nontraffic) related to exposure, and Use M, G, A, or O as applicable to joint substrates indicated.
 1. Public Health and Safety Requirements:
 - a. Sealant is certified for compliance with NSF standards for end-use application indicated.
 - b. Washed and cured sealant complies with the FDA's regulations for use in areas that come in contact with food.
 2. Cylindrical Sealant Backing: ASTM C1330, Type C, closed-cell polyethylene, in diameter greater than joint width.

2.5 FINISHES

- A. Stainless Steel Finishes:
 1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - a. Run grain of directional finishes with long dimension of each piece.
 - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- B. Powder-Coat Finishes: Immediately after cleaning and pretreating, electrostatically apply manufacturer's standard, baked-polymer, thermosetting powder finish. Comply with resin manufacturer's written instructions for application, baking, and minimum dry film thickness.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install foodservice equipment level and plumb, according to manufacturer's written instructions.
 - 1. Connect equipment to utilities.
 - 2. Provide cutouts in equipment, neatly formed, where required to run service lines through equipment to make final connections.
- B. Complete equipment assembly where field assembly is required.
 - 1. Provide closed butt and contact joints that do not require a filler.
 - 2. Grind field welds on stainless steel equipment until smooth and polish to match adjacent finish.
- C. Install equipment with access and maintenance clearances that comply with manufacturer's written installation instructions and with requirements of authorities having jurisdiction.
- D. Install cabinets and similar equipment on bases in a bed of sealant.
- E. Install closure-trim strips and similar items requiring fasteners in a bed of sealant.
- F. Install joint sealant in joints between equipment and abutting surfaces with continuous joint backing unless otherwise indicated. Produce airtight, watertight, vermin-proof, sanitary joints.

3.2 CLEANING AND PROTECTING

- A. After completing installation of equipment, repair damaged finishes.
- B. Clean and adjust equipment as required to produce ready-for-use condition.
- C. Protect equipment from damage during remainder of the construction period.

3.3 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain foodservice equipment.

END OF SECTION

SECTION 11 9519 - ANIMAL EQUIPMENT**PART 1 GENERAL****1.1 SUMMARY****A. Section Includes:**

1. Provide and install specialized animal equipment including drinkers, sea lion scale and sea lion hoist, as shown on the drawings, specified herein, or needed for a complete and proper installation.
2. Work of this Section Includes:
 - a) Animal Drinkers
3. Coordinate with the closely related work of the following sections:
 - a) Artificial Rockwork – Section 03 37 13
 - b) Keeper Access Doors, Frames, and Caging – Section 08 34 53

B. Related Sections:

Section 03 30 00 Cast-in-Place Concrete

Section 07 92 00 Joint Sealants

Division 22 Plumbing

Division 26 Electrical

1.2 SUBMITTALS**A. General:**

1. Comply with the pertinent provisions of Sections of 01 30 00 Administrative Requirements.
2. Within 35 calendar days after the Contractor has received the Owner's Notice to Proceed, submit all items listed below.

B. Product Data:

1. Materials list of items proposed to be provide under this Section.
2. Manufacturers' specifications and other data needed to prove compliance with the specified requirements.
3. Submit sufficient technical data to enable the interface of the work of this section with the work of mechanical and electrical trades
4. Shop Drawings and details completely showing the installation, and anchorage of the proposed construction, and the interface of the work of this section with the work of adjacent trades.
5. Manufacturer's recommended installation procedures which, when approved by the Consultant, will become the basis for accepting or rejecting actual installation procedures used on the Work.

C. Samples:

Accompanying the Shop Drawings submit:

1. Samples of finishes, showing complete range of color proposed for use on each item of this Work.

1.3 QUALITY ASSURANCE**A. Workers:**

Use adequate numbers of skilled workers who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

1.4 PRODUCT HANDLING

A. General:

Comply with the pertinent provisions of Sections of 01 60 00 Product Requirements.

B. Protection:

Use all means necessary to protect materials of this Section before, during, and after installation and to protect installed Work and materials of all other trades.

C. Replacements:

In the event of damage, immediately make all repairs and replacements necessary to the approval of the Consultant and at no additional cost to the Owner.

PART 2 PRODUCTS

2.1 DRINKERS

A. Nelson Drinkers; www.nelsonmfg.com

1. Nelson Freestanding 730-10 series Animal Drinker.
 - a) Coordinate with location of concrete mounting pad and plumbing/water supply. Height: 11 inches; finish: stainless steel.
 - b) Provide all optional accessories for waterline, and anchorage.
 - c) Provide freeze protection
 - d) Water consumption
2. Nelson Wall mounted 730-10W series Animal Drinker.
 - a) Coordinate with location of concrete mounting pad and plumbing/water supply. Height: 11 inches; finish: stainless steel.
 - b) Provide all optional accessories for waterline, and anchorage.
 - c) Provide freeze protection
 - d) Water consumption

PART 3 EXECUTION

3.1 SURFACE CONDITIONS

- #### A. Examine the areas and conditions under which work of this Section will be performed. Correct conditions detrimental to timely and proper completion of the Work. Do not proceed until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Shop Drawings:

Install the work of this Section in strict accordance with the Shop Drawings as approved by the Consultant.

B. Coordination:

Coordinate as required with other trades to assure proper and adequate provision in the work of those trades for interface with the work of this Section.

C. Manufacturer's Procedures:

Install the work of this section in strict accordance with the manufacturer's recommended installation procedures.

D. Codes:

Install the work of this Section in strict accordance with the pertinent codes and requirements of governmental agencies.

E. Anchoring:

Provide secure anchoring of all materials, firmly in position, and capable of long life under hard use.

3.3 OPERATION, ADJUSTMENT, AND CLEAN UP

A. Operating Cycles:

Upon completion of the installation and hookup to utilities, put all operating components through at least five complete operating cycles, adjusting as necessary to achieve optimum levels of operation.

B. Touch-Up:

Visually inspect all exposed surfaces and touch-up scratches and abrasions, which must be invisible to the unaided eye from a distance of five feet.

C. Clean-Up:

Promptly remove from the job site all cartons and packing material associated with the work of this Section.

END OF SECTION

FOR REFERENCE ONLY

SECTION 12 1423 - SIMULATED NATURE - ARTIFICIAL PLANTS**PART 1 GENERAL****1.1 SUMMARY****A. Section Includes:**

1. Fabricate and install simulated-nature trees and fallen logs as shown on the drawings and described herein.
2. Work of this section will be fabricated by the owner and installed by the contractor.
3. Work of this section includes:
4. Simulated nature trees and fallen logs
5. Simulated nature roots
6. See Part Four for a schedule of Artificial Plants.
7. Provide support structures and armatures, foundations, and connections for all work of this section.

B. Related Work:

Section 03 30 00 Cast-in-Place Concrete

Section 03 37 00 Artificial Rockwork

Section 13 31 20 Cable Supported Mesh Structures

Section 32 94 26 Natural Deadfall

1.2 ADMINISTRATIVE REQUIREMENTS**A. Coordination:**

Coordinate components of the work of this Section with work performed by other Sections in sufficient time to allow for other components of the work to incorporate requirements of this Section without causing delay to the work, including the following:

1. Foundations of Adjacent Structures: coordinate with the foundation requirements of all adjacent buildings and structures.
2. Cable Supported Mesh Structures
3. Shotcrete Rockwork

B. Pre-Construction Meeting:

Arrange a site meeting attended by the Contractor's superintendent, the Subcontractor's representative and foreman for this project, the Consultant, materials supplier(s), and other relevant personal in accordance with Section 01 31 19 – Project Meetings before commencement of work for this Section; agenda for meeting will include the following:

1. Confirmation of specifications and details for the project
2. Review of required fastening and joining methods
3. Review of samples
4. Review of finishing methods and proposed coatings
5. Additional items that are required for identification of installation and fabrication concerns

1.3 SYSTEM DESCRIPTION**A. Delegated Design:**

1. The work of this section requires professional design services or certifications by design professionals employed by the fabricator, and who are not the Consultant.

B. Artistic Interpretation:

1. Provide artists and craftsmen skilled in the creation of the simulated-nature plants, who will interpret and complete the design of the concepts specified in this section.
 2. Complete the design, fabricate, place, and install the work of this section in such a manner as to replicate the forms, structures, finishes, and colors described by the written descriptions and reference photographs contained herein and/or on the drawings.
- C. Owner's and Consultant's Direction:
1. It is intended that the finished products of work in this Section produce the aesthetic effects shown on the drawings and indicated in the project manual and graphics manual.
 2. The Consultant explicitly reserves the right to monitor the work for aesthetic quality until the specified effects are achieved.
 3. The Consultant will decide questions of aesthetic effect.
- D. Materials and Structures - Alternative Means and Methods:
1. Exhibit Design Drawings:
 - a) The design, layout, and details referenced by this Section have been developed for the purposes of establishing a standard of quality for the work.
 - b) At its option the Contractor may propose alternative means and methods of construction: including alternative materials, waterproofing systems, and structural systems.
 2. Alternative Means and Methods:

Alternative means and methods will be considered only when fully described at the time of tendering, in the form provided on tender documents and when substantiated by the Contractor's submittal of the following information:

 - a) Manufacturer's specifications for proposed materials.
 - b) Minimum of three (3) projects where the proposed materials or structural systems have been used successfully.
 3. Final selection of specific materials for each exhibit element must be approved by the Consultant.
 4. Provide appropriate documentation that all proposed materials meet the specific performance requirements specified below.
- E. Performance Standards:
1. General:
 - a) All exposed surfaces and finishes shall use non-toxic materials.
 - b) All materials shall be cleanable and UV resistant.
 - c) Grout voids solid or provide 800mm diameter access panels in locations concealed from any views of guests.
 2. Service Life:
 - a) All materials and/or completed fabrications must have a ten (10) year service life for finishes and a twenty (20) year structural service life.
 - b) Finishes must be capable of resisting any visible damage for a 5-year active service life.
 - c) All integral and applied color must resist fading for a minimum of 5 years of active service life in the project environment(s).
- F. Structural Design:
1. General:
 - a) Provide the structural engineering design for the simulated deadfall and its foundations.
 - b) Drawings and Calculations:

Provide complete design, calculations, and drawings.

- c) Licensed Engineer:
Design drawings will be prepared, approved, signed and sealed by a Professional Engineer licensed in the jurisdiction in which the project will be constructed.
- d) Maintain the general design concept as shown, without decreasing or increasing sizes of members and without altering profiles and alignment, except as approved by the Consultant.
- 2. Design of Simulated-Nature Plants:
Design all of the elements comprising the simulated-nature plants shown on the drawings, including but not limited to the following:
 - a) Skin Panels:
Design the concrete, epoxy, and/or resin mixes, fiber and steel reinforcing, required thicknesses, attachments, and support armatures.
 - b) Support Structure:
Design the support structure and its foundations to support the skin panels.
- 3. Design Loads:
Design all elements and connections for the following loads:
 - a) Dead loads including plants and soil
 - b) Live loads due to visitors and maintenance activities including the required vehicles and staff,
 - c) Seismic, wind, and snow loads where applicable.
 - d) In addition to the above loads, design all elements for the following loads:
Concentrated gravity live load of 5 kN at any one location.
- 4. Structural Design Coordination:
 - a) Design the openings and rebates required for the work of Section 08 84 00.
 - b) Design the inlet and outlet structures and the penetrations for pipe systems as required for the work of Division 17.
- 5. Geotechnical Investigations and Recommendations:
 - a) The following geotechnical investigations and recommendations provide the basis for the structural and foundation design of the work of this section:
 - b) Geotechnical Investigation See Section 02 31 00 Soil Investigations.
- 6. Foundation Design:
 - a) Design foundations, when required, in accordance with all pertinent recommendations of the geotechnical Investigations, clarifications, and additions.
 - b) Design the foundations to limit movement due to frost heave or soil movement.
 - c) Thicken paving slabs when required to carry the loads imposed.
- 7. Safety Factors:
 - a) Use liberal safety factors that exceed Code minimums as noted herein.
 - b) Working stresses shall not exceed the lower value of one-third of the yield strength or one-fifth of the ultimate strength of the material.
 - c) Design fiberglass reinforced concrete (FRC), glass fiber reinforced resin (FRP), and metal fabrications for the stresses to which these products will be subjected during fabrication, erection, and continuous operation.
- G. Play Safety Standards:
 - 1. Comply with the referenced standards for children's play included in this section.
 - 2. Comply with or exceed all standards for entrapment, entanglement, and projection hazards; slip resistance of finishes; and all other aspects of play safety covered by the standards.
- H. Electrical Bonding:

1. Bonding:
2. Provide bonding for the equipotential plane and for metal structures, surfaces, and fixed metal equipment per all requirements of the US National Electrical Code Article 547 and 680.

I. Building Permits:

The Contractor will obtain all required permits and approvals for proposed and alternative structural systems.

1.4 SUBMITTALS

A. General:

1. Comply with the pertinent provisions of Sections of 01 30 00 Administrative Requirements.
2. Within 45 calendar days after the Contractor has received the Owner's Notice to Proceed, submit all items listed below.

B. Design Drawings:

1. Delegated Design:
 - a) Submit complete drawings accurately indicating all proposed simulated-nature plants described in this Section, prepared in accordance with the following provisions:
 - 1) Verify materials selection and sizes.
 - 2) Verify fabrication and connection details for the simulated nature plants or suggest alternative connection details.
 - 3) Complete the design utilizing the components specified in Part 2 of this Section.
 - 4) Revise drawings as required by the permitting authorities and resubmit.
2. Delegated Design Submittals:
 - a) Provide all submittals described in Section 01 33 50 – Delegated Design Submittals as required for the work of this Section.
3. Design Notes and Calculations:

Submit design notes and calculations; signed and sealed by Professional Engineer when requested by Consultant.

C. Product and Materials Data:

1. Representative samples of materials for testing, mix proportion testing, and preparation of pre-construction samples and mock-ups.
2. Appropriate documentation that all proposed materials meet the performance requirements specified herein.
3. Manufacturers cut sheets and literature fully describing all manufactured products and materials.

D. Sketches, Mock-ups and Samples:

1. Sketches:
 - a) Provide sketches developing the concepts for each simulated nature plant of this section.
 - b) Submit color sketches sufficient to portray the completed work and to indicate all significant details.
2. Surface Material Samples:

Provide full scale samples of each finish material showing the texture and color of the finished surface. See Section 4 for sample descriptions.
3. Maquettes:

Provide a maquette of each simulated nature plant at $\frac{1}{2}" = 1'-0"$. Maquette shall clearly show the surface textures, shape and size of the finished simulated nature plant and be

capable of being incorporated into the Shotcrete model described in Section 03 37 13 Shotcrete.

4. Full Size Patterns:
Provide full size patterns for all simulated-nature plants for approval by Consultant and Owner prior to taking molds for casting or commencing fabrication (as necessary).
- E. Shop Drawings:
 1. Provide complete shop drawings for all work of this section indicating the shape, size, and location of all elements.
 2. Provide details of construction techniques, requirements for anchorage to the substrates provided by other contractors, details of connections between differing materials, structural details of internal armature, and required connections.
 3. Provide all mounting details.
 4. Provide complete specifications for all proposed materials. These specifications will provide the basis for the Owner's quality assurance testing.
 5. No materials shall be fabricated or delivered to the site until the shop drawings have been reviewed, approved, and returned.
- F. Maintenance Data:
 1. Provide recommended cleaning techniques and products for all sculpture.

1.5 QUALITY ASSURANCE

A. Codes and Standards:

Comply with pertinent provisions of following codes and standards:

1. Codes
 - a) Conform to all applicable requirements of the local building codes, latest editions.
 - b) International Building Code, Chapter 19 latest edition and local amendments.
2. Testing Agencies
 - a) American Society for Testing and Materials (ASTM), latest edition.
3. Fire Safety
 - a) Surface Burning:
 - b) UL 723 (ASTM E84) (CAN - ULC S102.2) Test for Surface Burning:
 - c) Use only materials that have been tested and accepted for labeling and meeting requirements of the Authority Having Jurisdiction
 - d) Comply with all current applicable requirements of state and local Fire Marshall.
 - e) ANSI / NFPA 101 Life Safety Code, current edition
 - f) ANSI / NFPA 150 Animal Standard on Fire & Life Safety in Animal Housing Facilities, current edition
4. Concrete Standards
 - a) ACI 318 Building Code Requirements for Reinforced Concrete.
 - b) CRSI "Manual of Standard Practice";
 - c) ACI 315, latest edition, "Manual of Standard Practice for Detailing Reinforcing Bars".
 - d) ACI (American Concrete Institute) 506R-90(95), Guide to Shotcrete.
5. Steel Standards
 - a) 'Specification for the Design, Fabrication, and Erection of Structural Steel for Buildings' by AISC, latest edition.
 - b) AISC "Code of Standard Practice";
 - c) AISC "Specification for Structural Joints Using ASTM A325 or A490 Bolts".
6. Accessibility Standards

- a) ISO Guide 71, Standards for Accessible Design.
- b) USA, 2010 ADA Standards for Accessible Design
7. Play Standards
 - a) Public Playground Safety Handbook, US Consumer Products Safety Standards, latest edition.
 - b) Standard Consumer Safety Performance Specification for Playground Equipment for Public Use, ASTM F1487.
- B. Welding:
 1. Perform welding with electric arc process and in accordance with AWS "Code for Arc and Gas Welding in Building Construction."
 2. Qualify welding processes and welding operators in accordance with AWS "Standard Qualification Procedures".
 3. Welder shall be certified in conformance with (AWS) (WABO) requirements.
- C. Qualifications:
 1. Established firm or individual with a minimum of five (5) years experience in successfully constructing elements of similar nature to the work of this section.
 2. Provide resumes for key personnel performing the work.
 3. Submit references and photographic documentation of previous projects documenting the experience and ability to construct the work of this section.
 4. Acceptable Fabricators:

The following list of fabricators and installers is derived from previous projects indicating a successful record of fabrication and installation of similar complexity and extent as required for this project and are subject to verification of their capabilities before starting work of this section by submittal of documentation indicating that they meet the specified qualifications:

 - a) Cost of Wisconsin, Seattle Washington
Contact: Jeff Sheiber
Telephone: 407-816-2110 ext. 2101
Email: jsheiber@costofwisconsin.com
www.costofwisconsin.com.
 - b) Edge Concrete, Woodinville, Washington
Contact: Wendy Endres
Telephone: 425 482-3343, Fax: 425 482-3342,
Email: wendy@edgeconcretelc.com
www.edgeconcretelc.com.
 - c) The Nassal Company, Orlando Florida 32806
www.nassal.com
 5. Substitute Fabricators:

The Contractor may choose to select any of the listed fabricators or installers in accordance with Section 01 60 00 – Product Requirements or elect to solicit additional fabricators installers having similar qualifications, experience and proven capabilities as the acceptable installers listed above and provided that the Contractor makes requests for substitution in accordance with Section 01 25 00 – Substitutions a minimum of ten (10) days in advance of Bid Closing as follows:

 - a) Bidders wishing to use a fabricator or installer that is not identified in this Section must have the proposed fabricator comply with qualification requirements listed in Item .1 above and submit a letter of qualification, including references a minimum of five (5) 8½-inch by 11-inch color photographs of previous comparable work for review and acceptance by the Consultant.

- b) Fabricators wishing to be accepted for the work of this section may independently make application directly to the Consultant as detailed above.
 - c) Acceptance of substitute fabricators will be indicated by a subsequent addendum.
 - d) The Consultant may require additional information and may request a visit to a completed work in order to make a final determination of the fabricator's qualifications.
- D. Shop Fabrication:
- 1. Perform all appropriate work of this section in a shop experienced in the relevant work, in accordance with the standards of quality for the specified trade established in the relevant section as listed under Related Work Described Elsewhere.
 - 2. Preassemble items in the shop to the greatest extent possible to minimize field splicing and assembly.
 - 3. Perform shop or field welding required in connection with the work of this section, adhering strictly to the current pertinent recommendations of CSA W59 or the equivalent American Welding Society standard.
 - 4. Perform welding with electric arc process and in accordance with AWS "Code for Arc and Gas Welding in Building Construction".
 - 5. Qualify welding processes and welding operators in accordance with AWS "Standard Qualification Procedures".
 - 6. Fabricator shall be certified in accordance with CSA W47.1, Division 1 or 2.1 or according to the equivalent American Welding Society standards.
 - 7. Welder shall be qualified by the Canadian Welding Bureau or certified in conformance with equivalent AWS requirements.
- E. Surface Inspection Prior to Finishes:
- 1. Notify Consultant a minimum of 24-hours prior to application of any finishes to the work of this section.

1.6 PROJECT CONDITIONS

A. Field Measurements:

Secure all field measurements required for proper and adequate fabrication and installation of the work.

B. Templates:

Furnish templates for exact location of all items to be embedded in concrete and setting instructions required for all installation work.

1.7 WARRANTY

- A. Warranty all materials and finishes to give complete and satisfactory service for a period of five (5) year from the date of Final Acceptance of the work. Provide manufacturer's standard warranties on all materials and finishes.

PART 2 PRODUCTS

2.1 FIBER REINFORCED CONCRETE (FRC)

A. General:

- 1. Conform to all applicable requirements of the standard specifications and standards of Part One of this section.
- 2. Provide reinforcement, accessories, and connection materials required in accordance with the Drawings as approved by the Consultant.
- 3. Provide embedded anchors, fasteners, or other items as required by the work of this project.

B. FRC Material**1. Material:**

A composite of washed silica sand, Type III Portland cement modified with a polymer, reinforced with alkaline resistant glass fibers.

Density:..... 54.5kg (120lbs) to 59kg (130lbs) per cubic foot.

Compressive strength:..... 48 MPa (7,000) to 84 MPa (12,000 psi).

Flexural strength (ultimate):..... 14 MPa (2,000) to 28 MPa (4,000 psi).

Impact strength:..... 30 to 60 in. per lb.

Shell thickness:..... 8mm to 16mm

2. Design Mixes:

a) Prepare design mixes for each type of concrete required, and secure the Consultant's approval of the proposed design mix.

b) Prepare mixes by qualified precast concrete manufacturing personnel and approved by the Consultant.

c) Proportion mixes either by laboratory trial batch or field experience methods, using materials to be employed on the Work for each type of concrete required, and complying with ACI 211.1

3. Reinforcing, Armatures, and Supports:

Provide corrosion resistant reinforcing, armatures, and supports to meet structural requirements for support.

2.2 GLASS FIBER REINFORCED RESIN (FRP), POLYESTER, EPOXY, & URETHANE RESINS**A. Design Requirements:**

1. Design shall comply with these specifications and all pertinent Building and Safety Codes.

2. Liberal safety factors shall be used in the design of all products.

3. Working stresses shall not exceed the lower value of one-third of the yield strength or one-fifth of the ultimate strength of the material.

4. Sculptures shall be designed for stresses to which these products will be subjected during fabrication, erection, and continuous operation as shown on the Drawings.

B. Resins:

Glass Fiber Reinforced Resins shall conform to NBS Voluntary Product Standard PS 15-69.

C. Gelcoat:

Gelcoat shall maintain chip resistance and color fastness for minimum five years.

D. Flame Spread:

Glass fiber reinforced resin assemblies shall have a flame spread rating of 25 or less when tested in accordance ASTM E84-81 and will be a Class I material in the Uniform Building Code.

E. Reinforcing, Armatures, and Supports:

Provide corrosion resistant reinforcing, armatures, and supports to meet structural requirements for support.

2.3 FASTENERS**A. General:**

1. Provide zinc-coated or Type A316 stainless steel fasteners.

2. Select fasteners for the type, grade, and class required.

B. Standards:

All fasteners listed below shall comply with ASTM A307 and as follows:

1. Stainless steel bolts, screws, studs: ASTM F738M, Type 316.
2. Stainless steel nuts: ASTM F836M-91, Type 316.
3. Masonry anchorage devices: Expansion shields complying with Fed Spec FF-S-325.
4. Concrete inserts:
 - a) Threaded or wedge type, galvanized ferrous castings, either malleable iron ASTM A47 or cast steel ASTM A27.
 - b) Provide bolts, washers, and shims as required, hot-dip galvanized, ASTM A153.
5. Lock washers: Helical spring type carbon steel, complying with Fed Spec FF-W-84.

2.4 FABRICATION**A. Embedded Metal Artwork:**

1. Confirm artwork content, type, and size prior to fabrication.
2. Confirm colors and finishes prior to fabrication.

B. Artistic Style and Design Intent:

1. The 'realistic' sculpture and artwork will be realistic representations displaying key details of each species.
2. The 'abstract' sculpture and artwork will be abstractions of the actual elements, simplified and softened as required for visitor contact and play.
3. Final styles will be determined through discussions among the Owner, Consultant and Fabricator, and approved based on submission of the specified drawings, maquettes, and patterns.

C. Safety:

1. All portions of the simulated-nature plants within reach of visitors will be touchable, and shall be formed and fabricated to avoid protruding or sharp edges and points that could cause injury as required in the play safety standards referenced in this section.

2.5 FINISHES**A. General:**

1. Provide finishes for all exposed surfaces.
2. All artwork shall be free of scratches, defects, blemishes and warping.
3. All exposed surfaces will be free of burrs, slivers, sharp edges and ridges and smooth and safe to the touch before and after installation.

B. Reference Photographs:

1. The reference photographs included in the specifications and drawings, provide direction by the consultant to the fabricator for the intended colors and textures of the finishes.
2. The fabricator will utilize the reference photographs, drawings, and written specifications as a starting point from which to develop unique sculptures and artwork that carry out the artistic intent described herein.

