 2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
 3. Install insulation to flanges as specified for flange insulation application.
 4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.7 FINISHES

- A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 09 9113 "Exterior Painting" and Section 09 9123 "Interior Painting."
 1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 - a. Finish Coat Material: Interior, flat, latex-emulsion size.

- B. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.
- C. Do not field paint aluminum or stainless-steel jackets.

3.8 FIELD QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Inspect pipe, fittings, strainers, and valves, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
- B. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.9 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
 - 1. Drainage piping located in crawl spaces.
 - 2. Underground piping.
 - 3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.10 INDOOR PIPING INSULATION SCHEDULE

- A. Domestic Cold Water:
 - 1. NPS 1 (DN 25) and Smaller: Insulation shall be one of the following:
 - a. Cellular Glass: 1 inches (25 mm) thick.
 - b. Flexible Elastomeric: 1 inch (25 mm) thick.
 - 2. NPS 1-1/4 (DN 32) and Larger: Insulation shall be one of the following:
 - a. Cellular Glass: 1 inches (25 mm) thick.
 - b. Flexible Elastomeric: 1 inch (25 mm) thick.
- B. Domestic Hot and Recirculated Hot Water:
 - 1. NPS 1-1/4 (DN 32) and Smaller: Insulation shall be one of the following:
 - a. Cellular Glass: 1-1/2 inches (38 mm) thick.
 - b. Flexible Elastomeric: 1 inch (25 mm) thick.
 - 2. NPS 1-1/2 (DN 40) and Larger: Insulation shall be one of the following:
 - a. Cellular Glass: 1 inches (25 mm) thick.
 - b. Flexible Elastomeric: 1 inch (25 mm) thick.
- C. Exposed Sanitary Drains, Domestic Water, Domestic Hot Water, and Stops for Plumbing Fixtures for People with Disabilities:

1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Flexible Elastomeric: 1/2 inch (13 mm) thick.
- D. Floor Drains, Traps, and Sanitary Drain Piping within 10 Feet (3 m) of Drain Receiving Condensate and Equipment Drain Water below 60 Deg F (16 Deg C):
 1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Cellular Glass: 1-1/2 inches (38 mm) thick.
 - b. Flexible Elastomeric: 3/4 inch (19 mm) thick.
- 3.11 UNDERGROUND, FIELD-INSTALLED INSULATION JACKET
 - A. For underground direct-buried piping applications, install underground direct-buried jacket over insulation material.

END OF SECTION

FOR REFERENCE ONLY

SECTION 22 0800 - COMMISSIONING OF PLUMBING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes Cx process requirements for the following plumbing systems, assemblies, and equipment:
 - 1. Domestic hot- and cold-water piping.
 - 2. Sanitary waste and vent piping.
 - 3. Plumbing pumps.
 - 4. Plumbing equipment.
- B. Related Requirements:
 - 1. Section 01 9113 "General Commissioning Requirements" for general Cx process requirements and CxA responsibilities.
 - 2. For construction checklists, comply with requirements in various Division 22 Sections specifying plumbing systems, system components, equipment, and products.

1.2 DEFINITIONS

- A. Cx: Commissioning, as defined in Section 01 9113 "General Commissioning Requirements."
- B. CxA: Commissioning Authority, as defined in Section 01 9113 "General Commissioning Requirements."
- C. "Systems," "Assemblies," "Subsystems," "Equipment," and "Components": Where these terms are used together or separately, they shall mean "as-built" systems, assemblies, subsystems, equipment, and components.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For plumbing testing technician.
- B. Construction Checklists: Draft construction checklists will be created by CxA for Contractor review.
- C. Construction Checklists: Material, installation, and performance test checklists for systems, assemblies, subsystems, equipment, and components to be part of the Cx process and according to requirements in Section 01 9113 "General Commissioning Requirements."
 - 1. Facility water distribution piping, including the following:
 - a. Domestic water piping, fittings, and specialties outside the building.
 - b. Pumps, motors, accessories, and controls.
 - c. Sleeves and sleeve seals.
 - d. Meters and gages.
 - e. General-duty and specialty valves.
 - f. Hangers and supports.
 - 2. Domestic water piping, including the following:
 - a. Domestic cold- and hot-water piping, fittings, and specialties inside the building.
 - b. Pumps, motors, accessories, and controls.
 - c. Sleeves and sleeve seals.

- d. Meters and gages.
 - e. General-duty and specialty valves.
 - f. Hangers and supports.
- 3. Sanitary waste and vent piping, including the following:
 - a. Gravity and forced-main sewerage piping, fittings, and specialties.
 - b. Pumps, motors, accessories, and controls.
 - c. Drains.
 - d. Sleeves and sleeve seals.
 - e. Meters and gages.
 - f. General-duty and specialty valves.
 - g. Hangers and supports.
- 4. Plumbing fixtures, including the following:
 - a. Water closets, supports and connections, supplies, and flush valves.
 - b. Lavatories, supports, supplies, drain connections, and faucets.
 - c. Sinks, supports, supplies, drain connections, and faucets.
 - d. Emergency plumbing fixtures, supplies, drain connections, and controls.
- D. Test equipment and instrumentation list, identifying the following:
 - 1. Equipment/instrument identification number.
 - 2. Planned Cx application or use.
 - 3. Manufacturer, make, model, and serial number.
 - 4. Calibration history, including certificates from agencies that calibrate the equipment and instrumentation.
 - 5. Equipment manufacturers' proprietary instrumentation and tools. For each instrument or tool, identify the following:
 - a. Instrument or tool identification number.
 - b. Equipment schedule designation of equipment for which the instrument or tool is required.
 - c. Manufacturer, make, model, and serial number.
 - d. Calibration history, including certificates from agencies that calibrate the instrument or tool, where appropriate.

1.4 QUALITY ASSURANCE

- A. Plumbing Testing Technician Qualifications: Technicians to perform plumbing construction checklist verification tests, construction checklist verification test demonstrations, Cx tests, and Cx test demonstrations shall have the following minimum qualifications:
 - 1. Journey level or equivalent skill level with knowledge of plumbing system, electrical concepts, and building operations.
 - 2. Minimum three years' experience installing, servicing, and operating systems manufactured by approved manufacturer.
- B. Medical Gas Piping Systems Testing Technician Qualifications: Technicians to perform medical compressed-air, vacuum, and medical gas piping for laboratory and healthcare facilities system construction checklist verification tests, construction checklist verification test demonstrations, Cx tests, and Cx test demonstrations shall have the following minimum qualifications:

1. Journey level or equivalent skill level. Vocational school four-year-program graduate or an Associate's degree in mechanical systems, plumbing systems, or similar field. Degree may be offset by three years' experience in servicing plumbing systems in the gas piping for laboratory and healthcare facilities plumbing systems industry. Generally, required knowledge includes gas piping for laboratory and healthcare facilities systems, electrical concepts, building operations, and application and use of tools and instrumentation to measure performance of plumbing system equipment, assemblies, and systems.
 2. Minimum three years' experience installing, servicing, and operating systems manufactured by approved manufacturer.
- C. Testing Equipment and Instrumentation Quality and Calibration:
1. Capable of testing and measuring performance within the specified acceptance criteria.
 2. Be calibrated at manufacturer's recommended intervals with current calibration tags permanently affixed to the instrument being used.
 3. Be maintained in good repair and operating condition throughout duration of use on Project.
 4. Be recalibrated/repared if dropped or damaged in any way since last calibrated.
- D. Proprietary Test Instrumentation and Tools:
1. Equipment Manufacturer's Proprietary Instrumentation and Tools: For installed equipment included in the Cx process, test instrumentation and tools manufactured or prescribed by equipment manufacturer to service, calibrate, adjust, repair, or otherwise work on its equipment or required as a condition of equipment warranty, shall comply with the following:
 - a. Be calibrated by manufacturer with current calibration tags permanently affixed.
 - b. Include a separate list of proprietary test instrumentation and tools in operation and maintenance manuals.
 - c. Plumbing system proprietary test instrumentation and tools become property of Owner at the time of Substantial Completion.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 CONSTRUCTION CHECKLISTS

- A. Prepare detailed construction checklists for plumbing systems, assemblies, subsystems, equipment, and components.
1. Domestic hot- and cold-water piping.
 2. Sanitary waste and vent piping.
 3. Storm drainage piping.
 4. Plumbing pumps.
 5. Plumbing equipment, including the following:
 - a. Domestic water heating equipment.
 - b. Plumbing fixtures.

3.2 CONSTRUCTION CHECKLIST REVIEW

- A. Review and provide written comments on draft construction checklists. CxA will create required draft construction checklists and provide them to Contractor.

- B. Return draft construction checklist review comments within 10 days of receipt.
- C. When review comments have been resolved, the CxA will provide final construction checklists, marked "Approved for Use, (date)."
- D. Use only construction checklists, marked "Approved for Use, (date)."

3.3 Cx TESTING PREPARATION

- A. Certify that plumbing systems, subsystems, and equipment have been installed, calibrated, and started and that they are operating according to the Contract Documents and approved submittals.
- B. Certify that plumbing systems instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents and approved submittals, and that pretest set points have been recorded.
- C. Set systems, subsystems, and equipment into operating mode to be tested according to approved test procedures (for example, normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

3.4 Cx TEST CONDITIONS

- A. Perform tests using design conditions, whenever possible.
 - 1. Simulated conditions may, with approval of Architect, be imposed using an artificial load when it is impractical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by CxA and document simulated conditions and methods of simulation. After tests, return configurations and settings to normal operating conditions.
 - 2. Cx test procedures may direct that set points be altered when simulating conditions is impractical.
 - 3. Cx test procedures may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are impractical.
- B. If tests cannot be completed because of a deficiency outside the scope of the plumbing system, document the deficiency and report it to Architect. After deficiencies are resolved, reschedule tests.
- C. If seasonal testing is specified, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.5 Cx TESTS COMMON TO PLUMBING

- A. Measure capacities and effectiveness of systems, assemblies, subsystems, equipment, and components, including operational and control functions, to verify compliance with acceptance criteria.
- B. Test systems, assemblies, subsystems, equipment, and components operating modes, interlocks, control responses, responses to abnormal or emergency conditions, and response according to acceptance criteria.

- C. Coordinate schedule with, and perform Cx activities at the direction of, CxA.
- D. Comply with construction checklist requirements, including material verification, installation checks, startup, and performance tests requirements specified in Division 22 Sections specifying plumbing systems and equipment.
- E. Provide technicians, instrumentation, tools, and equipment to perform and document the following:
 - 1. Construction checklist verification tests.
 - 2. Construction checklist verification test demonstrations.
 - 3. Cx tests.
 - 4. Cx test demonstrations.
- F. Supervision of Alarms in Plumbing Systems:
 - 1. Prerequisites: Acceptance of results of construction checklists for plumbing systems specified in the Sections listed below:
 - a. Section 22 1113 "Facility Water Distribution Piping."
 - 2. Scope:
 - a. Monitored plumbing system alarms.
 - 3. Purpose:
 - a. Verify reporting of monitored plumbing alarm at building management system.
 - 4. Conditions of the Test:
 - a. Alarm monitoring systems operating in normal, automatic mode.
 - b. Activate monitored plumbing alarms, one at a time.
 - 5. Acceptance Criteria:
 - a. Activation of monitored plumbing alarm generates alarm at building management system control panel.
- G. Plumbing Meter Reporting:
 - 1. Prerequisites: Acceptance of results of construction checklists for plumbing systems specified in the Sections listed below:
 - a. Section 22 1113 "Facility Water Distribution Piping."
 - b. Section 22 1119 "Domestic Water Piping Specialties."
 - c. Section 22 3100 "Domestic Water Softeners."
 - 2. Scope:
 - a. Monitored plumbing system water meters.
 - 3. Purpose:
 - a. Verify accuracy of reporting of monitored plumbing system water meters at building management system.
 - 4. Conditions of the Test:
 - a. Plumbing system water meter recording systems operating in normal, automatic mode.
 - b. Compare cumulative consumption data at plumbing system water meter recording systems with independent, calibrated flow-measuring instrumentation under the following conditions:
 - 1) Low Flow: 1 percent of maximum design flow rate for a period of four hours.
 - 2) High Flow: 80 percent of maximum design flow rate for a period of 20 minutes.
 - c. Activate monitored plumbing alarms, one at a time.

5. Acceptance Criteria:
 - a. Cumulative flow reported for low-flow condition is within 5 percent flow recorded by calibrated flow-measuring instrumentation.
 - b. Cumulative flow reported for high-flow condition is within 1 percent flow recorded by calibrated flow-measuring instrumentation.

END OF SECTION

FOR REFERENCE ONLY

SECTION 22 1113 - FACILITY WATER DISTRIBUTION PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes water-distribution piping and related components outside the building for water service.
- B. Utility-furnished products include water meters that will be furnished to the site, ready for installation.

1.2 DEFINITIONS

- A. EPDM: Ethylene propylene diene terpolymer rubber.
- B. LLDPE: Linear, low-density polyethylene plastic.
- C. PA: Polyamide (nylon) plastic.
- D. PE: Polyethylene plastic.
- E. PP: Polypropylene plastic.
- F. PVC: Polyvinyl chloride plastic.
- G. RTRF: Reinforced thermosetting resin (fiberglass) fittings.
- H. RTRP: Reinforced thermosetting resin (fiberglass) pipe.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Detail precast concrete vault assemblies and indicate dimensions, method of field assembly, and components.
 - 1. Wiring Diagrams: Power, signal, and control wiring for alarms.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: For piping and specialties including relation to other services in same area, drawn to scale. Show piping and specialty sizes and valves, meter and specialty locations, and elevations.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For water valves and specialties to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Regulatory Requirements:
 - 1. Comply with requirements of utility company supplying water. Include tapping of water mains and backflow prevention.
 - 2. Comply with standards of authorities having jurisdiction for potable-water-service piping, including materials, installation, testing, and disinfection.
 - 3. Comply with standards of authorities having jurisdiction for fire-suppression water-service piping, including materials, hose threads, installation, and testing.
- B. Piping materials shall bear label, stamp, or other markings of specified testing agency.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. Comply with ASTM F 645 for selection, design, and installation of thermoplastic water piping.
- E. Comply with FMG's "Approval Guide" or UL's "Fire Protection Equipment Directory" for fire-service-main products.
- F. NFPA Compliance: Comply with NFPA 24 for materials, installations, tests, flushing, and valve and hydrant supervision for fire-service-main piping for fire suppression.
- G. NSF Compliance:
 - 1. Comply with NSF 14 for plastic potable-water-service piping.
 - 2. Comply with NSF 61 Annex G for materials for water-service piping and specialties for domestic water.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Preparation for Transport: Prepare valves, including fire hydrants, according to the following:
 - 1. Ensure that valves are dry and internally protected against rust and corrosion.
 - 2. Protect valves against damage to threaded ends and flange faces.
 - 3. Set valves in best position for handling. Set valves closed to prevent rattling.
- B. During Storage: Use precautions for valves, including fire hydrants, according to the following:
 - 1. Do not remove end protectors unless necessary for inspection; then reinstall for storage.
 - 2. Protect from weather. Store indoors and maintain temperature higher than ambient dew-point temperature. Support off the ground or pavement in watertight enclosures when outdoor storage is necessary.
- C. Handling: Use sling to handle valves and fire hydrants if size requires handling by crane or lift. Rig valves to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.
- D. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.

- E. Protect stored piping from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor when storing inside.
- F. Protect flanges, fittings, and specialties from moisture and dirt.
- G. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.

1.8 PROJECT CONDITIONS

- A. Interruption of Existing Water-Distribution Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water-distribution service according to requirements indicated:
 - 1. Notify Owner no fewer than two days in advance of proposed interruption of service.
 - 2. Do not proceed with interruption of water-distribution service without Owner's written permission.

1.9 COORDINATION

- A. Coordinate connection to water main with utility company.

PART 2 - PRODUCTS

2.1 DUCTILE-IRON PIPE AND FITTINGS

- A. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.
 - 1. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
 - 2. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

2.2 JOINING MATERIALS

- A. Refer to Section 33 0500 "Common Work Results for Utilities" for commonly used joining materials.
- B. Brazing Filler Metals: AWS A5.8, BCuP Series.
- C. Bonding Adhesive for Fiberglass Piping: As recommended by fiberglass piping manufacturer.
- D. Plastic Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

2.3 PIPING SPECIALTIES

- A. Transition Fittings: Manufactured fitting or coupling same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.
- B. Tubular-Sleeve Pipe Couplings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Cascade Waterworks Manufacturing Co.
 - b. Dresser, Inc.
 - c. Ford Meter Box Company, Inc.
 - d. Hays Fluid Controls.
 - e. JCM Industries, Inc.
 - f. Smith-Blair, Inc.
 - g. Viking Johnson.
 2. Description: Metal, bolted, sleeve-type, reducing or transition coupling, with center sleeve, gaskets, end rings, and bolt fasteners and with ends of same sizes as piping to be joined.
 - a. Standard: AWWA C219.
 - b. Center-Sleeve Material: Manufacturer's standard.
 - c. Gasket Material: Natural or synthetic rubber.
 - d. Pressure Rating: 150 psig (1035 kPa) minimum.
 - e. Metal Component Finish: Corrosion-resistant coating or material.
- C. Split-Sleeve Pipe Couplings:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Victaulic Company.
 2. Description: Metal, bolted, split-sleeve-type, reducing or transition coupling with sealing pad and closure plates, O-ring gaskets, and bolt fasteners.
 - a. Standard: AWWA C219.
 - b. Sleeve Material: Manufacturer's standard.
 - c. Sleeve Dimensions: Of thickness and width required to provide pressure rating.
 - d. Gasket Material: O-rings made of EPDM rubber, unless otherwise indicated.
 - e. Pressure Rating: 150 psig (1035 kPa) minimum.
 - f. Metal Component Finish: Corrosion-resistant coating or material.
- D. Flexible Connectors:
1. Nonferrous-Metal Piping: Bronze hose covered with bronze wire braid; with copper-tube, pressure-type, solder-joint ends or bronze flanged ends brazed to hose.
 2. Ferrous-Metal Piping: Stainless-steel hose covered with stainless-steel wire braid; with ASME B1.20.1, threaded steel pipe nipples or ASME B16.5, steel pipe flanges welded to hose.
- E. Dielectric Fittings:
1. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
 2. Dielectric Unions:
 - a. Description:
 - 1) Standard: ASSE 1079.
 - 2) Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C).
 - 3) End Connections: Solder-joint copper alloy and threaded ferrous.
 3. Dielectric Flanges:
 - a. Description:
 - 1) Standard: ASSE 1079.
 - 2) Factory-fabricated, bolted, companion-flange assembly.

- 3) Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C).
- 4) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
- 4. Dielectric-Flange Insulating Kits:
 - a. Description:
 - 1) Nonconducting materials for field assembly of companion flanges.
 - 2) Pressure Rating: 150 psig (1035 kPa).
 - 3) Gasket: Neoprene or phenolic.
 - 4) Bolt Sleeves: Phenolic or polyethylene.
 - 5) Washers: Phenolic with steel backing washers.
- 5. Dielectric Nipples:
 - a. Description:
 - 1) Standard: IAPMO PS 66
 - 2) Electroplated steel nipple. complying with ASTM F 1545.
 - 3) Pressure Rating: 300 psig (2070 kPa) at 225 deg F (107 deg C).
 - 4) End Connections: Male threaded or grooved.
 - 5) Lining: Inert and noncorrosive, propylene.

2.4 CORROSION-PROTECTION PIPING ENCASEMENT

- A. Encasement for Underground Metal Piping:
 - 1. Standards: ASTM A 674 or AWWA C105.
 - 2. Form: Sheet or tube.
 - 3. Material: LLDPE film of 0.008-inch (0.20-mm) minimum thickness.
 - 4. Material: LLDPE film of 0.008-inch (0.20-mm) minimum thickness, or high-density, crosslaminated PE film of 0.004-inch (0.10-mm) minimum thickness.
 - 5. Material: High-density, crosslaminated PE film of 0.004-inch (0.10-mm) minimum thickness.
 - 6. Color: Black.

2.5 GATE VALVES

- A. Bronze Gate Valves:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane; Crane Energy Flow Solutions.
 - b. Hammond Valve.
 - c. Jenkins Valves; Crane Energy Flow Solutions.
 - d. Milwaukee Valve Company.
 - e. NIBCO INC.
 - f. Red-White Valve Corporation.
 - g. Stockham; Crane Energy Flow Solutions.
 - 2. OS&Y, Rising-Stem Gate Valves:
 - a. Description: Bronze body and bonnet and bronze stem.
 - 1) Standards: UL 262 and FMG approved.
 - 2) Minimum Pressure Rating: 175 psig (1207 kPa).
 - 3) End Connections: Threaded.
 - 3. Nonrising-Stem Gate Valves:
 - a. Description: Class 125, Type 1, bronze with solid wedge, threaded ends, and malleable-iron handwheel.
 - 1) Standard: MSS SP-80.

2.6 WATER METERS

- A. Water meters will be furnished by utility company.

2.7 BACKFLOW PREVENTERS

A. Reduced-Pressure-Principle Backflow Preventers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ames Fire & Waterworks.
 - b. Conbraco Industries, Inc.
 - c. FEBCO.
 - d. Flomatic Corporation.
 - e. Watts; a Watts Water Technologies company.
2. Standard: ASSE 1013.
3. Operation: Continuous-pressure applications.
4. Body: Bronze for NPS 2 (DN 50) and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 (DN 65) and larger.
5. End Connections: Threaded for NPS 2 (DN 50) and smaller; **[flanged]** **<Insert type>** for NPS 2-1/2 (DN 65) and larger.
6. Accessories:
 - a. Valves: Ball type with threaded ends on inlet and outlet of NPS 2 (DN 50) and smaller; OS&Y gate type with flanged ends on inlet and outlet of NPS 2-1/2 (DN 65) and larger.
 - b. Air-Gap Fitting: ASME A112.1.2, matching backflow preventer connection.

B. Backflow Preventer Test Kits:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Conbraco Industries, Inc.
 - b. FEBCO.
 - c. Flomatic Corporation.
 - d. Watts; a Watts Water Technologies company.
 - e. Wilkins.
2. Description: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

PART 3 - EXECUTION

3.1 EARTHWORK

- A. Refer to Section 31 2000 "Earth Moving" for excavating, trenching, and backfilling.

3.2 PIPING APPLICATIONS

- A. General: Use pipe, fittings, and joining methods for piping systems according to the following applications.
- B. Transition couplings and special fittings with pressure ratings at least equal to piping pressure rating may be used, unless otherwise indicated.

- C. Do not use flanges or unions for underground piping.
- D. Flanges, unions, grooved-end-pipe couplings, and special fittings may be used, instead of joints indicated, on aboveground piping and piping in vaults.
- E. Underground water-service piping NPS 3 to NPS 8 (DN 100 to DN 200) shall be the following:
 - 1. Ductile-iron, push-on-joint pipe; ductile-iron, push-on-joint fittings; and gasketed joints.

3.3 VALVE APPLICATIONS

- A. General Application: Use mechanical-joint-end valves for NPS 3 (DN 80) and larger underground installation. Use threaded- or flanged-end valves for installation in vaults. Use UL/FMG, nonrising-stem gate valves for installation with indicator posts. Use corporation valves and curb valves with ends compatible with piping, for NPS 2 (DN 50) and smaller installation.

3.4 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. See Section 33 0500 "Common Work Results for Utilities" for piping-system common requirements.

3.5 PIPING INSTALLATION

- A. Water-Main Connection: Arrange with utility company for tap of size and in location indicated in water main.
- B. Water-Main Connection: Tap water main according to requirements of water utility company and of size and in location indicated.
- C. Make connections larger than NPS 2 (DN 50) with tapping machine according to the following:
 - 1. Install tapping sleeve and tapping valve according to MSS SP-60.
 - 2. Install tapping sleeve on pipe to be tapped. Position flanged outlet for gate valve.
 - 3. Use tapping machine compatible with valve and tapping sleeve; cut hole in main. Remove tapping machine and connect water-service piping.
 - 4. Install gate valve onto tapping sleeve. Comply with MSS SP-60. Install valve with stem pointing up and with valve box.
- D. Make connections NPS 2 (DN 50) and smaller with drilling machine according to the following:
 - 1. Install service-saddle assemblies and corporation valves in size, quantity, and arrangement required by utility company standards.
 - 2. Install service-saddle assemblies on water-service pipe to be tapped. Position outlets for corporation valves.
 - 3. Use drilling machine compatible with service-saddle assemblies and corporation valves. Drill hole in main. Remove drilling machine and connect water-service piping.
 - 4. Install corporation valves into service-saddle assemblies.
 - 5. Install manifold for multiple taps in water main.
 - 6. Install curb valve in water-service piping with head pointing up and with service box.
- E. Install ductile-iron, water-service piping according to AWWA C600 and AWWA M41.

- F. Bury piping with depth of cover over top at least , with top at least 12 inches (300 mm) below level of maximum frost penetration, and according to the following:
 - 1. In Loose Gravelly Soil and Rock: With at least 12 inches (300 mm) additional cover.
- G. Install piping by tunneling or jacking, or combination of both, under streets and other obstructions that cannot be disturbed.
- H. Extend water-service piping and connect to water-supply source and building-water-piping systems at outside face of building wall in locations and pipe sizes indicated.
 - 1. Terminate water-service piping at building wall until building-water-piping systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building-water-piping systems when those systems are installed.
- I. Sleeves are specified in Section 22 0517 "Sleeves and Sleeve Seals for Plumbing Piping."
- J. Mechanical sleeve seals are specified in Section 22 0517 "Sleeves and Sleeve Seals for Plumbing Piping."
- K. Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.
- L. See Section 22 1116 "Domestic Water Piping" for potable-water piping inside the building.

3.6 JOINT CONSTRUCTION

- A. See Section 33 0500 "Common Work Results for Utilities" for basic piping joint construction.
- B. Make pipe joints according to the following:
 - 1. Ductile-Iron Piping, Gasketed Joints for Water-Service Piping: AWWA C600 and AWWA M41.
 - 2. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
 - a. Dielectric Fittings for NPS 2 (DN 50) and Smaller: Use dielectric nipples unions.
 - b. Dielectric Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric flanges flange kits nipples.
 - c. Dielectric Fittings for NPS 5 (DN 125) and Larger: Use dielectric flange kits.

3.7 ANCHORAGE INSTALLATION

- A. Anchorage, General: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:
 - 1. Concrete thrust blocks.
 - 2. Locking mechanical joints.
 - 3. Set-screw mechanical retainer glands.
 - 4. Bolted flanged joints.
 - 5. Heat-fused joints.
 - 6. Pipe clamps and tie rods.
 - 7.
- B. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches. Include anchorages for the following piping systems:

1. Gasketed-Joint, Ductile-Iron, Water-Service Piping: According to AWWA C600.
2. Gasketed-Joint, PVC Water-Service Piping: According to AWWA M23.
3. Bonded-Joint Fiberglass, Water-Service Piping: According to AWWA M45.
4. Fire-Service-Main Piping: According to NFPA 24.

- C. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

3.8 VALVE INSTALLATION

- A. AWWA Gate Valves: Comply with AWWA C600 and AWWA M44. Install each underground valve with stem pointing up and with valve box.
- B. AWWA Valves Other Than Gate Valves: Comply with AWWA C600 and AWWA M44.
- C. UL/FMG, Gate Valves: Comply with NFPA 24. Install each underground valve and valves in vaults with stem pointing up and with vertical cast-iron indicator post.
- D. UL/FMG, Valves Other Than Gate Valves: Comply with NFPA 24.
- E. MSS Valves: Install as component of connected piping system.
- F. Corporation Valves and Curb Valves: Install each underground curb valve with head pointed up and with service box.
- G. Relief Valves: Comply with AWWA C512. Install aboveground with shutoff valve on inlet.

3.9 WATER METER INSTALLATION

- A. Install water meters, piping, and specialties according to utility company's written instructions.

3.10 BACKFLOW PREVENTER INSTALLATION

- A. Install backflow preventers of type, size, and capacity indicated. Include valves and test cocks. Install according to requirements of plumbing and health department and authorities having jurisdiction.
- B. Do not install backflow preventers that have relief drain in vault or in other spaces subject to flooding.
- C. Do not install bypass piping around backflow preventers.
- D. Support NPS 2-1/2 (DN 65) and larger backflow preventers, valves, and piping near floor and on brick or concrete piers.

3.11 PROTECTIVE ENCLOSURE INSTALLATION

- A. Install concrete base level and with top approximately 2 inches (50 mm) above grade.
- B. Install protective enclosure over valves and equipment.
- C. Anchor protective enclosure to concrete base.

3.12 CONNECTIONS

- A. See Section 33 0500 "Common Work Results for Utilities" for piping connections to valves and equipment.
- B. Connect water-distribution piping to interior domestic water and fire-suppression piping.

3.13 FIELD QUALITY CONTROL

- A. Piping Tests: Conduct piping tests before joints are covered and after concrete thrust blocks have hardened sufficiently. Fill pipeline 24 hours before testing and apply test pressure to stabilize system. Use only potable water.
- B. Hydrostatic Tests: Test at not less than one-and-one-half times working pressure for two hours.
 - 1. Increase pressure in 50-psig (350-kPa) increments and inspect each joint between increments. Hold at test pressure for 1 hour; decrease to 0 psig (0 kPa). Slowly increase again to test pressure and hold for 1 more hour. Maximum allowable leakage is 2 quarts (1.89 L) per hour per 100 joints. Remake leaking joints with new materials and repeat test until leakage is within allowed limits.
- C. Prepare reports of testing activities.

3.14 IDENTIFICATION

- A. Install continuous underground detectable warning tape during backfilling of trench for underground water-distribution piping. Locate below finished grade, directly over piping. Underground warning tapes are specified in Section 31 2000 "Earth Moving."
- B. Permanently attach equipment nameplate or marker indicating plastic water-service piping, on main electrical meter panel. See Section 33 0500 "Common Work Results for Utilities" for identifying devices.

3.15 CLEANING

- A. Clean and disinfect water-distribution piping as follows:
 - 1. Purge new water-distribution piping systems and parts of existing systems that have been altered, extended, or repaired before use.
 - 2. Use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in NFPA 24 for flushing of piping. Flush piping system with clean, potable water until dirty water does not appear at points of outlet.
 - 3. Use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in AWWA C651 or do as follows:
 - a. Fill system or part of system with water/chlorine solution containing at least 50 ppm of chlorine; isolate and allow to stand for 24 hours.
 - b. Drain system or part of system of previous solution and refill with water/chlorine solution containing at least 200 ppm of chlorine; isolate and allow to stand for 3 hours.

- c. After standing time, flush system with clean, potable water until no chlorine remains in water coming from system.
 - d. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedure if biological examination shows evidence of contamination.
- B. Prepare reports of purging and disinfecting activities.

END OF SECTION

FOR REFERENCE ONLY

SECTION 22 1116 - DOMESTIC WATER PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Under-building-slab and aboveground domestic water pipes, tubes, and fittings inside buildings.
 - 2. Encasement for piping.
- B. Related Requirements:
 - 1. Section 22 1113 "Facility Water Distribution Piping" for water-service piping outside the building from source to the point where water-service piping enters the building.

1.2 ACTION SUBMITTALS

- A. Product Data: For transition fittings and dielectric fittings.

1.3 INFORMATIONAL SUBMITTALS

- A. System purging and disinfecting activities report.

1.4 FIELD CONDITIONS

- A. Interruption of Existing Water Service: Do not interrupt water service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:
 - 1. Notify Owner no fewer than two days in advance of proposed interruption of water service.
 - 2. Do not interrupt water service without Owner's written permission.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.
- B. Potable-water piping and components shall comply with NSF 14 and NSF 61 Annex G. Plastic piping components shall be marked with "NSF-pw."

2.2 COPPER TUBE AND FITTINGS

- A. Hard Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B) water tube, drawn temper.
- B. Cast-Copper, Solder-Joint Fittings: ASME B16.18, pressure fittings.
- C. Wrought-Copper, Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.
- D. Bronze Flanges: ASME B16.24, Class 150, with solder-joint ends.

- E. Copper Unions:
1. MSS SP-123.
 2. Cast-copper-alloy, hexagonal-stock body.
 3. Ball-and-socket, metal-to-metal seating surfaces.
 4. Solder-joint or threaded ends.
- F. Copper Pressure-Seal-Joint Fittings:
1. Manufacturers: Subject to compliance with requirements, provide products by the following
 - a. Elkhart Products Corporation.
 - b. NIBCO Inc.
 - c. Viega LLC.
 2. Fittings for NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM-rubber, O-ring seal in each end.
 3. Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Cast-bronze or wrought-copper fitting with EPDM-rubber, O-ring seal in each end.
- G. Copper-Tube, Extruded-Tee Connections:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. T-Drill Industries Inc.
 2. Description: Tee formed in copper tube according to ASTM F 2014.
- H. Appurtenances for Grooved-End Copper Tubing:
1. Manufacturers: Subject to compliance with requirements, provide products by the following
 - a. Anvil International; a subsidiary of Mueller Water Products, Inc.
 - b. Shurjoint Piping Products
 - c. Victaulic Company.
 2. Bronze Fittings for Grooved-End, Copper Tubing: ASTM B 75 (ASTM B 75M) copper tube or ASTM B 584 bronze castings.
 3. Mechanical Couplings for Grooved-End Copper Tubing:
 - a. Copper-tube dimensions and design similar to AWWA C606.
 - b. Ferrous housing sections.
 - c. EPDM-rubber gaskets suitable for hot and cold water.
 - d. Bolts and nuts.
 - e. Minimum Pressure Rating: 300 psig (2070 kPa).

2.3 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials:
1. AWWA C110/A21.10, rubber, flat face, 1/8 inch (3.2 mm) thick or ASME B16.21, nonmetallic and asbestos free unless otherwise indicated.
 2. Full-face or ring type unless otherwise indicated.
- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Solder Filler Metals: ASTM B 32, lead-free alloys.
- D. Flux: ASTM B 813, water flushable.

- E. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
- F. Solvent Cements for Joining CPVC Piping and Tubing: ASTM F 493.
- G. Solvent Cements for Joining PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
- H. Plastic, Pipe-Flange Gaskets, Bolts, and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.

2.4 ENCASEMENT FOR PIPING

- A. Standard: ASTM A 674 or AWWA C105/A21.5.
- B. Form: Sheet or tube.
- C. Color: Black or natural.

2.5 TRANSITION FITTINGS

- A. General Requirements:
 - 1. Same size as pipes to be joined.
 - 2. Pressure rating at least equal to pipes to be joined.
 - 3. End connections compatible with pipes to be joined.
- B. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
- C. Sleeve-Type Transition Coupling: AWWA C219.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by the following :
 - a. Cascade Waterworks Manufacturing Co.
 - b. Dresser, Inc.
 - c. Ford Meter Box Company, Inc. (The).
 - d. JCM Industries, Inc.
 - e. Romac Industries, Inc.
 - f. Smith-Blair, Inc.
 - g. Viking Johnson.

2.6 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by the following :
 - a. A.Y. McDonald Mfg. Co.
 - b. Capitol Manufacturing Company.

- c. Central Plastics Company.
 - d. Hart Industries International, Inc.
 - e. Jomar Valve.
 - f. Matco-Norca.
 - g. Watts; a Watts Water Technologies company.
 - h. Wilkins.
 - 2. Standard: ASSE 1079.
 - 3. Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C).
 - 4. End Connections: Solder-joint copper alloy and threaded ferrous.
- C. Dielectric Flanges:
- 1. Manufacturers: Subject to compliance with requirements, provide products by the following :
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.
 - c. Matco-Norca.
 - d. Watts; a Watts Water Technologies company.
 - e. Wilkins.
 - 2. Standard: ASSE 1079.
 - 3. Factory-fabricated, bolted, companion-flange assembly.
 - 4. Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C).
 - 5. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
- D. Dielectric Nipples:
- 1. Manufacturers: Subject to compliance with requirements, provide products by the following :
 - a. Elster Perfection Corporation.
 - b. Grinnell Mechanical Products.
 - c. Matco-Norca.
 - d. Precision Plumbing Products, Inc.
 - e. Victaulic Company.
 - 2. Standard: IAPMO PS 66.
 - 3. Electroplated steel nipple complying with ASTM F 1545.
 - 4. Pressure Rating and Temperature: [300 psig (2070 kPa) at 225 deg F (107 deg C)]
 - 5. End Connections: Male threaded or grooved.
 - 6. Lining: Inert and noncorrosive, propylene.

PART 3 - EXECUTION

3.1 EARTHWORK

- A. Comply with requirements in Section 31 2000 "Earth Moving" for excavating, trenching, and backfilling.

3.2 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.

- B. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."
- C. Install ductile-iron piping under building slab with restrained joints according to AWWA C600 and AWWA M41.
- D. Install underground copper tube ductile-iron pipe in PE encasement according to ASTM A 674 or AWWA C105/A21.5.
- E. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve inside the building at each domestic water-service entrance. Comply with requirements for pressure gages in Section 22 0519 "Meters and Gages for Plumbing Piping" and with requirements for drain valves and strainers in Section 22 1119 "Domestic Water Piping Specialties."
- F. Install shutoff valve immediately upstream of each dielectric fitting.
- G. Install water-pressure-reducing valves downstream from shutoff valves. Comply with requirements for pressure-reducing valves in Section 22 1119 "Domestic Water Piping Specialties."
- H. Install domestic water piping level and plumb.
- I. Rough-in domestic water piping for water-meter installation according to utility company's requirements.
- J. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices in Section 22 0548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- K. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
- L. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- M. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.
- N. Install piping to permit valve servicing.
- O. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than the system pressure rating used in applications below unless otherwise indicated.
- P. Install piping free of sags and bends.
- Q. Install fittings for changes in direction and branch connections.
- R. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.

- S. Install pressure gages on suction and discharge piping for each plumbing pump and packaged booster pump. Comply with requirements for pressure gages in Section 22 0519 "Meters and Gages for Plumbing Piping."
- T. Install thermostats in hot-water circulation piping. Comply with requirements for thermostats in Section 22 1123 "Domestic Water Pumps."
- U. Install thermometers on inlet and outlet piping from each water heater. Comply with requirements for thermometers in Section 22 0519 "Meters and Gages for Plumbing Piping."
- V. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 22 0517 "Sleeves and Sleeve Seals for Plumbing Piping."
- W. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 22 0517 "Sleeves and Sleeve Seals for Plumbing Piping."
- X. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 22 0518 "Escutcheons for Plumbing Piping."

3.3 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- D. Brazed Joints for Copper Tubing: Comply with CDA's "Copper Tube Handbook," "Brazed Joints" chapter.
- E. Soldered Joints for Copper Tubing: Apply ASTM B 813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B 828 or CDA's "Copper Tube Handbook."
- F. Pressure-Sealed Joints for Copper Tubing: Join copper tube and pressure-seal fittings with tools recommended by fitting manufacturer.
- G. Push-on Joints for Copper Tubing: Clean end of tube. Measure insertion depth with manufacturer's depth gage. Join copper tube and push-on-joint fittings by inserting tube to measured depth.
- H. Extruded-Tee Connections: Form tee in copper tube according to ASTM F 2014. Use tool designed for copper tube; drill pilot hole, form collar for outlet, dimple tube to form seating stop, and braze branch tube into collar.

- I. Joint Construction for Grooved-End Copper Tubing: Make joints according to AWWA C606. Roll groove ends of tubes. Lubricate and install gasket over ends of tubes or tube and fitting. Install coupling housing sections over gasket with keys seated in tubing grooves. Install and tighten housing bolts.
- J. Joint Construction for Grooved-End, Ductile-Iron Piping: Make joints according to AWWA C606. Cut round-bottom grooves in ends of pipe at gasket-seat dimension required for specified (flexible or rigid) joint. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections over gasket with keys seated in piping grooves. Install and tighten housing bolts.
- K. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.
- L. Joints for Dissimilar-Material Piping: Make joints using adapters compatible with materials of both piping systems.

3.4 TRANSITION FITTING INSTALLATION

- A. Install transition couplings at joints of dissimilar piping.
- B. Transition Fittings in Underground Domestic Water Piping:
 - 1. Fittings for NPS 1-1/2 (DN 40) and Smaller: Fitting-type coupling.
 - 2. Fittings for NPS 2 (DN 50) and Larger: Sleeve-type coupling.
- C. Transition Fittings in Aboveground Domestic Water Piping NPS 2 (DN 50) and Smaller: Plastic-to-metal transition fittings unions.

3.5 DIELECTRIC FITTING INSTALLATION

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. Dielectric Fittings for NPS 2 (DN 50) and Smaller: Use dielectric couplings or nipples nipples unions.
- C. Dielectric Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric flanges flange kits nipples.
- D. Dielectric Fittings for NPS 5 (DN 125) and Larger: Use dielectric flange kits.

3.6 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements for seismic-restraint devices in Section 22 0548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. Comply with requirements for pipe hanger, support products, and installation in Section 22 0529 "Hangers and Supports for Plumbing Piping and Equipment."
 - 1. Vertical Piping: MSS Type 8 or 42, clamps.
 - 2. Individual, Straight, Horizontal Piping Runs:

- a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
 - b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
 - c. Longer Than 100 Feet (30 m) if Indicated: MSS Type 49, spring cushion rolls.
 3. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
 4. Base of Vertical Piping: MSS Type 52, spring hangers.
 - C. Support vertical piping and tubing at base and at each floor.
 - D. Rod diameter may be reduced one size for double-rod hangers, to a minimum of 3/8 inch (10 mm).
 - E. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
 1. NPS 3/4 (DN 20) and Smaller: 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
 2. NPS 1 and NPS 1-1/4 (DN 25 and DN 32): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
 3. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
 4. NPS 2-1/2 (DN 65): 108 inches (2700 mm) with 1/2-inch (13-mm) rod.
 5. NPS 3 to NPS 5 (DN 80 to DN 125): 10 feet (3 m) with 1/2-inch (13-mm) rod.
 6. NPS 6 (DN 150): 10 feet (3 m) with 5/8-inch (16-mm) rod.
 7. NPS 8 (DN 200): 10 feet (3 m) with 3/4-inch (19-mm) rod.
 - F. Install supports for vertical copper tubing every 10 feet (3 m).
 - G. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
 1. NPS 1-1/4 (DN 32) and Smaller: 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
 2. NPS 1-1/2 (DN 40): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
 3. NPS 2 (DN 50): 10 feet (3 m) with 3/8-inch (10-mm) rod.
 4. NPS 2-1/2 (DN 65): 11 feet (3.4 m) with 1/2-inch (13-mm) rod.
 5. NPS 3 and NPS 3-1/2 (DN 80 and DN 90): 12 feet (3.7 m) with 1/2-inch (13-mm) rod.
 6. NPS 4 and NPS 5 (DN 100 and DN 125): 12 feet (3.7 m) with 5/8-inch (16-mm) rod.
 7. NPS 6 (DN 150): 12 feet (3.7 m) with 3/4-inch (19-mm) rod.
 8. NPS 8 to NPS 12 (DN 200 to DN 300): 12 feet (3.7 m) with 7/8-inch (22-mm) rod.
 - H. Support piping and tubing not listed in this article according to MSS SP-69 and manufacturer's written instructions.
- 3.7 CONNECTIONS
- A. Drawings indicate general arrangement of piping, fittings, and specialties.
 - B. When installing piping adjacent to equipment and machines, allow space for service and maintenance.
 - C. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.
 - D. Connect domestic water piping to water-service piping with shutoff valve; extend and connect to the following:

1. Water Heaters: Cold-water inlet and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.
2. Plumbing Fixtures: Cold- and hot-water-supply piping in sizes indicated, but not smaller than that required by plumbing code.
3. Equipment: Cold- and hot-water-supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 (DN 65) and larger.

3.8 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification materials and installation in Section 22 0553 "Identification for Plumbing Piping and Equipment."
- B. Label pressure piping with system operating pressure.

3.9 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 1. Piping Inspections:
 - a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.
 - b. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
 - 1) Roughing-in Inspection: Arrange for inspection of piping before concealing or closing in after roughing in and before setting fixtures.
 - 2) Final Inspection: Arrange for authorities having jurisdiction to observe tests specified in "Piping Tests" Subparagraph below and to ensure compliance with requirements.
 - c. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections and arrange for reinspection.
 - d. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
 2. Piping Tests:
 - a. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
 - b. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.
 - c. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
 - d. Cap and subject piping to static water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow it to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
 - e. Repair leaks and defects with new materials, and retest piping or portion thereof until satisfactory results are obtained.
 - f. Prepare reports for tests and for corrective action required.
- B. Domestic water piping will be considered defective if it does not pass tests and inspections.

- C. Prepare test and inspection reports.

3.10 ADJUSTING

- A. Perform the following adjustments before operation:
 - 1. Close drain valves, hydrants, and hose bibbs.
 - 2. Open shutoff valves to fully open position.
 - 3. Open throttling valves to proper setting.
 - 4. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
 - a. Manually adjust ball-type balancing valves in hot-water-circulation return piping to provide hot-water flow in each branch.
 - b. Adjust calibrated balancing valves to flows indicated.
 - 5. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
 - 6. Remove and clean strainer screens. Close drain valves and replace drain plugs.
 - 7. Check plumbing specialties and verify proper settings, adjustments, and operation.

3.11 CLEANING

- A. Clean and disinfect potable domestic water piping as follows:
 - 1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
 - 2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below:
 - a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
 - b. Fill and isolate system according to either of the following:
 - 1) Fill system or part thereof with water/chlorine solution with at least 50 ppm (50 mg/L) of chlorine. Isolate with valves and allow to stand for 24 hours.
 - 2) Fill system or part thereof with water/chlorine solution with at least 200 ppm (200 mg/L) of chlorine. Isolate and allow to stand for three hours.
 - c. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
 - d. Repeat procedures if biological examination shows contamination.
 - e. Submit water samples in sterile bottles to authorities having jurisdiction.
 - 3. Secondary disinfection is required for projects constructed in phases before building is turned over to the owner, to prevent Legionella and other pathogens growth in standing domestic water system.
- B. Clean non-potable domestic water piping as follows:
 - 1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
 - 2. Use purging procedures prescribed by authorities having jurisdiction or; if methods are not prescribed, follow procedures described below:
 - a. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.
- C. Prepare and submit reports of purging and disinfecting activities. Include copies of water-sample approvals from authorities having jurisdiction.

- D. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

3.12 PIPING SCHEDULE

- A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
- B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.
- C. Fitting Option: Extruded-tee connections and brazed joints may be used on aboveground copper tubing.
- D. Under-building-slab, domestic water, building-service piping, NPS 3 (DN 80) and smaller, shall be the following:
 - 1. Soft copper tube, ASTM B 88, Type K (ASTM B 88M, Type A) ASTM B 88, Type L (ASTM B 88M, Type B); wrought-copper, solder-joint fittings; and brazed copper pressure-seal fittings; and pressure-sealed joints.
- E. Under-building-slab, domestic water piping, NPS 2 (DN 50) and smaller, shall be one of the following:
 - 1. Hard or soft copper tube, ASTM B 88, Type L (ASTM B 88M, Type B); wrought-copper, solder-joint fittings; and brazed joints.
- F. Aboveground domestic water piping, NPS 2 (DN 50) and smaller, shall be the following:
 - 1. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B); wrought-copper, solder-joint fittings; and soldered joints.
- G. Aboveground domestic water piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100), shall be one of the following:
 - 1. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B); wrought-copper, solder-joint fittings; and soldered joints.

3.13 VALVE SCHEDULE

- A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
 - 1. Shutoff Duty: Use ball or gate valves for piping NPS 2 (DN 50) and smaller. Use butterfly, ball, or gate valves with flanged ends for piping NPS 2-1/2 (DN 65) and larger.
 - 2. Throttling Duty: Use ball or globe valves for piping NPS 2 (DN 50) and smaller. Use butterfly or ball valves with flanged ends for piping NPS 2-1/2 (DN 65) and larger.
 - 3. Hot-Water Circulation Piping, Balancing Duty: Calibrated Memory-stop balancing valves.
 - 4. Drain Duty: Hose-end drain valves.
- B. Use check valves to maintain correct direction of domestic water flow to and from equipment.
- C. Iron grooved-end valves may be used with grooved-end piping.

END OF SECTION

June 15, 2026

Smithsonian OPDC Project No. 2533105

SmithGroup Project No. 00100084

FOR REFERENCE ONLY

SECTION 22 1119 - DOMESTIC WATER PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Backflow preventers.
2. Balancing valves.
3. Temperature-actuated, water mixing valves.
4. Strainers.
5. Hose bibbs.
6. Wall hydrants.
7. Ground hydrants.
8. Water-hammer arresters.
9. Trap-seal primer valves.
10. Trap-seal primer systems.
11. Flexible connectors.
12. Water meters.

B. Related Requirements:

1. Section 22 0519 "Meters and Gages for Plumbing Piping" for thermometers, pressure gages, and flow meters in domestic water piping.
2. Section 22 1116 "Domestic Water Piping" for water meters.
3. Section 22 3200 "Domestic Water Filtration Equipment" for water filters in domestic water piping.
4. Section 22 4300 "Medical Plumbing Fixtures" for thermostatic mixing valves for sitz baths, thermostatic mixing-valve assemblies for hydrotherapy equipment, and outlet boxes for dialysis equipment.
5. Section 22 4500 "Emergency Plumbing Fixtures" for water tempering equipment.
6. Section 22 4713 "Drinking Fountains" for water filters for water coolers.
7. Section 22 4716 "Pressure Water Coolers" for water filters for water coolers.
8. Section 22 4723 "Remote Water Coolers" for water filters for water coolers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For domestic water piping specialties.

1. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For domestic water piping specialties to include in emergency, operation, and maintenance manuals.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR PIPING SPECIALTIES

- A. Potable-water piping and components shall comply with NSF 61 Annex G and NSF 14.

2.2 PERFORMANCE REQUIREMENTS

- A. Minimum Working Pressure for Domestic Water Piping Specialties: 125 psig (860 kPa) unless otherwise indicated.

2.3 BACKFLOW PREVENTERS

- A. Reduced-Pressure-Principle Backflow Preventers:

1. Manufacturers: Subject to compliance with requirements, provide products by the following :
 - a. Ames Fire & Waterworks.
 - b. Conbraco Industries, Inc.
 - c. FEBCO.
 - d. Watts; a Watts Water Technologies company.
 - e. Zurn Industries, LLC.
2. Standard: ASSE 1013.
3. Operation: Continuous-pressure applications.
4. Body: Bronze for NPS 2 (DN 50) and smaller; cast iron with interior lining that complies with AWWA C550 or that is FDA approved for NPS 2-1/2 (DN 65) and larger.
5. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 (DN 65) and larger.
6. Configuration: Designed for horizontal, straight-through flow.
7. Accessories:
 - a. Valves NPS 2 (DN 50) and Smaller: Ball type with threaded ends on inlet and outlet.
 - b. Valves NPS 2-1/2 (DN 65) and Larger: Outside-screw and yoke-gate type with flanged ends on inlet and outlet.
 - c. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.

2.4 BALANCING VALVES

- A. Copper-Alloy Calibrated Balancing Valves :

1. Manufacturers: Subject to compliance with requirements, provide products by the following :
 - a. Armstrong International, Inc.
 - b. Tour & Andersson (Victaulic)
 - c. Flo Fab Inc.
 - d. ITT Corporation.
 - e. NIBCO Inc.
 - f. Schneider Electric USA, Inc.
 - g. TACO Incorporated.
 - h. Watts; a Watts Water Technologies company.
2. Type: **[Ball] [or] [Y-pattern globe]** valve with two readout ports and memory-setting indicator.

3. Body: **[Brass]** [or] **[bronze]**.
4. Size: Same as connected piping, but not larger than NPS 2 (DN 50).
5. Accessories: Meter hoses, fittings, valves, differential pressure meter, and carrying case.
6. etting indicator.
7. Size: Same as connected piping, but not smaller than NPS 2-1/2 (DN 65).

B. Accessories: Meter hoses, fittings, valves, differential pressure meter, and carrying case.

C. Memory-Stop Balancing Valves :

1. Manufacturers: Subject to compliance with requirements, provide products by the following
 - a. Conbraco Industries, Inc.
 - b. Tour & Andersson (Victaulic)
 - c. Hammond Valve.
 - d. Milwaukee Valve Company.
 - e. NIBCO Inc.
 - f. Red-White Valve Corporation.
2. Standard: MSS SP-110 for two-piece, copper-alloy ball valves.
3. Pressure Rating: 400-psig (2760-kPa) minimum CWP.
4. Size: NPS 2 (DN 50) or smaller.
5. Body: Copper alloy.
6. Port: Standard or full port.
7. Ball: Chrome-plated brass.
8. Seats and Seals: Replaceable.
9. End Connections: Solder joint or threaded.
10. Handle: Vinyl-covered steel with memory-setting device.

2.5 TEMPERATURE-ACTUATED, WATER MIXING VALVES

A. Water-Temperature Limiting Devices :

1. Manufacturers: Subject to compliance with requirements, provide products by the following :
 - a. Armstrong International, Inc.
 - b. Cash Acme.
 - c. Conbraco Industries, Inc.
 - d. Honeywell Water Controls.
 - e. Legend Valve.
 - f. Leonard Valve Company.
 - g. Powers; a division of Watts Water Technologies, Inc.
 - h. Symmons Industries, Inc.
 - i. TACO Incorporated.
 - j. Watts; a Watts Water Technologies company.
 - k. Zurn Industries, LLC.
 - l. Tour & Andersson (Victaulic)
2. Standard: ASSE 1070.
3. Pressure Rating: 125 psig (860 kPa).
4. Type: Thermostatically controlled, water mixing valve.
5. Material: Bronze body with corrosion-resistant interior components.
6. Connections: Threaded union inlets and outlet.
7. Accessories: Check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.

8. Valve Finish: Rough bronze.

B. Primary, Thermostatic, Water Mixing Valves :

1. Manufacturers: Subject to compliance with requirements, provide products by the following :
 - a. Armstrong International, Inc.
 - b. Lawler Manufacturing Company, Inc.
 - c. Leonard Valve Company.
 - d. Powers; a division of Watts Water Technologies, Inc.
 - e. Symmons Industries, Inc.
2. Standard: ASSE 1017.
3. Pressure Rating: 125 psig (860 kPa) minimum unless otherwise indicated.
4. Type: thermostatically controlled, water mixing valve.
5. Connections: Threaded union inlets and outlet.
6. Accessories: Manual temperature control, check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.

2.6 HOSE BIBBS

A. Hose Bibbs:

1. Standard: ASME A112.18.1 for sediment faucets.
2. Body Material: Bronze.
3. Seat: Bronze, replaceable.
4. Supply Connections: NPS 1/2 or NPS 3/4 (DN 15 or DN 20) threaded or solder-joint inlet.
5. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
6. Pressure Rating: 125 psig (860 kPa).
7. Vacuum Breaker: Integral nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011.
8. Finish for Equipment Rooms: Rough bronze, or chrome or nickel plated.
9. Finish for Service Areas: Chrome or nickel plated.
10. Finish for Finished Rooms: Chrome or nickel plated.
11. Operation for Equipment Rooms: Wheel handle or operating key.
12. Include operating key with each operating-key hose bibb.
13. Include[**integral**] wall flange with each chrome- or nickel-plated hose bibb.

2.7 WALL HYDRANTS

A. Nonfreeze Wall Hydrants:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
2. Josam Company.
 - a. MIFAB, Inc.
 - b. Prier Products, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Tyler Pipe; a subsidiary of McWane, Inc.
 - e. Watts; a Watts Water Technologies company.
 - f. Woodford Manufacturing Company; a division of WCM Industries, Inc.
 - g. Zurn Industries, LLC.
3. Standard: ASME A112.21.3M for concealed -outlet, self-draining wall hydrants.
4. Pressure Rating: 125 psig (860 kPa).
5. Operation: Loose key.

6. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
7. Inlet: NPS 3/4 or NPS 1 (DN 20 or DN 25).
8. Outlet: Concealed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
9. Box: Deep, flush mounted with cover.
10. Box and Cover Finish: Polished nickel bronze.
11. Outlet: Exposed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
12. Nozzle and Wall-Plate Finish: Polished nickel bronze.
13. Operating Keys(s): One with each wall hydrant.

2.8 GROUND HYDRANTS

A. Nonfreeze Ground Hydrants :

1. Manufacturers: Subject to compliance with requirements, provide products by the following :
2. acturer's name; product name or designation> or comparable product by one of the following:
 - a. Josam Company.
 - b. MIFAB, Inc.
 - c. Murdock-Super Secur; a member of Morris Group International.
 - d. Prier Products, Inc.
 - e. Smith, Jay R. Mfg. Co.
 - f. Tyler Pipe; a subsidiary of McWane, Inc.
 - g. Watts; a Watts Water Technologies company.
 - h. Woodford Manufacturing Company.
 - i. Zurn Industries, LLC.
3. Standard: ASME A112.21.3M.
4. Type: Nonfreeze, concealed-outlet ground hydrant with box.
5. Operation: Loose key.
6. Casing and Operating Rod: Of at least length required for burial of valve below frost line.
7. Inlet: NPS 3/4 (DN 20).
8. Outlet: Garden-hose thread complying with ASME B1.20.7.
9. Drain: Designed with hole to drain into ground when shut off.
10. Box: **[Standard] [Deep]** pattern with cover.
11. Box and Cover Finish: Polished nickel bronze.
12. Operating Key(s): One with each ground hydrant.
13. Vacuum Breaker: ASSE 1011.

2.9 WATER-HAMMER ARRESTERS

A. Water-Hammer Arresters :

1. Manufacturers: Subject to compliance with requirements, provide products by the following :
 - a. AMTROL, Inc.
 - b. Josam Company.
 - c. MIFAB, Inc.
 - d. Precision Plumbing Products, Inc.
 - e. Sioux Chief Manufacturing Company, Inc.
 - f. Smith, Jay R. Mfg. Co.

- g. Tyler Pipe; a subsidiary of McWane, Inc.
- h. Watts; a Watts Water Technologies company.
- i. Zurn Industries, LLC.
- 2. Standard: ASSE 1010 or PDI-WH 201.
- 3. Type: **[Metal bellows] [Copper tube with piston]**.
- 4. Size: ASSE 1010, Sizes AA and A through F, or PDI-WH 201, Sizes A through F.

2.10 TRAP-SEAL PRIMER DEVICE

A. Supply-Type, Trap-Seal Primer Device :

- 1. Manufacturers: Subject to compliance with requirements, provide products by the following :
 - a. MIFAB, Inc.
 - b. Precision Plumbing Products, Inc.
 - c. Sioux Chief Manufacturing Company, Inc.
 - d. Smith, Jay R. Mfg. Co.
 - e. Watts; a Watts Water Technologies company.
- 2. Standard: ASSE 1018.
- 3. Pressure Rating: 125 psig (860 kPa) minimum.
- 4. Body: Bronze.
- 5. Inlet and Outlet Connections: NPS 1/2 (DN 15) threaded, union, or solder joint.
- 6. Gravity Drain Outlet Connection: NPS 1/2 (DN 15) threaded or solder joint.
- 7. Finish: Chrome plated, or rough bronze for units used with pipe or tube that is not chrome finished.

B. Drainage-Type, Trap-Seal Primer Device :

- 1. Manufacturers: Subject to compliance with requirements, provide products by the following :
 - a. Smith, Jay R. Mfg. Co.
- 2. Standard: ASSE 1044, lavatory P-trap with NPS 3/8 (DN 10) minimum, trap makeup connection.
- 3. Size: NPS 1-1/4 (DN 32) minimum.
- 4. Material: Chrome-plated, cast brass.

2.11 TRAP-SEAL PRIMER SYSTEMS

A. Trap-Seal Primer Systems:

- 1. Manufacturers: Subject to compliance with requirements, provide products by the following :
 - a. Precision Plumbing Products, Inc.
- 2. Standard: ASSE 1044.
- 3. Piping: NPS 3/4, ASTM B 88, Type L (DN 20, ASTM B 88M, Type B); copper, water tubing.
- 4. Cabinet: **[Recessed] [Surface]**-mounted steel box with stainless-steel cover.
- 5. Electric Controls: 24-hour timer, solenoid valve, and manual switch for 120-V ac power.
 - a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- 6. Vacuum Breaker: ASSE 1001.
- 7. Number Outlets: **[Four] [Six] [Eight] <Insert number>**.
- 8. Size Outlets: [NPS 1/2 (DN 15)] [NPS 5/8 (DN 18)].

2.12 FLEXIBLE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by the following :
1. Flex-Hose Co., Inc.
 2. Flexicraft Industries.
 3. Flex Pression Ltd.
 4. Flex-Weld Incorporated.
 5. Hyspan Precision Products, Inc.
 6. Mercer Gasket & Shim, Inc.
 7. Metraflex Company (The).
 8. Proco Products, Inc.
 9. TOZEN Corporation.
 10. Unaflex.Universal Metal Hose.
- B. Bronze-Hose Flexible Connectors: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.
1. Working-Pressure Rating: Minimum [200 psig (1380 kPa)] [250 psig (1725 kPa)].
 2. End Connections NPS 2 (DN 50) and Smaller: Threaded copper pipe or plain-end copper tube.
 3. End Connections NPS 2-1/2 (DN 65) and Larger: Flanged copper alloy.
- C. Stainless-Steel-Hose Flexible Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.
1. Working-Pressure Rating: Minimum [200 psig (1380 kPa)] [250 psig (1725 kPa)].
 2. End Connections NPS 2 (DN 50) and Smaller: Threaded steel-pipe nipple.
 3. End Connections NPS 2-1/2 (DN 65) and Larger: Flanged steel nipple.

2.13 WATER METERS

- A. Displacement-Type Water Meters:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. AALIAN
 - b. ABB.
 - c. Carlon Meter.
 - d. Mueller Co.
 - e. Schlumberger Limited.
 - f. Sensus.
 - g. Badger Meter
 2. Description:
 - a. Standard: AWWA C700.
 - b. Pressure Rating: 150-psig (1035-kPa) working pressure.
 - c. Body Design: Nutating disc; totalization meter.
 - d. Registration: In gallons (liters) or cubic feet (cubic meters) as required by utility company.
 - e. Case: Bronze.
 - f. End Connections: Threaded.

- B. Remote Registration System: Direct-reading type complying with AWWA C706; modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly as required by utility company.
- C. Remote Registration System: Encoder type complying with AWWA C707; modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly as required by utility company.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install backflow preventers in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply with authorities having jurisdiction.
 - 1. Locate backflow preventers in same room as connected equipment or system.
 - 2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe-to-floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are unacceptable for this application.
 - 3. Do not install bypass piping around backflow preventers.
- B. Install balancing valves in locations where they can easily be adjusted.
- C. Install temperature-actuated, water mixing valves with check stops or shutoff valves on inlets and with shutoff valve on outlet.
 - 1. Install cabinet-type units recessed in or surface mounted on wall as specified.
- D. Install Y-pattern strainers for water on supply side of each water pressure-reducing valve.
- E. Install ground hydrants with [1 cu. yd. (0.75 cu. m)] **<Insert dimension>** of crushed gravel around drain hole. Set ground hydrants with box flush with grade.
- F. Set nonfreeze, nondraining-type post hydrants in concrete or pavement.
- G. Install water-hammer arresters in water piping according to PDI-WH 201.
- H. Install supply-type, trap-seal primer valves with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust valve for proper flow.
- I. Install trap-seal primer systems with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust system for proper flow.