C. Colors:

1. Use color palettes corresponding to those of the natural specimen or life form or as specified in these documents.
2. Wherever possible the color will be an integral part of the cast, molded, or sculpted material.
3. Highlight and contrasting colors will be applied prior to installation with a medium that is non-toxic, and durable in the operating environment of the installed sculpture.

D. Durability:

1. In areas receiving intense physical contact by visitors, use materials that resist abrasion or damage.
2. Provide clear coats or other means to protect the finished surfaces.
3. Ensure that all textures and colors will be unaffected when cleaned with pressure washers.

2.6 ELECTRICAL GROUNDING

A. General:

1. Ground all embedded metal artwork when required, and in accordance with the relevant electrical and safety codes.

PART 3 EXECUTION

3.1 GENERAL

- #### A. Provide a structural substrate, capable of maintaining the intended shape, containing water in pools, and supporting live and dead loads as specified herein or as required by codes.

B. Finish Coat:

1. Produce the intended color and texture.
2. Provide mix design appropriate for integral color, carving, and texturing, and other aesthetic treatment to create the specified finishes.
3. Provide sufficient thickness to assure structural integrity and bonding to the structural substrate.
4. Provide sufficient thickness to create the specified recreations of natural forms and finishes.

3.2 COORDINATION

A. General:

Verify locations and dimensions with requirements of the drawings and specifications before production and installation begins.

B. Simulated-Nature Plants:

1. Provide all required foundation connection points in coordination with the requirements of Section 03 37 13 Artificial Rockwork.
2. Provide all required foundation connection points in coordination with the requirements of Section 32 13 13 Concrete Paving.

3.3 PANEL FABRICATION

A. General:

1. At the option of the contractor, provide prefabricated Fiber Reinforced Concrete or fiber reinforced plastic panels in areas where this system of construction is structurally and aesthetically appropriate.

B. Molds or Sculpting:

1. Make molds from rigid materials that will result in shapes, textures and dimensions as required for the work described in this section and on the drawings.
2. Sculpt panels to replicate natural plant surfaces as agreed in Part One.

C. Joining Panels:

1. Where panels are specified or have been approved, place into proper position by shimming and bracing as necessary, then fill seams between panels solid with texture coat.
2. Upon installation, field treat and cover joints and seams to match the texture and finish of the material exactly so that joints are not visible or discernable.

3.4 INSTALLATION

A. General:

1. Final placement and installation of simulated-nature plants will be approved on site with Consultant.
2. Install work in strict accordance with the approved Submittals.
3. Employ a qualified, experienced installation team for all work.

B. Placing:

1. Pre-Conditions:
Do not install work on site until the following conditions are met:
2. Final layout plans have been reviewed and approved by Consultant and Owner.
3. Consultant and Owner have reviewed layouts on site, in their final location, through the placement, or of templates.
4. The work of all associated trades has been coordinated.

C. Touchup:

Repair and touch-up all simulated-nature plants after installation to eliminate any visual defects.

D. Protection:

Upon completion of work, clean the simulated-nature plants and protect until final acceptance by the Consultant.

3.5 INSTALLATION

PART FOUR - SCHEDULE OF SIMULATED NATURE PLANTS

4.1 SIMULATED NATURE PLANTS

A. Stand Dead Trees and Fallen Logs

1. Represents the trunk and branching structure of a dead Chisos Oak (*Quercus graciliformis*) or Trumpet Tree (*Tabeaia* sp).
2. Realistic sculpture, colors and textures matching the specified plant species and reference photos.
3. Relief – As required to achieve described texture
4. Quantity – As shown in drawings
5. Size – as shown in the drawings
6. Sample Description:
 - a) Deadfall: Provide (2) 3' long trunk sample measuring 8" in diameter, (1) for each tree species. Include in the sample a branching junction with a branch 5" in diameter. Terminate both the trunk and branch with an irregular broken end. Include areas of bark and areas of exposed sapwood and miscellaneous smaller branching.
 - b) Fine Branching: Provide 3' x 3' x 3' mass of branching of different sizes depicting the branching of the crown of a fallen tree. Half of the sample should depict submerged branching that is darker in color with varying algae growth.

B. Artificial Roots

1. Represents the exposed woody root masses in an eroded earthbank.
2. Realistic sculpture, colors and textures matching the specified plant species and reference photos.
3. Relief – As required to achieve described texture
4. Quantity – As shown in drawings
5. Size – Root diameter varies in size from large main roots to small diameter fine roots as shown in the drawings
6. Placement of all roots shall be done with the oversight/approval of the Owner.

7. Sample Description:
 - a) Exposed Roots: Provide a 3' wide by 3' tall sample of root massing. Incorporate root mass sample into Artificial mudbank sample described in 03 37 13 Shotcrete.
- C. Artificial Vines
 1. Represents the tangled woody vines growing out of the earth and twining around nearby trees.
 2. Realistic sculpture, colors and textures matching the specified plant species and reference photos.
 3. Relief – As required to achieve described texture
 4. Quantity – As shown in drawings
 5. Size – Vine diameter varies in size from large main vines to small diameter fine vines as shown in the drawings
 6. Placement of all vines shall be done with the oversight/approval of the Owner.
 7. Sample Description:
 8. Exposed Roots: Provide a 6'-0" long sample of (3) different vine diameters. Show the termination system/attachment system to be used at the end of each vine sample.

END OF SECTION

FOR REFERENCE ONLY

SECTION 12 3553.13 – METAL LABORATORY CASEWORK

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes metal laboratory casework.
- B. Related Requirements:
 - 1. Refer to Section 12 3553 "General Requirements for Laboratory Casework and Fume Hoods" for all References, Approved manufacturers, Materials, Hardware, Finishes, Installation, etc.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Refer to Section 12 3553 for approved manufacturers.

2.2 CASEWORK DESIGN (STC-01)

- A. Comply with SEFA 8-M "Laboratory Grade Metal Casework."
- B. Full overlay style: Square edged door and drawer fronts overlapping the openings on all four sides. In elevation, hold the reveal between end panel and door or drawer edge to a maximum of 1/8 inch (3 mm) wide. Hold spaces between abutting doors and drawers to a maximum of 1/8 inch (3 mm) wide, both horizontally and vertically, and shall be accurate and uniform, forming a continuous reveal throughout full length of assembled casework. Hold the reveal between top of cabinet and door or drawer edge to a maximum of 1/4 inch (6 mm) wide.
- C. Self-Supporting Units: Completely welded shell assembly without applied panels at ends, backs or bottoms, so that cases can be used interchangeably or as a single, stand-alone unit.
- D. Interior of Case Units: Easily cleanable, flush interior. Base cabinets, 30 inches (750 mm) and wider, with double swinging doors shall provide full access to complete interior without center vertical post.
- E. Secure intersection of case members with spot and arc welds.
- F. Testing of Casework, Tables, and Shelving: Meet or exceed SEFA 8-M.

2.3 CASEWORK FABRICATION

- A. General: Include completely enclosed vertical posts. Include the items of cabinet construction listed. Exclude provisions for doors in open shelf cabinets or cubbies.
- B. Movable Base Cabinets: Provide movable base cabinets as described under Floor Mounted Base Cabinets above, unless modified under this Paragraph:
 - 1. At toespace rail provide leveling glides in lieu of leveling screws.
 - 2. Backs: Provide solid fixed backs on all base cabinets.

C. Wall and Upper Cabinets:

1. End Panels and Backs:

- a. End panels and back formed from a single steel sheet with front edges formed to a channel shape and further offset to form a strike for doors and drawers.
- b. Reinforce at front and rear corners with vertical posts containing shelf adjustment holes, maximum 1/2 inch (12 mm) on centers.

2. Bottoms:

- a. Bottom and bottom rail formed from a single piece of metal with both sides and back formed up with a radius between flange and bottom for ease of cleaning.
- b. Form front rail to provide a strike for doors and drawers.
- c. Reinforce at front corners with gussets.

3. Tops

- a. One piece construction with front edge formed into a channel shape and offset for door recess and to provide a strike for doors. Turn down flanges at back and side edges for welding top to back and end panels.
- b. Reinforce at front corners with gussets.

4. Adjustable Shelves:

- a. Full width with one adjustable shelf for cabinets up to 30 inches (760 mm) high.
- b. Full width with two adjustable shelves for cabinets between 31 (787 mm) high up to 37 inches (940 mm).
- c. Form front and back edges down 3/4 inch (19 mm) and returned back 3/4 inch (19 mm).
- d. For shelves over 36 inches (915 mm) long or 16 inches (400 mm) deep, reinforce with a welded hat channel for the full length of the shelf.
- e. Adjustable on 1/2 inch (12 mm) centers.
- f. Front edge of shelf to be within 1 inch (25 mm) of inside face of door.

5. Hinged Solid Doors:

- a. 3/4 inch (19 mm) double wall assembly.
- b. Reinforce interior of front panel with welded steel hat channels. Prepaint and sound deaden interior. Weld outer corners and grind smooth.
- c. Secure hinges with screws to internal full-height reinforcing in case and door. Hinges shall be removable; welding of hinges is not acceptable.
- d. Doors shall close against rubber bumpers.

6. Hinged Solid Doors: 3/4 inch (19 mm) hardwood plywood with particleboard, MDF or combination core with 1/8 inch (3 mm), Type 1 hardwood edgebanding.

D. Filler Panels:

1. Provide filler panels or scribe strips at exposed to view areas between back of cabinets and walls, between backs of cabinets at end of island or peninsula benches, and at any other area necessary to enclose gaps. For floor mounted cabinets provide all filler panels with bottom 6 inches (152 mm) fixed and the top portion removable. When cabinets abut side walls, provide a minimum 1 inch filler between side of cabinet and wall. For floor mounted cabinets the filler panel includes a toe kick to match adjacent casework.
2. Grind edges and radius corners to eliminate sharp edges.
3. Secure to frame and/or cabinet back and wall with metal angle and oval head screws with finishing washers.
4. Finish color to match color of adjacent casework.

2.4 HARDWARE

- A. Refer to Section 12 3553.

2.5 METAL FINISH

- A. Refer to Section 12 3553.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 12 3553.

END OF SECTION

FOR REFERENCE ONLY

SECTION 12 3661.16 - SOLID SURFACING COUNTERTOPS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Solid surface material countertops.
 - 2. Solid surface material backsplashes.
 - 3. Solid surface material end splashes.

1.2 ACTION SUBMITTALS

- A. Product Data: For countertop materials.
- B. Sustainable Design Submittals:
 - 1. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
 - 2. Product Data: For adhesives, indicating VOC content.
 - 3. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
 - 4. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings: For countertops. Show materials, finishes, edge and backsplash profiles, methods of joining, and cutouts for plumbing fixtures.
 - 1. Show locations and details of joints.
 - 2. Show direction of directional pattern, if any.
- D. Samples for Initial Selection: For each type of material exposed to view.
- E. Samples for Verification: For the following products:
 - 1. Countertop material, 6 inches (150 mm) square.
 - 2. One full-size solid surface material countertop, with front edge and backsplash, 8 by 10 inches (200 by 250 mm), of construction and in configuration specified.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For fabricator.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For solid surface material countertops to include in maintenance manuals. Include Product Data for care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.

1.5 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate countertops similar to that required for this Project, and whose products have a record of successful in-service performance.

- B. Installer Qualifications: Fabricator of countertops.

1.6 FIELD CONDITIONS

- A. Field Measurements: Verify dimensions of countertops by field measurements after base cabinets are installed but before countertop fabrication is complete.

1.7 COORDINATION

- A. Coordinate locations of utilities that will penetrate countertops or backsplashes.

PART 2 - PRODUCTS

2.1 SOLID SURFACE COUNTERTOP MATERIALS (SS-01)

- A. Solid Surface Material: Homogeneous-filled plastic resin complying with ISFA 2-01.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. E. I. du Pont de Nemours and Company.
 - b. LG Chemical, Ltd.
 - c. Swan Corporation (The).
 - d. Wilsonart LLC.
 - 2. Basis-of-Design Products: As scheduled; refer to Finish Schedule.
 - 3. Type: Provide Standard type unless Special Purpose type is indicated.
 - 4. Colors and Patterns: As indicated by manufacturer's designations .
- B. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.
- C. Particleboard: ANSI A208.1, Grade M-2-Exterior Glue.

2.2 FABRICATION

- A. Fabricate countertops according to solid surface material manufacturer's written instructions and to the AWI/AWMAC/WI's "Architectural Woodwork Standards."
 - 1. Grade: Custom .
- B. Configuration:
 - 1. Front: Straight, slightly eased at top .
 - 2. Backsplash: Straight, slightly eased at corner .
 - 3. End Splash: Matching backsplash .
- C. Countertops:
 - 1. 3/4-inch- (19-mm-) thick, solid surface material with front edge built up with same material.
- D. Backsplashes: 3/4-inch- (19-mm-) thick, solid surface material.

- E. Fabricate tops with shop-applied edges and backsplashes unless otherwise indicated. Comply with solid surface material manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
 - 1. Install integral sink bowls in countertops in the shop.
- F. Joints:
 - 1. Fabricate countertops without joints.
- G. Cutouts and Holes:
 - 1. Undercounter Plumbing Fixtures: Make cutouts for fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.
 - a. Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 3/16 inch (5 mm) into fixture opening.
 - b. Provide vertical edges, rounded to 3/8-inch (10-mm) radius at juncture of cutout edges with top surface of countertop, slightly eased at bottom, and projecting 3/16 inch (5 mm) into fixture opening.
 - c. Provide 3/4-inch (20-mm) full bullnose edges projecting 3/8 inch (10 mm) into fixture opening.
 - 2. Counter-Mounted Plumbing Fixtures: Prepare countertops in shop for field cutting openings for counter-mounted fixtures. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.
 - 3. Fittings: Drill countertops in shop for plumbing fittings, undercounter soap dispensers, and similar items.

2.3 INSTALLATION MATERIALS

- A. Adhesive: Product recommended by solid surface material manufacturer.
 - 1. Adhesives shall have a VOC content of 70 g/L or less.
 - 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Sealant for Countertops: Comply with applicable requirements in Section 07 9200 "Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates to receive solid surface material countertops and conditions under which countertops will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of countertops.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install countertops level to a tolerance of 1/8 inch in 8 feet (3 mm in 2.4 m), 1/4 inch (6 mm) maximum. Do not exceed 1/64-inch (0.4-mm) difference between planes of adjacent units.

- B. Fasten countertops by screwing through corner blocks of base units into underside of countertop. Predrill holes for screws as recommended by manufacturer. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
- C. Fasten subtops to cabinets by screwing through subtops into cornerblocks of base cabinets. Shim as needed to align subtops in a level plane.
- D. Secure countertops to subtops with adhesive according to solid surface material manufacturer's written instructions. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
- E. Bond joints with adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.
 - 1. Install metal splines in kerfs in countertop edges at joints[**where indicated**]. Fill kerfs with adhesive before inserting splines and remove excess immediately after adjoining units are drawn into position.
 - 2. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.
- F. Install backsplashes and end splashes by adhering to wall and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.
- G. Install aprons to backing and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears. Fasten by screwing through backing. Predrill holes for screws as recommended by manufacturer.
- H. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.
 - 1. Seal edges of cutouts in particleboard subtops by saturating with varnish.
- I. Apply sealant to gaps at walls; comply with Section 07 9200 "Joint Sealants."

END OF SECTION

SECTION 13 3100 – SPECIAL STRUCTURES**PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and supplementary Conditions and Division-1 Specification sections, apply to this section.

1.2 SUMMARY OF WORK

A. Project Identification and Description of Work

- 1 The Arabian Leopard Habitat (East & West) and transfer bridge Enclosures (Project) is comprised of site survey, coordination, shop drawings, fabrication and installation of a permanent SS mesh structure supported by steel arches. The Project is comprised of steel arches, mesh covering, cable hardware and interface hardware.
- 2 TYLin will provide Construction Documents to the Specialty Contractor for the development of shop drawings, means and methods, installation sequence diagrams and quality control guidelines as defined in this specification. In addition, the selected Specialty Contractor will be responsible to co-ordinate with all associated trades i.e. Artificial rock work, concrete posts, anchors, foundations etc.
- 3 The Specialty Contractor will be the single source of responsibility for the mesh enclosures and is responsible for the fabrication of all components of the structure, including but not limited to, steel arches, hardware, base plates, interface rods, mesh, cables, etc. Prior to commencement of work a full site survey of existing conditions is required; the selected Specialty Contractor is to coordinate with the project architect and engineer to confirm location of all points of interface. A follow up site meeting will be required to confirm survey prior to commencement of fabrication.

B. SCOPE OF WORK

1. The work consists of furnishing all plant, labor, materials, facilities and equipment required to manufacture, deliver, and install this project on the site provided by the Owner and in so doing demonstrating that the structure is fit for the purpose intended. The work outlined by these plans and specifications consists of the following general requirements:
 - a. Fabrication / Installation Scope.

Fabrication, shipping and installation of the mesh structures includes, but is not limited to the following:

 - 1) Steel members: Arches, and all steel and mesh interface details.
 - 2) Hand woven SS steel mesh, as per specifications.
 - 3) Cables:
 - 4) Hardware – link assemblies and related fasteners, gaskets, cables, etc.
 - 5) Access ways, with all related hardware
 - 6) Interface hardware i.e rods, cables etc
 - 7) Access openings i.e framing, door, hardware, hinges, locking, exiting hardware etc.

- b. All submittals as listed in section 1.7.

1.3 COORDINATION AND RESPONSIBILITY

- A. The Specialty Contractor is to coordinate all work with the Owner, plus any sub-Specialty Contractors and vendors, to ensure compatibility where components relate.
- B. The Specialty Contractor shall coordinate all work with architectural and structural drawings. Conflicts in dimension and interference shall be reported immediately to TYLin prior to commencement of shop drawings.
- C. Construction Documents describing the work herein are as listed as follows:
 - 1. Loading Criteria
 - 2. Drawings

1.5 SYSTEM REQUIREMENT

A. General: Provide a Mesh enclosure system that complies with requirements specified herein.

B. Building Code Criteria: The Mesh Enclosure shall comply with the 2024 International Building Code (IBC)

1. Nominal Ice Thickness: 1.0 in
2. Roof Live Load 5 psf
3. Basic Wind Speed: 115 mph
4. Wind Load Importance Factor: 1.0
5. Wind Exposure Category: B
6. Design Mean Roof Height(s): 50 feet

1.6 QUALITY ASSURANCE

A. Approved Specialty Contractors

1. Birdair: Lawrence Bell Dr. Suite 100, Amherst, NY 14221 (716) 633-9500 Attn: David Capezzuto dcapezzuto@birdair.com
2. Fabritecture, +1 913-488-4317 Attn: Bart Dreiling bart@fabritecture.com
3. Structurflex Inut Street, Suite 201, Kansas City, Missouri 64106 (816) 889-9000 Attn: Tim McFadden tmcfadden@structurflex.com

B. Materials

1. All material shall be of new/first class quality, suitable for the purpose specified, and shall comply with appropriate National Standards, where such exist, unless otherwise specified.

2. Workmanship: All workmanship shall be of the best quality, suitable for the purpose specified and shall comply with the local city code and the appropriate National Standards or Codes of Practice, where such exist, unless otherwise required.
3. Defective Work
 - a. Where in the opinion of TYLin the materials or workmanship of any part of the finished work do not comply with all relevant requirements of this specification, that part shall be classified as defective.
 - b. All work classified as defective shall be replaced to the approval of TYLin at the expense of the Specialty Contractor.
 - c. The extent of the work removed and methods of removal and replacement of this work shall be in accordance with the Owner's instructions. The Specialty Contractor shall pay for any specialist testing required by TYLin in connection with remedial work.
 - d. Sub-letting: The tensile structure Specialty Contractor shall sublet no work without prior approval.

1.7 SUBMITTALS

- A. General: All submittals shall be made to Smith Group.
- B. A schedule of all submittals and major project milestones required for the completion of the project to be submitted within one week of the start of the contract.
- C. Shop Drawings
 1. The Specialty Contractor is responsible for preparing shop drawings based on design drawings for all components including structural steelwork, connections, connection hardware, end fittings, mesh details and interface attachments.
 2. As part of the shop drawings, the Specialty Contractor shall prepare erection and installation sequence drawings fully explaining hoisting and lifting mechanism, location of motors, electrical requirements and other material necessary for the full coordination of the work with other portions of the project.
 3. These drawings shall be submitted to TYLin for approval.
 4. The Specialty Contractor shall allow 14 days for initial review of the submittal and sufficient time to make amendments.
 5. Approval of shop drawings will not relieve the Specialty Contractor of his responsibility for dimensional coordination.
 6. The Specialty Contractor shall obtain authorization to start fabrication based on shop drawing review.
 7. The Specialty Contractor shall be responsible for any of the discrepancies, errors or omissions in the drawings, calculations and other particulars supplied by him, whether or not such drawings have been approved by the Owner or TYLin.

8. Specialty Contractor will provide testing to demonstrate that the Enclosure:
 - a. Resist local wind load conditions
 - b. Additional tests as required by Engineer of Record, Owner or Local Law.

D. Quality Assurance Submittals

1. Testing and inspection of specific structural and system components including:
 - a. Welds
 - b. Slip critical bolted connections
 - c. Paint applications
2. Material and finish samples for approval
3. Material Certificates
 - a. The Specialty Contractor shall submit such technical literature, test certificates or similar declarations as to proof of compliance of the proposed material with all specified performance data or applicable national standards and codes.
 - b. The Specialty Contractor shall submit the following test certificates for components including, but not limited to the following, unless otherwise approved by the Engineer of Record:
 - 1) Steel
 - 2) Stainless Steel Mesh
 - 3) Cables
 - 4) Fasteners
 - 5) Gaskets
 - 6) Miscellaneous items
 - 7) Doors, hardware etc
4. Warranty: Project Warranty documents as described herein
5. Record Documents: Project record documents for installed materials in accordance with Conditions of the Contract and Division 1 Submittal Procedures Section.
6. Maintenance manual: Submit two (2) copies of a maintenance manual for the mesh structure to the Owner. The manual shall include a schedule for routine inspection, an inspection checklist, instructions for emergency repair and use of emergency repair materials, and warranty. During the system erection period, the Owner shall provide maintenance personnel to be trained in the use of the repair materials.

1.8 SUBSTITUTIONS

- A. No variations to the specifications or drawings may be made without approval of TYLin.
- B. The Specialty Contractor shall submit details of and reasons for any proposed variations from this specification, the drawings, and/or TYLin's written or drawn instructions.
- C. In making request for substitution, the Specialty Contractor represents he has personally investigated the proposed product or method and determined that it is equal or superior in all respects to that specified unless such requirements are waived by the Owner. He will provide the same guarantee for substitution as for the product or method specified.

- D. The Specialty Contractor shall coordinate installation of accepted substitutions into the work and complete it in all respects. He waives all claims for additional costs or time extensions related to substitutions. He is responsible for all fabrication delays necessitated because of product substitution, and any additional costs, which accrue to the Owner as a result of these delays.
- E. Should the Specialty Contractor find at any time that the existing conditions make modifications in requirements necessary; he shall promptly report such matters to TYLin for consideration and comment.

1.9 WARRANTY

- A. All fabricated components will be warranted for a period of 10 years for material failure and workmanship. Warranty to cover full replacement and installation costs.

1.10 INSPECTIONS

- A. The Specialty Contractor shall make provisions to have Key Personnel attend inspections along with the Designer & Engineer, and an appropriate representative of the Owner at the Owner's discretion.
- B. The Specialty Contractor attending these inspections will be prepared to undertake all required adjustments to the satisfaction of TYLin.
- C. The Specialty Contractor shall provide 14 days notice for inspections. TYLin or any representative of the Owner may visit the site or inspect supplier's work at any reasonable time.
- D. Where in the opinion of TYLin, materials or workmanship of any part of the finished work do not comply with requirements, that work shall be classified as defective and immediately replaced by the Specialty Contractor at no additional cost to the Owner.

1.11 ERRORS AND OMISSIONS

- A. Any approval given by the Owner in pursuance with this specification shall not be deemed in any way to relieve the Specialty Contractor of any of his liabilities, obligations or responsibilities under the Conditions of this Contract. Errors or omissions in executed work, Specialty Contractor's workshop drawings or any other part of the Specialty Contractor's work shall remain the responsibility of the Specialty Contractor whether approved by the Owner or not.

PART 2 - MATERIALS

2.1 STEELWORK

- A. Submittals
 - 1. The Specialty Contractor shall submit shop and erection drawings for all steelwork components, in accordance with Part 1 General Section 1.7 Submittals.
 - 2. No fabrication of steelwork, under any circumstances, shall commence without approved shop drawings. The Specialty Contractor shall be responsible for all changes required if fabrication proceeds without approved shop drawings for primary metalwork or connections.

- a. Shop Applied Primer: 90-97 Tnemec-Zinc @ 2.5 to 3.5 mils dry film thickness.
- d. Shop Applied Intermediate: Series 27 FC Typoxy or N69F Epoxoline II @ 3.0 to 5.0 mils dft in a color recommended by the manufacturer as appropriate under the top coat color.
- e. Shop Applied Topcoat: Series 1075 Endura-Shield, 2 part polyurethane @ 2.0 to 4.0 mils dry film thickness

E. Quality Control and Inspection

- 1. All coatings, when cured, shall be visibly free of dust, dirt, flow lines, streaks, sags, holidays, blisters, pin-holes, runs, curtains or other surface imperfections. Applicator shall follow manufacturer's guidelines for quality control testing on a prescribed schedule during productions.
- 2. Unacceptable color or film characteristics shall be cause for rejection of the entire coated section, and shall be replaced by another factory applied coated section. Determination of such conditions and final approval are to be made by TYLin.
- 3. After erection, clean exposed surfaces of field connections, unpainted areas adjacent to field connections and damaged areas in the shop coat to the same standards as required for the shop coat and paint with the same primer used in the shop coat. Color of the shop coat shall be as recommended by the paint manufacturer to be a suitable undercoat for the finish color selected by TYLin.

F. Fabrication

- 1. Mill column and bearing stiffeners to give full bearing over cross section. Plane contact surface of bearing plates.
- 2. Drill or punch holes at right angles, unless otherwise noted, to the surface of the metal, not more than 1/8 inch larger than connector diameter. Do not make or enlarge holes by burning. Drill material having a thickness in excess of the connector diameter and material thicker than 7/8 inch. Holes shall be clean-cut without torn or ragged edges. Remove outside burrs resulting from drilling operations.
- 3. Provide holes in members to permit connection of the work of other trades. Use suitable templates for the proper location of these holes. Steel requiring adjustment shall be provided with slotted holes as shown.
- 4. Provide holes, slots and openings required by other trades together with necessary reinforcing as shown. Use suitable templates for proper location of these openings. Where openings are shown on the drawings or shop drawings, no change in location will be permitted without prior approval.
- 5. Manual oxygen cutting shall be done only with a mechanically guided torch. Alternatively, an unguided torch may be used at the discretion of TYLin, provided the cut is within 1/8 inch of the required line and the final removal is completed by grinding to produce a surface quality equal to that of the base metal edges. The use of oxygen-cut holes for bolted connections will under no circumstances be permitted, and violation of this clause will be sufficient cause for the rejection of any pieces in which oxygen cut holes exist.
- 6. Provide proper sealing of all welded connections and other connections so as to prevent water migration through all connections.

G. Connections

1. All connection shall be designed for maximum capacity of the member, and shall withstand frequent and constant use unless otherwise detailed and shall be one of the following:
 - a. High-strength bolts/pins.
 - b. Welds.
2. Bolted Connections
 - a. Bolts shall be of a length that will extend not less than 1/4 inch beyond the nuts. Enter bolts into holes without damaging the thread.
3. Welded Connections
 - a. Do not begin structural welding until joint elements are bolted or tacked in intimate contact and adjusted to dimensions shown on Drawings, or both, with allowance for any weld shrinkage that is expected. Weld heavy sections and those having a high degree of restraint with low hydrogen type electrodes. No members are to be spliced without prior review by the Engineer.
 - b. Welding shall be performed by operators who have qualified within the preceding one year period under AWS standard qualifications procedure for the type of work required.

H. Testing

1. Testing and inspection of specific structural steel components including, but not limited to, welded and bolted connections will be performed by the Specialty Contractor, or their representative. The results shall be documented into a submittal for approval by SmithGroup.
2. Inspection and testing of welding work shall consist of visual inspection and non-destructive (LP or MT) spot testing at the rate of at least one test in three welds by each welder.
3. Welds: The testing agency shall perform all tests and inspections in accordance with "The Code For Welding In Building Construction By The American Welding Society (AWS D1.1)", Latest Edition. The following tests for welded connection are required:
 - a. 33% of all shop welds
 - b. 100% of all full penetration welds
 - c. All field welds.
4. High Strength Bolted Connections: The testing agency shall make all test and inspections in accordance with AISC "Specifications for Structural Joints Using ASTM A325 or A490 Bolts."
5. The Specialty Contractor shall provide the testing agency with the following:
 - a. Documents required under Paragraph "Submittals."
 - b. Full and ample means and assistance for testing all material
 - c. Proper facilities for inspection of the work in mills shop and field.
6. Each person installing a connection shall be assigned an identifying symbol or mark and all shop and field connections shall be so identified so that the inspector can refer back to the person making the connection.
7. The testing agency shall operate in such a way that fabrication and erection are not unnecessarily delayed or impeded, and as follows:
 - a. Non-destructive testing shall be by the magnetic particle or ultra-sonic method; whichever is more effective for the joint to be tested unless the method to be used is specifically noted on the drawings.
 - b. Weldments and bolt connections that are found deficient by the testing agency shall be redone or corrected as directed, at the Specialty Contractor's expense and to the satisfaction of the testing engineer.

- c. Where inspection reveals defects, the extent of inspection will be increased as much as necessary to assure that the full extent of the defects in a joint have been found and to assure that the same defects are not present in welds made on similar parts or under similar circumstances.
- d. Work that is not acceptable will be designated by "Repair" or "Reject," as applicable.
- e. Shop welds will be inspected in the shop before the work has a protective system applied or is approved for shipment.
- f. The Inspector will maintain a daily record of the work he has inspected and its disposition. Reports of tests will be made in form prescribed in the "Structural Welding Code." One (1) copy of each of the reports will be submitted to the Engineer on a weekly basis.

I. Product Handling

- 1. Do not handle structural steel until paint has thoroughly dried. Care shall be exercised to avoid abrasions and other damage.
- 2. Stack material out of mud and dirt and provide for proper drainage. Protect from damage or soiling by adjacent construction operations.

J. Architecturally Exposed Structural Steel

- 1. All steel exposed to view shall be Architecturally Exposed Structural Steel.
- 2. Lines shall be straight, surfaces flat and without surface imperfections, corners square and with uniform and sharp arris.
- 3. All welds shall be ground smooth to match surrounding surfaces; flush welds shall blend with adjacent surfaces.
- 4. Tolerances, as a minimum, shall be consistent with the AISC tolerances for Architecturally Exposed Structural Steel, Section 10 of the Code of Standard Practice, except where more stringent tolerances are required by the design.
- 5. Tolerances for fabrication and installation shall be half those normally acceptable for structural steel.
- 6. Surfaces shall be blast cleaned and receive the finish specified herein.

2.2 CABLES

A. Wire Rope/Spiral Strand

- 1. All cables to have Class A zinc coating throughout, and have a PVC jacket unless otherwise specified or approved.
- 2. Unless noted otherwise on the drawings the wire rope construction shall be 6 x19 right hand ordinary lay with wire rope core, complying with the recommendations of ASTM A603 "Standard Specification For Zinc-Coated Steel Structural Wire Rope", Latest Edition.
- 3. Where required, steel spiral strand rope shall comply with the recommendations of ASTM A 586 "Standard Specification For Zinc-Coated Parallel And Helical Steel Wire Structural Strand", Latest Edition.
- 4. The cable construction shall provide the MBL if shown on the drawings. The cable sizes shown on the drawings are based on the standards set in ASTM A603 "Standard Specification For Zinc-Coated Steel Structural Wire Rope".
- 5. Cables designated to be pre-stretched shall be prestretched according to ASTM A603 for wire rope and A586 for spiral strand. Cables of the same type shall have the same modulus of elasticity.
- 6. The Specialty Contractor shall determine the construction stretch of the cables by load cycling from 10% to 45% of the MBL until no inelastic stretch is noted. The construction stretch is measured at 15% MBL. Test results shall be sent to TYLin for approval.

7. All cables shall be manufactured to the following length tolerances (measured at 70 degrees F):
 - a. Length less than 70 ft. 1/4 in.
 - b. Length 70 to 270 ft. 0.03%
 - c. Length greater than 270 ft. 1 in
8. The design of fittings assumes that the cable strength is reduced by not more than 10% at bends of internal radius of 4 x cable diameter. Any variation of the cable construction to achieve this flexibility shall be at the Specialty Contractor expense.
9. Cables shall have a continuous longitudinal paint stipe (1/4" wide max.) along their top surface unless noted otherwise.
10. All swaged and splattered fittings shall be designed and attached to develop the full breaking strength of the cable.
11. All cables shall be delivered clean, dry and free of grease.

2.3 CONNECTORS

- A. Verification: The Specialty Contractor shall verify that all assemblies and hardware fit.
- B. Bolts and threaded studs: refer to project drawings.
- C. Nuts and washers: refer to project drawings.
- D. Anchor Bolts: refer to project drawings.
- E. Spares: The Specialty Contractor shall supply 5% spares for all bolts and fittings delivered loose to the site or as otherwise directed by the Owner.

2.4 STAINLESS STEEL MESH

- A. Submittals
 1. Name of mesh manufacturer and technical literature including standard testing procedures.
 2. One square yard of each type of mesh.
- B. Mesh Description
 1. Material: Type 304 stainless steel 7x7 wire rope handwoven.
 2. Cable diameter x Mesh aperture Dimensions - 1/18 " x 2" x 2"
 3. Finish: black oxide
 4. Breaking Strength - 1/16" diameter **480 lbs or greater**

PART 3- EXECUTION

3.1 GENERAL

- C. Shop Drawings: The Specialty Contractor shall design, prepare and submit to TYlin a complete set shop drawings as appropriate, at least 8 weeks prior to start of fabrication for:
 1. Mesh and supporting metalwork based on TYlin drawings and final cutting patterns.
 2. All connections of unique geometric conditions.
 3. Method of fabrication
 4. Welding procedures and details, including tack and sealing welds
 5. Marking and numbering systems for cables
 6. All information necessary for fabrication of mesh

7. Size, shape and weight of mesh panels, type and location of shop and field connections, and size and type of seams

D. Geometry

1. TYlin to furnish a 3d design intent model to the Specialty Contractor.
2. Specialty contractor to undertake patterning, develop geometry drawing and final 3d extruded model of all components i.e steel, mesh, cables, hardware etc. .These will be submitted by the Specialty Contractor and to Tylin for review and approval.
3. All edge and corner detailing will be indicated on these drawings

E. Approval of Specialty Contractors Drawings

1. The Specialty Contractor shall be responsible for any of the discrepancies, errors or omissions in the drawings, calculations and other particulars supplied by him, whether such drawings have been approved by the Owner or not.

F. Shipment of Work

1. The Specialty Contractor shall advise the Owner of intended date of shipments to site of cables, membranes and steelwork in such a way that inspection may take place prior to shipment.

G. Notice for Inspection

1. The Specialty Contractor shall give seven working days notice for any inspection but the Owner or his appointed representatives shall have the right to visit the Specialty Contractor's or his supplier's works at any reasonable time for purposes of inspection.

3.2 DELIVERY, STORAGE, HANDLING

- A. In order to facilitate inspection at all stages, the work shall always be laid out in separate holding areas and kept clean. All painted or metal coated work shall be supported clear of the ground. Individual member marking shall be visible when members are stacked.
- B. All bundling, packing, handling and transportation shall be planned and carried out in a manner designed to prevent kinks, abrasions, and any damage to the work and any protective coating.
- C. Care should be taken not to crush kink or otherwise damage wire rope cables, mesh or steel members during storage/handling.
- D. The Specialty Contractor shall mark and identify materials so as to ensure that they are properly used as specified. His proposals for so doing and his proposed cable number system shall be submitted for approval.

3.3 ERECTION – STEELWORK

A. Erection General

1. Check the alignment and elevations of all existing steelwork, existing mast supports and other existing conditions affecting the work before starting erection. Correct any deviations encountered and as required to insure a plumb, true and level installation. Obtain Engineer's approval of methods proposed for correcting errors prior to proceeding with correction and erection.

2. Drift Pins may be used only to align the several parts. They shall not be used in such a manner as to distort or damage the metal.
3. Oxygen cutting of structural steel for "fitting-up" purposes shall not be done except with the prior approval of the Engineer.
4. The use of an oxygen-cutting torch for correction fabrication errors will be permitted only when the member is not under load, and upon acceptance of the Engineer.
5. Make all necessary provisions for temporary bracing and for completion of erection where structural members, permanent cables or mesh are temporarily left out for erection at a later date.

B. Erection Tolerances

1. Individual pieces shall be plumbed, leveled and aligned in accordance with the requirements of the "Code of Standard Practice of Steel Buildings."
2. Dimensions shown on Drawings are based on an assumed design temperature of 70 degrees F. Fabrication and erection procedures shall take into account the ambient temperature range at the time of the respective operations.

C. Erection Details. The Specialty Contractor shall suggest the method of erection and shall submit of the following at least four weeks before starting to erect the steelwork:

1. Detailed method and sequence of erection
2. Erection stresses and lifting points indicated in drawing form.
3. Types of winches or lifting gear stay cables and jacking systems.

D. Field Quality Control: Filed testing and inspection requirements shall comply with Part 2 - Products, "Source Quality Control."

3.4 ERECTION - MESH

- A. Handling: Pre-stressing levels and method of pre-stressing must be performed to the satisfaction of the Engineer. A slow and incremental pre-stress process must be used to ensure no local oversteering during erection.
- B. Remove temporary coverings and protection of adjacent work areas
- C. Clean installed products in accordance with manufacturer's instructions before owner's acceptance. Do not use chlorine-based or abrasive cleaners
- D. Repair/maintenance Manual
 1. The Specialty Contractor shall supply a repair/maintenance instruction manual and repair kit with sufficient tools and materials for use by the Owner in the event accidental damage should occur. Touch up paint should be supplied.
 2. The Specialty Contractor shall demonstrate repair/maintenance methods to Owner.

June 15, 2026

Smithsonian OPDC Project No. 2533105

SmithGroup Project No. 00100084

END OF SECTION (This is an EOS paragraph style.)

FOR REFERENCE ONLY

SECTION 13 3120 - CABLE SUPPORTED MESH STRUCTURES**PART 1 GENERAL****1.1 SUMMARY**

- A. Section Includes:
1. Provide engineered cable supported wire mesh structure, complete, in place, as shown on the drawings, specified herein, or needed for a complete and proper installation.
 2. Work of this Section Includes the Cable supported Mesh structure and mesh transfer bridge for Jaguars
 - a) Steel supported poles
 - b) Wire rope cable support structure
 - c) Wire mesh fabric
 - d) Wire rope hardware

1.2 RELATED SECTIONS

Section 03 30 00 Cast-in-Place Concrete

- A. Section 03 37 13 Artificial Rockwork
- B. Section 09 94 13 Themed Finishes
- C. Section 32 31 00 Fences and Gates

1.3 SYSTEM DESCRIPTION

- A. Delegated Design:
1. The work of this section requires professional design services or certifications by a design professional employed by the fabricator, and who is not the Consultant.
 2. Complete the design of the support structure, wire rope support system, mesh fabric, and hardware. Maintain the general design concept shown.
 3. Do not change member sizes or alter profiles and alignment, except as outlined in the design processes of this section.
- B. Structural Systems Design:
1. Structural Design:
 - a) Provide the structural engineering design for enclosure structure, wire rope support system, mesh fabric, hardware and all connections.
 - b) Drawings and Calculations:
Provide complete design, calculations, and drawings, prepared and signed in accordance with pertinent provisions of division one of these Specifications
 - c) Licensed Engineer:
Design drawings will be prepared, approved, signed and sealed by a Professional Engineer registered in Washington DC.
 2. General Design Loads:
Design all elements for the following loads:
 - a) Dead loads,
 - b) Live loads due to animals and keeper staff (300 pound minimum concentrated load on overhead mesh or cable)
 - c) Wind loads where applicable, as shown on the Drawings.
 3. Geotechnical Investigations and Recommendations:
 - a) The following geotechnical investigations and recommendations provide the basis for the structural and foundation design of the work of this section:
 - b) Geotechnical Investigation, see Section 02 31 00

4. Foundation Design:
Foundation design is by Engineer-of-Record
 - a) Provide all information required for the EOR to confirm the foundation design shown on the Bid Drawings.
 - b) Clearly identify on the shop drawings the reactions, by load case, and unbalanced loading on the supporting poles.
 - c) Design the foundations to limit movement due to frost heave or soil movement.
- C. Approvals and Permits:
 1. General:
Secure the approval of governmental agencies having jurisdiction prior to submitting for the Consultant's approval.
 2. Building Permits:
Obtain all required permits and approvals for proposed systems.
- D. Performance Standards:
 1. Materials specified herein are intended to establish the standards of quality required for the Work of this Section.
 2. Provide appropriate documentation that all proposed materials meet the specific performance requirements specified below.
 3. All materials and/or completed fabrications must have a twenty (20) year structural service life.
 4. All materials must be capable of resisting the loads and all potential wear and abrasions inherent in their position within the completed exhibits.

1.4 SUBMITTALS

- A. General:
 1. Comply with the pertinent provisions of Sections of 01 30 00 Administrative Requirements.
 2. Within 45 calendar days after the Contractor has received the Owner's Notice to Proceed, submit all items listed below
- B. Design Drawings:
 1. Delegated Design:
 - a) Submit complete drawings accurately showing proposed all of the fabrications and equipment described in this section, prepared in accordance with the following provisions:
 - a) Submit complete drawings accurately showing proposed all of the fabrications and equipment described in this section, prepared in accordance with the following provisions:
- C. Fasteners
 1. General:
 - a) Provide zinc-coated or stainless steel fasteners for exterior use.
 - b) Select fasteners for the type, grade, and class required.
 2. Standards:
All fasteners listed below shall comply with ASTM A307 and as follows:
 - a) Bolts and nuts: Regular hexagon-head type, Grade A.
 - b) High strength bolts: ASTM A325N bearing type and ASTM A325F friction type.
 - c) Stainless steel bolts, screws, studs: ASTM F738M, Type 316.
 - d) Stainless steel nuts: ASTM F836M-91, Type 316.
 - e) Plain washers: Round, carbon steel, complying with Fed Spec FF-W-92.

- f) Masonry anchorage devices: Expansion shields complying with Fed Spec FF-S-325.
- g) Concrete Inserts:
 - 1) Threaded or wedge type, galvanized ferrous castings, either malleable iron ASTM A47 or cast steel ASTM A27.
 - 2) Provide bolts, washers, and shims as required, hot-dip galvanized, ASTM A153.
 - 3) Fastener to be compatible with bolt and installed condition to prevent electrolytic-reaction induced corrosion

D. Grout:

- 1. General:
Provide non-Metallic, non-shrink cement grout, meeting all requirements of ASTM C1107.
- 2. Acceptable Manufacturer:
"SonogROUT" as manufactured by Sonneborn Building Products or approved.
- 3. Provide grout specifically recommended by manufacturer for type of application.
- 4. Pre-mixed, factory-packaged, non-staining, non-corrosive, non-gaseous grout complying with CE CRD-C621.

1.5 SUPPORT STRUCTURE

A. General:

- 1. Conform to the applicable requirements of the standard specifications.
- 2. All materials hot dip galvanized except as specifically indicated otherwise.

B. Structural Members:

- 1. Masts:
 - a) Sizes as shown as shown on the drawings.
 - b) Wall thickness as required by the structural design.
 - c) Galvanized steel.
- 2. Posts:
 - a) Diameter as shown on the drawings.
 - b) Wall thickness as shown on drawings.
 - c) Galvanized steel.

C. Finish:

- 1. Hot dip galvanized after fabrication

1.6 LACING BARS

A. General:

- 1. 12mm diameter galvanized steel bars.
- 2. Form to surfaces as shown on the drawings.
- 3. Attach as shown on the drawing details.

1.7 WIRE ROPE MESH

A. Manufacturers and Installers:

- 1. AthruZ Consulting and Distributing (Sean Stoddard), Tucson AZ, info@athruzconsulting.com, www.athrucages.com, tel: (520) 434-8281.
- 2. International Cordage (Kyle Nichols), incoarz@yahoo.com, www.international-cordage.net, Phoenix AZ, tel: (800) 920-1474.
- 3. Nets Unlimited (Sean Stewart / Kelly Blair), Cave Creek AZ, Kelly@netsunlimited.com, www.netsunlimited.com , tel: (480) 515-1300, (480) 515-1301

B. Wire-Rope Mesh:

- 1. Jaguar Wire Rope Mesh:

- a) Mesh: Hand-woven stainless-steel wire mesh. Woven from 1/8-inch diameter stainless steel wire rope. 2-inch by 2-inch mesh typical openings. Black oxide finish.
- b) Jaguar Wire Rope Mesh training wall: Mesh: Hand-woven stainless-steel wire mesh. Woven from 1/8-inch diameter stainless steel wire rope. 2-inch by 2-inch mesh typical openings. Black oxide finish. Designed with 1" deflection

1.8 DIGGING BARRIER

A. Chain link Mesh:

- 1. Galvanized chain-link Mesh:
 - a) 2"x2"x9 ga.
 - b) Hot-dip galvanized, black polyethylene coated.

1.9 WIRE ROPE ASSEMBLIES

A. Manufacturers

- 1. Wire Rope:
United States Steel (USS), Tiger Brand wire rope, WireCo, Loos & Co, Hackensack, Blue Wave DK or approved equal.
- 2. Hardware: Stainless steel, Color: Black
 - a) The Crosby Group, www.thecrosbygroup.com, Tulsa Oklahoma, Telephone (918) 834-4611.
 - b) Electroline, www.esmet.com, Canton Ohio, telephone (800) 321-0870.
 - c) Jakob Rope Systems, www.jakob.ch, Delray Beach FL, tele: 866 215-1421.

B. Wire Rope Cable, Color: Black:

- 1. Primary Support System:
 - a) Wire rope diameter as required by the system design and as required by the minimum size shown on the Drawings.
- 2. Stainless Steel:
 - a) 7 x 19 or 6 x 19 stainless steel aircraft cable.
 - b) AISI 316 BS MA 29: 1982.

C. Wire Rope Hardware:

- 1. Turnbuckle:
 - a) Jaw and jaw type, hot dip galvanized, diameter of thread as shown, 12-inch take-up typical, Crosby Laughlin, HG-228, or approved equal. Color: Black.
 - b) Cable/Wire Rope Clips: Crosby-Laughlin "Crosby Clips" - size to fit cable shown as manufactured by the Crosby Group, Tulsa, Oklahoma, or approved equal. Color: Black.
 - c) Clevis Socket Assembly: Positive grip wire rope end fitting, forged alloy stainless steel, Electroline GD 131 and 150 or approved equal. Size clevis connections to the steel wire rope diameter. Color: Black.
 - d) Shoulder Eye Bolt: Galvanized forged steel shoulder nut eyebolt. Crosby Laughlin, or approved equal. Color: Black.
 - e) Wire Rope Stops: Zinc coated copper stops, size appropriate for the wire rope cable. Color: Black.

1.10 DESIGN & FABRICATION

A. Design Parameters:

- 1. Fabricate from materials in sizes to achieve the profiles and arrangements shown on the drawings:
- 2. Design to withstand the loads specified in Part 1 of this section.

3. Make necessary allowances for expansion and contraction and movement of structure the structure.
 4. Make allowance for trees that penetrate the structure.
 5. Provide design details for collars at tree trunk penetrations as shown on the drawings. Maximum opening at trunk shall be 50mm (2-inches) in any dimension.
 6. Provide for tree growth and minimize abrasion to bark. Provide details of connections at removable panels as shown on the drawings.
- B. Quality:
1. Conform to the Quality Assurance standards for this work.
 2. Use materials of size and thickness shown or, if not shown, of required size and thickness to produce strength and durability of connecting material in the finished product.
 3. Work to dimensions shown or accepted on the Shop Drawings, using proven details of fabrication and support.
 4. Use type of materials shown or specified for the various components of the Work.
 5. Form exposed Work true to line and level, with accurate angles and surfaces and with straight sharp edges.
 6. Ease the exposed edges to a radius of approximately [0.03] inch ([0.8] mm) unless otherwise shown.
 7. Weld metal corners and seams continuously, complying with the recommendations of the standard specifications for this section.
 8. At exposed connections, grind exposed metal welds smooth and flush; match and blend with adjoining surfaces.
 9. Form exposed connections flush and smooth, using concealed fasteners wherever possible.
 10. Provide for anchorage of the type shown. Coordinate with supporting structure. Fabricate and space the anchoring devices to provide adequate support for intended use.
 11. Cut, reinforce, drill, and tap the work as indicated to receive finish hardware and similar items.
 12. Fabricate joints that will be exposed to weather in a manner to exclude water or provide weep holes to evacuate accumulated water.
- C. Support Posts (poles):
1. Provide horizontal and vertical members as shown on the drawings and as required to form a rigid structure without sag or twist.
 2. Close all open tube ends.
 3. Provide drain holes as required for hot-dip galvanizing and seal tight with weld material, ground smooth and painted with zinc-rich paint, afterward.
 4. Connections:
 - a) All internal connections fully welded
 - b) Provide bolted connections to adjacent structure or concrete.
- D. Wire Rope Cable Support Structure:
1. Primary Support System:
 - a) Provide a primary support system of wire rope cables to support the secondary wire rope support system and the wire rope mesh.
 - b) Connect the support masts, ground attachment points, and structures as shown on the drawings and as required for a structural sound, and complete enclosure for the animals.
 2. Secondary Support System:
 - a) Provide a secondary support system to support the wire rope mesh.

- b) Connect the primary wire rope support system cables with a network of parallel, smaller wire rope cables.
 - c) Connect secondary wire ropes to the primary wire ropes with hardware of the smallest, commercially available hardware.
- E. Connectors and Fasteners:
- 1. Provide connectors and fasteners of materials matching the materials to be fastened except where specified otherwise.
 - 2. Provide fastener types and sizes appropriate for size and weight of materials to be fastened and as documented in the shop drawings.
 - 3. Except where otherwise specified provide the following fastener types: Hot dip galvanized, conforming to all pertinent standards of this section.