3.2 CONNECTIONS

- A. Comply with requirements for ground equipment in Section 26 0526 "Grounding and Bonding for Electrical Systems."

- B. Fire-retardant-treated-wood blocking is specified in Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables" for electrical connections.

3.3 LABELING AND IDENTIFYING

- A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
 - 1. Pressure vacuum breakers.
 - 2. Reduced-pressure-principle backflow preventers.
 - 3. Calibrated balancing valves.
 - 4. Primary, thermostatic, water mixing valves.
 - 5. Supply-type, trap-seal primer valves.
 - 6. Trap-seal primer systems.
- B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 22 0553 "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 - 1. Test each reduced-pressure-principle backflow preventer according to authorities having jurisdiction and the device's reference standard.
- B. Domestic water piping specialties will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Set field-adjustable pressure set points of water pressure-reducing valves.
- B. Set field-adjustable flow set points of balancing valves.
- C. Set field-adjustable temperature set points of temperature-actuated, water mixing valves.

END OF SECTION

SECTION 22 1119 - DOMESTIC WATER PIPING SPECIALTIES

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Hose bibbs.
- B. Mistert
- C. Pool Bubblers
- D. Pool Overflow Stand Pipe

1.2 REFERENCE STANDARDS

- A. ASSE 1011 - Performance Requirements for Hose Connection Vacuum Breakers; 2023.
- B. NSF 61 - Drinking Water System Components - Health Effects; 2025, with Addendum
- C. NSF 372 - Drinking Water System Components - Lead Content; 2024.

1.3 SUBMITTALS

- A. See Section 01 3000 - Administrative Requirements for submittal procedures.
- B. Product Data: Provide manufacturer's literature and data sheets for each product. Include information on materials of fabrication, assembly of components, dimensions, ratings, finishes, rough-in requirements, and installed accessories.
- C. Maintenance Materials: Furnish the following for Owner's use in project maintenance:
 - 1. See Section 01 6000 - Product Requirements for additional provisions.
 - 2. Extra Loose Keys for Hose Bibbs: Two.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. See Section 01 7419 - Construction Waste Management and Disposal for packaging waste requirements.
- B. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.
- C. Keep products in original manufacturer's packaging and protect from damage until ready for installation.
- D. Store products under cover and protected from weather and dirt. Elevate above grade.
- E. Protect end connections, flanges, threads, and grooves from dirt and damage.
- F. Protect product interiors against rust and corrosion.
- G. Do not use operating handles or stems as lifting or rigging points.

1.5 WARRANTY

- A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS

- A. Specialties in Potable Water Supply Systems: Provide products complying with NSF 61 and NSF 372.
- B. Source Limitations: Furnish domestic water piping specialties of same kind by same manufacturer.
- C. Provide brass-bodied domestic water piping specialties in DZR brass.

2.2 HOSE BIBBS

- A. Manufacturers:

1. Zurn.
 2. Woodford
 3. Jay R Smith
 4. Prier
 5. Substitutions: See Section 01 6000 - Product Requirements.
- B. Hose Bibbs:
1. Valve: Bronze or brass body with mounting flange, replaceable seat, hose thread spout, and integral or add-on vacuum breaker complying with ASSE 1011.
 2. Operation:
 - a) Exposed Locations in Finished Areas: Loose key.
 3. Finishes:
 - a) Exposed Locations in Finished Areas: Provide in polished chrome or polished brass.
 4. Maximum Working Pressure: 125 psi (8.6 bar).
 5. Working Temperature Range: 33 to 120 degrees F (0.5 to 50 degrees C).

PART 3 EXECUTION

3.1 EXAMINATION

- A. Discard packing materials and verify product interiors are free from debris, damage, and corrosion.
- B. Verify end connections, flanges, threads, and grooves are completely clean without signs of damage or degradation that could result in leakage.
- C. For products containing isolation or shutoff valves, verify isolation and shutoff valves operate smoothly from fully closed to fully open.

3.2 INSTALLATION

- A. Prior to installation of domestic water piping specialties, flush domestic water piping of foreign material.
- B. Install products in accordance with manufacturer's instructions.
- C. Install products level and plumb.
- D. Install products with clearance for access and maintenance.
- E. Support products NPS 2-1/2 (DN 65) and larger independently of surrounding pipe.
- F. Support products with flanged or grooved ends independently of surrounding pipe.
- G. For products containing isolation or shutoff valves, locate valves in horizontal piping with stems at or above center of piping, maintaining unimpeded stem movement.
- H. Locate as indicated on the drawings

3.3 FIELD QUALITY CONTROL

- A. See Section 01 4000 - Quality Requirements for additional requirements.
- B. Inspect each product for damage and defects.
- C. Repair or replace damaged products.
- D. Replace defective products.
- E. For products containing isolation or shutoff valves, exercise isolation and shutoff valves from fully closed to fully open. Confirm smooth operation.
- F. Coordination of Other Tests and Inspections: Provide access to accommodate tests and inspections by independent testing agencies employed by Owner.

3.4 CLEANING

- A. See Section 01 7000 - Execution and Closeout Requirements for additional requirements.
- B. Clean products to remove dirt, paint, and other foreign materials.
- C. Clean surfaces of products exposed to view in finished spaces to remove dirt, fingerprints, paint, and other foreign materials. Restore finishes to match original factory finish.
- D. Clean surfaces of products exposed to view on building exterior to remove dirt, fingerprints, paint, and other foreign materials. Restore finishes to match original factory finish.
- E. Clean strainers, including those internal to other products, prior to mm-dd-yyyy.

3.5 PROTECTION

- A. Protect installed products from damage due to subsequent construction operations.

END OF SECTION

FOR REFERENCE ONLY

SECTION 22 1123 - DOMESTIC WATER PUMPS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. In-line, sealless centrifugal pumps.

1.2 DEFINITIONS

- A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include materials of construction, rated capacities, certified performance curves with operating points plotted on curves, operating characteristics, electrical characteristics, and furnished specialties and accessories.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For domestic water pumps to include in operation and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Retain shipping flange protective covers and protective coatings during storage.
- B. Protect bearings and couplings against damage.
- C. Comply with pump manufacturer's written rigging instructions for handling.

1.7 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 - PRODUCTS

2.1 IN-LINE, SEALLESS CENTRIFUGAL PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following]:
 - 1. Armstrong Pumps Inc.

2. Bell & Gossett; a Xylem brand.
 3. Grundfos Pumps Corp.
 4. TACO Incorporated.
- B. Description: Factory-assembled and -tested, in-line, close-coupled, canned-motor, sealless, overhung-impeller centrifugal pumps.
- C. Pump Construction:
1. Pump and Motor Assembly: Hermetically sealed, replaceable-cartridge type with motor and impeller on common shaft and designed for installation with pump and motor shaft horizontal.
 2. Casing: Bronze, with threaded or companion-flange connections.
 3. Impeller: Plastic.
 4. Motor: Single speed, unless otherwise indicated.

2.2 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 22 0513 "Common Motor Requirements for Plumbing Equipment."
1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

2.3 CONTROLS

- A. Pressure Switches: Electric, adjustable for control of water-supply pump.
1. Type: Water-immersion pressure sensor, for installation in piping.
 2. Operation of Pump: On or off.
 3. Transformer: Provide if required.
- B. Thermostats: Electric; adjustable for control of hot-water circulation pump.
1. Type: Water-immersion temperature sensor, for installation in piping.
 2. Range: 65 to 200 deg F (18 to 93 deg C) .
 3. Operation of Pump: On or off.
 4. Transformer: Provide if required.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of domestic-water-piping system to verify actual locations of connections before pump installation.

3.2 PUMP INSTALLATION

- A. Comply with HI 1.4.
- B. Install in-line, sealless centrifugal pumps with shaft horizontal unless otherwise indicated.
- C. Install horizontally mounted, in-line, close-coupled centrifugal pumps with shaft(s) horizontal.

- D. Install vertically mounted, in-line, close-coupled centrifugal pumps with shaft vertical.
- E. Install continuous-thread hanger rods and spring hangers of size required to support pump weight.
 - 1. Comply with requirements for vibration isolation devices specified in Section 22 0548.13 "Vibration Controls for Plumbing Piping and Equipment." Fabricate brackets or supports as required.
 - 2. Comply with requirements for hangers and supports specified in Section 22 0529 "Hangers and Supports for Plumbing Piping and Equipment."
- F. Install pressure switches in water supply piping.
- G. Install thermostats in hot-water return piping.

3.3 CONNECTIONS

- A. Comply with requirements for piping specified in Section 22 1116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to pumps to allow service and maintenance.
- C. Connect domestic water piping to pumps. Install suction and discharge piping equal to or greater than size of pump nozzles.
 - 1. Install flexible connectors adjacent to pumps in suction and discharge piping of the following pumps:
 - a. Horizontally mounted, in-line, separately coupled centrifugal pumps.
 - b. Horizontally mounted, in-line, close-coupled centrifugal pumps.
 - c. Vertically mounted, in-line, close-coupled centrifugal pumps.
 - d. Comply with requirements for flexible connectors specified in Section 22 1116 "Domestic Water Piping."
- D. Install shutoff valve and strainer on suction side of each pump, and check, shutoff, and throttling valves on discharge side of each pump. Install valves same size as connected piping. Comply with requirements for valves specified in Section 22 0523.12 "Ball Valves for Plumbing Piping," Section 22 0523.13 "Butterfly Valves for Plumbing Piping," Section 22 0523.14 "Check Valves for Plumbing Piping," and Section 22 0523.15 "Gate Valves for Plumbing Piping," and comply with requirements for strainers specified in Section 22 1119 "Domestic Water Piping Specialties."
 - 1. Install pressure gage at suction of each pump and pressure gage at discharge of each pump. Install at integral pressure-gage tappings where provided or install pressure-gage connectors in suction and discharge piping around pumps. Comply with requirements for pressure gages and snubbers specified in Section 22 0519 "Meters and Gages for Plumbing Piping."
- E. Connect pressure switches, thermostats, to pumps that they control.

3.4 IDENTIFICATION

- A. Comply with requirements for identification specified in Section 22 0553 "Identification for Plumbing Piping and Equipment" for identification of pumps.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Check piping connections for tightness.
 - 3. Clean strainers on suction piping.
 - 4. Set pressure switches, thermostats, for automatic starting and stopping operation of pumps.
 - 5. Perform the following startup checks for each pump before starting:
 - a. Verify bearing lubrication.
 - b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
 - c. Verify that pump is rotating in the correct direction.
 - 6. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
 - 7. Start motor.
 - 8. Open discharge valve slowly.
 - 9. Adjust temperature settings on thermostats.
 - 10. Adjust timer settings.

3.6 ADJUSTING

- A. Adjust domestic water pumps to function smoothly, and lubricate as recommended by manufacturer.
- B. Adjust initial temperature set points.
- C. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

END OF SECTION

SECTION 22 1313 – FACILITY SANITARY SEWERS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Sanitary sewer piping.
 - 2. Manholes.
 - 3. Flexible couplings.
 - 4. Flexible pipe boots for manhole pipe entrances
- B. Related Requirements:
 - 1. Section 312000 – Earth Moving

1.2 REFERENCES

- A. ASTM International (ASTM):
 - 1. ASTM D2321 – Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.
 - 2. ASTM D3034 – Standard Specification for Type PSM Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
 - 3. ASTM D3212 – Standard Specification for Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals.
 - 4. ASTM F477 – Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
 - 5. ASTM F679 – Standard Specification for Poly(Vinyl Chloride) (PVC) Large-Diameter Plastic Gravity Sewer Pipe and Fittings.
 - 6. ASTM F794 – Standard Specification for Poly(Vinyl Chloride) (PVC) Profiled Gravity Sewer Pipe and Fittings Based on Controlled Inside Diameter.
 - 7. ASTM F1336 – Standard Specification for Poly(Vinyl Chloride) (PVC) Gasketed Sewer Fittings.
 - 8. ASTM F1417 – Standard Practice for Installation Acceptance of Plastic Non-Pressure Sewer Lines Using Low-Pressure Air.
- B. DC Water:
 - 1. DC Water Standard Specifications.

1.3 SUBMITTALS

- A. Product Data:
 - 1. Sanitary sewer piping.
 - 2. Manholes.
 - 3. Flexible couplings.
 - 4. Flexible pipe boots for manhole pipe entrances.
- B. Information:
 - 1. Source Quality-Control Reports: For piping and accessories.
 - 2. Field Quality-Control Reports: For piping and accessories.
 - 3. Qualifications Statements: For manufacturer and installer.
 - 4. Manufacturer's certification and test result reports.
 - 5. Field inspection data for deflection, visual, and leakage acceptance tests.

- C. Closeout:

1. Submit layout drawings showing:
 - a. Direction of lay.
 - b. Starting and finish points.
 - c. Lay lengths.
 - d. Bending, bending radius and offsets, and deflection angles.
 - e. Locations and lengths of cut segments of pipe.
 - f. Fittings and fitting locations.
 - g. Manholes and other appurtenances.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Storage:

1. Upon receipt of each product, inspect for damage and conformance to the Contract Documents.
2. Verify manufacturer's certification accompanies pipe at delivery.
3. Store products in accordance with the manufacturer's recommendations.
4. Prevent exposure to sources of heat or hot objects such as heaters, boilers, steam lines, and engine exhaust.
5. Protect gaskets from exposure to heat, direct sunlight, ozone, oil and grease, dust and grit, and solvents.
6. Do not store gaskets close to electrical equipment that produces ozone.

B. Handling:

1. Handle and store products in accordance with the manufacturer's recommendations and the following requirements:
 - a. Handle pipe carefully and prevent severe impact blows, abrasion damage, gouging, and cutting of pipe.
 - b. Never handle pipe with individual chain or single cable, even if padded.

- C. Remove defective or damaged products from the Project Site and replace with acceptable products, at Contractor's expense.

1.5 QUALITY ASSURANCE

- A. Submit manufacturer's certifications and reports showing test results per ASTM D3034 and ASTM F679.

PART 2 - PRODUCTS

2.1 PVC PIPE AND FITTINGS

- A. Unless shown otherwise on Drawings, PVC Pipe and Fittings shall be as follows:

1. ASTM D3034.
2. Standard Dimension Ratio (SDR) rating: Minimum 35.
3. Joining System: Elastomeric Gasket Joints.
4. Gaskets: ASTM F477 elastomeric, factory assembled and secured.
5. Fittings: ASTM F1336.
6. Saddle wye-branches are not permitted.

2.2 PIPE BEDDING

- A. Crushed Stone or Screened Gravel Size No. 57 per Section 31 20 00 – Earth Moving.

2.3 MANHOLES

- A. Doghouse Manhole: Per DC Water Standard Detail S20.12
- B. Manhole: Per DC Water Standard Detail S-20.01
- C. Frame and Cover: DC Water Detail S-80.02
- D. Refer to Section 33 42 00 Stormwater Conveyance for additional specifications.

PART 3 - EXECUTION

3.1 GENERAL

- A. Perform trench excavation and backfill in accordance with Section 31 20 00 Earth Moving.

3.2 MAINTAINING SEWER SERVICE

- A. Maintain existing sewer service at all times by conducting operations in a manner that maintains flows or uses bypass pumping in existing sewers.
- B. Perform bypass pumping in accordance with DC Water Standard Specification Section 33 29 60 Sewer Bypass Pumping.

3.3 BACKFILL AND COMPACTION FOR PIPING

- A. Install Embedment Zone materials in accordance with Section 31 20 00 Earth Moving, except as noted below:
 - 1. Bedding Zone for Embedment Zone shall be Crushed Stone wrapped in Geotextile Fabric.
 - 2. Provide a minimum depth of cover 36-inches or one (1) pipe diameter, whichever is larger, before allowing vehicles or construction equipment to traffic the trench surface.
- B. Prior to installing pipe, verify bedding accurately reflects final slope of pipe with uniform bearing for the pipe which will prevent sags, high points, and pressure points in the pipe alignment.

3.4 INSTALLATION FOR PIPING

- A. General:
 - 1. Comply with manufacturer's recommendations for pipe installation, joint components, lubrication, and making joints.
 - 2. Secure pipe against movement and seal open ends to prevent the entrance of water, mud, or foreign material when pipe laying is interrupted.
- B. Laying and alignment:
 - 1. Lay pipe from the lowest invert elevation to the highest invert elevation with the bells facing upstream.
 - 2. Place pipe and fittings on bedding with the invert conforming to the required elevations, slopes, and alignment.
 - 3. Provide bell holes in pipe bedding, no larger than necessary to ensure uniform pipe support.
 - 4. Fill all voids under the bell by working in bedding material.
 - 5. When Drawings show pipe to be installed to a curved alignment, obtain curvature as follows:

- a. For SDR 35 pipe, use longitudinal bending as follows:
 - 1) 6-inch Diameter
 - a) 150-foot minimum radius.
 - b) 20-foot length equivalent linear offset: 16-inches.
 - c) 14-foot length equivalent linear offset: 7.8-inches.
 - 2) 8-inch Diameter
 - a) 200-foot minimum radius.
 - b) 20-foot length equivalent linear offset: 12-inches.
 - c) 14-foot length equivalent linear offset: 5.9-inches.
- b. Utilize manufacturer's recommendation for the minimum radius or the radius listed above, whichever is greater.

C. Jointing:

1. Mark or verify that pipe ends are marked with insertion stop position.
2. Clean all joint surfaces immediately before joining.
3. Lubricate joint with a lubricant approved by the manufacturer.
4. Align the spigot to the bell and insert the spigot into the bell, keeping true to the line and grade, until it contacts the gasket uniformly. Do not swing spigot into bell.
5. Push spigot into bell using methods recommended by the manufacturer, keeping pipe true to line and grade.
6. Protect the end of the pipe while inserting the spigot into the bell and do not use excessive force that may result in over-assembled joints or dislodged gaskets.
7. If undue resistance to insertion of the end is encountered or the insertion depth is not properly reached, disassemble the joint, verify the position and condition of the gasket, repair or replace damaged items, clean joint, and reassemble as defined above.
8. Adjust curvature, not to exceed limits listed above, to maintain alignment shown on Drawings.

D. Field Cut Pipe:

1. Use field cut pipe only when approved by Engineer.
2. Mark pipe around entire circumference.
3. Cut pipe on mark ensuring a square cut.
4. Bevel the end with a beveling tool, wood rasp, or power sander to the same angle and length as provided on the factory-finished pipe.
5. Round off any sharp edges on the leading edge of the bevel.
6. Redraw the insertion line on the spigot using a factory-marked spigot as guide.
7. Install and pipe as defined above.

3.5 ACCEPTANCE TESTING FOR PIPING

- A. Perform the acceptance testing listed in Specification in the presence of Engineer.

B. Visual Inspection and Grade Tolerance:

1. Visually inspect pipe in accordance with DC Water Specification 33 01 28 Inspection of Sewers for Cleaning, Repairs, Lining, and New Pipe Installations, to verify accuracy of alignment, joint construction, and freedom from debris and obstructions. Visual inspection and grade tolerance is considered acceptable if:
 - a. After flowing water through the pipe and terminating water flow, the pipe shows no visible signs of puddling, or
 - b. The total variation from the flow line (plus or minus) over the length of the pipe segment (14 or 20 foot) does not exceed:
 - 1) 6-inch to 12-inch pipe: $\frac{3}{4}$ -inch.

C. Leakage Testing:

1. Perform low-pressure air testing in accordance with ASTM F1417. Leakage test is considered acceptable if the pressure drop in the pipe:
 - a. Is less than 1.0-psig for the duration designated in Table 1 of ASTM F1414, or
 - b. Has no recordable leakage (zero psig drop) after 1-hour of testing.
2. At Engineer's discretion, pipe with a size and length requiring the minimum time of test for a 1.0-psig pressure drop to be tested for a duration that exceeds two (2) hours may be tested and accepted based on a 0.5-psig pressure drop in accordance with Table 2 of ASTM F1417.
3. At Engineer's discretion, when groundwater is below the pipe invert, a hydrostatic test may be performed on short lengths of pipe and building sewer connections as follows:
 - a. Plug the pipe at points of connection and fill with water to provide a minimum of ten (10) feet of head.
 - b. Hold the water in the system for at least 15 minutes before beginning the leakage test.
 - c. Allowable leakage rate of 0.0316-gallon per hour per ten feet of building sewer connection pipe for a test duration of not less than two (2) hours.

D. Deflection Testing:

1. Engineer reserves the right to require deflection testing to be performed and will notify the Contractor within 30 days of completing installation and other acceptance testing if it is to be performed.
 - a. Perform deflection testing not less than 30 days following completion of installation and other acceptance testing using a mandrel, sized in accordance with ASTM D3034 and F679.
 - b. Pipe with an integral diameter of the barrel that is not reduced by more than 7.5 percent of its base diameter is acceptable.

3.6 MANHOLES

- A. Follow the requirements noted in Section 33 42 00 Stormwater Conveyance.

END OF SECTION

SECTION 22 1316 - SANITARY WASTE AND VENT PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Hubless, cast-iron soil pipe and fittings.
 - 2. Epoxy coated cast iron soil pipe and fittings.
 - 3. Stainless steel drainage pipe and fittings.
 - 4. Copper tube and fittings.
 - 5. Specialty pipe fittings.
 - 6. Encasement for underground metal piping.
- B. Related Requirements:
 - 1. Section 22 1329 "Sanitary Sewerage Pumps" for effluent and sewage pumps.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans and elevations, or Building Information Model (BIM) drawn to scale, showing items described in this Section and coordinated with all building trades.
- B. Seismic Qualification Certificates: For waste and vent piping, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Detailed description of piping anchorage devices on which the certification is based and their installation requirements.
- C. Field quality control reports.

1.4 WARRANTY

- A. Listed manufacturers to provide labeling and warranty of their respective products.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Components and installation are capable of withstanding the following minimum working pressure unless otherwise indicated:
 - 1. Soil, Waste, and Vent Piping: 10 ft. head of water (30 kPa head of water).
 - 2. Waste, Force-Main Piping: 50 psig (345 kPa).

2.2 PIPING MATERIALS

- A. Piping materials to bear label, stamp, or other markings of specified testing agency.
- B. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.3 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. AB & I Foundry; a part of the McWane family of companies.
 - 2. Charlotte Pipe and Foundry Company.
 - 3. Tyler Pipe; a part of McWane family of companies.
- B. Pipe and Fittings:
 - 1. Pipe and fittings shall be marked with the collective trademark of the Cast Iron Soil Pipe Institute.
 - a. Plainly marked with date of manufacture (pipe only).
 - b. Country of origins.
 - c. Name of manufacturer or manufacturer's registered trademark by which the manufacturer can be readily identified after installation.
 - 2. ASTM A888 or CISPI 301.
 - 3. Pipe and fittings shall be marked with the collective trademark of the Cast Iron Soil Pipe Institute.
 - 4. Listed by NSF International.
- C. CISPI, Hubless-Piping Couplings:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ANACO-Husky.
 - b. Charlotte Pipe and Foundry Company.
 - c. Fernco Inc.
 - d. Mission Rubber Company, LLC; a division of MCP Industries.
 - e. Tyler Pipe; a subsidiary of McWane Inc.
 - 2. Standards: ASTM C1277 and CISPI 310.
 - 3. Description: Stainless steel corrugated shield with stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.
- D. Heavy-Duty, Hubless-Piping Couplings:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ANACO-Husky.
 - b. Charlotte Pipe and Foundry Company.
 - c. Mission Rubber Company, LLC; a division of MCP Industries.
 - d. Tyler Pipe; a subsidiary of McWane Inc.
 - 2. Standards: ASTM C1277 and ASTM C1540.
 - 3. Description: Stainless steel shield with stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.
 - 4.

2.4 EPOXY COATED, HUB AND SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AB & I Foundry; a part of the McWane family of companies.
 2. Charlotte Pipe and Foundry Company.
 3. Tyler Pipe; a subsidiary of McWane Inc.
- B. Pipe and Fittings:
1. Pipe and fittings shall be marked with the collective trademark of the Cast Iron Soil Pipe Institute.
 - a. Plainly marked with date of manufacture (pipe only).
 - b. Country of origins.
 - c. Name of manufacturer or manufacturer's registered trademark by which the manufacturer can be readily identified after installation.
 2. ASTM A888 or CISPI 301 and ASTM A74.
 3. Listed by NSF International.
 4. The pipe coating shall consist of chemically deposited zinc-phosphate pretreatment layer followed by an electrically deposited, high performance cathodic epoxy coating, and finally an electrically deposited, high performance anodic epoxy top coat. The fitting coating shall consist of a chemically deposited zinc-phosphate pretreatment layer followed by an electrically deposited, high performance cathodic epoxy coating, and finally an epoxy acrylic powder top coat.
- C. Pipe and Fittings:
1. Marked with CISPI collective trademark.
 2. ASTM A74, service and extra-heavy cast iron.
- D. Gaskets: ASTM C564, rubber.CISPI,

2.5 COPPER TUBE AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 2. Cambridge-Lee Industries, LLC.
 3. Cerro Flow Products, LLC.
 4. Wieland Copper Products, LLC.
- B. Copper Type DWV Tube: ASTM B306, drainage tube, drawn temper.
- C. Copper Drainage Fittings: ASME B16.23, cast copper or ASME B16.29, wrought copper, solder-joint fittings.
- D. Hard Copper Tube: ASTM B88, Type K (ASTM B88M, Type A), water tube, drawn temper.
- E. Copper Pressure Fittings:
1. Copper Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint fittings. Furnish wrought-copper fittings if indicated.

2. Copper Unions: MSS SP-123, copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.
- F. Copper Flanges: ASME B16.24, Class 150, cast copper with solder-joint end.
1. Flange Gasket Materials: ASME B16.21, full-face, flat, nonmetallic, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
 2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- G. Solder: ASTM B32, lead free with ASTM B813, water-flushable flux.

2.6 SPECIALTY PIPE FITTINGS

A. Transition Couplings:

1. General Requirements: Fitting or device for joining piping with small differences in ODs or of different materials. Include end connections of same size as and compatible with pipes to be joined.
2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
3. Shielded, Nonpressure Transition Couplings:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Cascade Waterworks Mfg. Co.
 - 2) Mission Rubber Company, LLC; a division of MCP Industries.
 - b. Standard: ASTM C1460.
 - c. Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.
 - d. End Connections: Same size as and compatible with pipes to be joined.
4. Pressure Transition Couplings:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - 2) Cascade Waterworks Mfg. Co.
 - 3) EBAA Iron Sales, Inc.
 - 4) Ford Meter Box Company, Inc. (The).
 - 5) JCM Industries, Inc.
 - b. Standard: AWWA C219.
 - c. Description: Metal sleeve-type same size as, with pressure rating at least equal to, and ends compatible with, pipes to be joined.
 - d. Center-Sleeve Material: Manufacturer's standard Carbon steel Ductile iron Malleable iron.
 - e. Gasket Material: Natural or synthetic rubber.
 - f. Metal Component Finish: Corrosion-resistant coating or material.

B. Dielectric Fittings:

1. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
2. Dielectric Unions:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1) A.Y. McDonald Mfg. Co.
- 2) GF Piping Systems: Georg Fischer LLC.
- 3) Jomar Valve.
- 4) Matco-Norca.
- 5) WATTS; A Watts Water Technologies Company.
- 6) Wilkins.
- 7) Zurn Industries, LLC.
- b. Description:
 - 1) Standard: ASSE 1079.
 - 2) Pressure Rating: 150 psig (1035 kPa).
 - 3) End Connections: Solder-joint copper alloy and threaded ferrous.
3. Dielectric Nipples:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Anvil International/Smith-Cooper International; Tailwind Capital, LLC.
 - 2) Elster Perfection; Honeywell.
 - 3) Matco-Norca.
 - 4) Precision Plumbing Products.
 - 5) Victaulic Company.
 - b. Description:
 - 1) Standard: IAPMO PS 66.
 - 2) Electroplated steel nipple.
 - 3) Pressure Rating: 300 psig (2070 kPa) at 225 deg F (107 deg C).
 - 4) End Connections: Male threaded or grooved.
 - 5) Lining: Inert and noncorrosive, propylene.
- 2.7 ENCASEMENT FOR UNDERGROUND METAL PIPING
 - A. Standard: ASTM A674 or AWWA C105/A 21.5.
 - B. Material: Linear low-density polyethylene film of 0.008-inch (0.20-mm) or high-density, cross-laminated polyethylene film of 0.004-inch (0.10-mm)] minimum thickness.
 - C. Form: Sheet or tube.
 - D. Color: Black or natural.

PART 3 - EXECUTION

3.1 EARTH MOVING

- A. Comply with requirements for excavating, trenching, and backfilling specified in Section 31 2000 "Earth Moving."

3.2 INSTALLATION OF PIPING

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems.
 1. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations.

2. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends.
 1. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical.
 2. Use long-turn, double Y-branch, and 1/8-bend fittings if two fixtures are installed back to back or side by side with common drain pipe.
 - a. Straight tees, elbows, and crosses may be used on vent lines.
 3. Do not change direction of flow more than 90 degrees.
 4. Use proper size of standard increasers and reducers if pipes of different sizes are connected.
 - a. Reducing size of waste piping in direction of flow is prohibited.
- K. Lay buried building waste piping beginning at low point of each system.
 1. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream.
 2. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements.
 3. Maintain swab in piping and pull past each joint as completed.
- L. Install soil and waste and vent piping at the following minimum slopes unless otherwise indicated:
 1. Building Sanitary Waste: Two percent downward in direction of flow for piping NPS 3 (DN 80) and smaller; Two percent downward in direction of flow for piping NPS 4 (DN 100) and larger.
 2. Horizontal Sanitary Waste Piping: Two percent downward in direction of flow.
 3. Vent Piping: One percent down toward vertical fixture vent or toward vent stack.
- M. Install cast-iron soil piping in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

1. Install encasement on underground piping in accordance with ASTM A674 or AWWA C105/A 21.5.
 - N. Install steel piping in accordance with applicable plumbing code.
 - O. Install aboveground copper tubing in accordance with CDA's "Copper Tube Handbook."
 - P. Install aboveground PVC piping in accordance with ASTM D2665.
 - Q. Install engineered soil and waste and vent piping systems as follows:
 1. Combination Waste and Vent: Comply with standards of authorities having jurisdiction.
 - R. Install underground, copper, force-main tubing in accordance with CDA's "Copper Tube Handbook."
 1. Install encasement on piping in accordance with ASTM A674 or AWWA C105/A 21.5.
 - S. Install force mains at elevations indicated.
 - T. Plumbing Specialties:
 1. Install backwater valves in sanitary waster gravity-flow piping.
 - a. Comply with requirements for backwater valves specified in Section 22 1319 "Sanitary Waste Piping Specialties."
 2. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary waste gravity-flow piping.
 - a. Install cleanout fitting with closure plug inside the building in sanitary drainage force-main piping.
 - b. Comply with requirements for cleanouts specified in Section 22 1319 "Sanitary Waste Piping Specialties."
 3. Install drains in sanitary waste gravity-flow piping.
 - a. Comply with requirements for drains specified in Section 22 1319 "Sanitary Waste Piping Specialties."
 - U. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
 - V. Install sleeves for piping penetrations of walls, ceilings, and floors.
 1. Comply with requirements for sleeves specified in Section 22 0517 "Sleeves and Sleeve Seals for Plumbing Piping."
 - W. Install sleeve seals for piping penetrations of concrete walls and slabs.
 1. Comply with requirements for sleeve seals specified in Section 22 0517 "Sleeves and Sleeve Seals for Plumbing Piping."
 - X. Install escutcheons for piping penetrations of walls, ceilings, and floors.
 1. Comply with requirements for escutcheons specified in Section 22 0518 "Escutcheons for Plumbing Piping."
- 3.3 JOINT CONSTRUCTION
- A. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

- B. Hub-and-Spigot, Cast-Iron Soil Piping Caulked Joints: Join in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead-and-oakum caulked joints.
- C. Hubless, Cast-Iron Soil Piping Coupled Joints:
 - 1. Join hubless, cast-iron soil piping in accordance with CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.
- D. Threaded Joints: Thread pipe with tapered pipe threads in accordance with ASME B1.20.1.
 - 1. Cut threads full and clean using sharp dies.
 - 2. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
 - c. Do not use pipe sections that have cracked or open welds.
- E. Join copper tube and fittings with soldered joints in accordance with ASTM B828. Use ASTM B813, water-flushable, lead-free flux and ASTM B32, lead-free-alloy solder.
- F. Grooved Joints: Cut groove ends of pipe in accordance with AWWA C606. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections over gasket, with keys seated in piping grooves. Install and tighten housing bolts.
- G. Flanged Joints: Align bolt holes. Select appropriate gasket material, size, type, and thickness. Install gasket concentrically positioned. Use suitable lubricants on bolt threads. Torque bolts in cross pattern.
- H. Joint Restraints and Sway Bracing:
 - 1. Provide joint restraints and sway bracing for storm drainage piping joints to comply with the following conditions:
 - a. Provide axial restraint for pipe and fittings 5 inches and larger, upstream and downstream of all changes in direction, branches, and changes in diameter greater than two pipe sizes.
 - b. Provide rigid sway bracing for pipe and fittings 4 inches (100 mm) and larger, upstream and downstream of all changes in direction 45 degrees and greater.
 - c. Provide rigid sway bracing for pipe and fittings 5 inches (125 mm) and larger, upstream and downstream of all changes in direction and branch openings.

3.4 INSTALLATION OF SPECIALTY PIPE FITTINGS

- A. Transition Couplings:
 - 1. Install transition couplings at joints of piping with small differences in ODs.
 - 2. In Waste Drainage Piping: Shielded, nonpressure transition couplings.
 - 3. In Aboveground Force Main Piping: Fitting-type transition couplings.
 - 4. In Underground Force Main Piping:
 - a. NPS 1-1/2 (DN 40) and Smaller: Fitting-type transition couplings.
 - b. NPS 2 (DN 50) and Larger: Pressure transition couplings.
- B. Dielectric Fittings:

1. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
2. Dielectric Fittings for NPS 2 (DN 50) and Smaller: Use dielectric nipples.
3. Dielectric Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric flanges.
4. Dielectric Fittings for NPS 5 (DN 125) and Larger: Use dielectric flange kits.

3.5 INSTALLATION OF VALVES

- A. General valve installation requirements for general-duty valve installation are specified in the following Sections:
 1. Section 22 0523.12 "Ball Valves for Plumbing Piping."
 2. Section 22 0523.14 "Check Valves for Plumbing Piping."
- B. Shutoff Valves:
 1. Install shutoff valve on each sewage pump discharge.
 2. Install full-port ball valve for piping NPS 2 (DN 50) and smaller.
 3. Install gate valve for piping NPS 2-1/2 (DN 65) and larger.
- C. Check Valves: Install swing check valve, between pump and shutoff valve, on each sewage pump discharge.
- D. Backwater Valves: Install backwater valves in piping subject to backflow.
 1. Horizontal Piping: Horizontal backwater valves. Use normally closed type unless otherwise indicated on plans.
 2. Floor Drains: Drain outlet backwater valves unless drain has integral backwater valve.
 3. Install backwater valves in accessible locations.
 4. Comply with requirements for backwater valve specified in Section 22 1319 "Sanitary Waste Piping Specialties."

3.6 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements for seismic-restraint devices specified in Section 22 0548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. All piping shall be supported according to the International Plumbing Code (IPC), Section 22 0511, COMMON WORK RESULTS FOR PLUMBING, and these specifications. Where conflicts arise between these the code and Section 22 0511, COMMON WORK RESULTS FOR PLUMBING the most restrictive or the requirement that specifies supports with highest loading or shortest spacing shall apply
- C. Install hangers for cast-iron, steel, stainless steel, and copper soil piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- D. Install hangers for ABS and PVC piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- E. Support horizontal piping and tubing within 12 inches (300 mm) of each fitting, valve, and coupling.

- F. Support vertical runs of cast-iron, steel, stainless steel, and copper soil piping to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- G. Support vertical runs of ABS and PVC piping to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

3.7 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.
- C. Connect waste and vent piping to the following:
 - 1. Plumbing Fixtures: Connect waste piping in sizes indicated, but not smaller than required by plumbing code.
 - 2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.
 - 3. Plumbing Specialties: Connect waste and vent piping in sizes indicated, but not smaller than required by plumbing code.
 - 4. Install test tees (wall cleanouts) in conductors near floor and floor cleanouts with cover flush with floor.
 - 5. Install horizontal backwater valves with cleanout cover flush with floor or in pit with pit cover flush with floor.
 - 6. Comply with requirements for backwater valves, cleanouts and drains specified in Section 22 1319 "Sanitary Waste Piping Specialties."
 - 7. Equipment: Connect waste piping as indicated.
 - a. Provide shutoff valve if indicated and union for each connection.
 - b. Use flanges instead of unions for connections NPS 2-1/2 (DN 65) and larger.
- D. Connect force-main piping to the following:
 - 1. Sanitary Sewer: To exterior force main.
 - 2. Sewage Pump: To sewage pump discharge.
- E. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.
- F. Make connections in accordance with the following unless otherwise indicated:
 - 1. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.
 - 2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.

3.8 IDENTIFICATION

- A. Identify exposed sanitary waste and vent piping.

- B. Comply with requirements for identification specified in Section 22 0553 "Identification for Plumbing Piping and Equipment."

3.9 FIELD QUALITY CONTROL

- A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
 - 1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
 - 2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
- B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.
- C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
- D. Test sanitary waste and vent piping in accordance with procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
 - 1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired.
 - a. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 - 2. Leave uncovered and unconcealed new, altered, extended, or replaced waste and vent piping until it has been tested and approved.
 - a. Expose work that was covered or concealed before it was tested.
 - 3. Roughing-in Plumbing Test Procedure: Test waste and vent piping except outside leaders on completion of roughing-in.
 - a. Close openings in piping system and fill with water to point of overflow, but not less than 10 ft. head of water (30 kPa head of water).
 - b. From 15 minutes before inspection starts to completion of inspection, water level must not drop.
 - c. Inspect joints for leaks.
 - 4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight.
 - a. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1 inch wg (250 Pa).
 - b. Use U-tube or manometer inserted in trap of water closet to measure this pressure.
 - c. Air pressure must remain constant without introducing additional air throughout period of inspection.
 - d. Inspect plumbing fixture connections for gas and water leaks.
 - 5. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
 - 6. Prepare reports for tests and required corrective action.
- E. Test force-main piping in accordance with procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
 - 1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved.
 - a. Expose work that was covered or concealed before it was tested.

2. Cap and subject piping to static-water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials.
 - a. Isolate test source and allow to stand for four hours.
 - b. Leaks and loss in test pressure constitute defects that must be repaired.
3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
4. Prepare reports for tests and required corrective action.

3.10 CLEANING AND PROTECTION

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect sanitary waste and vent piping during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.
- D. Repair damage to adjacent materials caused by waste and vent piping installation.

3.11 PIPING SCHEDULE

- A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.
- B. Aboveground, soil and waste piping NPS 4 (DN 100) and smaller are to be the following:
 1. Hubless, cast-iron soil pipe and fittings; CISPI hubless-piping couplings; and coupled joints.
 2. Stainless steel pipe and fittings, sealing rings, and gasketed joints.
 3. Copper Type DWV tube, copper drainage fittings, and soldered joints.
 4. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.
- C. Aboveground, vent piping NPS 4 (DN 100) is to be the following:
 1. Hubless, cast-iron soil pipe and fittings; CISPI hubless-piping couplings; and coupled joints.
 2. Epoxy coated cast iron soil pipe and fittings
 3. Stainless steel pipe and fittings gaskets, and gasketed joints.
 4. Copper Type DWV tube, copper drainage fittings, and soldered joints.
 5. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.
- D. Underground, soil, waste, and vent piping NPS 4 (DN 100) and smaller are to be the following:
 1. Epoxy coated cast iron soil pipe and fittings
 2. Stainless steel pipe and fittings, gaskets, and gasketed joints.
 3. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.
- E. Soil, waste, and vent piping branch piping from trench drains (aboveground and underground) to be the following:
 1. Epoxy coated cast iron soil pipe and fittings
 2. Stainless steel pipe and fittings, gaskets, and gasketed joints.
 3. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.
- F. Aboveground sanitary-sewage force mains NPS 2-1/2 to NPS 6 (DN 65 to DN 150) are to be the following:

1. Hard copper tube, Type K; copper pressure fittings; and soldered joints.
- G. Underground sanitary-sewage force mains NPS 4 (DN 100) and smaller are to be the following:
 1. Hard copper tube, Type K; wrought-copper pressure fittings; and soldered joints.

END OF SECTION

FOR REFERENCE ONLY

SECTION 22 1319 - SANITARY WASTE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Cleanouts.
 - 2. Miscellaneous sanitary drainage piping specialties.
- B. Related Requirements:
 - 1. Section 07 6200 "Sheet Metal Flashing and Trim" for metal roof flashing assemblies.
 - 2. Section 07 7200 "Roof Accessories" for preformed flashings.
 - 3. Section 07 8413 "Penetration Firestopping" for through-penetration firestop assemblies.

1.2 DEFINITIONS

- A. ABS: Acrylonitrile butadiene styrene.
- B. PVC: Polyvinyl chloride.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings:
 - 1. Show fabrication and installation details for frost-resistant vent terminals.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For sanitary waste piping specialties to include in emergency, operation, and maintenance manuals.

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTIONS

- A. Sanitary waste piping specialties shall bear label, stamp, or other markings of specified testing agency.
- B. Comply with NSF 14 for plastic sanitary waste piping specialty components.

2.2 CLEANOUTS

A. Cast-Iron Exposed Cleanouts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Jay R. Smith Mfg Co; a division of Morris Group International.
 - b. Josam Company.
 - c. MIFAB, Inc.
 - d. Tyler Pipe; a subsidiary of McWane Inc.
 - e. WATTS.
 - f. Zurn Industries, LLC.
2. Standard: ASME A112.36.2M.
3. Size: Same as connected drainage piping
4. Body Material: Hub-and-spigot, cast-iron soil pipe T-branch Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk Countersunk or raised-head Raised-head, brass cast-iron plastic plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

B. Stainless Steel Exposed Cleanouts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BLÜCHER; A Watts brand.
 - b. Josam Company.
2. Standard: ASME A112.3.1.
3. Size: Same as connected drainage piping.
4. Body Material: Stainless steel tee with side cleanout as required to match connected piping.
5. Closure: Stainless steel plug with seal.

C. Cast-Iron Exposed Floor Cleanouts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Jay R. Smith Mfg Co; a division of Morris Group International.
 - b. Josam Company.
 - c. MIFAB, Inc.
 - d. Sioux Chief Manufacturing Company, Inc.
 - e. WATTS.
 - f. Zurn Industries, LLC.
2. Standard: ASME A112.36.2M for adjustable housing cast-iron soil pipe with cast-iron ferrule heavy-duty, adjustable housing threaded, adjustable housing cleanout.
3. Size: Same as connected branch.
4. Type: Adjustable housing Cast-iron soil pipe with cast-iron ferrule Heavy-duty, adjustable housing Threaded, adjustable housing.
5. Body or Ferrule: Cast iron.
6. Clamping Device: Not required Required.
7. Outlet Connection: Inside calk Spigot Threaded.

8. Closure: Brass plug with straight threads and gasket Brass plug with tapered threads
Cast-iron plug Plastic plug.
 9. Adjustable Housing Material: Cast iron Plastic Insert material with threads setscrews or other device.
 10. Frame and Cover Material and Finish: Nickel-bronze, copper alloy Painted cast iron
Polished bronze Rough bronze Stainless steel Insert material and finish.
 11. Frame and Cover Shape: Round Square Insert shape.
 12. Top-Loading Classification: Extra Heavy Heavy Light Medium Duty.
 13. Riser: ASTM A74, Extra-Heavy Service Class, cast-iron drainage pipe fitting and riser to cleanout.
- D. Stainless Steel Exposed Floor Cleanouts:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BLÜCHER; A Watts brand.
 - b. Josam Company.
 - c. Kusel Equipment Co.
 - d. Zurn Industries, LLC.
 2. Standards: ASME A112.3.1[; NSF listed].
 3. Size: Same as connected branch.
 4. Housing: Type 304 stainless steel Type 316 stainless steel.
 5. Closure: Stainless steel with seal Plastic plug.
 6. Riser: ASTM A74, Extra-Heavy Service Class, stainless steel cast-iron drainage pipe fitting and riser to cleanout.
 7. Body or Ferrule: Stainless steel.
 8. Clamping Device: Not required Required.
 9. Outlet Connection: Inside caulk Spigot Threaded Butt-weld.
 10. Adjustable Housing Material: Cast iron Plastic Insert material with threads setscrews or other device.
 11. Frame and Cover Material and Finish: Stainless steel.
 12. Frame and Cover Shape: Round Square Insert shape.
 13. Top-Loading Classification: Extra Heavy Heavy Light Medium Duty.
- E. Cast-Iron Wall Cleanouts:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. Jay R. Smith Mfg Co; a division of Morris Group International.
 - b. Josam Company.
 - c. MIFAB, Inc.
 - d. WATTS.
 - e. Zurn Industries, LLC.
 2. Standard: ASME A112.36.2M. Include wall access.
 3. Size: Same as connected drainage piping.
 4. Body: Hub-and-spigot, cast-iron soil pipe T-branch Hubless, cast-iron soil pipe test tee as required to match connected piping.
 5. Closure Plug:
 - a. Brass Cast iron.
 - b. Countersunk or raised head.
 - c. Drilled and threaded for cover attachment screw.

- d. Size: Same as or not more than one size smaller than cleanout size.
- 6. Wall Access, Cover Plate: Round, deep, chrome-plated bronze flat, chrome-plated brass or stainless steel cover plate with screw.

2.3 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

A. Open Drains:

- 1. Description: Shop or field fabricate from ASTM A74, Service Class, hub-and-spigot, cast-iron soil-pipe fittings. Include P-trap, hub-and-spigot riser section; and where required, increaser fitting joined with ASTM C564 rubber gaskets.
- 2. Size: Same as connected waste piping with increaser fitting of size indicated.

B. Deep-Seal Traps:

- 1. Description: Cast-iron or bronze casting, with inlet and outlet matching connected piping and cleanout trap-seal primer valve connection.
- 2. Size: Same as connected waste piping.
 - a. NPS 2 (DN 50): 4-inch- (100-mm-) minimum water seal.
 - b. NPS 2-1/2 (DN 65) and Larger: 5-inch- (125-mm-) minimum water seal.

C. Floor-Drain, Trap-Seal Primer Fittings:

- 1. Description: Cast iron, with threaded inlet and threaded or spigot outlet, and trap-seal primer valve connection.
- 2. Size: Same as floor drain outlet with NPS 1/2 (DN 15) side inlet.

D. Air-Gap Fittings:

- 1. Standard: ASME A112.1.2, for fitting designed to ensure fixed, positive air gap between installed inlet and outlet piping.
- 2. Body: Bronze or cast iron.
- 3. Inlet: Opening in top of body.
- 4. Outlet: Larger than inlet.
- 5. Size: Same as connected waste piping and with inlet large enough for associated indirect waste piping.

E. Sleeve Flashing Device:

- 1. Description: Manufactured, cast-iron fitting, with clamping device that forms sleeve for pipe floor penetrations of floor membrane. Include galvanized-steel pipe extension in top of fitting that will extend 1 inch (25 mm) 2 inches (51 mm) Insert dimension above finished floor and galvanized-steel pipe extension in bottom of fitting that will extend through floor slab.
- 2. Size: As required for close fit to riser or stack piping.

F. Stack Flashing Fittings:

- 1. Description: Counterflashing-type, cast-iron fitting, with bottom recess for terminating roof membrane, and with threaded or hub top for extending vent pipe.
- 2. Size: Same as connected stack vent or vent stack.

- G. Vent Caps:
 - 1. Description: Cast-iron body with threaded or hub inlet and vandal-proof design. Include vented hood and setscrews to secure to vent pipe.
 - 2. Size: Same as connected stack vent or vent stack.
- H. Frost-Resistant Vent Terminals:
 - 1. Description: Manufactured or shop-fabricated assembly constructed of copper, lead-coated copper, or galvanized steel.
 - 2. Design: To provide 1-inch (25-mm) enclosed air space between outside of pipe and inside of flashing collar extension, with counterflashing.
- I. Expansion Joints:
 - 1. Standard: ASME A112.6.4.
 - 2. Body: Cast iron with bronze sleeve, packing, and gland.
 - 3. End Connections: Matching connected piping.
 - 4. Size: Same as connected soil, waste, or vent piping.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
 - 1. Size same as drainage piping up to NPS 4 (DN 100). Use NPS 4 (DN 100) for larger drainage piping unless larger cleanout is indicated.
 - 2. Locate at each change in direction of piping greater than 45 degrees.
 - 3. Locate at minimum intervals of 50 feet (15 m) for piping NPS 4 (DN 100) and smaller and 100 feet (30 m) for larger piping.
 - 4. Locate at base of each vertical soil and waste stack.
- B. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- C. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- D. Install deep-seal traps on floor drains and other waste outlets, if indicated.
- E. Install floor-drain, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection.
 - 1. Exception: Fitting may be omitted if trap has trap-seal primer connection.
 - 2. Size: Same as floor drain inlet.
- F. Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.
- G. Install sleeve and sleeve seals with each riser and stack passing through floors with waterproof membrane.
- H. Install vent caps on each vent pipe passing through roof.

- I. Install frost-resistant vent terminals on each vent pipe passing through roof. Maintain 1-inch (25-mm) clearance between vent pipe and roof substrate.
- J. Install expansion joints on vertical stacks and conductors. Position expansion joints for easy access and maintenance.
- K. Install frost-proof vent caps on each vent pipe passing through roof. Maintain 1-inch (25-mm) clearance between vent pipe and roof substrate.
- L. Install wood-blocking reinforcement for wall-mounting-type specialties.
- M. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

3.2 PIPING CONNECTIONS

- A. Comply with requirements in Section 22 1316 "Sanitary Waste and Vent Piping" for piping installation requirements. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment, to allow service and maintenance.

3.3 LABELING AND IDENTIFYING

- A. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit.
 - 1. Nameplates and signs are specified in Section 22 0553 "Identification for Plumbing Piping and Equipment."

3.4 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION

SECTION 22 1319.13 - SANITARY DRAINS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Floor drains.
 - 2. Floor sinks.
 - 3. Trench drains.

1.2 DEFINITIONS

- A. ABS: Acrylonitrile-butadiene styrene.
- B. FRP: Fiberglass-reinforced plastic.
- C. HDPE: High-density polyethylene.
- D. PE: Polyethylene.
- E. PP: Polypropylene.
- F. PVC: Polyvinyl chloride.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

PART 2 - PRODUCTS

2.1 DRAIN ASSEMBLIES

- A. Sanitary drains shall bear label, stamp, or other markings of specified testing agency.
- B. Comply with NSF 14 for plastic sanitary piping specialty components.

2.2 FLOOR DRAINS

- A. Cast-Iron Floor Drains:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Commercial Enameling Company.
 - b. Jay R. Smith Mfg. Co.
 - c. Josam Company.
 - d. MIFAB, Inc.
 - e. Prier Products, Inc.
 - f. Sioux Chief Manufacturing Company, Inc.
 - g. Wade; a subsidiary of McWane Inc.
 - h. WATTS.
 - i. Zurn Industries, LLC.

2. Standard: ASME A112.6.3.
3. Pattern: Area Floor drain.
4. Seepage Flange: Required.
5. Anchor Flange: Required.
6. Clamping Device: Required.
7. Outlet: Bottom.
8. Top Loading Classification: Extra Heavy Duty Heavy Duty Light Duty Medium Duty
Delete if not applicable.
9. Trap Pattern: Deep-seal P-trap.

2.3 FLOOR SINKS

A. Stainless-Steel Floor Sinks, ASME A112.6.7:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Jay R. Smith Mfg. Co.
 - b. Josam Company.
 - c. Wade; a subsidiary of McWane Inc.
 - d. Watts; a Watts Water Technologies company.
 - e. Zurn Industries, LLC.
2. Standard: ASME A112.6.7.
3. Pattern: Floor drain.
4. Body Material: Stainless steel.
5. Anchor Flange: Not required.
6. Clamping Device: Not required.
7. Outlet: Bottom, no-hub connection.
8. Sediment Bucket: .
9. Internal Strainer: Dome.
10. Internal Strainer Material: Stainless steel.
11. Top Grate Material: Stainless steel.
12. Top of Body and Grate Finish: Stainless steel.
13. Top Shape: Square.
14. Top Loading Classification: No traffic.
15. Funnel: Not required. .

2.4 TRENCH DRAINS

A. Trench Drains:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Jay R. Smith Mfg. Co.
 - b. Josam Company.
 - c. MIFAB, Inc.
 - d. Sioux Chief Manufacturing Company, Inc.
 - e. Wade; a subsidiary of McWane Inc.
 - f. WATTS/Blucher
 - g. Zurn Industries, LLC.
2. Standard: ASME A112.6.3 for trench drains.
3. Material: Stainless Steel

4. Outlet: Bottom.
5. Grate Material: IFRP.
6. Trap Material: Stainless steel.
7. Trap Pattern: Standard P-trap.
 - a. Blucher

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
 1. Position floor drains for easy access and maintenance.
 2. Set floor drains below elevation of surrounding finished floor to allow floor drainage.
 3. Set with grates depressed according to the following drainage area radii:
 - a. Radius, 30 Inches (750 mm) or Less: Equivalent to 1 percent slope, but not less than 1/4-inch (6.35-mm) total depression.
 - b. Radius, 30 to 60 Inches (750 to 1500 mm): Equivalent to 1 percent slope.
 - c. Radius, 60 Inches (1500 mm) or Larger: Equivalent to 1 percent slope, but not greater than 1-inch (25-mm) total depression.
 4. Install floor-drain flashing collar or flange, so no leakage occurs between drain and adjoining flooring.
 - a. Maintain integrity of waterproof membranes where penetrated.
 5. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.
- B. Install trench drains at low points of surface areas to be drained.
 1. Set grates of drains flush with finished surface, unless otherwise indicated.
- C. Comply with ASME A112.3.1 for installation of stainless-steel channel drainage systems.
 1. Install on support devices, so that top will be flush with adjacent surface.
- D. Install FRP channel drainage system components on support devices, so that top will be flush with adjacent surface.
- E. Install plastic channel drainage system components on support devices, so that top will be flush with adjacent surface.

3.2 CONNECTIONS

- A. Comply with requirements in Section 22 1316 "Sanitary Waste and Vent Piping" for piping installation requirements. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements in Section 22 1319 "Sanitary Waste Piping Specialties" for backwater valves, air admittance devices and miscellaneous sanitary drainage piping specialties.
- C. Comply with requirements in Section 22 1323 "Sanitary Waste Interceptors" for grease interceptors, grease-removal devices, oil interceptors, sand interceptors, and solid interceptors.
- D. Install piping adjacent to equipment to allow service and maintenance.

- E. Ground equipment according to Section 26 0526 "Grounding and Bonding for Electrical Systems."
- F. Connect wiring according to Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 LABELING AND IDENTIFYING

- A. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 22 0553 "Identification for Plumbing Piping and Equipment."

3.4 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION

SECTION 22 1329 - SANITARY SEWERAGE PUMPS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Submersible sewage pumps.
 - 2. Sewage-pump basins and basin covers.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Wiring Diagrams: For power, signal, and control wiring.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For pumps and controls, to include in operation and maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Retain shipping flange protective covers and protective coatings during storage.
- B. Protect bearings and couplings against damage.
- C. Comply with pump manufacturer's written rigging instructions for handling.

1.6 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 - PRODUCTS

2.1 SUBMERSIBLE SEWAGE PUMPS

- A. Submersible, Quick-Disconnect, Cutter Sewage Pumps:
 - 1. Manufacturers: Subject to compliance with requirements, [provide products by one of the following:
 - a. ABS Pumps Inc.
 - b. Alyan Pump Company.

- c. Barnes; Crane Pumps & Systems.
 - d. BJM Pumps, LLC.
 - e. EBARA Fluid Handling.
 - f. HOMA Pump Technology Inc.
 - g. Liberty Pumps.
 - h. Metropolitan Pump Industries.
 - i. Pentair Pump Group; Hydromatic Pumps.
 - j. Stancor, Inc.
 - k. Tsurumi America, Inc.
 - l. Vaughan Co., Inc.
 - m. Weil Pump Company, Inc.
 - n. WILO-EMU USA LLC.
 - o. Zoeller Company.
2. Description: Factory-assembled and -tested, grinder sewage-pump unit with guide-rail supports.
 3. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal sewage pump as defined in HI 1.1-1.2 and HI 1.3.
 4. Pump Casing: Cast iron, with open inlet, and discharge fittings for connection to guide-rail supports.
 5. Impeller: Bronze or stainless steel; statically and dynamically balanced, with stainless-steel cutter, or slicer assembly; capable of handling solids; and keyed and secured to shaft.
 6. Pump and Motor Shaft: Stainless steel, with factory-sealed, grease-lubricated ball bearings.
 7. Seal: Mechanical.
 8. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.
 - a. Motor Housing Fluid: Air.
 9. Controls:
 - a. Enclosure: NEMA 250, Type 4X; wall-mounted.
 - b. Switch Type: Mechanical-float type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
 - c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
 - d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with mechanical-float, mercury-float, or pressure switch matching control and electric bell; 120-V ac, with transformer and contacts for remote alarm bell.
 10. Control-Interface Features:
 - a. Remote Alarm Contacts: For remote alarm interface.
 - b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:
 - 1) On-off status of pump.
 - 2) Alarm status.
 11. Guide-Rail Supports:
 - a. Standard: SWPA's "Submersible Sewage Pumping Systems (SWPA) Handbook."
 - b. Guide Rails: Vertical pipes or structural members, made of galvanized steel or other corrosion-resistant metal, attached to baseplate and basin sidewall or cover.
 - c. Baseplate: Corrosion-resistant metal plate, attached to basin floor, supporting guide rails and stationary elbow.

- d. Pump Yoke: Motor-mounted or casing-mounted yokes or other attachments for aligning pump during connection of flanges.
- e. Movable Elbow: Pump discharge-elbow fitting with flange, seal, and positioning device.
- f. Stationary Elbow: Fixed discharge-elbow fitting with flange that mates to movable-elbow flange and support attached to baseplate.
- g. Lifting Cable: Stainless steel; attached to pump and cover at manhole.

2.2 SEWAGE-PUMP BASINS AND BASIN COVERS

- A. Basins: Factory-fabricated, watertight, cylindrical, basin sump with top flange and sidewall openings for pipe connections.
 - 1. Material: Fiberglass.
 - 2. Reinforcement: Mounting plates for pumps, fittings, guide-rail supports if used, and accessories.
 - 3. Anchor Flange: Steel, cast in or attached to sump, in location and of size required to anchor basin in concrete slab.
 - 4. Sewage-pump basin covers typically are round with openings for multiplex pumps.
- B. Basin Covers: Fabricate metal cover with openings having gaskets, seals, and bushings; for access to pumps, pump shafts, control rods, discharge piping, vent connections, and power cables.
 - 1. Reinforcement: Steel or cast iron, capable of supporting foot traffic for basins installed in foot-traffic areas.

2.3 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 22 0513 "Common Motor Requirements for Plumbing Equipment."
 - 1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- B. Motors for submersible pumps shall be hermetically sealed.

PART 3 - EXECUTION

3.1 EARTHWORK

- A. Excavation and filling are specified in Section 31 2000 "Earth Moving."

3.2 EXAMINATION

- A. Examine roughing-in for plumbing piping to verify actual locations of sanitary drainage and vent piping connections before sewage pump installation.

3.3 INSTALLATION

- A. Pump Installation Standards:
 - 1. Comply with HI 1.4 for installation of centrifugal pumps.
 - 2. Comply with HI 3.1-3.5 for installation of progressing-cavity sewage pumps.

- B. Wiring Method: Comply with requirements in Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

3.4 CONNECTIONS

- A. Comply with requirements for piping specified in Section 22 1316 "Sanitary Waste and Vent Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
 - 1. Perform each visual and mechanical inspection.
 - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Pumps and controls will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.6 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Insert startup steps if any.

3.7 ADJUSTING

- A. Adjust pumps to function smoothly, and lubricate as recommended by manufacturer.
- B. Adjust control set points.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain controls and pumps.

END OF SECTION

FOR REFERENCE ONLY

SECTION 22 1413 - FACILITY STORM DRAINAGE PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Pipe, tube, and fittings.
 - 2. Specialty pipe fittings.
 - 3. Encasement for underground metal piping.
- B. Related Requirements:
 - 1. Section 33 4100 "Storm Utility Drainage Piping" for storm drainage piping outside the building.

1.2 PERFORMANCE REQUIREMENTS

- A. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:
 - 1. Storm Drainage Piping: 10-foot head of water (30 kPa).

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1.4 QUALITY ASSURANCE

- A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

1.5 PROJECT CONDITIONS

- A. Interruption of Existing Storm-Drainage Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
 - 1. Notify Owner no fewer than two days in advance of proposed interruption of storm-drainage service.
 - 2. Do not proceed with interruption of storm-drainage service without Owner's written permission.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.2 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

- A. Pipe and Fittings: ASTM A 74, Service Extra Heavy classes.
- B. Gaskets: ASTM C 564, rubber.

2.3 ENCASEMENT FOR UNDERGROUND METAL PIPING

- A. Standard: ASTM A 674 or AWWA C105.
- B. Material: High-density, crosslaminated PE film of 0.004-inch (0.10-mm) LLDPE film of 0.008-inch (0.20-mm) minimum thickness.
- C. Form: Sheet.
- D. Color: Black.

PART 3 - EXECUTION

3.1 EARTH MOVING

- A. Comply with requirements for excavating, trenching, and backfilling specified in Section 31 2000 "Earth Moving."