1.11 FINISHES

A. Shop Painting:

- 1. Shop paint all work of this section, except members or portions of members to be embedded in concrete or masonry, surfaces and edges to be field welded, and galvanized surfaces, unless otherwise specified, and except stainless steel Work.
- 2. Remove scale, rust, and other deleterious materials before applying shop coat.
- 3. Clean off rust and loose mill scale in accordance with SSPC-SP-1.
- 4. Remove oil, grease, and similar contaminants in accordance with SSPC-SP-1.
- 5. Sand blast to near white metal in accordance with SSPC-SP-10 for ferrous metals to receive zinc rich polyamid epoxy primer.
- 6. Ferrous metals to receive zinc rich polyamid epoxy primer require inspection by Owner prior to priming. Notify Owner 24 hours prior to prime coating.
- 7. Immediately after surface preparation, brush or spray on primer in accordance with manufacturer's recommendations, and at a rate to provide the recommended dry film thickness.
- 8. Use painting methods, which will result in full coverage of joints, corners, edges, and exposed surfaces.
- 9. Apply one shop coat to fabricated metal items; except, apply two shop coats to surfaces inaccessible after assembly or erection. Change color of second coat to distinguish it from the first coat.

B. Galvanizing:

Galvanize all steel following fabrication in compliance with the following specifications:

- 1. ASTM A 153 for galvanizing iron and steel hardware.
- 2. ASTM A 123 for galvanizing rolled, pressed, and forged steel shapes, plates, bars, and strip [0.12] inch ([3] mm) thick and heavier.
- 3. ASTM A 386 for galvanizing assembled steel products.
- 4. All galvanized work to be performed true to line and level as required in shop before delivery to the job site.

C. Field Galvanizing Repair:

- 1. Use a high zinc dust content paint for re-galvanizing welds in galvanized steel, complying with MIL-P-21035.
- 2. Repair in accordance with applicable requirements of ASTM A780.
- 3. Repair in accordance with applicable requirements of AS/NZS 4680.
- 4. Products: "Galvicon" by Galvicon Corp., "Drygalv" by Anchor Brand Co., "Tot-Rust" (with aluminum color added) by Wilbur & Williams Co. or equal.

D. Powder Coating:

1. Shop powder coat all work noted in drawings with a thermoset powder coat.
2. Use abrasive, mechanical, or chemical cleaning to remove deleterious materials before applying shop coat as appropriate for the material being cleaned
3. Clean in accordance with SSPC-SP-1 Solvent Cleaning or other SSPC standard.
4. Clean and prepare surfaces in accordance with AS/NZS 1627 Preparation and Pre-treatment of Surfaces.
5. Apply powder coat to 60 to 80 minimum dry coating thickness as appropriate for powder and color to be applied.
6. Use coating methods, which will result in full coverage of joints, corners, edges, and exposed surfaces.
7. Apply in accordance with ASTM D3451-06 Standard Guide for Testing Coating Powders and Powder Coatings.

1.12 OTHER MATERIALS

- A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the Contractor subject to the approval of the Owner.
 1. Verify materials selection and sizes.
 2. Verify fabrication and connection details for the fabrications or suggest alternative connection details.
 3. Design system utilizing the system components specified in Part 2 of this specification.
 4. Revise drawings as required by the Owner and resubmit.
 5. Delegated Design Submittals:
Provide all submittals described in Section 01 33 50 as required for the work of this section.
 6. Design Notes and Calculations:
Submit stamped and sealed design notes and calculations, signed and sealed by the Professional Engineer.
 7. Product Data:
 - a) A complete list of materials proposed to be furnished and installed under this Section.
 - b) Manufacturer's specifications and other data needed to demonstrate compliance with specified requirements.
 - c) Manufacturer's recommended installation procedures which, when approved by the Owner, will become the basis for accepting or rejecting actual installation procedures used on the work.
 - d) All stainless steel items require manufacturer's certification of type of stainless steel used.
 8. Shop Drawings:
 - a) Submit fully detailed layout, fabrication, and erection drawings of all materials specified herein for approval.
 - b) Drawings shall show all members, shop cuts, and holes, erection sequences, and tolerances.
 - c) Provide templates for anchor and bolt installation by other trades.
 - d) No fabrication or Work shall be commenced until Shop Drawings have been reviewed and returned to the Contractor.
 - e) Fabricate from reviewed drawings only.
 - f) Provide engineered drawings stamped by a Professional Engineer licensed in the jurisdiction in which the project is located.
 - g) Provide reactions at each reaction location for the tension cables. Include load case and identify the magnitude of the unbalanced load and its direction.

9. Samples:
 - a) Provide a 2'-0" length or square piece of each type, size, finish, and grade of each specified material.
 - b) Provide a sample of each item of hardware specified.

1.13 QUALITY ASSURANCE

A. Standards:

1. Building Codes:
 - a) International Building Code, latest edition, as modified by the local jurisdiction.
 - b) Relevant Building Code for the jurisdiction in which the project is being constructed.
2. Material and Fabrication Standards:
 - a) 'Specification for the Design, Fabrication, and Erection of Structural Steel for Buildings' by AISC, latest edition.
 - b) AISC "Specifications for Design, Fabrication, and Erection of Structural Steel for Buildings", 8th Edition; AISC "Code of Standard Practice";
 - c) AISC "Specification for Structural Joints Using ASTM A325 or A490 Bolts".
3. American Society for Testing and Materials (ASTM):
 - a) ASTM A27-10, Standard Specification for Steel Castings, Carbon, for General Application
 - b) ASTM A47-99(2009)/A47M-99(2009), Standard Specification for Ferritic Malleable Iron Castings
 - c) ASTM A53-10, Standard Specification for Pipe, Steel, Black and Hot Dipped, Zinc Coated, Welded and Seamless
 - d) ASTM A123-09/A123M-09, Standard Specification for Zinc (Hot Dip Galvanized) Coatings on Iron and Steel Products
 - e) ASTM A153-09/A153M-09, Standard Specification for Zinc Coating (Hot Dip) on Iron and Steel Hardware
 - f) ASTM A500/A500M-10a, Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes
 - g) ASTM A572-07/A572M-07, Standard Specification for High Strength Low Alloy Columbium Vanadium Structural Steel
 - h) ASTM A780-09/A780M-09, Standard Practice for Repair of Damaged and Uncoated Areas of Hot Dip Galvanized Coatings
4. Welding:
 - a) Perform welding with electric arc process and in accordance with AWS "Code for Arc and Gas Welding in Building Construction."
 - b) Qualify welding processes and welding operators in accordance with AWS "Standard Qualification Procedures".
 - c) Welder shall be certified in conformance with (AWS) (WABO) requirements.
5. Qualifications:
 - a) Established firm or individual with a minimum of five (5) years experience in successfully constructing elements of similar nature to the work of this section.
 - b) Provide resumes for key personnel performing the work.
 - c) Submit references and photographic documentation of previous projects documenting the experience and ability to construct the work of this section.

1.14 PRODUCT HANDLING

A. General:

Comply with the pertinent provisions of Sections of 01 60 00 Product Requirements.

B. Protection:

Use all means necessary to protect the materials of this section before, during, and after installation and to protect the Work and materials of all other trades.

C. Replacements:

In the event of damage, immediately make all repairs and replacements necessary to the approval of the Owner at no additional cost to the Owner.

PART 2 PRODUCTS**2.1 MATERIAL STANDARDS****A. Surface Quality:**

For fabrication of the Work of this Section, which will be exposed to view, use only those materials, which are smooth and free from surface blemishes including pitting, seam marks, roller marks, rolled trade names, and roughness.

B. Carbon Steel:

All materials shall comply with:

1. Steel plates, shapes, and bars: ASTM A36.
2. Steel plates to be bent or cold formed: ASTM A283, Grade C.
3. Steel tubing, hot-formed, welded, or seamless: ASTM A501.
4. Steel bars and bar-size shapes: ASTM A306, Grade 65, or ASTM A36.
5. Cold-finished steel bars: ASTM A108, grade as selected by the fabricator.
6. Cold-rolled carbon steel sheets: ASTM A336.
7. Galvanized carbon steel sheets: ASTM A526, with G90 zinc coating in accordance with ASTM A525.
8. Steel pipe: ASTM A53, type as selected, Grade A, epoxy paint finish unless otherwise noted, Schedule 40 unless otherwise indicated.
9. Steel Bar Grating: ASTM A 569 or ASTM A 36.
10. Structural Steel Tubes: ASTM A-500, Grade B

C. Stainless Steel:

All materials shall comply with:

1. Stainless Steel Tube/Pipe:
 - a) Cold-formed, round, seamless stainless steel tubing complying with ASTM A511, Grade B.
 - b) Schedule 40 or 80 stainless steel pipe, Type 304/304L, ASTM A312
2. Plates and Bars:

Stainless steel conforming to ASTM A480, Type 304/304L.
3. Stainless steel tube:

ASTM A269, Type 316L.
4. Stainless steel rod:

ASTM A564, Type 316L. Class A finish.
5. Stainless steel plate:

ASTM A480, Type 316L. Number 1 finish.
6. Black Oxide finish unless otherwise noted

D. Bronze:

1. Bushings and Thrust Washers:
2. Iron bronze sintered bearings (oil impregnated) ASTM B612-91, Oilite Bronze or equal.

E. Aluminum:

All materials shall comply with:

1. Aluminum tube: Type 5052.
2. Aluminum Sheet: Type 5052-H32 or 6061-T6, 3.2mm (1/8-inch, 8-gauge) minimum thickness.
3. Aluminum Extrusions: In accordance with ASTM B221/B221M, alloy 6063-T6

PART 3 EXECUTION

3.1 EXAMINATION

A. Verification of Conditions:

1. Examine the areas and conditions under which doors, frames, and panels are to be installed, and correct conditions detrimental to the proper and timely completion of the Work
2. Do not proceed until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General:

1. Furnish setting drawings, diagrams, templates, instructions, and directions for installation of anchorages, such as concrete inserts, anchor bolts, and miscellaneous items having integral anchors, which are to be embedded in concrete construction. Coordinate delivery of such items to project site

3.3 INSTALLATION

A. General:

1. Set work accurately at the established lines and levels.
2. Install in strict accordance with approved drawings and actual conditions, true and horizontal or perpendicular, level and square with angles and edges parallel with related lines of the structure.
3. Set support structures accurately in position, plumbed, aligned, and braced securely until permanent anchors are set.

B. Shop Drawings:

1. Install the work of this Section in strict accordance with the reviewed Shop Drawings

C. Anchor Bolts:

1. Properly locate and build into the connecting work
2. Preset bolts and anchors using templates or such other methods as may be required to locate the anchors and anchor bolts accurately.

D. Loose Bearing and Leveling Plates:

1. Provide loose bearing and leveling plates for steel items bearing on concrete construction, made flat, free from warps or twists, and of required thickness and bearing area
2. Drill plates to receive anchor bolts and for grouting as required.

E. Fastening:

1. General.
 - a) Provide malleable iron washers for heads and nuts, which bear on wood structural connections
 - b) Provide steel washers for all metal and plastic connections.
 - c) Space anchors [1.97] feet ([60] cm) on centers, except where shown otherwise on the drawings.

F. Mesh Panels:

1. Install mesh panels in the maximum possible sizes.

2. Join mesh panels using 'thread' of the same material, diameter, and construction as the mesh.
3. Use basting stitch to attach each mesh opening to the adjacent mesh opening, corner bar, or wire rope.
4. Secure with approved double half hitch knots at maximum 300mm on center to prevent a broken cord from creating a large opening.
5. Install in strict accordance with approved drawings and actual conditions, true and horizontal or perpendicular as the case may be, level and square with angles and edges parallel with related lines of the structure.

G. Mesh Digging Barriers:

1. Install mesh panels in the maximum possible sizes.
2. Run length of mesh roll horizontally as shown on the drawings.
3. Join mesh panels with stainless steel wire clips.
4. Join wire rope mesh structure and digging barrier panels with 2mm-diameter wire rope and secure with stainless steel wire clips.

3.4 COORDINATION

A. Fences and Gates:

1. Coordinate the work of this section with the closely related work described in Section 32 31 00
2. Coordinate the shop drawings for both sections so that the work of both sections will be coordinated in the field.

3.5 ADJUST AND CLEAN

A. Final Adjustments:

1. Leave Work in complete and proper operating condition.
2. Remove and replace defective Work, including structure, hardware, or fabric which is damaged.

B. Finishes:

1. Painted Finish: Touch up and repair painted finishes with products and procedures that achieve the closest possible match with the shop applied finish.
 - a) Installation

END OF SECTION

SECTION 21 1300 - FIRE SPRINKLER[AND STANDPIPE] SYSTEMS**PART 1 - GENERAL****1.1 SUMMARY**

- A. Description of Work: Furnish all new materials and labor for the detailed design and installation of new automatic fire sprinkler systems as outlined in Design Drawings, hereafter referred to as the "Systems" in complete compliance with this Specification, Contract Drawings, and all applicable codes and standards.
- B. Contract drawings are for information only to show potential system arrangement. Contractor shall field verify all site conditions and information contained on the contract drawings and is responsible for the complete design and installation of the systems in accordance with the specifications. The contract drawings may not show all information necessary for installation of the systems but are intended to be used by Contractor for the purpose of preparing a bid. The contract drawings indicate the following:
 - 1. Approximate pipe routing and sizes.
 - 2. Location of the new riser(s) for the Systems, and major points on the system, such as the fire department connection(s).
- C. Section Includes:
 - 1. Pipes, fittings, and specialties.
 - 2. Fire-protection valves.
 - 3. Sprinklers.
 - 4. Alarm devices.
 - 5. Manual control stations.
 - 6. Identification signs.
 - 7. Escutcheons.

1.2 DEFINITIONS

- A. High-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure higher than standard 175 psig (1200 kPa), but not higher than 300 psig (2070 kPa).
- B. Standard-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at a maximum working pressure of 175 psig (1200 kPa).
- C. AHJ: Authority Having Jurisdiction.
- D. FM: Factory Mutual Global.
- E. UL: Underwriters Laboratories.

1.3 INTENT OF SPECIFICATION

- A. The work performed pursuant to these specifications is to be complete in every respect, resulting in the Systems installed in accordance with the applicable codes, standards, manufacturers' recommendations, and UL listings.

- B. Commencement of Work:
 - 1. No work shall be performed until shop drawings, calculations, and data sheets have been approved by Architect and Engineer. The contractor is solely liable for any work performed prior to this approval.
- C. Upon completion of this work, and as a part of this contract, provide Owner with:
 - 1. Complete information and "as-built" record drawings describing and depicting the entire system as installed, including all information necessary for maintaining, troubleshooting, and/or expanding the system at a future date.
 - 2. Complete documentation of system testing in accordance with NFPA 13 and AHJ's acceptance.
 - 3. Certification that Contractor's work has been inspected and tested, is installed entirely in accordance with the applicable codes, standards, manufacturers' recommendations and UL listings[and FM approvals,] and is in proper working order. Contractor shall use "Contractor's Material and Test Certificate(s)" as required by NFPA 13.

1.4 SYSTEM DESCRIPTIONS

- A. Automatic Wet-Type, Class I Standpipe System: The system includes NPS 2-1/2 hose connections and is connected to a permanent water-supply capable of meeting the demand flow and pressure at the most remote hose connection as required by NFPA 14. The standpipe system may be combined with a wet-pipe sprinkler system.
- B. Wet-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing water and that is connected to the water supply through an alarm valve. Water discharges immediately from sprinklers when they operate. Automatic sprinklers operate when heat melts fusible link or destroys frangible device.

1.5 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design sprinkler and standpipe systems, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated. Refer to Section 01 3573 for design requirements and procedures associated with delegated design.
- B. Standard-Pressure Piping System Component: Listed for 175-psig minimum working pressure.
- C. Sprinkler system design shall be approved by authorities having jurisdiction.
- D. Margin of Safety:
 - 1. Margin of Safety for Available Water Flow and Pressure: 10 percent of the minimum required residual pressure or 10 psig, whichever is greater, including losses through water-service piping, valves, and backflow preventers.
- E. Sprinkler Occupancy Hazard Classifications and Design Criteria: Design systems in accordance with NFPA 13 and the criteria indicated in these specifications and drawings.
 - 1. Ordinary Hazard Group 2:

- a. Definition: Occupancies where the quantity and combustibility of content are moderate to high, stockpiles of contents with moderate rates of heat release do not exceed 12 ft, and stockpiles of contents with high rates of heat release do not exceed 8 ft.
 - b. Minimum Design Area and Design Density: 0.20 gpm/sq. ft. over 1500-sq. ft. area.
 - c. Maximum Protection Area per Sprinkler: 130 sq. ft.
 - d. Maximum Sprinkler Spacing: 15 ft.
 - e. Combined Hose-Stream Demand Requirement: 250 gpm.
 - f. Operation Duration: 90 minutes.
- F. Sprinkler Listing Design Criteria: All sprinklers shall be designed and installed in accordance with the product listing. Alternate design criteria recommended or required by a specific sprinkler listing may be utilized only when the sprinkler is approved for use on this project. Sprinkler listing design criteria approved for use on this project will take precedence over the criteria noted in Section this specification only to the extent indicated by the sprinkler listing.

1.6 ACTION AND INFORMATIONAL SUBMITTALS

- A. General:
- 1. Submittal shall contain all necessary information for the entire system. Partial submittals will not be accepted.
 - 2. Provide submittals, including shop drawings, samples, documentation and record drawings, to the Architect and Engineer to review on behalf of the Owner. This review is to verify conformance to project specifications and design concepts expressed in the contract documents. Review of such submittals is not conducted for the purpose of determining the accuracy and completeness of other details (i.e., dimensions) or for substantiating installation or performance of equipment or systems designed by the Contractor, all of which remain the Contractor's responsibility to the extent required by the contract documents. The review on behalf of the Owner shall not constitute approval of safety precautions of construction, means, method, techniques, sequences of procedures, approval of a specific assembly of which the item is a part.
- B. Product Data: For each type of product indicated, include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- C. When a product data shows more than one product, the specific proposed product shall be clearly indicated by arrows or other suitable means. Mark out all inapplicable items. Catalog data must have the item or model number to be provided clearly marked and all accessories indicated. Submit literature showing details of each item of equipment. Plainly indicate the intended use of each item shown. All manufacturers' data sheets shall clearly show all listings and approvals for each product submitted.
- D. Shop Drawings: Provide working drawings in accordance with applicable codes and standards, this specification, and Division 01.
- 1. Include plans drawn to scale, elevations, sections, details, and attachments to other work. Provide diagrams for power, signal, and control wiring.
 - 2. Indicate coordination with other fire-protection or non-fire-protection building systems including, but is not limited to, domestic water piping, compressed air piping, HVAC hydronic piping / ductwork, items penetrating ceiling assemblies, etc.

3. Where permitted for use elsewhere in this specification and provided for this project, flexible sprinkler connections shall be clearly indicated on drawings including locations, manufacturer, length, outlet type, maximum bend radius, maximum number of bends, as well as attachment methods to all ceiling types.
 4. Grooved joint couplings and fittings shall be identified on drawings, including the manufacturer's listed model or series designation.
 5. Sprinklers identification or Model number shall be identified on drawings as specifically published in the appropriate agency listing or approval. Trade names or other abbreviated designations shall not be allowed.
- E. Hydraulic Calculations: Prepared according to NFPA 13 and showing the pipe sizes proposed to produce adequate performance. Safety factor required in this specification shall be demonstrated in the hydraulic calculations. Where permitted for use elsewhere in this specification and provided for this project, flexible sprinkler connections shall be included in hydraulic calculations including manufacturer specific equivalent length for flexible connections and any right-angle/elbow fittings used for sprinkler attachment to flexible connections.
- F. Qualification Data: For qualified installer and designer.
- G. Delegated-Design Submittal: For sprinkler systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- H. Welding certificates.
- I. Fire-hydrant flow test report: Prepared according to NFPA 13 and NFPA 291. Include site plan indicating location of all flow and test hydrants.
- J. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."
- K. Field quality-control reports.
- 1.7 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For sprinkler specialties to include in emergency, operation, and maintenance manuals. At a minimum, the following shall be included:
1. 11-in. x 17-in. reduced copies of the 'as-built' record drawings required below (Final submittal only).
 2. Manufacturers' catalog data sheets and installation manuals for all installed components.
 3. Copy of NFPA 25.
 4. Copy of all test certificates and approvals.
 5. A list of recommended spare parts and summary of spare parts provided.
 6. A service directory, including a list of Contractor's contact names and telephone numbers for service on the system, including emergency service as required elsewhere in these Specifications.

- B. Contractor Record Drawings: Contractor shall provide and maintain on the site an up-to-date 'as-built' record set of approved shop drawing prints which shall be marked to show each and every change made to the sprinkler system from the original approved shop drawings. This requirement shall not be construed as authorization to deviate from or make changes to the shop drawings approved by Owner without written instruction from Owner in each case. These drawings shall be maintained in a current condition at all times and shall be made available for review immediately upon request during normal working hours throughout the installation. Upon completion of the 'as-built' record drawings and before final approval, one set of reproducible 'as-built' record drawings shall be delivered to Owner. Upon approval by Owner, three (3) sets of final record drawings shall be furnished to Owner. In addition, a record set of drawings shall be transmitted to Owner in the AutoCAD format with any applicable executable, un-archiving files.
- C. If Contractor's submittals, upon review by Owner, do not conform to the requirements of these specifications, Contractor shall be required to resubmit with modifications, within ten (10) working days of receipt of Owner's notification to Contractor. Contractor shall be responsible for Owner's expenses for subsequent review of rejected submittals that were necessitated by Contractor's failure to make the requested modifications. Such extra fees shall be deducted from payments by Owner to Contractor.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Sprinkler Cabinets: Finished, wall-mounted, steel cabinet with hinged cover, and with space for minimum of six spare sprinklers plus sprinkler wrench. Include number of sprinklers required by NFPA 13 and sprinkler wrench. Include separate cabinet with sprinklers and wrench for each type of sprinkler used on Project.

1.9 QUALITY ASSURANCE

- A. All work shall conform to the requirements of the applicable editions and portions of the National Fire Protection Association (NFPA) Standards, locally adopted codes, and this specification.
1. 2024 International Building Code with Local Amendments
 2. 2024 International Fire Code with Local Amendments
 3. NFPA 13 - 2025 edition, Standard for the Installation of Sprinkler Systems
 4. NFPA 24 - 2025 edition, Standard for the Installation of Private Fire Service Mains and Their Appurtenances
 5. NFPA 25 - <insert edition> edition, Standard for the Inspection, Testing and Maintenance of Water Based Fire Protection Systems
 6. NFPA 70 - 2026 edition, National Electrical Code with Local Amendments
 7. NFPA 72 - 2025 edition, National Fire Alarm and Signaling Code
- B. All work and materials shall conform to all Federal, State, and local codes and regulations governing this installation.
- C. Installer Qualifications:

1. Installer's responsibilities include designing, fabricating, and installing sprinkler systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
2. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.
3. Contractor Requirements: System design shall be by personnel certified by NICET as Level III Water-Based Systems technician as a minimum. Contractor shall:
 - a. Hold all licenses and obtain all permits necessary to perform work of this type in the District of Columbia. Copies of Contractor's licenses shall be provided with bid submittal.
 - b. Be regularly engaged, for the past 5 years in the design, installation, testing and servicing of automatic sprinkler systems for buildings of this type.
 - c. Have worked on one or more comparable new installation projects in the last five years.
 - d. Contractor's site supervisor will be at the job site at all times when work is actively in progress.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Modifications to Specification: Contractor shall be responsible for the review and compliance with this Specification. All work shall be performed in accordance with the Specification and good engineering and installation practice. Modifications to the Specification will NOT be accepted without the expressed written approval of Owner and/or Architect/Engineer. It is the Contractor's responsibility to document the required approvals of any such modifications prior to the execution of work.
- F. Code Conflicts: Should conflicts exist between the referenced NFPA Standards, Federal, State or local codes and this specification, it shall be Contractor's responsibility to bring the conflict to the attention of Owner for resolution. The contractor shall not attempt to resolve code conflicts with the local authority, independent of Owner. In general, in the event of a conflict, the most stringent of the requirements will apply.
- G. Design Document Conflicts: The sprinkler Contract Drawings and this Specification define the Scope of work for the project. The Contract Drawings are intended to be schematic only, and the Contractor's responsibilities are defined herein. Where conflicts occur between this Specification and Contract Drawings, the contractors shall request clarification prior to bidding. In general, should a conflict occur, the Specification will overrule the Contract Drawings.
- H. Permit Fees: Contractor shall be responsible for filing all documents, paying all fees and securing all permits, inspections and approvals necessary for completing the scope of the work in this section.
- I. The Contractor shall be responsible for the cost to provide and install any additional devices required as part of the plan check and inspection process conducted by the AHJ.

- J. Equipment: All devices, systems, equipment and materials furnished and installed shall be new and shall be submitted for approval by Owner. All sprinklers, pipe, fittings, hangers, valves, and other materials and equipment shall be UL Listed for their intended use. All shall be acceptable to the AHJ when such agencies have listings of acceptable equipment. The equipment and system components shall be installed in accordance with the applicable codes and standards, the manufacturers' recommendations, and within the limitations of the UL listings. All equipment and system components shall substantially be the standard product of a single manufacturer. Evidence of UL listings is required.
- K. Fittings: Fittings may be of the flanged, threaded, or grooved type. Welded outlets on cross-mains for riser nipples and/or branch lines and for sprinkler outlets on branch lines will be permitted. All shall be UL Listed for their intended use. The use of plain-end fittings to join steel pipe is not permitted.
1. All grooved couplings, fittings, valves, and specialties shall be the products of a single manufacturer. Grooving tools shall be of the same manufacturer as the grooved components.
 2. All castings used for couplings housings, fittings, or valve and specialty bodies shall be date stamped for quality assurance and traceability.