3.2 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations from layout are approved on coordination drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Make changes in direction for storm drainage piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

- K. Lay buried building storm drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
 - L. Install storm drainage piping at the following minimum slopes unless otherwise indicated:
 - 1. Horizontal Storm-Drainage Piping: 2 percent downward in direction of flow.
 - M. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
 - 1. Install encasement on underground piping according to ASTM A 674 or AWWA C105.
 - N. Install steel piping according to applicable plumbing code.
 - O. Plumbing Specialties:
 - 1. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers in storm drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in storm drainage force-main piping. Comply with requirements for cleanouts specified in Section 22 1423 "Storm Drainage Piping Specialties."
 - 2. Install drains in storm drainage gravity-flow piping. Comply with requirements for drains specified in Section 22 1423 "Storm Drainage Piping Specialties."
 - P. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
 - Q. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 22 0517 "Sleeves and Sleeve Seals for Plumbing Piping."
 - R. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 22 0518 "Escutcheons for Plumbing Piping."
- 3.3 JOINT CONSTRUCTION
- A. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.
 - B. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

3.4 VALVE INSTALLATION

- A. General valve installation requirements are specified in Section 22 0523.12 "Ball Valves for Plumbing Piping," Section 22 0523.14 "Check Valves for Plumbing Piping," and Section 22 0523.15 "Gate Valves for Plumbing Piping."
- B. Shutoff Valves: Install shutoff valve on each sump pump discharge.
 - 1. Install gate or full-port ball valve for piping NPS 2 (DN 50) and smaller.
 - 2. Install gate valve for piping NPS 2-1/2 (DN 65) and larger.
- C. Check Valves: Install swing-check valve, between pump and shutoff valve, on each sump pump discharge.
- D. Backwater Valves: Install backwater valves in piping subject to backflow.
 - 1. Horizontal Piping: Horizontal backwater valves. Use normally closed type unless otherwise indicated.
 - 2. Install backwater valves in accessible locations.
 - 3. Comply with requirements for backwater valves specified in Section 22 1423 "Storm Drainage Piping Specialties."

3.5 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements for pipe hanger and support devices and installation specified in Section 22 0529 "Hangers and Supports for Plumbing Piping and Equipment."
 - 1. Install carbon-steel Insert material pipe hangers for horizontal piping in noncorrosive environments.
 - 2. Install stainless-steel fiberglass pipe hangers for horizontal piping in corrosive environments.
 - 3. Install carbon-steel Insert material pipe support clamps for vertical piping in noncorrosive environments.
 - 4. Install stainless-steel pipe support clamps for vertical piping in corrosive environments.
 - 5. Vertical Piping: MSS Type 8 or Type 42, clamps.
 - 6. Individual, Straight, Horizontal Piping Runs:
 - a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
 - b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
 - c. Longer Than 100 Feet (30 m) if Indicated: MSS Type 49, spring cushion rolls.
 - 7. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
 - 8. Base of Vertical Piping: MSS Type 52, spring hangers.
- B. Support horizontal piping and tubing within 12 inches (300 mm) of each fitting, valve, and coupling.
- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.
- E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
2. NPS 3 (DN 80): 60 inches (1500 mm) with 1/2-inch (13-mm) rod.
3. NPS 4 and NPS 5 (DN 100 and DN 125): 60 inches (1500 mm) with 5/8-inch (16-mm) rod.
4. NPS 6 and NPS 8 (DN 150 and DN 200): 60 inches (1500 mm) with 3/4-inch (19-mm) rod.
5. NPS 10 and NPS 12 (DN 250 and DN 300): 60 inches (1500 mm) with 7/8-inch (22-mm) rod.
6. Spacing for 10-foot (3-m) pipe lengths may be increased to 10 feet (3 m). Spacing for fittings is limited to 60 inches (1500 mm).

- F. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.6 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.
- C. Connect storm drainage piping to roof drains and storm drainage specialties.
1. Install test tees (wall cleanouts) in conductors near floor, and floor cleanouts with cover flush with floor.
 2. Install horizontal backwater valves with cleanout cover flush with floor in pit with pit cover flush with floor. Insert description.
 3. Comply with requirements for backwater valves cleanouts specified in Section 22 1423 "Storm Drainage Piping Specialties."
- D. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.
- E. Make connections according to the following unless otherwise indicated:
1. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.
 2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.

3.7 IDENTIFICATION

- A. Identify exposed storm drainage piping. Comply with requirements for identification specified in Section 22 0553 "Identification for Plumbing Piping and Equipment."

3.8 FIELD QUALITY CONTROL

- A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
 2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
- B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

- C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
- D. Test storm drainage piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
 - 1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 - 2. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
 - 3. Test Procedure: Test storm drainage piping, except outside leaders, on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water (30 kPa). From 15 minutes before inspection starts until completion of inspection, water level must not drop. Inspect joints for leaks.
 - 4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
 - 5. Prepare reports for tests and required corrective action.
- E. Test force-main piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
 - 1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
 - 2. Cap and subject piping to static-water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
 - 3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
 - 4. Prepare reports for tests and required corrective action.

3.9 CLEANING

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

3.10 PIPING SCHEDULE

- A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.
- B. Underground storm drainage piping NPS 6 (DN 150) and smaller shall be the following:
 - 1. Extra Heavy Service class, cast-iron soil pipe and fittings; gaskets; and gasketed calking materials; and calked joints.

Smithsonian OPDC Project No. 2533105

SmithGroup Project No. 00100084

FOR REFERENCE ONLY

SECTION 22 1423 - STORM DRAINAGE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Miscellaneous storm drainage piping specialties.
 - 2. Cleanouts.
 - 3. Trench drains.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1.3 QUALITY ASSURANCE

- A. Provide drainage piping specialties are to bear label, stamp, or other markings of specified testing agency.

PART 2 - PRODUCTS

Standard: ASME A112.6.4.

2.1 CLEANOUTS

- A. Cast-Iron Cleanouts:
 - 1. Cast-Iron Exposed Cleanouts:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Jay R. Smith Mfg Co; a division of Morris Group International.
 - 2) Watts Water Technologies; a Watts company.
 - 3) Zurn Industries, LLC.
 - b. Standard: ASME A112.36.2M.
 - c. Size: Same as connected branch.
 - d. Body Material: No-hub, cast-iron soil pipe test tee as required to match connected piping.
 - e. Closure: Countersunk or raised-head, brass or cast-iron plug.
 - f. Closure Plug Size: Same as, or not more than, one size smaller than cleanout size.
 - 2. Cast-Iron Exposed Floor Cleanouts:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Jay R. Smith Mfg Co; a division of Morris Group International.
 - 2) Watts Water Technologies; a Watts company.
 - 3) Zurn Industries, LLC.
 - b. Standard: ASME A112.36.2M.
 - c. Size: Same as connected branch.
 - d. Type: Heavy-duty, adjustable housing unless otherwise noted in the plumbing drawing fixture schedule.
 - e. Body or Ferrule: Cast iron.

- f. Outlet Connection: No-hub unless otherwise noted in the plumbing drawing fixture schedule.
 - g. Closure: Brass plug with straight threads and gasket unless otherwise noted in the plumbing drawing fixture schedule.
 - h. Adjustable Housing Material: Cast iron with threads, setscrews or other device unless otherwise noted in the plumbing drawing fixture schedule.
 - i. Frame and Cover Material and Finish: Nickel-bronze, copper alloy unless otherwise noted in the plumbing drawing fixture schedule.
 - j. Frame and Cover Shape: Round.
 - k. Top Loading Classification: Extra-Heavy Duty unless otherwise noted in the plumbing drawing fixture schedule.
 - l. Riser: ASTM A74, Extra-Heavy Class, cast-iron drainage pipe fitting and riser to cleanout unless otherwise noted in the plumbing drawing fixture schedule.
 - m. Options:
 - 1) Clamping device.
3. Cast-Iron Test Tees:
- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Jay R. Smith Mfg Co; a division of Morris Group International.
 - 2) Watts Water Technologies; a Watts company.
 - 3) Zurn Industries, LLC.
 - b. Standard: ASME A112.36.2M and ASTM A74, ASTM A888, or CISPI 301.
 - c. Size: Same as connected drainage piping.
 - d. Body Material: Hub-and-spigot, cast-iron soil-pipe T-branch or no-hub, cast-iron soil-pipe test tee as required to match connected piping.
 - e. Closure Plug: Countersunk or raised head, brass.
 - f. Closure Plug Size: Same as, or not more than, one size smaller than cleanout size.

2.2 TRENCH DRAINS

- A. Trench Drains:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Jay R. Smith Mfg Co; a division of Morris Group International.
 - b. Zurn Industries, LLC.
 - 2. Standard: ASME A112.6.3.
 - 3. Body Material: Cast iron unless otherwise noted in the plumbing drawing fixture schedule.
 - 4. Dimensions of Frame and Grate: See plumbing drawing fixture schedule.
 - 5. Top-Loading Classification: Extra-Heavy Duty unless otherwise noted in the plumbing drawing fixture schedule.
 - 6. Grate Material: Ductile iron or stainless steel unless otherwise noted in the plumbing drawing fixture schedule.
 - 7. Grate Finish: See plumbing drawing fixture schedule.
 - 8. Flange: Anchor, Seepage unless otherwise noted in the plumbing drawing fixture schedule.
 - 9. Outlet: Bottom unless otherwise noted in the plumbing drawing fixture schedule.
 - 10. Outlet Type: Inside caulk unless otherwise noted in the plumbing drawing fixture schedule.
 - 11. Options:
 - a. Clamping device.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install roof drains in accordance with roof membrane manufacturer's written installation instructions at low points of roof areas.
 - 1. Install flashing collar or flange of roof drain to maintain integrity of waterproof membranes where penetrated.
 - 2. Install expansion joints, if indicated, in roof drain outlets.
 - 3. Position roof drains for easy access and maintenance.
 - 4. Provide roof drain extension as required to get roof drain to final height required for roofing.
- B. Install downspout adapters on outlet of back-outlet parapet roof drains and connect to sheet metal downspouts.
- C. Install downspout boots at grade with top 12 inches (305 mm) above grade. Secure to building wall.
- D. Install downspout nozzles at exposed bottom of conductors where they spill onto grade.
- E. Install cleanouts in aboveground piping and building drain piping in accordance with the following instructions unless otherwise indicated:
 - 1. Use cleanouts the same size as drainage piping up to NPS 4 (DN 100). Use NPS 4 (DN 100) for larger drainage piping unless larger cleanout is indicated.
 - 2. Locate cleanouts at each change in direction of piping greater than 45 degrees.
 - 3. Locate cleanouts at minimum intervals of 50 ft. (15 m) for piping NPS 4 (DN 100) and smaller and 100 ft. (30 m) for larger piping.
 - 4. Locate cleanouts at base of each vertical storm piping conductor.
- F. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- G. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- H. Install horizontal backwater valves in floor with cover flush with floor.
- I. Install drain-outlet backwater valves in outlet of drains.
- J. Install test tees in vertical conductors and near floor.
- K. Install wall cleanouts in vertical conductors. Install access door in wall if indicated.
- L. Install trench drains at low points of surface areas to be drained. Set grates of drains flush with finished surface unless otherwise indicated.
- M. Assemble channel drainage system components in accordance with manufacturer's written instructions. Install on support devices so that top will be flush with adjacent surface.

- N. Install through-penetration firestop assemblies for penetrations of fire- and smoke-rated assemblies.
 - 1. Comply with requirements in Section 07 8413 "Penetration Firestopping."

3.2 CONNECTIONS

- A. Comply with requirements for piping specified in Section 22 1414 "Storm Drainage Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

3.3 INSTALLATION OF FLASHING

- A. Fabricate flashing from single piece of metal unless large pans, sumps, or other drainage shapes are required.
- B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
- C. Set flashing on floors and roofs in solid coating of bituminous cement.
- D. Secure flashing into sleeve and specialty clamping ring or device.

3.4 CLEANING

- A. Clean piping specialties during installation and remove dirt and debris as work progresses.

3.5 PROTECTION

- A. Protect piping specialties during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic and construction work.
- B. Place plugs in ends of uncompleted piping at end of each day and when work stops.

END OF SECTION

SECTION 22 3400 - FUEL-FIRED, DOMESTIC-WATER HEATERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Commercial, gas-fired, high-efficiency, storage, domestic-water heaters.
 - 2. Domestic-water heater accessories.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type and size of domestic-water heater indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings:
 - 1. Wiring Diagrams: For power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of commercial, gas-fired, gas-fired, tankless, residential, gas-fired, commercial, oil-fired, residential, oil-fired, and commercial, gas- and oil-fired, domestic-water heater, from manufacturer.
- B. Domestic-Water Heater Labeling: Certified and labeled by testing agency acceptable to authorities having jurisdiction.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fuel-fired, domestic-water heaters to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE/IESNA Compliance: Fabricate and label fuel-fired, domestic-water heaters to comply with ASHRAE/IESNA 90.1.
- C. ASME Compliance:
 - 1. Where ASME-code construction is indicated, fabricate and label commercial, domestic-water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - 2. Where ASME-code construction is indicated, fabricate and label commercial, finned-tube, domestic-water heaters to comply with ASME Boiler and Pressure Vessel Code: Section IV.

- D. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61 Annex G, "Drinking Water System Components - Health Effects."

1.6 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.7 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of fuel-fired, domestic-water heaters that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including storage tank and supports.
 - b. Faulty operation of controls.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use.
 - 2. Warranty Periods: From date of Substantial Completion.
 - a. Commercial, Gas-Fired, Storage, Domestic-Water Heaters:
 - 1) Storage Tank: Five years.
 - 2) Controls and Other Components: Two year(s).
 - b. Compression Tanks: Five years.

PART 2 - PRODUCTS

2.1 COMMERCIAL, GAS-FIRED, STORAGE, DOMESTIC-WATER HEATERS

- A. Commercial, Gas-Fired, High-Efficiency, Storage, Domestic-Water Heaters:
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - a. Lochinvar, LLC.
 - b. PVI Industries, LLC.
 - c. Rheem Manufacturing Company.
 - d. Smith, A. O. Corporation.
 - 2. Standard: ANSI Z21.10.3/CSA 4.3.
 - 3. Description: Manufacturer's proprietary design to provide at least 95 percent combustion efficiency at optimum operating conditions.
 - 4. Storage-Tank Construction: ASME-code steel with [150-psig (1035-kPa)] minimum working-pressure rating.
 - a. Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
 - 1) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
 - b. Interior Finish: Comply with NSF 61 Annex G barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
 - 5. Factory-Installed Storage-Tank Appurtenances:
 - a. Anode Rod: Replaceable magnesium.
 - b. Dip Tube: Required unless cold-water inlet is near bottom of tank.

- c. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
- d. Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.
- e. Jacket: Steel with enameled finish.
- f. Burner or Heat Exchanger: Comply with UL 795 or approved testing agency requirements for gas-fired, high-efficiency, domestic-water heaters and natural-gas fuel.
- g. Temperature Control: Adjustable thermostat.
- h. Safety Controls: Automatic, high-temperature-limit and low-water cutoff devices or systems.
- i. Combination Temperature-and-Pressure Relief Valves: ANSI Z21.22/CSA 4.4-M. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
- 6. Draft Hood: Draft diverter, complying with ANSI Z21.12.
 - a. .
- 7. Electrical Characteristics:
 - a. Volts: 120.
 - b. Phase: Single.
 - c. Hertz: 60.

2.2 DOMESTIC-WATER HEATER ACCESSORIES

A. Domestic-Water Compression Tanks:

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - a. AMTROL Inc.
 - b. Flexcon Industries.
 - c. Honeywell Water Controls.
 - d. Pentair Pump Group.
 - e. Smith, A. O. Corporation.
 - f. State Industries.
 - g. Taco, Inc.
- 2. Description: Steel, pressure-rated tank constructed with welded joints and factory-installed butyl-rubber diaphragm. Include air precharge to minimum system operating pressure at tank.
- 3. Construction:
 - a. Tappings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1 pipe thread.
 - b. Interior Finish: Comply with NSF 61 Annex G barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
 - c. Air-Charging Valve: Factory installed.

B. Drain Pans: Corrosion-resistant metal with raised edge. Comply with ANSI/CSA LC 3. Include dimensions not less than base of domestic-water heater, and include drain outlet not less than NPS 3/4 (DN 20) with ASME B1.20.1 pipe threads or with ASME B1.20.7 garden-hose threads.

C. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE/IESNA 90.1.

- D. Heat-Trap Fittings: ASHRAE 90.2.
- E. Comply with requirements for ball-, butterfly-, or gate-type shutoff valves specified in Section 22 0523.12 "Ball Valves for Plumbing Piping," Section 22 0523.13 "Butterfly Valves for Plumbing Piping," and Section 22 0523.15 "Gate Valves for Plumbing Piping."
 - 1. Comply with requirements for balancing valves specified in Section 22 1119 "Domestic Water Piping Specialties."
- F. Gas Shutoff Valves: ANSI Z21.15/CSA 9.1-M, manually operated. Furnish for installation in piping.
- G. Gas Pressure Regulators: ANSI Z21.18/CSA 6.3, appliance type. Include 2-psig (13.8-kPa) pressure rating as required to match gas supply.
- H. Automatic Gas Valves: ANSI Z21.21/CSA 6.5, appliance, electrically operated, on-off automatic valve.
- I. Combination Temperature-and-Pressure Relief Valves: Include relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select relief valves with sensing element that extends into storage tank.
 - 1. Gas-Fired, Domestic-Water Heaters: ANSI Z21.22/CSA 4.4-M.
- J. Pressure Relief Valves: Include pressure setting less than domestic-water heater working-pressure rating.
 - 1. Gas-Fired, Domestic-Water Heaters: ANSI Z21.22/CSA 4.4-M.
- K. Vacuum Relief Valves: ANSI Z21.22/CSA 4.4-M.
- L. Domestic-Water Heater Stands: Manufacturer's factory-fabricated steel stand for floor mounting, capable of supporting domestic-water heater and water. Provide dimension that will support bottom of domestic-water heater a minimum of 18 inches (457 mm) above the floor.
- M. Domestic-Water Heater Mounting Brackets: Manufacturer's factory-fabricated steel bracket for wall mounting, capable of supporting domestic-water heater and water.

2.3 SOURCE QUALITY CONTROL

- A. Factory Tests: Test and inspect assembled domestic-water heaters specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.
- B. Hydrostatically test commercial domestic-water heaters to minimum of one and one-half times pressure rating before shipment.
- C. Domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Section 01 4000 "Quality Requirements" for retesting and reinspecting requirements and Section 01 7300 "Execution" for requirements for correcting the Work.
- D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 DOMESTIC-WATER HEATER INSTALLATION

- A. Commercial, Domestic-Water Heater Mounting: Install commercial domestic-water heaters on concrete base. Comply with requirements for concrete base specified in [Section 03 3000 "Cast-in-Place Concrete."] [Section 03 3053 "Miscellaneous Cast-in-Place Concrete."]
1. Exception: Omit concrete bases for commercial domestic-water heaters if installation on stand, bracket, suspended platform, or directly on floor is indicated.
 2. Maintain manufacturer's recommended clearances.
 3. Arrange units so controls and devices that require servicing are accessible.
 4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
 5. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 6. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 7. Install anchor bolts to elevations required for proper attachment to supported equipment.
 8. Anchor domestic-water heaters to substrate.
- B. Install domestic-water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
1. Install shutoff valves on domestic-water-supply piping to domestic-water heaters and on domestic-hot-water outlet piping. Comply with requirements for shutoff valves specified in Section 22 0523.12 "Ball Valves for Plumbing Piping," Section 22 0523.13 "Butterfly Valves for Plumbing Piping," and Section 22 0523.15 "Gate Valves for Plumbing Piping."
- C. Install gas-fired, domestic-water heaters according to NFPA 54.
1. Install gas shutoff valves on gas supply piping to gas-fired, domestic-water heaters without shutoff valves.
 2. Install gas pressure regulators on gas supplies to gas-fired, domestic-water heaters without gas pressure regulators if gas pressure regulators are required to reduce gas pressure at burner.
 3. Install automatic gas valves on gas supplies to gas-fired, domestic-water heaters if required for operation of safety control.
 4. Comply with requirements for gas shutoff valves, gas pressure regulators, and automatic gas valves specified in Section 23 1123 "Facility Natural-Gas Piping."
- D. Install commercial domestic-water heaters with seismic-restraint devices. Comply with requirements for seismic-restraint devices specified in Section 22 0548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- E. Install combination temperature-and-pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial-water-heater relief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.

- F. Install water-heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for domestic-water heaters that do not have tank drains. Comply with requirements for hose-end drain valves specified in Section 22 1119 "Domestic Water Piping Specialties."
- G. Install thermometer on outlet piping of domestic-water heaters. Comply with requirements for thermometers specified in Section 22 0519 "Meters and Gages for Plumbing Piping."
- H. Fill domestic-water heaters with water.
- I. Charge domestic-water compression tanks with air.

3.2 CONNECTIONS

- A. Comply with requirements for domestic-water piping specified in Section 22 1116 "Domestic Water Piping."
- B. Comply with requirements for gas piping specified in Section 23 1123 "Facility Natural-Gas Piping."
- C. Drawings indicate general arrangement of piping, fittings, and specialties.
- D. Where installing piping adjacent to fuel-fired, domestic-water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of domestic-water heaters.

3.3 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification specified in Section 22 0553 "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
 - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Section 01 4000 "Quality Requirements" for retesting and reinspecting requirements and Section 01 7300 "Execution" for requirements for correcting the Work.
- C. Prepare test and inspection reports.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain commercial, gas-fired, storage, domestic-water heaters.

END OF SECTION

FOR REFERENCE ONLY

SECTION 22 4213.13 - COMMERCIAL WATER CLOSETS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Wall-mounted water closets.
 - 2. Flushometer valves.
 - 3. Toilet seats.
 - 4. Supports.

1.2 DEFINITIONS

Retain terms that remain after this Section has been edited for a project. Include only essential definitions or acronyms not well understood by the affected industry or trade..

- A. High-Efficiency Flush Volume: 1.1 gal. (4.8 L) or less per flush.
- B. WaterSense Fixture: Water closet and/or flushometer valve/tank certified by the EPA to meet the WaterSense performance criteria.

1.3 ACTION SUBMITTALS

- A. Product Data:
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for water closets.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: Include diagrams for power and control wiring.
- C. Sustainable Design Submittals:
 - 1. Plumbing Fixtures: Provide the following:
 - a. Manufacturer cut sheet indicating water consumption.
 - b. WaterSense certification for residential fixtures, commercial water closets, commercial urinals, and commercial showers.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For flushometer valves and electronic sensors to include in operation and maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Extra Stock Materials: Furnish extra materials to Owner that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Flushometer-Valve Repair Kits: Equal to 10percent of amount of each type installed, but no fewer than one of each type.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Standards:

1. Comply with ASME A112.19.2/CSA B45.1 for water closets.
2. Comply with ASME A112.19.5/CSA B45.15 for flush valves and spuds for water closets and tanks.
3. Comply with ASSE 1037/ASME A112.1037/CSA B125.37 for flush valves.
4. Comply with IAMPO/ANSI Z124.5 for water-closet (toilet) seats.
5. Comply with ASME A112.6.1M for water-closet supports.
6. Comply with ICC A117.1 for ADA-compliant water closets.
7. Comply with ASTM A1045 for flexible PVC gaskets used in connection of vitreous china water closets to sanitary drainage systems.
8. Comply with ASME A112.4.3 for plastic fittings used in connection of vitreous china water closets to sanitary drainage systems.

2.2 WALL-MOUNTED WATER CLOSETS

A. Water Closets - Wall Mounted, Top Spud:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard.
 - b. Kohler Co.
 - c. Sloan Valve Company.
 - d. TOTO USA, INC.
 - e. Zurn Industries, LLC.
2. Source Limitations: Obtain water closets from single source from single manufacturer.
3. Bowl:
 - a. Material: Vitreous china.
 - b. Type: Siphon jet.
 - c. Style: Flushometer valve.
 - d. Mounting Height: See fixture schedule on drawings.
 - e. Rim Contour: Elongated.
 - f. Water Consumption: Maximum 1.28 gal. (4.8 L) per flush.
 - g. Spud Size and Location: NPS 1-1/2 (DN 40); top.
 - h. Color: White.
4. Flushometer Valve: See flushometer valve paragraph.
5. Toilet Seat: See toilet seat paragraph below.
6. Support: See Water-closet carrier paragraph below.

B. Water Closets - Wall Mounted, Back Outlet, Close-Coupled Flushometer Tank:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard.
 - b. Mansfield Plumbing Products LLC.
2. Source Limitations: Obtain water closets from single source from single manufacturer.
3. Bowl:
 - a. Material: Vitreous china.

- b. Type: Siphon jet.
 - c. Style: Flushometer tank, gravity.
 - d. Height: See fixture schedule on drawings.
 - e. Rim Contour: Elongated.
 - f. Water Consumption: Maximum 1.28 gal. (4.8 L) per flush.
 - g. Color: White.
- 4. Toilet Seat: See toilet seat paragraph below.
 - 5. Support: See Water-closet carrier paragraph below.

2.3 FLUSHOMETER VALVES

A. Flushometer Valves - Diaphragm, Solenoid Actuated:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Sloan Valve Company.
 - b. Zurn Industries, LLC.
- 2. Source Limitations: Obtain flushometer valve from single source from single manufacturer.
- 3. Minimum Pressure Rating: 125 psig (860 kPa).
- 4. Features: Include integral check stop and backflow-prevention device.
- 5. Material: Brass body with corrosion-resistant components.
- 6. Style: See plumbing drawing fixture schedule.
- 7. Exposed Flushometer-Valve Finish: Chrome-plated.
- 8. Panel Finish: Chrome-plated or stainless steel (For concealed style).
- 9. Actuator: Side or top mounted; listed and labeled as defined in NFPA 70, by qualified testing agency, and marked for intended location and application.
- 10. Trip Mechanism: Battery-powered electronic sensor unless otherwise noted as hard-wired in the plumbing drawing fixture schedule; listed and labeled as defined in NFPA 70, by qualified testing agency, and marked for intended location and application.
- 11. Consumption: Maximum 1.28 gal. (4.8 L) per flush. See plumbing drawing fixture schedule.
- 12. Minimum Inlet: NPS 1 (DN 25).
- 13. Minimum Outlet: NPS 1-1/4 (DN 32).

2.4 TOILET SEATS

A. Toilet Seats:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard.
 - b. Bemis Manufacturing Company.
 - c. Centoco Manufacturing Corporation.
 - d. Church Seats; Bemis Manufacturing Company.
 - e. Kohler Co.
 - f. TOTO USA, INC.
 - g. Zurn Industries, LLC.
- 2. Source Limitations: Obtain toilet seat from single source from single manufacturer.
- 3. Material: Plastic.
- 4. Type: Commercial (Heavy duty).
- 5. Shape: Elongated rim, open front.
- 6. Hinge: Self-sustaining, check.

7. Hinge Material: Noncorroding metal.
8. Seat Cover: Not required.
9. Color: White.
10. Surface Treatment: Antimicrobial.

2.5 SUPPORTS

A. Water-Closet Carrier:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Jay R. Smith Mfg Co; a division of Morris Group International.
 - b. MIFAB, Inc.
 - c. WATTS.
 - d. Zurn Industries, LLC.
2. Source Limitations: Obtain water-closet carrier from single source from single manufacturer.
3. Description: Waste-fitting assembly, as required to match drainage piping material and arrangement with faceplates, couplings gaskets, and feet; bolts and hardware matching fixture. Include additional extension coupling, faceplate, and feet for installation in wide pipe space.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for water-supply piping and sanitary drainage and vent piping systems to verify actual locations of piping connections before water-closet installation.
- B. Examine walls and floors for suitable conditions where water closets will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Water-Closet Installation:

1. Install level and plumb.
2. Install accessible, wall-mounted water closets at mounting height in accordance with ICC A117.1.

B. Support Installation:

1. Install supports, affixed to building substrate, for floor-mounted, back-outlet water closets.
2. Use carrier supports with waste-fitting assembly and seal.
3. Install wall-mounted, back-outlet water-closet supports with waste-fitting assembly and waste-fitting seals; and affix to building substrate.
4. Measure support height installation from finished floor, not structural floor.

C. Flushometer-Valve Installation:

1. Install flushometer-valve, water-supply fitting on each supply to each water closet.
2. Attach supply piping to supports or substrate within pipe spaces behind fixtures.

3. Install lever-handle flushometer valves for accessible water closets with handle mounted on open side of water closet.
 4. Install actuators in locations easily reachable for people with disabilities.
- D. Install toilet seats on water closets.
- E. Wall Flange and Escutcheon Installation:
1. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations and within cabinets and millwork.
 2. Install deep-pattern escutcheons if required to conceal protruding fittings.
 3. Comply with escutcheon requirements specified in Section 22 0518 "Escutcheons for Plumbing Piping."
- F. Joint Sealing:
1. Seal joints between water closets and walls and floors using sanitary-type, one-part, mildew-resistant silicone sealant.
 2. Match sealant color to water-closet color.
 3. Comply with sealant requirements specified in Section 07 9200 "Joint Sealants."

3.3 PIPING CONNECTIONS

- A. Connect water closets with water supplies and soil, waste, and vent piping. Use size fittings required to match water closets.
- B. Comply with water piping requirements specified in Section 22 1116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 22 1316 "Sanitary Waste and Vent Piping."
- D. Where installing piping adjacent to water closets, allow space for service and maintenance.

3.4 ELECTRICAL CONNECTIONS

- A. Connect wiring in accordance with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment in accordance with Section 26 0526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted in accordance with NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
 1. Nameplate to be laminated acrylic or melamine plastic signs, as specified in Section 26 0553 "Identification for Electrical Systems."
 2. Nameplate to be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.5 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring in accordance with Section 26 0523 "Control-Voltage Electrical Power Cables."

3.6 ADJUSTING

- A. Operate and adjust water closets and controls. Replace damaged and malfunctioning water closets, fittings, and controls.
- B. Adjust water pressure at flushometer valves to produce proper flow.

3.7 CLEANING AND PROTECTION

- A. Clean water closets and fittings with manufacturers' recommended cleaning methods and materials.
- B. Install protective covering for installed water closets and fittings.
- C. Do not allow use of water closets for temporary facilities unless approved in writing by Owner.

END OF SECTION

SECTION 22 4216.13 - COMMERCIAL LAVATORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Vitreous-china, wall-mounted lavatories.
 - 2. Automatically operated lavatory faucets.
 - 3. Supply fittings.
 - 4. Waste fittings.
 - 5. Lavatory supports.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for lavatories.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Sustainable Design Submittals:
 - 1. Product Data: For water consumption.
 - 2. Plumbing Fixtures: Provide the following:
 - a. Manufacturer cut sheet indicating water consumption.
 - b. WaterSense certification for residential fixtures, commercial water closets, commercial urinals, and commercial showers.
- C. Shop Drawings: Include diagrams for power, signal, and control wiring of automatic faucets.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Counter cutout templates for mounting of counter-mounted lavatories.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For lavatories and faucets to include in operation and maintenance manuals.
 - 1. In addition to items specified in Section 01 7823 "Operation and Maintenance Data," include the following:
 - a. Servicing and adjustments of automatic faucets.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Faucet Washers and O-Rings: Equal to 10 percent of amount of each type and size installed.
 - 2. Faucet Cartridges and O-Rings: Equal to 5 percent of amount of each type and size installed.

PART 2 - PRODUCTS

2.1 VITREOUS-CHINA, WALL-MOUNTED LAVATORIES

- A. Lavatory - Vitreous China, Wall Mounted:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard.
 - b. Kohler Co.
 - c. TOTO USA, INC.
 2. Fixture:
 - a. Standard: ASME A112.19.2/CSA B45.1.
 - b. Type: For wall hanging.
 - c. Color: White.
 - d. Mounting Material: Wall carrier.
 3. Support: Type II, concealed-arm lavatory carrier with escutcheons.
 4. Lavatory Mounting Height: Handicapped/elderly in accordance with ICC A117.1.
 5. Support: Type III lavatory carrier with two hanger plates made for corner lavatories.
- B. Lavatory Mounting Height: Handicapped/elderly in accordance with ICC A117..

2.2 AUTOMATICALLY OPERATED LAVATORY FAUCETS

- A. NSF Standard: Comply with NSF 61 and NSF 372 for faucet materials that will be in contact with potable water.
- B. Lavatory Faucets - Automatic Type: Hardwired Electronic Sensor Operated:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard.
 - b. Kohler Co.
 - c. Sloan Valve Company.
 2. Standards: ASME A112.18.1/CSA B125.1 and UL 1951.
 3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 4. General: Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and fixture receptor.
 5. Body Material: Commercial, solid-brass, or die-cast housing with brazed copper and brass waterway.
 6. Finish: Polished chrome plate.
 7. Maximum Flow Rate: 0.35 gpm (1.5 L/min.).
 8. Drain: Not part of faucet.

2.3 SUPPLY FITTINGS

- A. Products shall comply with the SDWA (Safe Drinking Act) "No Lead" restrictions of ANSI NSF 61 and NSF 372 for supply-fitting materials that will be in contact with potable water.
- B. Standard: ASME A112.18.1/CSA B125.1.

- C. Supply Piping: Chrome-plated-brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated-brass or stainless steel wall flange.
- D. Supply Stops: Chrome-plated-brass, one-quarter-turn, ball-type or compression valve with brass stems and shall contain no plastics.
- E. 1/2" IPS inlet connection and outlet 3/8" compression.
- F. Operation: Loose key

2.4 WASTE FITTINGS

- A. Standard: ASME A112.18.2/CSA B125.2.
- B. Drain: Grid type with offset and straight tailpiece.
 - 1. Size: NPS 1-1/4 (DN 32)
 - 2. Material:
 - a. Chrome plated cast brass strainer (with or without overflow) and brass lock nut.
 - b. 17-gauge seamless brass tube drain tailpiece.
 - c. CSA certified or other recognized third party testing authority.
 - d. Marked with manufacturers name.
- C. Trap:
 - 1. Size: NPS 1-1/2 by NPS 1-1/4 (DN 40 by DN 32).
 - 2. Material:
 - a. Chrome plated heavy cast brass with cleanout.
 - b. 17-gauge seamless brass adjustable wall bend.
 - c. Include cast brass, slip joints nuts and no reducing washers.
 - d. CSA certified or other recognized third party testing authority.

2.5 LAVATORY SUPPORTS

- A. Lavatory Wall Carrier:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Jay R. Smith Mfg Co; a division of Morris Group International.
 - b. WATTS.
 - c. Zurn Industries, LLC.
 - 2. Standard: ASME A112.6.1M.
 - 3. General: Provide with steel uprights and floor anchors.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before lavatory installation.
- B. Examine counters and walls for suitable conditions where lavatories will be installed.

- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install lavatories level and plumb in accordance with roughing-in drawings.
- B. Install wall carriers, affixed to building substrate, for wall-mounted lavatories.
- C. Install accessible wall-mounted lavatories at handicapped/elderly mounting height for people with disabilities or the elderly, in accordance with ICC A117.1.
- D. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 0518 "Escutcheons for Plumbing Piping."
- E. Seal joints between lavatories, counters, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 07 9200 "Joint Sealants."
- F. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible lavatories. Comply with requirements in Section 22 0719 "Plumbing Piping Insulation."

3.3 PIPING CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 22 1116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 22 1316 "Sanitary Waste and Vent Piping."

3.4 ELECTRICAL CONNECTIONS

- A. Connect wiring according to Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 26 0526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted in accordance with NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
 - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 26 0553 "Identification for Electrical Systems."
 - 2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.5 ADJUSTING

- A. Operate and adjust lavatories and controls. Replace damaged and malfunctioning lavatories, fittings, and controls.
- B. Install new batteries in battery-powered, electronic-sensor mechanisms.

3.6 CLEANING AND PROTECTION

- A. After completing installation of lavatories, inspect and repair damaged finishes.
- B. Clean lavatories, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed lavatories and fittings.
- D. Do not allow use of lavatories for temporary facilities unless approved in writing by Owner.

END OF SECTION

SECTION 22 4216.16 - COMMERCIAL SINKS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Service basins.
 - 2. Utility sinks.
 - 3. Handwash sinks.
 - 4. Sink faucets.
 - 5. Laminar-flow, faucet-spout outlets.
 - 6. Supply fittings.
 - 7. Waste fittings.
- B. Related Requirements:
 - 1. Section 22 4100 "Residential Plumbing Fixtures" for residential sinks.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for sinks.
 - 2. Include rated capacities, operating characteristics[, **electrical characteristics**,] and furnished specialties and accessories.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Counter cutout templates for mounting of counter-mounted lavatories.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For sinks to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Faucet Washers and O-Rings: Equal to 10 percent of amount of each type and size installed.
 - 2. Faucet Cartridges and O-Rings: Equal to 5 percent of amount of each type and size installed.

PART 2 - PRODUCTS

2.1 SERVICE BASINS

- A. Service Basins: Terrazzo, floor mounted.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

- a. Acorn Engineering Company.
- b. Crane Plumbing, L.L.C.
- c. Florestone Products Co., Inc.
- d. Stern-Williams Co., Inc.
2. Fixture:
 - a. Standard: IAPMO PS 99.
 - b. Shape: Square.
 - c. Nominal Size: 24 by 36 inches (610 by 915 mm)
 - d. Height: 12 inches (305 mm) with dropped front.
 - e. Rim Guard: On front] top surface.
 - f. Drain: Grid with NPS 3 (DN 80) outlet.
3. Mounting: On floor and flush to wall.

2.2 UTILITY SINKS

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - a. Advance Tabco.
 - b. Eagle Group; Foodservice Equipment Division.
 - c. Elkay Manufacturing Co.
 - d. Griffin Products, Inc.
 - e. Just Manufacturing.
2. Fixture:
 - a. Standard: ASME A112.19.3/CSA B45.4.
 - b. Type: Ledge back.

2.3 HANDWASH SINKS

- A. Handwash Sinks: Stainless steel, wall mounted.
 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - a. Advance Tabco.
 - b. AERO Manufacturing Company.
 - c. Amtekco Industries, Inc.; a Wasserstrom Company.
 - d. Elkay Manufacturing Co.
 - e. Just Manufacturing.
 2. Fixture:
 - a. Standards: ASME A112.19.3/CSA B45.4 and NSF/ANSI 2.
 - b. Type: Basin with radius corners, back for faucet, and support brackets.
 - c. Nominal Size: 17 by 16 by 5 inches (432 by 406 by 127 mm).

2.4 SINK FAUCETS

- A. NSF Standard: Comply with NSF/ANSI 61 Annex G, "Drinking Water System Components - Health Effects," for faucet-spout materials that will be in contact with potable water.

2.5 SUPPLY FITTINGS

- A. NSF Standard: Comply with NSF/ANSI 61 Annex G, "Drinking Water System Components - Health Effects," for supply-fitting materials that will be in contact with potable water.
- B. Standard: ASME A112.18.1/CSA B125.1.

- C. Supply Piping: Chrome-plated brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated brass or stainless-steel wall flange.
- D. Supply Stops: Chrome-plated brass, one-quarter-turn, ball-type or compression valve with inlet connection matching supply piping.

2.6 WASTE FITTINGS

- A. Standard: ASME A112.18.2/CSA B125.2.
- B. Drain: Grid type with NPS 1-1/2 (DN 40) offset and straight tailpiece.
- C. Trap:
 - 1. Size: NPS 1-1/2 (DN 40).

2.7 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before sink installation.
- B. Examine walls, floors, and counters for suitable conditions where sinks will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install sinks level and plumb according to roughing-in drawings.
- B. Install supports, affixed to building substrate, for wall-hung sinks.
- C. Install accessible wall-mounted sinks at handicapped/elderly mounting height according to ICC/ANSI A117.1.
- D. Set floor-mounted sinks in leveling bed of cement grout.
- E. Install water-supply piping with stop on each supply to each sink faucet.

1. Exception: Use ball or gate valves if supply stops are not specified with sink. Comply with valve requirements specified in Section 22 0523.12 "Ball Valves for Plumbing Piping" and Section 22 0523.15 "Gate Valves for Plumbing Piping."
2. Install stops in locations where they can be easily reached for operation.

F. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 0518 "Escutcheons for Plumbing Piping."

G. Seal joints between sinks and counters, floors, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 07 9200 "Joint Sealants."

H. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 22 0719 "Plumbing Piping Insulation."

3.3 CONNECTIONS

- A. Connect sinks with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 22 1116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 22 1316 "Sanitary Waste and Vent Piping."

3.4 ADJUSTING

- A. Operate and adjust sinks and controls. Replace damaged and malfunctioning sinks, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.

3.5 CLEANING AND PROTECTION

- A. After completing installation of sinks, inspect and repair damaged finishes.
- B. Clean sinks, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed sinks and fittings.
- D. Do not allow use of sinks for temporary facilities unless approved in writing by Owner.

END OF SECTION

SECTION 23 0100 - COMMON WORK RESULTS FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes basic requirements for divisions 22, 23, as well as applicable specification sections in division 26 (variable frequency drives).

1.3 QUALITY ASSURANCE

- A. Where equipment or accessories are used which differ in arrangement, configuration, dimensions, ratings, or engineering parameters from those indicated on the contract documents, the contractor is responsible for all costs involved in integrating the equipment or accessories into the system and for obtaining the performance from the system into which these items are placed. This may include changes found necessary during the testing, adjusting, and balancing phase of the project.
- B. Equipment Design
 - 1. Design equipment and accessories not specifically described or identified by manufacturer's catalog numbers in conformity with applicable technical standards and suitable for maximum working pressure, test pressure and temperatures required.
- C. Equipment Installation
 - 1. Obtain manufacturer's printed installation instructions to aid in properly executing work of installing equipment whenever such instructions are available.
 - 2. Erect equipment in a neat and workmanlike manner. Align, level and adjust for satisfactory operation. Install so that connecting and disconnecting of piping and accessories can be made readily, and so that parts are easily accessible for inspection, operation, maintenance and repair. Minor deviation from arrangements indicated may be made, as approved.
- D. Packaged Equipment
 - 1. Provide packaged equipment, where specified, which is completely factory assembled, including all mechanical and electrical components mounted on a common base or in a common enclosure with all piping, controls and wiring factory installed ready to be incorporated into the mechanical system.
- E. Quietness of Operation
 - 1. Pumps, fans, motors and other equipment with moving parts have been especially selected for quietness of operation.
 - 2. For equipment other than that specified, submitted by the Contractor for approval, submit written statements from the manufacturer and the Contractor that said equipment is at least as quiet as that specified and include certified sound test data to support the claims made.

F. Vibration Isolation

1. Vibration isolation devices for isolating equipment, ductwork and piping from the building structure are specified under Section 23 0548. Procure these devices from a single vibration materials manufacturer through a local representative. Furnish the local representative with copies of Shop Drawings of all equipment requiring vibration isolation and access to the Drawings that show the ductwork and piping that require vibration isolation.
2. For equipment requiring factory installation of vibration isolators, furnish the equipment manufacturer with the identity of the supplier of the vibration isolation manufacturer selected for the Project. Submittals for equipment not equipped with the product of the vibration isolation manufacturer selected for the Project will be rejected.

G. Vibration Testing of Rotating Equipment

1. Pumps

- a. Provide for the services of a qualified vibration consultant to take vibration velocity measurements on all base mounted pumps in accordance with ANSI H11.4.6.
- b. Take measurements on the bearing caps of each pump with a driver 5 HP and larger in the vertical, horizontal and axial directions.
- c. Maximum allowable self-excited, total unfiltered vibration velocity: 0.0875 mm (3.5 mils) per second peak to peak. If the measured velocity exceeds this figure, determine the source of the vibration and make the necessary corrections to bring the velocity figure to within the specified maximum.
- d. Submit on approved data sheets the vibration measurements for each pump along with the relevant charts and data from ANSI H19.6.4.

2. Fans

- a. Provide the services of a qualified vibration consultant to take vibration velocity measurements on all base mounted or suspended fans in accordance with AMCA 204-6.1.
- b. Take measurements on the bearing caps of each fan in the vertical, horizontal and axial directions.
- c. The following table, taken from AMCA 204, lists the fan application categories for the maximum allowable self-excited, total unfiltered, peak-to-peak vibration velocity.

1)	Fan Application Category	IN./S
2)	BV-1	0.60
3)	BV-2	0.30
4)	BV-3	0.20
5)	BV-4	0.15
6)	BV-5	0.10

- d. Apply Fan Application Category BV-3 for fan drivers 5 HP to 25 HP and BV-4 for fan drivers 30 HP and larger. Fans less than 5 HP do not require testing.
- e. If fan vibrations exceed the AMCA allowable levels for the specified vibration category, make the necessary corrections to bring the vibrations to within the allowable levels.

1.4 SEQUENCING AND SCHEDULING

- A. Coordinate mechanical equipment installation with other building components.

- B. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction to allow for mechanical installations.
- C. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components, as they are constructed.
- D. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the Work. Coordinate installation of large equipment requiring positioning before closing in building.
- E. Coordinate connection of mechanical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies.
- F. Coordinate installation of identifying devices after completing covering and painting, if devices are applied to surfaces. Install identifying devices before installing acoustical ceilings and similar concealment.

1.5 COORDINATION

- A. Furnish one can of touch up paint for each different color factory finish which is to be the final finished surface of the product. Deliver touch up paint with other "loose and detachable parts" as covered in the General Requirements. Motor controllers.
 - 1. Use zinc rich paint on galvanized surfaces prior to providing finish coat.
- B. Seal and firestop all penetrations of fire rated partitions.
 - 1. Sealing and firestopping of sleeves/openings between ductwork, piping, etc. and the sleeve, structural or partition opening shall be the responsibility of the contractor whose work penetrates the opening. The contractor responsible shall hire individuals skilled in such work to do the sealing and fireproofing. These individuals hired shall normally and routinely be employed in the sealing and fireproofing occupation.

1.6 REFERENCE TO DESIGN DRAWING STANDARDS

- A. Maximum and minimum requirements
 - 1. Refer to equipment schedules for equipment identification number and corresponding area location, capacity, and design requirements.
 - 2. Where ever schedules or notes appear in the Contract Documents in which sizes and capacities of equipment are indicated or specified, provide equipment under the contract which meets the following requirements under operating conditions:
 - a. The RPM, the outlet velocities, tip speeds and the NC ratings specified are the maximum that will be accepted.
 - b. The cfm, the static pressure on fans, the gpm and the total head on pumps, are the minimum that will be accepted.

3. Motor horsepower ratings specified or shown: the minimum acceptable indicated; motor speeds: the maximum acceptable. If a motor is provided having a larger horsepower rating than specified, provide the associated increased wire, breaker, starter, fuses, overload protection, etc., at no additional cost. Provide the increased motor circuit in accordance with the "Motor Circuit Sizing Schedule" indicated. Do not provide increased motor horsepower which together add more than 5 percent to the load of an electrical distribution equipment item (i.e., Motor Control Center, Power Panel, etc.).

1.7 OPERATION AND MAINTENANCE DATA

- A. All operations and maintenance data shall comply with the submission and content requirements specified under section Division 01.
- B. In addition to the general content specified under General Requirements, supply the following additional documentation.
 1. Records of tests performed to certify compliance with system requirements.
 2. Certification of inspections by regulatory agencies.
 3. Valve schedules.
 4. Lubrication instructions, including list/frequency of lubrication.

1.8 CERTIFICATIONS AND INSPECTIONS

- A. Obtain and pay for all required installation inspections except those provided by the Architect/Engineer. Include copies of the certificates in the Operating and Maintenance Manuals.

1.9 OPERATING AND MAINTENANCE INSTRUCTIONS

- A. Provide 2 copies of O&M manuals in three ring or post binders, using an index at the front of each volume and tabs for each system or type of equipment. Provide an electronic PDF of the same material.
 1. Prior to printing the O&M documents provide electronic PDF documents to the architect for approval. PDF documents shall be organized identical to the intended layout of the 3-ring binders. Provide digital bookmarks for each piece of equipment, similar to the indexed layout of the 3-ring binder.
- B. In addition to the data indicated in the General Requirements, include the following information:
 1. Copies of all approved shop drawings.
 2. Manufacturer's wiring diagrams for electrically powered equipment.
 3. Records of tests performed to certify compliance with system requirements.
 4. Certificates of inspection by regulatory agencies.
 5. Temperature control record drawings and control sequences.
 6. Parts lists for manufactured equipment.
 7. Valve schedules.
 8. Lubrication instructions, including list/frequency of lubrication done during construction
 9. Warranties.
 10. Additional information as indicated in the technical specification sections.

1.10 TRAINING OF OWNER PERSONNEL

- A. Instruct Owner personnel in the proper operation and maintenance of systems and equipment provided as part of this project; video tape all training sessions. Use hours indicated in individual specification sections. Where hours are not indicated within an individual specification section, include not less than 4 hours of instruction for each piece of equipment, using the Operating and Maintenance manuals during this instruction. Demonstrate startup and shutdown procedures for all equipment. All training to be during normal working hours.

1.11 RECORD DRAWINGS

- A. In addition to the data indicated in the General Requirements, maintain temperature control record drawings on originals prepared by the installing contractor/subcontractor. Include copies of these record drawings with the Operating and Maintenance manuals.

PART 2 - PRODUCTS

2.1 ACCESS PANELS AND DOORS

- A. Lay-in Ceilings
 - 1. Removable lay in ceiling tiles in 2 X 2 foot or 2 X 4 foot configuration provided under Division 9 are sufficient; no additional access provisions are required unless specifically indicated.
 - a. Provide tagging system using colored dots for identifying where equipment is located above the ceiling. Coordinate coloring system with Owner.
 - 2. Plaster walls and ceilings
 - a. 16 gauge frame with not less than a 20 gauge hinged door panel, prime coated steel for general applications, stainless steel for use in toilets, showers, and similar wet areas, concealed hinges, screwdriver operated cam latch for general applications, key lock for use in public areas, UL listed for use in fire rated partitions if required by the application. Use the largest size access opening possible, consistent with the space and the equipment needing service; minimum size is 12" by 12".

2.2 SEALING AND FIRESTOPPING

- A. Fire and/or Smoke Rated Penetrations
 - 1. Manufacturers: Subject to compliance with the requirements, provide products by one of the following:
 - a. 3M
 - b. Hilti,
 - c. Rectorseal,
 - d. STI/SpecSeal
 - e. Tremco
 - 2. General
 - a. Fire stop systems shall be UL listed or tested by an independent testing laboratory approved by the Department of Commerce.
 - b. Use a product that has a rating not less than the rating of the wall or floor being penetrated. Reference architectural and life safety drawings for identification of fire and/or smoke rated walls and floors.

- c. Contractor shall use firestop putty, caulk sealant, intumescent wrap strips, intumescent firestop collars, firestop blocks, firestop mortar or a combination of these products to provide a UL listed system for each application required for this project. Provide mineral wool backing where specified in manufacturer's application detail.
- B. Non-Rated Penetrations
 - 1. Pipe Penetrations
 - a. At pipe penetrations of non-rated interior partitions, floors and exterior walls above grade, use urethane caulk in annular space between pipe insulation and sleeve. For non-rated drywall, plaster or wood partitions where sleeve is not required use urethane caulk in annular space between pipe insulation and wall material.
 - 2. Duct Penetrations
 - a. Annular space between duct (with or without insulation) and the non-rated partition or floor opening shall not be larger than 2".
 - b. Where shown or specified, pack annular space with fiberglass batt insulation or mineral wool insulation. Provide 4" sheet metal escutcheon around duct on both sides of partition or floor to cover annular space.

PART 3 - EXECUTION

3.1 ERECTION, INSTALLATION, APPLICATION

- A. Dimension and Design
 - 1. Provide apparatus and equipment of such dimensions and design as to be adapted to the arrangement of the installation and to fit within the limits of the space available.
- B. Stand-off Brackets
 - 1. Provide insulated equipment, piping and duct work with stand-off brackets for attaching components to allow full insulation thickness.
- C. Special Tools
 - 1. Provide tools required to operate, adjust, or make minor repairs to the equipment and install them in a wall mounted wood or metal case. Provide the case with a lock and two keys.
- D. Standard Products
 - 1. Provide products and equipment that are essentially the standard product of the manufacturer. Where two or more units of the same product or type of equipment are required, provide these units as products of the same manufacturer.
 - 2. Where the requirements of the Contract Documents exceed that of a manufacturer's standard product in terms of quality, performance or efficiency, the manufacturer shall make special provisions to ensure that the product proposed meets the requirements of the Contract Documents.
- E. Substituted Items
 - 1. Should a substitute item be offered and accepted and the substitute item requires services or utilities other than required by the item substituted for, provide those other services or utilities at no additional cost to the Owner.

F. Equipment Locations

1. Mechanical equipment and devices have been shown on the Drawings in the approximate location required for reasons of access, noise control or maintainability. Minor adjustments in location dictated by coordination with other work are permitted. Major relocations for reasons other than these are not to be made without specific written approval.

G. Interferences

1. Before proceeding with the installation of piping and ductwork, inspect the Contract Documents and determine that the location of the Work does not interfere with other work. In case of interference request clarification from the Architect in writing.

H. Holes Through Previously Constructed Walls and Floors

1. Cut holes for the passage of piping and ductwork through previously constructed walls and floors in a neat workman-like manner.
2. Make holes through floors and masonry walls by coring or saw-cutting the hole with minimum oversizing to allow for firesafing or caulking the peripheral space between the pipe or duct and the structure.
3. Make holes through gypsum board walls by sawing with minimum oversizing to allow for firesafing or caulking or for a flange or escutcheon to be placed in a manner to fill or cover the peripheral space between the pipe or duct and the wall.

I. Piping and Ductwork – Prohibited Locations

1. Do not run piping over electrical equipment such as transformers, switchgear and panelboards.
2. When possible, do not install piping and ductwork of any kind in Electrical Rooms, telecommunications rooms, or elevator equipment rooms, except that which serves these rooms.
3. If installing piping or ductwork in Electrical rooms cannot be avoided, maintain a clear space over the equipment and 36 inches in front of equipment from floor to ceiling.

J. Offsets and Transitions

1. In general, most main offsets and transitions of piping and duct work are shown on the drawings in order to indicate approximate locations in plan and elevation where the systems are intended to be run.
2. The Contract Documents are not intended to serve as coordinated construction drawings showing all minor adjustments in locations and duct cross sections that are required for a fully coordinated installation that respects the work of all trades.
3. Fully coordinate the mechanical work within itself and with the work of other trades to ensure the avoidance of all interferences.

K. Lines and Grades

1. Construct Work in conformity with lines and grades as indicated.
2. Lay out the Work and be responsible for lines, elevations and measurements required for the installation of the Work.
3. Space axis lines within building on each floor level so that mechanical work may be laid out with metal tape measure having length of 30.5 meters (100 feet) maximum. The use of cloth tape for lay-out will not be permitted.
4. Use bench marks outside building from which lines and grades required for installation of mechanical work may be set.

L. Fan Inlet and Outlet Guards

1. Provide screen guards with rigid angle frames on fan inlet and outlet openings which are accessible to personnel.

3.2 CUTTING AND PATCHING

- A. Refer to Division 1 for cutting and patching requirements.

3.3 CONCRETE WORK

- A. Provide cast in place concrete per Division 3 requirements. Provide all layout drawings, anchor bolts, metal shapes, and/or templates required to be cast into concrete or used to form concrete for support of mechanical equipment.

3.4 SEALING AND FIRESTOPPING

A. Fire and/or Smoke Rated Penetrations

1. Install approved product in accordance with the manufacturer's instructions where pipes penetrate a fire/smoke rated surface. When pipe is insulated, use a product which maintains the integrity of the insulation and vapor barrier.
2. Where firestop mortar is used to infill large fire-rated floor openings that could be required to support weight, provide permanent structural forming. Firestop mortar alone is not adequate to support any substantial weight.

B. Non-Rated Partitions

1. In exterior wall openings below grade, assemble rubber links of mechanical seal to the proper size for the pipe and tighten in place, in accordance with manufacturer's instructions.
2. At all interior partitions and exterior walls, pipe penetrations are required to be sealed. Apply sealant to both sides of the penetration in such a manner that the annular space between the pipe sleeve or cored opening and the pipe or insulation is completely blocked.

- C. Duct penetrations through non-rated partitions shall require sheet metal escutcheons with fiberglass or mineral wool insulation fill for spaces that include laboratories, kitchens/servery, janitor closets, toilet rooms, mechanical rooms, conference rooms, private consultation rooms, and where noted on drawings elsewhere.

- D. Sealing and firestopping of sleeves/openings between ductwork, piping, etc. and the sleeve, structural or partition opening shall be the responsibility of the contractor whose work penetrates the opening. The contractor responsible shall hire individuals skilled in such work to do the sealing and fireproofing. These individuals hired shall normally and routinely be employed in the sealing and fireproofing occupation.

END OF SECTION

SECTION 23 0413 - COMMON SUBMITTAL REQUIREMENTS FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes supplementary administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals specific to the work of this Division.
- B. Related Requirements:
 - 1. Division 01 submittal requirements.

1.2 DEFINITIONS

- A. Contractor: Refers to an entity in direct Contract with the Owner to furnish and/or perform any portion of the Work of the Contract, including but not limited to a Construction Manager.
 - 1. Contractor shall review and approve Product Submittals prior to forwarding them to the Architect.
- B. Product Submittals: In general, Product Submittals show characteristics of the proposed construction in one of the following forms:
 - 1. Shop Drawings.
 - 2. Product Data.
 - 3. Samples.
- C. Action Submittals: Written and graphic information and physical samples that require Architect's and Construction Manager's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."
- D. Informational Submittals: Written and graphic information and physical samples that do not require Architect's and Construction Manager's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."
- E. Submittal Review Sheet: Specific form required to accompany each submittal. Obtain Submittal Review Sheet from the SmithGroup Project Manager.

1.3 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

- A. Requirements specified for submittals are intended to provide efficient handling, while permitting review responsibilities to be carried out.
- B. Avoidable Resubmittals: The first two reviews of each specified submittal will be processed without cost to the Contractor. After the second review, the Owner may charge the Contractor for the cost of such additional processing, unless the processing results from approved Change Orders causing revisions to previously approved submittals.
- C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
 2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
 3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
 4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
 - a. Architect and Construction Manager reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.
- D. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's Construction Manager's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
1. Initial Review: Allow 10 business days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required.
 2. When a large volume of submittal materials is scheduled, additional review time may be required. Similarly, a particular submittal may require review completion in less than the agreed normal time. Due to variations in submittal volume and processing needs, agreed review time is not intended to apply to extreme conditions.
 3. Resubmittal Review: Allow 10 business days for review of each resubmittal.
 4. Sequential Review: Where sequential review of submittals by Architect's consultants, Owner, or other parties is indicated, allow 15 business days for initial review of each submittal.
- E. Maintain at the Project Site ready access to the latest reviewed Shop Drawings and Product Data, and one set of samples.
- 1.4 DELEGATED-DESIGN SERVICES
- A. Definitions:
1. Delegated Design: A portion or component of the Work identified by the Contract Documents to be designed by the Contractor, or an entity assigned by the Contractor, to satisfy performance and design criteria specified in the Contract Documents for that portion or component.
 2. Registered Design Professional: Design professional, assigned by the Contractor, who is responsible for providing the delegated design work, and for certifying that the work is in compliance with the specified performance requirements and design criteria. Design professional shall be legally qualified to practice in jurisdiction where Project is located and shall be experienced in providing delegated design services of the kind indicated. Delegated design services are defined as those performed for installation of the system, assembly or product that are similar in material, design, and extent to those indicated for this Project.
- B. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.
- C. Delegated-Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally signed PDF electronic file copies of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.
 1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

PART 2 - PRODUCTS – NOT USED

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

- A. Action and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Combine with Submittal Review Sheet before submitting to Architect and Construction Manager.
 1. Submittal Compliance Form: Allowed in lieu of some product data and sample submittals. See individual specification sections for specific allowable use. By submitting the form, the Contractor certifies that all products specified in the Section are being submitted exactly as indicated, including all options and features indicated, with no substitutions or comparable products. Where a Basis-of-Design manufacturer/product is indicated, along with a list of other manufacturers, the Contractor certifies that only the Basis-of-Design manufacturer/product will be provided and not any other listed manufacturers/products. Where a single manufacturer/product is indicated, even if specified as "available manufacturer" or manufacturer "included but not limited to the following", Contractor certifies that only the indicated single manufacturer/product will be provided.
 - a. Obtain a copy of the Submittal Compliance Form from the Architect, fill in the information required and include as a line item on the Submittal Cover Sheet for each applicable Submittal.
 - b. Upon receipt, the Architect will complete the form in the space below "Architect Action" and indicate the Action on the Submittal Cover Sheet.
- B. Project Closeout and Maintenance Material Submittals: See requirements in Division 01.
- C. Be responsible for quantities, weights, and dimensions to be confirmed and correlated at the site; for information that pertains solely to the fabrication processes and to the means, methods, techniques, sequences, and procedures of construction; and for coordination of the work of every trade, supplier, and subcontractor.
- D. Be responsible for each submittal to be in conformance with information given and the design intent expressed in the Contract Documents.

- E. Provide with each submittal specific written notice of any variation from the requirements of the Contract Documents by causing a specific notation to be made on the Submittal Review Sheet and Submittal Transmittal.

3.2 ARCHITECT'S AND GENERAL CONTRACTOR'S ACTION

- A. General: Architect will not review submittals that do not include the Submittal Review Sheet.
- B. Action Submittals: Architect's staff and consultants will review the submittal, and mark the Submittal Review Sheet with an action code. The code meanings are described below.
- C. Additional codes may be provided within comments or as an electronic submittal review stamp and shall be used in help indicating return of partial submittals.
- D. The Final Review Code on the Submittal Review Sheet prevails and governs the action of the overall submittal.
- E. Review Code meanings are as follows:
 - 1. Action Codes Permitting Use:
 - a. When an action code permitting use is assigned to a submittal, it does not authorize work that does not comply with the requirements of the Contract Documents. Acceptance of the Work will depend on compliance.
 - b. Code AP - Approved: The Work covered by the submittal item may proceed, provided it complies with Contract Document requirements.
 - c. Code AN - Approved as Noted: The Work covered by the submittal item may proceed, provided it complies with the Architect's notations and Contract Document requirements.
 - d. Code AN-R - Approved as Noted - Resubmit: Do not deliver or install the related work until the resubmittal has received Code AP or AN. However, fabrication and other off-site work covered by the submittal item may proceed, at the Contractor's risk, provided it complies with the Architect's notations and Contract Document requirements.
 - 2. Action Code Prohibiting Use:
 - a. Action Code REJ - Not Approved: The Work covered by the submittal item, including purchasing, fabrication, delivery, and other activity, shall not proceed. Revise the submittal item or prepare a new item in accordance with the Architect's notations. Resubmit the corrected or new item without delay; do not permit submittal items marked "Not Approved" to be used. Work incorporating such items will be rejected.
 - 3. Action Code for Items Not Required:
 - a. Action Code X - Not Requested by Contract Documents: The submittal item is not called for by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.
- F. Informational Submittals: For Architect's information only. Architect and Construction Manager will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect and Construction Manager will forward each submittal to appropriate party.
 - 1. Action Code for Information Only:

- a. Action Code INF - Information Only - Received: The submittal item is not called for a return with a reviewed action code by the Contract Documents and is being returned un-reviewed by the Architect except to the extent necessary to determine its status.
- G. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.
- H. Incomplete submittals are not acceptable, will be considered non-responsive, and will be returned without review.
- I. Architect and Construction Manager will return without review or discard submittals received from sources other than the Contractor.
- J. Submittals not required by the Contract Documents may be returned by the Architect without action.
 - 1. Do not submit Material Safety Data Sheets. They will be returned without review.