1.10 WARRANTY AND EMERGENCY SERVICE

- A. Contractor shall warranty all materials and workmanship for a period of one (1) year beginning with the date of final acceptance of Contractor's completed installation by Owner. Contractor shall be responsible during the design, installation, testing and warranty periods for any damage caused by Contractor (or its subcontractors) or by defects in Contractor's (or its subcontractors') work, materials, or equipment.
- B. Emergency Service: During the installation and warranty period, Contractor shall provide emergency repair service for the sprinkler systems within twenty-four (24) hours of a request by Owner for such service. This service shall be provided on a 24-hour per day, seven days per week basis.

1.11 COORDINATION

- A. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

2.2 STEEL PIPE AND FITTINGS

- A. Schedule 40, Galvanized- Steel Pipe: ASTM A 53/A 53M, Type E, Grade B. Pipe ends may be factory or field formed to match joining method.

- B. Schedule 10, Galvanized- Steel Pipe: ASTM A 135 or ASTM A 795/A 795M, Schedule 10 in NPS 5 (DN 125) and smaller; and NFPA 13-specified wall thickness in NPS 6 to NPS 10 (DN 150 to DN 250), plain end.
- C. Galvanized- Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, standard-weight, seamless steel pipe with threaded ends.
- D. Galvanized, Steel Couplings: ASTM A 865, threaded.
- E. Galvanized, Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.
- F. Malleable- or Ductile-Iron Unions: UL 860.
- G. Cast-Iron Flanges: ASME 16.1, Class 125.
- H. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150.
- I. Steel Welding Fittings: ASTM A 234/A 234M and ASME B16.9.
- J. Grooved-Joint, Steel-Pipe Appurtenances:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Tyco Fire & Building Products LP.
 - c. Victaulic Company.
 - 2. Pressure Rating: 175 psig (1200 kPa) minimum.
 - 3. Installation-Ready fittings for Schedule 40 grooved end steel piping in sizes NPS 1-1/4 thru 2-1/2 (DN 32 thru DN 65). Fittings shall consist of a ductile iron housing with Installation-Ready ends, prelubricated Grade "E" EPDM Type 'A' gasket; and ASTM A449 electroplated steel bolts and nuts. UL listed for a working pressure of 300 psi (2065 kPa) and FM approved for working pressure 365 psi (2517kPa).
 - 4. Galvanized, Grooved-End Fittings for Steel Piping: ASTM A 536, ductile-iron casting or factory manufactured from ASTM A53 steel pipe; with dimensions matching steel pipe.
 - 5. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, bolts and nuts, EPDM-rubber center-leg gasket with pipe stop to ensure proper groove engagement, alignment, and pipe insertion depths.
 - a. Rigid Type: Housings cast with offsetting, angle-pattern bolt pads to provide rigidity and system support and hanging in accordance with NFPA-13, fully installed at visual pad-to-pad offset contact. Couplings that require exact gapping at specific torque ratings are not permitted.
 - b. Flexible Type: For use in locations where vibration attenuation and stress relief are required.

2.3 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick .
 - 1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
 - 2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.

- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Grooved Joint Lubricants: Lubricate gasket in accordance with the manufacturer's published instructions with lubricant approved for the gasket elastomer and fluid media.
- D. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.4 LISTED FIRE-PROTECTION VALVES

A. General Requirements:

- 1. Valves shall be UL listed or FM approved.
- 2. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig (1200 kPa).
- 3. Minimum Pressure Rating for High-Pressure Piping: 300 psig (2070 kPa).
- 4. Unless specified elsewhere in this specification, valve NPS 2 (DN 50) and smaller shall have threaded ends, and NPS 2-1/2 (DN 65) and larger shall have grooved or flanged ends.
- 5. Subject to compliance with requirements, the following manufacturers are acceptable. Approved equal products may be used as substitute.
 - a. Anvil International, Inc.
 - b. Milwaukee Valve Company.
 - c. NIBCO Inc.
 - d. Reliable Automatic Sprinkler Co., Inc.
 - e. Tyco Fire & Building Products LP.
 - f. Victaulic Company.
 - g. Viking Corporation.
 - h. Watts Water Technologies, Inc.

B. Ball Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. NIBCO Inc.
 - c. Victaulic Company.
 - d. Viking Corporation.
- 2. Standard: UL 1091 except with ball instead of disc.
- 3. Valves NPS 1-1/2 (DN 40) and Smaller: Bronze or brass body with threaded or grooved ends.
- 4. Valves NPS 2 and NPS 2-1/2 (DN 50 and DN 65): Bronze body with threaded ends or ductile-iron body with grooved ends.
- 5. Valves NPS 3 (DN 80): Ductile-iron body with grooved ends.

C. Butterfly Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fivalco Inc.
 - b. Milwaukee Valve Company.
 - c. NIBCO Inc.
 - d. Reliable Automatic Sprinkler Co., Inc.
 - e. Tyco Fire & Building Products LP.
 - f. Viking Corporation.

- g. Victaulic Company.
 2. Standard: UL 1091.
 3. Body Material: Bronze for NPS 2 (DN 50) and smaller. Cast of ductile iron for NPS 2-1/2 (DN 65) and larger.
 4. Seat: Pressure responsive elastomer.
 5. Stem: Stainless steel, offset from the disc centerline to provide complete 360-degree circumferential seating.
 6. End Connections: Threaded, grooved, or flanged.
 7. Supervised butterfly valves shall be provided with an integral tamper switch. Valves to be supervised in the normally closed position shall be listed for normally closed operation. Integral tamper switches shall comply with the requirement of this specification.
- D. Check Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Milwaukee Valve Company.
 - c. Victaulic Company.
 - d. Viking Corporation.
 - e. Watts Water Technologies, Inc.
 2. Standard: UL 312.
 3. Type: Single swing check or spring-assisted type for vertical installation.
 4. Body Material: Cast ductile iron.
 5. Clapper: Bronze, ductile iron, or stainless steel with elastomeric seal.
 6. Clapper Seat: Brass, bronze, or stainless steel.
 7. Hinge Shaft: Bronze or stainless steel.
 8. Hinge Spring: Stainless steel.
 9. End Connections: Flanged or grooved.
- E. OS&Y Gate Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Milwaukee Valve Company.
 - b. Mueller Co.; Water Products Division.
 - c. NIBCO INC.
 - d. Tyco Fire & Building Products LP.
 - e. United Brass Works, Inc.
 - f. Victaulic Company
 - g. Watts Water Technologies, Inc.
 2. Standard: UL 262.
 3. Body Material: Bronze for NPS 2 (DN 50) and smaller. Cast of ductile iron for NPS 2-1/2 (DN 65) and larger.
 4. Wedge and wedge seat: Cast or ductile iron, or bronze with elastomeric coating per valve listing.
 5. Stem: Bronze or brass.
 6. End Connections: Threaded, grooved, or flanged.
- F. Indicating-Type Butterfly Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Anvil International, Inc.
 - b. Milwaukee Valve Company.
 - c. NIBCO Inc.
 - d. Tyco Fire & Building Products LP.
 - e. Victaulic Company.
 2. Standard: UL 1091.
 3. Pressure Rating: 175 psig (1200 kPa) minimum.
 4. Valves NPS 2 (DN 50) and Smaller:
 - a. Valve Type: Ball or butterfly.
 - b. Body Material: Bronze or brass.
 - c. End Connections: Threaded or grooved.
 5. Valves NPS 2-1/2 (DN 65) and Larger:
 - a. Valve Type: Butterfly.
 - b. Seat: Pressure responsive elastomer.
 - c. Stem: Stainless steel, offset from the disc centerline to provide complete 360-degree circumferential seating.
 - d. Body Material: Cast or ductile iron.
 - e. End Connections: Flanged, grooved, or wafer.
 6. Valve Operation: Weatherproof actuator housing with factory installed integral electrical, 125-V ac, prewired, two-circuit, supervisory switches indicating device.
- G. NRS Gate Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - b. American Valve, Inc.
 - c. NIBCO INC.
 - d. Tyco Fire & Building Products LP.
 - e. Victaulic Company.
 2. Standard: UL 262.
 3. Pressure Rating: 300 psig (2070 kPa).
 4. Body Material: Cast iron with indicator post flange.
 5. Stem: Non-rising brass or bronze.
 6. Wedge: Cast or ductile iron.
 7. Wedge Seat: Cast or ductile iron, or bronze.
 8. End Connections: Flanged or grooved.
- H. Indicator Posts:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - b. American Valve, Inc.
 - c. NIBCO INC.
 - d. Tyco Fire & Building Products LP.
 - e. Victaulic Company.
 2. Standard: UL 789.
 3. Type: Horizontal for wall mounting.
 4. Body Material: Cast iron with extension rod and locking device.
 5. Extension Barrel: Cast or ductile iron.
 6. Cap: Cast or ductile iron.
 7. Operation: Wrench.

2.5 FIRE DEPARTMENT CONNECTIONS

A. Free-Standing Fire Department Connection:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. Elkhart Brass Mfg. Company, Inc.
 - b. Tyco Fire & Building Products LP.
 - c. Potter Roemer.
2. Standard: UL 405.
3. Type: Exposed, freestanding .
4. Pressure Rating: 175 psig (1200 kPa) minimum.
5. Body Material: Corrosion-resistant metal.
6. Inlets: Brass with threads according to NFPA 1963 and matching local fire department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
7. Caps: Brass, lugged type, with gasket and chain.
8. Escutcheon Plate: Round, brass, floor type.
9. Outlet: Bottom, with pipe threads.
10. Number of Inlets: Two.
11. Sleeve: Not required.
12. Sleeve Height: 18 inches.
13. Escutcheon Plate Marking: Similar to "AUTO SPKR."
14. Finish: Polished chrome plated.
15. Outlet Size: NPS 4.

- B. At the low point near each fire department connection, install a 90-degree elbow with drain connection to allow for localized system drainage to prevent freezing.

2.6 SPRINKLER SPECIALTY PIPE FITTINGS

A. Test and Drain Valve Assemblies:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Reliable Automatic Sprinkler Co., Inc.
 - b. Tyco Fire & Building Products LP.
 - c. Victaulic Company.
2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
3. Pressure Rating: 175 psig (1200 kPa) minimum.
4. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
5. Size: Same as connected piping.
6. Inlet and Outlet: Threaded or grooved.

B. Branch Line Testers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elkhart Brass Mfg. Company, Inc.
 - b. Fire-End & Croker Corporation.
 - c. Potter Roemer.

2. Standard: UL 199.
3. Pressure Rating: 175 psig (1200 kPa).
4. Body Material: Brass.
5. Size: Same as connected piping.
6. Inlet: Threaded.
7. Drain Outlet: Threaded and capped.
8. Branch Outlet: Threaded, for sprinkler.

C. Sprinkler Inspector's Test Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Tyco Fire & Building Products LP.
 - b. Victaulic Company.
 - c. Viking Corporation.
2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
3. Pressure Rating: 175 psig (1200 kPa) minimum.
4. Body Material: Cast- or ductile-iron housing with sight glass.
5. Size: Same as connected piping.
6. Inlet and Outlet: Threaded or grooved.

2.7 SPRINKLERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Reliable Automatic Sprinkler Co., Inc.
2. Tyco Fire & Building Products LP.
3. Victaulic Company.
4. Viking Corporation.

B. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Sprinklers shall be glass bulb type, with hex shaped wrench boss integrally cast into the sprinkler body to reduce the risk of damage during installation.
 - a. Wrenches shall be provided by the sprinkler manufacturer that directly engage the wrench boss cast in the sprinkler body.
3. Pressure Rating for Automatic Sprinklers: 175 psig (1200 kPa) minimum.
4. Pressure Rating for High-Pressure Automatic Sprinklers: 300 psig (2070 kPa).

C. Automatic Sprinklers with Heat-Responsive Element:

1. Early-Suppression, Fast-Response Applications: UL 1767.
2. Nonresidential Applications: UL 199.
3. Characteristics: Discharge Coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.

D. Sprinkler Finishes and Special Coating: Factory-applied per Sprinkler Schedule.

E. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers. Refer to Sprinkler Finish Schedule.

F. Sprinkler Guards:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Reliable Automatic Sprinkler Co., Inc.
 - b. Tyco Fire & Building Products LP.
 - c. Victaulic Company.
 - d. Viking Corporation.
2. Standard: UL 199.
3. Type: Wire cage with fastening device for attaching to sprinkler.

G. Escutcheons and guards shall be listed, supplied, and approved for use with the sprinkler by the sprinkler manufacturer.

2.8 ALARM AND SUPERVISORY DEVICES

A. Alarm-device types shall match piping and equipment connections.

B. Water-Motor-Operated Alarm:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Reliable Automatic Sprinkler Co., Inc.
 - b. Tyco Fire & Building Products LP.
 - c. Victaulic Company.
 - d. Viking Corporation.
2. Standard: UL 753.
3. Type: Mechanically operated, with Pelton wheel.
4. Alarm Gong: Cast aluminum with red-enamel factory finish.
5. Size: 10-inch diameter.
6. Components: Shaft length, bearings, and sleeve to suit wall construction.
7. Inlet: NPS 3/4 (DN 20).
8. Outlet: NPS 1 (DN 25) drain connection.

C. Water-Flow Indicators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Potter Electric Signal Company.
 - b. System Sensor; a Honeywell company.
 - c. Viking Corporation.
2. Standard: UL 346.
3. Water-Flow Detector: Electrically supervised.
4. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
5. Type: [Paddle operated][Vane operated][Pressure sensor].
6. Pressure Rating: 250 psig.
7. Design Installation: Horizontal or vertical.

D. Valve Supervisory Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire-Lite Alarms, Inc.; a Honeywell company.
 - b. Potter Electric Signal Company.
 - c. System Sensor; a Honeywell company.
2. Standard: UL 346.
3. Type: Electrically supervised.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design: Signals that controlled valve is in other than fully open position or other than the full-closed position for normally-closed valves.

E. Indicator-Post Supervisory Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Potter Electric Signal Company.
 - b. System Sensor; a Honeywell company.
2. Standard: UL 346.
3. Type: Electrically supervised.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design: Signals that controlled indicator-post valve is in other than fully open position.

2.9 PRESSURE GAUGES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AMETEK; U.S. Gauge Division.
 2. Ashcroft, Inc.
 3. Brecco Corporation.
 4. WIKA Instrument Corporation.
- B. Standard: UL 393.
- C. Dial Size: 3-1/2- to 4-1/2-inch (90- to 115-mm) diameter.
- D. Pressure Gauge Range: 0 to 300 psig (0 to 2070 kPa).
- E. Water System Piping Gauge: Include "WATER" or "AIR/WATER" label on dial face.
- F. Air System Piping Gauge: Include "AIR" or "AIR/WATER" label on dial face.

2.10 BACKFLOW PREVENTERS

- A. Double-Check, Detector-Assembly Backflow Preventers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
 - b. Conbraco Industries, Inc.; Apollo Valves.
 - c. FEBCO; SPX Valves & Controls.
 - d. Mueller Co.
 - e. Watts Water Technologies, Inc.
 - f. Zurn Plumbing Products Group; Wilkins Water Control Products Division.

2. Standards: ASSE 1048 and UL's "Fire Protection Equipment Directory" listing or FM Global's "Approval Guide."
3. Operation: Continuous-pressure applications.
4. Pressure Loss: 5 psig (35 kPa) maximum, through middle one-third of flow range.
5. Size: <Insert NPS (DN)>.
6. Design Flow Rate: <Insert gpm (L/s)>.
7. Selected Unit Flow Range Limits: <Insert gpm (L/s)>.
8. Pressure Loss at Design Flow Rate: <Insert psig (kPa)>.
9. Body Material: Steel with interior lining complying with AWWA C550 or that is FDA approved.
10. End Connections: Flanged.
11. Configuration: Designed for vertical flow.
12. Accessories:
 - a. Valves: UL 262 and FM Global's "Approval Guide" listing; OS&Y gate type with flanged ends on inlet and outlet.
 - b. Bypass: With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.

B. Backflow Preventer Test Kits:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
 - b. Conbraco Industries, Inc.; Apollo Valves.
 - c. FEBCO; SPX Valves & Controls.
 - d. Flomatic Corporation.
 - e. Watts Water Technologies, Inc.
 - f. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
2. Description: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

2.11 IDENTIFICATION SIGNS AND LABELS

- A. General: Identification signs shall be rigid, metal plaques with embossed enamel background and lettering. Signs shall be secured by chain or durable wire to each sprinkler zone control valve, main and auxiliary drain, and inspector's test valve, etc. System hydraulic calculation placards affixed using adhesives, and/or using permanent marker for information, are NOT acceptable.
- B. Hydraulic Calculation Signs:
 1. Contractor shall furnish and install hydraulic calculation signs for each new sprinkler and standpipe zone. Hydraulic calculation signs shall be affixed to the corresponding system riser downstream of the system control valve and main drain at the riser.
 2. Hydraulic calculation signs shall include all information indicated in NFPA 13 and appendices. Valve identification signs shall identify the function of the valve and the area served.
- C. Equipment Labels
 1. Material and Thickness: [Brass, 0.032 inch (0.8 mm)] [stainless steel, 0.025 inch (0.64 mm)] [aluminum, 0.032 inch (0.8 mm)] [or] [anodized aluminum, 0.032 inch (0.8 mm)] thick, with predrilled holes for attachment hardware.
 2. Letter Color: [Black] [Blue] [Red] [White] [Yellow] <Insert color>.

3. Background Color: [Black] [Blue] [Red] [White] [Yellow] <Insert color>.
4. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
5. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
6. Fasteners: Stainless-steel [rivets] [or] [self-tapping screws].
7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

D. Pipe Labels

1. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service and showing flow direction according to ASME A13.1.
2. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to [partially cover] [cover full] circumference of pipe and to attach to pipe without fasteners or adhesive.
3. Self-adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
4. Pipe-Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
 - a. Flow-Direction Arrows: Integral with piping-system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
 - b. Lettering Size: [Size letters according to ASME A13.1 for piping] [At least 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm) and proportionately larger lettering for greater viewing distances].
5. Pipe-Label Colors:
 - a. Background Color: Safety Red.
 - b. Letter Color: White.

E. Stencils

1. Lettering Size: [Size letters according to ASME A13.1 for piping] [At least 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm) and proportionately larger lettering for greater viewing distances].
2. Stencil Material: [Aluminum] [Brass] [Fiberboard] [Fiberboard or metal] <Insert material>.
3. Stencil Paint: Safety Red, exterior, gloss, [alkyd enamel] [acrylic enamel] <Insert paint type>. Paint may be in pressurized spray-can form.
4. Identification Paint: White, exterior, [alkyd enamel] [acrylic enamel] <Insert paint type>. Paint may be in pressurized spray-can form.

F. Valve Tags

1. Description: Stamped or engraved with 1/4-inch (6.4-mm) letters for piping-system abbreviation and 1/2-inch (13-mm) numbers.
2. Tag Material: [Brass, 0.032 inch (0.8 mm)] [stainless steel, 0.025 inch (0.64 mm)] [aluminum, 0.032 inch (0.8 mm)] [or] [anodized aluminum, 0.032 inch (0.8 mm)] thick, with predrilled holes for attachment hardware.
3. Fasteners: Brass [wire-link chain] [beaded chain] [or] [S-hook].
4. Valve-Tag Color: Safety Red.
5. Letter Color: White.

6. Valve Schedules: For each piping system, on 8-1/2-by-11-inch (A4) bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
 - a. Valve-tag schedule shall be included in operation and maintenance data.

2.12 ESCUTCHEONS

- A. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.
- B. Split-Plate, Stamped-Steel Type: With chrome-plated finish, concealed hinge, and spring-clip fasteners.

2.13 FLOOR PLATES

- A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.
- B. Split-Casting Floor Plates: Cast brass with concealed hinge.

2.14 SLEEVES

- A. Cast-Iron Wall Pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
- B. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.
- C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
- D. Galvanized-Steel-Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.

2.15 SLEEVE-SEAL SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Advance Products & Systems, Inc.
 2. CALPICO, Inc.
 3. Metraflex Company.
 4. Pipeline Seal and Insulator, Inc.
- B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
 1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
 2. Pressure Plates: Stainless steel.
 3. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements.

2.16 SLEEVE-SEAL FITTINGS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Presealed Systems.
- B. Description: Manufactured plastic, sleeve-type, waterstop assembly made for imbedding in concrete slab or wall. Unit has plastic or rubber waterstop collar with center opening to match piping OD.

2.17 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for sprinkler piping and connections to verify actual locations of piping connections before installation.
- B. Examine walls and partitions for suitable thickness, fire- and smoke-rated construction, framing for hose-station cabinets, and other conditions where hose connections/stations, sprinklers, and piping are to be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Perform fire-hydrant flow test in accordance with NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.
- B. Report test results promptly and in writing.
- C. Coordinate with other trades.
- D. Obtain owner's approval for all openings or penetrations.
- E. Obtain final approval of design documents prior to installation.

3.3 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.

- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch (25-mm) annular clear space between piping and concrete slabs and walls.
 - 1. Sleeves are not required for core-drilled holes.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
 - 1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
 - 2. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas [2 inches (50 mm)] above finished floor level.
 - 3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - 2. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
 - 3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Division 07 Section "Joint Sealants."
- E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07 Section "Penetration Firestopping."

3.4 STACK-SLEEVE-FITTING INSTALLATION

- A. Install stack-sleeve fittings in new slabs as slabs are constructed.
 - 1. Install fittings that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
 - 2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Division 07 Section "Sheet Metal Flashing and Trim."
 - 3. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level.
 - 4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
 - 5. Using grout, seal the space around outside of stack-sleeve fittings.
- B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07 Section "Penetration Firestopping."

3.5 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.

- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.6 SLEEVE-SEAL-FITTING INSTALLATION

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.
- D. Using grout, seal the space around outside of sleeve-seal fittings.

3.7 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
 - 1. Exterior Concrete Walls below Grade:
 - a. Piping Smaller Than NPS 6 (DN 150): Galvanized-steel wall sleeves with sleeve-seal system .
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel wall sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 - 2. Concrete Slabs-on-Grade:
 - a. Piping Smaller Than [NPS 6 (DN 150)] <Insert pipe size>: [Cast-iron wall sleeves with sleeve-seal system] [Galvanized-steel wall sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves with sleeve-seal system] [Sleeve-seal fittings] <Insert material>.
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 - b. Piping [NPS 6 (DN 150)] <Insert pipe size> and Larger: [Cast-iron wall sleeves with sleeve-seal system] [Galvanized-steel wall sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves] <Insert material>.
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 - 3. Interior Partitions:
 - a. Piping Smaller Than [NPS 6 (DN 150)] <Insert pipe size>: [Galvanized-steel-pipe sleeves] <Insert material>.
 - b. Piping [NPS 6 (DN 150)] <Insert pipe size> and Larger: [Galvanized-steel-sheet sleeves] <Insert material>.

3.8 ESCUTCHEON INSTALLATION

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
 - 1. Escutcheons for New Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
 - b. Insulated Piping: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge.
 - c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge.
 - d. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge.
 - e. Bare Piping in Unfinished Service Spaces: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge.
 - f. Bare Piping in Equipment Rooms: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge.
 - 2. Escutcheons for Existing Piping:
 - a. Insulated Piping: Split-plate, stamped-steel type with hinge.
 - b. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-plate, stamped-steel type with concealed hinge.
 - c. Bare Piping at Ceiling Penetrations in Finished Spaces: Split-plate, stamped-steel type with concealed hinge.
 - d. Bare Piping in Unfinished Service Spaces: Split-plate, stamped-steel type with concealed hinge.
 - e. Bare Piping in Equipment Rooms: Split-plate, stamped-steel type with concealed hinge.
- C. Install floor plates for piping penetrations of equipment-room floors.
- D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
 - 1. New Piping: One-piece, floor-plate type.
 - 2. Existing Piping: Split-casting, floor-plate type.
- E. Replace broken and damaged escutcheons and floor plates using new materials.

3.9 SERVICE-ENTRANCE PIPING

- A. Connect sprinkler piping to water-service piping for service entrance to building.
- B. Install shutoff valve, backflow preventer, pressure gauge, drain, and other accessories indicated at connection to water-service piping.

3.10 WATER-SUPPLY CONNECTIONS

- A. Connect sprinkler piping to building's interior water-distribution piping. Comply with requirements for interior piping in Section 22 1116 "Domestic Water Piping."

- B. Install shutoff valve, backflow preventer, pressure gauge, drain, and other accessories indicated at connection to water-distribution piping.
- C. Install shutoff valve, check valve, pressure gauge, and drain at connection to water supply.