3.3 SUBMITTAL TRANSMITTAL REQUIREMENTS

- A. Submittal Transmittal shall be a PDF file in electronic format. It is recommended, to expedite the submittal review, the electronic form be emailed for review to the Architect as early as possible.
 - 1. Submittal Numbering: See below.
 - 2. Contact Information: Full Name, Phone Number and Email Address.
- B. Submittal Definition
 - 1. Each submittal consists of items from only ONE Specifications section.
 - 2. Complete Submittal: If ALL the items required by the Specifications section are listed on one Submittal Form (including continuation sheet), it is a complete submittal.
 - 3. Partial Submittals: If it is necessary to divide the required items of a given Specifications section into two or more submittals to meet schedule or handling requirements, the separate submittals are partial submittals. All partial submittals have the same submittal number, and are differentiated by sequential P-numbers (see below).
 - 4. All items in each submittal, whether complete or partial, will be processed together: Individual items will not be 'broken out' for special handling. Arrange submittals accordingly.
- C. Submittal Numbering
 - 1. Number submittals as described below to assist tracking.
 - 2. Number each submittal in the format nnnnnn-pp.
 - a. The 6-digit number is the number of the section that requires the submittal. For example, 044200.
 - b. The 2-digit number is based on the numerical sequence of submittals from that section. In other words, for each section, the first submittal is 01, the second is 02, and so on. The 2-digit number does not change for partial or re-submittals, so that the submittal can be tracked.
 - c. P-Number for Partial Submittals: Number each partial submittal in the pee space, beginning with P1, and increasing by one for each partial submittal of that submittal. If the submittal is a complete submittal, leave the P space blank.

- d. R-Number for Re-submittals: Number each re-submittal in the arr space, beginning with R1, and increasing by one for each re-submittal of that submittal. Do not include an R-Number for the initial submittal.
- e. Examples:
 - 1) Initial Complete Submittal: 044200-01. First Re-Submittal: 044200-01-R1.
 - 2) Initial Partial Submittal: 044200-01-P1. Second Partial Submittal: 044200-01-P2.
 - 3) First Re-submittal of Second Partial Submittal: 044200-R1-P2.

3.4 SUBMITTAL REVIEW SHEET REQUIREMENTS

- A. Provide Submittal Review Sheet in PDF format. Submit as the page after the Submittal Transmittal.
- B. When attached, the Submittal Review Sheet shall not obscure information contained in the submittal.
- C. Do not edit any of the information contained within the Submittal Review Sheet except as follows:
 - 1. Submittal Number: See Submittal Numbering in Submittal Transmittal Requirements paragraph.
- D. The Contractor shall submit the PDF file in a manner that will allow editing of the Submittal Review Sheet fields by SmithGroup and its consultants.

END OF SECTION

SECTION 23 0513 - COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

1.2 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.

PART 2 - PRODUCTS**2.1 GENERAL MOTOR REQUIREMENTS**

- A. Comply with NEMA MG 1 unless otherwise indicated.
- B. Comply with IEEE 841 for severe-duty motors.
- C. EC motor line filter requirements: Provide passive filtering components as required to limit total harmonic voltage distortion (THDv) and total harmonic current distortion (THDi) caused by electronically commutated motors (ECM) and/or loads controlled by silicon controlled rectifiers (SCR) to 5% and 20% respectively. The specified THD performance shall be achieved with the attached motor operating throughout its entire speed and load ranges, with the input voltage to the motor controller at the nominal line voltage. The point of measurement for the specified THD performance shall be at the electrical panelboard where the ECM/SCR branch circuit connects to the power distribution system. The manufacturer shall provide additional line conditioning equipment, if necessary, to meet this requirement. Provide wiring diagram documentation indicating installed location of filtration.
- D. Provide a maintenance free, circumferential conductive micro fiber grounding ring installed on the AC motor to discharge shaft currents to ground. Grounding ring shall be AEGIS SGR (Shaft Grounding Ring).
- E. Motors protected by the AEGIS SGR shall be warranted for the term of the manufacturer's motor warranty from induced bearing current damage.

- F. Motors up to 100 HP shall be provided with a shaft grounding ring installed on either the drive end or non-drive end. Motors over 100 HP shall be provided with an insulated bearing on the non-drive end and a shaft grounding ring on the drive end of the motor. Grounding rings shall be provided and installed by the motor manufacturer or contractor and shall be installed in accordance with the shaft grounding ring manufacturer's recommendations.
- G. All motors operated on variable frequency drives shall be bonded from the motor foot to system ground with a high-frequency ground strap made of flat braided tinned copper with terminations to accommodate motor foot and system ground connection.

2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet (1000 m) above sea level.
- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: Energy efficient, as defined in NEMA MG 1.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
 - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
 - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Multispeed Motors: Separate winding for each speed.
- F. Rotor: Random-wound, squirrel cage.
- G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- H. Temperature Rise: Match insulation rating.
- I. Insulation: Class F.
- J. Code Letter Designation:
 - 1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
 - 2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.
- K. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

- A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
- B. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
 - 1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
 - 2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
 - 3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
 - 4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
- C. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

2.5 SINGLE-PHASE MOTORS

- A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
 - 1. Permanent-split capacitor.
 - 2. Split phase.
 - 3. Capacitor start, inductor run.
 - 4. Capacitor start, capacitor run.
- B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
- C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
- D. Motors 1/20 HP and Smaller: Shaded-pole type.
- E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

2.6 ELECTRONICALLY COMMUTATED (EC) MOTORS

- A. Description: EC, variable-speed, dc, programmable brushless motor.
- B. Features:
 - 1. Integral controller/inverter operates wound stator and senses rotor position to electronically commute the stator.
 - 2. Controller shall control motor speed through a remote 0- to 10-V-dc control signal.
 - 3. Motor Mounting: Coordinate with driven equipment; suitable for mounting with motor shaft in either horizontal or vertical position.

- C. Performance:
1. Altitude: Suitable for operation at site altitude.
 2. Electrical Characteristics: Suitable for operation with field power source. Coordinate with electrical Installer.
 3. Energy Efficiency: Complying with governing energy codes; 80 percent or higher maintained throughout entire operating range.
 4. Power Factor: 0.9 or higher at full load.
 5. Service Factor: 1.0 or higher.
 6. Speed Control: Variable, zero to 100 percent.
 - a. Synchronous speed rotation with no slip losses.
 - b. Gradual ramp-up to set point upon receiving a start signal.
 - c. Soft speed change ramps.
 - d. Able to overcome reverse rotation without impact.
 - e. Control airflow within 5 percent of set point regardless of static pressure.
 7. Temperature: Suitable for operation in ambient temperature range encountered.
 8. Thermal Protection:
 - a. Automatically breaks electrical power to motor when temperature exceeds a safe value.
 - b. Automatically resets and restores power when temperature returns to normal range.
- D. Bearings: Sealed and permanently lubricated ball bearings.
- E. Enclosure: ODP or TEFC.
- F. Insulation: Class B or Class F.
- G. Rotor: Permanent magnet with near zero rotor losses that operates independent of motor current.
- H. Materials and Construction:
1. Enclosure and Frame: Aluminum, painted steel, or stainless steel.
 2. End Brackets: Cast aluminum..Motor Leads: Pin or screw terminals.
 3. Shaft: Steel or stainless steel.
 4. Motor Leads: Pin or screw terminals.
 5. Nameplates: Manufacturer's standard.
 6. Paint: Manufacturer's standard.

PART 3 - EXECUTION (Not Applicable)

END OF SECTION

SECTION 23 0516 - EXPANSION FITTINGS AND LOOPS FOR HVAC PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Packless expansion joints.
 - 2. Grooved-joint expansion joints.
 - 3. Alignment guides and anchors.
- B. Related Requirements:
 - 1. Refer to Section 01 3573 "Delegated Design Requirements and Procedures" for delegated design submittal procedures and requirements.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Delegated Design Submittals: For each anchor, expansion joint, and alignment guide provide the following that is signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, anchors, alignment guides and swing connections. Design shall accommodate thermal expansion and contraction in accordance with:
 - a. ASME B31.1 for power piping systems
 - b. ASME B31.9 for building services piping
 - 2. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
 - 3. Alignment Guide Details: Detail field assembly and attachment to building structure.
 - 4. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.

1.3 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For expansion joints.

1.5 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M.
- B. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code, Section IX.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Compatibility: Provide products suitable for piping service fluids, materials, working pressures, and temperatures.
- B. Capability: Provide products and installations that will accommodate maximum axial movement as scheduled or indicated on Drawings.
- C. Provide structural work and equipment required for expansion and contraction of piping. Verify anchors, guides, and expansion joints provide and adequately protect system.
- D. Fluid Design Criteria
 - 1. Hot Water Heating System : 30% Propylene Glycol
 - 2. Chilled Water System : 30% Propylene Glycol
 - 3. Energy Recovery System : 30% Propylene Glycol
 - 4. Low Pressure Steam System (Humidifier) : 100% Water
- E. Expansion Compensation Design Criteria:
 - 1. Installation Temperature: 46 degrees F.
 - 2. Hot Water Heating System Temperature: 130 degrees F.
 - 3. Low Pressure Steam System Temperature: 250 degrees F and 0 psig.
 - 4. Chilled Water System Temperature: 57 degrees F.
 - a. Mason Industries, Inc.
 - b. Mason Industries, Inc.

2.2 PACKLESS EXPANSION JOINTS

- A. Metal, Compensator Packless Expansion Joints: MCEJ-01.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flex-Hose Co., Inc.
 - b. Flexicraft Industries.
 - c. Flex-Weld; a division of Kelco.
 - d. Hyspan Precision Products, Inc.
 - e. Mason Industries, Inc.
 - f. Metraflex Company (The).
 - 2. Source Limitations: Obtain metal compensator packless expansion joints from single manufacturer.
 - 3. Minimum Pressure Rating: 150 psig (1035 kPa) unless otherwise indicated.
 - 4. Description: Totally enclosed, externally pressurized, multi-ply bellows isolated from fluid flow by an internal pipe sleeve and external housing.
 - 5. Joint Axial Movement: 2 inches (50 mm) of compression and 1/2 inch (12 mm) of extension.
 - 6. Configuration for Copper Tubing: Multi-ply, phosphor-bronze bellows with copper pipe ends.
 - a. End Connections for Copper Tubing NPS 2 (DN 50) and Smaller: Solder joint.
 - b. End Connections for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Threaded.

7. Configuration for Steel Piping: Multi-ply, stainless steel bellows; steel-pipe end connections; and carbon-steel shroud.
 - a. End Connections for Steel Pipe NPS 2 (DN 50) and Smaller: Threaded.
 - b. End Connections for Steel Pipe NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged.
- B. Rubber Union Connector Expansion Joints: RUEJ-01.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amber/Booth Company, Inc.; a VMC Group Company.
 - b. Flex-Hose Co., Inc.
 - c. Flexicraft Industries.
 - d. Flo Fab Inc.
 - e. General Rubber Corporation.
 - f. Kadant Unaflex, LLC.
 - g. Mason Industries, Inc.
 - h. Metraflex Company (The).
 - i. Proco Products, Inc.
 - j. Unisource Manufacturing, Inc.
 2. Source Limitations: Obtain rubber union connector expansion joints from single manufacturer.
 3. Material: Twin reinforced-rubber spheres with external restraining cables.
 4. Minimum Pressure Rating: 150 psig at 170 deg F (1035 kPa at 77 deg C) unless otherwise indicated.
 5. End Connections for NPS 2 (DN 50) and Smaller: Threaded.
- C. Flexible-Hose Packless Expansion Joints: FHEJ-01.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flex-Hose Co., Inc.
 - b. Flexicraft Industries.
 - c. Flex-Pression.
 - d. Flex-Weld; a division of Kelco.
 - e. Kadant Unaflex, LLC.
 - f. Mason Industries, Inc.
 - g. Metraflex Company (The).
 - h. Proco Products, Inc.
 - i. Unisource Manufacturing, Inc.
 2. Source Limitations: Obtain flexible-hose packless expansion joints from single manufacturer.
 3. Description: Manufactured assembly with inlet and outlet elbow fittings and two flexible-metal-hose legs joined by long-radius, 180-degree return bend or center section of flexible hose.
 4. Flexible Hose: Corrugated-metal inner hoses and braided outer sheaths.
 5. Expansion Joints for Copper Tubing NPS 2 (DN 50) and Smaller: Copper-alloy fittings with solder-joint end connections.
 - a. Bronze hoses and single-braid bronze sheaths with 450 psig at 70 deg F (3100 kPa at 21 deg C) and 340 psig at 450 deg F (2340 kPa at 232 deg C) ratings.
 6. Expansion Joints for Steel Piping NPS 2 (DN 50) and Smaller: Carbon-steel fittings with threaded end connections.
 - a. Stainless steel hoses and single-braid, stainless steel sheaths with 450 psig at 70 deg F (3100 kPa at 21 deg C) and 325 psig at 600 deg F (2250 kPa at 315 deg C) ratings.

- b. Stainless steel hoses and double-braid, stainless steel sheaths with 700 psig at 70 deg F (4830 kPa at 21 deg C) and 515 psig at 600 deg F (3550 kPa at 315 deg C) ratings.
 - 7. Expansion Joints for Steel Piping NPS 2-1/2 to NPS 6 (DN 65 to DN 150): Carbon steel fittings with flanged end connections.
 - a. Stainless steel hoses and single-braid, stainless steel sheaths with 200 psig at 70 deg F (1380 kPa at 21 deg C) and 145 psig at 600 deg F (1000 kPa at 315 deg C) ratings.
 - b. Stainless steel hoses and double-braid, stainless steel sheaths with 275 psig at 70 deg F (1900 kPa at 21 deg C) and 200 psig at 600 deg F (1380 kPa at 315 deg C) ratings.
- D. Metal-Bellows Packless Expansion Joints: MBEJ-01.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Adasco Manufacturing LLC.
 - b. Badger Industries, Inc.
 - c. Flex-Hose Co., Inc.
 - d. Flexicraft Industries.
 - e. Flex-Pression.
 - f. Flex-Weld; a division of Kelco.
 - g. Flo Fab Inc.
 - h. Hyspan Precision Products, Inc.
 - i. Kadant Unaflex, LLC.
 - j. Metraflex Company (The).
 - k. Proco Products, Inc.
 - l. Senior Flexonics Pathway.
 - m. Tozen Corporation.
 - n. Universal Hose and Braid; a Hyspan Company.
 - o. WahlcoMetroflex.
 - 2. Source Limitations: Obtain metal-bellows packless expansion joints from single manufacturer.
 - 3. Standards: ASTM F1120 and EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
 - 4. Type: Circular, corrugated bellows with external tie rods.
 - 5. Minimum Pressure Rating: 200 psig (1379 kPa) unless otherwise indicated.
 - 6. Configuration: Single joint with base and double joint with base class(es), unless otherwise indicated.
 - 7. Expansion Joints for Copper Tubing: Single- or multi-ply phosphor-bronze bellows, copper pipe ends, and brass shrouds.
 - a. End Connections for Copper Tubing NPS 2 (DN 50) and Smaller: Solder joint or threaded.
 - b. End Connections for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Solder joint.
 - c. End Connections for Copper Tubing NPS 5 (DN 125) and Larger: Flanged.
 - 8. Expansion Joints for Steel Piping: Single- or multi-ply stainless steel bellows, steel pipe ends, and carbon steel shroud.
 - a. End Connections for Steel Pipe NPS 2 (DN 50) and Smaller: Threaded.
 - b. End Connections for Steel Pipe NPS 2-1/2 (DN 65) and Larger: Flanged.

2.3 GROOVED-JOINT EXPANSION JOINTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Anvil International/Smith-Cooper International; Tailwind Capital, LLC.
 2. Shurjoint; a part of Aalberts Integrated piping Systems.
 3. Victaulic Company.
- B. Source Limitations: Obtain grooved-joint expansion joints from single manufacturer.
- C. Description: Factory-assembled expansion joint made of several grooved-end pipe nipples, couplings, and grooved joints.
- D. Standard: AWWA C606, for grooved joints.
- E. Nipples: Galvanized, ASTM A53/A53M, Schedule 40, Type E or S, steel pipe with grooved ends.
- F. Couplings: 12, flexible type for steel-pipe dimensions. Include ferrous housing sections, EPDM rubber gasket suitable for cold and hot water, and bolts and nuts.

2.4 ALIGNMENT GUIDES AND ANCHORS

- A. Alignment Guides: AG-01.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flexicraft Industries.
 - b. Mason Industries, Inc.
 - c. Metraflex Company (The).
 2. Source Limitations: Obtain alignment guides from single manufacturer.
 3. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding slider for bolting to pipe.
- B. Anchor Materials:
1. Steel Shapes and Plates: ASTM A36/A36M.
 2. Bolts and Nuts: ASME B18.10 or ASTM A183, steel hex head.
 3. Washers: ASTM F844, steel, plain, flat washers.
 4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.
 - a. Stud: Threaded, stainless steel.
 - b. Expansion Plug: Stainless steel.
 - c. Washer and Nut: Stainless steel.
 5. Chemical Fasteners: Insert-type stud, bonding-system anchor for use with hardened portland cement concrete, with tension and shear capacities appropriate for application.
 - a. Bonding Material: ASTM C881/C881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
 - b. Stud: ASTM A307, stainless steel with continuous thread on stud, unless otherwise indicated.
 - c. Washer and Nut: Stainless steel.

PART 3 - EXECUTION

3.1 INSTALLATION OF EXPANSION JOINTS - GENERAL

- A. Install expansion joints of sizes matching sizes of piping in which they are installed.

3.2 INSTALLATION OF PACKED EXPANSION JOINTS

- A. Install packed expansion joints with packing suitable for fluid service.

3.3 INSTALLATION OF PACKLESS EXPANSION JOINTS

- A. Install metal-bellows packless expansion joints according to EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
- B. Install rubber packless expansion joints according to FSA-PSJ-703.

3.4 INSTALLATION OF GROOVED-JOINT EXPANSION JOINTS

- A. Install grooved-joint expansion joints to grooved-end steel piping.

3.5 INSTALLATION OF ALIGNMENT GUIDES AND ANCHORS

- A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
- B. Install one guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.
- C. Attach guides to pipe, and secure guides to building structure.
- D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
- E. Anchor Attachments:
 - 1. Anchor Attachment to Steel Pipe: Attach by welding. Comply with ASME B31.9.
 - 2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-58, Type 24; U bolts bolted to anchor.
- F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
 - 1. Anchor Attachment to Steel Structural Members: Attach by welding.
 - 2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.
 - 3. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

3.6 INSTALLATION OF PIPE LOOPS AND SWING CONNECTIONS

- A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.

- B. Connect risers and branch connections to mains with at least five pipe fittings, including tee in main.
- C. Connect risers and branch connections to terminal units with at least four pipe fittings, including tee in riser.
- D. Connect mains and branch connections to terminal units with at least four pipe fittings, including tee in main.

SECTION 23 0517 - SLEEVES AND SLEEVE SEALS FOR HVAC PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Sleeves.
 - 2. Stack-sleeve fittings.
 - 3. Sleeve-seal systems.
- B. Related Requirements:
 - 1. Section 07 8413 "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
 - 1. Product Data: For sealants, indicating VOC content.
 - 2. Laboratory Test Reports: For sealants, indicating compliance with requirements for low-emitting materials.

1.3 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Advance Products & Systems, Inc.
 - 2. CALPICO, Inc.
 - 3. GPT, an EnPro Industries company.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop collar.
- C. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends and integral welded waterstop collar.
- D. Galvanized-Steel Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
- E. PVC Pipe Sleeves: ASTM D 1785, Schedule 40.
- F. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.

- G. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

2.2 STACK-SLEEVE FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Jay R. Smith Mfg. Co.
 2. Zurn Industries, LLC.
- B. Description: Manufactured, galvanized cast-iron sleeve with integral cast flashing flange for use in waterproof floors and roofs. Include clamping ring, bolts, and nuts for membrane flashing.
 1. Underdeck Clamp: Clamping ring with setscrews.

2.3 SLEEVE-SEAL SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Advance Products & Systems, Inc.
 2. CALPICO, Inc.
 3. GPT; an EnPro Industries company.
 4. Metraflex Company (The).
 5. Proco Products, Inc.
- B. Description:
 1. Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
 2. Designed to form a hydrostatic seal of 20-psig (137-kPa) minimum).
 3. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size.
 4. Pressure Plates: Carbon steel.
 5. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, ASTM B 633 of length required to secure pressure plates to sealing elements.

2.4 SLEEVE-SEAL FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Advance Products & Systems, Inc.
 2. CALPICO, Inc.
 3. GPT; an EnPro Industries company.
 4. Metraflex Company (The).
 5. Proco Products, Inc.
- B. Description:
 1. Manufactured plastic, sleeve-type, waterstop assembly, made for imbedding in concrete slab or wall.
 2. Plastic or rubber waterstop collar with center opening to match piping OD.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch (25-mm) annular clear space between piping and concrete slabs and walls.
 - 1. Sleeves are not required for core-drilled holes.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
 - 1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
 - 2. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level.
- D. Install sleeves for pipes passing through interior partitions.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - 2. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
 - 3. Seal annular space between sleeve and piping or piping insulation; use sealants appropriate for size, depth, and location of joint.
- E. Fire-Resistance-Rated Penetrations, Horizontal Assembly Penetrations, and Smoke-Barrier Penetrations: Maintain indicated fire or smoke rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with fire- and smoke-stop materials. Comply with requirements for firestopping and fill materials specified in Section 07 8413 "Penetration Firestopping."

3.2 STACK-SLEEVE-FITTING INSTALLATION

- A. Install stack-sleeve fittings in new slabs as slabs are constructed.
 - 1. Install fittings that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
 - 2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Section 07 6200 "Sheet Metal Flashing and Trim."
 - 3. Install section of cast-iron soil pipe to extend sleeve to 3 inches (76 mm) above finished floor level.
 - 4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
 - 5. Using waterproof silicone sealant, seal space between top hub of stack-sleeve fitting and pipe.
- B. Fire-Resistance-Rated, Horizontal Assembly, and Smoke Barrier Penetrations: Maintain indicated fire or smoke rating of floors at pipe penetrations. Seal pipe penetrations with fire- and smoke-stop materials. Comply with requirements for firestopping specified in Section 07 8413 "Penetration Firestopping."

3.3 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal-system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 - 1. Leak Test: After allowing for a full cure, test sleeves and sleeve seals for leaks. Repair leaks and retest until no leaks exist.
- B. Sleeves and sleeve seals will be considered defective if they do not pass tests and inspections.

3.5 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
 - 1. Exterior Concrete Walls Above Grade:
 - a. Piping Smaller Than NPS 6 (DN 150): Steel pipe sleeves.
 - b. Piping NPS 6 (DN 150) and Larger: Steel pipe sleeves.
 - 2. Exterior Concrete Walls Below Grade:
 - a. Piping Smaller Than NPS 6 (DN 150): Steel pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 - 3. Interior Partitions:
 - a. Piping Smaller Than NPS 6 (DN 150): Steel pipe sleeves.
 - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel sheet sleeves.

END OF SECTION

SECTION 23 0518 - ESCUTCHEONS FOR HVAC PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Escutcheons.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

- A. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.
- B. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.
- C. Split-Casting Brass Type: With polished, chrome-plated finish and with concealed hinge and setscrew.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
 - 1. Escutcheons for New Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
 - b. Chrome-Plated Piping: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.
 - c. Insulated Piping: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge.
 - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.
 - e. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
 - f. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.
 - g. Bare Piping in Equipment Rooms: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.

3.2 FIELD QUALITY CONTROL

- A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION

FOR REFERENCE ONLY

SECTION 23 0519 - METERS AND GAUGES FOR HVAC PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Liquid-in-glass thermometers.
 - 2. Duct-thermometer mounting brackets.
 - 3. Thermowells.
 - 4. Dial-type pressure gages.
 - 5. Gage attachments.
 - 6. Test plugs.
 - 7. Test-plug kits.
 - 8. Sight flow indicators.
 - 9. Flowmeters.
 - 10. Thermal-energy meters.
- B. Related Requirements:
 - 1. Section 23 1123 "Facility Natural-Gas Piping" for gas meters.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings:
 - 1. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of meter and gage.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 LIQUID-IN-GLASS THERMOMETERS

- a. Weiss Instruments, Inc.
- B. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Terice, H. O. Co.
 - b. Weiss Instruments, Inc.
 - 2. Standard: ASME B40.200.
 - 3. Case: Cast aluminum; [7-inch (178-mm)] [9-inch (229-mm)] nominal size unless otherwise indicated.

4. Case Form: Adjustable angle unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F and deg C.
7. Window: Glass.
8. Stem: Aluminum and of length to suit installation.
 - a. Design for Air-Duct Installation: With ventilated shroud.
 - b. Design for Thermowell Installation: Bare stem.
9. Connector: 1-1/4 inches (32 mm), with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.2 DUCT-THERMOMETER MOUNTING BRACKETS

- A. Description: Flanged bracket with screw holes, for attachment to air duct and made to hold thermometer stem.

2.3 THERMOWELLS

- A. Thermowells:
 1. Standard: ASME B40.200.
 2. Description: Pressure-tight, socket-type fitting made for insertion in piping tee fitting.
 3. Material for Use with Copper Tubing: CNR or CUNI.
 4. Material for Use with Steel Piping: CRES.
 5. Type: Stepped shank unless straight or tapered shank is indicated.
 6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, (DN 15, DN 20, or NPS 25,) ASME B1.20.1 pipe threads.
 7. Internal Threads: 1/2, 3/4, and 1 inch (13, 19, and 25 mm), with ASME B1.1 screw threads.
 8. Bore: Diameter required to match thermometer bulb or stem.
 9. Insertion Length: Length required to match thermometer bulb or stem.
 10. Lagging Extension: Include on thermowells for insulated piping and tubing.
 11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.
- B. Heat-Transfer Medium: Mixture of graphite and glycerin.

2.4 DIAL-TYPE PRESSURE GAGES

- A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Terice, H. O. Co.
 - b. Watts; a Watts Water Technologies company.
 - c. Weiss Instruments, Inc.
 2. Standard: ASME B40.100.
 3. Case: Liquid-filled type(s); cast aluminum or drawn steel; 6-inch (152-mm) nominal diameter.
 4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
 5. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2 (DN 8 or DN 15), ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
 6. Movement: Mechanical, with link to pressure element and connection to pointer.

7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi and kPa.
8. Pointer: Dark-colored metal.
9. Window: Glass.
10. Ring: Stainless steel.
11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

2.5 GAGE ATTACHMENTS

- A. Snubbers: ASME B40.100, brass; with NPS 1/4 or NPS 1/2 (DN 8 or DN 15), ASME B1.20.1 pipe threads and piston -type surge-dampening device. Include extension for use on insulated piping.
- B. Siphons: Loop-shaped section of stainless-steel pipe with [NPS 1/4 (DN 8)] [NPS 1/4 or NPS 1/2 (DN 8 or DN 15)] [NPS 1/2 (DN 15)] pipe threads.
- C. Valves: Brass or stainless-steel needle, with NPS 1/4 or NPS 1/2 (DN 8 or DN 15), ASME B1.20.1 pipe threads.

2.6 TEST PLUGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Trerice, H. O. Co.
 2. Watts; a Watts Water Technologies company.
 3. Weiss Instruments, Inc.
- B. Description: Test-station fitting made for insertion in piping tee fitting.
- C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.
- D. Thread Size: NPS 1/4 (DN 8) or NPS 1/2 (DN 15), ASME B1.20.1 pipe thread.
- E. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F (3450 kPa at 93 deg C).
- F. Core Inserts: Chlorosulfonated polyethylene synthetic and EPDM self-sealing rubber.

2.7 TEST-PLUG KITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Trerice, H. O. Co.
 2. Watts; a Watts Water Technologies company.
 3. Weiss Instruments, Inc.
- B. Furnish one test-plug kit(s) containing two thermometer(s), one pressure gage and adapter, and carrying case. Thermometer sensing elements, pressure gage, and adapter probes shall be of diameter to fit test plugs and of length to project into piping.

- C. Low-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- (25- to 51-mm-) diameter dial and tapered-end sensing element. Dial range shall be at least 25 to 125 deg F (minus 4 to plus 52 deg C).
- D. High-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- (25- to 51-mm-) diameter dial and tapered-end sensing element. Dial range shall be at least 0 to 220 deg F (minus 18 to plus 104 deg C).
- E. Pressure Gage: Small, Bourdon-tube insertion type with 2- to 3-inch- (51- to 76-mm-) diameter dial and probe. Dial range shall be at least 0 to 200 psig (0 to 1380 kPa).
- F. Carrying Case: Metal or plastic, with formed instrument padding.

2.8 SIGHT FLOW INDICATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. John C. Ernst Co., Inc.
 - 2. KOBOLD Instruments, Inc. - USA.
 - 3. OPW Engineered Systems; OPW Fluid Transfer Group; a Dover company.
 - 4. Pentair Valves & Controls; Penberthy Brand.
- B. Description: Piping inline-installation device for visual verification of flow.
- C. Construction: Bronze or stainless-steel body, with sight glass and ball, flapper, or paddle wheel indicator, and threaded or flanged ends.
- D. Minimum Pressure Rating: 150 psig (1034 kPa).
- E. Minimum Temperature Rating: 200 deg F (93 deg C).
- F. End Connections for NPS 2 (DN 50) and Smaller: Threaded.
- G. End Connections for NPS 2-1/2 (DN 65) and Larger: Flanged.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install thermowells with socket extending one-third of pipe diameter and in vertical position in piping tees.
- B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- C. Install thermowells with extension on insulated piping.
- D. Fill thermowells with heat-transfer medium.
- E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.

- F. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.
- G. Install duct-thermometer mounting brackets in walls of ducts. Attach to duct with screws.
- H. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.
- I. Install valve and snubber in piping for each pressure gage for fluids (except steam).
- J. Install valve and syphon fitting in piping for each pressure gage for steam.
- K. Install test plugs in piping tees.
- L. Install flow indicators in piping systems in accessible positions for easy viewing.
- M. Install permanent indicators on walls or brackets in accessible and readable positions.
- N. Install connection fittings in accessible locations for attachment to portable indicators.
- O. Install thermometers in the following locations:
 - 1. Inlet and outlet of each hydronic zone.
 - 2. Inlet and outlet of each hydronic boiler.
 - 3. Two inlets and two outlets of each chiller.
 - 4. Inlet and outlet of each hydronic coil in air-handling units.
 - 5. Two inlets and two outlets of each hydronic heat exchanger.
 - 6. Inlet and outlet of each thermal-storage tank.
 - 7. Outside-, return-, supply-, and mixed-air ducts.
- P. Install pressure gages in the following locations:
 - 1. Discharge of each pressure-reducing valve.
 - 2. Inlet and outlet of each chiller chilled-water and condenser-water connection.
 - 3. Suction and discharge of each pump.

3.2 CONNECTIONS

- A. Install meters and gages adjacent to machines and equipment to allow space for service and maintenance of meters, gages, machines, and equipment.
- B. Connect flowmeter-system elements to meters.
- C. Connect flowmeter transmitters to meters.
- D. Connect thermal-energy meter transmitters to meters.

3.3 ADJUSTING

- A. After installation, calibrate meters according to manufacturer's written instructions.
- B. Adjust faces of meters and gages to proper angle for best visibility.

3.4 THERMOMETER SCHEDULE

- A. Thermometers at inlet and outlet of each hydronic zone shall be one of the following:
 - 1. Industrial-style, liquid-in-glass type.
 - 2. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- B. Thermometers at inlet and outlet of each hydronic boiler shall be one of the following:
 - 1. Industrial-style, liquid-in-glass type.
 - 2. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- C. Thermometers at inlets and outlets of each heat pump / chiller shall be one of the following:
 - 1. Industrial-style, liquid-in-glass type.
 - 2. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- D. Thermometers at inlet and outlet of each hydronic coil in air-handling units and built-up central systems shall be one of the following:
 - 1. Industrial-style, liquid-in-glass type.
 - 2. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- E. Thermometers at inlets and outlets of each hydronic heat exchanger shall be one of the following:
 - 1. Industrial-style, liquid-in-glass type.
 - 2. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- F. Thermometers at outside-, return-, supply-, and mixed-air ducts shall be one of the following:
 - 1. Industrial-style, liquid-in-glass type.
- G. Thermometer stems shall be of length to match thermowell insertion length.

3.5 THERMOMETER SCALE-RANGE SCHEDULE

- A. Scale Range for Chilled-Water Piping: Minus 40 to plus 160 deg F and minus 40 to plus 100 deg C.
- B. Scale Range for Heating, Hot-Water Piping: 0 to 250 deg F and 0 to 150 deg C.
- C. Scale Range for Air Ducts: Minus 40 to plus 160 deg F and minus 40 to plus 100 deg C.

3.6 PRESSURE-GAGE SCHEDULE

- A. Pressure gages at discharge of each pressure-reducing valve shall be one of the following:
 - 1. Liquid-filled , direct -mounted, metal case.
 - 2. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- B. Pressure gages at inlet and outlet of each chiller chilled-water and condenser-water connection shall be one of the following:
 - 1. Liquid-filled , direct -mounted, metal case.
 - 2. **[Sealed]** **<Insert type>**, **[direct]** **[remote]**-mounted, plastic case.
 - 3. Test plug with **[chlorosulfonated polyethylene synthetic]** **[EPDM]** self-sealing rubber inserts.

- C. Pressure gages at suction and discharge of each pump shall be[**one of**] the following:
1. **[Liquid-filled] [Sealed] [Open-front, pressure-relief] [Solid-front, pressure-relief]** **<Insert type>**, **[direct] [remote]**-mounted, metal case.
 2. **[Sealed]** **<Insert type>**, **[direct] [remote]**-mounted, plastic case.
 3. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.

3.7 PRESSURE-GAGE SCALE-RANGE SCHEDULE

- A. Scale Range for Chilled-Water Piping: [30-in. Hg to 15 psi (minus 100 to 0 kPa)] **[30-in. Hg to 15 psi and minus 100 to 0 kPa]**.
- B. Scale Range for Chilled-Water Piping: [0 to 30 psi (0 to 240 kPa)] **[0 to 30 psi and 0 to 240 kPa]**.
- C. Scale Range for Chilled-Water Piping: [0 to 100 psi (0 to 600 kPa)] **[0 to 100 psi and 0 to 600 kPa]**.
- D. Scale Range for Chilled-Water Piping: [0 to 160 psi (0 to 1100 kPa)] **[0 to 160 psi and 0 to 1100 kPa]**.
- E. Scale Range for Chilled-Water Piping: [0 to 200 psi (0 to 1400 kPa)] **[0 to 200 psi and 0 to 1400 kPa]**.
- F. Scale Range for Chilled-Water Piping: [0 to 300 psi (0 to 2500 kPa)] **[0 to 300 psi and 0 to 2500 kPa]**.
- G. Scale Range for Chilled-Water Piping: [0 to 600 psi (0 to 4000 kPa)] **[0 to 600 psi and 0 to 4000 kPa]**.
- H. Scale Range for Condenser-Water Piping: [30-in. Hg to 15 psi (minus 100 to 0 kPa)] **[30-in. Hg to 15 psi and minus 100 to 0 kPa]**.
- I. Scale Range for Condenser-Water Piping: [0 to 30 psi (0 to 240 kPa)] **[0 to 30 psi and 0 to 240 kPa]**.
- J. Scale Range for Condenser-Water Piping: [0 to 100 psi (0 to 600 kPa)] **[0 to 100 psi and 0 to 600 kPa]**.
- K. Scale Range for Condenser-Water Piping: [0 to 160 psi (0 to 1100 kPa)] **[0 to 160 psi and 0 to 1100 kPa]**.
- L. Scale Range for Condenser-Water Piping: [0 to 200 psi (0 to 1400 kPa)] **[0 to 200 psi and 0 to 1400 kPa]**.
- M. Scale Range for Condenser-Water Piping: [0 to 300 psi (0 to 2500 kPa)] **[0 to 300 psi and 0 to 2500 kPa]**.
- N. Scale Range for Condenser-Water Piping: [0 to 600 psi (0 to 4000 kPa)] **[0 to 600 psi and 0 to 4000 kPa]**.

- O. Scale Range for Heating, Hot-Water Piping: [30-in. Hg to 15 psi (minus 100 to 0 kPa)] [**30-in. Hg to 15 psi and minus 100 to 0 kPa**].
 - P. Scale Range for Heating, Hot-Water Piping: [0 to 30 psi (0 to 240 kPa)] [**0 to 30 psi and 0 to 240 kPa**].
 - Q. Scale Range for Heating, Hot-Water Piping: [0 to 100 psi (0 to 600 kPa)] [**0 to 100 psi and 0 to 600 kPa**].
 - R. Scale Range for Heating, Hot-Water Piping: [0 to 160 psi (0 to 1100 kPa)] [**0 to 160 psi and 0 to 1100 kPa**].
 - S. Scale Range for Heating, Hot-Water Piping: [0 to 200 psi (0 to 1400 kPa)] [**0 to 200 psi and 0 to 1400 kPa**].
 - T. Scale Range for Heating, Hot-Water Piping: [0 to 300 psi (0 to 2500 kPa)] [**0 to 300 psi and 0 to 2500 kPa**].
 - U. Scale Range for Heating, Hot-Water Piping: [0 to 600 psi (0 to 4000 kPa)] [**0 to 600 psi and 0 to 4000 kPa**].
 - V. Scale Range for Steam Piping: [30-in. Hg to 15 psi (minus 100 to 0 kPa)] [**30-in. Hg to 15 psi and minus 100 to 0 kPa**].
 - W. Scale Range for Steam Piping: [0 to 30 psi (0 to 240 kPa)] [**0 to 30 psi and 0 to 240 kPa**].
 - X. Scale Range for Steam Piping: [0 to 100 psi (0 to 600 kPa)] [**0 to 100 psi and 0 to 600 kPa**].
 - Y. Scale Range for Steam Piping: [0 to 160 psi (0 to 1100 kPa)] [**0 to 160 psi and 0 to 1100 kPa**].
 - Z. Scale Range for Steam Piping: [0 to 200 psi (0 to 1400 kPa)] [**0 to 200 psi and 0 to 1400 kPa**].
 - AA. Scale Range for Steam Piping: [0 to 300 psi (0 to 2500 kPa)] [**0 to 300 psi and 0 to 2500 kPa**].
 - BB. Scale Range for Steam Piping: [0 to 600 psi (0 to 4000 kPa)] [**0 to 600 psi and 0 to 4000 kPa**].
- 3.8 FLOWMETER SCHEDULE
- A. Flowmeters for Chilled-Water Piping: [**Orifice**] [**Pitot-tube**] [**Turbine**] [**Venturi**] [**Vortex-shedding**] type.
 - B. Flowmeters for Condenser-Water Piping: [**Orifice**] [**Pitot-tube**] [**Turbine**] [**Venturi**] [**Vortex-shedding**] type.
 - C. Flowmeters for Heating, Hot-Water Piping: [**Orifice**] [**Pitot-tube**] [**Turbine**] [**Venturi**] [**Vortex-shedding**] type.
 - D. Flowmeters for Steam and Steam-Condensate Piping: [**Orifice**] [**Turbine**] [**Venturi**] [**Vortex-shedding**] type.

3.9 THERMAL-ENERGY METER SCHEDULE

- A. Thermal-Energy Meters for Chilled-Water Piping: [**Impeller-turbine**] [**Ultrasonic**] type.
- B. Thermal-Energy Meters for Condenser-Water Piping: [**Impeller-turbine**] [**Ultrasonic**] type.
- C. Thermal-Energy Meters for Heating, Hot-Water Piping: [**Impeller-turbine**] [**Ultrasonic**] type.
- D. Thermal-Energy Meters for Steam and Steam-Condensate Piping: [**Impeller-turbine**] [**Ultrasonic**] type.

END OF SECTION

FOR REFERENCE ONLY

SECTION 23 0523 - GENERAL-DUTY VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Globe valves.
 - 2. Ball valves.
 - 3. Butterfly valves.
 - 4. Check valves.
 - 5. Gate valves.

1.2 DEFINITIONS

- A. CWP: Cold working pressure.
- B. EPDM: Ethylene-propylene-diene monomer.
- C. FKM: Fluoroelastomer.
- D. NBR: Nitrile butadiene rubber (also known as "Buna-N").
- E. NRS: Nonrising stem.
- F. OS&Y: Outside screw and yoke.
- G. PTFE: Polytetrafluoroethylene.
- H. RPTFE: Reinforced polytetrafluoroethylene.
- I. RS: Rising stem.
- J. SWP: Steam working pressure.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include material descriptions and dimensions of individual components.
 - 2. Include operating characteristics and furnished accessories.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 - 1. Protect internal parts against rust and corrosion.
 - 2. Protect threads, flange faces, grooved ends, press ends, solder ends, and weld ends.
 - 3. Set ball valves open to minimize exposure of functional surfaces.
 - 4. Set butterfly valves closed or slightly open.
 - 5. Block check valves in either closed or open position.
 - 6. Set gate valves closed to prevent rattling.
 - 7. Set plug valves to open to minimize exposure of functional surfaces.

- B. Use the following precautions during storage:
 - 1. Maintain valve end protection.
 - 2. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use operating handles or stems or other components as lifting or rigging points unless specifically indicated for this purpose in manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain each type of valve from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. ASME Compliance:
 - 1. ASME B1.20.1 for threads for threaded-end valves.
 - 2. ASME B16.1 for flanges on iron valves.
 - 3. ASME B16.5 for flanges on steel valves.
 - 4. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 - 5. ASME B16.18 for cast-copper solder-joint connections.
 - 6. ASME B16.22 for wrought copper and copper-alloy solder-joint connections.
 - 7. ASME B16.34 for flanged- and threaded-end connections.
 - 8. ASME B16.51 for press joint connections.
 - 9. ASME B31.1 for power piping valves.
 - 10. ASME B31.9 for building services piping valves.
- B. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.
- C. Provide bronze valves made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are unacceptable.
- D. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- E. Valve Sizes: Same as upstream piping unless otherwise indicated.
- F. Valve Bypass and Drain Connections: MSS SP-45.
- G. Valve Actuator Type:
 - 1. Gear Actuator: For quarter-turn ball valves NPS 4 (DN 100) and larger.
 - 2. Hand Lever: For quarter-turn ball valves smaller than NPS 4 (DN 100).
- H. Valves in Insulated Piping:
 - 1. Provide 2-inch (50-mm) extended neck stems.
 - 2. Provide extended operating handles with nonthermal-conductive covering material and protective sleeves that allow operation of valves without breaking vapor seals or disturbing insulation.

3. Provide memory stops that are fully adjustable after insulation is applied.

2.3 GLOBE VALVES

A. Globe Valves, Flanged Ends - Iron, Class 250:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Crane Fluid Systems; Crane Co.
 - c. Hammond Valve.
 - d. Jenkins Valves; a Crane Co. brand.
 - e. Milwaukee Valve Company.
 - f. NIBCO INC.
 - g. Siemens Industry, Inc., Building Technologies Division.
 - h. Stockham; a Crane Co. brand.
2. Standard: MSS SP-85, Type I.
3. CWP Rating: 500 psig (3450 kPa).
4. Body Material: ASTM A126, gray iron with bolted bonnet.
5. Ends: Flanged.
6. Trim: Bronze.
7. Packing and Gasket: Asbestos free.
8. Operator: Handwheel or chainwheel.

2.4 BALL VALVES

A. Ball Valves, Threaded or Soldered Ends - Brass, Two Piece with Full Port and Stainless Steel Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Valve, Inc.
 - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - c. Crane Fluid Systems; Crane Co.
 - d. Flow-Tek; a subsidiary of Bray International.
 - e. Hammond Valve.
 - f. Milwaukee Valve Company.
 - g. Siemens Industry, Inc., Building Technologies Division.
 - h. Stockham; a Crane Co. brand.
 - i. Viega LLC.
 - j. WATTS; A Watts Water Technologies Company.
2. Standard: MSS SP-110.
3. SWP Rating: 150 psig (1035 kPa).
4. CWP Rating: 600 psig (4140 kPa).
5. Body Design: Two piece.
6. Body Material: Forged brass.
7. Ends: Threaded or soldered. See Part 3 ball valve schedule articles.
8. Seats: PTFE.
9. Stem: Stainless steel.
10. Ball: Stainless steel, vented.
11. Port: Full.

B. Ball Valves, Threaded or Soldered Ends - Bronze, Two Piece with Full Port and Stainless Steel Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Crane Fluid Systems; Crane Co.
 - c. DynaQuip Controls.
 - d. Hammond Valve.
 - e. Jenkins Valves; a Crane Co. brand.
 - f. Milwaukee Valve Company.
 - g. NIBCO INC.
 - h. Red-White Valve Corp.
 - i. Stockham; a Crane Co. brand.
 - j. Viega LLC.
 - k. WATTS; A Watts Water Technologies Company.
2. Standard: MSS SP-110.
3. SWP Rating: 150 psig (1035 kPa).
4. CWP Rating: 600 psig (4140 kPa).
5. Body Design: Two piece.
6. Body Material: Bronze.
7. Ends: Threaded or soldered. See Part 3 ball valve schedule articles.
8. Seats: PTFE.
9. Stem: Stainless steel.
10. Ball: Stainless steel, vented.
11. Port: Full.

C. Ball Valves, Threaded or Flanged Ends - Stainless Steel, Two Piece with Full Port:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. A.Y. McDonald Mfg. Co.
 - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - c. Bray International, Inc.
 - d. FNW; Ferguson Enterprises, Inc.
 - e. Hammond Valve.
 - f. Jomar Valve.
2. Standard: MSS SP-110.
3. SWP Rating: 150 psig (1030 kPa).
4. WOG Rating: 1000 psig (6895 kPa).
5. Body Design: Split body.
6. Body Material: Type 316 stainless steel.
7. Ends: Threaded or flanged. See Part 3 ball valve schedule articles.
8. Seats: PTFE.
9. Stem: Type 316 stainless steel.
10. Ball: Type 316 stainless steel.
11. Port: Full.

2.5 BUTTERFLY VALVES

A. Butterfly Valves, Single Flange (Lug Type) - High Performance, Class 300:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ABZ Valve; an ASC Engineered Solution.
 - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - c. Bray International, Inc.
 - d. DeZURIK.
 - e. Flowseal; Crane Energy Flow Solutions.
 - f. Hammond Valve.
 - g. Jamesbury; a brand of Valmet.
 - h. Milwaukee Valve Company.
 - i. NIBCO INC.
 - j. Process Development & Control, Inc.
 - k. Stockham; a Crane Co. brand.
 - l. XOMOX; Crane ChemPharma & Energy.
2. Standard: MSS SP-68.
3. CWP Rating: 720 psig (4965 kPa) at 100 deg F (38 deg C).
4. Body Design: Single flange (lug type), suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
5. Body Material: Carbon or stainless steel. See Part 3 butterfly valve schedule articles.
6. Seat: Reinforced PTFE or metal.
7. Stem: Stainless steel; offset from seat plane.
8. Disc: Type 316 stainless steel.
9. Service: Bidirectional.

2.6 CHECK VALVES

- A. Check Valves, Swing Type, Threaded Ends - Bronze, with Bronze Disc, Class 150:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. A.Y. McDonald Mfg. Co.
 - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - c. Crane Fluid Systems; Crane Co.
 - d. Hammond Valve.
 - e. Jenkins Valves; a Crane Co. brand.
 - f. Lance Valves.
 - g. Milwaukee Valve Company.
 - h. NIBCO INC.
 - i. Powell Valves.
 - j. Stockham; a Crane Co. brand.
 2. Standard: MSS SP-80, Type 3.
 3. CWP Rating: 300 psig (2070 kPa).
 4. Body Design: Horizontal flow.
 5. Body Material: ASTM B62, bronze.
 6. Ends: Threaded.
 7. Disc: Bronze.
- B. Check Valves, Swing Type, Flanged Ends - Iron, with Metal Seats, Class 250:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Bray International, Inc.

- c. Cooper Valves.
- d. Crane Fluid Systems; Crane Co.
- e. Crispin Valve.
- f. DeZURIK.
- g. FNW; Ferguson Enterprises, Inc.
- h. GA Industries, Inc.
- i. Hammond Valve.
- j. Jenkins Valves; a Crane Co. brand.
- k. KITZ Corporation.
- l. Lance Valves.
- m. Milwaukee Valve Company.
- n. Powell Valves.
- o. Victaulic Company.
- 2. Standard: MSS SP-71, Type I.
- 3. CWP Rating, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): 500 psig (3450 kPa).
- 4. CWP Rating, NPS 14 to NPS 24 (DN 350 to DN 600): 300 psig (2070 kPa).
- 5. Body Design: Clear or full waterway.
- 6. Body Material: ASTM A126, gray iron with bolted bonnet.
- 7. Ends: Flanged.
- 8. Trim: Bronze.
- 9. Gasket: Asbestos free.

2.7 GATE VALVES

- A. Gate Valves, Threaded Ends - Bronze, NRS, Class 150:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Valve, Inc.
 - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - c. Crane Fluid Systems; Crane Co.
 - d. Jenkins Valves; a Crane Co. brand.
 - e. Milwaukee Valve Company.
 - f. Stockham; a Crane Co. brand.
 - g. WATTS; A Watts Water Technologies Company.
 - 2. Standard: MSS SP-80, Type 1.
 - 3. CWP Rating: 300 psig (2070 kPa).
 - 4. Body Material: ASTM B62, bronze with integral seat and union-ring bonnet.
 - 5. Ends: Threaded.
 - 6. Stem: Bronze.
 - 7. Disc: Solid wedge, bronze.
 - 8. Packing: Asbestos free.
 - 9. Handwheel: Malleable iron, bronze, or aluminum.
- B. Gate Valves, Flanged Ends - Iron, NRS, Class 250:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Clow Valve Company; a subsidiary of McWane, Inc.
 - c. Cooper Valves.
 - d. Crane Fluid Systems; Crane Co.
 - e. Flomatic Valves; Flomatic Corporation.

- f. FNW; Ferguson Enterprises, Inc.
- g. Jenkins Valves; a Crane Co. brand.
- h. KITZ Corporation.
- i. Victaulic Company.
- j. Zurn Industries, LLC.
- 2. Standard: MSS SP-70, Type I.
- 3. CWP Rating, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): 500 psig (3450 kPa).
- 4. CWP Rating, NPS 14 to NPS 24 (DN 350 to DN 600): 300 psig (2070 kPa).
- 5. Body Material: ASTM A126, gray iron with bolted bonnet.
- 6. Ends: Flanged.
- 7. Trim: Bronze.
- 8. Disc: Solid wedge.
- 9. Packing and Gasket: Asbestos free.

2.8 CHAINWHEELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Babbitt Steam Specialty Co.
 - 2. Roto Hammer Industries; Rotork.
 - 3. Trumbull Industries.
- B. Description: Valve actuation assembly with sprocket rim, chain guides, chain, and attachment brackets for mounting chainwheels directly to handwheels.
 - 1. Sprocket Rim with Chain Guides: Bronze, of type and size required for valve. Include zinc or epoxy coating.
 - 2. Chain: Hot-dip, galvanized steel, of size required to fit sprocket rim.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Examine press fittings to verify they have been properly pressed.
- F. Do not attempt to repair defective valves; replace with new valves. Remove defective valves from site.

3.2 INSTALLATION OF VALVES

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Provide support of piping adjacent to valves such that no force is imposed upon valves.
- C. Locate valves for easy access and where not blocked by equipment, other piping, or building components.
- D. For valves in horizontal piping, install valves with stem at or above center of pipe.
- E. Install valves in position that does not project into aisles or block access to other equipment.
- F. Install valves in position to allow full stem and actuator or manual operator movement.
- G. Verify that joints of each valve have been properly installed and sealed to ensure that there is no leakage or damage.
- H. Chainwheels: Install chainwheels on manual operators for globe butterfly gate valves NPS 4 (DN 100) and larger and more than 96 inches (2400 mm) above floor. Extend chains to 60 inches (1520 mm) above finished floor.
- I. Install check valves for proper direction of flow and as follows:
 - 1. Check Valves, Swing Type: In horizontal position with hinge pin level.
- J. Valve Tags: Comply with requirements for valve tags and schedules in Section 23 0553 "Identification for HVAC Piping and Equipment."
- K. Adhere to manufacturer's written installation instructions. When soldering or brazing valves, do not heat valves above maximum permitted temperature. Do not use solder with melting point temperature above valve of manufacturer's written recommended maximum.

3.3 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service, but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.4 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valves with specified SWP classes or CWP ratings are unavailable, the same types of valves with higher SWP classes or CWP ratings may be substituted.
- B. Select valves with the following end connections:
 - 1. For Copper Tubing, NPS 2 (DN 50) and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules.
 - 2. For Copper Tubing, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules.
 - 3. For Copper Tubing, NPS 5 (DN 125) and Larger: Flanged ends.
 - 4. For Steel Piping, NPS 2 (DN 50) and Smaller: Threaded ends.

5. For Steel Piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules.
6. For Steel Piping, NPS 5 (DN 125) and Larger: Flanged ends.
7. For Grooved-End Copper Tubing, except Steam and Steam Condensate Piping: Valve ends may be grooved.
8. For Grooved-End Steel Piping, except Steam and Steam Condensate Piping: Valve ends may be grooved.
9. Wafer-Type Valves: Flanged connections.

3.5 CHILLED-WATER ANGLE OR GLOBE VALVE SCHEDULE

- A. Pipe NPS 2 (DN 50) and Smaller:
 1. Globe valves, threaded ends - bronze, Class 150; stainless steel disc.
- B. Pipe NPS 2-1/2 (DN 65) and Larger:
 1. Globe valves, flanged ends - iron, Class 250.

3.6 HEATING-WATER ANGLE OR GLOBE VALVE SCHEDULE

- A. Pipe NPS 2 (DN 50) and Smaller:
 1. Globe valves, threaded ends - bronze, Class 150; stainless steel disc.
- B. Pipe NPS 2-1/2 (DN 65) and Larger:
 1. Globe valves, flanged ends - iron, Class 250.

3.7 LOW-PRESSURE STEAM ANGLE OR GLOBE VALVE SCHEDULE - 15 PSIG (104 kPa) OR LESS

- A. Pipe NPS 2 (DN 50) and Smaller:
 1. Globe valves, threaded ends - bronze, Class 150; stainless steel disc.
- B. Pipe NPS 2-1/2 (DN 65) and Larger:
 1. Globe valves, flanged ends - iron, Class 250.

3.8 CHILLED-WATER BALL VALVE SCHEDULE

- A. Pipe NPS 2 (DN 50) and Smaller:
 1. Ball valves, threaded or soldered ends - brass, two piece with full port and stainless steel trim, threaded soldered ends.
- B. Pipe NPS 2-1/2 (DN 65) and Larger:
 1. Ball valves, flanged ends - steel, with full port and stainless steel trim, Class 300.

3.9 COOLING-COIL CONDENSATE BALL VALVE SCHEDULE

- A. Pipe NPS 2 (DN 50) and Smaller:
 1. Ball valves, threaded or soldered ends - brass, two piece with full port and brass trim; threaded soldered ends.
 2. Ball valves, threaded or soldered ends - bronze, two piece with full port and bronze or brass trim; threaded soldered ends.

3.10 HEATING-WATER BALL VALVE SCHEDULE

- A. Pipe NPS 2 (DN 50) and Smaller:
 - 1. Ball valves, threaded or soldered ends - brass, two piece with full port and stainless steel trim; threaded soldered ends.
- B. Pipe NPS 2-1/2 (DN 65) and Larger:
 - 1. Ball valves, flanged ends - steel, with full port and stainless steel trim, Class 300.

3.11 LOW-PRESSURE CLEAN STEAM BALL VALVE SCHEDULE - 15 PSIG (104 kPa) OR LESS

- A. Pipe NPS 2 (DN 50) and Smaller: Ball valves, threaded ends - stainless steel, two piece with full port.
- B. Pipe NPS 2-1/2 (DN 65) and Larger: Ball valves, flanged ends - stainless steel, two piece with full port.

3.12 CLEAN STEAM-CONDENSATE BALL VALVE SCHEDULE

- A. Pipe NPS 2 (DN 50) and Smaller: Ball valves, threaded ends - stainless steel, two piece with full port.
- B. Pipe NPS 2-1/2 (DN 65) and Larger: Ball valves, flanged ends - stainless steel, two piece with full port.

3.13 CHILLED-WATER BUTTERFLY VALVE SCHEDULE

- A. Pipe NPS 2-1/2 (DN 65) and Larger:
 - 1. Butterfly valves, single flange (lug type) - iron, with aluminum-bronze disc; [150] [200] CWP, [EPDM] [NBR] seat.
 - 2. Butterfly valves, single flange (lug type) - iron, with ductile-iron disc; [150] [200] CWP, [EPDM] [NBR] seat.
 - 3. Butterfly valves, single flange (lug type) - iron, with stainless steel disc; [150] [200] CWP, [EPDM] [NBR] seat.
 - 4. Butterfly valves, flangeless (wafer type) - iron, with aluminum-bronze disc; [150] [200] CWP, [EPDM] [NBR] seat.
 - 5. Butterfly valves, flangeless (wafer type) - iron, with ductile-iron disc; [150] [200] CWP, [EPDM] [NBR] seat.
 - 6. Butterfly valves, flangeless (wafer type) - iron, with stainless steel disc; [150] [200] CWP, [EPDM] [NBR] seat.
 - 7. Butterfly valves, grooved end - ductile iron, 175 CWP.
 - 8. Butterfly valves, grooved end - ductile iron, 300 CWP.
 - 9. Butterfly valves, single flange (lug type) - high performance, Class 150; stainless steel body.
 - 10. Butterfly valves, single flange (lug type) - high performance, Class 300; stainless steel body.

3.14 CONDENSER-WATER BUTTERFLY VALVE SCHEDULE

A. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Butterfly valves, single flange (lug type) - iron, with aluminum-bronze disc; [150] [200] CWP, [EPDM] [NBR] seat.
2. Butterfly valves, single flange (lug type) - iron, with ductile-iron disc; [150] [200] CWP, [EPDM] [NBR] seat.
3. Butterfly valves, single flange (lug type) - iron, with stainless steel disc; [150] [200] CWP, [EPDM] [NBR] seat.
4. Butterfly valves, flangeless (wafer type) - iron, with aluminum-bronze disc; [150] [200] CWP, [EPDM] [NBR] seat.
5. Butterfly valves, flangeless (wafer type) - iron, with ductile-iron disc; [150] [200] CWP, [EPDM] [NBR] seat.
6. Butterfly valves, flangeless (wafer type) - iron, with stainless steel disc; [150] [200] CWP, [EPDM] [NBR] seat.
7. Butterfly valves, grooved end - ductile iron, 175 CWP.
8. Butterfly valves, grooved end - ductile iron, 300 CWP.
9. Butterfly valves, single flange (lug type) - high performance, Class 150; stainless steel body.
10. Butterfly valves, single flange (lug type) - high performance, Class 300; stainless steel body.

3.15 HEATING-WATER BUTTERFLY VALVE SCHEDULE

A. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Butterfly valves, single flange (lug type) - iron, with aluminum-bronze disc; [150] [200] CWP, [EPDM] [NBR] seat.
2. Butterfly valves, single flange (lug type) - iron, with ductile-iron disc; [150] [200] CWP, [EPDM] [NBR] seat.
3. Butterfly valves, single flange (lug type) - iron, with stainless steel disc; [150] [200] CWP, [EPDM] [NBR] seat.
4. Butterfly valves, flangeless (wafer type) - iron, with aluminum-bronze disc; [150] [200] CWP, [EPDM] [NBR] seat.
5. Butterfly valves, flangeless (wafer type) - iron, with ductile-iron disc; [150] [200] CWP, [EPDM] [NBR] seat.
6. Butterfly valves, flangeless (wafer type) - iron, with stainless steel disc; [150] [200] CWP, [EPDM] [NBR] seat.
7. Butterfly valves, grooved end - ductile iron, 175 CWP.
8. Butterfly valves, grooved end - ductile iron, 300 CWP.
9. Butterfly valves, single flange (lug type) - high performance, Class 150; stainless steel body.
10. Butterfly valves, single flange (lug type) - high performance, Class 300; stainless steel body.

3.16 LOW-PRESSURE STEAM BUTTERFLY VALVE SCHEDULE - 15 PSIG (104 kPa) OR LESS

A. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Butterfly valves, single flange (lug type) - high performance, Class 150; stainless steel body.

2. Butterfly valves, single flange (lug type) - high performance, Class 300; stainless steel body.
- 3.17 LOW-PRESSURE CLEAN STEAM BUTTERFLY VALVE SCHEDULE - 15 PSIG (104 kPa) OR LESS
- A. Pipe NPS 2-1/2 (DN 65) and Larger:
1. Butterfly valves, single flange (lug type) - high performance, Class 150; stainless steel body.
 2. Butterfly valves, single flange (lug type) - high performance, Class 300; stainless steel body.
- 3.18 HIGH-PRESSURE STEAM BUTTERFLY VALVE SCHEDULE - MORE THAN 15 PSIG (104 kPa)
- A. Pipe NPS 2-1/2 (DN 65) and Larger:
1. Butterfly valves, single flange (lug type) - high-performance, Class 150 stainless steel body.
 2. Butterfly valves, single flange (lug type) - high-performance, Class 300 stainless steel body.
- 3.19 HIGH-PRESSURE CLEAN STEAM BUTTERFLY VALVE SCHEDULE - MORE THAN 15 PSIG (104 kPa)
- A. Pipe NPS 2-1/2 (DN 65) and Larger:
1. Butterfly valves, single flange (lug type) - high performance, Class 150; stainless steel body.
 2. Butterfly valves, single flange (lug type) - high performance, Class 300; stainless steel body.
- 3.20 STEAM-CONDENSATE BUTTERFLY VALVE SCHEDULE
- A. Pipe NPS 2-1/2 (DN 65) and Larger:
1. Butterfly valves, single flange (lug type) - high performance, Class 150; stainless steel body.
 2. Butterfly valves, single flange (lug type) - high performance, Class 300; stainless steel body.
- 3.21 CLEAN-STEAM-CONDENSATE BUTTERFLY VALVE SCHEDULE
- A. Pipe NPS 2-1/2 (DN 65) and Larger:
1. Butterfly valves, single flange (lug type) - high performance, Class 150; stainless steel body.
 2. Butterfly valves, single flange (lug type) - high performance, Class 300; stainless steel body.
- 3.22 CHILLED-WATER CHECK VALVE SCHEDULE
- A. Pipe NPS 2 (DN 50) and Smaller:
1. Check valves, lift type, threaded ends - bronze, with bronze disc, Class 125.
 2. Check valves, lift type, threaded ends - bronze, with nonmetallic disc, Class 125.

3. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 125.
 4. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 125.
 5. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 150.
 6. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 150.
 7. Check valves, swing type, press ends - bronze.
- B. Pipe NPS 2-1/2 (DN 65) and Larger:
1. Check valves, swing type, flanged ends - iron, with metal seats, Class 125.
 2. Check valves, swing type, flanged ends - iron, with nonmetallic-to-metal seats, Class 125.
 3. Check valves, swing type, flanged ends - iron, with metal seats, Class 250.
 4. Check valves, center guided - iron, compact wafer, with metal seat, Class 125.
 5. Check valves, center guided - iron, globe, with metal seat, Class 125.
 6. Check valves, center guided - iron, compact wafer, with metal seat, Class 150.
 7. Check valves, center guided - iron, globe, with metal seat, Class 150.
 8. Check valves, center guided - iron, compact wafer, with metal seat, Class 250.
 9. Check valves, center guided - iron, globe, with metal seat, Class 250.
 10. Check valves, center guided - iron, compact wafer, with metal seat, Class 300.
 11. Check valves, center guided - iron, globe, with metal seat, Class 300.
 12. Check valves, center guided - iron, compact wafer, with resilient seat, Class 125; [EPDM] [NBR].
 13. Check valves, center guided - iron, globe, with resilient seat, Class 125; [EPDM] [NBR].
 14. Check valves, center guided - iron, compact wafer, with resilient seat, Class 150; [EPDM] [NBR].
 15. Check valves, center guided - iron, globe, with resilient seat, Class 150; [EPDM] [NBR].
 16. Check valves, center guided - iron, compact wafer, with resilient seat, Class 250; [EPDM] [NBR].
 17. Check valves, center guided - iron, globe, with resilient seat, Class 250; [EPDM] [NBR].
 18. Check valves, center guided - iron, compact wafer, with resilient seat, Class 300; [EPDM] [NBR].
 19. Check valves, center guided - iron, globe, with resilient seat, Class 300; [EPDM] [NBR].
 20. Check valves, dual-plate type - iron, with metal seat, Class 125.
 21. Check valves, dual-plate type - iron, with metal seat, Class 150.
 22. Check valves, dual-plate type - iron, with metal seat, Class 250.
 23. Check valves, dual-plate type - iron, with metal seat, Class 300.
 24. Check valves, single-plate type - iron, with resilient seat, Class 125; [EPDM] [NBR] seat.
 25. Check valves, dual-plate type - iron, with resilient seat, Class 125; [EPDM] [NBR] seat.
 26. Check valves, dual-plate type - iron, with resilient seat, Class 150; [EPDM] [NBR] seat.
 27. Check valves, single-plate type - iron, with resilient seat, Class 250; [EPDM] [NBR] seat.
 28. Check valves, dual-plate type - iron, with resilient seat, Class 250; [EPDM] [NBR] seat.
 29. Check valves, dual-plate type - iron, with resilient seat, Class 300; [EPDM] [NBR] seat.
- C. Pipe NPS 2-1/2 to NPS 12 (DN 65 to DN 300):
1. Check valves, swing type, flanged ends - iron, with lever- and spring-closure control, Class 125.
 2. Check valves, swing type, flanged ends - iron, with lever- and weight-closure control, Class 125.
- D. Pipe NPS 3 to NPS 12 (DN 80 to DN 300):

1. Check valves, swing type, grooved ends - iron, 300 CWP.

E. For CPVC Pipe:

1. CPVC Union-Type Ball Check Valve: [NPS 2 (DN 50) and smaller] [NPS 4 (DN 100) and smaller] [125 psig (860 kPa)] [150 psig (1035 kPa)] <Insert pressure> at [73 deg F (23 deg C)] <Insert temperature>.
 - a. End Connections for Valves NPS 2 (DN 50) and Smaller: Socket or threaded.
 - b. End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100) and Larger: Socket Socket or threaded Threaded Flanged.

F. For PVC Pipe:

1. PVC Union-Type Ball Check Valve: NPS 4 (DN 100) at [73 deg F (23 deg C)] <Insert temperature>.
 - a. End Connections for Valves NPS 2 (DN 50) and Smaller: Socket or threaded.
 - b. End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Socket Socket or threaded Threaded Flanged.

3.23 CONDENSER-WATER CHECK VALVE SCHEDULE

A. Pipe NPS 2 (DN 50) and Smaller:

1. Check valves, lift type, threaded ends - bronze, with bronze disc, Class 125.
2. Check valves, lift type, threaded ends - bronze, with nonmetallic disc, Class 125.
3. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 125.
4. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 125.
5. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 150.
6. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 150.
7. Check valves, swing type, press ends - bronze.

B. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Check valves, swing type, flanged ends - iron, with metal seats, Class 125.
2. Check valves, swing type, flanged ends - iron, with nonmetallic-to-metal seats, Class 125.
3. Check valves, swing type, flanged ends - iron, with metal seats, Class 250.
4. Check valves, center guided - iron, compact wafer, with metal seat, Class 125.
5. Check valves, center guided - iron, globe, with metal seat, Class 125.
6. Check valves, center guided - iron, compact wafer, with metal seat, Class 150.
7. Check valves, center guided - iron, globe, with metal seat, Class 150.
8. Check valves, center guided - iron, compact wafer, with metal seat, Class 250.
9. Check valves, center guided - iron, globe, with metal seat, Class 250.
10. Check valves, center guided - iron, compact wafer, with metal seat, Class 300.
11. Check valves, center guided - iron, globe, with metal seat, Class 300.
12. Check valves, center guided - iron, compact wafer, with resilient seat, Class 125; [EPDM] [NBR].
13. Check valves, center guided - iron, globe, with resilient seat, Class 125; [EPDM] [NBR].
14. Check valves, center guided - iron, compact wafer, with resilient seat, Class 150; [EPDM] [NBR].
15. Check valves, center guided - iron, globe, with resilient seat, Class 150; [EPDM] [NBR].
16. Check valves, center guided - iron, compact wafer, with resilient seat, Class 250; [EPDM] [NBR].
17. Check valves, center guided - iron, globe, with resilient seat, Class 250; [EPDM] [NBR].

18. Check valves, center guided - iron, compact water, with resilient seat, Class 300; [EPDM] [NBR].
 19. Check valves, center guided - iron, globe, with resilient seat, Class 300; [EPDM] [NBR].
 20. Check valves, dual-plate type - iron, with metal seat, Class 125.
 21. Check valves, dual-plate type - iron, with metal seat, Class 150.
 22. Check valves, dual-plate type - iron, with metal seat, Class 250.
 23. Check valves, dual-plate type - iron, with metal seat, Class 300.
 24. Check valves, single-plate type - iron, with resilient seat, Class 125; [EPDM] [NBR] seat.
 25. Check valves, dual-plate type - iron, with resilient seat, Class 125; [EPDM] [NBR] seat.
 26. Check valves, dual-plate type - iron, with resilient seat, Class 150; [EPDM] [NBR] seat.
 27. Check valves, single-plate type - iron, with resilient seat, Class 250; [EPDM] [NBR] seat.
 28. Check valves, dual-plate type - iron, with resilient seat, Class 250; [EPDM] [NBR] seat.
 29. Check valves, dual-plate type - iron, with resilient seat, Class 300; [EPDM] [NBR] seat.
- C. Pipe NPS 2-1/2 to NPS 12 (DN 65 to DN 300):
1. Check valves, swing type, flanged ends - iron, with lever- and spring-closure control, Class 125.
 2. Check valves, swing type, flanged ends - iron, with lever- and weight-closure control, Class 125.
- D. Pipe NPS 3 to NPS 12 (DN 80 to DN 300):
1. Check valves, swing type, grooved ends - iron, 300 CWP.
- E. For CPVC Pipe:
1. CPVC Union-Type Ball Check Valve: [NPS 2 (DN 50) and smaller] [NPS 4 (DN 100) and smaller] [125 psig (860 kPa)] [150 psig (1035 kPa)] <Insert pressure> at [73 deg F (23 deg C)] <Insert temperature>.
 - a. End Connections for Valves NPS 2 (DN 50) and Smaller: Socket or threaded.
 - b. End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100) and Larger: Socket Socket or threaded Threaded Flanged.
- F. For PVC Pipe:
1. PVC Union-Type Ball Check Valve: NPS 4 (DN 100) at [73 deg F (23 deg C)] <Insert temperature>.
 - a. End Connections for Valves NPS 2 (DN 50) and Smaller: Socket or threaded.
 - b. End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Socket Socket or threaded Threaded Flanged.
- 3.24 HEATING-WATER CHECK VALVE SCHEDULE
- A. Pipe NPS 2 (DN 50) and Smaller:
1. Check valves, lift type, threaded ends - bronze, with bronze disc, Class 125.
 2. Check valves, lift type, threaded ends - bronze, with nonmetallic disc, Class 125.
 3. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 125.
 4. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 125.
 5. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 150.
 6. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 150.
 7. Check valves, swing type, press ends - bronze.

B. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Check valves, swing type, flanged ends - iron, with metal seats, Class 125.
2. Check valves, swing type, flanged ends - iron, with nonmetallic-to-metal seats, Class 125.
3. Check valves, swing type, flanged ends - iron, with metal seats, Class 250.
4. Check valves, center guided - iron, compact wafer, with metal seat, Class 125.
5. Check valves, center guided - iron, globe, with metal seat, Class 125.
6. Check valves, center guided - iron, compact wafer, with metal seat, Class 150.
7. Check valves, center guided - iron, globe, with metal seat, Class 150.
8. Check valves, center guided - iron, compact wafer, with metal seat, Class 250.
9. Check valves, center guided - iron, globe, with metal seat, Class 250.
10. Check valves, center guided - iron, compact wafer, with metal seat, Class 300.
11. Check valves, center guided - iron, globe, with metal seat, Class 300.
12. Check valves, center guided - iron, compact wafer, with resilient seat, Class 125; [EPDM] [NBR].
13. Check valves, center guided - iron, globe, with resilient seat, Class 125; [EPDM] [NBR].
14. Check valves, center guided - iron, compact wafer, with resilient seat, Class 150; [EPDM] [NBR].
15. Check valves, center guided - iron, globe, with resilient seat, Class 150; [EPDM] [NBR].
16. Check valves, center guided - iron, compact wafer, with resilient seat, Class 250; [EPDM] [NBR].
17. Check valves, center guided - iron, globe, with resilient seat, Class 250; [EPDM] [NBR].
18. Check valves, center guided - iron, compact wafer, with resilient seat, Class 300; [EPDM] [NBR].
19. Check valves, center guided - iron, globe, with resilient seat, Class 300; [EPDM] [NBR].
20. Check valves, dual-plate type - iron, with metal seat, Class 125.
21. Check valves, dual-plate type - iron, with metal seat, Class 150.
22. Check valves, dual-plate type - iron, with metal seat, Class 250.
23. Check valves, dual-plate type - iron, with metal seat, Class 300.
24. Check valves, single-plate type - iron, with resilient seat, Class 125; [EPDM] [NBR] seat.
25. Check valves, dual-plate type - iron, with resilient seat, Class 125; [EPDM] [NBR] seat.
26. Check valves, dual-plate type - iron, with resilient seat, Class 150; [EPDM] [NBR] seat.
27. Check valves, single-plate type - iron, with resilient seat, Class 250; [EPDM] [NBR] seat.
28. Check valves, dual-plate type - iron, with resilient seat, Class 250; [EPDM] [NBR] seat.
29. Check valves, dual-plate type - iron, with resilient seat, Class 300; [EPDM] [NBR] seat.

C. Pipe NPS 2-1/2 to NPS 12 (DN 65 to DN 300):

1. Check valves, swing type, flanged ends - iron, with lever- and spring-closure control, Class 125.
2. Check valves, swing type, flanged ends - iron, with lever- and weight-closure control, Class 125.

D. Pipe NPS 3 to NPS 12 (DN 80 to DN 300):

1. Check valves, swing type, grooved ends - iron, 300 CWP.

3.25 LOW-PRESSURE STEAM CHECK VALVE SCHEDULE - 15 PSIG (104 kPa) OR LESS

A. Pipe NPS 2 (DN 50) and Smaller:

1. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 125.
 2. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 150.
 3. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 150.
- B. Pipe NPS 2-1/2 (DN 65) and Larger:
1. Check valves, swing type, flanged ends - iron, with metal seats, Class 125.
 2. Check valves, swing type, flanged ends - iron, with nonmetallic-to-metal seats, Class 125.
 3. Check valves, swing type, flanged ends - iron, with metal seats, Class 250.
 4. Check valves, swing type, flanged ends - iron, with lever- and spring-closure control, Class 125.
 5. Check valves, swing type, flanged ends - iron, with lever- and weight-closure control, Class 125.
- 3.26 HIGH-PRESSURE STEAM CHECK VALVE SCHEDULE - MORE THAN 15 PSIG (104 kPa)
- A. Pipe NPS 2 (DN 50) and Smaller:
1. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 125.
 2. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 150.
 3. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 150.
- B. Pipe NPS 2-1/2 (DN 65) and Larger:
1. Check valves, swing type, flanged ends - iron, with metal seats, Class 125.
 2. Check valves, swing type, flanged ends - iron, with nonmetallic-to-metal seats, Class 125.
 3. Check valves, swing type, flanged ends - iron, with metal seats, Class 250.
 4. Check valves, swing type, flanged ends - iron, with lever- and spring-closure control, Class 125.
 5. Check valves, swing type, flanged ends - iron, with lever- and weight-closure control, Class 125.
- 3.27 STEAM-CONDENSATE CHECK VALVE SCHEDULE
- A. Pipe NPS 2 (DN 50) and Smaller:
1. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 125.
 2. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 150.
 3. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 150.
- B. Pipe NPS 2-1/2 (DN 65) and Larger:
1. Check valves, swing type, flanged ends - iron, with metal seats, Class 125.
 2. Check valves, swing type, flanged ends - iron, with nonmetallic-to-metal seats, Class 125.
 3. Check valves, swing type, flanged ends - iron, with metal seats, Class 250.
 4. Check valves, swing type, flanged ends - iron, with lever- and spring-closure control, Class 125.
 5. Check valves, swing type, flanged ends - iron, with lever- and weight-closure control, Class 125.

3.28 PUMP-DISCHARGE CHECK VALVE SCHEDULE

A. Chilled-Water Pump Discharge:

1. Pipe NPS 2 (DN 50) and Smaller:
 - a. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 125.
 - b. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 125.
 - c. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 150.
 - d. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 150.
2. Pipe NPS 2-1/2 (DN 65) and Larger:
 - a. Check valves, swing type, flanged ends - iron, with lever- and spring-closure control, Class 125.
 - b. Check valves, swing type, flanged ends - iron, with lever- and weight-closure control, Class 125.
 - c. Check valves, center guided - iron, compact wafer, with metal seat, Class 125.
 - d. Check valves, center guided - iron, globe, with metal seat, Class 125.
 - e. Check valves, center guided - iron, compact wafer, with metal seat, Class 150.
 - f. Check valves, center guided - iron, globe, with metal seat, Class 150.
 - g. Check valves, center guided - iron, compact wafer, with metal seat, Class 250.
 - h. Check valves, center guided - iron, globe, with metal seat, Class 250.
 - i. Check valves, center guided - iron, compact wafer, with metal seat, Class 300.
 - j. Check valves, center guided - iron, globe, with metal seat, Class 300.
 - k. Check valves, center guided - iron, compact wafer, with resilient seat, Class 125; [EPDM] [NBR] seat.
 - l. Check valves, center guided - iron, globe, with resilient seat, Class 125; [EPDM] [NBR] seat.
 - m. Check valves, center guided - iron, compact wafer, with resilient seat, Class 150; [EPDM] [NBR] seat.
 - n. Check valves, center guided - iron, globe, with resilient seat, Class 150; [EPDM] [NBR] seat.
 - o. Check valves, center guided - iron, compact wafer, with resilient seat, Class 250; [EPDM] [NBR] seat.
 - p. Check valves, center guided - iron, globe, with resilient seat, Class 250; [EPDM] [NBR] seat.
 - q. Check valves, center guided - iron, compact wafer, with resilient seat, Class 300; [EPDM] [NBR] seat.
 - r. Check valves, center guided - iron, globe, with resilient seat, Class 300; [EPDM] [NBR] seat.
3. Pipe NPS 2-1/2 to NPS 12 (DN 65 to DN 300):
 - a. Check valves, swing type, flanged ends - iron, with lever- and spring-closure control, Class 125.
 - b. Check valves, swing type, flanged ends - iron, with lever- and weight-closure control, Class 125.
4. Pipe NPS 3 to NPS 12 (DN 80 to DN 300):
 - a. Check valves, swing type, grooved ends - iron, 300 CWP.

B. Condenser-Water Pump Discharge:

1. Pipe NPS 2 (DN 50) and Smaller:
 - a. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 125.

- b. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 125.
 - c. Check valves, swing type, threaded or soldered ends - bronze, with bronze disc, Class 150.
 - d. Check valves, swing type, threaded or soldered ends - bronze, with nonmetallic disc, Class 150.
 - 2. Pipe NPS 2-1/2 (DN 65) and Larger:
 - a. Check valves, swing type, flanged ends - iron, with lever- and spring-closure control, Class 125.
 - b. Check valves, swing type, flanged ends - iron, with lever- and weight-closure control, Class 125.
 - c. Check valves, center guided - iron, compact wafer, with metal seat, Class 125.
 - d. Check valves, center guided - iron, globe, with metal seat, Class 125.
 - e. Check valves, center guided - iron, compact wafer, with metal seat, Class 150.
 - f. Check valves, center guided - iron, globe, with metal seat, Class 150.
 - g. Check valves, center guided - iron, compact wafer, with metal seat, Class 250.
 - h. Check valves, center guided - iron, globe, with metal seat, Class 250.
 - i. Check valves, center guided - iron, compact wafer, with metal seat, Class 300.
 - j. Check valves, center guided - iron, globe, with metal seat, Class 300.
 - k. Check valves, center guided - iron, compact wafer, with resilient seat, Class 125; [EPDM] [NBR] seat.
 - l. Check valves, center guided - iron, globe, with resilient seat, Class 125; [EPDM] [NBR] seat.
 - m. Check valves, center guided - iron, compact wafer, with resilient seat, Class 150; [EPDM] [NBR] seat.
 - n. Check valves, center guided - iron, globe, with resilient seat, Class 150; [EPDM] [NBR] seat.
 - o. Check valves, center guided - iron, compact wafer, with resilient seat, Class 250; [EPDM] [NBR] seat.
 - p. Check valves, center guided - iron, globe, with resilient seat, Class 250; [EPDM] [NBR] seat.
 - q. Check valves, center guided - iron, compact wafer, with resilient seat, Class 300; [EPDM] [NBR] seat.
 - r. Check valves, center guided - iron, globe, with resilient seat, Class 300; [EPDM] [NBR] seat.
 - 3. Pipe NPS 3 to NPS 12 (DN 80 to DN 300):
 - a. Check valves, swing type, grooved-end - iron, 300 CWP.
- C. Heating-Water Pump Discharge:
 - 1. Pipe NPS 2 (DN 50) and Smaller:
 - a. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 125.
 - b. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 125.
 - c. Check valves, swing type, threaded or soldered ends - bronze, with bronze disc, Class 150.
 - d. Check valves, swing type, threaded or soldered ends - bronze, with nonmetallic disc, Class 150.
 - 2. Pipe NPS 2-1/2 (DN 65) and Larger:
 - a. Check valves, swing type, flanged ends - iron, with lever- and spring-closure control, Class 125.

- b. Check valves, swing type, flanged ends - iron, with lever- and weight-closure control, Class 125.
- c. Check valves, center guided - iron, spring loaded, compact wafer, with metal seat, Class 125.
- d. Check valves, center guided - iron, spring loaded, globe, with metal seat, Class 125.
- e. Check valves, center guided - iron, spring loaded, compact wafer, with metal seat, Class 150.
- f. Check valves, center guided - iron, spring loaded, globe, with metal seat, Class 150.
- g. Check valves, center guided - iron, spring loaded, compact wafer, with metal seat, Class 250.
- h. Check valves, center guided - iron, spring loaded, globe, with metal seat, Class 250.
- i. Check valves, center guided - iron, spring loaded, compact wafer, with metal seat, Class 300.
- j. Check valves, center guided - iron, spring loaded, globe, with metal seat, Class 300.
- k. Check valves, center guided - iron, spring loaded, compact wafer, with resilient seat, Class 125; **[EPDM]** **[NBR]** seat.
- l. Check valves, center guided - iron, spring loaded, globe, with resilient seat, Class 125; **[EPDM]** **[NBR]** seat.
- m. Check valves, center guided - iron, spring loaded, compact wafer, with resilient seat, Class 150; **[EPDM]** **[NBR]** seat.
- n. Check valves, center guided - iron, spring loaded, globe, with resilient seat, Class 150; **[EPDM]** **[NBR]** seat.
- o. Check valves, center guided - iron, spring loaded, compact wafer, with resilient seat, Class 250; **[EPDM]** **[NBR]** seat.
- p. Check valves, center guided - iron, spring loaded, globe, with resilient seat, Class 250; **[EPDM]** **[NBR]** seat.
- q. Check valves, center guided - iron, spring loaded, compact wafer, with resilient seat, Class 300; **[EPDM]** **[NBR]** seat.
- r. Check valves, center guided - iron, spring loaded, globe, with resilient seat, Class 300; **[EPDM]** **[NBR]** seat.
- 3. Pipe NPS 2-1/2 to NPS 12 (DN 65 to DN 300):
 - a. Check valves, swing type, flanged ends - iron, with lever- and spring-closure control, Class 125.
 - b. Check valves, swing type, flanged ends - iron, with lever- and weight-closure control, Class 125.
- 4. Pipe NPS 3 to NPS 12 (DN 80 to DN 300):
 - a. Check valves, swing type, grooved ends - iron, 300 CWP.
- D. Steam-Condensate Pump Discharge:
 - 1. Pipe NPS 2 (DN 50) and Smaller:
 - a. Check valves, swing type, threaded ends - bronze, with bronze disc, Class 125.
 - b. Check valves, swing type, threaded ends - bronze, with nonmetallic disc, Class 125.
 - c. Check valves, swing type, threaded - bronze, with bronze disc, Class 150.
 - d. Check valves, swing type, threaded - bronze, with nonmetallic disc, Class 150.
 - 2. Pipe NPS 2-1/2 (DN 65) and Larger for Steam Condensate Pumps:

- a. Check valves, swing type, flanged ends - iron, with lever- and spring-closure control, Class 125.
- b. Check valves, swing type, flanged ends - iron, with lever- and weight-closure control, Class 125.
- c. Check valves, center guided - iron, compact wafer, with metal seat, Class 125.
- d. Check valves, center guided - iron, globe, with metal seat, Class 125.
- e. Check valves, center guided - iron, compact wafer, with metal seat, Class 150.
- f. Check valves, center guided - iron, globe, with metal seat, Class 150.
- g. Check valves, center guided - iron, compact wafer, with metal seat, Class 250.
- h. Check valves, center guided - iron, globe, with metal seat, Class 250.
- i. Check valves, center guided - iron, compact wafer, with metal seat, Class 300.
- j. Check valves, center guided - iron, globe, with metal seat, Class 300.
- k. Check valves, center guided - iron, compact wafer, with resilient seat, Class 125; [EPDM] [NBR] seat.
- l. Check valves, center guided - iron, globe, with resilient seat, Class 125; [EPDM] [NBR] seat.
- m. Check valves, center guided - iron, compact wafer, with resilient seat, Class 150; [EPDM] [NBR] seat.
- n. Check valves, center guided - iron, globe, with resilient seat, Class 150; [EPDM] [NBR] seat.
- o. Check valves, center guided - iron, compact wafer, with resilient seat, Class 250; [EPDM] [NBR] seat.
- p. Check valves, center guided - iron, globe, with resilient seat, Class 250; [EPDM] [NBR] seat.
- q. Check valves, center guided - iron, compact wafer, with resilient seat, Class 300; [EPDM] [NBR] seat.
- r. Check valves, center guided - iron, globe, with resilient seat, Class 300; [EPDM] [NBR] seat.
- 3. Pipe NPS 2-1/2 to NPS 12 (DN 65 to DN 300) for Steam Condensate Pumps:
 - a. Check valves, swing type, flanged ends - iron, with lever- and spring-closure control, Class 125.
 - b. Check valves, swing type, flanged ends - iron, with lever- and weight-closure control, Class 125.

3.29 CHILLED-WATER GATE VALVE SCHEDULE

- A. Pipe NPS 2 (DN 50) and Smaller:
 - 1. Gate valves, threaded or soldered ends - bronze, NRS, Class 125; threaded soldered ends.
 - 2. Gate valves, threaded or soldered ends - bronze, RS, Class 125; threaded soldered ends.
 - 3. Gate valves, threaded ends - bronze, NRS, Class 150.
 - 4. Gate valves, threaded ends - bronze, RS, Class 150.
 - 5. Gate valves, press ends - bronze; [RS] [NRS].
- B. Pipe NPS 2-1/2 (DN 65) and Larger:
 - 1. Gate valves, flanged ends - iron, NRS, Class 125.
 - 2. Gate valves, flanged ends - iron, OS&Y, Class 125.
 - 3. Gate valves, flanged ends - iron, NRS, Class 250.
 - 4. Gate valves, flanged ends - iron, OS&Y, Class 250.
- C. CPVC Pipe:

1. CPVC Gate Valve: [NPS 2 (DN 50) and smaller] [NPS 4 (DN 100) and smaller] [125 psig (860 kPa)] [150 psig (1035 kPa)] <Insert pressure> at [73 deg F (23 deg C)] <Insert temperature>.
 - a. End Connections for Valves NPS 2 (DN 50) and Smaller: Socket or threaded.
 - b. End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100) and Larger: Socket Socket or threaded Threaded Flanged.

D. PVC Pipe:

1. PVC Gate Valve: NPS 4 (DN 100) at [73 deg F (23 deg C)] <Insert temperature>.
 - a. End Connections for Valves NPS 2 (DN 50) and Smaller: Socket or threaded.
 - b. End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Socket Socket or threaded Threaded Flanged.

3.30 CONDENSER-WATER GATE VALVE SCHEDULE

A. Pipe NPS 2 (DN 50) and Smaller:

1. Gate valves, threaded or soldered ends - bronze, NRS, Class 125; threaded soldered ends.
2. Gate valves, threaded or soldered ends - bronze, RS, Class 125; threaded soldered ends.
3. Gate valves, threaded ends - bronze, NRS, Class 150.
4. Gate valves, threaded ends - bronze, RS, Class 150.
5. Gate valves, press ends - bronze; [RS] [NRS].

B. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Gate valves, flanged ends - iron, NRS, Class 125.
2. Gate valves, flanged ends - iron, OS&Y, Class 125.
3. Gate valves, flanged ends - iron, NRS, Class 250.
4. Gate valves, flanged ends - iron, OS&Y, Class 250.

C. CPVC Pipe:

1. CPVC Gate Valve: [NPS 2 (DN 50) and smaller] [NPS 4 (DN 100) and smaller] [125 psig (860 kPa)] [150 psig (1035 kPa)] <Insert pressure> at [73 deg F (23 deg C)] <Insert temperature>.
 - a. End Connections for Valves NPS 2 (DN 50) and Smaller: Socket or threaded.
 - b. End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100) and Larger: Socket Socket or threaded Threaded Flanged.

D. PVC Pipe:

1. PVC Gate Valve: NPS 4 (DN 100) at [73 deg F (23 deg C)] <Insert temperature>.
 - a. End Connections for Valves NPS 2 (DN 50) and Smaller: Socket or threaded.
 - b. End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Socket Socket or threaded Threaded Flanged.

3.31 HEATING-WATER GATE VALVE SCHEDULE

A. Pipe NPS 2 (DN 50) and Smaller:

1. Gate valves, threaded or soldered ends - bronze, NRS, Class 125; threaded soldered ends.
2. Gate valves, threaded or soldered ends - bronze, RS, Class 125; threaded soldered ends.
3. Gate valves, threaded ends - bronze, NRS, Class 150.
4. Gate valves, threaded ends - bronze, RS, Class 150.
5. Gate valves, press ends - bronze; [RS] [NRS].

B. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Gate valves, flanged ends - iron, NRS, Class 125.
2. Gate valves, flanged ends - iron, OS&Y, Class 125.
3. Gate valves, flanged ends - iron, NRS, Class 250.
4. Gate valves, flanged ends - iron, OS&Y, Class 250.

3.32 LOW-PRESSURE STEAM GATE VALVE SCHEDULE - 15 PSIG (104 kPa) OR LESS

A. Pipe NPS 2 (DN 50) and Smaller:

1. Gate valves, threaded or soldered ends - bronze, NRS, Class 125; threaded ends.
2. Gate valves, threaded or soldered ends - bronze, RS, Class 125; threaded ends.
3. Gate valves, threaded ends - bronze, NRS, Class 150.
4. Gate valves, threaded ends - bronze, RS, Class 150.

B. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Gate valves, flanged ends - iron, NRS, Class 125.
2. Gate valves, flanged ends - iron, OS&Y, Class 125.
3. Gate valves, flanged ends - iron, NRS, Class 250.
4. Gate valves, flanged ends - iron, OS&Y, Class 250.

3.33 HIGH-PRESSURE STEAM GATE VALVE SCHEDULE - MORE THAN 15 PSIG (104 kPa)

A. Pipe NPS 2 (DN 50) and Smaller:

1. Gate valves, threaded or soldered ends - bronze, NRS, Class 125; threaded ends.
2. Gate valves, threaded or soldered ends - bronze, RS, Class 125; threaded ends.
3. Gate valves, threaded ends - bronze, NRS, Class 150.
4. Gate valves, threaded ends - bronze, RS, Class 150.

B. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Gate valves, flanged ends - iron, NRS, Class 125.
2. Gate valves, flanged ends - iron, OS&Y, Class 125.
3. Gate valves, flanged ends - iron, NRS, Class 250.
4. Gate valves, flanged ends - iron, OS&Y, Class 250.

3.34 STEAM-CONDENSATE GATE VALVE SCHEDULE

A. Pipe NPS 2 (DN 50) and Smaller:

1. Gate valves, threaded or soldered ends - bronze, NRS, Class 125; threaded ends.
2. Gate valves, threaded or soldered ends - bronze, RS, Class 125; threaded ends.
3. Gate valves, threaded ends - bronze, NRS, Class 150.
4. Gate valves, threaded ends - bronze, RS, Class 150.

B. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Gate valves, flanged ends - iron, NRS, Class 125.
2. Gate valves, flanged ends - iron, OS&Y, Class 125.
3. Gate valves, flanged ends - iron, NRS, Class 250.
4. Gate valves, flanged ends - iron, OS&Y, Class 250.

3.35 CHILLED-WATER PLUG VALVE SCHEDULE

- A. Pipe NPS 2-1/2 (DN 65) and Larger:
1. Plug valves, lubricated type, threaded ends - Class 125.
 2. Plug valves, lubricated type, flanged ends - Class 125; **[Type I single gland]** [or] **[Type II regular gland]**.
 3. Plug valves, lubricated type, threaded ends - cylindrical, Class 125.
 4. Plug valves, lubricated type, flanged ends - cylindrical, Class 125.
 5. Plug valves, lubricated type, threaded ends - Class 250; **[Type I single gland]** [or] **[Type II regular gland]**.
 6. Plug valves, lubricated type, flanged ends - Class 250; **[Type I single gland]** [or] **[Type II regular gland]**.
 7. Plug valves, lubricated type, threaded ends - cylindrical, Class 250.
 8. Plug valves, lubricated type, flanged ends - cylindrical, Class 250.
 9. Plug valves, eccentric type, flanged ends - with resilient seat, 175 CWP.

3.36 CONDENSER-WATER PLUG VALVE SCHEDULE

- A. Pipe NPS 2-1/2 (DN 65) and Larger:
1. Plug valves, lubricated type, threaded ends - Class 125.
 2. Plug valves, lubricated type, flanged ends - Class 125; **[Type I single gland]** [or] **[Type II regular gland]**.
 3. Plug valves, lubricated type, threaded ends - cylindrical, Class 125.
 4. Plug valves, lubricated type, flanged ends - cylindrical, Class 125.
 5. Plug valves, lubricated type, threaded ends - Class 250; **[Type I single gland]** [or] **[Type II regular gland]**.
 6. Plug valves, lubricated type, flanged ends - Class 250; **[Type I single gland]** [or] **[Type II regular gland]**.
 7. Plug valves, lubricated type, threaded ends - cylindrical, Class 250.
 8. Plug valves, lubricated type, flanged ends - cylindrical, Class 250.
 9. Plug valves, eccentric type, flanged ends - with resilient seat, 175 CWP.

3.37 HEATING-WATER PLUG VALVE SCHEDULE

- A. Pipe NPS 2-1/2 (DN 65) and Larger:
1. Plug valves, lubricated type, threaded ends - Class 125.
 2. Plug valves, lubricated type, flanged ends - Class 125; **[Type I single gland]** [or] **[Type II regular gland]**.
 3. Plug valves, lubricated type, threaded ends - cylindrical, Class 125.
 4. Plug valves, lubricated type, flanged ends - cylindrical, Class 125.
 5. Plug valves, lubricated type, threaded ends - Class 250; **[Type I single gland]** [or] **[Type II regular gland]**.
 6. Plug valves, lubricated type, flanged ends - Class 250; **[Type I single gland]** [or] **[Type II regular gland]**.
 7. Plug valves, lubricated type, threaded ends - cylindrical, Class 250.
 8. Plug valves, lubricated type, flanged ends - cylindrical, Class 250.
 9. Plug valves, eccentric type, flanged ends - with resilient seat, 175 CWP.

3.38 STEAM-CONDENSATE PLUG VALVE SCHEDULE

- A. Pipe NPS 2-1/2 (DN 65) and Larger:
1. Plug valves, lubricated type, threaded ends - Class 125.
 2. Plug valves, lubricated type, flanged ends - Class 125; [**Type I single gland**] [or] [**Type II regular gland**].
 3. Plug valves, lubricated type, threaded ends - cylindrical, Class 125.
 4. Plug valves, lubricated type, flanged ends - cylindrical, Class 125.
 5. Plug valves, lubricated type, threaded ends - Class 250; [**Type I single gland**] [or] [**Type II regular gland**].
 6. Plug valves, lubricated type, flanged ends - Class 250; [**Type I single gland**] [or] [**Type II regular gland**].
 7. Plug valves, lubricated type, threaded ends - cylindrical, Class 250.
 8. Plug valves, lubricated type, flanged ends - cylindrical, Class 250.
 9. Plug valves, eccentric type, flanged ends - with resilient seat, 175 CWP.

END OF SECTION

FOR REFERENCE ONLY

SECTION 23 0529 - HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal pipe hangers and supports.
2. Trapeze pipe hangers.
3. Metal framing systems.
4. Thermal-hanger shield inserts.
5. Fastener systems.
6. Pipe stands.
7. Equipment stands.
8. Equipment supports.

B. Related Requirements:

1. Section 05 5000 "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.
2. Section 23 0500 "Common Work Results for HVAC" for pipe guides and anchors.
3. Section 23 0548.13 "Vibration Controls for HVAC" for vibration isolation devices.
4. Section 23 3116 "Nonmetal Ducts" for duct hangers and supports.
5. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product. Include dimensions and methods of assembly and attachment to building structure.

B. Shop Drawings: Signed and sealed by a qualified professional engineer. Show fabrication and installation details and include calculations for the following; include Product Data for components:

1. Trapeze pipe hangers.
2. Metal framing systems.
3. Pipe stands.
4. Equipment supports.

C. Delegated Design Submittals: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of trapeze hangers. Show dimensions and methods of assembly and attachment to building structure.
2. Include design calculations for designing trapeze hangers.
3. Include Piping layout, trapeze hanger layout, pipe stand layout, metal framing system layout, equipment stand layout, equipment support layout, drawn to scale, indicating the items described in this Section, and coordinated with all building trades. Show dimensions and methods of assembly and attachment to building structure for each trapeze hanger, pipe stand, metal framing system, equipment stand and equipment support..

1.3 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

1.4 QUALITY ASSURANCE

- A. Structural-Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code, Section IX.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 4000 "Quality Requirements," to design trapeze pipe hangers and equipment supports.
- B. Structural Performance: Hangers and supports for HVAC piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
 - 1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
 - 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
 - 3. Limit point loads on new building structural systems to no less than [6'] on center along the length of a structural beam and [500 lbs] of combined weight of supported systems, system contents, and test water.

2.2 METAL PIPE HANGERS AND SUPPORTS

- A. Carbon-Steel Pipe Hangers and Supports:
 - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 - 2. Galvanized Metallic Coatings: Pregalvanized, hot-dip galvanized, or electro-galvanized.
 - 3. Nonmetallic Coatings: Plastic coated, or epoxy powder-coated.
 - 4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
 - 5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
- B. Stainless Steel Pipe Hangers and Supports:
 - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 - 2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
 - 3. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.
- C. Copper Pipe and Tube Hangers:
 - 1. Description: MSS SP-58, Types 1 through 58, copper-plated steel, factory-fabricated components.
 - 2. Hanger Rods: Continuous-thread rod, nuts, and washer made of copper-plated steel.

2.3 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-58, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.4 METAL FRAMING SYSTEMS

A. MFMA Manufacturer Metal Framing Systems:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ABB, Electrification Business.
 - b. Cooper B-line; brand of Eaton, Electrical Sector.
 - c. Flex-Strut Inc.
 - d. G-Strut.
 - e. Haydon Corporation.
 - f. MIRO Industries.
 - g. Rooftop Support Systems; Eberl Iron Works, Inc.
 - h. Unistrut; Atkore International.
 - i. Wesanco, Inc.
2. Description: Shop- or field-fabricated, pipe-support assembly made of steel channels, accessories, fittings, and other components for supporting multiple parallel pipes.
3. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
4. Channels: Continuous slotted stainless steel, Type 304 channel with inturred lips.
5. Channel Width: Selected for applicable load criteria.
6. Channel Nuts: Formed or stamped nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
7. Hanger Rods: Continuous-thread rod, nuts, and washer made of galvanized steel.
8. Paint Coating: Green epoxy, acrylic, or urethane.

B. Non-MFMA Manufacturer Metal Framing Systems:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International/Smith-Cooper International; Tailwind Capital, LLC.
 - b. CADDY; brand of nVent Electrical plc.
 - c. Carpenter & Paterson, Inc.
 - d. Empire Industries, Inc.
 - e. Gripple Inc.
 - f. MIRO Industries.
 - g. PHD Manufacturing, Inc.
 - h. RectorSeal HVAC; a CSW Industrials Company.
2. Description: Shop- or field-fabricated, pipe-support assembly made of steel channels, accessories, fittings, and other components for supporting multiple parallel pipes.
3. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
4. Channels: Continuous slotted stainless steel channel with inturred lips.
5. Channel Width: Select for applicable load criteria.
6. Channel Nuts: Formed or stamped nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
7. Hanger Rods: Continuous-thread rod, nuts, and washer made of galvanized steel.
8. Metallic Coating: No coating.

9. Paint Coating: Green epoxy, acrylic, or urethane Insert paint coating.
10. Plastic Coating: PVC Insert plastic type.

2.5 THERMAL-HANGER SHIELD INSERTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Buckaroos, Inc.
 2. CADDY; brand of nVent Electrical plc.
 3. Carpenter & Paterson, Inc.
 4. KB Enterprise.
 5. National Pipe Hanger Corporation.
 6. Pipe Shields Inc.
 7. Piping Technology & Products, Inc.
 8. Rilco Manufacturing Co., Inc.
 9. Value Engineered Products, Inc.
- B. Insulation-Insert Material for Cold Piping: ASTM C552, Type II cellular glass with 100-psi (688-kPa) or ASTM C591, Type VI, Grade 1 polyisocyanurate with 125-psi (862-kPa) minimum compressive strength and vapor barrier.
- C. Insulation-Insert Material for Hot Piping: Water-repellent-treated, ASTM C533, Type I calcium silicate with 100-psi (688-kPa) or ASTM C552, Type II cellular glass with 100-psi (688-kPa) or ASTM C591, Type VI, Grade 1 polyisocyanurate with 125-psi (862-kPa) minimum compressive strength.
- D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.
- F. Insert Length: Extend 2 inches (50 mm) beyond sheet metal shield for piping operating below ambient air temperature.

2.6 FASTENER SYSTEMS

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hilti, Inc.
 - b. ITW Ramset/Red Head; Illinois Tool Works, Inc.
 - c. MKT Fastening, LLC.
- B. Mechanical-Expansion Anchors: Insert-wedge-type anchors for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Cooper B-line; brand of Eaton, Electrical Sector.
 - b. Empire Industries, Inc.

- c. Hilti, Inc.
- d. ITW Ramset/Red Head; Illinois Tool Works, Inc.
- e. MKT Fastening, LLC.
- 2. Indoor Applications: stainless steel.
- 3. Outdoor Applications: Stainless steel.

2.7 PIPE STANDS

- A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.
- B. Compact Pipe Stand:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. MIRO Industries.
 - b. PHP Systems/Design.
 - c. RectorSeal HVAC; a CSW Industrials Company.
 - 2. Description: Single base unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.
 - 3. Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.
 - 4. Hardware: Galvanized steel or polycarbonate.
 - 5. Accessories: Protection pads.
- C. Low-Profile, Single Base, Single-Pipe Stand:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. MIRO Industries.
 - b. PHP Systems/Design.
 - 2. Description: Single base with vertical and horizontal members, and pipe support, for roof installation without membrane protection.
 - 3. Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.
 - 4. Vertical Members: Two, galvanized- steel, continuous-thread 1/2-inch (12-mm) rods.
 - 5. Horizontal Member: Adjustable horizontal, galvanized- steel pipe support channels.
 - 6. Pipe Supports: Roller Strut clamps Clevis hanger Swivel hanger.
 - 7. Hardware: Galvanized steel.
 - 8. Accessories: Protection pads.
 - 9. Height: 12 inches (300 mm) above roof.
- D. Curb-Mounted-Type Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

2.8 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

2.9 OUTDOOR EQUIPMENT STANDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. MIRO Industries.
 2. RectorSeal HVAC; a CSW Industrials Company.
- B. Description: Individual foot supports with elevated adjustable channel cross bars and clamps/fasteners/bolts for ground or roof supported outdoor equipment components, without roof membrane penetration, in a pre-fabricated system that can be modularly-assembled on site.
- C. Foot Material: Rubber or polypropylene.
- D. Rails Material: Hot dip galvanized carbon steel.
- E. Wind/Sliding Load Resistance: Up to 100 mph (44 mps) minimum.
- 2.10 MATERIALS
- A. Aluminum: ASTM B221 (ASTM B221M).
- B. Carbon Steel: ASTM A1011/A1011M.
- C. Structural Steel: ASTM A36/A36M, carbon-steel plates, shapes, and bars; galvanized.
- D. Stainless Steel: ASTM A240/A240M.
- E. Threaded Rods: Continuously threaded. Zinc-plated or galvanized steel for indoor applications and stainless steel for outdoor applications. Mating nuts and washers of similar materials as rods.
- F. Grout: ASTM C1107/C1107M, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
1. Properties: Nonstaining, noncorrosive, and nongaseous.
 2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

PART 3 - EXECUTION

3.1 APPLICATION

- A. Comply with requirements in Section 07 8413 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.
- B. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb (90 kg).

3.2 INSTALLATION OF HANGERS AND SUPPORTS

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-58. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-58. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.

1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
 2. Field fabricate from ASTM A36/A36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Framing System Installation: Metal. Arrange for grouping of parallel runs of piping, and support together on field-assembled strut systems.
- D. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- E. Fastener System Installation:
1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches (100 mm) thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
 2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- F. Pipe Stand Installation:
1. Pipe Stand Types except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
 2. Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. See Section 07 7200 "Roof Accessories" for curbs.
- G. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- H. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- I. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- J. Install lateral bracing with pipe hangers and supports to prevent swaying.
- K. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 (DN 65) and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- L. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- M. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- N. Insulated Piping:
1. Attach clamps and spacers to piping.

- a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
- b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
- c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
 - a. Thermal-hanger shield inserts may be used as an option. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.
3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
 - a. Thermal-hanger shield inserts may be used as an option. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.
4. Shield Dimensions for Pipe: Not less than the following:
 - a. NPS 1/4 to NPS 3-1/2 (DN 8 to DN 90): 12 inches (305 mm) long and 0.048 inch (1.22 mm) thick.
 - b. NPS 4 (DN 100): 12 inches (305 mm) long and 0.06 inch (1.52 mm) thick.
 - c. NPS 5 and NPS 6 (DN 125 and DN 150): 18 inches (457 mm) long and 0.06 inch (1.52 mm) thick.
 - d. NPS 8 to NPS 14 (DN 200 to DN 350): 24 inches (610 mm) long and 0.075 inch (1.91 mm) thick.
 - e. NPS 16 to NPS 24 (DN 400 to DN 600): 24 inches (610 mm) long and 0.105 inch (2.67 mm) thick.
5. Pipes NPS 8 (DN 200) and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.3 INSTALLATION OF EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.4 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.5 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches (40 mm).

3.6 PAINTING

- A. Touchup:
 1. Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 - a. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils (0.05 mm).
 2. Comply with requirements in Section 09 9113 "Exterior Painting" Section 09 9123 "Interior Painting" and Section 09 9600 "High-Performance Coatings" for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.
 3. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A780/A780M.

3.7 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-58 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel pipe hangers and supports metal framing systems and attachments for general service applications.
- F. Use stainless steel pipe hangers and stainless steel attachments for hostile environment applications.
- G. Use copper-plated pipe hangers and stainless steel attachments for copper piping and tubing.

- H. Use padded hangers for piping that is subject to scratching.
- I. Use thermal-hanger shield inserts for insulated piping and tubing.
- J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30 (DN 15 to DN 750).
 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F (566 deg C), pipes NPS 4 to NPS 24 (DN 100 to DN 600), requiring up to 4 inches (100 mm) of insulation.
 3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36 (DN 20 to DN 900), requiring clamp flexibility and up to 4 inches (100 mm) of insulation.
 4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 (DN 15 to DN 600) if little or no insulation is required.
 5. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4 (DN 15 to DN 100), to allow off-center closure for hanger installation before pipe erection.
 6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes NPS 3/4 to NPS 8 (DN 20 to DN 200).
 7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8 (DN 15 to DN 200).
 8. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8 (DN 15 to DN 200).
 9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8 (DN 15 to DN 200).
 10. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 8 (DN 10 to DN 200).
 11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 3 (DN 10 to DN 80).
 12. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30 (DN 15 to DN 750).
 13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
 14. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36 (DN 100 to DN 900), with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
 15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36 (DN 100 to DN 900), with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
 16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 (DN 65 to DN 900) if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
 17. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30 (DN 25 to DN 750), from two rods if longitudinal movement caused by expansion and contraction might occur.
 18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24 (DN 65 to DN 600), from single rod if horizontal movement caused by expansion and contraction might occur.
 19. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 (DN 50 to DN 1050) if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is unnecessary.

20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 (DN 50 to DN 600) if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is unnecessary.
 21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 (DN 50 to DN 750) if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.
- K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24 (DN 24 to DN 600).
 2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 (DN 20 to DN 600) if longer ends are required for riser clamps.
- L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches (150 mm) for heavy loads.
 2. Steel Clevises (MSS Type 14): For 120 to 450 deg F (49 to 232 deg C) piping installations.
 3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
 4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
 5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F (49 to 232 deg C) piping installations.
- M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
 2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joint construction, to attach to top flange of structural shape.
 3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
 4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
 5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
 6. C-Clamps (MSS Type 23): For structural shapes.
 7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
 8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
 9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
 10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
 11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
 12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
 - a. Light (MSS Type 31): 750 lb (340 kg).
 - b. Medium (MSS Type 32): 1500 lb (680 kg).
 - c. Heavy (MSS Type 33): 3000 lb (1360 kg).

13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
 14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
 15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.
- N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
 2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
 3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- O. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
 2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches (32 mm).
 3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
 4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
 5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from hanger.
 6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
 7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from trapeze support.
 8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
 - a. Horizontal (MSS Type 54): Mounted horizontally.
 - b. Vertical (MSS Type 55): Mounted vertically.
 - c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.
- P. Comply with MSS SP-58 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.
- Q. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.
- R. Use mechanical-expansion anchors instead of building attachments where required in concrete construction.

END OF SECTION

SECTION 23 0548.13 - VIBRATION CONTROLS FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Elastomeric isolation pads.
2. Elastomeric isolation mounts.
3. Restrained elastomeric isolation mounts.
4. Open-spring isolators.
5. Housed-spring isolators.
6. Restrained-spring isolators.
7. Housed-restrained-spring isolators.
8. Pipe-riser resilient support.
9. Resilient pipe guides.
10. Air-spring isolators.
11. Restrained-air-spring isolators.
12. Elastomeric hangers.
13. Spring hangers.
14. Snubbers.
15. Restraints - rigid type.
16. Restraints - cable type.
17. Restraint accessories.
18. Post-installed concrete anchors.
19. Concrete inserts.
20. Vibration isolation equipment bases.
21. Restrained isolation roof-curb rails.

B. Related Requirements:

1. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.
2. Section 21 0548.13 "Vibration Controls for Fire-Suppression Piping and Equipment" for devices for fire-suppression equipment and systems.
3. Section 22 0548.13 "Vibration Controls for Plumbing Piping and Equipment" for devices for plumbing equipment and systems.

1.2 DEFINITIONS

A. IBC: International Building Code.

B. OSHPD: Office of Statewide Health Planning and Development (for the State of California owned and regulated medical facilities).

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
2. Include load rating for each wind-force-restraint fitting and assembly.

3. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of vibration isolation device component.
 4. Annotate to indicate application of each product submitted and compliance with requirements.
 5. Interlocking Snubbers: Include ratings for horizontal, vertical, and combined loads.
- B. Shop Drawings:
1. Detail fabrication and assembly of equipment bases.
 2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Show coordination of vibration isolation device installation for HVAC piping and equipment with other systems and equipment in the vicinity, including other supports and restraints.
- B. Qualification Data: For testing agency.
- C. Welding certificates.
- D. Air-Spring Mounting System Performance Certification: Include natural frequency, load, and damping test data.
- E. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air-spring mounts and restrained-air-spring mounts to include in operation and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct testing indicated, be an NRTL as defined by OSHA in 29 CFR 1910.7 and be acceptable to authorities having jurisdiction.
- B. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M, "Structural Welding Code - Steel."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a registered design professional, as defined in Section 01 3573 "Delegated Design Requirements and Procedures" to design system.
 1. Material properties indicated in this Section shall be considered as minimum properties.
- B. Suspended piping:

1. Spring Hangers or Rubber Hangers shall be used for all piping in equipment rooms and up to 50 ft from vibration isolated equipment and pressure regulating valve (PRV) stations.
 - a. The first three hangers from the equipment shall provide the same deflection as the equipment isolators, with a maximum limitation of 2 in. deflection.
 - b. The remaining hangers shall be spring or combination spring and rubber with 0.75 in. deflection.
 2. The first two hangers adjacent to the equipment shall be the positioning of precompressed type, to prevent load transfer to equipment flanges when the piping system is filled.
 3. Piping over 2 in. in diameter that is suspended below or within 50 ft of noise-sensitive areas shall be hung with combination spring and rubber hangers.
 - a. Animal Holding Spaces (All three (3) dens, Quarantine and Cubbing Spaces)
 - b. Adjacent Corridors to dens and Quarantine and cubbing spaces.
 - c. Day Room
- C. Floor-supported piping:
1. Floor supports for piping in equipment rooms and adjacent to isolated equipment shall use vibration isolators as described in Table 47, Chapter 49 of ASHRAE Handbook - HVAC Applications.
 - a. The first two adjacent floor supports shall be the restrained spring type, with a blocking feature that prevents load transfer to equipment flanges as the piping is filled or drained.
 2. Where the piping is subjected to large thermal movement, a slide plate (PTFE, graphite or steel) shall be installed on top of the isolator and a thermal barrier shall be used when rubber products are installed directly beneath steam or hot-water lines.
- D. Fire/Smoke Resistance: All components that are not constructed of ferrous metals must have a maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested by an NRTL in accordance with ASTM E84 or UL 723, and be so labeled.
- E. Component Supports:
1. Load ratings, features, and applications of all reinforcement components must be based on testing standards of a nationally recognized testing agency.
- ## 2.2 ELASTOMERIC ISOLATION PADS
- A. Elastomeric Isolation Pads: .
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Isolation Technology, Inc.
 - e. Kinetics Noise Control, Inc.
 - f. Korfund.
 - g. Mason Industries, Inc.
 - h. Novia; A Division of C&P.
 - i. Vibration Eliminator Co., Inc.
 - j. Vibration Management Corp.
 - k. Vibration Mountings & Controls, Inc.
 2. Fabrication: Single or multiple layers of sufficient durometer stiffness for uniform loading over pad area.

3. Size: Factory or field cut to match requirements of supported equipment.
4. Minimum deflection as indicated on Drawings.
5. Pad Material: Oil- and water-resistant rubber.
6. Infused nonwoven cotton or synthetic fibers.
7. Load-bearing metal plates adhered to pads.
8. Sandwich-Core Material: Resilient and elastomeric.
 - a. Infused nonwoven cotton or synthetic fibers.

2.3 ELASTOMERIC ISOLATION MOUNTS

A. Elastomeric Isolation Mounts: .

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Isolation Technology, Inc.
 - e. Kinetics Noise Control, Inc.
 - f. Korfund.
 - g. Mason Industries, Inc.
 - h. Novia; A Division of C&P.
 - i. Vibration Eliminator Co., Inc.
 - j. Vibration Isolation.
 - k. Vibration Management Corp.
 - l. Vibration Mountings & Controls, Inc.
2. Mounting Plates:
 - a. Top Plate: Encapsulated steel load transfer top plates, factory drilled and threaded with threaded studs or bolts.
 - b. Baseplate: Encapsulated steel bottom plates with holes provided for anchoring to support structure.
3. Minimum deflection as indicated on Drawings.
4. Elastomeric Material: Molded, oil-resistant rubber, neoprene, or other elastomeric material.

2.4 RESTRAINED ELASTOMERIC ISOLATION MOUNTS

A. Restrained Elastomeric Isolation Mounts: .

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Isolation Technology, Inc.
 - e. Kinetics Noise Control, Inc.
 - f. Korfund.
 - g. Mason Industries, Inc.
 - h. Novia; A Division of C&P.
 - i. Vibration Eliminator Co., Inc.
 - j. Vibration Isolation.
 - k. Vibration Management Corp.
 - l. Vibration Mountings & Controls, Inc.

2. Description: All-directional isolator with restraints containing two separate and opposing elastomeric elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
 - a. Housing: Cast-ductile iron or welded steel.
 - b. Elastomeric Material: Molded, oil-resistant rubber, neoprene, or other elastomeric material.
3. Minimum deflection as indicated on Drawings.

2.5 HOUSED-SPRING ISOLATORS

- A. Freestanding, Laterally Stable, Open-Spring Isolators in Two-Part Telescoping Housing: .
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Isolation Technology, Inc.
 - e. Kinetics Noise Control, Inc.
 - f. Korfund.
 - g. Mason Industries, Inc.
 - h. Vibration Eliminator Co., Inc.
 - i. Vibration Isolation.
 - j. Vibration Management Corp.
 - k. Vibration Mountings & Controls, Inc.
 2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 6. Minimum deflection as indicated on Drawings.
 7. Two-Part Telescoping Housing: A steel top and bottom frame separated by an elastomeric material and enclosing the spring isolators.
 - a. Drilled base housing for bolting to structure with an elastomeric isolator pad attached to the underside. Bases shall limit floor load to 500 psi (3447 kPa).
 - b. Top housing with threaded mounting holes and internal leveling device.

2.6 RESTRAINED-SPRING ISOLATORS

- A. Freestanding, Laterally Stable, Open-Spring Isolators with Vertical-Limit Stop Restraint: .
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Isolation Technology, Inc.
 - e. Kinetics Noise Control, Inc.
 - f. Korfund.
 - g. Mason Industries, Inc.

- h. Novia; A Division of C&P.
- i. Vibration Eliminator Co., Inc.
- j. Vibration Isolation.
- k. Vibration Management Corp.
- l. Vibration Mountings & Controls, Inc.
- 2. Housing: Steel housing with vertical-limit stops to prevent spring extension due to weight being removed.
 - a. Base with holes for bolting to structure with an elastomeric isolator pad attached to the underside. Bases shall limit floor load to 500 psi (3447 kPa).
 - b. Top plate with threaded mounting holes.
 - c. Internal leveling bolt that acts as blocking during installation.
- 3. Restraint: Limit stop as required for equipment and authorities having jurisdiction.
- 4. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
- 5. Minimum Additional Travel: 50 percent of the required deflection at rated load.
- 6. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
- 7. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
- 8. Minimum deflection as indicated on Drawings.

2.7 HOUSED-RESTRAINED-SPRING ISOLATORS

- A. Freestanding, Steel, Open-Spring Isolators with Vertical-Limit Stop Restraint in Two-Part Telescoping Housing: .
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Isolation Technology, Inc.
 - e. Kinetics Noise Control, Inc.
 - f. Korfund.
 - g. Mason Industries, Inc.
 - h. Vibration Eliminator Co., Inc.
 - i. Vibration Isolation.
 - j. Vibration Management Corp.
 - k. Vibration Mountings & Controls, Inc.
 - 2. Two-Part Telescoping Housing: A steel top and bottom frame separated by an elastomeric material and enclosing the spring isolators. Housings are equipped with adjustable snubbers to limit vertical movement.
 - a. Drilled base housing for bolting to structure with an elastomeric isolator pad attached to the underside. Bases shall limit floor load to 500 psi (3447 kPa).
 - b. Threaded top housing with adjustment bolt and cap screw to fasten and level equipment.
 - 3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 - 4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 - 5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 - 6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 - 7. Minimum deflection as indicated on Drawings.

2.8 PIPE-RISER RESILIENT SUPPORT

- A. All-Directional, Acoustical Pipe Anchor Consisting of Two Steel Tubes Separated by a Minimum 1/2-inch- (13-mm-) Thick Neoprene: .
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. California Dynamics Corporation.
 - b. Kinetics Noise Control, Inc.
 - c. Mason Industries, Inc.
 - d. Vibration Eliminator Co., Inc.
 - e. Vibration Management Corp.
 - 2. Vertical-Limit Stops: Steel and neoprene vertical-limit stops arranged to prevent vertical travel in both directions.
 - 3. Maximum Load Per Support: 500 psi (3447 kPa) on isolation material providing equal isolation in all directions.
 - 4. Minimum deflection as indicated on Drawings.

2.9 RESILIENT PIPE GUIDES

- A. Telescopic Arrangement of Two Steel Tubes or Post and Sleeve Arrangement Separated by a Minimum 1/2-inch- (13-mm-) Thick Neoprene: .
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. California Dynamics Corporation.
 - b. Kinetics Noise Control, Inc.
 - c. Mason Industries, Inc.
 - d. Vibration Eliminator Co., Inc.
 - e. Vibration Management Corp.
 - f. Vibration Mountings & Controls, Inc.
 - 2. Factory-Set Height Guide with Shear Pin: Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of motion to meet location requirements.

2.10 ELASTOMERIC HANGERS

- A. Elastomeric Mount in a Steel Frame with Upper and Lower Steel Hanger Rods: **<Insert drawing designation>**.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Kinetics Noise Control, Inc.
 - e. Mason Industries, Inc.
 - f. Novia; A Division of C&P.
 - g. Vibration Eliminator Co., Inc.
 - h. Vibration Isolation.
 - i. Vibration Management Corp.
 - j. Vibration Mountings & Controls, Inc.

2. Frame: Steel, fabricated with a connection for an upper threaded hanger rod and an opening on the underside to allow for a maximum of 30 degrees of angular lower hanger-rod misalignment without binding or reducing isolation efficiency.
3. Damping Element: Molded, oil-resistant rubber, neoprene, or other elastomeric material with a projecting bushing for the underside opening preventing steel-to-steel contact.
4. Minimum deflection as indicated on Drawings.

2.11 SPRING HANGERS

A. Combination Coil-Spring and Elastomeric-Insert Hanger with Spring and Insert in Compression: .

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Kinetics Noise Control, Inc.
 - e. Mason Industries, Inc.
 - f. Novia; A Division of C&P.
 - g. Vibration Eliminator Co., Inc.
 - h. Vibration Isolation.
 - i. Vibration Management Corp.
 - j. Vibration Mountings & Controls, Inc.
2. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
6. Minimum deflection as indicated on Drawings.
7. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
8. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.
9. Adjustable Vertical Stop: Steel washer with neoprene washer "up-stop" on lower threaded rod.
10. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.

2.12 SNUBBERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. CADDY; a brand of nVent.
2. Kinetics Noise Control, Inc.
3. Mason Industries, Inc.
4. Vibration Management Corp.
5. Vibration Mountings & Controls, Inc.

- B. Description: Factory fabricated using welded structural-steel shapes and plates, anchor bolts, and replaceable resilient isolation washers and bushings.
1. Post-Installed Concrete Anchor Bolts: Secure to concrete surface with post-installed concrete anchors. Anchors to be prequalified in accordance with ACI 355.2 testing and designated in accordance with ACI 318-14 Ch. 17 for 2015 or 2018 IBC.
 2. Preset Concrete Inserts: Prequalified in accordance with ICC-ES AC446 testing.
 3. Anchors in Masonry: Design in accordance with TMS 402.
 4. Resilient Isolation Washers and Bushings: Oil- and water-resistant neoprene.
 5. Resilient Cushion: Maximum 1/4-inch (6-mm) air gap, and minimum 1/4 inch (6 mm) thick.

2.13 RESTRAINTS - RIGID TYPE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. B-line, an Eaton business.
 2. CADDY; a brand of nVent.
 3. California Dynamics Corporation.
 4. Hilti, Inc.
 5. Isolation Technology, Inc.
 6. TOLCO.
 7. Unistrut; Part of Atkore International.
 8. Vibration Mountings & Controls, Inc.
- B. Description: Shop- or field-fabricated bracing assembly made of AISI S110-07-S1 slotted steel channels, ANSI/ASTM A53/A53M steel pipe as per NFPA 13, or other rigid steel brace member. Includes accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; rated in tension, compression, and torsion forces.

2.14 RESTRAINTS - CABLE TYPE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. B-line, an Eaton business.
 2. CADDY; a brand of nVent.
 3. Loos & Co.
 4. Vibration Mountings & Controls, Inc.
- B. Restraint Cables: ASTM A1023/A1023M galvanized or ASTM A603 galvanized-steel cables. End connections made of steel assemblies with thimbles, brackets, swivel, and bolts designed for restraining cable service; with fittings attached by means of poured socket, swaged socket, or mechanical (Flemish eye) loop.
- C. Restraint cable assembly and cable fittings must comply with ASCE/SEI 19-16. All cable fittings and complete cable assembly must maintain the minimum cable breaking force. U-shaped cable clips and wedge-type end fittings do not comply and are unacceptable.