3.11 PIPING INSTALLATION

- A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
 - 1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with Architect before deviating from approved working plans.
- B. Piping Standard: Comply with requirements for installation of sprinkler piping in NFPA 13.
- C. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- D. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
- E. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- F. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.
- G. Install sprinkler piping with drains for complete system drainage.
- H. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.
- I. Install automatic (ball drip) drain valve at each check valve for fire department connection, to drain piping between fire department connection and check valve. Install drain piping to and spill over floor drain or to outside building.
- J. Install alarm devices (e.g., flow switches) in piping systems.
- K. Install hangers and supports for sprinkler system piping according to NFPA 13. Comply with requirements for hanger materials in NFPA 13.
- L. Install pressure gauges on riser or feed main, at each sprinkler test connection, and at top of each riser. Include pressure gauges with connection not less than NPS 1/4 (DN 8) and with soft metal seated globe valve, arranged for draining pipe between gauge and valve. Install gauges to permit removal, and install where they will not be subject to freezing.
- M. Fill wet-pipe sprinkler system piping with water.
- N. Install sleeves for piping penetrations of walls, ceilings, and floors.
- O. Install sleeve seals for piping penetrations of concrete walls and slabs.

- P. Install escutcheons for piping penetrations of walls, ceilings, and floors.

3.12 JOINT CONSTRUCTION

- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
- B. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
- C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.
- G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- H. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
 - 1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.
- I. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts in accordance with the manufacturer's latest published instructions. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints. The gasket style and elastomeric material (grade) shall be verified as suitable for the intended service. Gaskets shall be molded and produced by the grooved coupling manufacturer. Grooved ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove. Grooved coupling manufacturer's factory trained field representative shall provide on-site training for contractor's field personnel in the proper use of grooving tools, application of groove, and installation of grooved piping products. Factory trained representative shall periodically visit the jobsite to ensure best practices in grooved product installation are being followed. Contractor shall remove and replace any improperly installed products.

- J. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts in accordance with the manufacturer's latest published instructions. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints. The gasket style and elastomeric material (grade) shall be verified as suitable for the intended service. Gaskets shall be molded and produced by the grooved coupling manufacturer. Grooved ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove. Grooved coupling manufacturer's factory trained field representative shall provide on-site training for contractor's field personnel in the proper use of grooving tools, application of groove, and installation of grooved piping products. Factory trained representative shall periodically visit the jobsite to ensure best practices in grooved product installation are being followed. Contractor shall remove and replace any improperly installed products.

3.13 VALVE AND SPECIALTIES INSTALLATION

- A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13, manufacturer's instructions, and authorities having jurisdiction.
- B. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
- D. Install valves having threaded connections with unions at each piece of equipment arranged to allow easy access, service, maintenance, and equipment removal without system shutdown. Provide separate support where necessary.
- E. Install valves in horizontal piping with stem at or above the pipe center.
- F. Install valves in position to allow full stem movement.
- G. Install valve tags. Comply with requirements in this specification for Identification Signs and Labels for valve tags and schedules and signs on surfaces concealing valves; and the NFPA standard applying to the piping system in which valves are installed. Install permanent identification signs indicating the portion of system controlled by each valve.
- H. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire department connections.
- I. Supervisory Switches: Install supervisory switches for sprinkler control valves to monitor closure of the valve and for high and low system supervisory nitrogen pressure to monitor abnormal system pressures.

3.14 SPRINKLER INSTALLATION

- A. Install sprinklers in suspended ceilings in center of acoustical ceiling panels.

- B. Install dry-type sprinklers with water supply from heated space. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing.
- C. Do not install sprinklers that have been dropped, damaged, show a visible loss of fluid, or a cracked bulb. The sprinkler bulb protector shall be removable by hand, without tools or devices that may damage the bulb.

3.15 HOSE CONNECTION INSTALLATION

- A. Install freestanding hose connections for access and minimum passage restriction.
- B. Install NPS 2-1/2 hose connections.
- C. Install wall-mounted-type hose connections in cabinets. Include pipe escutcheons, with finish matching valves, inside cabinet where water-supply piping penetrates cabinet. Install valves at angle required for connection of fire hose.

3.16 FIRE DEPARTMENT CONNECTION INSTALLATION

- A. Install yard-type, fire department connections in concrete slab support. Comply with requirements for concrete in Section 03 3000 "Cast-in-Place Concrete."
 - 1. Install protective pipe bollards around each fire department connection. Comply with requirements for bollards in Section 05 5000 "Metal Fabrications."
- B. Install automatic (ball drip) drain valve at each check valve for fire department connection.

3.17 IDENTIFICATION SIGNS AND LABELS

- A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13. Identify system components, wiring, cabling, and terminals. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be installed. Coordinate installation of identifying devices with locations of access panels and doors. Install identifying devices before installing acoustical ceilings and similar concealment.
- B. Equipment Label Installation: Install or permanently fasten labels on each major item of mechanical equipment. Locate equipment labels where accessible and visible.
- C. Pipe Label Installation: Arrows shall be used to indicate direction of flow in pipes including pipes where flow is allowed in both directions. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
 - 1. Near each valve and control device.
 - 2. Near each branch connection excluding short takeoffs. Where flow pattern is not obvious, mark each pipe at branch.
 - 3. Near penetrations and on both sides of through walls, floors, ceilings, and inaccessible enclosures.
 - 4. At access doors, manholes, and similar access points that permit a view of concealed piping.
 - 5. Near major equipment items and other points of origination and termination.

6. Spaced at maximum intervals of 50 feet (15 m) along each run. Reduce intervals to 25 feet (7.6 m) in areas of congested piping and equipment.
 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
- D. Valve Identification Sign Installation: Install tags on valves and control devices in fire-suppression piping systems. List tagged valves in a valve-tag schedule. Tag valves according to size, shape, and with captions similar to those indicated below:
1. Wet-Pipe Sprinkler System: 1-1/2 inches (38 mm), round .

3.18 FIELD QUALITY CONTROL

- A. Perform pretests and inspections prior to Final Inspection and Tests.
- B. Pretests and Inspections shall include the following at a minimum:
1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
 2. Pretest and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 3. Verify that equipment hose threads are same as local fire department equipment.
- C. Correct all deficiencies identified during pretest and inspection prior to scheduling Final Inspection and Test.

3.19 CLEANING

- A. Clean dirt and debris from sprinklers.
- B. Remove and replace sprinklers with paint other than factory finish.

3.20 FINAL INSPECTION AND TEST

- A. Contractor shall make arrangements with Owner for Owner's final inspection and the local authorities.
- B. All tests and inspections required by the referenced Codes and Standards, AHJ, and Owner shall be conducted by Contractor under this scope of work.
1. When AHJ are required to witness tests, Contractor shall be responsible for making all necessary arrangements with the code authorities and coordinating the testing with Owner.
- C. Contractor shall be responsible for completing all test documents with necessary approval stamps and signatures of the AHJ. Contractor shall submit one copy of each of these documents to Owner for their records.
- D. Tests and Inspections:
1. Hydrostatic Test: Hydrostatic tests shall be conducted at the greater of 200 psig or 50 psig above the normal system pressure, whichever is greater, for a two-hour period with no leakage or reduction in gauge pressure. Charge systems and test for leaks. Repair leaks and retest until no leaks exist. Hydrostatic test pressures shall not be maintained on the system overnight. Flush piping with potable water in accordance with NFPA 13.

2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Flush, test, and inspect standpipe systems according to NFPA 13, "System Acceptance" Chapter.
4. Energize circuits to electrical equipment and devices.
5. Start and run air compressors for dry-pipe and preaction sprinkler systems.
6. Coordinate with fire-alarm tests. Operate as required.
7. Coordinate with fire pump tests. Operate as required.

E. Prepare test and inspection reports.

3.21 FINAL APPROVAL

- A. Final approval and acceptance of the work will be given by Owner when:
1. The completed sprinkler system has been inspected, tested and approved by Owner and AHJ.
 2. Required submittals, system operation and maintenance manuals, record drawings, spare parts, special tools and training have been provided to, reviewed, and accepted by Owner.
 3. Written certification is submitted that states all equipment has been inspected and tested by a manufacturer's certified representative.
 4. Written certification is submitted that states all equipment is installed in accordance with the manufacturer's recommendations and UL and/or FM approvals.
- B. Owner's Representative may visit the job site to observe the work and witness the final acceptance tests when advised by Contractor that the work is complete and ready for test. If the work has not been completed, or the test is unsatisfactory, Contractor shall be responsible for Owner's added expenses for re-inspection and witnessing the retesting of the work. Such extra fees shall be deducted from payments by Owner to Contractor.
- C. Additional Tests: Any additional tests, required by the referenced codes, standards, or criteria, or by Owner, shall be performed.

3.22 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain .
- B. Contractor shall conduct one four-hour training session(s) at the project site to familiarize the building personnel with the features, operation and maintenance of the sprinklers and standpipe. Training sessions shall be scheduled by Owner at a time mutually agreeable to Contractor and Owner.

3.23 PIPING SCHEDULE

- A. Piping between Fire Department Connections and Check Valves: Galvanized, Schedule 40 steel pipe with threaded ends; cast-iron threaded fittings; and threaded joints.
- B. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.
- C. Standard-pressure, wet-pipe sprinkler system, NPS 2-1/2 (DN 65) and smaller, shall be the following:

1. Schedule 40, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
- D. Standard-pressure, wet-pipe sprinkler system, NPS 4 (DN 100) and larger, shall be the following:
 1. Schedule 40 or Schedule 10, galvanized-steel pipe with roll-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

3.24 SPRINKLER SCHEDULE

- A. Use sprinkler types in subparagraphs below for the following applications:
 1. Rooms without Ceilings: Upright sprinklers.
 2. Rooms with Suspended Ceilings: Concealed sprinklers.
 3. Wall Mounting: Sidewall sprinklers.
 4. Spaces Subject to Freezing: Sidewall, dry sprinklers.
- B. Provide sprinkler types in subparagraphs below with finishes indicated.
 1. Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
 - a. Specialty Ceiling Finishes: Provide manufacturers standard or custom color cover plate as selected by the Architect.
 2. Upright and Sidewall Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.

END OF SECTION

SECTION 22 0513 - COMMON MOTOR REQUIREMENTS FOR PLUMBING EQUIPMENT**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

1.2 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.

PART 2 - PRODUCTS**2.1 GENERAL MOTOR REQUIREMENTS**

- A. Comply with requirements in this Section except when stricter requirements are specified in plumbing equipment schedules or Sections.
- B. Comply with NEMA MG 1 unless otherwise indicated.
- C. Comply with IEEE 841 for severe-duty motors.
- D. Provide a maintenance free, circumferential conductive micro fiber grounding ring installed on the AC motor to discharge shaft currents to ground. Grounding ring shall be AEGIS SGR (Shaft Grounding Ring).
- E. Motors protected by the AEGIS SGR shall be warranted for the term of the manufacturer's motor warranty from induced bearing current damage.
- F. *Motors up to 100 HP shall be provided with one shaft grounding ring installed on either the drive end or non-drive end. Motors over 100 HP shall be provided with an insulated bearing on the non-drive end and a shaft grounding ring on the drive end of the motor. Grounding rings shall be provided and installed by the motor manufacturer or contractor and shall be installed in accordance with the shaft grounding ring manufacturer's recommendations.*
- G. *All motors operated on variable frequency drives shall be bonded from the motor foot to system ground with a high-frequency ground strap made of flat braided tinned copper with terminations to accommodate motor foot and system ground connection .*

2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet (1000 m) above sea level.
- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: Energy efficient, as defined in NEMA MG 1.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
 - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
 - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Multispeed Motors: Separate winding for each speed.
- F. Rotor: Random-wound, squirrel cage.
- G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- H. Temperature Rise: Match insulation rating.
- I. Insulation: Class F .
- J. Code Letter Designation:
 - 1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
 - 2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.

2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

- A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
- B. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
 - 1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
 - 2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
 - 3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
 - 4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

2.5 SINGLE-PHASE MOTORS

- A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
 - 1. Permanent-split capacitor.
 - 2. Split phase.
 - 3. Capacitor start, inductor run.
 - 4. Capacitor start, capacitor run.
- B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
- C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
- D. Motors 1/20 HP and Smaller: Shaded-pole type.
- E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION (Not Applicable)

END OF SECTION

SECTION 22 0516 - EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Rubber union connector packless expansion joints.
 - 2. Flexible-hose packless expansion joints.
 - 3. Metal-bellows packless expansion joints.
 - 4. Externally pressurized metal-bellows packless expansion joints.
 - 5. Rubber packless expansion joints.
 - 6. Grooved-joint expansion joints.
 - 7. Alignment guides and anchors.
 - 8. Pipe loops and swing connections.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Delegated-Design Submittal: For each anchor and alignment guide, including analysis data, signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections.
 - 2. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
 - 3. Alignment Guide Details: Detail field assembly and attachment to building structure.
 - 4. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For expansion joints to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
- B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

2.2 PACKLESS EXPANSION JOINTS

A. Rubber Union Connector Expansion Joints RUEJ-01:

1. Manufacturers: Subject to compliance with requirements, provide products by the following
 - a. Amber/Booth Company, Inc.; a MC Group Company.
 - b. Flex-Hose Co., Inc.
 - c. Flexicraft Industries.
 - d. General Rubber Corporation.
 - e. Mason Industries, Inc.
 - f. Proco Products, Inc.
 - g. Unaflex.
 - h. Unisource Manufacturing, Inc.
2. Material: Twin reinforced-rubber spheres with external restraining cables.
3. Minimum Pressure Rating: 150 psig at 170 deg F (1035 kPa at 77 deg C) unless otherwise indicated.
4. End Connections for NPS 2 (DN 50) and Smaller: Threaded.

B. Flexible-Hose Packless Expansion Joints :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following]:
 - a. Flex-Hose Co., Inc.
 - b. Flexicraft Industries.
 - c. Mason Industries, Inc.
 - d. Metraflex, Inc.
 - e. Unisource Manufacturing, Inc.
2. Description: Manufactured assembly with inlet and outlet elbow fittings and two flexible-metal-hose legs joined by long-radius, 180-degree return bend or center section of flexible hose.
3. Flexible Hose: Corrugated-metal inner hoses and braided outer sheaths.
4. Expansion Joints for Copper Tubing NPS 2 (DN 50) and Smaller: Copper-alloy fittings with solder-joint end connections.
 - a. Bronze hoses and single-braid bronze sheaths with 450 psig at 70 deg F (3100 kPa at 21 deg C) and 340 psig at 450 deg F (2340 kPa at 232 deg C) ratings.
 - b. Bronze hoses and double-braid bronze sheaths with 700 psig at 70 deg F (4830 kPa at 21 deg C) and 500 psig at 450 deg F (3450 kPa at 232 deg C) ratings.
5. Expansion Joints for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Copper-alloy fittings with threaded end connections.
 - a. Stainless-steel hoses and single-braid, stainless-steel sheaths with 300 psig at 70 deg F (2070 kPa at 21 deg C) and 225 psig at 450 deg F (1550 kPa at 232 deg C) ratings.
 - b. Stainless-steel hoses and double-braid, stainless-steel sheaths with 420 psig at 70 deg F (2890 kPa at 21 deg C) and 315 psig at 450 deg F (2170 kPa at 232 deg C) ratings.
6. Expansion Joints for Steel Piping NPS 2 (DN 50) and Smaller: Carbon-steel fittings with threaded end connections.
 - a. Stainless-steel hoses and single-braid, stainless-steel sheaths with 450 psig at 70 deg F (3100 kPa at 21 deg C) and 325 psig at 600 deg F (2250 kPa at 315 deg C) ratings.
 - b. Stainless-steel hoses and double-braid, stainless-steel sheaths with 700 psig at 70 deg F (4830 kPa at 21 deg C) and 515 psig at 600 deg F (3550 kPa at 315 deg C) ratings.
7. Expansion Joints for Steel Piping NPS 2-1/2 to NPS 6 (DN 65 to DN 150): Carbon-steel fittings with flanged end connections.

- a. Stainless-steel hoses and single-braid, stainless-steel sheaths with 200 psig at 70 deg F (1380 kPa at 21 deg C) and 145 psig at 600 deg F (1000 kPa at 315 deg C) ratings.
 - b. Stainless-steel hoses and double-braid, stainless-steel sheaths with 275 psig at 70 deg F (1900 kPa at 21 deg C) and 200 psig at 600 deg F (1380 kPa at 315 deg C) ratings.
 8. Expansion Joints for Steel Piping NPS 8 to NPS 12 (DN 200 to DN 300): Carbon-steel fittings with flanged end connections.
 - a. Stainless-steel hoses and single-braid, stainless-steel sheaths with 125 psig at 70 deg F (860 kPa at 21 deg C) and 90 psig at 600 deg F (625 kPa at 315 deg C) ratings.
 - b. Stainless-steel hoses and double-braid, stainless-steel sheaths with 165 psig at 70 deg F (1130 kPa at 21 deg C) and 120 psig at 600 deg F (830 kPa at 315 deg C) ratings.
 9. Expansion Joints for Steel Piping NPS 14 (DN 350) and Larger: Carbon-steel fittings with flanged end connections.
 - a. Stainless-steel hoses and double-braid, stainless-steel sheaths with 165 psig at 70 deg F (1130 kPa at 21 deg C) and 120 psig at 600 deg F (830 kPa at 315 deg C) ratings.
- C. Metal-Bellows Packless Expansion Joints :
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Adesco Manufacturing LLC.
 - b. American BOA, Inc.
 - c. Badger Industries, Inc.
 - d. Expansion Joint Systems, Inc.
 - e. Flex-Hose Co., Inc.
 - f. Flexicraft Industries.
 - g. Flex-Weld, Inc.
 - h. Hyspan Precision Products, Inc.
 - i. Mason Industries, Inc.
 - j. Metraflex, Inc.
 - k. Tozen Corporation.
 - l. Unaflex.
 - m. Unisource Manufacturing, Inc.
 - n. Universal Metal Hose, a subsidiary of Hyspan Precision Products, Inc.
 - o. U.S. Bellows, Inc.
 - p. WahlcoMetroflex.
 2. Standards: ASTM F 1120 and EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
 3. Type: Circular, corrugated bellows with external tie rods.
 4. Minimum Pressure Rating: 150 psig (1035 kPa) 175 psig (1200 kPa) Insert value, unless otherwise indicated.
 5. Configuration: Single joint Single joint with base double joint with base class(es), unless otherwise indicated.
 6. Expansion Joints for Copper Tubing: Single- ply phosphor-bronze bellows, copper pipe ends, and brass shrouds.
 - a. End Connections for Copper Tubing NPS 2 (DN 50) and Smaller: Solder joint threaded.
 - b. End Connections for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Solder joint threaded.
 - c. End Connections for Copper Tubing NPS 5 (DN 125) and Larger: Flanged.
 7. Expansion Joints for Steel Piping: Single- ply stainless-steel bellows, steel pipe ends, and carbon-steel shroud.
 - a. End Connections for Steel Pipe NPS 2 (DN 50) and Smaller: Threaded.

- b. End Connections for Steel Pipe NPS 2-1/2 (DN 65) and Larger: Flanged.
- D. Externally Pressurized Metal-Bellows Packless Expansion Joints:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Adscot Manufacturing LLC.
 - b. Hyspan Precision Products, Inc.
 - c. Mason Industries, Inc.
 - d. Metraflex, Inc.
 - e. U.S. Bellows, Inc.
 2. Minimum Pressure Rating: [150 psig (1035 kPa)] [200 psig (1379 kPa)] [300 psig (2068 kPa)] , unless otherwise indicated.
 3. Description:
 - a. Totally enclosed, externally pressurized, multi-ply, stainless-steel bellows isolated from fluid flow by an internal pipe sleeve.
 - b. Carbon-steel housing.
 - c. Drain plugs and lifting lug for NPS 3 (DN 80) and larger.
 - d. Bellows shall have operating clearance between the internal pipe sleeves and the external shrouds.
 - e. Joints shall be supplied with a built-in scale to confirm the starting position and operating movement.
 - f. Joint Axial Movement: [4 inches (100 mm)] [6 inches (150 mm)] [8 inches (200 mm)] of compression and [0.75 inch (19 mm)] [1 inch (25 mm)] [2 inches (50 mm)] of extension.
 4. Permanent Locking Bolts: Set locking bolts to maintain joint lengths during installation. Temporary welding tabs that are removed after installation in lieu of locking bolts are not acceptable.
 5. End Connection Configuration: Flanged; one raised, fixed and one floating flange.
- E. Rubber Packless Expansion Joints :
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 2.
 - a. Amber/Booth Company, Inc.; a VMC Group Company.
 - b. Flex-Hose Co., Inc.
 - c. Flexicraft Industries.
 - d. Flex-Weld, Inc.
 - e. Garlock Sealing Technologies.
 - f. General Rubber Corporation.
 - g. Mason Industries, Inc.
 - h. Metraflex, Inc.
 - i. Proco Products, Inc.
 - j. Red Valve Company, Inc.
 - k. Tozen Corporation.
 - l. Unaflex.
 - m. Unisource Manufacturing, Inc.
 - n. .
 3. Standards: ASTM F 1123 and FSA's "Technical Handbook: Non-Metallic Expansion Joints and Flexible Pipe Connectors."
 4. Material: Fabric-reinforced rubber complying with FSA-PSJ-703.
 5. Arch Type: Single multiple arches with external control rods.

6. Spherical Type: Single multiple spheres with external control rods.
7. Minimum Pressure Rating for NPS 1-1/2 to NPS 4 (DN 40 to DN 100): 150 psig (1035 kPa) at 220 deg F (104 deg C) .
8. Minimum Pressure Rating for NPS 5 and NPS 6 (DN 125 and DN 150): 140 psig (966 kPa) at 200 deg F (93 deg C) .
9. Minimum Pressure Rating for NPS 8 to NPS 12 (DN 200 to DN 300): 140 psig (966 kPa) at 180 deg F (82 deg C) .
10. Material for Fluids Containing Acids, Alkalis, or Chemicals: Butyl rubber Chlorosulfonyl-polyethylene rubber Ethylene-propylene-diene terpolymer rubber Insert material.
11. Material for Fluids Containing Gas, Hydrocarbons, or Oil: Buna-N Chlorosulfonated polyethylene synthetic rubber Insert material.
12. Material for Water: Butyl rubber Buna-N Chlorosulfonated polyethylene synthetic rubber Chlorosulfonyl-polyethylene rubber Ethylene-propylene-diene terpolymer rubber Natural rubber.
13. End Connections: Full-faced, integral steel flanges with steel retaining rings.

2.3 GROOVED-JOINT EXPANSION JOINTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Anvil International, Inc.
 2. Shurjoint Piping Products.
 3. Victaulic Company.
 4. .
- B. Description: Factory-assembled expansion joint made of several grooved-end pipe nipples, couplings, and grooved joints.
- C. Standard: AWWA C606, for grooved joints.
- D. Nipples: [**Galvanized**,]ASTM A 53/A 53M, Schedule 40, Type E or S, steel pipe with grooved ends.
- E. Couplings: [**Five**] [**Seven**] [**10**] [**12**] <Insert number>, flexible type for steel-pipe dimensions. Include ferrous housing sections, [**Buna-N gasket suitable for diluted acid, alkaline fluids, and cold and hot water**] [**ethylene-propylene-diene terpolymer rubber gasket suitable for cold and hot water**], and bolts and nuts.

2.4 ALIGNMENT GUIDES AND ANCHORS

- A. Alignment Guides :
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Adscos Manufacturing LLC.
 - b. Advanced Thermal Systems, Inc.
 - c. Flex-Hose Co., Inc.
 - d. Flexicraft Industries.
 - e. Flex-Weld, Inc.
 - f. Hyspan Precision Products, Inc.
 - g. Mason Industries, Inc.

- h. Metraflex, Inc.
 - i. Senior Flexonics Pathway.
 - j. Unisource Manufacturing, Inc.
 - k. U.S. Bellows, Inc.
 - l. .
 - 2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding slider for bolting to pipe.
- B. Anchor Materials:
- 1. Steel Shapes and Plates: ASTM A 36/A 36M.
 - 2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
 - 3. Washers: ASTM F 844, steel, plain, flat washers.
 - 4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.
 - a. Stud: Threaded, zinc-coated carbon steel.
 - b. Expansion Plug: Zinc-coated steel.
 - c. Washer and Nut: Zinc-coated steel.
 - 5. Chemical Fasteners: Insert-type stud, bonding-system anchor for use with hardened portland cement concrete, with tension and shear capacities appropriate for application.
 - a. Bonding Material: ASTM C 881/C 881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
 - b. Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud, unless otherwise indicated.
 - c. Washer and Nut: Zinc-coated steel.

PART 3 - EXECUTION

3.1 EXPANSION JOINT INSTALLATION

- A. Install expansion joints of sizes matching sizes of piping in which they are installed.
- B. Install metal-bellows expansion joints according to EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
- C. Install rubber packless expansion joints according to FSA-PSJ-703.
- D. Install grooved-joint expansion joints to grooved-end steel piping.

3.2 PIPE LOOP AND SWING CONNECTION INSTALLATION

- A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
- B. Connect risers and branch connections to mains with at least five pipe fittings, including tee in main.
- C. Connect risers and branch connections to terminal units with at least **four** pipe fittings, including tee in riser.

- D. Connect mains and branch connections to terminal units with at least **four** pipe fittings, including tee in main.

3.3 ALIGNMENT-GUIDE AND ANCHOR INSTALLATION

- A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
- B. Install [**one**] [**two**] guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than **four** pipe diameters from expansion joint.
- C. Attach guides to pipe, and secure guides to building structure.
- D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
- E. Anchor Attachments:
 - 1. Anchor Attachment to Steel Pipe: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24; U bolts bolted to anchor.
- F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
 - 1. Anchor Attachment to Steel Structural Members: Attach by welding.
 - 2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.
- G. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

END OF SECTION

SECTION 22 0517 - SLEEVES AND SLEEVE SEALS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Sleeves.
 - 2. Stack-sleeve fittings.
 - 3. Sleeve-seal systems.
 - 4. Sleeve-seal fittings.
 - 5. Grout.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Cast-Iron Wall Pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
- B. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.
- C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
- D. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.
- E. Galvanized-Steel-Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
- F. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.
- G. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.