2.15 RESTRAINT ACCESSORIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. B-line, an Eaton business.
 2. CADDY; a brand of nVent.
 3. Hilti, Inc.
 4. Loos & Co.
 5. Mason Industries, Inc.
 6. TOLCO.
 7. Unistrut; Part of Atkore International.
 8. Insert manufacturer's name.
- B. Hanger-Rod Stiffener: Steel tube or steel slotted-support-system sleeve with internally bolted connections to hanger rod.
- C. Hinged and Swivel Brace Attachments: Multifunctional steel connectors for attaching hangers to rigid channel bracings and restraint cables.
- D. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.
- E. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices used.
- F. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

2.16 POST-INSTALLED CONCRETE ANCHORS

- A. Mechanical Anchor Bolts:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. B-line, an Eaton business.
 - b. Hilti, Inc.
 - c. Mason Industries, Inc.
 - d. Powers Fasteners.
 - e. Simpson Strong-Tie Co., Inc.
 - f. Unistrut; Part of Atkore International.
 2. Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength for anchor and as tested according to ASTM E488/E488M.
- B. Adhesive Anchor Bolts:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. B-line, an Eaton business.
 - b. Hilti, Inc.
 - c. Mason Industries, Inc.

- d. Powers Fasteners.
 - e. Simpson Strong-Tie Co., Inc.
 - f. Unistrut; Part of Atkore International.
 - 2. Drilled-in and capsule anchor system containing PVC or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E488/E488M.
 - C. Provide post-installed concrete anchors that have been prequalified for use in wind-load applications. Post-installed concrete anchors must comply with all requirements of ASCE/SEI 7-22, Ch. 13.
 - 1. Prequalify post-installed anchors in concrete in accordance with ACI 355.2 or other approved qualification testing procedures.
 - 2. Prequalify post-installed anchors in masonry in accordance with approved qualification procedures.
 - D. Expansion-type anchor bolts are not permitted for equipment in excess of 10 hp (7.46 kW) that is not vibration isolated.
 - 1. Undercut expansion anchors are permitted.
- 2.17 CONCRETE INSERTS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. B-line, an Eaton business.
 - 2. Hilti, Inc.
 - 3. Mason Industries, Inc.
 - 4. Powers Fasteners.
 - 5. Simpson Strong-Tie Co., Inc.
 - 6. Unistrut; Part of Atkore International.
 - B. Provide preset concrete inserts that are prequalified in accordance with ICC-ES AC466 testing.
 - C. Comply with ANSI/MSS SP-58.
- 2.18 VIBRATION ISOLATION EQUIPMENT BASES
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. CADDY; a brand of nVent.
 - 2. California Dynamics Corporation.
 - 3. Kinetics Noise Control, Inc.
 - 4. Mason Industries, Inc.
 - 5. Novia; A Division of C&P.
 - 6. Vibration Eliminator Co., Inc.
 - 7. Vibration Isolation.
 - 8. Vibration Management Corp.
 - 9. Vibration Mountings & Controls, Inc.
 - B. Steel Rails: Factory-fabricated, welded, structural-steel rails.

1. Design Requirements: Lowest possible mounting height with not less than 1-inch (25-mm) clearance above the floor. Include equipment anchor bolts and auxiliary motor slide rails.
 - a. Include supports for suction and discharge elbows for pumps.
 2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A36/A36M. Rails shall have shape to accommodate supported equipment.
 3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
- C. Steel Bases: Factory-fabricated, welded, structural-steel bases and rails.
1. Design Requirements: Lowest possible mounting height with not less than 1-inch (25-mm) clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.
 - a. Include supports for suction and discharge elbows for pumps.
 2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A36/A36M. Bases shall have shape to accommodate supported equipment.
 3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
- D. Concrete Inertia Base: Factory-fabricated, welded, structural-steel bases and rails ready for placement of cast-in-place concrete.
1. Design Requirements: Lowest possible mounting height with not less than 1-inch (25-mm) clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.
 - a. Include supports for suction and discharge elbows for pumps.
 - b. Concrete inertia bases shall be formed of stone aggregate concrete, with a density no less than 150 lb/ft³, and appropriate steel reinforcing cast between the perimeter structural steel channels. Inertia bases shall be built to form a rigid base that will not twist, deform or deflect, in any manner that would negatively affect the operation of the supported equipment or the vibration isolation mounts.
 - c. Inertia bases shall be adequately sized to support basic equipment conduits and motors plus any associated pipe elbows supports, suction diffuser and its supports, duct elbow supports, electrical control elements, or other components closely related and requiring resilient support in order to prevent vibration transfer to the building structure.
 - d. Inertia base depth shall be at least 1.5 times the longest dimension of the inertia base but not less than 6 inch and not more than 12 inches. The weight of the inertia base, as a minimum, shall be equal to or greater than that of the total weight of the equipment being isolated (including the attached piping it is supporting and applicable loads).
 - e. Forms shall include minimum concrete reinforcing of 1/2 inch bars welded in place, 6 inch on-center running in both directions at 1-1/2 inch from concrete bottom.
 2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A36/A36M. Bases shall have shape to accommodate supported equipment.
 3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
 4. Fabrication: Fabricate steel templates to hold equipment anchor-bolt sleeves and anchors in place during placement of concrete. Obtain anchor-bolt templates from supported equipment manufacturer.

2.19 RESTRAINED ISOLATION ROOF-CURB RAILS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. CADDY; a brand of nVent.
 - 2. California Dynamics Corporation.
 - 3. Kinetics Noise Control, Inc.
 - 4. Novia; A Division of C&P.
 - 5. Thybar Corporation.
 - 6. Vibration Eliminator Co., Inc.
 - 7. Vibration Management Corp.
 - 8. Vibration Mountings & Controls, Inc.
- B. Description: Factory-assembled, fully enclosed, insulated, air- and watertight curb rail designed to resiliently support equipment.
- C. Upper Frame: Shall provide continuous and captive support for equipment.
- D. Lower Support Assembly: Shall be formed sheet metal section containing adjustable and removable steel springs that support upper frame. Lower support assembly shall have a means for attaching to building structure and a wood nailer for attaching roof materials and shall be insulated with a minimum of 2 inches (50 mm) of rigid glass-fiber insulation on inside of assembly.
 - 1. Adjustable, restrained-spring isolators shall be mounted on elastomeric vibration isolation pads and shall have access ports, for level adjustment, with removable waterproof covers at all isolator locations. Isolators shall be located so they are accessible for adjustment at any time during the life of the installation without interfering with integrity of roof.
 - 2. Minimum deflection as indicated on Drawings.
- E. Water Seal: Galvanized sheet metal with EPDM seals at corners, attached to upper support frame, extending down past wood nailer of lower support assembly, and counterflashed over roof materials.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and equipment to receive vibration isolation devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

- A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by an agency acceptable to authorities having jurisdiction.

- B. Hanger-Rod Stiffeners: Install hanger-rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to wind-load forces.
- C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength is adequate to carry static and wind force loads within specified loading limits.

3.3 INSTALLATION OF VIBRATION CONTROL DEVICES

- A. Provide vibration control devices for systems and equipment where indicated in Equipment Schedules or Vibration-Control Device Schedules on Drawings, where Specifications indicate they are to be installed on specific equipment and systems, and where required by applicable codes.
- B. Coordinate location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Section 03 3000 "Cast-in-Place Concrete."
- C. Installation of vibration isolators must not cause any change of position of equipment, piping, or ductwork resulting in stresses or misalignment.
- D. Comply with requirements in Section 07 7200 "Roof Accessories" for installation of roof curbs, equipment supports, and roof penetrations.
- E. Equipment Restraints:
 - 1. Install snubbers on HVAC equipment mounted on vibration isolators. Locate snubbers as close as possible to vibration isolators and bolt to equipment base and supporting structure.
 - 2. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).
 - 3. Install wind-load-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction that provides required submittals for component.
- F. Piping Restraints:
 - 1. Comply with requirements in MSS SP-127.
 - 2. Space lateral supports a maximum of 40 feet (12 m) o.c., and longitudinal supports a maximum of 80 feet (24 m) o.c.
 - 3. Brace a change of direction longer than 12 feet (3.7 m).
- G. Install wind-load-restraint cables so they do not bend across edges of adjacent equipment or building structure.
- H. Install wind-load-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction that provides required submittals for component.
- I. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.
- J. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.

- K. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- L. Post-Installed Concrete Anchors:
 - 1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
 - 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 - 3. Wedge-Type Anchor Bolts: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
 - 4. Adhesive-Type Anchor Bolts: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
 - 5. Set anchors to manufacturer's recommended torque, using a torque wrench.
 - 6. Install zinc-coated steel anchors for interior and stainless steel anchors for exterior applications.

3.4 ACCOMMODATION OF DIFFERENTIAL MOTION

- A. Provide flexible connections in piping systems where they cross structural joints and other point where differential movement may occur. Provide adequate flexibility to accommodate differential movement as determined in accordance with ASCE/SEI 7. Comply with requirements in Section 23 2113 "Hydronic Piping" and Section 23 2116 "Hydronic Piping Specialties" for piping flexible connections.

3.5 INSTALLATION OF VIBRATION ISOLATION EQUIPMENT BASES

- A. Coordinate location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Section 03 3000 "Cast-in-Place Concrete."
- B. Coordinate dimensions of equipment bases with requirements of isolated equipment specified in this and other Sections. Where dimensions of base are indicated on Drawings, they may require adjustment to accommodate isolated equipment.

3.6 ADJUSTING

- A. Adjust isolators after system is at operating weight.
- B. Adjust limit stops on restrained-spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

3.7 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
- D. Tests and Inspections:
 - 1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
 - 2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless postconnection testing has been approved), and with at least seven days' advance notice.
 - 3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
 - 4. Test at least four of each type and size of installed anchors and fasteners selected by Architect.
 - 5. Test to 90 percent of rated proof load of device.
 - 6. Measure isolator restraint clearance.
 - 7. Measure isolator deflection.
 - 8. Verify snubber minimum clearances.
 - 9. Test and adjust restrained-air-spring isolator controls and safeties.
- E. Remove and replace malfunctioning units and retest as specified above.
- F. Prepare test and inspection reports.

3.8 VIBRATION AND ISOLATION CONTROL DEVICE SCHEDULE

END OF SECTION

SECTION 23 0553 - IDENTIFICATION FOR HVAC, PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Equipment labels.
 - 2. Warning signs and labels.
 - 3. Pipe labels.
 - 4. Duct labels.
 - 5. Stencils.
 - 6. Valve tags.
 - 7. Warning tags.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- D. Valve numbering scheme.
- E. Valve Schedules: For each piping system to include in maintenance manuals.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Metal Labels for Equipment:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Brady Corporation.
 - b. Brimar Industries, Inc.
 - c. Carlton Industries, LP.
 - d. Champion America.
 - e. Craftmark Identification Systems.
 - f. emedco.
 - g. Kolbi Pipe Marker Co.
 - h. LEM Products Inc.
 - i. Marking Services Inc.
 - j. Seton Identification Products.
 - 2. Material and Thickness: stainless steel, 0.025-inch (0.64-mm) minimum thickness, and having predrilled or stamped holes for attachment hardware.
 - 3. Letter Color: White.
 - 4. Background Color: Black.

5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
 6. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
 7. Fasteners: Stainless-steel rivets or self-tapping screws.
 8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.
- C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch (A4) bond paper. Tabulate equipment identification number, and identify Drawing numbers where equipment is indicated (plans, details, and schedules) and the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 WARNING SIGNS AND LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Brady Corporation.
 2. Brimar Industries, Inc.
 3. Carlton Industries, L.P.
 4. Champion America.
 5. Craftmark Identification Systems.
 6. emedco.
 7. LEM Products Inc.
 8. Marking Services Inc.
 9. NMC.
 10. Seton Identification Products.
 11. Stranco, Inc.
- B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch (3.2 mm) thick, and having predrilled holes for attachment hardware.
- C. Letter Color: Red.
- D. Background Color: White.
- E. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
- F. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
- G. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.

- H. Fasteners: Stainless-steel rivets or self-tapping screws.
- I. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- J. Label Content: Include caution and warning information plus emergency notification instructions.

2.3 PIPE LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Actioncraft Products, Inc.
 - 2. Brady Corporation.
 - 3. Brimar Industries, Inc.
 - 4. Carlton Industries, LP.
 - 5. Champion America.
 - 6. Craftmark Identification Systems.
 - 7. emedco.
 - 8. Kolbi Pipe Marker Co.
 - 9. LEM Products Inc.
 - 10. Marking Services Inc.
 - 11. Seton Identification Products.
 - 12. Insert manufacturer's name.
- B. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction according to ASME A13.1, with following modifications -
 - 1. Equipment Drains:
 - a. Background Color: Green.
 - b. Text Color: White.
 - 2. Low pressure steam including Relief, vent and steam valve discharge:
 - a. Background Color: Orange.
 - b. Text Color: Black.
 - 3. Hot water Supply and Return:
 - a. Background Color: Yellow.
 - b. Text Color: Black.
 - 4. Chilled Water Supply and Return:
 - a. Background Color: Blue.
 - b. Text Color: White.
 - 5. Energy Recovery Coil Supply and Return:
 - a. Background Color: Yellow.
 - b. Text Color: Black.
 - 6. Natural Gas Piping:
 - a. Background Color: Yellow.
 - b. Text Color: Black.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.

- E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings; also include pipe size and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
 - 2. Lettering Size: Size letters according to ASME A13.1 for piping.

2.4 DUCT LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Brady Corporation.
 - 2. Brimar Industries, Inc.
 - 3. Carlton Industries, L.P.
 - 4. Champion America.
 - 5. Craftmark Identification Systems.
 - 6. emedco.
 - 7. Kolbi Pipe Marker Co.
 - 8. LEM Products Inc.
 - 9. Marking Services Inc.
 - 10. Seton Identification Products.
- B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch (3.2 mm) thick, and having predrilled holes for attachment hardware.
- C. Letter Color: Blue.
- D. Background Color: White.
- E. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
- F. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
- G. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
- H. Fasteners: Stainless-steel rivets or self-tapping screws.
- I. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- J. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings; also include duct size and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions or as separate unit on each duct label to indicate flow direction.

2.5 STENCILS

A. Stencils for Piping:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Brimar Industries, Inc.
 - b. Carlton Industries, LP.
 - c. Champion America.
 - d. Craftmark Identification Systems.
 - e. Kolbi Pipe Marker Co.
 - f. Marking Services Inc.
2. Lettering Size: Size letters according to ASME A13.1 for piping.
3. Stencil Material: Aluminum.
4. Identification Paint: Exterior, in colors according to ASME A13.1 unless otherwise indicated. Paint may be in pressurized spray-can form. Comply with following Color Coding:
 - a. Equipment Drains:
 - 1) Background Color: Green.
 - 2) Text Color: White
 - b. Low pressure steam including Relief, vent and steam valve discharge:
 - 1) Background Color: Orange.
 - 2) Text Color: Black
 - c. Hot water Supply and Return:
 - 1) Background Color: Yellow.
 - 2) Text Color: Black
 - d. Chilled Water Supply and Return:
 - 1) Background Color: Blue.
 - 2) Text Color: White
 - e. Energy Recovery Coil Supply and Return:
 - 1) Background Color: Yellow.
 - 2) Text Color: Black
 - f. Natural Gas Piping:
 - 1) Background Color: Yellow.
 - 2) Text Color: Black

B. Stencils for Ducts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2.
 - a. Brimar Industries, Inc.
 - b. Carlton Industries, LP.
 - c. Champion America.
 - d. Craftmark Identification Systems.
 - e. Kolbi Pipe Marker Co.
 - f. Marking Services Inc.
3. Lettering Size: Minimum letter height of 1-1/4 inches (32 mm) for viewing distances up to 15 feet (4-1/2 m) and proportionately larger lettering for greater viewing distances.
4. Stencil Material: Aluminum.

5. Identification must be either stenciled onto the system with an oil-based paint or with pressure sensitive vinyl markers with permanent adhesive. Provide full-band duct markers extending 360 degrees around a duct.
- C. Stencils for Access Panels and Door Labels, Equipment Labels, and Similar Operational Instructions:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 2. Brimar Industries, Inc.
 - a. Carlton Industries, LP.
 - b. Champion America.
 - c. Craftmark Identification Systems.
 - d. Kolbi Pipe Marker Co.
 - e. Marking Services Inc.
 3. Lettering Size: Minimum letter height of 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm) and proportionately larger lettering for greater viewing distances.
 4. Stencil Material: Aluminum.
 5. Identification must be either stenciled onto the system with an oil-based paint or with pressure sensitive vinyl markers with permanent adhesive.

2.6 VALVE TAGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Actioncraft Products, Inc.
 2. Brady Corporation.
 3. Brimar Industries, Inc.
 4. Carlton Industries, LP.
 5. Champion America.
 6. Craftmark Identification Systems.
 7. emedco.
 8. Kolbi Pipe Marker Co.
 9. LEM Products Inc.
 10. Marking Services Inc.
 11. Seton Identification Products.
- B. Description: Stamped or engraved with 1/4-inch (6.4-mm) letters for piping system abbreviation and 1/2-inch (13-mm) numbers.
1. Tag Material: stainless steel, 0.025-inch (0.64-mm) minimum thickness, and having predrilled or stamped holes for attachment hardware.
 2. Fasteners: Brass wire-link chain or beaded chain.
- C. Valve Schedules: For each piping system, on 8-1/2-by-11-inch (A4) bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
1. Valve-tag schedule shall be included in operation and maintenance data.

2.7 WARNING TAGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- B. g:
 - 1. Brady Corporation.
 - 2. Brimar Industries, Inc.
 - 3. Carlton Industries, LP.
 - 4. Champion America.
 - 5. Craftmark Identification Systems.
 - 6. emedco.
 - 7. Kolbi Pipe Marker Co.
 - 8. LEM Products Inc.
 - 9. Marking Services Inc.
 - 10. Seton Identification Products.
- C. Description: Preprinted or partially preprinted accident-prevention tags of plasticized card stock with matte finish suitable for writing.
 - 1. Size: Approximately 4 by 7 inches (100 by 178 mm).
 - 2. Fasteners: Brass grommet and wire.
 - 3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
 - 4. Color: Safety-yellow background with black lettering.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 GENERAL INSTALLATION REQUIREMENTS

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

3.3 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

3.4 PIPE LABEL INSTALLATION

- A. Piping Color Coding: Painting of piping is specified in Section 09 9123 "Interior Painting." Section 09 9600 "High-Performance Coatings."
- B. Stenciled Pipe Label Option: Stenciled labels may be provided instead of manufactured pipe labels, at Installer's option. Install stenciled pipe labels, complying with ASME A13.1, with painted, color-coded bands or rectangles on each piping system.
 - 1. Identification Paint: Use for contrasting background.
 - 2. Stencil Paint: Use for pipe marking.
- C. Pipe Label Locations: Provide identification at following locations -
 - 1. All exposed piping
 - a. All exposed piping within 0.5 m (18 in) of each valve .
 - b. All exposed piping within 75 mm (3 in) of each 90-degree elbow, connection to equipment or vessel, point where pipe enters shaft to upper floors, and point where pipe pierces outside wall.
 - c. All exposed piping within 75 mm (3 in) of each 90-degree elbow, connection to equipment or vessel, point where pipe enters shaft to upper floors, and point where pipe pierces outside wall.
 - d. Omit identification on piping 40 mm (1 ½ in) size and smaller exposed at connections to equipment .
 - 2. Above suspended ceilings:
 - a. Within 0.5 m (18 in) of each valve or valve assembly.
 - b. At tees, both main and branch must be identified within 7.6 m (25 ft) of tee.
 - c. Within 0.9 m (3 ft) of each 90-degree elbow.
 - d. Minimum of one label per room (each side of partition).
 - 3. Pipe concealed in cases or shafts -
 - a. Identify each pipe visible through access door panel / ceiling tile.
- D. Directional Flow Arrows: Arrows shall be used to indicate direction of flow in pipes, including pipes where flow is allowed in both directions.
- E. Arrows showing the direction of flow must be painted on the piping near the location of each piping identification label.

3.5 DUCT LABEL INSTALLATION

- A. Duct Label Location - Identify ductwork at following locations
 - 1. All exposed ductwork
 - a. All exposed ductwork within 0.5 m (18 in) of fire smoke and/or main isolation damper.
 - b. Minimum of one label per opaque partition (each side of partition).
 - 2. Above suspended ceilings:
 - a. Within 0.5 m (18 in) of each terminal unit (or terminal unit assembly with heating coil).
 - b. At tees, both main and branch must be identified within 7.6 m (25 ft) of tee.
 - c. Minimum of one label per opaque partition (each side of partition).
 - 3. Pipe concealed in cases or shafts -

- B. Identify each primary duct main visible through access door panel / ceiling tile.
- C. Stenciled Duct Label Option: Stenciled labels showing service and flow direction may be provided instead of plastic-laminated duct labels, at Installer's option.
- D. Locate labels near points where ducts enter into and exit from concealed spaces and at maximum intervals of 50 feet (15 m) in each space where ducts are exposed or concealed by removable ceiling system.

3.6 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems, except check valves, valves within factory-fabricated equipment units, shutoff valves, faucets, convenience and lawn-watering hose connections, and HVAC terminal devices and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.
- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:
 - 1. Valve-Tag Size and Shape:
 - a. Chilled Water: 2 inches (50 mm), round.
 - b. Hot Water: 2 inches (50 mm), round.
 - c. Gas: 2 inches (50 mm), round.
 - d. Low-Pressure Steam: 2 inches (50 mm), round.
 - e. Steam Condensate: 2 inches (50 mm), round.
 - 2. Valve-Tag Colors:
 - a. Toxic and Corrosive Fluids: Black letters on a safety-orange background.
 - b. Flammable Fluids: Black letters on a safety-yellow background.
 - c. Combustible Fluids: White letters on a safety-brown background.
 - d. Potable and Other Water: White letters on a safety-green background.
 - e. Compressed Air: White letters on a safety-blue background.
 - f. Defined by User: White letters on a safety-purple background, black letters on a safety-white background, white letters on a safety-gray background, and white letters on a safety-black background

3.7 WARNING-TAG INSTALLATION

- A. Write required message on, and attach warning tags to, equipment and other items where required.

END OF SECTION

SECTION 23 0593 - TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Balancing Air Systems:
 - a. Constant-volume air systems.
 - b. Variable-air-volume systems.
2. Balancing Hydronic Piping Systems:
 - a. Variable-flow hydronic systems.
 - b. Primary-secondary hydronic systems.
3. Balancing steam systems.
4. Testing, Adjusting, and Balancing Equipment:
 - a. Heat exchangers.
 - b. Motors.
 - c. Chillers.
 - d. Condensing units.
 - e. Boilers.
 - f. Heat-transfer coils.
5. Testing, adjusting, and balancing existing systems and equipment.
6. Sound tests.
7. Vibration tests.
8. Duct leakage tests.
9. Control system verification.

1.2 DEFINITIONS

- A. AABC: Associated Air Balance Council.
- B. BAS: Building automation systems.
- C. NEBB: National Environmental Balancing Bureau.
- D. TAB: Testing, adjusting, and balancing.
- E. TABB: Testing, Adjusting, and Balancing Bureau.
- F. TAB Specialist: An independent entity meeting qualifications to perform TAB work.
- G. TDH: Total dynamic head.

1.3 PREINSTALLATION MEETINGS

- A. TAB Conference: If requested by the Owner, conduct a TAB conference at 3001 Connecticut Ave. NW, Washington, D.C. 20008 after approval of the TAB strategies and procedures plan to develop a mutual understanding of the details. Provide a minimum of 14 days' advance notice of scheduled meeting time and location.
1. Minimum Agenda Items:
 - a. The Contract Documents examination report.

- b. The TAB plan.
- c. Needs for coordination and cooperation of trades and subcontractors.
- d. Proposed procedures for documentation and communication flow.

1.4 ACTION SUBMITTALS

- A. Sustainable Design Submittals:
 - 1. Air-Balance Report: Documentation indicating that Work complies with ASHRAE 62.1, Section 7.2.2 - "Air Balancing."
- B. HVAC Flush Report: Documentation indicating that building HVAC system flush complies with Green Globes Section 3.2.4.4 "IAQ During Construction."
 - 1. TAB Report: Documentation indicating that Work complies with ASHRAE/IES 90.1, Section 6.7.2.3 - "System Balancing."

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: Within 30 days of Contractor's Notice to Proceed, submit documentation that the TAB specialist and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.
- B. Contract Documents Examination Report: Within 30 days of Contractor's Notice to Proceed, submit the Contract Documents review report as specified in Part 3.
- C. Strategies and Procedures Plan: Within 30 days of Contractor's Notice to Proceed, submit TAB strategies and step-by-step procedures as specified in "Preparation" Article.
- D. System Readiness Checklists: Within 30 days of Contractor's Notice to Proceed, submit system readiness checklists as specified in "Preparation" Article.
- E. Examination Report: Submit a summary report of the examination review required in "Examination" Article.
- F. Certified TAB reports.
- G. Sample report forms.
- H. Instrument calibration reports, to include the following:
 - 1. Instrument type and make.
 - 2. Serial number.
 - 3. Application.
 - 4. Dates of use.
 - 5. Dates of calibration.

1.6 QUALITY ASSURANCE

- A. TAB Specialists Qualifications: Certified by AABC.
 - 1. TAB Field Supervisor: Employee of the TAB specialist and certified by AABC.
 - 2. TAB Technician: Employee of the TAB specialist and certified by AABC as a TAB technician.

- B. TAB Specialists Qualifications: Certified by NEBB or TABB.
 - 1. TAB Field Supervisor: Employee of the TAB specialist and certified by NEBB or TABB.
 - 2. TAB Technician: Employee of the TAB specialist and certified by NEBB or TABB as a TAB technician.
- C. Instrumentation Type, Quantity, Accuracy, and Calibration: Comply with requirements in ASHRAE 111, Section 4, "Instrumentation."
- D. ASHRAE 62.1 Compliance: Applicable requirements in ASHRAE 62.1, Section 7.2.2 - "Air Balancing."
- E. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6.7.2.3 - "System Balancing."

1.7 FIELD CONDITIONS

- A. Partial Owner Occupancy: Owner may occupy completed areas of building before Substantial Completion. Cooperate with Owner during TAB operations to minimize conflicts with Owner's operations.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems designs that may preclude proper TAB of systems and equipment.
- B. Examine installed systems for balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are applicable for intended purpose and are accessible.
- C. Examine the approved submittals for HVAC systems and equipment.
- D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems output, and statements of philosophies and assumptions about HVAC system and equipment controls.
- E. Examine ceiling plenums and underfloor air plenums used for supply, return, or relief air to verify that they are properly separated from adjacent areas. Verify that penetrations in plenum walls are sealed and fire-stopped if required.
- F. Examine equipment performance data including fan and pump curves.
 - 1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.

2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.
 - G. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.
 - H. Examine test reports specified in individual system and equipment Sections.
 - I. Examine HVAC equipment and verify that bearings are greased, belts are aligned and tight, filters are clean, and equipment with functioning controls is ready for operation.
 - J. Examine terminal units, such as variable-air-volume boxes, and verify that they are accessible and their controls are connected and functioning.
 - K. Examine strainers. Verify that startup screens have been replaced by permanent screens with indicated perforations.
 - L. Examine control valves for proper installation for their intended function of throttling, diverting, or mixing fluid flows.
 - M. Examine heat-transfer coils for correct piping connections and for clean and straight fins.
 - N. Examine system pumps to ensure absence of entrained air in the suction piping.
 - O. Examine operating safety interlocks and controls on HVAC equipment.
 - P. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.
- 3.2 PREPARATION
- A. Prepare a TAB plan that includes the following:
 1. Equipment and systems to be tested.
 2. Strategies and step-by-step procedures for balancing the systems.
 3. Instrumentation to be used.
 4. Sample forms with specific identification for all equipment.
 - B. Perform system-readiness checks of HVAC systems and equipment to verify system readiness for TAB work. Include, at a minimum, the following:
 1. Airside:
 - a. Verify that leakage and pressure tests on air distribution systems have been satisfactorily completed.
 - b. Duct systems are complete with terminals installed.
 - c. Volume, smoke, and fire dampers are open and functional.
 - d. Clean filters are installed.
 - e. Fans are operating, free of vibration, and rotating in correct direction.
 - f. Variable-frequency controllers' startup is complete and safeties are verified.

- g. Automatic temperature-control systems are operational.
 - h. Ceilings are installed.
 - i. Windows and doors are installed.
 - j. Suitable access to balancing devices and equipment is provided.
2. Hydronics:
- a. Verify leakage and pressure tests on water distribution systems have been satisfactorily completed.
 - b. Piping is complete with terminals installed.
 - c. Water treatment is complete.
 - d. Systems are flushed, filled, and air purged.
 - e. Strainers are pulled and cleaned.
 - f. Control valves are functioning per the sequence of operation.
 - g. Shutoff and balance valves have been verified to be 100 percent open.
 - h. Pumps are started and proper rotation is verified.
 - i. Pump gage connections are installed directly at pump inlet and outlet flanges or in discharge and suction pipe prior to valves or strainers.
 - j. Variable-frequency controllers' startup is complete and safeties are verified.
 - k. Suitable access to balancing devices and equipment is provided.

3.3 GENERAL PROCEDURES FOR TESTING AND BALANCING

- A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Total System Balance" NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems" SMACNA's "HVAC Systems - Testing, Adjusting, and Balancing" and in this Section.
- B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.
 - 1. After testing and balancing, install test ports and duct access doors that comply with requirements in Section 23 3300 "Air Duct Accessories."
 - 2. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to Section 23 0713 "Duct Insulation," Section 23 0716 "HVAC Equipment Insulation," and Section 23 0719 "HVAC Piping Insulation."
- C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.
- D. Take and report testing and balancing measurements in inch-pound (IP) and metric (SI) units.

3.4 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

- A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Cross-check the summation of required outlet volumes with required fan volumes.
- B. Prepare schematic diagrams of systems' "as-built" duct layouts.
- C. For variable-air-volume systems, develop a plan to simulate diversity.

- D. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.
- E. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.
- F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
- G. Verify that motor starters are equipped with properly sized thermal protection.
- H. Check dampers for proper position to achieve desired airflow path.
- I. Check for airflow blockages.
- J. Check condensate drains for proper connections and functioning.
- K. Check for proper sealing of air-handling-unit components.
- L. Verify that air duct system is sealed as specified in Section 23 3113 "Metal Ducts."

3.5 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

- A. Adjust the variable-air-volume systems as follows:
 - 1. Verify that the system static pressure sensor is located two-thirds of the distance down the duct from the fan discharge.
 - 2. Verify that the system is under static pressure control.
 - 3. Select the terminal unit that is most critical to the supply-fan airflow. Measure inlet static pressure, and adjust system static pressure control set point so the entering static pressure for the critical terminal unit is not less than the sum of the terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
 - 4. Calibrate and balance each terminal unit for maximum and minimum design airflow as follows:
 - a. Adjust controls so that terminal is calling for maximum airflow. Some controllers require starting with minimum airflow. Verify calibration procedure for specific project.
 - b. Measure airflow and adjust calibration factor as required for design maximum airflow. Record calibration factor.
 - c. When maximum airflow is correct, balance the air outlets downstream from terminal units.
 - d. Adjust controls so that terminal is calling for minimum airflow.
 - e. Measure airflow and adjust calibration factor as required for design minimum airflow. Record calibration factor. If no minimum calibration is available, note any deviation from design airflow.
 - f. When in full cooling or full heating, ensure that there is no mixing of hot-deck and cold-deck airstreams unless so designed.
 - g. On constant volume terminals, in critical areas where room pressure is to be maintained, verify that the airflow remains constant over the full range of full cooling to full heating. Note any deviation from design airflow or room pressure.

5. After terminals have been calibrated and balanced, test and adjust system for total airflow. Adjust fans to deliver total design airflows within the maximum allowable fan speed listed by fan manufacturer.
 - a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
 - b. Set terminals for maximum airflow. If system design includes diversity, adjust terminals for maximum and minimum airflow so that connected total matches fan selection and simulates actual load in the building.
 - c. Where duct conditions allow, measure airflow by Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses to obtain total airflow.
 - d. Where duct conditions are not suitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
 - e. If a reliable Pitot-tube traverse or coil traverse is not possible, measure airflow at terminals and calculate the total airflow.
6. Measure fan static pressures as follows:
 - a. Measure static pressure directly at the fan outlet or through the flexible connection.
 - b. Measure static pressure directly at the fan inlet or through the flexible connection.
 - c. Measure static pressure across each component that makes up the air-handling system.
 - d. Report any artificial loading of filters at the time static pressures are measured.
7. Set final return and outside airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.
 - a. Balance the return-air ducts and inlets the same as described for constant-volume air systems.
 - b. Verify that terminal units are meeting design airflow under system maximum flow.
8. Re-measure the inlet static pressure at the most critical terminal unit and adjust the system static pressure set point to the most energy-efficient set point to maintain the optimum system static pressure. Record set point and give to controls contractor.
9. Verify final system conditions as follows:
 - a. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to match design if necessary.
 - b. Re-measure and confirm that total airflow is within design.
 - c. Re-measure final fan operating data, rpms, volts, amps, and static profile.
 - d. Mark final settings.
 - e. Test system in economizer mode. Verify proper operation and adjust if necessary. Measure and record all operating data.
 - f. Verify tracking between supply and return fans.

3.6 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

- A. Prepare test reports for pumps, coils, and heat exchangers. Obtain approved submittals and manufacturer-recommended testing procedures. Crosscheck the summation of required coil and heat exchanger flow rates with pump design flow rate.
- B. Prepare schematic diagrams of systems' "as-built" piping layouts.
- C. In addition to requirements in "Preparation" Article, prepare hydronic systems for testing and balancing as follows:
 1. Check liquid level in expansion tank.
 2. Check highest vent for adequate pressure.
 3. Check flow-control valves for proper position.

4. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
5. Verify that motor starters are equipped with properly sized thermal protection.
6. Check that air has been purged from the system.

3.7 PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS

- A. Balance systems with automatic two- and three-way control valves by setting systems at maximum flow through heat-exchange terminals, and proceed as specified above for hydronic systems.
- B. Adjust the variable-flow hydronic system as follows:
 1. Verify that the differential-pressure sensor is located as indicated.
 2. Determine whether there is diversity in the system.
- C. For systems with no diversity:
 1. Adjust pumps to deliver total design gpm.
 - a. Measure total water flow.
 - 1) Position valves for full flow through coils.
 - 2) Measure flow by main flow meter, if installed.
 - 3) If main flow meter is not installed, determine flow by pump TDH or exchanger pressure drop.
 - b. Measure pump TDH as follows:
 - 1) Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
 - 2) Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
 - 3) Convert pressure to head and correct for differences in gage heights.
 - 4) Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
 - 5) With valves open, read pump TDH. Adjust pump discharge valve until design water flow is achieved.
 - c. Monitor motor performance during procedures and do not operate motor in an overloaded condition.
 2. Adjust flow-measuring devices installed in mains and branches to design water flows.
 - a. Measure flow in main and branch pipes.
 - b. Adjust main and branch balance valves for design flow.
 - c. Re-measure each main and branch after all have been adjusted.
 3. Adjust flow-measuring devices installed at terminals for each space to design water flows.
 - a. Measure flow at terminals.
 - b. Adjust each terminal to design flow.
 - c. Re-measure each terminal after it is adjusted.
 - d. Position control valves to bypass the coil and adjust the bypass valve to maintain design flow.
 - e. Perform temperature tests after flows have been balanced.
 4. For systems with pressure-independent valves at terminals:
 - a. Measure differential pressure and verify that it is within manufacturer's specified range.
 - b. Perform temperature tests after flows have been verified.
 5. For systems without pressure-independent valves or flow-measuring devices at terminals:

- a. Measure and balance coils by either coil pressure drop or temperature method.
 - b. If balanced by coil pressure drop, perform temperature tests after flows have been verified.
 6. Prior to verifying final system conditions, determine the system differential-pressure set point.
 7. If the pump discharge valve was used to set total system flow with variable-frequency controller at 60 Hz, at completion open discharge valve 100 percent and allow variable-frequency controller to control system differential-pressure set point. Record pump data under both conditions.
 8. Mark final settings and verify that all memory stops have been set.
 9. Verify final system conditions as follows:
 - a. Re-measure and confirm that total water flow is within design.
 - b. Re-measure final pumps' operating data, TDH, volts, amps, and static profile.
 - c. Mark final settings.
 10. Verify that memory stops have been set.
- D. For systems with diversity:
1. Determine diversity factor.
 2. Simulate system diversity by closing required number of control valves, as approved by the design engineer.
 3. Adjust pumps to deliver total design gpm.
 - a. Measure total water flow.
 - 1) Position valves for full flow through coils.
 - 2) Measure flow by main flow meter, if installed.
 - 3) If main flow meter is not installed, determine flow by pump TDH or exchanger pressure drop.
 - b. Measure pump TDH as follows:
 - 1) Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
 - 2) Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
 - 3) Convert pressure to head and correct for differences in gage heights.
 - 4) Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
 - 5) With valves open, read pump TDH. Adjust pump discharge valve until design water flow is achieved.
 - c. Monitor motor performance during procedures and do not operate motor in an overloaded condition.
 4. Adjust flow-measuring devices installed in mains and branches to design water flows.
 - a. Measure flow in main and branch pipes.
 - b. Adjust main and branch balance valves for design flow.
 - c. Re-measure each main and branch after all have been adjusted.
 5. Adjust flow-measuring devices installed at terminals for each space to design water flows.
 - a. Measure flow at terminals.
 - b. Adjust each terminal to design flow.
 - c. Re-measure each terminal after it is adjusted.
 - d. Position control valves to bypass the coil, and adjust the bypass valve to maintain design flow.
 - e. Perform temperature tests after flows have been balanced.

6. For systems with pressure-independent valves at terminals:
 - a. Measure differential pressure, and verify that it is within manufacturer's specified range.
 - b. Perform temperature tests after flows have been verified.
7. For systems without pressure-independent valves or flow-measuring devices at terminals:
 - a. Measure and balance coils by either coil pressure drop or temperature method.
 - b. If balanced by coil pressure drop, perform temperature tests after flows have been verified.
8. Open control valves that were shut. Close a sufficient number of control valves that were previously open to maintain diversity, and balance terminals that were just opened.
9. Prior to verifying final system conditions, determine system differential-pressure set point.
10. If the pump discharge valve was used to set total system flow with variable-frequency controller at 60 Hz, at completion open discharge valve 100 percent and allow variable-frequency controller to control system differential-pressure set point. Record pump data under both conditions.
11. Mark final settings and verify that memory stops have been set.
12. Verify final system conditions as follows:
 - a. Re-measure and confirm that total water flow is within design.
 - b. Re-measure final pumps' operating data, TDH, volts, amps, and static profile.
 - c. Mark final settings.
13. Verify that memory stops have been set.

3.8 PROCEDURES FOR PRIMARY-SECONDARY HYDRONIC SYSTEMS

- A. Balance the primary circuit flow first.
- B. Balance the secondary circuits after the primary circuits are complete.
- C. Adjust pumps to deliver total design gpm.
 1. Measure total water flow.
 - a. Position valves for full flow through coils.
 - b. Measure flow by main flow meter, if installed.
 - c. If main flow meter is not installed, determine flow by pump TDH or exchanger pressure drop.
 2. Measure pump TDH as follows:
 - a. Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
 - b. Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
 - c. Convert pressure to head and correct for differences in gage heights.
 - d. Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
 - e. With valves open, read pump TDH. Adjust pump discharge valve until design water flow is achieved.
 3. Monitor motor performance during procedures and do not operate motor in an overloaded condition.
- D. Adjust flow-measuring devices installed in mains and branches to design water flows.
 1. Measure flow in main and branch pipes.

2. Adjust main and branch balance valves for design flow.
 3. Re-measure each main and branch after all have been adjusted.
- E. Adjust flow-measuring devices installed at terminals for each space to design water flows.
1. Measure flow at terminals.
 2. Adjust each terminal to design flow.
 3. Re-measure each terminal after it is adjusted.
 4. Position control valves to bypass the coil and adjust the bypass valve to maintain design flow.
 5. Perform temperature tests after flows have been balanced.
- F. For systems with pressure-independent valves at terminals:
1. Measure differential pressure and verify that it is within manufacturer's specified range.
 2. Perform temperature tests after flows have been verified.
- G. For systems without pressure-independent valves or flow-measuring devices at terminals:
1. Measure and balance coils by either coil pressure drop or temperature method.
 2. If balanced by coil pressure drop, perform temperature tests after flows have been verified.
- H. Verify final system conditions as follows:
1. Re-measure and confirm that total water flow is within design.
 2. Re-measure final pumps' operating data, TDH, volts, amps, and static profile.
 3. Mark final settings.
- I. Verify that memory stops have been set.
- 3.9 PROCEDURES FOR STEAM SYSTEMS
- A. Measure and record upstream and downstream pressure of each piece of equipment.
- B. Measure and record upstream and downstream steam pressure of pressure-reducing valves.
- C. Check settings and operation of automatic temperature-control valves, self-contained control valves, and pressure-reducing valves. Record final settings.
- D. Check settings and operation of each safety valve. Record settings.
- E. Verify the operation of each steam trap.
- 3.10 PROCEDURES FOR MOTORS
- A. Motors 1/2 HP and Larger: Test at final balanced conditions and record the following data:
1. Manufacturer's name, model number, and serial number.
 2. Motor horsepower rating.
 3. Motor rpm.
 4. Phase and hertz.
 5. Nameplate and measured voltage, each phase.
 6. Nameplate and measured amperage, each phase.
 7. Starter size and thermal-protection-element rating.
 8. Service factor and frame size.

- B. Motors Driven by Variable-Frequency Controllers: Test manual bypass of controller to prove proper operation.
- C. Electronically Communicated Motors in Terminal Units: Test for proper operation at airflows ranging from minimum to maximum. Incrementally increase minimum airflow as required until the fan static pressure is within the manufacturers specified range and stable operation is achieved. Record observations including terminal unit tag and final minimum airflow.

3.11 PROCEDURES FOR CHILLERS

- A. Balance water flow through each evaporator and condenser to within specified tolerances of indicated flow with all pumps operating. With only one chiller operating in a multiple chiller installation, do not exceed the flow for the maximum tube velocity recommended by the chiller manufacturer. Measure and record the following data with each chiller operating at design conditions:
 - 1. Evaporator-water entering and leaving temperatures, pressure drop, and water flow.
 - 2. For water-cooled chillers, condenser-water entering and leaving temperatures, pressure drop, and water flow.
 - 3. Evaporator and condenser refrigerant temperatures and pressures, using instruments furnished by chiller manufacturer.
 - 4. Power factor if factory-installed instrumentation is furnished for measuring kilowatts.
 - 5. Kilowatt input if factory-installed instrumentation is furnished for measuring kilowatts.
 - 6. Capacity: Calculate in tons of cooling.
 - 7. For air-cooled chillers, verify condenser-fan rotation and record fan and motor data including number of fans and entering- and leaving-air temperatures.

3.12 PROCEDURES FOR CONDENSING UNITS

- A. Verify proper rotation of fans.
- B. Measure entering- and leaving-air temperatures.
- C. Record fan and motor operating data.

3.13 PROCEDURES FOR BOILERS

- A. Hydronic Boilers:
 - 1. Measure and record entering- and leaving-water temperatures.
 - 2. Measure and record water flow.
 - 3. Record relief valve pressure setting.
- B. Steam Boilers:
 - 1. Measure and record entering-water temperature.
 - 2. Measure and record feed water flow.
 - 3. Measure and record leaving-steam pressure and temperature.
 - 4. Record relief valve pressure setting.

3.14 PROCEDURES FOR HEAT-TRANSFER COILS

- A. Measure, adjust, and record the following data for each water coil:

1. Entering- and leaving-water temperature.
 2. Water flow rate.
 3. Water pressure drop for major (more than 20 gpm) equipment coils, excluding unitary equipment such as reheat coils, unit heaters, and fan-coil units.
 4. Dry-bulb temperature of entering and leaving air.
 5. Wet-bulb temperature of entering and leaving air for cooling coils.
 6. Airflow.
- B. Measure, adjust, and record the following data for each electric heating coil:
1. Nameplate data.
 2. Airflow.
 3. Entering- and leaving-air temperature at full load.
 4. Voltage and amperage input of each phase at full load.
 5. Calculated kilowatt at full load.
 6. Fuse or circuit-breaker rating for overload protection.
- C. Measure, adjust, and record the following data for each steam coil:
1. Dry-bulb temperature of entering and leaving air.
 2. Airflow.
 3. Inlet steam pressure.
- D. Measure, adjust, and record the following data for each refrigerant coil:
1. Dry-bulb temperature of entering and leaving air.
 2. Wet-bulb temperature of entering and leaving air.
 3. Airflow.
- 3.15 SOUND TESTS
- A. After the systems are balanced and construction is Substantially Complete, measure and record sound levels at 10 locations as designated by the Architect.
- B. Instrumentation:
1. The sound-testing meter shall be a portable, general-purpose testing meter consisting of a microphone, processing unit, and readout.
 2. The sound-testing meter shall be capable of showing fluctuations at minimum and maximum levels, and measuring the equivalent continuous sound pressure level (LEQ).
 3. The sound-testing meter must be capable of using 1/3 octave band filters to measure mid-frequencies from 31.5 Hz to 8000 Hz.
 4. The accuracy of the sound-testing meter shall be plus or minus one decibel.
- C. Test Procedures:
1. Perform test at quietest background noise period. Note cause of unpreventable sound that affects test outcome.
 2. Equipment should be operating at design values.
 3. Calibrate the sound-testing meter prior to taking measurements.
 4. Use a microphone suitable for the type of noise levels measured that is compatible with meter. Provide a windshield for outside or in-duct measurements.
 5. Record a set of background measurements in dBA and sound pressure levels in the eight un-weighted octave bands 63 Hz to 8000 Hz (NC) with the equipment off.
 6. Take sound readings in dBA and sound pressure levels in the eight un-weighted octave bands 63 Hz to 8000 Hz (NC) with the equipment operating.

7. Take readings no closer than 36 inches (900 mm) from a wall or from the operating equipment and approximately 60 inches (1500 mm) from the floor, with the meter held or mounted on a tripod.
8. For outdoor measurements, move sound-testing meter slowly and scan area that has the most exposure to noise source being tested. Use A-weighted scale for this type of reading.

D. Reporting:

1. Report shall record the following:
 - a. Location.
 - b. System tested.
 - c. dBA reading.
 - d. Sound pressure level in each octave band with equipment on and off.
2. Plot sound pressure levels on NC worksheet with equipment on and off.

3.16 VIBRATION TESTS

- A. After systems are balanced and construction is Substantially Complete, measure and record vibration levels on equipment having motor horsepower equal to or greater than 10.

B. Instrumentation:

1. Use portable, battery-operated, and microprocessor-controlled vibration meter with or without a built-in printer.
2. The meter shall automatically identify engineering units, filter bandwidth, amplitude, and frequency scale values.
3. The meter shall be able to measure machine vibration displacement in mils of deflection, velocity in inches per second, and acceleration in inches per second squared.
4. Verify calibration date is current for vibration meter before taking readings.

C. Test Procedures:

1. To ensure accurate readings, verify that accelerometer has a clean, flat surface and is mounted properly.
2. With the unit running, set up vibration meter in a safe, secure location. Connect transducer to meter with proper cables. Hold magnetic tip of transducer on top of the bearing, and measure unit in mils of deflection. Record measurement, then move transducer to the side of the bearing and record in mils of deflection. Record an axial reading in mils of deflection by holding nonmagnetic, pointed transducer tip on end of shaft.
3. Change vibration meter to velocity (inches per second) measurements. Repeat and record above measurements.
4. Record CPM or rpm.
5. Read each bearing on motor, fan, and pump as required. Track and record vibration levels from rotating component through casing to base.

D. Reporting:

1. Report shall record location and the system tested.
2. Include horizontal-vertical-axial measurements for tests.
3. Verify that vibration limits follow Specifications, or, if not specified, follow the General Machinery Vibration Severity Chart or Vibration Acceleration General Severity Chart from the AABC National Standards. Acceptable levels of vibration are normally "smooth" to "good."

4. Include in report General Machinery Vibration Severity Chart, with conditions plotted.

3.17 DUCT LEAKAGE TESTS

- A. Witness the duct pressure testing performed by Installer.
- B. Verify that proper test methods are used and that leakage rates are within specified tolerances.
- C. Report deficiencies observed.

3.18 CONTROLS VERIFICATION

- A. In conjunction with system balancing, perform the following:
 1. Verify temperature control system is operating within the design limitations.
 2. Confirm that the sequences of operation are in compliance with Contract Documents.
 3. Verify that controllers are calibrated and function as intended.
 4. Verify that controller set points are as indicated.
 5. Verify the operation of lockout or interlock systems.
 6. Verify the operation of valve and damper actuators.
 7. Verify that controlled devices are properly installed and connected to correct controller.
 8. Verify that controlled devices travel freely and are in position indicated by controller: open, closed, or modulating.
 9. Verify location and installation of sensors to ensure that they sense only intended temperature, humidity, or pressure.
- B. Reporting: Include a summary of verifications performed, remaining deficiencies, and variations from indicated conditions.

3.19 TOLERANCES

- A. Set HVAC system's airflow rates and water flow rates within the following tolerances:
 1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus or minus 10 percent.
 2. Air Outlets and Inlets: Plus or minus 10 percent.
 3. Heating-Water Flow Rate: Plus or minus 10 percent.
 4. Cooling-Water Flow Rate: Plus or minus 10 percent.
- B. Maintaining pressure relationships as designed shall have priority over the tolerances specified above.

3.20 PROGRESS REPORTING

- A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems balancing devices. Recommend changes and additions to systems balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.

- B. Status Reports: Prepare weekly progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.21 FINAL REPORT

- A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.
 - 1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
 - 2. Include a list of instruments used for procedures, along with proof of calibration.
 - 3. Certify validity and accuracy of field data.
- B. Final Report Contents: In addition to certified field-report data, include the following:
 - 1. Pump curves.
 - 2. Fan curves.
 - 3. Manufacturers' test data.
 - 4. Field test reports prepared by system and equipment installers.
 - 5. Other information relative to equipment performance; do not include Shop Drawings and Product Data.
- C. General Report Data: In addition to form titles and entries, include the following data:
 - 1. Title page.
 - 2. Name and address of the TAB specialist.
 - 3. Project name.
 - 4. Project location.
 - 5. Architect's name and address.
 - 6. Engineer's name and address.
 - 7. Contractor's name and address.
 - 8. Report date.
 - 9. Signature of TAB supervisor who certifies the report.
 - 10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
 - 11. Summary of contents including the following:
 - a. Indicated versus final performance.
 - b. Notable characteristics of systems.
 - c. Description of system operation sequence if it varies from the Contract Documents.
 - 12. Nomenclature sheets for each item of equipment.
 - 13. Data for terminal units, including manufacturer's name, type, size, and fittings.
 - 14. Notes to explain why certain final data in the body of reports vary from indicated values.
 - 15. Test conditions for fans and pump performance forms including the following:
 - a. Settings for outdoor-, return-, and exhaust-air dampers.
 - b. Conditions of filters.
 - c. Cooling coil, wet- and dry-bulb conditions.
 - d. Face and bypass damper settings at coils.
 - e. Fan drive settings including settings and percentage of maximum pitch diameter.
 - f. Inlet vane settings for variable-air-volume systems.
 - g. Settings for supply-air, static-pressure controller.

- h. Other system operating conditions that affect performance.
- D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
 - 1. Quantities of outdoor, supply, return, and exhaust airflows.
 - 2. Water and steam flow rates.
 - 3. Duct, outlet, and inlet sizes.
 - 4. Pipe and valve sizes and locations.
 - 5. Terminal units.
 - 6. Balancing stations.
 - 7. Position of balancing devices.
- E. Air-Handling-Unit Test Reports: For air-handling units with coils, include the following:
 - 1. Unit Data:
 - a. Unit identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and unit size.
 - e. Manufacturer's serial number.
 - f. Unit arrangement and class.
 - g. Discharge arrangement.
 - h. Sheave make, size in inches (mm), and bore.
 - i. Center-to-center dimensions of sheave and amount of adjustments in inches (mm).
 - j. Number, make, and size of belts.
 - k. Number, type, and size of filters.
 - 2. Motor Data:
 - a. Motor make, and frame type and size.
 - b. Horsepower and rpm.
 - c. Volts, phase, and hertz.
 - d. Full-load amperage and service factor.
 - e. Sheave make, size in inches (mm), and bore.
 - f. Center-to-center dimensions of sheave and amount of adjustments in inches (mm).
 - 3. Test Data (Indicated and Actual Values):
 - a. Total airflow rate in cfm (L/s).
 - b. Total system static pressure in inches wg (Pa).
 - c. Fan rpm.
 - d. Discharge static pressure in inches wg (Pa).
 - e. Filter static-pressure differential in inches wg (Pa).
 - f. Preheat-coil static-pressure differential in inches wg (Pa).
 - g. Cooling-coil static-pressure differential in inches wg (Pa).
 - h. Heating-coil static-pressure differential in inches wg (Pa).
 - i. Outdoor airflow in cfm (L/s).
 - j. Return airflow in cfm (L/s).
 - k. Outdoor-air damper position.
 - l. Return-air damper position.
 - m. Vortex damper position.
- F. Apparatus-Coil Test Reports:
 - 1. Coil Data:
 - a. System identification.
 - b. Location.

- c. Coil type.
- d. Number of rows.
- e. Fin spacing in fins per inch (mm) o.c.
- f. Make and model number.
- g. Face area in sq. ft. (sq. m).
- h. Tube size in NPS (DN).
- i. Tube and fin materials.
- j. Circuiting arrangement.
- 2. Test Data (Indicated and Actual Values):
 - a. Airflow rate in cfm (L/s).
 - b. Average face velocity in fpm (m/s).
 - c. Air pressure drop in inches wg (Pa).
 - d. Outdoor-air, wet- and dry-bulb temperatures in deg F (deg C).
 - e. Return-air, wet- and dry-bulb temperatures in deg F (deg C).
 - f. Entering-air, wet- and dry-bulb temperatures in deg F (deg C).
 - g. Leaving-air, wet- and dry-bulb temperatures in deg F (deg C).
 - h. Water flow rate in gpm (L/s).
 - i. Water pressure differential in feet of head or psig (kPa).
 - j. Entering-water temperature in deg F (deg C).
 - k. Leaving-water temperature in deg F (deg C).
 - l. Refrigerant expansion valve and refrigerant types.
 - m. Refrigerant suction pressure in psig (kPa).
 - n. Refrigerant suction temperature in deg F (deg C).
 - o. Inlet steam pressure in psig (kPa).
- G. Gas- and Oil-Fired Heat Apparatus Test Reports: In addition to manufacturer's factory startup equipment reports, include the following:
 - 1. Unit Data:
 - a. System identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and unit size.
 - e. Manufacturer's serial number.
 - f. Fuel type in input data.
 - g. Output capacity in Btu/h (kW).
 - h. Ignition type.
 - i. Burner-control types.
 - j. Motor horsepower and rpm.
 - k. Motor volts, phase, and hertz.
 - l. Motor full-load amperage and service factor.
 - m. Sheave make, size in inches (mm), and bore.
 - n. Center-to-center dimensions of sheave and amount of adjustments in inches (mm).
 - 2. Test Data (Indicated and Actual Values):
 - a. Total airflow rate in cfm (L/s).
 - b. Entering-air temperature in deg F (deg C).
 - c. Leaving-air temperature in deg F (deg C).
 - d. Air temperature differential in deg F (deg C).
 - e. Entering-air static pressure in inches wg (Pa).
 - f. Leaving-air static pressure in inches wg (Pa).
 - g. Air static-pressure differential in inches wg (Pa).
 - h. Low-fire fuel input in Btu/h (kW).

- i. High-fire fuel input in Btu/h (kW).
 - j. Manifold pressure in psig (kPa).
 - k. High-temperature-limit setting in deg F (deg C).
 - l. Operating set point in Btu/h (kW).
 - m. Motor voltage at each connection.
 - n. Motor amperage for each phase.
 - o. Heating value of fuel in Btu/h (kW).
- H. Electric-Coil Test Reports: For electric furnaces, duct coils, and electric coils installed in central-station air-handling units, include the following:
 - 1. Unit Data:
 - a. System identification.
 - b. Location.
 - c. Coil identification.
 - d. Capacity in Btu/h (kW).
 - e. Number of stages.
 - f. Connected volts, phase, and hertz.
 - g. Rated amperage.
 - h. Airflow rate in cfm (L/s).
 - i. Face area in sq. ft. (sq. m).
 - j. Minimum face velocity in fpm (m/s).
 - 2. Test Data (Indicated and Actual Values):
 - a. Heat output in Btu/h (kW).
 - b. Airflow rate in cfm (L/s).
 - c. Air velocity in fpm (m/s).
 - d. Entering-air temperature in deg F (deg C).
 - e. Leaving-air temperature in deg F (deg C).
 - f. Voltage at each connection.
 - g. Amperage for each phase.
- I. Fan Test Reports: For supply, return, and exhaust fans, include the following:
 - 1. Fan Data:
 - a. System identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and size.
 - e. Manufacturer's serial number.
 - f. Arrangement and class.
 - g. Sheave make, size in inches (mm), and bore.
 - h. Center-to-center dimensions of sheave and amount of adjustments in inches (mm).
 - 2. Motor Data:
 - a. Motor make, and frame type and size.
 - b. Horsepower and rpm.
 - c. Volts, phase, and hertz.
 - d. Full-load amperage and service factor.
 - e. Sheave make, size in inches (mm), and bore.
 - f. Center-to-center dimensions of sheave, and amount of adjustments in inches (mm).
 - g. Number, make, and size of belts.
 - 3. Test Data (Indicated and Actual Values):
 - a. Total airflow rate in cfm (L/s).
 - b. Total system static pressure in inches wg (Pa).

- c. Fan rpm.
 - d. Discharge static pressure in inches wg (Pa).
 - e. Suction static pressure in inches wg (Pa).
- J. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:
- 1. Report Data:
 - a. System and air-handling-unit number.
 - b. Location and zone.
 - c. Traverse air temperature in deg F (deg C).
 - d. Duct static pressure in inches wg (Pa).
 - e. Duct size in inches (mm).
 - f. Duct area in sq. ft. (sq. m).
 - g. Indicated airflow rate in cfm (L/s).
 - h. Indicated velocity in fpm (m/s).
 - i. Actual airflow rate in cfm (L/s).
 - j. Actual average velocity in fpm (m/s).
 - k. Barometric pressure in psig (Pa).
- K. Air-Terminal-Device Reports:
- 1. Unit Data:
 - a. System and air-handling unit identification.
 - b. Location and zone.
 - c. Apparatus used for test.
 - d. Area served.
 - e. Make.
 - f. Number from system diagram.
 - g. Type and model number.
 - h. Size.
 - i. Effective area in sq. ft. (sq. m).
 - 2. Test Data (Indicated and Actual Values):
 - a. Airflow rate in cfm (L/s).
 - b. Air velocity in fpm (m/s).
 - c. Preliminary airflow rate as needed in cfm (L/s).
 - d. Preliminary velocity as needed in fpm (m/s).
 - e. Final airflow rate in cfm (L/s).
 - f. Final velocity in fpm (m/s).
 - g. Space temperature in deg F (deg C).
- L. System-Coil Reports: For reheat coils and water coils of terminal units, include the following:
- 1. Unit Data:
 - a. System and air-handling-unit identification.
 - b. Location and zone.
 - c. Room or riser served.
 - d. Coil make and size.
 - e. Flowmeter type.
 - 2. Test Data (Indicated and Actual Values):
 - a. Airflow rate in cfm (L/s).
 - b. Entering-water temperature in deg F (deg C).
 - c. Leaving-water temperature in deg F (deg C).
 - d. Water pressure drop in feet of head or psig (kPa).

- e. Entering-air temperature in deg F (deg C).
 - f. Leaving-air temperature in deg F (deg C).
- M. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves and include the following:
 - 1. Unit Data:
 - a. Unit identification.
 - b. Location.
 - c. Service.
 - d. Make and size.
 - e. Model number and serial number.
 - f. Water flow rate in gpm (L/s).
 - g. Water pressure differential in feet of head or psig (kPa).
 - h. Required net positive suction head in feet of head or psig (kPa).
 - i. Pump rpm.
 - j. Impeller diameter in inches (mm).
 - k. Motor make and frame size.
 - l. Motor horsepower and rpm.
 - m. Voltage at each connection.
 - n. Amperage for each phase.
 - o. Full-load amperage and service factor.
 - p. Seal type.
 - 2. Test Data (Indicated and Actual Values):
 - a. Static head in feet of head or psig (kPa).
 - b. Pump shutoff pressure in feet of head or psig (kPa).
 - c. Actual impeller size in inches (mm).
 - d. Full-open flow rate in gpm (L/s).
 - e. Full-open pressure in feet of head or psig (kPa).
 - f. Final discharge pressure in feet of head or psig (kPa).
 - g. Final suction pressure in feet of head or psig (kPa).
 - h. Final total pressure in feet of head or psig (kPa).
 - i. Final water flow rate in gpm (L/s).
 - j. Voltage at each connection.
 - k. Amperage for each phase.
- N. Instrument Calibration Reports:
 - 1. Report Data:
 - a. Instrument type and make.
 - b. Serial number.
 - c. Application.
 - d. Dates of use.
 - e. Dates of calibration.

3.22 VERIFICATION OF TAB REPORT

- A. The TAB specialist's test and balance engineer shall conduct the inspection in the presence of Owner, Construction Manager and Commissioning Authority.

- B. Owner Commissioning authority shall randomly select measurements, documented in the final report, to be rechecked. Rechecking shall be limited to either 10 percent of the total measurements recorded or the extent of measurements that can be accomplished in a normal 8-hour business day.
1. If rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."
- C. Recheck the following measurements in their entirety:
1. Airside:
 - a. All outside air intake flow rates
 - b. All exhaust/relief flow rates
 - c. Supply, return, relief and exhaust airflow rates (as applicable) for all AHUs / RTU/s / DOAUs in the entire project
 - d. 10 percent of all other measurements recorded as randomly selected by the Architect. Submit RFI to the Architect to identify the associated measurements that need to be rechecked.
 2. Waterside:
 - a. Pump performance for all pumps, in all hydronic systems in the project.
 - b. Hydronic coil balancing for all coils in AHUs / RTU/s / DOAUs with a minimum design airflow of 5,000 CFM, in the entire project.
 - c. 10 percent of all other measurements recorded as randomly selected by the Architect. Submit RFI to the Architect to identify the associated measurements that need to be rechecked.
- D. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.
- E. If TAB work fails, proceed as follows:
1. TAB specialists shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection.
 2. If the second final inspection also fails, Owner may contract the services of another TAB specialist to complete TAB work according to the Contract Documents and deduct the cost of the services from the original TAB specialist's final payment.
 3. If the second verification also fails, Owner may contact AABC Headquarters regarding the AABC National Performance Guaranty.
- F. Prepare test and inspection reports.
- 3.23 ADDITIONAL TESTS
- A. Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.
- B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

Smithsonian OPDC Project No. 2533105
SmithGroup Project No. 00100084

END OF SECTION

FOR REFERENCE ONLY

SECTION 23 0713 - DUCT INSULATION**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes insulating the following duct services:
 - 1. Indoor, concealed supply and outdoor air.
 - 2. Indoor, exposed supply and outdoor air.
 - 3. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
 - 4. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
 - 5. Outdoor, exposed supply and return.
- B. Related Requirements:
 - 1. Section 23 0716 "HVAC Equipment Insulation."
 - 2. Section 23 0719 "HVAC Piping Insulation."
 - 3. Section 23 3113 "Metal Ducts" for duct liners.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).
- B. Sustainable Design Submittals:
 - 1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
 - 2. Product Data: For adhesives, indicating VOC content.
 - 3. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
 - 4. Product Data: For coatings, indicating VOC content.
 - 5. Laboratory Test Reports: For coatings, indicating compliance with requirements for low-emitting materials.
 - 6. Product Data: For sealants, indicating VOC content.
 - 7. Laboratory Test Reports: For sealants, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
 - 2. Detail insulation application at elbows, fittings, dampers, specialties and flanges for each type of insulation.
 - 3. Detail application of field-applied jackets.
 - 4. Detail application at linkages of control devices.
- D. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:
 - 1. Sheet Form Insulation Materials: 12 inches (300 mm) square.
 - 2. Sheet Jacket Materials: 12 inches (300 mm) square.
 - 3. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- C. Field quality-control reports.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or craft training program, certified by the Department of Labor, Bureau of Apprenticeship and Training.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers are to be marked with the manufacturer's name, appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.6 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 23 0529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with duct installer for duct insulation application. Before preparing ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.7 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products in accordance with ASTM E84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation, jacket materials, adhesive, mastic, tapes, and cement material containers with appropriate markings of applicable testing agency.
 - 1. All Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

2.2 INSULATION MATERIALS

- A. Comply with requirements in "Duct Insulation Schedule, General," "Indoor Duct and Plenum Insulation Schedule," and "Aboveground, Outdoor Duct and Plenum Insulation Schedule" articles for where insulating materials are to be applied.
- B. Products do not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel have a leachable chloride content of less than 50 ppm when tested in accordance with ASTM C871.
- D. Insulation materials for use on austenitic stainless steel are qualified as acceptable in accordance with ASTM C795.
- E. Foam insulation materials do not use CFC or HCFC blowing agents in the manufacturing process.
- F. Mineral Wool Blanket: Basalt volcanic rock-derived fibers bonded with a thermosetting resin, unfaced; suitable for maximum use temperature up to 1200 deg F (650 deg C) in accordance with ASTM C447. Comply with ASTM C553.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. Owens Corning.
 - c. ROCKWOOL Technical Insulation.
- G. Mineral Wool Board: Basalt volcanic rock-derived fibers bonded with a thermosetting resin; suitable for maximum use temperature up to 1100 deg F (600 deg C) in accordance with ASTM C411. Comply with ASTM C612, Type III, unfaced.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. Owens Corning.
 - c. ROCKWOOL Technical Insulation.
- H. Mineral Wool, Pipe and Tank: Mineral wool fibers bonded with a thermosetting resin; suitable for maximum use temperature up to 1000 deg F (538 deg C), in accordance with ASTM C411. Comply with ASTM C1393.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. Owens Corning.
 - c. ROCKWOOL.
 - 2. Semirigid board material with factory-applied ASJ jacket.
 - 3. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

2.3 ADHESIVES

- A. Materials are compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

- B. Glass-Fiber and Mineral Wool Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
 - d. Mon-Eco Industries, Inc.
 2. Fiberglass adhesive shall have a VOC content of 80 g/L or less when calculated in accordance with 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
- C. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
 - d. Mon-Eco Industries, Inc.
 2. Adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.

2.4 MASTICS AND COATINGS

- A. Materials are compatible with insulation materials, jackets, and substrates.
1. VOC Content: 300 g/L or less.
 2. VOC Content: 300 g/L or less.
 3. Low-Emitting Materials: Mastic coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. VOC Content: 300 g/L or less.

5. Low-Emitting Materials: Mastic coatings shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 6. VOC Content: 300 g/L or less.
 7. Low-Emitting Materials: Mastic coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 8. VOC Emissions: Mastic coatings shall contain no more than half of the chronic REL of VOCs when tested according to the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit or 33 mcg/cu. m and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- B. Vapor-Retarder Mastic, Water Based, Interior Use: Suitable for indoor use on below ambient services.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Knauf Insulation.
 - d. Vimasco Corporation.
 2. Water-Vapor Permeance: Comply with ASTM C755, Section 7.2.2, Table 2, for insulation type and service conditions.
 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 4. Comply with MIL-PRF-19565C, Type II, for permeance requirements, with supplier listing on DOD QPD - Qualified Products Database.
 5. Color: White.
- C. Vapor-Retarder Mastic, Solvent Based, Interior Use: Suitable for indoor use on below ambient services.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
 - d. Mon-Eco Industries, Inc.
 2. Water-Vapor Permeance: Comply with ASTM C755, Section 7.2.2, Table 2, for insulation type and service conditions.
 3. Service Temperature Range: 0 to 180 deg F (Minus 18 to plus 82 deg C).
 4. Color: White.
- D. Vapor-Retarder Mastic, Solvent Based, Exterior Use: Suitable for outdoor use on below ambient services.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.

- c. Foster Brand; H. B. Fuller Construction Products.
 - 2. Water-Vapor Permeance: Comply with ASTM C755, Section 7.2.2, Table 2, for insulation type and service conditions.
 - 3. Service Temperature Range: Minus 50 to plus 220 deg F (Minus 46 to plus 104 deg C).
 - 4. Color: White.
- E. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
 - d. Knauf Insulation.
 - e. Mon-Eco Industries, Inc.
 - f. Vimasco Corporation.
 - 2. Water-Vapor Permeance: ASTM E96/E96M, greater than 1.0 perm (0.66 metric perm) at manufacturer's recommended dry film thickness.
 - 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 - 4. Color: White.

2.5 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C, Class I, Grade A and are compatible with insulation materials, jackets, and substrates.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Vimasco Corporation.
 - 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 - 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
7. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct insulation.
8. Service Temperature Range: 0 to plus 180 deg F (Minus 18 to plus 82 deg C).
9. Color: White.

2.6 SEALANTS

A. FSK and Metal Jacket Flashing Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
 - d. Mon-Eco Industries, Inc.
2. Materials are compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
5. Color: Aluminum.
6. Sealant shall have a VOC content of 420 g/L or less.
7. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
8. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
9. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
10. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
11. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

B. ASJ Flashing Sealants, and Vinyl and PVC Jacket Flashing Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
2. Materials are compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
5. Color: White.
6. Sealant shall have a VOC content of 420 g/L or less.
7. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
8. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
9. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

2.7 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
 1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C1136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.
 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C1136, Type II.
 4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C1136, Type II.
 5. Vinyl Jacket: White vinyl with a permeance of 1.3 perms (0.86 metric perm) when tested in accordance with ASTM E96/E96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.8 FIELD-APPLIED FABRIC-REINFORCING MESH

- A. Woven Glass-Fiber Mesh: Approximately 6 oz./sq. yd. (203 g/sq. m) with a thread count of 5 strands by 5 strands/sq. in. (2 strands by 2 strands/sq. mm) for covering ducts.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.

- B. Woven Polyester Mesh: Approximately 1 oz./sq. yd. (34 g/sq. m) with a thread count of 10 strands by 10 strands/sq. in. (4 strands by 4 strands/sq. mm), in a Leno weave, for ducts.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Vimasco Corporation.

2.9 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Cloth: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd. (271 g/sq. m).
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Alpha Associates, Inc.

2.10 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 2. Width: 3 inches (75 mm).
 3. Thickness: 11.5 mils (0.29 mm).
 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C1136.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 2. Width: 3 inches (75 mm).
 3. Thickness: 6.5 mils (0.16 mm).
 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 - e. Sekisui Voltek, LLC.
2. Width: 2 inches (50 mm).
3. Thickness: 3.7 mils (0.093 mm).
4. Adhesion: 100 ounces force/inch (1.1 N/mm) in width.
5. Elongation: 5 percent.
6. Tensile Strength: 34 lbf/inch (6.2 N/mm) in width.

2.11 SECUREMENTS

A. Bands:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. RPR Products, Inc.
2. Stainless Steel: ASTM A240/A240M, Type 304 or Type 316; 0.015 inch (0.38 mm) thick, 3/4 inch (19 mm) wide with wing seal or closed seal.
3. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- (3.5-mm-) diameter shank, length to suit depth of insulation indicated.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - 4) Nelson Stud Welding.
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- (3.5-mm-) diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch (38-mm) galvanized carbon-steel washer.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) CL WARD & Family Inc.
 - 3) Gemco.
 - 4) Midwest Fasteners, Inc.
 - 5) Nelson Stud Welding.
3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
 - c. Spindle: Stainless steel, fully annealed, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
 - 4. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick, stainless steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - 4) Nelson Stud Welding.
 - b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
 - C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- (19-mm-) wide, stainless steel or Monel.
 - D. Wire: 0.062-inch (1.6-mm) soft-annealed, stainless steel.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C & F Wire.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. RPR Products, Inc.
- 2.12 CORNER ANGLES
- A. PVC Corner Angles: 30 mils (0.8 mm) thick, minimum 1 by 1 inch (25 by 25 mm), PVC in accordance with ASTM D1784, Class 16354-C. White or color-coded to match adjacent surface.
 - B. Aluminum Corner Angles: 0.040 inch (1.0 mm) thick, minimum 1 by 1 inch (25 by 25 mm), aluminum in accordance with ASTM B209 (ASTM B209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14.
 - C. Stainless Steel Corner Angles: Insert dimension thick, minimum 1 by 1 inch (25 by 25 mm), stainless steel in accordance with ASTM A240/A240M, Type 304 or Type 316.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 - 1. Verify that systems to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Exposed indoor ductwork must be insulated with a semi-rigid insulation with white kraft ALL Service Jacket (ASJ) bonded to aluminum foil, with a white paintable finish.
- B. Install paintable canvas wrapping on all ductwork located within the mechanical rooms and exposed ductwork in occupied spaces. Coordinate paint colors in all spaces with the COTR and Architect.
- C. Concealed indoor ductwork must be insulated with either semi-rigid or flexible fibrous duct wrap with Foil Scrim Kraft (FSK) and formaldehyde free bonding resin.
- D. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of ducts and fittings.
- E. Install insulation materials, vapor barriers or retarders, jackets, and thicknesses required for each item of duct system as specified in insulation system schedules.
- F. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, compress, or otherwise damage insulation or jacket.
- G. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- H. Install multiple layers of insulation with longitudinal and end seams staggered.
- I. Keep insulation materials dry during application and finishing.
- J. Replace insulation materials that get wet during storage or in the installation process before being properly covered and sealed in accordance with Contract Documents.
- K. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- L. Install insulation with least number of joints practical.

- M. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
1. Install insulation continuously through hangers and around anchor attachments.
 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
- N. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- O. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth, but not to the extent of creating wrinkles or areas of compression in the insulation.
 2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
 3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at [2 inches (50 mm)] [4 inches (100 mm)] o.c.
 - a. For below ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct flanges and fittings.
- P. Cut insulation in a manner to avoid compressing insulation.
- Q. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- R. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

3.4 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches (50 mm) below top of roof flashing.
 4. Seal jacket to roof flashing with flashing sealant.

- B. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches (50 mm).
 - 4. Seal jacket to wall flashing with flashing sealant.
- C. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- D. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches (50 mm).
 - 1. Comply with requirements in Section 07 8413 "Penetration Firestopping."
- E. Insulation Installation at Floor Penetrations:
 - 1. Duct: For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches (50 mm).
 - 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 07 8413 "Penetration Firestopping."

3.5 INSTALLATION OF GLASS-FIBER AND MINERAL-WOOL INSULATION

- A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
- B. Comply with manufacturer's written installation instructions.
 - 1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
 - 2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
 - 3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
 - a. On duct sides with dimensions 18 inches (450 mm) and smaller, place pins along longitudinal centerline of duct. Space 3 inches (75 mm) maximum from insulation end joints, and 16 inches (400 mm) o.c.
 - b. On duct sides with dimensions larger than 18 inches (450 mm), place pins 16 inches (400 mm) o.c. each way, and 3 inches (75 mm) maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
 - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
 - d. Do not overcompress insulation during installation.
 - e. Impale insulation over pins and attach speed washers.

- f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
 - 4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches (50 mm) from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch (13-mm) outward-clinching staples, 1 inch (25 mm) o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
 - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
 - b. Install vapor stops for ductwork and plenums operating below 50 deg F (10 deg C) at 18-foot (5.5-m) intervals. Vapor stops consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches (75 mm).
 - 5. Overlap unfaced blankets a minimum of 2 inches (50 mm) on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches (450 mm) o.c.
 - 6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
 - 7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- (150-mm-) wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches (150 mm) o.c.
- C. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
 - 1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
 - 2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
 - 3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
 - a. On duct sides with dimensions 18 inches (450 mm) and smaller, place pins along longitudinal centerline of duct. Space 3 inches (75 mm) maximum from insulation end joints, and 16 inches (400 mm) o.c.
 - b. On duct sides with dimensions larger than 18 inches (450 mm), space pins 16 inches (400 mm) o.c. each way, and 3 inches (75 mm) maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
 - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
 - d. Do not overcompress insulation during installation.
 - e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches (50 mm) from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch (13-mm) outward-clinching staples, 1 inch (25 mm) o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
 - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
 - b. Install vapor stops for ductwork and plenums operating below 50 deg F (10 deg C) at 18-foot (5.5-m) intervals. Vapor stops consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches (75 mm).
5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- (150-mm-) wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches (150 mm) o.c.

3.6 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
 1. Draw jacket smooth and tight to surface with 2-inch (50-mm) overlap at seams and joints.
 2. Embed glass cloth between two 0.062-inch- (1.6-mm-) thick coats of lagging adhesive.
 3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
 1. Draw jacket material smooth and tight.
 2. Install lap or joint strips with same material as jacket.
 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 4. Install jacket with 1-1/2-inch (38-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.
 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless steel bands 12 inches (300 mm) o.c. and at end joints.

3.7 FINISHES

- A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 09 9113 "Exterior Painting" and Section 09 9123 "Interior Painting."
 1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.

- a. Finish Coat Material: Interior, flat, latex-emulsion size.
 - B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
 - C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.
 - D. Do not field paint aluminum or stainless steel jackets.
- 3.8 FIELD QUALITY CONTROL
- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
 - B. Perform tests and inspections.
 - C. Tests and Inspections:
 - 1. Inspect ductwork, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection is limited to one location(s) for each duct system defined in the "Duct Insulation Schedule, General" Article.
 - D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.
- 3.9 DUCT INSULATION SCHEDULE, GENERAL
- A. Plenums and Ducts Requiring Insulation:
 - 1. Indoor, concealed supply and outdoor air.
 - 2. Indoor, exposed supply and outdoor air.
 - 3. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
 - 4. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
 - 5. Outdoor, concealed supply and return.
 - 6. Outdoor, exposed supply and return.
 - B. Items Not Insulated:
 - 1. Factory-insulated flexible ducts.
 - 2. Factory-insulated plenums and casings.
 - 3. Flexible connectors.
 - 4. Vibration-control devices.
 - 5. Factory-insulated access panels and doors.
- 3.10 INDOOR DUCT AND PLENUM INSULATION SCHEDULE
- A. Concealed, round and flat-oval, supply-air duct insulation is one of the following:
 - 1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 - B. Concealed, round and flat-oval, outdoor-air duct insulation is one of the following:
 - 1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.

- C. Concealed, round and flat-oval, exhaust-air duct insulation is one of the following:
1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
- D. Concealed, rectangular, supply-air duct insulation is one of the following:
1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 2. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
- E. Concealed, rectangular, outdoor-air duct insulation is one of the following:
1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 2. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
- F. Concealed, rectangular, exhaust-air duct insulation between isolation damper and penetration of building exterior is one of the following:
1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 2. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
- G. Concealed, outdoor-air plenum insulation is one of the following:
1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 2. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
- H. Concealed, exhaust-air plenum insulation is one of the following:
1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 2. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
- I. Exposed, round and flat-oval, supply-air duct insulation is one of the following:
1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 2. Mineral Wool Pipe and Tank: 2 inches (50 mm) thick.
- J. Exposed, round and flat-oval, outdoor-air duct insulation is one of the following:
1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 2. Mineral Wool Pipe and Tank: 2 inches (50 mm) thick.
- K. Exposed, round and flat-oval, exhaust-air duct insulation is one of the following:
1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 2. Mineral Wool Pipe and Tank: 2 inches (50 mm) thick.
- L. Exposed, rectangular, supply-air duct insulation is one of the following:
1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 2. Mineral Wool Board: 2 inches (50 mm) thick and 6-lb/cu. ft. (96-kg/cu. m) nominal density.

- M. Exposed, rectangular, outdoor-air duct insulation is one of the following:
 - 1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 - 2. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
- N. Exposed, rectangular, exhaust-air duct insulation is one of the following:
 - 1. Mineral Wool Blanket: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 - 2. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.

3.11 ABOVEGROUND, OUTDOOR DUCT AND PLENUM INSULATION SCHEDULE

- A. Insulation materials and thicknesses are identified below. If more than one material is listed for a duct system, selection from materials listed is Contractor's option.

3.12 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Ducts and Plenums, Concealed:
 - 1. None.
- D. Ducts and Plenums, Exposed:
 - 1. All exposed ductwork that requires insulation shall be covered with canvas wrap and painted in an exact color approved by Architect.

3.13 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. All outdoor and/or exposed ductwork (including but limited to boiler flue and boiler intake) shall be covered with canvas wrap and painted in an exact custom color approved by Architect.

END OF SECTION

SECTION 23 0716 - HVAC EQUIPMENT INSULATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes insulating HVAC equipment that is not factory insulated.
- B. Related Sections:
 - 1. Section 23 0713 "Duct Insulation."
 - 2. Section 23 0719 "HVAC Piping Insulation."

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory and field applied, if any).
- B. Sustainable Design Submittals:
 - 1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
 - 2. Product Data: For sealants, indicating VOC content.
 - 3. Laboratory Test Reports: For sealants, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail removable insulation at equipment connections.
 - 2. Detail application of field-applied jackets.
 - 3. Detail application at linkages of control devices.
 - 4. Detail field application for each equipment type.
- D. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:
 - 1. Sheet Form Insulation Materials: 12 inches (300 mm) square.
 - 2. Sheet Jacket Materials: 12 inches (300 mm) square.
 - 3. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- C. Field quality-control reports.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or craft training program, certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by Architect. Use materials indicated for the completed Work.
 - 1. Equipment Mockups:
 - a. One chilled-water pump and one heating-hot-water pump.
 - b. One tank or vessel.
 - 2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
 - 3. Notify Architect seven days in advance of dates and times when mockups will be constructed.
 - 4. Obtain Architect's approval of mockups before starting insulation application.
 - 5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 - 7. Demolish and remove mockups when directed.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation system **materials are to be delivered to the Project site in unopened containers**. The packaging is to include, the name of the manufacturer, fabricator, type, description, and size, as well as ASTM standard designation, and maximum use temperature.

1.6 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 23 0529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with equipment Installer for equipment insulation application.
- C. Coordinate installation and testing of heat tracing.

1.7 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products in accordance with ASTM E84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation, jacket materials, adhesive, mastic, tapes, and cement material containers with appropriate markings of applicable testing agency.
 - 1. All Insulation Installed Indoors and Outdoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

2.2 INSULATION MATERIALS

- A. Comply with requirements in "Breeching Insulation Schedule," "Indoor Equipment Insulation Schedule," and "Outdoor, Aboveground Equipment Insulation Schedule" articles for where insulating materials are applied.
- B. Products do not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel have a leachable chloride content of less than 50 ppm when tested in accordance with ASTM C871.
- D. Insulation materials for use on austenitic stainless steel are qualified as acceptable in accordance with ASTM C795.
- E. Foam insulation materials do not use CFC or HCFC blowing agents in the manufacturing process.
- F. Calcium Silicate: Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C533, Type I or Type II.
 - 1. Prefabricated Fitting Covers: Comply with ASTM C450 and ASTM C585 for dimensions used in preforming insulation to cover valves, elbows, tees, and flanges.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Johns Manville; a Berkshire Hathaway company.
- G. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Comply with ASTM C552.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Owens Corning.
 - 2. Block Insulation: Type I.
 - 3. Special-Shaped Insulation: Type III.
 - 4. Board Insulation: Type IV.
 - 5. Fabricated shapes in accordance with ASTM C450 and ASTM C585.
 - 6. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

- H. Mineral Wool Blanket: Basalt volcanic rock-derived fibers bonded with a thermosetting resin, unfaced; suitable for maximum use temperature up to 1200 deg F (650 deg C) in accordance with ASTM C447. Comply with ASTM C553.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. Owens Corning.
 - c. ROCKWOOL Technical Insulation.
- I. Mineral Wool Board: Basalt volcanic rock-derived fibers bonded with a thermosetting resin; suitable for maximum use temperature up to 1100 deg F (600 deg C) in accordance with ASTM C411. Comply with ASTM C612, Type III, unfaced.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. Owens Corning.
 - c. ROCKWOOL Technical Insulation.
- J. Mineral Wool, Pipe and Tank: Mineral wool fibers bonded with a thermosetting resin; suitable for maximum use temperature up to 1000 deg F (538 deg C), in accordance with ASTM C411. Comply with ASTM C1393.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. Owens Corning.
 - c. Rockwool International.
 2. Semirigid board material with factory-applied ASJFSK jacket.
 3. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

2.3 INSULATING CEMENTS

- A. Glass-Fiber and Mineral Wool Insulating Cement: Comply with ASTM C195.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ramco Insulation, Inc.
- B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C196.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ramco Insulation, Inc.
- C. Glass-Fiber and Mineral Wool, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C449.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ramco Insulation, Inc.

2.4 ADHESIVES

- A. Materials are compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 800 deg F (10 to 427 deg C).
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. Vimasco Corporation.
 2. Adhesive: As recommended by calcium silicate manufacturer and with a VOC content of 50 g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- C. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F (minus 73 to plus 93 deg C).
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 2. Adhesive: As recommended by cellular glass manufacturer and with a VOC content of [80]<Insert value> g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- D. Glass-Fiber and Mineral Wool Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 2. Adhesive: As recommended by mineral fiber manufacturer and with a VOC content of 80 g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- E. ASJ Adhesive and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.

2. Adhesives shall have a VOC content of 50 g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- F. PVC Jacket Adhesive: Compatible with PVC jacket.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. Proto Corporation.
 - c. Speedline Corporation.
 - d. The Dow Chemical Company.
 2. Adhesive: As recommended by Adhesive - PVC Jacket manufacturer and with a VOC content of 50 g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

7. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

2.5 MASTICS AND COATINGS

- A. Vapor-Retarder Mastic, Water Based: Suitable for indoor and outdoor use on below-ambient services.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Knauf Insulation.
 - d. Mon-Eco Industries, Inc.
 - e. Vimasco Corporation.
 2. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 4. Color: White.
- B. Vapor-Retarder Mastic, Solvent Based, Indoor Use: Suitable for indoor use on below-ambient services.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 2. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
 3. Service Temperature Range: 0 to 180 deg F (Minus 18 to plus 82 deg C).
 4. Color: White.
- C. Vapor-Retarder Mastic, Solvent Based, Outdoor Use: Suitable for outdoor use on below-ambient services.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 2. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
 3. Service Temperature Range: Minus 50 to plus 220 deg F (Minus 46 to plus 104 deg C).
 4. Color: White.
- D. Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Knauf Insulation.
 - d. Vimasco Corporation.
 2. Water-Vapor Permeance: ASTM E96/E96M, greater than 1.0 perm (0.66 metric perms) at manufacturer's recommended dry film thickness.

3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
4. Color: White.

2.6 LAGGING ADHESIVES

- A. Adhesives comply with MIL-A-3316C, Class I, Grade A and are compatible with insulation materials, jackets, and substrates.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Vimasco Corporation.
 2. Adhesive shall be as recommended by insulation manufacturer and shall have a VOC content of 50 g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
 7. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over equipment insulation.
 8. Service Temperature Range: 20 to plus 180 deg F (Minus 6 to plus 82 deg C) 0 to plus 180 deg F (Minus 18 to plus 82 deg C).
 9. Color: White.

2.7 SEALANTS

- A. Materials are as recommended by the insulation manufacturer and are compatible with insulation materials, jackets, and substrates.
- B. Joint Sealants:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. Owens Corning.

2. Permanently flexible, elastomeric sealant.
 3. Service Temperature Range: Minus 100 to plus 300 deg F (Minus 73 to plus 149 deg C).
 4. Color: White or gray.
 5. Sealant shall have a VOC content of 420 g/L or less.
 6. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 8. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 9. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- C. FSK and Metal Jacket Flashing Sealants:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 2. Fire- and water-resistant, flexible, elastomeric sealant.
 3. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
 4. Color: Aluminum.
 5. Sealant shall have a VOC content of 420 g/L or less.
 6. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 8. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

9. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- D. ASJ Flashing Sealants and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 2. Fire- and water-resistant, flexible, elastomeric sealant.
 3. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
 4. Color: White.
 5. Sealant shall have a VOC content of [420]<Insert value> g/L or less.
 6. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 8. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 9. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

2.8 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C1136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.
 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C1136, Type II.
 4. Vinyl Jacket: White vinyl with a permeance of 1.3 perms (0.86 metric perm) when tested in accordance with ASTM E96/E96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.9 FIELD-APPLIED JACKETS

- A. Field-applied jackets comply with ASTM C1136, Type I, unless otherwise indicated.
- B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.
- C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. P.I.C. Plastics, Inc.
 - c. Proto Corporation.
 - d. Speedline Corporation.
 - 2. Adhesive: As recommended by jacket material manufacturer.
 - 3. Color: Color-code jackets based on system. Color as selected by Architect.
 - 4. Factory-fabricated tank heads and tank side panels.
- D. Metal Jacket:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. RPR Products, Inc.
 - 2. Aluminum Jacket: Comply with ASTM B209 (ASTM B209M), Alloy 3003, 3005, 3105, or 5005, Temper H-14.
 - a. Factory cut and rolled to size.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper.
 - d. Moisture Barrier for Outdoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper.
 - e. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
 - 3. Stainless Steel Jacket: ASTM A240/A240M.
 - a. Factory cut and rolled to size.
 - b. Material, finish, and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper.
 - d. Moisture Barrier for Outdoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper.

- e. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
 - f. MFM Building Products Corp.
 - g. Polyguard Products, Inc.
- E. Self-Adhesive Indoor/Outdoor Jacket (Non-Asphaltic): Vapor barrier and waterproofing jacket for installation over insulation located aboveground outdoors or indoors. Specialized jacket has five layers of laminated aluminum and polyester film with low-temperature acrylic pressure-sensitive adhesive. Outer aluminum surface is coated with UV-resistant coating for protection from environmental contaminants.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - 2. Permeance: 0.00 perm as tested in accordance with ASTM F1249.
 - 3. Flamespread/Smoke Developed: 25/50 as tested in accordance with ASTM E84.
 - 4. Aluminum Finish: Embossed.
- F. PVDC Jacket for Indoor Applications: 4-mil- (0.10-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at 0.02 perm (0.013 metric perm) when tested in accordance with ASTM E96/E96M and with a flame-spread index of 10 and a smoke-developed index of 20 when tested in accordance with ASTM E84.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
- G. PVDC Jacket for Outdoor Applications: 6-mil- (0.15-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at 0.01 perm (0.007 metric perm) when tested in accordance with ASTM E96/E96M and with a flame-spread index of 25 and a smoke-developed index of 50 when tested in accordance with ASTM E84.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
- H. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.

2.10 FIELD-APPLIED FABRIC-REINFORCING MESH

- A. Woven Glass-Fiber Mesh: Approximately 4 oz./sq. yd. (114 g/sq. m) with a thread count of 5 strands by 5 strands/sq. in. (2 strands by 2 strands/sq. mm) for covering equipment.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
- B. Woven Polyester Mesh: Approximately 1 oz./sq. yd. (34 g/sq. m) with a thread count of 10 strands by 10 strands/sq. in. (4 strands by 4 strands/sq. mm), in a Leno weave, for equipment.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Vimasco Corporation.

2.11 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Cloth: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd. (271 g/sq. m).
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Alpha Associates, Inc.

2.12 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 - 2. Width: 3 inches (75 mm).
 - 3. Thickness: 11.5 mils (0.29 mm).
 - 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 - 5. Elongation: 2 percent.
 - 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 - 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C1136.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.

- e. .
 2. Width: 3 inches (75 mm).
 3. Thickness: 6.5 mils (0.16 mm).
 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Ideal Tape Co., Inc., an American Biltrite Company.
 2. Width: 2 inches (50 mm).
 3. Thickness: 6 mils (0.15 mm).
 4. Adhesion: 64 ounces force/inch (0.7 N/mm) in width.
 5. Elongation: 500 percent.
 6. Tensile Strength: 18 lbf/inch (3.3 N/mm) in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 2. Width: 2 inches (50 mm).
 3. Thickness: 3.7 mils (0.093 mm).
 4. Adhesion: 100 ounces force/inch (1.1 N/mm) in width.
 5. Elongation: 5 percent.
 6. Tensile Strength: 34 lbf/inch (6.2 N/mm) in width.
- E. PVDC Tape for Indoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 2. Width: 3 inches (75 mm).
 3. Film Thickness: 6 mils (0.15 mm).
 4. Adhesive Thickness: 1.5 mils (0.04 mm).
 5. Elongation at Break: 145 percent.
 6. Tensile Strength: 55 psi (379 kPa) in width.
- F. PVDC Tape for Outdoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 2. Width: 3 inches (75 mm).
 3. Film Thickness: 6 mils (0.15 mm).
 4. Adhesive Thickness: 1.5 mils (0.04 mm).
 5. Elongation at Break: 145 percent.

6. Tensile Strength: 55 psi (379 kPa) in width.

2.13 SECUREMENTS

A. Bands:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. RPR Products, Inc.
2. Stainless Steel: ASTM A240/A240M, Type 304 or Type 316; 0.015 inch (0.38 mm) thick, 1/2 inch (13 mm) wide with wing seal or closed seal.
3. Aluminum: ASTM B209 (ASTM B209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 3/4 inch (19 mm) wide with wing seal or closed seal.
4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size is determined by manufacturer for application.

B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding; 0.135-inch- (3.5-mm-) diameter shank, length to suit depth of insulation indicated.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - 4) Nelson Stud Welding.
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding; 0.135-inch- (3.5-mm-) diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch (38-mm) galvanized carbon-steel washer.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) CL WARD & Family Inc.
 - 3) Gemco.
 - 4) Midwest Fasteners, Inc.
3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
 - c. Spindle: Stainless steel, fully annealed, 0.106-inch- (2.6-mm-) diameter shank; length to suit depth of insulation indicated.
 - d. Adhesive: Recommended by hanger manufacturer. Use product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Gemco.
 - 2) Midwest Fasteners, Inc.
 - b. Baseplate: Perforated, nylon sheet, 0.030 inch (0.76 mm) thick by 1-1/2 inches (38 mm) in diameter.
 - c. Spindle: Nylon, 0.106-inch- (2.6-mm-) diameter shank; length to suit depth of insulation indicated, up to 2-1/2 inches (63 mm).
 - d. Adhesive: Recommended by hanger manufacturer. Use product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
 5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - b. Baseplate: Galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
 - c. Spindle: Stainless steel, fully annealed; 0.106-inch- (2.6-mm-) diameter shank; length to suit depth of insulation indicated.
 - d. Adhesive-backed base with a peel-off protective cover.
 6. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick, stainless steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - 4) Nelson Stud Welding.
 - 5) .
 - b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
 7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- (19-mm-) wide, stainless steel or Monel.
- D. Wire: 0.062-inch (1.6-mm) soft-annealed, stainless steel.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C & F Wire.
 - b. Johns Manville; a Berkshire Hathaway company.

- c. RPR Products, Inc.
- d. .

2.14 CORNER ANGLES

- A. PVC Corner Angles: 30-mils- (0.8-mm-) thick, minimum 1- by 1-inch (25- by 25-mm) PVC in accordance with ASTM D1784, Class 16354-C, white or color-coded to match adjacent surface.
- B. Aluminum Corner Angles: 0.040-inch- (1.0-mm-) thick, minimum 1- by 1-inch (25- by 25-mm) aluminum in accordance with ASTM B209 (ASTM B209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14.
- C. Stainless Steel Corner Angles: 0.024-inch- (0.61-mm-) thick, minimum 1- by 1-inch (25- by 25-mm) stainless steel in accordance with ASTM A240/A240M, Type 304 or Type 316.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 - 1. Verify that systems and equipment to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
 - 1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils (0.127 mm) thick and an epoxy finish 5 mils (0.127 mm) thick if operating in a temperature range of between 140 and 300 deg F (60 and 149 deg C). Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
 - 2. Carbon Steel: Coat carbon steel operating at a service temperature of between 32 and 300 deg F (0 and 149 deg C) with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the tradesman installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment.
- B. Install insulation materials, forms, vapor barriers or retarders, and jackets, of thicknesses required for each item of equipment, as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, compress, or otherwise damage insulation or jacket.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Keep insulation materials dry during storage, application, and finishing. Replace insulation materials that get wet during storage or in the installation process before being properly covered and sealed in accordance with the Contract Documents.
- G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- H. Install insulation with least number of joints practical.
- I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends attached to structure with vapor-barrier mastic.
 - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 - 4. Cover inserts with jacket material matching adjacent insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- K. Install insulation with factory-applied jackets as follows:
 - 1. Draw jacket tight and smooth, but not to the extent of creating wrinkles or areas of compression in the insulation.
 - 2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward-clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
 - 3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Clean and dry surface to receive self-sealing lap. Staple laps with outward-clinching staples along edge at 2 inches (50 mm) o.c.
 - 4. For below-ambient services, apply vapor-barrier mastic over staples.

5. Cover joints and seams with tape, in accordance with insulation material manufacturer's written instructions, to maintain vapor seal.
 6. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints.
- L. Cut insulation in a manner to avoid compressing insulation.
- M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches in similar fashion to butt joints.
- O. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Manholes.
 5. Handholes.
 6. Cleanouts.

3.4 INSTALLATION OF EQUIPMENT, TANK, AND VESSEL INSULATION

- A. Mineral WoolGlass-Fiber, Pipe and Tank Insulation Installation for Tanks and Vessels: Secure insulation with adhesive, anchor pins, and speed washers.
1. Apply adhesives in accordance with manufacturer's recommended coverage rates per unit area, for 100 percent coverage of tank and vessel surfaces.
 2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
 3. Protect exposed corners with secured corner angles.
 4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
 - a. Do not weld anchor pins to ASME-labeled pressure vessels.
 - b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
 - c. On tanks and vessels, maximum anchor-pin spacing is 3 inches (75 mm) from insulation end joints and 16 inches (400 mm) o.c. in both directions.
 - d. Do not compress insulation during installation.
 - e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
 - f. Impale insulation over anchor pins, and attach speed washers.
 - g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
 5. Secure each layer of insulation with stainless steel or aluminum bands. Select band material compatible with insulation materials.

6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches (150 mm) from each end. Install wire or cable between two circumferential girdles 12 inches (300 mm) o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches (1200 mm) o.c. Use this network for securing insulation with tie wire or bands.
7. Stagger joints between insulation layers at least 3 inches (75 mm).
8. Install insulation in removable and replaceable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.

B. Insulation Installation on Pumps:

1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch (150-mm) centers, starting at corners. Install 3/8-inch- (10-mm-) diameter fasteners with wing nuts. Alternatively, secure the box sections together using a field-adjustable latching mechanism.
2. Fabricate boxes from stainless steel, at least 0.060 inch (1.6 mm) thick.
3. For below-ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

3.5 INSTALLATION OF CALCIUM SILICATE INSULATION

A. Insulation Installation on Boiler Breechings:

1. Secure single-layer insulation with stainless steel bands at 12-inch (300-mm) intervals, and tighten bands without deforming insulation material.
2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches (75 mm). Secure inner layer with wire spaced at 12-inch (300-mm) intervals. Secure outer layer with stainless steel bands at 12-inch (300-mm) intervals.
3. On exposed applications without metal jacket, finish insulation surface with a skim coat of mineral-fiber, hydraulic-setting cement. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth. Overlap edges at least 1 inch (25 mm). Apply finish coat of lagging adhesive over glass cloth. Thin finish coat to achieve smooth, uniform finish.

3.6 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
1. Draw jacket smooth and tight to surface with 2-inch (50-mm) overlap at seams and joints.
 2. Embed glass cloth between two 0.062-inch- (1.6-mm-) thick coats of lagging adhesive.
 3. Completely encapsulate insulation with coating, leaving no exposed insulation.

- B. Where FSK jackets are indicated, install as follows:
1. Draw jacket material smooth and tight.
 2. Install lap or joint strips with same material as jacket.
 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 4. Install jacket with 1-1/2-inch (38-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.
 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1-inch (25-mm) overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.
1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless steel bands 12 inches (300 mm) o.c. and at end joints.
- E. Where PVDC jackets are indicated, install as follows:
1. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference of 33-1/2 inches (850 mm) or less. 33-1/2-inch- (850-mm-) circumference limit allows for 2-inch- (50-mm-) overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal. Visually inspect lap seal for "fishmouthing," and use PVDC tape along lap seal to secure joint.
 2. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 1-1/4 circumferences to avoid damage to tape edges.

3.7 FINISHES

- A. Equipment Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 09 9113 "Exterior Painting" and Section 09 9123 "Interior Painting."
1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless steel jackets.

3.8 FIELD QUALITY CONTROL

- A. Engage a qualified testing agency to perform tests and inspections.

- B. Tests and Inspections: Inspect field-insulated equipment, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection is limited to one location(s) for each type of equipment defined in "Indoor Equipment Insulation Schedule" and "Outdoor, Aboveground Equipment Insulation Schedule" articles. For large equipment, remove only a portion adequate to determine compliance.
- C. All insulation applications will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.9 EQUIPMENT INSULATION SCHEDULE, GENERAL

- A. Insulation conductivity and thickness per pipe size comply with schedules in this Section or with requirements of authorities having jurisdiction, whichever is more stringent.
- B. Acceptable insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials is Contractor's option.

3.10 INDOOR EQUIPMENT INSULATION SCHEDULE

- A. Insulate indoor and outdoor equipment that is not factory insulated.
- B. Chilled-water pump insulation is one of the following:
 - 1. Cellular Glass: 3 inches (75 mm) thick.
 - 2. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
- C. Heating-hot-water pump insulation is one of the following:
 - 1. Calcium Silicate: 3 inches (75 mm) thick.
 - 2. Cellular Glass: 3 inches (75 mm) thick.
 - 3. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
- D. Heat-recovery pump insulation is one of the following:
 - 1. Cellular Glass: 2 inches (50 mm) thick.
 - 2. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
- E. Chilled-water expansion/compression tank insulation is one of the following:
 - 1. Cellular Glass: 3 inches (75 mm) thick.
 - 2. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 - 3. Mineral Wool Pipe and Tank: 1.5 inches (38 mm) thick.
- F. Heating-hot-water expansion/compression tank insulation is one of the following:
 - 1. Calcium Silicate: 2 inches (50 mm) thick.
 - 2. Cellular Glass: 2 inches (50 mm) thick.
 - 3. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 - 4. Mineral Wool Pipe and Tank: 2 inches (50 mm) thick.
- G. Heat-recovery expansion/compression tank insulation is one of the following:
 - 1. Cellular Glass: 2 inches (50 mm) thick.
 - 2. Mineral Wool Board: 1 inch (25 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.

3. Mineral Wool Pipe and Tank: 1.5 inches (38 mm) thick.
- H. Chilled-water air-separator insulation is one of the following:
1. Cellular Glass: 2 inches (50 mm) thick.
 2. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 3. Mineral Wool Pipe and Tank: 1.5 inches (38 mm) thick.
- I. Heating-hot-water air-separator insulation is one of the following:
1. Calcium Silicate: 3 inches (75 mm) thick.
 2. Cellular Glass: 3 inches (75 mm) thick.
 3. Mineral Wool Board: 2 inches (50 mm) thick and [4 lb/cu. ft. (64 kg/cu. m)][6 lb/cu. ft. (96 kg/cu. m)]<Insert density> nominal density.
 4. Mineral Wool Pipe and Tank: 2 inches (50 mm) thick.
- J. Heat-recovery air-separator insulation is one of the following:
1. Cellular Glass: 2 inches (50 mm) thick.
 2. Mineral Wool Board: 2 inches (50 mm) thick and 4 lb/cu. ft. (64 kg/cu. m) nominal density.
 3. Mineral Wool Pipe and Tank: 2 inches (50 mm) thick.
- K. Thermal storage tank (brine, water, ice), buffer tank insulation is one of the following:
1. Cellular Glass: 4 inches (100 mm) thick.
 2. Mineral Wool Board: 3 inches (75 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 3. Mineral Wool Pipe and Tank: 3 inches (75 mm) thick.
 4. Polystyrene (Outdoor Application Only): 3 inches (75 mm) thick.
- L. Piping system filter-housing insulation is one of the following:
1. Cellular Glass: 3 inches (75 mm) thick.
 2. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 3. Mineral Wool Pipe and Tank: 2 inches (50 mm) thick.
- 3.11 OUTDOOR, ABOVEGROUND EQUIPMENT INSULATION SCHEDULE
- A. Retain "one of" option in paragraph below to allow Contractor to select materials from those retained. Heated, fuel-oil storage tank insulation is one of the following:
1. Cellular Glass: 3 inches (75 mm) thick.
 2. Mineral Wool Board: 2 inches (50 mm) thick and 6 lb/cu. ft. (96 kg/cu. m) nominal density.
 3. Mineral Wool Pipe and Tank: 2 inches (50 mm) thick.
- 3.12 INDOOR, FIELD-APPLIED JACKET SCHEDULE
- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Equipment, Concealed:
1. PVC, Color-Coded by System: 30 mils (0.8 mm) thick.
 2. Painted Aluminum, Stucco Embossed: 0.032 inch (0.81 mm) thick.
 3. Stainless Steel, Type 304 or Type 316, Stucco Embossed: 0.020 inch (0.51 mm) thick.

- D. Equipment, Exposed, up to 48 Inches (1200 mm) in Diameter or with Flat Surfaces of up to 72 Inches (1800 mm):
 - 1. PVC, Color-Coded by System: 30 mils (0.8 mm) thick.
 - 2. Painted Aluminum, Stucco Embossed: 0.032 inch (0.81 mm) thick.
 - 3. Stainless Steel, [Type 304][or][Type 316], Stucco Embossed: 0.024 inch (0.61 mm) thick.
- E. Equipment, Exposed, Larger Than 48 Inches (1200 mm) in Diameter or with Flat Surfaces Larger Than 72 Inches (1800 mm):
 - 1. Painted Aluminum, Stucco Embossed with 2-1/2-Inch- (65-mm-) Deep Corrugations: 0.040 inch (1.0 mm) thick.
 - 2. Stainless Steel, Type 304orType 316, Stucco Embossed, with 2-1/2-Inch- (65-mm-) Deep Corrugations: 0.024 inch (0.61 mm) thick.

3.13 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Equipment, Exposed, Larger Than 48 Inches (1200 mm) in Diameter or with Flat Surfaces Larger Than 72 Inches (1800 mm):
 - 1. Painted Aluminum, Stucco Embossed with 2-1/2-Inch- (65-mm-) Deep Corrugations: 0.040 inch (1.0 mm) thick.
 - 2. Stainless Steel, Type 304orType 316, Stucco Embossed, with 2-1/2-Inch- (65-mm-) Deep Corrugations: [0.020 inch (0.51 mm)][0.024 inch (0.61 mm)] thick.

END OF SECTION

SECTION 23 0719 - HVAC PIPING INSULATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes insulation for HVAC piping systems.
- B. Related Requirements:
 - 1. Section 23 0713 "Duct Insulation" for duct insulation.
 - 2. Section 23 0716 "HVAC Equipment Insulation" for equipment insulation.
 - 3. Section 23 2113.13 "Underground Hydronic Piping" loose-fill pipe insulation in underground piping outside the building.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory and field applied, if any).
- B. Sustainable Design Submittals:
 - 1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
 - 2. Product Data: For adhesives, mastics, and sealants, indicating VOC content.
 - 3. Laboratory Test Reports: For adhesives, mastics, and sealants, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
 - 2. Detail attachment and covering of heat tracing inside insulation.
 - 3. Detail insulation application at pipe expansion joints for each type of insulation.
 - 4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
 - 5. Detail removable insulation at piping specialties.
 - 6. Detail application of field-applied jackets.
 - 7. Detail application at linkages of control devices.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- C. Field quality-control reports.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or craft training program, certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by Architect. Use materials indicated for the completed Work.
 - 1. Piping Mockups:
 - a. One 10-foot (3-m) section of NPS 2 (DN 50) straight pipe.
 - b. One each of a 90-degree threaded, welded, and flanged elbow.
 - c. One each of a threaded, welded, and flanged tee fitting.
 - d. One NPS 2 (DN 50) or smaller valve and one NPS 2-1/2 (DN 65) or larger valve.
 - e. Four support hangers, including hanger shield and insert.
 - f. One threaded strainer and one flanged strainer with removable portion of insulation.
 - g. One threaded reducer and one welded reducer.
 - h. One pressure temperature tap.
 - i. One mechanical coupling.
 - j. One union.
 - 2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
 - 3. Notify Architect seven days in advance of dates and times when mockups will be constructed.
 - 4. Obtain Architect's approval of mockups before starting insulation application.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation system materials are to be delivered to the Project site in unopened containers. The packaging is to include name of manufacturer, fabricator, type, description, and size, as well as ASTM standard designation, and maximum use temperature.

1.6 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 23 0529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.7 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor, Underground Piping Insulation Schedule" articles for where insulating materials are applied.
- B. Products do not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come into contact with stainless steel have a leachable chloride content of less than 50 ppm when tested in accordance with ASTM C871.
- D. Insulation materials for use on austenitic stainless steel are qualified as acceptable in accordance with ASTM C795.
- E. Foam insulation materials do not use CFC or HCFC blowing agents in the manufacturing process.
- F. Calcium Silicate: Preformed Pipe Sections: Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C533, Type I.
 - 1. Prefabricated Fitting Covers: Comply with ASTM C450 and ASTM C585 for dimensions used in preforming insulation to cover valves, elbows, tees, and flanges.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Johns Manville; a Berkshire Hathaway company.
- G. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Comply with ASTM C552.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Owens Corning.
 - 2. Preformed Pipe Insulation without Jacket: Type II, Class 1, unfaced.
 - 3. Preformed Pipe Insulation with Jacket: Type II, Class 2, with factory-applied ASJ jacket.
 - 4. Fabricated shapes in accordance with ASTM C450, ASTM C585, and ASTM C1639.
 - 5. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
- H. Mineral Wool, Preformed Pipe: Mandrel-wound mineral wool fibers bonded with a thermosetting resin, unfaced; suitable for maximum use temperature up to 1200 deg F (650 deg C) in accordance with ASTM C447. Comply with ASTM C547.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.

- b. Owens Corning.
 - c. ROCKWOOL Technical Insulation.
 - 2. Preformed Pipe Insulation: Type II, Grade A, unfaced with factory-applied ASJ.
 - 3. Fabricated shapes in accordance with ASTM C450 and ASTM C585.
 - I. Mineral Wool, Pipe and Tank: Mineral wool fibers bonded with a thermosetting resin; suitable for maximum use temperature up to 1000 deg F (538 deg C), in accordance with ASTM C411. Comply with ASTM C1393.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. Owens Corning.
 - c. Rockwool International.
 - 2. Semirigid board material with factory-applied ASJ jacket.
 - 3. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 - J. Polyisocyanurate: Prefabricated, rigid cellular polyisocyanurate material intended for use as thermal insulation. Comply with ASTM C591.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. .
 - 2. Prefabricated insulation, with factory-applied ASJ.
 - 3. Type IV, except thermal conductivity (k-value) do not exceed 0.19 Btu x in./h x sq. ft. x deg F (0.027 W/m x K) at 75 deg F (24 deg C) after 180 days of aging.
 - 4. Flame-spread index is 25 or less, and smoke-developed index is 50 or less for thicknesses of up to 1.5 inch (38 mm) as tested in accordance with ASTM E84.
 - 5. Fabricated shapes in accordance with ASTM C450 and ASTM C585.
 - 6. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 - K. Polyolefin: Polyethylene thermal plastic insulation. Comply with ASTM C1427, Type I, Grade 1, for tubular materials and with Type II, Grade 1, for sheet materials, self-seal.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armacell LLC.
 - b. Nomaco.
- 2.2 INSULATING CEMENTS
- A. Mineral Wool Insulating Cement: Comply with ASTM C195.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ramco Insulation, Inc.
 - B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C196.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ramco Insulation, Inc.
 - C. Mineral Wool Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C449.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ramco Insulation, Inc.

2.3 ADHESIVES

- A. Materials are compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 800 deg F (10 to 427 deg C).
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. Vimasco Corporation.
 2. Adhesive: As recommended by calcium silicate manufacturer and with a VOC content of 50 g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- C. Polyolefin Adhesive: Solvent-based adhesive.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Aeroflex USA.
 - b. Armacell LLC.
 - c. K-Flex USA.
 2. Adhesive: As recommended by flexible elastomeric and polyolefin manufacturer and with a VOC content of 80 g/L or less.

3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
 8. Flame-spread index is 25 or less and smoke-developed index is 50 or less as tested in accordance with ASTM E84.
 9. Wet Flash Point: Below 0 deg F (minus 18 deg C).
 10. Service Temperature Range: 40 to 200 deg F (4 to plus 93 deg C).
 11. Color: Black.
- D. Mineral Wool Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 2. Adhesive: As recommended by mineral fiber manufacturer and with a VOC content of 80 g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.

6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- E. Polystyrene Adhesive: Solvent- or water-based, synthetic resin adhesive with a service temperature range of minus 20 to plus 140 deg F (29 to plus 60 deg C).
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 2. Adhesive: As recommended by polystyrene manufacturer and with a VOC content of 50 g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- F. ASJ Adhesive and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A, for bonding insulation jacket lap seams and joints.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 2. Adhesives shall have a VOC content of 50 g/L or less.

3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
7. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

2.4 MASTICS AND COATINGS

A. Materials are compatible with insulation materials, jackets, and substrates.

1. Mastics: As recommended by insulation manufacturer and with a VOC content of 50 g/L or less.
2. Mastics shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
3. Mastics shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
4. Mastics shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
5. Mastics shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

B. Vapor-Retarder Mastic, Water Based: Suitable for indoor use on below-ambient services.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Knauf Insulation.
 - d. Mon-Eco Industries, Inc.
 - e. Vimasco Corporation.
 2. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 4. Comply with MIL-PRF-19565C, Type II, for permeance requirements, with supplier listing on DOD QPD - Qualified Products Database.
 5. Color: White.
- C. Vapor-Retarder Mastic, Solvent Based, Indoor Use: Suitable for indoor use on below-ambient services.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 2. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
 3. Service Temperature Range: 0 to 180 deg F (Minus 18 to plus 82 deg C).
 4. Color: White.
- D. Vapor-Retarder Mastic, Solvent Based, Outdoor Use: Suitable for outdoor use on below-ambient services.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 2. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
 3. Service Temperature Range: Minus 50 to plus 220 deg F (Minus 46 to plus 104 deg C).
 4. Color: White.
- E. Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Knauf Insulation.
 - d. Mon-Eco Industries, Inc.
 - e. Vimasco Corporation.
 2. Water-Vapor Permeance: ASTM E96/E96M, greater than 1.0 perm (0.66 metric perm) at manufacturer's recommended dry film thickness.
 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 4. Color: White.

2.5 LAGGING ADHESIVES

- A. Adhesives comply with MIL-A-3316C, Class I, Grade A, and are compatible with insulation materials, jackets, and substrates.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Vimasco Corporation.
2. Adhesive shall be as recommended by insulation manufacturer and shall have a VOC content of 50 g/L or less.
3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
7. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over pipe insulation.
8. Service Temperature Range: 20 to plus 180 deg F (Minus 6 to plus 82 deg C) 0 to plus 180 deg F (Minus 18 to plus 82 deg C).
9. Color: White.

2.6 SEALANTS

- A. Materials are as recommended by the insulation manufacturer and are compatible with insulation materials, jackets, and substrates.
- B. Joint Sealants:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. Owens Corning.
 2. Permanently flexible, elastomeric sealant.
 - a. Service Temperature Range: Minus 100 to plus 300 deg F (Minus 73 to plus 149 deg C).
 - b. Color: White or gray.
 3. Sealant shall have a VOC content of 420 g/L or less.

4. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 6. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- C. FSK and Metal Jacket Flashing Sealants:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 2. Fire- and water-resistant, flexible, elastomeric sealant.
 3. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
 4. Color: Aluminum.
 5. Sealant shall have a VOC content of 420 g/L or less.
 6. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 8. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 9. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

2.7 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C1136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.
 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C1136, Type II.

2.8 FIELD-APPLIED JACKETS

- A. Metal Jacket:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. RPR Products, Inc.
 2. Aluminum Jacket: Comply with ASTM B209 (ASTM B209M), Alloy 3003, 3005, 3105, or 5005, Temper H-14.
 - a. Factory cut and rolled to size.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper.
 - d. Moisture Barrier for Outdoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper.
 - e. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
- B. Underground Direct-Buried Jacket: 125-mil- (3.2-mm-) thick vapor barrier and waterproofing membrane, consisting of a rubberized bituminous resin reinforced with a woven-glass fiber or polyester scrim and laminated aluminum foil.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Owens Corning.
 - b. Polyguard Products, Inc.

- C. Self-Adhesive Indoor/Outdoor Jacket (Non-Asphaltic): Vapor barrier and waterproofing jacket for installation over insulation located aboveground outdoors or indoors. Specialized jacket has five layers of laminated aluminum and polyester film with low-temperature acrylic pressure-sensitive adhesive. Outer aluminum surface is coated with UV-resistant coating for protection from environmental contaminants.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 2. Permeance: 0.00 perm as tested in accordance with ASTM F1249.
 3. Flamespread/Smoke Developed: 25/50 as tested in accordance with ASTM E84.
 4. Aluminum Finish: Embossed.

2.9 FIELD-APPLIED FABRIC REINFORCING MESH

- A. Woven Glass-Fiber Mesh: Approximately 2 oz./sq. yd. (68 g/sq. m) with a thread count of 10 strands by 10 strands/sq. in. (4 strands by 4 strands/sq. mm) for covering pipe and pipe fittings.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
- B. Woven Polyester Mesh: Approximately 1 oz./sq. yd. (34 g/sq. m) with a thread count of 10 strands by 10 strands/sq. in. (4 strands by 4 strands/sq. mm), in a Leno weave, for pipe.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Vimasco Corporation.

2.10 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Cloth: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd. (271 g/sq. m).
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Alpha Associates, Inc.

2.11 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 2. Width: 3 inches (75 mm).
 3. Thickness: 11.5 mils (0.29 mm).

4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C1136.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 - e. .
 2. Width: 3 inches (75 mm).
 3. Thickness: 6.5 mils (0.16 mm).
 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 2. Width: 2 inches (50 mm).
 3. Thickness: 3.7 mils (0.093 mm).
 4. Adhesion: 100 ounces force/inch (1.1 N/mm) in width.
 5. Elongation: 5 percent.
 6. Tensile Strength: 34 lbf/inch (6.2 N/mm) in width.

2.12 SECUREMENTS

- A. Bands:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. RPR Products, Inc.
 2. Stainless Steel: ASTM A240/A240M, Type 304or; 0.015 inch (0.38 mm) thick, 3/4 inch (19 mm) wide with wing sealorclosed seal.
 3. Aluminum: ASTM B209 (ASTM B209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 3/4 inch (19 mm) wide with [wing seal][or][closed seal].
 4. Springs: Twin spring set constructed of stainless steel, with ends flat and slotted to accept metal bands. Spring size is determined by manufacturer for application.
- B. Staples: Outward-clinching insulation staples, nominal 3/4 inch (19 mm) wide, stainless steel or Monel.

- C. Wire: 0.080-inch (2.0-mm) nickel-copper alloy 0.062-inch (1.6-mm) soft-annealed, stainless steel.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C & F Wire.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. RPR Products, Inc.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 - 1. Verify that systems to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Indoor piping - Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Outdoor piping - Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
 - 1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils (0.127 mm) thick and an epoxy finish 5 mils (0.127 mm) thick if operating in a temperature range between 140 and 300 deg F (60 and 149 deg C). Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
 - 2. Carbon Steel: Coat carbon steel operating at a service temperature of between 32 and 300 deg F (0 and 149 deg C) with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the tradesman installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping, including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and of thicknesses required for each item of pipe system, as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, compress, or otherwise damage insulation or jacket.

- D. Install insulation with longitudinal seams at top and bottom (12 o'clock and 6 o'clock positions) of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during storage, application, and finishing. Replace insulation materials that get wet during storage or in the installation process before being properly covered and sealed in accordance with the Contract Documents.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends attached to structure with vapor-barrier mastic.
 - 3. Install insert materials and insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 - 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
 - 1. Draw jacket tight and smooth, but not to the extent of creating wrinkles or areas of compression in the insulation.
 - 2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward-clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
 - 3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward-clinching staples along edge at [2 inches (50 mm)][4 inches (100 mm)] o.c.
 - 4. For below-ambient services, apply vapor-barrier mastic over staples.
 - 5. Cover joints and seams with tape, in accordance with insulation material manufacturer's written instructions, to maintain vapor seal.
 - 6. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation.

- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches in similar fashion to butt joints.
- P. For above-ambient services, do not install insulation to the following:
 - 1. Vibration-control devices.
 - 2. Testing agency labels and stamps.
 - 3. Nameplates and data plates.

3.4 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches (50 mm) below top of roof flashing.
 - 4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches (50 mm).
 - 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
 - 1. Comply with requirements in Section 07 8413 "Penetration Firestopping" for firestopping and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
 - 1. Pipe: Install insulation continuously through floor penetrations.

2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 07 8413 "Penetration Firestopping."

3.5 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials, except where more specific requirements are specified in various pipe insulation material installation articles below.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, Mechanical Couplings, and Unions:
 1. Install insulation over fittings, valves, strainers, flanges, mechanical couplings, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
 2. Insulate pipe elbows using prefabricated fitting insulation made from same material and density as that of adjacent pipe insulation. Each piece is butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
 3. Insulate tee fittings with prefabricated fitting insulation of same material and thickness as that used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 4. Insulate valves using prefabricated fitting insulation of same material, density, and thickness as that used for adjacent pipe. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
 5. Insulate strainers using prefabricated fitting insulation of same material, density, and thickness as that used for adjacent pipe. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers, so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
 6. Insulate flanges, mechanical couplings, and unions using a section of oversized preformed pipe insulation to fit. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Stencil or label the outside insulation jacket of each union with the word "union" matching size and color of pipe labels.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. For services not specified to receive a field-applied jacket, except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing, using PVC tape.

- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- D. Install removable insulation covers at locations indicated. Installation conforms to the following:
 - 1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as that of adjoining pipe insulation.
 - 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union at least 2 times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless steel or aluminum bands. Select band material compatible with insulation and jacket.
 - 3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
 - 4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches (50 mm) over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
 - 5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.6 INSTALLATION OF CALCIUM SILICATE INSULATION

- A. Insulation Installation on Straight Pipes and Tubes:
 - 1. Secure single-layer insulation with stainless steel bands at 12-inch (300-mm) intervals, and tighten bands without deforming insulation materials.
 - 2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches (75 mm). Secure inner layer with wire spaced at 12-inch (300-mm) intervals. Secure outer layer with stainless steel bands at 12-inch (300-mm) intervals.
 - 3. Apply a skim coat of mineral-fiber, hydraulic-setting cement to insulation surface. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth or tape. Overlap edges at least 1 inch (25 mm). Apply finish coat of lagging adhesive over glass cloth or tape. Thin finish coat to achieve smooth, uniform finish.
- B. Insulation Installation on Pipe Flanges:
 - 1. Install prefabricated pipe insulation to outer diameter of pipe flange.
 - 2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
 - 3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as that of pipe insulation. Where voids are difficult to fill with block insulation, fill the voids with a fibrous insulation material suitable for the specific operating temperature.
 - 4. Finish flange insulation same as pipe insulation.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When prefabricated insulation sections of insulation are not available, install mitered sections of calcium silicate insulation. Secure insulation materials with wire or bands.
3. Finish fittings insulation same as pipe insulation.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install pipe insulation, quads, hex sections, or beveled lag segments, adhered together, of calcium silicate insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
2. Install insulation to flanges as specified for flange insulation application.
3. Finish valve and specialty insulation same as pipe insulation.

3.7 INSTALLATION OF CELLULAR-GLASS INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with jackets on above-ambient services, secure laps with outward-clinched staples at 6 inches (150 mm) o.c.
4. For insulation with jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install prefabricated pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as that of pipe insulation. Where voids are difficult to fill with block insulation, fill the voids with a fibrous insulation material suitable for the specific operating temperature.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed sections of insulation are not available, install mitered or routed sections of cellular-glass insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install prefabricated sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.8 INSTALLATION OF GLASS-FIBER AND MINERAL WOOL INSULATION

- A. Insulation Installation on Straight Pipes and Tubes:
1. Secure each layer of preformed pipe insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.
 2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
 3. For insulation with jackets on above-ambient surfaces, secure laps with outward-clinched staples at 6 inches (150 mm) o.c.
 4. For insulation with jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.
- B. Insulation Installation on Pipe Flanges:
1. Install prefabricated pipe insulation to outer diameter of pipe flange.
 2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
 3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with glass-fiber or mineral-wool blanket insulation.
 4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.
- C. Insulation Installation on Pipe Fittings and Elbows:
1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available.
 2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.
- D. Insulation Installation on Valves and Pipe Specialties:
1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available.
 2. When prefabricated sections are not available, install fabricated sections of pipe insulation to valve body.
 3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
 4. Install insulation to flanges as specified for flange insulation application.