2.2 STACK-SLEEVE FITTINGS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Smith, Jay R. Mfg. Co.
 - 2. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
- B. Description: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring, bolts, and nuts for membrane flashing.
 - 1. Underdeck Clamp: Clamping ring with setscrews.

2.3 SLEEVE-SEAL SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Advance Products & Systems, Inc.
 - 2. CALPICO, Inc.
 - 3. Metraflex Company (The).
 - 4. Pipeline Seal and Insulator, Inc.
 - 5. Proco Products, Inc.
 - 6. .
- B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
 - 1. Sealing Elements: [**EPDM-rubber**] [**NBR**] interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
 - 2. Pressure Plates: [**Plastic**] [**Stainless steel**].
 - 3. Connecting Bolts and Nuts: **Stainless steel** of length required to secure pressure plates to sealing elements.

2.4 SLEEVE-SEAL FITTINGS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Presealed Systems.
- B. Description: Manufactured plastic, sleeve-type, waterstop assembly made for imbedding in concrete slab or wall. Unit has plastic or rubber waterstop collar with center opening to match piping OD.

2.5 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch (25-mm) annular clear space between piping and concrete slabs and walls.
 - 1. Sleeves are not required for core-drilled holes.

- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
 - 1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
 - 2. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level.
 - 3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - 2. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
 - 3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Section 07 9200 "Joint Sealants."
- E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 07 8413 "Penetration Firestopping."

3.2 STACK-SLEEVE-FITTING INSTALLATION

- A. Install stack-sleeve fittings in new slabs as slabs are constructed.
 - 1. Install fittings that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
 - 2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Section 07 6200 "Sheet Metal Flashing and Trim."
 - 3. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level.
 - 4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
 - 5. Using grout, seal the space around outside of stack-sleeve fittings.
- B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 07 8413 "Penetration Firestopping."

3.3 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.4 SLEEVE-SEAL-FITTING INSTALLATION

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.
- D. Using grout, seal the space around outside of sleeve-seal fittings.

3.5 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
 - 1. Exterior Concrete Walls above Grade:
 - a. Piping Smaller Than NPS 6 (DN 150) [Cast-iron wall sleeves] [Galvanized-steel wall sleeves] [Galvanized-steel-pipe sleeves] [Sleeve-seal fittings]
 - 2. Exterior Concrete Walls below Grade:
 - a. Piping Smaller Than NPS 6 (DN 150) : [Cast-iron wall sleeves with sleeve-seal system] [Galvanized-steel wall sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves with sleeve-seal system] [Sleeve-seal fittings] .
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 - 3. Concrete Slabs-on-Grade:
 - a. Piping Smaller Than NPS 6 (DN 150): [Cast-iron wall sleeves with sleeve-seal system] [Galvanized-steel wall sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves with sleeve-seal system] [Sleeve-seal fittings] .
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 - 4. Concrete Slabs above Grade:
 - a. Piping Smaller Than NPS 6 (DN 150): [Galvanized-steel-pipe sleeves] [PVC-pipe sleeves] [Stack-sleeve fittings] [Sleeve-seal fittings] [Molded-PE or -PP sleeves] [Molded-PVC sleeves].
 - 5. Interior Partitions:
 - a. Piping Smaller Than NPS 6 (DN 150): [Galvanized-steel-pipe sleeves] [PVC-pipe sleeves] .

END OF SECTION

SECTION 22 0518 - ESCUTCHEONS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Escutcheons.
 - 2. Floor plates.

1.2 DEFINITIONS

- A. Existing Piping to Remain: Existing piping that is not to be removed and that is not otherwise indicated to be removed and salvaged, or removed and reinstalled.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following.
 - 1. BrassCraft Manufacturing Co.; a Masco company.
 - 2. Dearborn Brass.
 - 3. ProFlo; a Ferguson Enterprises, Inc. brand.

2.2 ESCUTCHEONS

- A. One-Piece, Stainless-Steel Type: With polished stainless-steel finish.
- B. One-Piece, Cast-Brass Type: With polished, chrome-plated finish and setscrew fastener.
- C. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped steel with polished, chrome-plated finish and spring-clip fasteners.
- D. One-Piece, Stamped-Steel Type: With polished, chrome-plated finish and spring-clip fasteners.
- E. Split-Plate, Stamped-Steel Type: With polished, chrome-plated finish; concealed and exposed-rivet hinge; and spring-clip fasteners.

2.3 FLOOR PLATES

- A. Split Floor Plates: Cast brass with concealed hinge.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of insulated piping and with OD that completely covers opening.
 - 1. Escutcheons for New Piping and Relocated Existing Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep pattern.
 - b. Chrome-Plated Piping: One-piece steel with polished, chrome-plated finish.
 - c. Insulated Piping: One-piece steel with polished, chrome-plated finish or One-piece stainless steel with polished stainless-steel finish.
 - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece steel with polished, chrome-plated finish or One-piece stainless steel with polished stainless-steel finish.
 - e. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece steel with polished, chrome-plated finish or One-piece stainless steel with polished stainless-steel finish.
 - f. Bare Piping in Unfinished Service Spaces: One-piece steel with polished, chrome-plated finish or One-piece steel with polished, chrome-plated finish.
 - g. Bare Piping in Equipment Rooms: One-piece steel with polished, chrome-plated finish.
 - 2. Escutcheons for Existing Piping to Remain:
 - a. Chrome-Plated Piping: Split-casting, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
 - b. Insulated Piping: Split-plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
 - c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
 - d. Bare Piping at Ceiling Penetrations in Finished Spaces: Split-plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
 - e. Bare Piping in Unfinished Service Spaces: Split-plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
 - f. Bare Piping in Equipment Rooms: Split-plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
- C. Install floor plates for piping penetrations of equipment-room floors.
- D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
 - 1. New Piping and Relocated Existing Piping: One-piece, floor plate.
 - 2. Existing Piping: Split floor plate.

3.2 FIELD QUALITY CONTROL

- A. Using new materials, replace broken and damaged escutcheons and floor plates.

FOR REFERENCE ONLY

SECTION 22 0519 - METERS AND GAGES FOR PLUMBING PIPING**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
 - 1. Liquid-in-glass thermometers.
 - 2. Thermowells.
 - 3. Dial-type pressure gages.
 - 4. Gage attachments.
- B. Related Requirements:
 - 1. Section 22 1113 "Facility Water Distribution Piping" for domestic water meters and combined domestic and fire-protection water-service meters outside the building.
 - 2. Section 22 1116 "Domestic Water Piping" for water meters inside the building.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of meter and gage, from manufacturer.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

PART 2 - PRODUCTS**2.1 LIQUID-IN-GLASS THERMOMETERS**

- A. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flo Fab Inc.
 - b. Miljoco Corporation.
 - c. Palmer Wahl Instrumentation Group.
 - d. Tel-Tru Manufacturing Company.
 - e. Trerice, H. O. Co.
 - f. Weiss Instruments, Inc.
 - g. Winters Instruments - U.S.
 - 2. Standard: ASME B40.200.
 - 3. Case: Cast aluminum ; 7-inch (178-mm) nominal size unless otherwise indicated.
 - 4. Case Form: Straight unless otherwise indicated.
 - 5. Tube: Glass with magnifying lens and blue or red organic liquid.
 - 6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F and deg C.

7. Window: Glass .
8. Stem: Aluminum and of length to suit installation.
 - a. Design for Thermowell Installation: Bare stem.
9. Connector: 1-1/4 inches (32 mm), with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.2 THERMOWELLS

A. Thermowells:

1. Standard: ASME B40.200.
2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
3. Material for Use with Copper Tubing: CNR or CUNI .
4. Type: Stepped shank unless straight or tapered shank is indicated.
5. External Threads: NPS 1/2, NPS 3/4, or NPS 1, (DN 15, DN 20, or NPS 25,) ASME B1.20.1 pipe threads.
6. Internal Threads: 1/2, 3/4, and 1 inch (13, 19, and 25 mm), with ASME B1.1 screw threads.
7. Bore: Diameter required to match thermometer bulb or stem.
8. Insertion Length: Length required to match thermometer bulb or stem.
9. Lagging Extension: Include on thermowells for insulated piping and tubing.
10. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

B. Heat-Transfer Medium: Mixture of graphite and glycerin

2.3 PRESSURE GAGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMETEK, Inc.; U.S. Gauge.
 - b. Ashcroft Inc.
 - c. Ernst Flow Industries.
 - d. Flo Fab Inc.
 - e. Marsh Bellofram.
 - f. Miljoco Corporation.
 - g. Noshok.
 - h. Palmer Wahl Instrumentation Group.
 - i. REOTEMP Instrument Corporation.
 - j. Tel-Tru Manufacturing Company.
 - k. Terice, H. O. Co.
 - l. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
 - m. Weiss Instruments, Inc.
 - n. WIKA Instrument Corporation - USA.
 - o. Winters Instruments - U.S.
2. Standard: ASME B40.100.
3. Case: Liquid-filled type(s); cast aluminum or drawn steel ; 6-inch (152-mm) nominal diameter.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2 (DN 8 or DN 15), ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.

6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi and kPa.
8. Pointer: Dark-colored metal.
9. Window: Glass .
10. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

2.4 GAGE ATTACHMENTS

- A. Snubbers: ASME B40.100, brass; with [NPS 1/4 (DN 8)] [NPS 1/4 or NPS 1/2 (DN 8 or DN 15)] [NPS 1/2 (DN 15)], ASME B1.20.1 pipe threads and [piston] [porous-metal]-type surge-dampening device. Include extension for use on insulated piping.
- B. Valves: Brass ball Brass or stainless-steel needle, with [NPS 1/4 (DN 8)] [NPS 1/4 or NPS 1/2 (DN 8 or DN 15)] [NPS 1/2 (DN 15)], ASME B1.20.1 pipe threads.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install thermowells with socket extending to center of pipe and in vertical position in piping tees.
- B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- C. Install thermowells with extension on insulated piping.
- D. Fill thermowells with heat-transfer medium.
- E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- F. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.
- G. Install valve and snubber in piping for each pressure gage for fluids.
- H. Install thermometers in the following locations:
 1. Inlet and outlet of each water heater.
- I. Install pressure gages in the following locations:
 1. Building water service entrance into building.
 2. Inlet and outlet of each pressure-reducing valve.
 3. Suction and discharge of each domestic water pump.

3.2 CONNECTIONS

- A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.

3.3 ADJUSTING

- A. Adjust faces of meters and gages to proper angle for best visibility.

3.4 THERMOMETER SCHEDULE

- A. Thermometers at inlet and outlet of each domestic water heater shall be one of the following:
 - 1. Industrial-style, liquid-in-glass type.
- B. Thermometer stems shall be of length to match thermowell insertion length.

3.5 THERMOMETER SCALE-RANGE SCHEDULE

- A. Scale Range for Domestic Cold-Water Piping: 0 to 100 deg F (Minus 20 to plus 50 deg C).
- B. Scale Range for Domestic Hot-Water Piping: 0 to 250 deg F (0 to 150 deg C).

3.6 PRESSURE-GAGE SCHEDULE

- A. Pressure gages at discharge of each water service into building shall be the following:
 - 1. Liquid-filled , direct -mounted, metal case.
 - 2. Test plug with EPDM self-sealing rubber inserts.
- B. Pressure gages at inlet and outlet of each water pressure-reducing valve shall be the following:
 - 1. Liquid-filled , -mounted, metal case.
- C. Pressure gages at suction and discharge of each domestic water pump shall be[**one of**] the following:
 - 1. Liquid-filled , direct -mounted, metal case.

3.7 PRESSURE-GAGE SCALE-RANGE SCHEDULE

- A. Scale Range for Water Service Piping: 0 to 200 psi (0 to 1400 kPa).
- B. Scale Range for Domestic Water Piping: 0 to 160 psi (0 to 1100 kPa).

END OF SECTION

SECTION 22 0523.12 - BALL VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Bronze ball valves.
2. Steel ball valves.
3. Iron ball valves.

1.2 DEFINITIONS

- A. CWP: Cold working pressure.
- B. RPTFE: Reinforced polytetrafluoroethylene.
- C. WOG: Water, oil, gas.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of valve.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 1. Protect internal parts against rust and corrosion.
 2. Protect threads, flange faces, and soldered ends.
 3. Set ball valves open to minimize exposure of functional surfaces.
- B. Use the following precautions during storage:
 1. Maintain valve end protection.
 2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use operating handles or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain each type of valve from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Standards:

1. Domestic water valves intended to convey or dispense water for human consumption must comply with the SDWA, requirements of authorities having jurisdiction, and NSF 61 and NSF 372, or must be certified to be in compliance with NSF 61 and NSF 372 (by an ANSI-accredited third-party certification body) that the weighted average lead content at wetted surfaces is less than or equal to 0.25 percent.
 - B. ASME Compliance:
 1. ASME B1.20.1 for threads for threaded end valves.
 2. ASME B16.1 for flanges on iron valves.
 3. ASME B16.5 for flanges on steel valves.
 4. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 5. ASME B16.18 for cast copper solder-joint connections.
 6. ASME B16.22 for wrought copper and copper alloy solder-joint connections.
 7. ASME B16.34 for flanged and threaded end connections
 8. ASME B31.9 for building services piping valves.
 - C. Provide bronze valves made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.
 - D. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
 - E. Valve Sizes: Same as upstream piping unless otherwise indicated.
 - F. Valve Actuator Type:
 1. Gear Actuator: For quarter-turn valves NPS 4 (DN 100) and larger.
 2. Hand Lever: For quarter-turn valves smaller than NPS 4 (DN 100).
 - G. Valves in Insulated Piping:
 1. Provide 2-inch (50-mm) extended neck stems.
 2. Extended operating handles with nonthermal-conductive covering material and protective sleeves that allow operation of valves without breaking vapor seals or disturbing insulation.
 3. Memory stops that are fully adjustable after insulation is applied.
- 2.3 BRONZE BALL VALVES
- A. Bronze Ball Valves, Two Piece with Full Port and Stainless Steel Trim, Threaded or Soldered Ends:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Milwaukee Valve Company.
 - c. NIBCO INC.
 - d. WATTS.
 2. Standard: MSS SP-110; MSS SP-145.
 3. CWP Rating: 600 psig (4140 kPa).
 4. Body Design: Two piece.

5. Body Material: Bronze.
6. Ends: Threaded or soldered.
7. Seats: PTFE.
8. Stem: Stainless steel.
9. Ball: Stainless steel, vented.
10. Port: Full.

2.4 STEEL BALL VALVES

- A. Steel Ball Valves with Full Port, Class 150, Flanged or Threaded Ends:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Hammond Valve.
 - c. Jomar Valve.
 - d. Milwaukee Valve Company.
 - e. NIBCO INC.
 - f. WATTS.
 2. Standard: MSS SP-72; MSS SP-110.
 3. CWP Rating: 285 psig (1964 kPa).
 4. Body Design: Split body.
 5. Body Material: Carbon steel, ASTM A216/A216M, Type WCB.
 6. Ends: Flanged or threaded.
 7. Seats: PTFE.
 8. Stem: Stainless steel.
 9. Ball: Stainless steel, vented.
 10. Port: Full.

2.5 IRON BALL VALVES

- A. Iron Ball Valves, Class 125, Flanged or Threaded Ends:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Valve, Inc.
 - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - c. Sure Flow Equipment Inc.
 - d. WATTS.
 2. Standard: MSS SP-72; MSS SP-110; MSS SP-145.
 3. CWP Rating: 200 psig (1380 kPa).
 4. Body Design: Split body.
 5. Body Material: ASTM A126, gray iron.
 6. Ends: Flanged or threaded.
 7. Seats: PTFE.
 8. Stem: Stainless steel.
 9. Ball: Stainless steel.
 10. Port: Full.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace with new valves. Remove defective valves from site.

3.2 INSTALLATION OF VALVES

- A. Install valves with unions or flanges at each piece of equipment arranged to allow space for service, maintenance, and equipment removal without system shutdown.
- B. Provide support to piping adjacent to valves such that no force is imposed upon valves.
- C. Locate valves for easy access.
- D. For valves in horizontal piping, install valves with stem at or above center of pipe.
- E. Install valves in position to allow full valve actuation movement.
- F. Valve Tags: Comply with requirements in Section 22 0553 "Identification for Plumbing Piping and Equipment" for valve tags and schedules.
- G. Adhere to manufacturer's written installation instructions. When soldering or brazing valves, do not heat valves above maximum permitted temperature. Do not use solder with melting point temperature above valve manufacturer's recommended maximum.

3.3 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service, but before final adjusting and balancing. Replace valves exhibiting leakage.

3.4 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valves with specified CWP ratings are unavailable, provide the same types of valves with higher CWP ratings.
- B. Select valves with the following end connections:
 - 1. For Copper Tubing, NPS 2 (DN 50) and Smaller: Threaded ends except where solder-joint valve-end option or press-end option is indicated in valve schedules below.
 - 2. For Copper Tubing, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules below.
 - 3. For Copper Tubing, NPS 5 (DN 125) and Larger: Flanged ends.
 - 4. For Steel Piping, NPS 2 (DN 50) and Smaller: Threaded ends.
 - 5. For Steel Piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules below.
 - 6. For Steel Piping, NPS 5 (DN 125) and Larger: Flanged ends.
 - 7. For Stainless Steel Piping, NPS 2 (DN 50) and Smaller: Threaded ends.
 - 8. For Stainless Steel Piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends.
 - 9. For Stainless Steel Piping, NPS 2 (DN 50) and Smaller: Press ends.

3.5 DOMESTIC HOT- AND COLD-WATER VALVE SCHEDULE

- A. Pipe NPS 2 (DN 50) and Smaller:
 - 1. Bronze ball valves, two piece with full port, and stainless steel trim. Provide with threaded solder-joint ends.
- B. Pipe NPS 2-1/2 (DN 65) and Larger:
 - 1. Steel and Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
 - 2. Steel ball valves, Class 150 with full port.
 - 3. Iron ball valves, Class 150.

END OF SECTION

SECTION 22 0523.14 - CHECK VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Bronze swing check valves.
 - 2. Iron swing check valves.

1.2 DEFINITIONS

- A. CWP: Cold working pressure.
- B. EPDM: Ethylene propylene-diene terpolymer rubber.
- C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of valve.
 - 1. Certification that products comply with NSF 61 Annex G and NSF 372.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 - 1. Protect internal parts against rust and corrosion.
 - 2. Protect threads, flange faces, grooves, and weld ends.
 - 3. Set check valves in either closed or open position.
- B. Use the following precautions during storage:
 - 1. Maintain valve end protection.
 - 2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
- B. ASME Compliance:
 - 1. ASME B1.20.1 for threads for threaded end valves.
 - 2. ASME B16.1 for flanges on iron valves.
 - 3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 - 4. ASME B16.18 for solder joint.
 - 5. ASME B31.9 for building services piping valves.

- C. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.
- D. Drinking Water System Components - Health Effects and Drinking Water System Components - Lead Content Compliance: NSF 61 Annex G and NSF 372.
- E. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.
- F. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- G. Valve Sizes: Same as upstream piping unless otherwise indicated.
- H. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRONZE SWING CHECK VALVES

- A. Bronze Swing Check Valves with Bronze Disc, Class 125:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Valve, Inc.
 - b. Apollo Flow Controls; Conbraco Industries, Inc.
 - c. Crane; Crane Energy Flow Solutions.
 - d. Hammond Valve.
 - e. Jenkins Valves; Crane Energy Flow Solutions.
 - f. KITZ Corporation.
 - g. Macomb Groups (The).
 - h. Milwaukee Valve Company.
 - i. NIBCO INC.
 - j. Powell Valves.
 - k. Red White Valve Corp.
 - l. Stockham; Crane Energy Flow Solutions.
 - m. WATTS.
 - n. Insert manufacturer's name.
 - 2. Description:
 - a. Standard: MSS SP-80, Type 3.
 - b. CWP Rating: 200 psig (1380 kPa).
 - c. Body Design: Horizontal flow.
 - d. Body Material: ASTM B 62, bronze.
 - e. Ends: Threaded or soldered. See valve schedule articles.
 - f. Disc: Bronze.

2.3 IRON SWING CHECK VALVES WITH CLOSURE CONTROL

- A. Iron Swing Check Valves with Lever- and Spring-Closure Control, Class 125:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane; Crane Energy Flow Solutions.
 - b. Hammond Valve.
 - c. Jenkins Valves; Crane Energy Flow Solutions.

- d. Milwaukee Valve Company.
 - e. NIBCO INC.
 - f. Stockham; Crane Energy Flow Solutions.
 - g. WATTS.
 - 2. Description:
 - a. Standard: MSS SP-71, Type I.
 - b. CWP Rating: 200 psig (1380 kPa).
 - c. Body Design: Clear or full waterway.
 - d. Body Material: ASTM A 126, gray iron with bolted bonnet.
 - e. Ends: Flanged or threaded. See valve schedule articles.
 - f. Trim: Bronze.
 - g. Gasket: Asbestos free.
 - h. Closure Control: Factory-installed exterior lever and weight.
- B. Iron Swing Check Valves with Lever and Weight-Closure Control, Class 125:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane; Crane Energy Flow Solutions.
 - b. Hammond Valve.
 - c. Jenkins Valves; Crane Energy Flow Solutions.
 - d. Milwaukee Valve Company.
 - e. NIBCO INC.
 - f. Stockham; Crane Energy Flow Solutions.
 - g. WATTS.
 - h. .
 - 2. Description:
 - a. Standard: MSS SP-71, Type I.
 - b. CWP Rating: 200 psig (1380 kPa).
 - c. Body Design: Clear or full waterway.
 - d. Body Material: ASTM A 126, gray iron with bolted bonnet.
 - e. Ends: Flanged or threaded. See valve schedule articles.
 - f. Trim: Bronze.
 - g. Gasket: Asbestos free.
 - h. Closure Control: Factory-installed exterior lever and weight.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

- E. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Locate valves for easy access and provide separate support where necessary.
- C. Install valves in horizontal piping with stem at or above center of pipe.
- D. Install valves in position to allow full stem movement.
- E. Check Valves: Install check valves for proper direction of flow.
 - 1. Swing Check Valves: In horizontal position with hinge pin level.
- F. Install valve tags. Comply with requirements in Section 22 0553 "Identification for Plumbing Piping and Equipment" for valve tags and schedules.

3.3 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.4 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
 - 1. Pump-Discharge Check Valves:
 - a. NPS 2 (DN 50) and Smaller: Bronze swing check valves with bronze disc.
 - b. NPS 2-1/2 (DN 65) and Larger for Sanitary Waste and Storm Drainage: Iron swing check valves with lever and weight or spring.
- B. If valves with specified CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.
- C. End Connections:
 - 1. For Copper Tubing, NPS 2 (DN 50) and Smaller: Threaded or soldered or press-ends.
 - 2. For Copper Tubing, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged or threaded.
 - 3. For Copper Tubing, NPS 5 (DN 125) and Larger: Flanged.
 - 4. For Steel Piping, NPS 2 (DN 50) and Smaller: Threaded.
 - 5. For Steel Piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged or threaded.
 - 6. For Steel Piping, NPS 5 (DN 125) and Larger: Flanged.

3.5 DOMESTIC HOT- AND COLD-WATER VALVE SCHEDULE

- A. Pipe NPS 2 (DN 50) and Smaller:
 - 1. Bronze swing check valves with bronze disc, Class 125, with soldered end connections.
 - 2. Bronze swing check valves with press-end connections.
- B. Pipe NPS 2-1/2 (DN 65) and Larger:

June 15, 2026

Smithsonian OPDC Project No. 2533105

SmithGroup Project No. 00100084

1. Iron swing check valves with metal seats, Class 125, with threaded or flanged end connections.

END OF SECTION

FOR REFERENCE ONLY

SECTION 22 0529 - HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal pipe hangers and supports.
2. Trapeze pipe hangers.
3. Fiberglass pipe hangers.
4. Metal framing systems.
5. Fiberglass strut systems.
6. Thermal-hanger shield inserts.
7. Fastener systems.
8. Pipe stands.
9. Pipe positioning systems.
10. Equipment supports.

B. Related Requirements:

1. Section 05 5000 "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.
2. Section 22 0516 "Expansion Fittings and Loops for Plumbing Piping" for pipe guides and anchors.
3. Section 22 0548 "Vibration and Seismic Controls for Plumbing Piping and Equipment" Section 22 0548.13 "Vibration Controls for Plumbing Piping and Equipment" for vibration isolation devices.

1.2 DEFINITIONS

- A. MSS: Manufacturers Standardization Society of The Valve and Fittings Industry Inc.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Hangers and supports for plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to [ASCE/SEI 7] .
1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
 3. Design seismic-restraint hangers and supports for piping and equipment[**and obtain approval from authorities having jurisdiction**].

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

- B. Shop Drawings:[**Signed and sealed by a qualified professional engineer.**] Show fabrication and installation details and include calculations for the following; include Product Data for components:
1. Trapeze pipe hangers.
 2. Metal framing systems.
 3. Fiberglass strut systems.
 4. Pipe stands.
 5. Equipment supports.

1.5 QUALITY ASSURANCE

- A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 - PRODUCTS

2.1 METAL PIPE HANGERS AND SUPPORTS

- A. Carbon-Steel Pipe Hangers and Supports:
1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
 3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
 4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
 5. Hanger Rods: Continuous-thread rod, nuts, and washer made of [**carbon steel**] [**stainless steel**].
- B. Stainless-Steel Pipe Hangers and Supports:
1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
 3. Hanger Rods: Continuous-thread rod, nuts, and washer made of [**stainless steel**].
- C. Copper Pipe Hangers:
1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.
 2. Hanger Rods: Continuous-thread rod, nuts, and washer made of [**copper-coated steel**] [**stainless steel**].

2.2 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.3 FIBERGLASS PIPE HANGERS

- A. Clevis-Type, Fiberglass Pipe Hangers:
1. Description: Similar to MSS SP-58, Type 1, steel pipe hanger except hanger is made of fiberglass or fiberglass-reinforced resin.
 2. Hanger Rods: Continuous-thread rod, washer, and nuts made of [**fiberglass**] [polyurethane] [or] [stainless steel].
- B. Strap-Type, Fiberglass Pipe Hangers:
1. Description: Similar to MSS SP-58, Type 9 or Type 10, steel pipe hanger except hanger is made of fiberglass-reinforced resin.
 2. Hanger Rod and Fittings: Continuous-thread rod, washer, and nuts made of [**stainless steel**] .

2.4 METAL FRAMING SYSTEMS

- A. MFMA Manufacturer Metal Framing Systems:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Allied Tube & Conduit.
 - b. Cooper B-Line, Inc.
 - c. Flex-Strut Inc.
 - d. GS Metals Corp.
 - e. Thomas & Betts Corporation.
 - f. Unistrut Corporation; Tyco International, Ltd.
 - g. Wesanco, Inc.
 2. Description: Shop- or field-fabricated pipe support assembly for supporting multiple parallel pipes.
 3. Standard: MFMA-4.
 4. Channels: Continuous slotted steel channel with intumed lips.
 5. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
 6. Hanger Rods: Continuous-thread rod, nuts, and washer made of [**carbon steel**] [stainless steel] .
 7. Metallic Coating: [**Electroplated zinc**] [Hot-dipped galvanized] [Mill galvanized] [In-line, hot galvanized] [Mechanically-deposited zinc].
 8. Paint Coating: [**Vinyl**] [Vinyl alkyd] [Epoxy] [Polyester] [Acrylic] [Amine] [Alkyd] .
 9. Plastic Coating: [**PVC**] [Polyurethane] [Epoxy] [Polyester] .
 10. Framing systems in paragraph below should be equal to or able to exceed MFMA-4 requirements.
- B. Non-MFMA Manufacturer Metal Framing Systems:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following]:
 - a. Anvil International; a subsidiary of Mueller Water Products Inc.
 - b. Empire Industries, Inc.
 - c. ERICO International Corporation.
 - d. Haydon Corporation; H-Strut Division.
 - e. NIBCO INC.
 - f. PHD Manufacturing, Inc.

- g. PHS Industries, Inc.
- 2. Description: Shop- or field-fabricated pipe-support assembly made of steel channels, accessories, fittings, and other components for supporting multiple parallel pipes.
- 3. Standard: Comply with MFMA-4.
- 4. Channels: Continuous slotted steel channel with intumed lips.
- 5. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
- 6. Hanger Rods: Continuous-thread rod, nuts, and washer made of [**carbon steel**] [stainless steel] .
- 7. Coating: [Zinc] [Paint] [PVC] .

2.5 FIBERGLASS STRUT SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following]:
 - 1. Allied Tube & Conduit.
 - 2. Champion Fiberglass, Inc.
 - 3. Cooper B-Line, Inc.
 - 4. SEASAFE, INC.; a Gibraltar Industries Company.
- B. Description: Shop- or field-fabricated pipe-support assembly similar to MFMA-4 for supporting multiple parallel pipes.
 - 1. Channels: Continuous slotted fiberglass[**or other plastic**] channel with intumed lips.
 - 2. Channel Nuts: Fiberglass nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
 - 3. Hanger Rods: Continuous-thread rod, nuts, and washer made of [**fiberglass**] [stainless steel] .

2.6 THERMAL-HANGER SHIELD INSERTS

- A. Manufacturers: Subject to compliance with requirements, [provide products by one of the following]:
 - 1. Carpenter & Paterson, Inc.
 - 2. Clement Support Services.
 - 3. ERICO International Corporation.
 - 4. National Pipe Hanger Corporation.
 - 5. PHS Industries, Inc.
 - 6. Pipe Shields, Inc.; a subsidiary of Piping Technology & Products, Inc.
 - 7. Piping Technology & Products, Inc.
 - 8. Rilco Manufacturing Co., Inc.
 - 9. Value Engineered Products, Inc.
- B. **Insulation-Insert Material for Cold Piping:** [ASTM C 552, Type II cellular glass with 100-psig (688-kPa)] [or] [ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig (862-kPa)] minimum compressive strength and vapor barrier.
- C. **Insulation-Insert Material for Hot Piping:** [**Water-repellent treated, ASTM C 533, Type I calcium silicate with** 100-psig (688-kPa)] [ASTM C 552, Type II cellular glass with 100-psig (688-kPa)] [or] [ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig (862-kPa)] minimum compressive strength.

- D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.
- F. Insert Length: Extend 2 inches (50 mm) beyond sheet metal shield for piping operating below ambient air temperature.

2.7 FASTENER SYSTEMS

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
- B. Mechanical-Expansion Anchors: Insert-wedge-type, [**zinc-coated**] [**stainless-**] steel anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

2.8 PIPE STANDS

- A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.
- B. Compact Pipe Stand: One-piece plastic unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.
- C. Low-Type, Single-Pipe Stand: One-piece [**plastic**] [**stainless-steel**] base unit with plastic roller, for roof installation without membrane penetration.
- D. High-Type, Single-Pipe Stand:
 - 1. Description: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
 - 2. Base: [**Plastic**] [**Stainless steel**].
 - 3. Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.
 - 4. Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.
- E. High-Type, Multiple-Pipe Stand:
 - 1. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.
 - 2. Bases: One or more; plastic.
 - 3. Vertical Members: Two or more protective-coated-steel channels.
 - 4. Horizontal Member: Protective-coated-steel channel.
 - 5. Pipe Supports: Galvanized-steel, clevis-type pipe hangers.
- F. Curb-Mounting-Type Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

2.9 PIPE POSITIONING SYSTEMS

- A. Description: IAPMO PS 42, positioning system of metal brackets, clips, and straps for positioning piping in pipe spaces; for plumbing fixtures in commercial applications.

2.10 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

2.11 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
 - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
 - 2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

PART 3 - EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
 - 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
 - 2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Fiberglass Pipe-Hanger Installation: Comply with applicable portions of MSS SP-69 and MSS SP-89. Install hangers and attachments as required to properly support piping from building structure.
- D. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.
- E. Fiberglass Strut System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled fiberglass struts.
- F. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- G. Fastener System Installation:

1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches (100 mm) thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
 2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- H. Pipe Stand Installation:
1. Pipe Stand Types except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
 2. Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. See Section 07 7200 "Roof Accessories" for curbs.
- I. Pipe Positioning-System Installation: Install support devices to make rigid supply and waste piping connections to each plumbing fixture.
- J. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- K. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- L. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- M. Install lateral bracing with pipe hangers and supports to prevent swaying.
- N. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, [NPS 2-1/2 (DN 65)] and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- O. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- P. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- Q. Insulated Piping:
1. Attach clamps and spacers to piping.
 - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
 - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
 - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
 2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.

- a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.
3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
 - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.
4. Shield Dimensions for Pipe: Not less than the following:
 - a. NPS 1/4 to NPS 3-1/2 (DN 8 to DN 90): 12 inches (305 mm) long and 0.048 inch (1.22 mm) thick.
 - b. NPS 4 (DN 100): 12 inches (305 mm) long and 0.06 inch (1.52 mm) thick.
 - c. NPS 5 and NPS 6 (DN 125 and DN 150): 18 inches (457 mm) long and 0.06 inch (1.52 mm) thick.
 - d. NPS 8 to NPS 14 (DN 200 to DN 350): 24 inches (610 mm) long and 0.075 inch (1.91 mm) thick.
 - e. NPS 16 to NPS 24 (DN 400 to DN 600): 24 inches (610 mm) long and 0.105 inch (2.67 mm) thick.
5. Pipes NPS 8 (DN 200) and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.2 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.3 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.4 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches (40 mm).

3.5 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 - 1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils (0.05 mm).
- B. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.6 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel metal trapeze pipe hangers and metal framing systems and attachments for general service applications.
- F. Use and fiberglass pipe hangers fiberglass strut systems and stainless-steel attachments for hostile environment applications.
- G. Use copper-plated pipe hangers and copper or stainless-steel attachments for copper piping and tubing.
- H. Use padded hangers for piping that is subject to scratching.
- I. Use thermal-hanger shield inserts for insulated piping and tubing.
- J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30 (DN 15 to DN 750).

2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F (566 deg C), pipes NPS 4 to NPS 24 (DN 100 to DN 600), requiring up to 4 inches (100 mm) of insulation.
3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36 (DN 20 to DN 900), requiring clamp flexibility and up to 4 inches (100 mm) of insulation.
4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 (DN 15 to DN 600) if little or no insulation is required.
5. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4 (DN 15 to DN 100), to allow off-center closure for hanger installation before pipe erection.
6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes NPS 3/4 to NPS 8 (DN 20 to DN 200).
7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8 (DN 15 to DN 200).
8. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8 (DN 15 to DN 200).
9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8 (DN 15 to DN 200).
10. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 8 (DN 10 to DN 200).
11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 3 (DN 10 to DN 80).
12. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30 (DN 15 to DN 750).
13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
14. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36 (DN 100 to DN 900), with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36 (DN 100 to DN 900), with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 (DN 65 to DN 900) if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
17. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30 (DN 25 to DN 750), from two rods if longitudinal movement caused by expansion and contraction might occur.
18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24 (DN 65 to DN 600), from single rod if horizontal movement caused by expansion and contraction might occur.
19. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 (DN 50 to DN 1050) if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.
20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 (DN 50 to DN 600) if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is not necessary.
21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 (DN 50 to DN 750) if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.

- K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24 (DN 24 to DN 600).
 2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 (DN 20 to DN 600) if longer ends are required for riser clamps.
- L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches (150 mm) for heavy loads.
 2. Steel Clevises (MSS Type 14): For 120 to 450 deg F (49 to 232 deg C) piping installations.
 3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
 4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
 5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F (49 to 232 deg C) piping installations.
- M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
 2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
 3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
 4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
 5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
 6. C-Clamps (MSS Type 23): For structural shapes.
 7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
 8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
 9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
 10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
 11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
 12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
 - a. Light (MSS Type 31): 750 lb (340 kg).
 - b. Medium (MSS Type 32): 1500 lb (680 kg).
 - c. Heavy (MSS Type 33): 3000 lb (1360 kg).
 13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
 14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
 15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.

- N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
 2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
 3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- O. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
 2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches (32 mm).
 3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
 4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
 5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from hanger.
 6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
 7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from trapeze support.
 8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
 - a. Horizontal (MSS Type 54): Mounted horizontally.
 - b. Vertical (MSS Type 55): Mounted vertically.
 - c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.
- P. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.
- Q. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.
- R. Use powder-actuated fasteners mechanical-expansion anchors instead of building attachments where required in concrete construction.
- S. Use pipe positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

END OF SECTION

SECTION 22 0553 - IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Equipment labels.
 - 2. Pipe labels.
 - 3. Valve tags.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- C. Valve numbering scheme.
- D. Valve Schedules: For each piping system to include in maintenance manuals.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Metal Labels for Equipment:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. Brady Corporation.
 - b. Brimar Industries, Inc.
 - c. Carlton Industries, LP.
 - d. Champion America.
 - e. Craftmark Identification Systems.
 - f. emedco.
 - g. Kolbi Pipe Marker Co.
 - h. LEM Products Inc.
 - i. Marking Services Inc.
 - 2. Material and Thickness: stainless steel, 0.025-inch (0.64-mm) and having predrilled or stamped holes for attachment hardware.
 - 3. Letter Color: Black.
 - 4. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
 - 5. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
 - 6. Fasteners: Stainless-steel rivets or self-tapping screws.
 - 7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

2.2 PIPE LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - 1. Actioncraft Products, Inc.
 - 2. Brady Corporation.
 - 3. Brimar Industries, Inc.
 - 4. Carlton Industries, LP.
 - 5. Champion America.
 - 6. Craftmark Identification Systems.
 - 7. emedco.
 - 8. Kolbi Pipe Marker Co.
 - 9. LEM Products Inc.
 - 10. Marking Services Inc.
 - 11. Seton Identification Products.
- B. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings; also include pipe size and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with piping-system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
 - 2. Lettering Size: Size letters according to ASME A13.1 for piping.

2.3 VALVE TAGS

- A. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - 1. Actioncraft Products, Inc.
 - 2. Brady Corporation.
 - 3. Brimar Industries, Inc.
 - 4. Carlton Industries, LP.
 - 5. Champion America.
 - 6. Craftmark Identification Systems.
 - 7. emedco.
 - 8. Kolbi Pipe Marker Co.
 - 9. LEM Products Inc.
 - 10. Marking Services Inc.
 - 11. Seton Identification Products.
- B. Valve Tags: Stamped or engraved with 1/4-inch (6.4-mm) letters for piping system abbreviation and 1/2-inch (13-mm) numbers.
 - 1. Tag Material: Brass, 0.032-inch (0.8-mm) , 0.032-inch (0.8-mm) minimum thickness, and having predrilled or stamped holes for attachment hardware.
 - 2. Fasteners: Brass S-hook.

- C. Valve Schedules: For each piping system, on 8-1/2-by-11-inch (A4) bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
 - 1. Valve-tag schedule shall be included in operation and maintenance data.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 GENERAL INSTALLATION REQUIREMENTS

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

3.3 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

3.4 PIPE LABEL INSTALLATION

- A. Pipe Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
 - 1. Near each valve and control device.
 - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
 - 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
 - 4. At access doors, manholes, and similar access points that permit view of concealed piping.
 - 5. Near major equipment items and other points of origination and termination.
 - 6. Spaced at maximum intervals of 50 feet (15 m) along each run. Reduce intervals to 25 feet (7.6 m) in areas of congested piping and equipment.
 - 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
- B. Directional Flow Arrows: Arrows shall be used to indicate direction of flow in pipes, including pipes where flow is allowed in both directions.
- C. Pipe Label Color Schedule:
 - 1. Domestic Water Piping

- a. Background: Safety green.
 - b. Letter Colors: White.
- 2. Sanitary Waste and Storm Drainage Piping:
 - a. Background Color: Safety black .
 - b. Letter Color: White.
- 3. Non-Potable Water Piping
 - a. Background Color: Safety purple
 - b. Letter Color: White
- 4. Natural Gas Piping
 - a. Background Color: Yellow
 - b. Letter Color: Black

3.5 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems, except check valves, valves within factory-fabricated equipment units, shutoff valves, faucets, convenience and lawn-watering hose connections, and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.
- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:
 - 1. Valve-Tag Size and Shape:
 - a. Cold Water: 1-1/2 inches (38 mm), round.
 - b. Hot Water: 1-1/2 inches (38 mm), round.
 - 2. Valve-Tag Colors:
 - a. Cold Water: Natural.
 - b. Hot Water: Natural.
 - 3. Letter Colors:
 - a. Cold Water: White.
 - b. Hot Water: White.

3.6 WARNING-TAG INSTALLATION

- A. Write required message on, and attach warning tags to, equipment and other items where required.

END OF SECTION

SECTION 22 0719 - PLUMBING PIPING INSULATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes insulating the following plumbing piping services:
 - 1. Domestic cold-water piping.
 - 2. Domestic hot-water piping.
 - 3. Domestic recirculating hot-water piping.
 - 4. Supplies and drains for handicap-accessible lavatories and sinks.
- B. Related Requirements:
 - 1. Section 22 0716 "Plumbing Equipment Insulation."

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied, if any).
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content and chemical components.
 - 2. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that product complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
 - 2. Detail attachment and covering of heat tracing inside insulation.
 - 3. Detail insulation application at pipe expansion joints for each type of insulation.
 - 4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
 - 5. Detail removable insulation at piping specialties, equipment connections, and access panels.
 - 6. Detail application of field-applied jackets.
 - 7. Detail application at linkages of control devices.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- C. Field quality-control reports.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84 by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
 - 1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 - 2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.
- C. Comply with the following applicable standards and other requirements specified for miscellaneous components:
 - 1. Supply and Drain Protective Shielding Guards: ICC A117.1.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.6 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 22 0529 "Hangers and Supports for Plumbing Piping and Equipment."
- B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.7 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor, Underground Piping Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Pittsburgh Corning Corporation; Foamglas.
 - 2. Block Insulation: ASTM C 552, Type I.
 - 3. Special-Shaped Insulation: ASTM C 552, Type III.
 - 4. Preformed Pipe Insulation without Jacket: Comply with ASTM C 552, Type II, Class 1.
 - 5. Preformed Pipe Insulation with Factory-Applied ASJ: Comply with ASTM C 552, Type II, Class 2.
 - 6. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
- F. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Aeroflex USA, Inc.; Aerocel.
 - b. Armacell LLC; AP Armaflex.
 - c. K-Flex USA; Insul-Lock, Insul-Tube, and K-FLEX LS.

2.2 INSULATING CEMENTS

- A. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.
 - 1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Ramco Insulation, Inc.; Thermokote V.
 - b. <Insert manufacturer's name; product name or designation>.

2.3 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

- B. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F (minus 73 to plus 93 deg C).
1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-84.
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.
1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Aeroflex USA, Inc.; Aeroseal.
 - b. Armacell LLC; Armaflex 520 Adhesive.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75.
 - d. K-Flex USA; R-373 Contact Adhesive.
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-82.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-20.
 - d. Mon-Eco Industries, Inc.; 22-25.
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.4 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.

1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below-ambient services.
1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-80/30-90.
 - b. Vimasco Corporation; 749.
 2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm (0.009 metric perm) at 43-mil (1.09-mm) dry film thickness.
 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
 5. Color: White.
- C. Vapor-Barrier Mastic: Solvent based; suitable for indoor use on below-ambient services.
1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-30.
 - b. Eagle Bridges - Marathon Industries; 501.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-35.
 - d. Mon-Eco Industries, Inc.; 55-10.
 2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.03 metric perm) at 35-mil (0.9-mm) dry film thickness.
 3. Service Temperature Range: 0 to 180 deg F (Minus 18 to plus 82 deg C).
 4. Solids Content: ASTM D 1644, 44 percent by volume and 62 percent by weight.
 5. Color: White.
- D. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below-ambient services.
1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Encacel.
 - b. Eagle Bridges - Marathon Industries; 570.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 60-95/60-96.
 2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.033 metric perm) at 30-mil (0.8-mm) dry film thickness.
 3. Service Temperature Range: Minus 50 to plus 220 deg F (Minus 46 to plus 104 deg C).
 4. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
 5. Color: White.
- E. Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.
1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:

- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-10.
- b. Eagle Bridges - Marathon Industries; 550.
- c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 46-50.
- d. Mon-Eco Industries, Inc.; 55-50.
2. Water-Vapor Permeance: ASTM F 1249, 1.8 perms (1.2 metric perms) at 0.0625-inch (1.6-mm) dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
4. Solids Content: 60 percent by volume and 66 percent by weight.
5. Color: White.

2.5 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C, Class I, Grade A, and shall be compatible with insulation materials, jackets, and substrates.
 1. For indoor applications, use lagging adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-50 AHV2.
 - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-36.
 - c. Vimasco Corporation; 713 and 714.
 3. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over pipe insulation.
 4. Service Temperature Range: 0 to plus 180 deg F (Minus 18 to plus 82 deg C).
 5. Color: White.

2.6 SEALANTS

- A. Joint Sealants:
 1. Joint Sealants for Cellular-Glass and Phenolic Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Pittsburgh Corning Corporation; Pittseal 444.
 2. Materials shall be compatible with insulation materials, jackets, and substrates.
 3. Permanently flexible, elastomeric sealant.
 4. Service Temperature Range: Minus 100 to plus 300 deg F (Minus 73 to plus 149 deg C).
 5. Color: White or gray.
 6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

B. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
5. Color: White.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.7 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.

2.8 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.

1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. ABI, Ideal Tape Division; 428 AWF ASJ.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
 - c. Compac Corporation; 104 and 105.
 - d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
2. Width: 3 inches (75 mm).
3. Thickness: 11.5 mils (0.29 mm).
4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.

1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. ABI, Ideal Tape Division; 491 AWF FSK.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
 - c. Compac Corporation; 110 and 111.
 - d. Venture Tape; 1525 CW NT, 1528 CW, and 1528 CW/SQ.
 2. Width: 3 inches (75 mm).
 3. Thickness: 6.5 mils (0.16 mm).
 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. ABI, Ideal Tape Division; 370 White PVC tape.
 - b. Compac Corporation; 130.
 - c. Venture Tape; 1506 CW NS.
 2. Width: 2 inches (50 mm).
 3. Thickness: 6 mils (0.15 mm).
 4. Adhesion: 64 ounces force/inch (0.7 N/mm) in width.
 5. Elongation: 500 percent.
 6. Tensile Strength: 18 lbf/inch (3.3 N/mm) in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. ABI, Ideal Tape Division; 488 AWF.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
 - c. Compac Corporation; 120.
 - d. Venture Tape; 3520 CW.
 2. Width: 2 inches (50 mm).
 3. Thickness: 3.7 mils (0.093 mm).
 4. Adhesion: 100 ounces force/inch (1.1 N/mm) in width.
 5. Elongation: 5 percent.
 6. Tensile Strength: 34 lbf/inch (6.2 N/mm) in width.

2.9 SECUREMENTS

A. Bands:

1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. ITW Insulation Systems; Gerrard Strapping and Seals.
 - b. RPR Products, Inc.; Insul-Mate Strapping and Seals.

2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, [Type 304] [or] [Type 316]; 0.015 inch (0.38 mm) thick, [1/2 inch (13 mm)] [3/4 inch (19 mm)] wide with [wing seal] [or] [closed seal].
 3. Aluminum: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, [1/2 inch (13 mm)] [3/4 inch (19 mm)] wide with [wing seal] [or] [closed seal].
- B. Staples: Outward-clinching insulation staples, nominal 3/4-inch- (19-mm-) wide, stainless steel or Monel.
- C. Wire: [0.080-inch (2.0-mm) nickel-copper alloy] [0.062-inch (1.6-mm) soft-annealed, stainless steel] [0.062-inch (1.6-mm) soft-annealed, galvanized steel].
1. Manufacturers: Subject to compliance with requirements, [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. C & F Wire.

2.10 PROTECTIVE SHIELDING GUARDS

- A. Protective Shielding Pipe Covers,
1. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Engineered Brass Company.
 - b. Insul-Tect Products Co.; a subsidiary of MVG Molded Products.
 - c. McGuire Manufacturing.
 - d. Plumberex.
 - e. Truebro; a brand of IPS Corporation.
 - f. Zurn Industries, LLC; Tubular Brass Plumbing Products Operation.
 2. Description: Manufactured plastic wraps for covering plumbing fixture [hot-water supply] [hot- and cold-water supplies] and trap and drain piping. Comply with Americans with Disabilities Act (ADA) requirements.
- B. Protective Shielding Piping Enclosures,
1. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Truebro; a brand of IPS Corporation.
 - b. Zurn Industries, LLC; Tubular Brass Plumbing Products Operation.
 2. Description: Manufactured plastic enclosure for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with ADA requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
1. Verify that systems to be insulated have been tested and are free of defects.

2. Verify that surfaces to be insulated are clean and dry.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:

1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils (0.127 mm) thick and an epoxy finish 5 mils (0.127 mm) thick if operating in a temperature range between 140 and 300 deg F (60 and 149 deg C). Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
2. Carbon Steel: Coat carbon steel operating at a service temperature between 32 and 300 deg F (0 and 149 deg C) with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.

C. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.

D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Keep insulation materials dry during application and finishing.

H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

I. Install insulation with least number of joints practical.

J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.

1. Install insulation continuously through hangers and around anchor attachments.
 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth.
 2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
 3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at [2 inches (50 mm)] [4 inches (100 mm)] o.c.
 - a. For below-ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- P. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Cleanouts.
- 3.4 PENETRATIONS
- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.

2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches (50 mm) below top of roof flashing.
 4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches (50 mm).
 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
1. Comply with requirements in Section 07 8413 "Penetration Firestopping" for firestopping and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
1. Pipe: Install insulation continuously through floor penetrations.
 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 07 8413 "Penetration Firestopping."
- 3.5 GENERAL PIPE INSULATION INSTALLATION
- A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.

3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
 5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
 6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
 9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.
- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- D. Install removable insulation covers at locations indicated. Installation shall conform to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
 3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.

4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches (50 mm) over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.6 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

- A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- B. Insulation Installation on Pipe Flanges:
 1. Install pipe insulation to outer diameter of pipe flange.
 2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
 3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
 4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- C. Insulation Installation on Pipe Fittings and Elbows:
 1. Install mitered sections of pipe insulation.
 2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- D. Insulation Installation on Valves and Pipe Specialties:
 1. Install preformed valve covers manufactured of same material as pipe insulation when available.