3.9 INSTALLATION OF PHENOLIC INSULATION

- A. General Installation Requirements:
1. Secure single-layer insulation with stainless steel bands at 12-inch (300-mm) intervals, and tighten bands without deforming insulation materials.
 2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches (75 mm). Secure inner layer with 0.062-inch (1.6-mm) wire spaced at 12-inch (300-mm) intervals. Secure outer layer with stainless steel bands at 12-inch (300-mm) intervals.
- B. Insulation Installation on Straight Pipes and Tubes:
1. Secure each layer of insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.

2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with jackets on above-ambient services, secure laps with outward-clinched staples at 6 inches (150 mm) o.c.
4. For insulation with jackets with vapor retarder on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.

C. Insulation Installation on Pipe Flanges:

1. Install prefabricated pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as that of pipe insulation. Where voids are difficult to fill with block insulation, fill the voids with a fibrous insulation material suitable for the specific operating temperature.

D. Insulation Installation on Pipe Fittings and Elbows:

1. Install prefabricated insulation sections, or mitered or routed fittings, of same material as that of straight segments of pipe insulation. Secure according to manufacturer's written instructions.

E. Insulation Installation on Valves and Pipe Specialties:

1. Install prefabricated insulation sections of same material as that of straight segments of pipe insulation. Secure according to manufacturer's written instructions.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.10 INSTALLATION OF FIELD-APPLIED JACKETS

A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

1. Draw jacket smooth and tight to surface with 2-inch (50-mm) overlap at seams and joints.
2. Embed glass cloth between two 0.062-inch- (1.6-mm-) thick coats of lagging adhesive.
3. Completely encapsulate insulation with coating, leaving no exposed insulation.

B. Where FSK jackets are indicated, install as follows:

1. Draw jacket material smooth and tight.
2. Install lap or joint strips with same material as jacket.
3. Secure jacket to insulation with manufacturer's recommended adhesive.
4. Install jacket with 1-1/2-inch (38-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.
5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

C. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless steel bands 12 inches (300 mm) o.c. and at end joints.

3.11 FINISHES

- A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 09 9113 "Exterior Painting" and Section 09 9123 "Interior Painting."
 - 1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless steel jackets.

3.12 FIELD QUALITY CONTROL

- A. Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections with the assistance of a factory-authorized service representative.
- D. Tests and Inspections: Inspect pipe, fittings, strainers, and valves, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection is limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
- E. All insulation applications will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.13 PIPING INSULATION SCHEDULE, GENERAL

- A. Insulation conductivity and thickness per pipe size comply with schedules in this Section or with requirements of authorities having jurisdiction, whichever is more stringent.
- B. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.

3.14 INDOOR PIPING INSULATION SCHEDULE

- A. Condensate and Equipment Drain Water below 60 Deg F (16 Deg C):
 - 1. All Pipe Sizes: Insulation is one of the following:
 - a. Cellular Glass: 1-1/2 inches (38 mm) thick.

- b. Mineral Wool, Preformed Pipe Insulation, Type II: 1 inch (25 mm) thick.
 - B. Chilled Water (30% PG) and Brine, Above 40 Deg F (5 Deg C):
 - 1. NPS 12 (DN 300) and Smaller: Insulation is one of the following:
 - a. Cellular Glass: 2 inches (50 mm) thick.
 - b. Mineral Wool, Preformed Pipe Insulation, Type II: 2 inches (50 mm) thick.
 - c. Phenolic: 2 inches (50 mm) thick.
 - C. Heating-Hot-Water Supply and Return, 200 Deg F (93 Deg C) and Below:
 - 1. NPS 12 (DN 300) and Smaller: Insulation is one of the following:
 - a. Cellular Glass: 2 inches (50 mm) thick.
 - b. Mineral Wool, Preformed Pipe, Type II: 2 inches (50 mm) thick.
 - c. Phenolic: 2 inches (50 mm) thick.
 - D. Steam and Steam Condensate, Boiler Blowdown, Vents, Drains, and Safety Relief Vents 350 Deg F (177 Deg C) and Below:
 - 1. NPS 3/4 (DN 20) and Smaller: Insulation is one of the following:
 - a. Calcium Silicate: 2 inches (50 mm) thick.
 - b. Mineral Wool, Preformed Pipe Insulation, Type II: 2 inches (50 mm) thick.
 - 2. NPS 1 (DN 25) and Larger: Insulation is one of the following:
 - a. Calcium Silicate: 3 inches (75 mm) thick.
 - b. Mineral Wool, Pipe and Tank Insulation: 4 inches (100 mm) thick.
 - E. Heat-Recovery Piping:
 - 1. All Pipe Sizes: Insulation is one of the following:
 - a. Cellular Glass: 1-1/2 inches (38 mm) thick.
 - b. Mineral Wool, Preformed Pipe Insulation, Type II or Pipe and Tank Insulation: 1 inch (25 mm) thick.
- 3.15 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE
- A. Chilled Water and Brine:
 - 1. All Pipe Sizes: Insulation is one of the following:
 - a. Phenolic: 2 inches (50 mm) thick.
 - B. Heating-Hot-Water Supply and Return, 200 Deg F (93 Deg C) and Below:
 - 1. All Pipe Sizes: Insulation is one of the following:
 - a. Phenolic: 2 inches (50 mm) thick.
- 3.16 INDOOR, FIELD-APPLIED JACKET SCHEDULE
- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
 - B. If more than one material is listed, selection from materials listed is Contractor's option.
 - C. Piping, Concealed:
 - 1. None.
 - D. Piping, Exposed:
 - 1. None.

2. Aluminum, [Smooth][Corrugated][Stucco Embossed]: [0.016 inch (0.41 mm)][0.020 inch (0.51 mm)][0.024 inch (0.61 mm)][0.032 inch (0.81 mm)][0.040 inch (1.0 mm)] thick.
3. Painted Aluminum, Smooth: 0.016 inch (0.41 mm) thick.
4. Stainless Steel, Type 304, Smooth No. 2B Finish: 0.010 inch (0.25 mm) thick.

3.17 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Piping, Concealed:
 1. Stainless Steel, Type 304, Smooth No. 2B Finish: [0.010 inch (0.25 mm)][0.016 inch (0.41 mm)][0.020 inch (0.51 mm)][0.024 inch (0.61 mm)] thick.
- D. Piping, Exposed:
 1. Stainless Steel, Type 304, Smooth No. 2B Finish: 0.016 inch (0.41 mm) thick.

3.18 UNDERGROUND, FIELD-APPLIED INSULATION JACKET

- A. For underground direct-buried piping applications, install underground direct-buried jacket over insulation material.

END OF SECTION

SECTION 23 0800 - COMMISSIONING OF HVAC

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes Cx process requirements for the following HVAC systems, assemblies, and equipment:
 - 1. Energy supply systems.
 - 2. Heat generation systems.
 - 3. Cooling generation systems.
 - 4. Central-station air-handling systems.
 - 5. Air, steam, and hydronic distribution systems.
 - 6. Heating and cooling terminal and unitary equipment.
 - 7. BUILDING AUTOMATION SYSTEM (BAS) COMMISSIONING.
 - 8. TAB verification.
- B. Related Requirements:
 - 1. Section 01 9113 "General Commissioning Requirements" for general Cx process requirements and CxA responsibilities.
 - 2. For construction checklists, comply with requirements in various Division 23 Sections specifying HVAC systems, system components, equipment, and products.

1.2 DEFINITIONS

- A. BAS: Building automation system.
- B. Cx: Commissioning, as defined in Section 01 9113 "General Commissioning Requirements."
- C. CxA: Commissioning Authority, as defined in Section 01 9113 "General Commissioning Requirements."
- D. IgCC: International Green Construction Code.
- E. CM : Construction Manager.
- F. "Systems," "Assemblies," "Subsystems," "Equipment," and "Components": Where these terms are used together or separately, they mean "as-built" systems, assemblies, subsystems, equipment, and components.
- G. TAB: Testing, adjusting, and balancing.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For BAS and HVAC testing technician.
- B. Construction Checklists:

1. Draft Cx plan, including draft construction checklists to be prepared by CxA under Section 01 9113 "General Commissioning Requirements." Div. 23 Subcontractor is to review Construction Checklist in accordance with requirements in Section 01 9113 "General Commissioning Requirements" and ASHRAE 202 and to resolve any issues with the CxA.
 2. Cx plan, including material, installation, and performance construction checklists for systems, assemblies, subsystems, equipment, and components relating to BAS and HVAC to be part of the Cx process and in accordance with requirements in Section 01 9113 "General Commissioning Requirements and ASHRAE 202."
- C. Test Equipment and Instruments: For all test equipment and instruments to be used in conducting Cx tests by Div. 23 Subcontractor, provide the following:
1. Equipment/instrument identification number.
 2. Planned Cx application or use.
 3. Manufacturer, make, model, and serial number.
 4. Calibration history, including certificates from agencies that calibrate the equipment and instrumentation.
 5. Equipment manufacturers' proprietary instrumentation and tools. For each instrument or tool, identify the following:
 - a. Instrument or tool identification number.
 - b. Equipment schedule designation of equipment for which the instrument or tool is required.
 - c. Manufacturer, make, model, and serial number.
 - d. Calibration history, including certificates from agencies that calibrate the instrument or tool, where appropriate.
- 1.4 ADDITIONAL RESPONSIBILITIES
- A. Refer to Section 01 9113: Detailed Contractor responsibilities common to all Divisions are specified in Section 01 9113. The following are additional responsibilities or notable responsibilities specific to Division 23.
- B. Construction Phase
1. Provide skilled technicians qualified to perform the work required.
 2. Provide factory-trained and authorized technicians where required by the Contract Documents.
 3. Prepare and submit required draft Start-Up Documentation and submit along with the manufacturer's application, installation and start-up information.
 4. Provide assistance to the CxA in preparation of the specific Functional Performance Test (FPT) procedures. Contractors, subcontractors and vendors shall review FPT procedures to ensure feasibility, safety and equipment protection and provide necessary written alarm limits to be used during the tests. Damage caused to equipment performed in accordance with the approved procedures will be the responsibility of the Contractor.
 5. Thoroughly complete and inspect installation of systems and equipment as detailed throughout Contract Documents, as required by reference or industry standards, and as specifically indicated elsewhere in this Section.
 6. Start-Up, test/adjust/balance, and Turn-Over systems and equipment prior to functional performance testing by the CxA. Approved Start-Up Documentation shall be in accordance with Contract Documents, reference or industry standards, and specifically elsewhere in Part I of this Section.

7. Record Start-Up on approved Start-Up Documentation forms and certify that the systems and equipment have been started and or tested in accordance with the requirements specified above and in Section 01 0900. Each task or item shall be indicated with the Party actually performing the task or procedure.
 8. TAB: As outlined in Section 23 0593. Specifically as it relates to Cx:
 - a. Attend Construction Phase Cx Kick-Off Meeting and Cx progress meetings beginning within 3 months of start of TAB work;
 - b. Submit TAB Plan as indicated above;
 - c. Meet with Cx team to review TAB procedures and documentation required;
 - d. Demonstrate TAB procedures for repetitive tasks (zone balancing, AHU adjusting) as called for by the CxA;
 - e. Participate in Action List dialogue;
 - f. Provide all documentation electronically.
 - g. Attend a meeting convened by the CxA to coordinate with the safety certifying agency. The point of the meeting will be to coordinate protocols and measurement approaches to ensure that devices such as fume hoods and biosafety cabinets will be set up to achieve certification.
 - h. On airflow tracking zones:
 - 1) Balance all outlets downstream of VAV terminal. Record final settings.
 - 2) Measure airflow at both minimum and maximum flow conditions and calibrate VAV flow signals at both extremes. Extremes of flow shall be established by putting the zone into full heating and full cooling and raising the fume hood sashes to the stop height and lowering them to the airfoil. Record all parameters and final flow coefficient. If only one flow coefficient is available and this does not permit setting the range to within specified tolerances, enter the flow coefficient as the average of the two required flow coefficients and report the deficiency in an Action Item.
 - 3) Measure and record supply air flow at flow extremes with reheat valves both open and closed as required above.
- C. Acceptance Phase
1. Assist CxA in Functional Performance Testing. Assistance will typically include the following:
 - a. Manipulate systems and equipment to facilitate Functional Performance Testing
 - b. Provide any specialized instrumentation necessary for Functional Performance Testing;
 - c. Manipulate BAS and other control systems to facilitate Functional Performance Testing.
 - d. Provide a TAB technician to work at the direction of CxA for up to 16 hours beyond assistance specified above.
 - e. Provide a BAS technician to work at the direction of CxA for up to 16 hours beyond assistance specified above.
 - f. Maintain trends and monitor the facility throughout the Endurance Period.
- D. Warranty Phase
1. Maintain record documentation of any configurations, setpoints, parameters, etc. that change throughout the Warranty Period.
 2. Provide representative for off-season testing as required by CxA.
 3. Respond to warranty issues as required by Division 01 and the General Conditions.

1.5 PIPING CLEANING, FLUSH, AND FILL PLAN

- A. Contractors shall provide a Piping Cleaning, Flush, and Fill Plan to the CxA that provides a descriptive narrative and supporting calculations of the means and methods that will be used to clean out, flush, and fill the piping systems.
- B. The Piping Cleaning, Flush, and Fill Plan shall incorporate and be inclusive of all requirements of individual Sections relating to piping and pipe cleaning and flushing. In addition to the requirements of any other related Section, this document shall consist of the following at a minimum for each individual hydronic loop:
1. Overview schematic diagram of each of the hydronic systems, showing individual flow components such as chillers, boilers, pumps, heat exchangers, cooling towers, control valves, and strainers.
 2. Narrative and illustration indicating the equipment that will either participate or be bypassed by fluid flow during the clean and flush process.
 3. For equipment to be bypassed, description of the means for providing the bypass, including the type, size, and length of hoses or piping to be used.
 4. Description of how flow is to be induced (permanent pumps, temporary pumps, etc.) and flow rates to be imposed during the flush process.
 5. Calculation of resultant flow velocities in various portions of the piping system, with specific identification of the minimum velocity sections of the piping loop. Velocities should generally be shown to be above a 7 feet-per-second minimum speed to provide for adequate capability to flush and carry debris through the system to the appropriate strainer or clean-out location.
 6. Description of cleaning methods and materials to be used to flush the system. Description shall include cleaning material and concentration, details of the cleaning process including duration of circulation and flushing intervals, criteria for determining a clean flush, and name and qualifications of cleaning or chemical treatment subcontractors to be used.
 7. Identification and discussion of any isolated sections or dead-legs that will be present, including means to provide cleaning and flushing for these sections.
 8. Details of the strainers to be used for the flush and clean process, as well as final strainers to be used after cleaning. Contractor shall clean all strainers prior to turning over the system for commissioning.
 9. If the cleaning and flushing process is to be phased in sections, details should be provided to clarify how clean sections will be protected as other sections are flushed.

1.6 TEMPORARY OPERATION AND CONDITIONING PLAN

- A. Contractor shall be allowed to use permanent building equipment to provide temporary conditioning ONLY upon the approval of the A/E, Owner, and the CxA. Approval for such will only be given upon acceptance of a detailed Temporary Operating and Conditioning Plan provided by the individually involved subcontractors and compiled by the Construction Manager. The Temporary Operating and Conditioning Plan shall consider/address the following at a minimum:
1. Contractor shall address how equipment will be maintained in good, clean condition. Specifically address:

- a. Temporary Filtering of Air: Air filters used for construction shall be as or more effective than those specified for permanent use. Contractor shall remove construction filters and replace with new filters prior to FPT. Filters shall be maintained and replaced at the specified final pressure drop. Contractor shall install a magnehelic gauge for visual indication of pressure drop as well as setting and adjusting the loaded filter DP switch for monitoring on the BAS.
 - b. Temporary Filtering of Water and Condensate: Construction strainers shall be used while circulating fluid during construction. Construction strainer shall be finer than that specified for final strainers.
 - c. Sealing/Filtering of Open Ducts: Address that all open ducts shall be either sealed or protected with filter media. Return or exhaust systems shall not be used during construction unless otherwise approved.
 - d. Lubrication and Maintenance: Contractor shall maintain the systems and equipment in accordance with the manufacturer's instructions. Contractor shall coordinate lubricants used with Owner's operators. Frequency of lubrication and inspection shall be as recommended by manufacturer's literature. Applicable maintenance lubrication schedules shall be included in the Plan. Draft maintenance logs shall be submitted with Plan and completed as maintenance is performed.
 - e. Operation Outside of Normal Ranges: Systems and equipment shall not be operated outside the range of specified conditions. The Temporary Conditioning Plan shall address how the Contractor will ensure that operation will not harm the equipment.
2. Emergency Condition Identification and Response Protocols: The Temporary Conditioning Plan shall address protocols for responding to equipment malfunctions and or harmful operation. Automatic safeties and remote enunciation shall be in place to protect people and property. Temporary operation shall not be allowed until there is an automatic communication/enunciation medium such as a phone connection or an Internet connection. At a minimum, an alarm on the equipment used for temporary service shall be automatically sent to the Contractor's 24 hour monitoring service and to the Owner's help desk. The Contractor shall respond to and be responsible for securing conditions within the building.
 3. Building Protection: Address how the system will be controlled to avoid humidity conditions that could either promote mold growth or cause corrosion.
 4. Equipment Reconditioning: Address with specific means and methods how the equipment used for temporary conditioning will be reconditioned to like-new condition. Belts, seals, bearings, couplings, or other parts that wear more than 3% of their expected life shall be replaced.
 5. Cleaning: Address how ducts, pipes, coils, converters, air handling equipment, terminal units, etc. shall be cleaned prior to Turn-Over.
 6. Operations Log: Contractor responsible for operating the equipment shall maintain a log of all activities associated with operating and maintaining equipment. Log shall be submitted to Owner on a frequency specified by the Owner.
 7. Operating System Alterations: The Temporary Conditioning Plan shall address specific protocol for doing work on the systems.
 8. Damages: Any material, device, component, or equipment that is assessed as damaged or as having a substantially shortened life as a result of temporary conditioning operation shall be replaced by the Contractor at no cost to the Owner or to the project.

9. Segregation: Where only portions of a system are to be used, Contractor shall specifically indicate how the used portion will be isolated from the unused portion. The Temporary Conditioning Plan shall address how to ensure that the reduced operation condition will be maintained within acceptable ranges, and/or how capacity will be throttled to keep all operating parameters in recommended ranges.

1.7 QUALITY ASSURANCE

- A. BAS Testing Technician Qualifications: Technicians performing BAS Construction Checklist verification tests, Construction Checklist verification test demonstrations, Cx tests, and Cx test demonstrations are to have the following minimum qualifications:
 1. Journey level or equivalent skill level with knowledge of BAS, HVAC, electrical concepts, and building operations.
 2. Minimum three years' experience installing, servicing, and operating systems manufactured by approved manufacturer.
 3. International Society of Automation (ISA)-Certified Control Systems Technician (CCST) Level I.
- B. HVAC Testing Technician Qualifications: Technicians to perform HVAC Construction Checklist verification tests, Construction Checklist verification test demonstrations, Cx tests, and Cx test demonstrations shall have the following minimum qualifications:
 1. Journey level or equivalent skill level; vocational school four-year-program graduate or an Associate's degree in mechanical systems, air conditioning, or similar field. Degree may be offset by three years' experience in servicing mechanical systems in the HVAC industry. Generally, required knowledge includes HVAC systems, electrical concepts, building operations, and application and use of tools and instrumentation to measure performance of HVAC equipment, assemblies, and systems.
 2. Minimum three years' experience that is to include installing, servicing, and operating systems manufactured by approved manufacturer.
- C. Testing Equipment and Instrumentation Quality and Calibration:
 1. Capable of testing and measuring performance within the specified acceptance criteria.
 2. Be calibrated at manufacturer's recommended intervals with current calibration tags permanently affixed to the instrument being used.
 3. Be maintained in good repair and operating condition throughout duration of use on Project.
 4. Be recalibrated/repared if dropped or damaged in any way since last calibrated.
- D. Proprietary Test Instrumentation and Tools:
 1. Equipment Manufacturer's Proprietary Instrumentation and Tools: For installed equipment included in the Cx process, test instrumentation and tools manufactured or prescribed by equipment manufacturer to service, calibrate, adjust, repair, or otherwise work on its equipment or required as a condition of equipment warranty, shall comply with the following:
 - a. Be calibrated by manufacturer with current calibration tags permanently affixed.
 - b. Include a separate list of proprietary test instrumentation and tools in operation and maintenance manuals.
 2. HVAC proprietary test instrumentation and tools become property of Owner at the time of Substantial Completion.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 Cx PROCESS:

- A. Perform Cx process in accordance with Section 01 9113 "General Commissioning Requirements" for BAS and HVAC and in accordance with the following:
 - 1. Commissioning standards acceptable to the authority having jurisdiction.

3.2 CONSTRUCTION CHECKLISTS

- A. Preliminary detailed construction checklists are to be prepared under Section 01 9113 "General Commissioning Requirements" for each BAS and HVAC system, assembly, subsystem, equipment, and component required to be commissioned, as detailed in IgCC and ASHRAE 202. Contractor performs the following:
 - 1. Review BAS and HVAC preliminary construction checklists and provide written comments on checklist items where appropriate.
 - 2. Return preliminary Construction Checklist with review comments within 10 days of receipt.
 - 3. When review comments have been resolved, the CxA will provide final construction checklists marked "Approved for Use, (date)."
 - 4. Use only construction checklists marked "Approved for Use, (date)" When performing tests. Mark construction checklists in the appropriate place as indicated Project events are completed, and provide pertinent details and other information.
- B. Prepare preliminary detailed construction checklists for each BAS and HVAC system, assembly, subsystem, equipment, and component required to be commissioned, as detailed in IgCC and ASHRAE 202.
 - 1. Submit preliminary construction checklists to CxA and Designer for review.
 - 2. When review comments have been resolved, the CxA will provide final construction checklists marked "Approved for Use, (date)."
 - 3. Use only construction checklists, marked "Approved for Use, (date)" when performing tests. Mark construction checklists in the appropriate place, as indicated Project events are completed and provide pertinent details and other information.
- C. Systems required to be commissioned under IgCC:
 - 1. Heating, ventilating, air-conditioning, and refrigeration systems (mechanical and/or passive) and associated controls.
 - 2. Air-curtain systems.
 - 3. Water-pumping and -mixing systems over 5 hp (4 kW) and purification systems.
 - 4. Energy and building management and demand-control systems.
- D. Additional systems required to be commissioned:
 - 1. Energy supply systems, including the following:
 - a. Fuel gas supply.
 - b. Central-plant hot-water supply.
 - c. Demand-control systems.
 - 2. Heat generation systems, including the following:

- a. Boilers.
 - b. Furnaces.
 - c. Fuel-fired unit heaters.
 - d. Auxiliary equipment.
3. Cooling generation systems, including the following:
 - a. Water chillers.
 - b. Direct-expansion refrigeration systems.
4. Air-handling systems, including the following:
 - a. Supply, return, and exhaust air fans, motors, and drives.
 - b. Automatic and gravity dampers.
 - c. Heating and cooling devices.
 - d. Humidification and dehumidification devices.
 - e. Air filters.
 - f. Hangers and supports.
 - g. Interlock between air-handling system and fire/smoke alarm system.
5. Air duct systems, including the following:
 - a. Duct systems.
 - b. Air-duct accessories, including volume dampers, fire and smoke dampers, turning vanes, sound attenuators, and flexible connectors.
 - c. Duct-mounted access doors and panels.
 - d. Hangers and supports.
6. Air curtain systems.
 - a. Supply air fans and motors.
 - b. Heating and cooling devices.
7. Steam and hydronic distribution systems, including the following:
 - a. Steam distribution piping systems.
 - b. Condensate piping systems, including condensate pumps and all accessories.
 - c. Hydronic piping systems and all accessories.
 - d. Meters and gauges.
 - e. General-duty and specialty valves.
 - f. Hangers and supports.
 - g. Heat tracing.
8. Refrigerant piping, including the following:
 - a. Refrigerant piping, fittings, and specialties.
 - b. Refrigerant charge.
 - c. Sleeves and sleeve seals.
 - d. Meters and gauges.
 - e. General-duty and specialty valves.
 - f. Hangers and supports.
9. Smoke-control systems, including the following:
 - a. Exhaust and makeup fans, motors, and drives.
 - b. Exhaust and makeup air distribution systems.
 - c. Smoke dampers.
 - d. Smoke detectors.
 - e. Fire and smoke alarm system interface.
10. Heating and cooling terminal and unitary equipment, including the following:
 - a. Unit ventilators.
 - b. Unit heaters.
 - c. Fan-coil units.
 - d. Electric heating.
 - e. Unitary heating and cooling equipment.

11. Vibration isolation systems.
12. Controls and instrumentation, including the following:
 - a. Energy monitoring and recording system.
 - b. Controllers and sensors.
 - c. Automatic control valves, dampers, and actuators.
 - d. Control interface with fans, pumps, dampers, and other equipment and systems.
 - e. Demand-control systems.
13. TAB Verification:
 - a. Airflow.
 - b. Water flow.
 - c. Space pressurization.
14. Documentation:
 - a. Mechanical systems manuals.
 - b. Documentation of required commissioning.
15. Mechanical insulation, including the following:
 - a. Duct and plenum insulation.
 - b. HVAC piping insulation.

3.3 Cx TESTING PREPARATION

- A. Certify that HVAC systems, subsystems, and equipment have been installed, calibrated, and started and that they are operating in accordance with the Contract Documents and approved submittals.
- B. Certify that HVAC instrumentation and control systems have been completed and calibrated, point-to-point checkout has been successfully completed, and systems are operating in accordance with their design sequence of operation, Contract Documents, and approved submittals. Certify that all sensors are operating within specified accuracy and all systems are set to and maintaining set points as required by the design documents.
- C. Certify that TAB procedures have been completed and that TAB reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Set systems, subsystems, and equipment into operating mode to be tested in accordance with approved test procedures (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

3.4 Cx TEST CONDITIONS

- A. Perform tests using design conditions, whenever possible.
 1. Simulated conditions may, with approval of Architect, be imposed using an artificial load when it is impractical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by CxA, and document simulated conditions and methods of simulation. After tests, return configurations and settings to normal operating conditions.
 2. Cx test procedures may direct that set points be altered when simulating conditions is impractical.
 3. Cx test procedures may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are impractical.

- B. If tests cannot be completed because of a deficiency outside the scope of the HVAC system, document the deficiency and report it to Architect. After deficiencies are resolved, reschedule tests.
- C. If seasonal testing is specified, complete appropriate initial performance tests and documentation, and schedule seasonal tests.

3.5 Cx TESTS COMMON TO HVAC SYSTEMS

- A. Measure capacities and effectiveness of systems, assemblies, subsystems, equipment, and components, including operational and control functions, to verify compliance with acceptance criteria.
- B. Test systems, assemblies, subsystems, equipment, and components for operating modes, interlocks, control responses, responses to abnormal or emergency conditions, and response in accordance with acceptance criteria.
- C. Coordinate schedule with, and perform Cx activities at the direction of, CxA.
- D. Comply with Construction Checklist requirements, including material verification, installation checks, startup, and performance test requirements specified in Division 23 Sections specifying HVAC systems and equipment.
- E. Provide technicians, instrumentation, tools, and equipment to perform and document the following:
 - 1. Cx Construction Checklist verification tests.
 - 2. Cx Construction Checklist verification test demonstrations.

3.6 CONSTRUCTION CHECKLIST EXAMPLES

- A. Vibration Isolation in HVAC Systems:
 - 1. Prerequisites: Acceptance of results of construction checklists for vibration control devices specified in Section 23 0548.13 "Vibration Controls for HVAC Piping and Equipment".
 - 2. Components to Be Tested:
 - a. Vibration isolation control devices in HVAC systems.
 - b. Support systems.
 - 3. Test Purpose: Evaluate effectiveness of vibration isolation control devices.
 - 4. Test Conditions, Constant Speed Equipment: Measure vibration of the facility structure at three locations designated by Owner's witness while the isolated equipment operates.
 - 5. Test Conditions, Variable Speed Equipment: Measure vibration of the facility structure at three locations designated by Owner's witness at the following operating conditions:
 - a. Maximum speed.
 - b. Minimum speed.
 - c. Critical speed.
 - 6. Acceptance Criteria: Structure-borne vibration not to exceed specified performance.
- B. Heat Tracing in HVAC Systems:

1. Prerequisites: Acceptance of results of construction checklists for heat tracing specified in HVAC systems. Comply with requirements listed in Section 23 0533 "Heat Tracing for HVAC Piping."
2. Equipment and Systems to Be Tested:
 - a. Self-regulating, parallel-resistance heating cables.
 - b. Heat tracing circuit controller.
3. Test Purpose:
 - a. Evaluate response to ambient temperature below freeze-protection set point.
 - b. Evaluate heating cable fault alarm.
4. Test Conditions:
 - a. Subject temperature sensor to temperature approximately 3 deg F (2 deg C) above freeze-protection set point of 30% propylene glycol (initial set point 41 deg F (5 deg C) 22 deg F (-14 deg C)). Monitor sensed temperature with a calibration-grade thermometer. Gradually change set point or sensed temperature until freeze-protection circuit is energized.
 - b. Subject temperature sensor to temperature approximately 3 deg F (2 deg C) below freeze-protection set point of 30% propylene glycol (initial set point 41 deg F (5 deg C)). Monitor sensed temperature with a calibration-grade thermometer. Gradually change set point or sensed temperature until freeze-protection circuit is de-energized.
 - c. Simulate an electrical fault on the heating cable.
5. Acceptance Criteria:
 - a. Freeze-protection circuit is energized at set-point temperature of minus 2 deg F (1 deg C).
 - b. Freeze-protection circuit is de-energized at set-point temperature of plus 2 deg F (1 deg C).
 - c. Heater trace circuit controller initiates an alarm of cable fault. Alarm is correctly reported at the alarm panel.

3.7 TAB VERIFICATION

- A. Prerequisites: Completion of "Examination" Article requirements and correction of deficiencies, as specified in Section 23 0593 "Testing, Adjusting, and Balancing for HVAC."
- B. Completion of "Preparation" Article requirements for preparation of a TAB plan that includes strategies and step-by-step procedures, and system-readiness checks and reports, as specified in Section 23 0593 "Testing, Adjusting, and Balancing for HVAC."
- C. Scope: HVAC air systems and hydronic piping systems.
- D. Purpose: Differential flow relationships intended to maintain air and water pressurization differentials between the various areas of Project.
- E. Conditions of the Test:
 1. Cx Test Demonstration Sampling Rate: As specified in "Inspections" Article in Section 23 0593 "Testing, Adjusting, and Balancing for HVAC."
 2. Systems operating in full heating mode with minimum outside-air volume.
 3. Systems operating in full cooling mode with minimum outside-air volume.
 4. For measurements at air-handling units with economizer controls; systems operating in economizer mode with 100 percent outside air.

F. Acceptance Criteria:

1. Under all conditions, rechecked measurements comply with "Inspections" Article in Section 23 0593 "Testing, Adjusting, and Balancing for HVAC."
2. Additionally, no rechecked measurement shall differ from measurements documented in the final report by more than the tolerances allowed.
3. Under all conditions, where the Contract Documents indicate a differential in airflow between supply and exhaust and/or return in a space, the differential relationship shall be maintained.

3.8 HEATING CONTROL SYSTEM Cx TESTS

- A. Test all sequences of operation as shown on the controls drawings.

3.9 CHILLER SYSTEM Cx TESTS

- A. Test all sequences of operation as shown on the controls drawings.

3.10 TERMINAL UNIT EQUIPMENT Cx TESTS

- A. Test all sequences of operation as shown on the controls drawings.

3.11 AIR-HANDLING SYSTEM Cx TESTS

- A. Test all sequences of operation as shown on the controls drawings.

3.12 BUILDING AUTOMATION SYSTEM (BAS) COMMISSIONING

A. WORK INCLUDED

1. BAS Start-Up and Functional Performance Testing.
2. Validation of proper and thorough installation of BAS and associated equipment.
3. Generic Start-Up Documentation for BAS.
4. Development of final Start-Up Documentation for BAS.
5. Functional Performance Testing of BAS.
6. Coordination of BAS-related training.
7. Documentation of BAS Operation and Maintenance Documentation.

B. GENERAL DESCRIPTION

1. This section defines responsibilities of the Building Automation System Contractor to commission the BAS.
2. Commissioning (Cx) is the process of ensuring that (i) all building systems are installed and perform interactively according to the design intent; (ii) that systems are efficient and cost effective and meet the Owner's operational needs; (iii) that the installation is accurately documented; and (iv) that the Operators are adequately trained. Commissioning serves as a tool to minimize post-occupancy operational problems, and establishes testing and communication protocols to advance the building systems from installation to optimized, fully-dynamic operation.
3. Commissioning Authority (CxA) shall work with the Contractor and the design engineers to direct and oversee the Cx process and perform Functional Performance Testing.

4. The Commissioning Plan outlines the Cx process beyond the Construction Contract, including design phase activities and design team/owner responsibilities. The specification Sections dictate all requirements of the commissioning process relative to the construction contract. The Cx Plan is not part of the construction contract, although it is available for reference at the request of the Contractor.
- C. SCOPE
1. The scope of Commissioning on this project shall include the entire BAS system.
- D. DEFINITIONS AND ABBREVIATIONS
1. Refer to Section 01 9113 for a complete list of Definitions and Abbreviations.
 2. POT (Portable Operators Terminal): Portable operator workstation (typically a laptop computer) that has BAS software loaded and the capability to access, program, and edit the BAS.
 3. HHD (Hand-Held Device): Portable device (typically with limited functionality) that is used to access components of the BAS. May be a standard PDA or proprietary device/interface.
- E. CONTRACTOR RESPONSIBILITIES
1. General responsibilities of the BAS Contractor (BAC) are specified in Section 01 9113. The following indicate additional specific responsibilities of the BAS Contractor.
 2. Assist CxA in verification and Functional Performance Testing. Assistance will typically include the following:
 - a. Establish trend logs of system operation as specified herein.
 - b. Manipulate systems and equipment to facilitate Functional Performance Testing. Typically, this will only be for initial samples of like systems.
 - c. Provide POTs or operator workstations in locations convenient to testing activities as specified below.
 - d. Provide CxA with appropriate passwords, keys, and access to control panels and workstations.
 - e. Where control systems do not allow a test mode or the overriding of physical input values for testing, program an interim virtual point for all inputs that can be used to represent the point and be overridden for testing.
 3. Provide a control technician to work at the direction of the CxA for software optimization assistance for a minimum of 40 hours during the Acceptance Phase of the project.
 4. Controls Parameter Matrix: Contractor shall provide a form summarizing all setpoints and alarm parameters and alarming strategies for the Owner to complete. Organize a meeting to discuss the desired initial setpoints and alarm parameters. Contractor shall enter the requested setpoints and alarm parameters at completion of start-up and record the applicable settings in the Start-Up Documentation.
 5. Final Systems Operation Training: The BAC shall train the Owner and Operators on whole-building operation and use of the BAS. This training shall focus primarily on BAS control of building systems and operation and its impact on building performance, and shall be conducted after Functional Completion. Additional information is provided in Section 01 9113.
- F. INSTRUMENTATION
1. General: All testing equipment used by any Party shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified. If not otherwise noted, the following minimum requirements apply:

- a. Temperature sensors and digital thermometers shall have a certified calibration within the past year and a resolution of $\pm 0.1^{\circ}\text{F}$.
- b. Pressure sensors shall have an accuracy of $\pm 2.0\%$ of the value range being measured (not full range of meter) and have been calibrated within the last year.
- c. All equipment shall be calibrated according to the manufacturer's recommended intervals. Calibration tags shall be affixed or certificates readily available.
2. Standard Testing Instrumentation: Standard instrumentation used for testing air and water flows, temperatures, humidity, noise levels, amperage, voltage, and pressure differential in air and water systems related to functional testing shall be provided by CxA.
3. Special Tools: Special equipment, tools and instruments (only available from vendor, specific to a piece of equipment) required for testing equipment, according to these Contract Documents shall be included in the base bid price to the Contractor and turned over to the Owner upon project completion.

G. TAB & COMMISSIONING Portable operators terminal

1. Provide the CxA with all software, connection devices, licenses, passwords, etc. to facilitate connection to the BAS throughout the building. Provide a license to graphic software, and all operating software necessary for testing and configuration of all control elements at all levels. License may be a temporary license that will expire after the completion of the Warranty Period. Options include:
 - a. A laptop computer provided by BAS Contractor for dedicated use by the CxA throughout the Construction and Acceptance Phases. This would be turned over to the Owner at the end of the Acceptance Phase.
 - b. Browser access to the full graphic software: CxA will provide laptop, however BAS Contractor shall set up the laptop to successfully connect.
 - c. Licensed client software to be installed on CxA computer: BAS Contractor shall install the software and ensure it is functional.
 - d. Terminal Services session access to a graphic server with required CALs to allow use of all required software. BAS Contractor shall configure the CxA computer to connect to the terminal session.
2. Access to the BAS must be provided throughout the building as more fully defined as follows:
 - a. Full wireless connection to the graphic server throughout the building will be adequate.
 - b. Network connection for full access to the graphic server within 50' of any point in the building.
 - c. Exception to 1 and 2 above: An acceptable alternative to full building access to the graphic server relating to terminal controls shall be providing to the CxA the devices and software required to connect to local terminal controllers through a connection port in the space such as connection to a jack on the temperature sensor (basically what is required by TAB specified below). This does not apply to mechanical rooms as full graphic access is required in mechanical rooms.
3. Provide software required by TAB to calibrate all flow sensors. TAB will provide computer to be used as a portable operator's terminal. Any manufacturer specific hardware such as connection cables, converters, hand held devices, etc. shall be provided by the BAS Contractor.
4. Connections shall be provided local to the device being calibrated. For instance, for VAV boxes, connection of the operator's terminal shall be either at the sensor as well as at the box. Otherwise a wireless system shall be provided to facilitate this local functionality.

H. BAS Start-Up TESTING, ADJUSTING, CALIBRATION

1. BAS work and/or systems shall be fully functioning prior to Demonstration and Acceptance Phase. Contractor shall start, test, adjust, and calibrate all work and/or systems under this contract, as described below:
 - a. Inspect the installation of all devices. Review the manufacturer's installation instructions and validate that the device is installed in accordance with them.
 - b. Verify proper electrical voltages and amperages, and verify that all circuits are free from faults.
 - c. Verify integrity/safety of all electrical connections.
 - d. Coordinate with TAB Contractor to obtain and with CxA to fine tune control settings that are determined from balancing procedures. Record the following control settings as obtained from TAB Contractor, and note any TAB deficiencies in the BAS Start-Up Documentation:
 - 1) Optimum duct static pressure setpoints for VAV air handling units.
 - 2) Minimum outside air damper settings for air handling units.
 - 3) Optimum differential pressure setpoints for variable speed pumping systems.
 - 4) Calibration parameters for flow control devices such as VAV boxes and flow measuring stations. BAS Contractor shall provide hand held device as a minimum to the TAB and CxA to facilitate calibration. Connection for any given device shall be local to the device (i.e., at the VAV box or at the thermostat). HHD or POT shall allow querying and editing of parameters required for proper calibration and Start-Up.
 - 5) Calibration parameters for fume hoods.
 - e. Test, calibrate, and set all digital and analog sensing and actuating devices. Calibrate each instrumentation device by making a comparison between the BAS display and the reading at the device, using an instrument traceable to the National Bureau of Standards, which shall be at least twice as accurate as the device to be calibrated (e.g., if field device is +/-0.5% accurate, test equipment shall be +/-0.25% accurate over same range). Record the measured value and displayed value for each device in the BAS Start-Up Documentation.
 - f. Check and set zero and span adjustments for all transducers and transmitters.
 - g. For dampers and valves:
 - 1) Check for adequate installation including free travel throughout range and adequate seal.
 - 2) Where control loops are sequenced, check for proper control without overlap
 - h. For actuators:
 - 1) Check to insure that device seals tightly when the appropriate signal is applied to the operator.
 - 2) Check for appropriate fail position, and that the stroke and range is as required and coordinated with the programmed ranges when it is operating under normal conditions.
 - 3) For pneumatic operators, adjust the operator spring compression as required to achieve close off. If positioner or volume booster is installed on the operator, calibrate per manufacturer's procedure to achieve spring range indicated. Check split range positioners to verify proper operation. Record settings for each device.
 - 4) Check the stroke and range under actual loading conditions and validate that they correlate with programmed values.

- 5) For sequenced electronic actuators, calibrate per manufacturer's instructions to required ranges.
- i. Check each digital control point by making a comparison between the control command at the CU and the status of the controlled device. Check each digital input point by making a comparison of the state of the sensing device and the OI display. Record the results for each device.
- j. For outputs to reset other manufacturers devices (such as VSDs) and feedback from them, calibrate ranges to establish proper parameters. Coordinate with representative of the respective manufacturer and obtain their approval of the installation.
- k. Verify proper sequences by using the approved Start-Up Documentation to record results. Verify proper sequence and operation of all specified functions.
- l. Verify that all safety devices trip at appropriate conditions. Adjust setpoints accordingly.
- m. Tune all control loops to obtain the fastest stable response without hunting, offset or overshoot. Record tuning parameters and response test results for each control loop in the BAS Start-Up Documentation. Except from a start-up, maximum allowable variance from setpoint for controlled variables under normal load fluctuations shall be as follows. Within 3 minutes of any step-change (for which the system has the capability to respond) in the control loop, the following tolerances shall be maintained (exceptions noted):
 - 1) Duct air temperature: ± 1 deg F
 - 2) Zone temperature: $\pm 3^{\circ}\text{F}$ within 3 minutes and control within ± 2 deg F
 - 3) Chilled water temperatures: ± 1 deg F
 - 4) Hot water temperatures: ± 2 deg F
 - 5) Duct air pressure: ± 0.25 i.w.g
 - 6) Water pressure: ± 1 psig
 - 7) Duct relative humidity: $\pm 3\%$ when adding humidity
 - 8) Zone relative humidity: $\pm 5\%$ when adding humidity
 - 9) Terminal air flow control: $\pm 5\%$ of setpoint. This includes all VAV terminal control and exhausted BSCs, canopy hoods, ventilated cage racks, necropsy tables, and other scientific equipment with supply or exhaust ventilation.
 - 10) Zone pressurization (on active control systems): ± 0.03 i.w.c. with no door or window movements. No high containment space shall go more than 0.15 i.w.c. positive, nor go positive at all for more than 20 seconds.
- n. For communication interfaces and BAS control panels:
 - 1) Ensure devices are properly installed with adequate clearance for maintenance and with clear labels in accordance with the record drawings.
 - 2) Ensure that terminations are safe, secure and labeled in accordance with the record drawings.
 - 3) Check power supplies for proper voltage ranges and loading.
 - 4) Ensure that wiring and tubing are run in a neat and workman-like manner, either bound or enclosed in trough.
 - 5) Check for adequate signal strength and acceptable bandwidth utilization on communication networks.
 - 6) Check for stand-alone performance of controllers by disconnecting the controller from the LAN. Verify the event is annunciated at Operator Interfaces. Verify that the controlling LAN reconfigures as specified in the event of a LAN disconnection.
 - 7) Ensure that all outputs and devices fail to their proper positions/states.

- 8) Ensure that buffered and/or volatile information is retained through power outage.
- 9) With all system and communications operating normally and all trends functioning, sample and record update/annunciation times for critical alarms fed from the panel to the Operator Interface.
- 10) Check for adequate grounding of all BAS panels and devices.
- 11) Run self diagnostic routines and ensure they are functional.
- 12) Check the memory allocation and loading to ensure adequate and excess capacity is available and that it will not affect control functionality.
- o. Coordinate desired initial alarm strategies with Owner's Operators. Set all required alarms and document the initial settings in the Start-Up Documentation.
- p. Coordinate all initial setpoints with Owner's Operators. Ensure those setpoints are active.
- q. For Operator Interfaces:
 - 1) Verify that all elements on the graphics are functional and are properly bound to physical devices and/or virtual points, and that hot links or page jumps are functional and logical.
 - 2) Output all specified BAS reports for review and approval.
 - 3) Verify that the alarm printing and logging is functional and per requirements.
 - 4) Verify that trend archiving to disk and provide a sample to the CxA for review.
 - 5) Verify alarm enunciation functionality. Time delay from actual occurrence to the time updated or enunciated on the screen. Ensure it is per the specified requirements.
 - 6) Verify that real time and historical trends are accessible and viewable in graph format.
 - 7) Verify that paging/dial out alarm annunciation is functional.
 - 8) Verify the functionality of remote OIs and that a robust connection can be established consistently.
 - 9) Verify that required third party software applications required with the bid are installed and are functional.
 - 10) Demonstrate open protocol and custom third party interfaces reliably communicate and check response time.
 - 11) Verify response times and screen update and refresh times are per the requirements.
 - 12) Verify that all custom programs are editable from the OI. Check upload, download, back up and restore capabilities of system configuration information as well as custom programs.
 - 13) Verify schedules are set up and working.
 - 14) Verify Owner stipulated security and permissions is set up and functional.
 - 15) In concert with the Building Power Outage test, validate that critical GUI installations are properly powered by UPS and emergency outlets to keep it functional during a power outage. Validate that the space has adequate lighting to manage the building in the event of an outage.
- r. Start-up and check out control air compressors and air drying and filtering systems in accordance with the appropriate section and with manufacturer's instructions.
 - 1) Validate adequate drying and pressures.
 - 2) Validate adequate redundancy
 - 3) Validate max run time and cycle time vs manufacturer's recommendations

- 4) Validate that routing of the compressed air does not result in condensation at any point in the system when used with the specified drier.
 - 5) Check all PRVs both primary and back up to ensure adequate functionality and maintenance of downstream pressure.
- s. Verify proper interface with Fire Alarm System.
- t. Verify proper interface with control panels of equipment with self-contained controls that are being monitored by the BAS.
2. Submit Start-Up Documentation. This shall be completed, submitted, and approved prior to demonstration and Acceptance Phase.

I. SENSOR CHECKOUT AND CALIBRATION

1. General Checkout: Verify that all sensor locations are appropriate and are away from causes of erratic operation. Verify that sensors with shielded cable are grounded only at one end. For sensor pairs that are used to determine a temperature or pressure difference, make sure they are reading within 0.2°F of each other for temperature and within a tolerance equal to 2% of the reading of each other for pressure. Tolerances for critical applications may be tighter.
2. Calibration: Calibrate all sensors using one of the following procedures:
 - a. Sensors Without Transmitters--Standard Application. Make a reading with a calibrated test instrument within 6 inches of the site sensor at various points across the range. Verify that the sensor reading (via the permanent thermostat, gage or BAS) is within the tolerances specified for the sensor. If not, adjust offset and range, or replace sensor. Where sensors are subject to wide variations in the sensed variable, calibrate sensor within the highest and lowest 20% of the expected range.
 - b. Sensors With Transmitters--Standard Application. Disconnect sensor. Connect a signal generator in place of sensor. Connect ammeter in series between transmitter and BAS control panel. Using manufacturer's resistance-temperature data, simulate minimum desired temperature. Adjust transmitter potentiometer zero until 4 mA is read by the ammeter. Repeat for the maximum temperature matching 20 mA to the potentiometer span or maximum and verify at the OI. Record all values and recalibrate controller as necessary to conform to tolerances. Reconnect sensor. Make a reading with a calibrated test instrument within 6 inches of the site sensor. Verify that the sensor reading (via the permanent thermostat, gage or BAS) is within the tolerances specified. If not, replace sensor and repeat. For pressure sensors, perform a similar process with a suitable signal generator.
3. Sensor Tolerance: Sensors shall be within the tolerances specified for the device. Refer to Section 23 0900.

J. LOOP TUNING

1. For all control loops, Contractor shall tune the loops to ensure the fastest stable response without hunting, offset or overshoot with tolerances defined above. Contractor shall introduce upsets to the load when possible to affect response. Otherwise, setpoints can be changed to affect the response.
2. Generally tune loops during periods of high gain.
3. Document all parameters either by capturing text, short interval trends, or screen shots of trend graph documenting the final response.

K. COIL VALVE LEAK CHECK

1. Verify proper close off of the valves. Ensure the valve seats properly by simulating the maximum anticipated pressure difference across the circuit. Calibrate air temperature sensors on each side of coil to be within 0.5°F of each other. Via the OI, command the valve to close. Energize fans. After 5 minutes, observe air temperature difference across coil. If a temperature difference is indicated, and the piping surface temperature entering the coil is within 3°F of the water supply temp, leakage is probably occurring. If it appears that it is occurring, close the isolation valves to the coil to ensure the conditions change. If they do, this validates the valve is not closing. Remedy the condition by adjusting the stroke and range, increasing the actuator size/torque, replacing the seat, or replacing the valve as applicable.
- L. VALVE STROKE SETUP AND CHECK
1. For all valve and actuator positions checked, verify the actual position against the OI readout.
 2. Set pumps to normal operating mode. Command valve closed, verify that valve is closed, and adjust output zero signal as required. Command valve open, verify position is full open and adjust output signal as required. Command valve to a few intermediate positions. If actual valve position does not reasonably correspond, replace actuator or add pilot positioner (for pneumatics).
- M. GRAPHIC COORDINATION
1. The Contractor shall prepare all graphics (only one example graphic is required for typical systems like terminal units) with points embedded for review of CxA and Owner. Owner shall use these graphics to provide direction to Contractor for the required final graphic. All final graphics must be complete and active before functional testing. Any deviation from the approved graphics will be considered a failure from the perspective of the functional test.
- N. BAS DEMONSTRATION
1. Demonstrate the operation of the BAS hardware, software, and all related components and systems to the satisfaction of the CxA and Owner. Schedule the demonstration with the Owner's representative 1 week in advance. Demonstration shall not be scheduled until all hardware and software submittals, and the Start-Up Test Report are approved.
 2. The Contractor shall supply all personnel and equipment for the demonstration, including, but not limited to, instruments, ladders, etc. Contractor supplied personnel must be competent with and knowledgeable of all project-specific hardware, software, and the HVAC systems. All training documentation and submittals shall be at the job site.
 3. Demonstration shall typically involve small representative samples of systems/equipment randomly selected by the Owner and CxA.
 4. The system shall be demonstrated following the same procedures used in the Start-Up Test by using the approved Commissioning Checklists. Demonstration shall include, but not necessarily be limited to, the following:
 - a. Demonstrate that required software is installed on BAS workstations. Demonstrate that graphic screens, alarms, trends, and reports are installed as submitted and approved.
 - b. Demonstrate that points specified and shown can be interrogated and/or commanded (as applicable) from all workstations, as specified.
 - c. Demonstrate that remote dial-up communication abilities are in accordance with these Specifications.

- d. Demonstrate correct calibration of input/output devices using the same methods specified for the start-Up tests. A maximum of 10 percent of I/O points shall be selected at random by CxA and/or Owner for demonstration. Upon failure of any device to meet the specified end-to-end accuracy, an additional 10 percent of I/O points shall be selected at random by CxA for demonstration. This process shall be repeated until 100 percent of randomly selected I/O points have been demonstrated to meet specified end-to-end accuracy.
 - e. Demonstrate that all BAS and other software programs exist at respective field panels. The BAS programming and point database shall be as submitted and approved.
 - f. Demonstrate that all BAS programs accomplish the specified sequences of operation.
 - g. Demonstrate that the panels automatically recover from power failures, as specified.
 - h. Demonstrate that the stand-alone operation of panels meets the requirements of these Specifications. Demonstrate that the panels' response to LAN communication failures meets the requirements of these Specifications.
 - i. Identify access to equipment selected by CxA. Demonstrate that access is sufficient to perform required maintenance.
 - j. Demonstrate that required trend graphs and trend logs are set up per the requirements. Provide a sample of the data archive. Indicate the file names and locations.
5. BAS Demonstration shall be completed and approved prior to Functional Performance Testing. CxA shall determine if the system is ready for Functional Performance Testing and document any problems requiring Contractor attention.
- a. If the systems are not ready for Functional Performance Testing, Contractor shall correct problems and provide notification to the Owner's representative that all problems have been corrected. The Acceptance Period shall be restarted at a mutually scheduled time for an additional one week period. This process shall be repeated until CxA issues notice that the BAS is ready for Functional Performance Testing.
6. Any tests successfully completed during the BAS Demonstration will be recorded as Passed for the Functional Performance Testing and will not have to be re-accomplished.

O. FUNCTIONAL PERFORMANCE TESTING

- 1. Requirements for assistance with Functional Performance Testing are specified in the Section 01 9113, Section 23 0800 and Section 26 0800. Provide assistance during Functional Performance Testing per the Section 01 9113 and related Specifications.

P. BAS ACCEPTANCE PHASE AND OBSERVATION PERIOD

- 1. BAS Acceptance Phase: BAS Acceptance Phase consists of the Functional Performance Testing process of the BAS by the CxA and shall begin after approval of the BAS Demonstration and prior to issuance of Substantial Completion. Acceptance Phase for the BAS shall not be scheduled until all HVAC systems are in operation, the Start-Up Documentation has been reviewed, all required cleaning and lubrication has been completed (i.e., filters changed, piping flushed, strainers cleaned, etc.), and TAB report has been submitted and approved. Acceptance Phase and its approval to begin will be performed on a system-by-system basis if mutually agreed upon by Contractor and Owner.

2. BAS Observation Period: After Functional Performance Testing, the BAS shall be shown to operate properly for 2 weeks without malfunction, without alarm caused by control action or device failure, and with smooth and stable control of systems and equipment in conformance with these specifications. At the end of the two weeks, BAS Contractor shall forward the trend logs to the CxA for review.
3. During the Acceptance Phase, the Contractor shall maintain a hard copy log of all alarms generated by the BAS. For each alarm received, Contractor shall diagnose the cause of the alarm, and shall list on the log for each alarm, the diagnosed cause of the alarm, and the corrective action taken. If in the Contractor's opinion, the cause of the alarm is not the responsibility of the Contractor, Contractor shall immediately notify the Owner's representative.
4. During the Acceptance Phase, the Contractor shall maintain all controller network and workstation hardware and software in a state that will allow remote access by CxA to trend logs as specified below.

Q. BAS TREND REQUIREMENTS

1. The BAS Contractor shall configure and analyze all trends required under this Section.
2. Trends are historical archives on computer disks that document the operation of the systems and equipment. Trends can be time-series (interval) recordings of system I/O parameters or change-of-value (COV) based trends that record when a system value changes by more than a specified threshold.
3. CxA will analyze trend logs of the system operating parameters to evaluate normal system functionality. The requirements of the trending are specified below. Contractor shall establish these trends, ensure they are being stored properly, and forward the data in electronic format to the CxA.
4. Data shall include a single row of field headings and the data thereafter shall be contiguous. Each record shall include a date and time field. Recorded parameters for a given piece of equipment or component shall be trended at the same time intervals and be presented in a maximum of two separate two dimensional formats with time being the vertical axis and field name being the horizontal axis.. Data shall be forwarded in one of the following formats.
 - a. Microsoft Access Database (.mdb)
 - b. Microsoft Excel Spreadsheet (.xls)
 - c. Comma Separated Value (.csv or .txt), preferably with quotes delimiting text fields and # delimiting date/time fields.
5. Sample times indicated as COV ($\pm$) mean that the changed parameter only needs to be recorded whenever the value changes by the amount listed. When output to the trend file, the latest recorded value shall be listed along with the time increment record. If the BAS does not have the capability to record based on COV, the parameter shall be recorded based on the time interval common to other point trends for the system.
6. Contractor shall provide the CxA with required passwords, phone numbers, etc. to allow the CxA access to the trend log data and allow downloading to a remote location. Contractor shall also provide step-by-step written instructions for accessing the data.
7. Trending Requirements: All I/O points on primary equipment shall be trended throughout the Cx process on 10 min. intervals for analog values and change-of-value for binary values. Trends shall include but are not necessarily limited to the following points:
 - a. Outside air temperature
 - b. Outside air relative humidity
 - c. Outside air enthalpy
 - d. Cooling tons

- e. All sensed hydronic temperatures
- f. All sensed air temperatures and relative humidity measurements on primary equipment
- g. All damper outputs on primary equipment
- h. All valve outputs on primary equipment
- i. All sensed fan volumes (flow) on primary equipment
- j. All inputs and outputs to Variable Speed Drives
- k. Return (or exhaust) air temperature on each air handler
- l. All safety indications
- m. Status on all primary equipment
- n. All air and water pressures on primary equipment or systems
- o. Zone temperatures
- p. Steam flow
- q. Electricity consumption where monitored.
- r. Natural gas flows
- s. Converter steam valves and hot water temperatures
- t. Steam supply pressures and temperatures.
- u. All points on primary equipment and selected sampling of terminal points unless approved otherwise.

R. TREND GRAPHS

- 1. Trend graphs shall be used during Functional Performance Testing to facilitate and document testing. Contractor shall prepare controller and workstation software to display graphical format trends throughout the Acceptance Phase. Trend graphs shall demonstrate compliance with contract documents. Trended values and intervals shall be the same as those specified for the Functional Performance Tests.
- 2. Lines shall be labeled and shall be distinguishable from each other by using either different line types or different line colors.
- 3. Indicate engineering units of the y-axis values; e.g. degrees F., inches w.c., Btu/lb, percent wide open, etc.
- 4. The y-axis scale shall be chosen so that all trended values are in a readable range. Do not mix trended values on one graph if their unit ranges are incompatible.
- 5. Trend outside air temperature, humidity, and enthalpy during each period in which any other points are trended.
- 6. All points trended for one HVAC subsystem (e.g. air handling unit, chilled water system, etc.) shall be trended simultaneously and on a common trend period.
- 7. Each graph shall be clearly labeled with HVAC subsystem title, date, and times.
- 8. The format of all trend graphs must be provided as approved by the CxA.

S. WARRANTY PHASE - OPPOSITE SEASON TRENDING AND TESTING

- 1. Trending: Throughout the Warranty Phase, trend logs shall be maintained as required for the Acceptance Phase. BAS Contractor shall forward archived trend logs to the CxA for review upon CxA request. CxA will review these and notify BAS Contractor of any warranty work required.
- 2. Opposite Season Testing: Within 6 months of completion of the Acceptance Phase, CxA shall schedule and conduct Opposite Season Functional Performance Testing. The BAS Contractor shall support this testing and remedy any deficiencies identified.

T. SOFTWARE OPTIMIZATION ASSISTANCE

1. The Contractor shall provide the services of a BAS technician as specified above at the project site to be at the disposal of the CxA. The purpose of this requirement is to make changes, enhancements and additions to control unit and/or workstation software that have been identified by the CxA during the construction and commissioning of the project and that are beyond the specified Contract requirements. The cost for this service shall be included with the bid. Requests for assistance shall be for contiguous or non-contiguous 8-hour days, unless otherwise mutually agreed upon by Contractor, CxA, and Owner. The Owner's representative shall notify Contractor 2 days in advance of each day of requested assistance.
2. The BAS technician provided shall be thoroughly trained in the programming and operation of the controller and workstation software. If the BAS technician provided cannot perform every software task requested by the CxA in a timely fashion, Contractor shall provide additional qualified personnel at the project site as requested by the CxA to meet the total specified requirement on-site.

U. BAS OPERATOR TRAINING

1. Provide up to 6 complete sets of User Manuals (hard copy and one electronic copy) to be used for training.
2. BAS Contractor shall submit a Training Plan per the requirements of Div 01 to the CM who will forward it to the A/E and CxA for review.
3. On Site Training: Provide services of BAS Contractor's qualified technical personnel to instruct Owners personnel in operation and maintenance of the BAS. Instruction shall be in classroom setting at the project site for appropriate portions of the training. Training may be in non-contiguous days at the request of the Owner. The Owner's representative shall notify Contractor 1-week in advance of each day of requested training. The Contractor's designated training personnel shall meet with the A/E, CxA and Owner's representative for the purpose of discussing and fine-tuning the training agenda prior to the first training session. Training agenda shall be as follows:
 - a. Basic Operator Workstation Training:
 - 1) Brief walk-through of building, including identification of all controlled equipment and condensed demonstration of controller portable and built-in operator interface device display capabilities.
 - 2) Brief overview of the various parts of the BAS O&M manuals, including hardware and software programming and operating publications, catalog data, controls installation drawings, and BAS programming documentation.
 - 3) Demonstration of workstation login/logout procedures, password setup, and exception reporting.
 - 4) Demonstration of workstation menu penetration and broad overview of the various workstation features.
 - 5) Overview of systems installed.
 - 6) Present all site-specific naming conventions and points lists, open protocol information, configuration databases, back up sequences, upload/download procedures etc.
 - 7) Overview of scheduling procedures.
 - 8) Overview of alarm features, including how to acknowledge, respond to, and archive alarms, and how to access further information from them.
 - 9) Overview of trend features, including how to set up and view trends.
 - 10) Overview of workstation reporting features and introductory level report generation and scheduling.
 - b. BAS Technician Training:

- 1) General review of sequence of operation and control logic for the project site, including standalone and fail safe modes of operation
- 2) Uploading/downloading and backing up controller configuration and application programs
- 3) Review of installed components including all communication devices, controllers, I/O, etc., and how to install/replace, maintain, commission, and diagnose them
- 4) Introduction to controller programming and overview of the programming application interface
- 5) Defining trends, generating graphs in real time; archiving trends, accessing historical archive and generating reports from them
- 6) Introductory network administration
- 7) Introduction to creating and editing graphics
- 8) Review of setpoint optimization and fine-tuning concepts
- 9) OI use and maintenance
- 10) Web page creation as applicable
- c. System Administrator Training:
 - 1) Overview of system architecture including all routers, bridges, repeaters, gateways, communications protocols, servers, controllers etc.
 - 2) Overview of and recommendations for backing up and restoring the system configuration database
 - 3) Server maintenance
 - 4) Security Management: Assigning passwords and rights for various users on the server, workstations and GUI software
- d. Final Systems Operation Training
 - 1) The BAS Contractor shall conduct Final Systems Operation Training in accordance with Section 01 9113.
 - 2) Final Systems Operation Training provides the Owner and Operators a training session on whole-building operation. It shall focus primarily on BAS control of building systems and operation and its impact on building performance. System interactions shall be presented and discussed (such as a combined air handler, chiller, boiler, and terminal unit system), along with a detailed presentation of the sequences of operation and their relationship to the BAS. This training shall be conducted by the BAC with assistance from the CxA, and shall be attended by the Owner, Operators, Contractor, Design Team, and by any other Cx Team members deemed necessary by the CxA or the Owner.
 - 3) The Record BAS Shop Drawings shall be provided as a handout for the training.
 - 4) Scheduling, attendees, and training methods shall be as specified in Section 01 9113.

END OF SECTION

SECTION 23 0900 - INSTRUMENTATION AND CONTROL FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes control equipment, including but not limited to HVAC systems and components, control components for equipment not supplied with factory-wired controls
- B. Direct-Digital Control (DDC) system description
 - 1. The Controls Contractor shall supply and install a complete Direct Digital Control (DDC) Building Automation System (BAS) as required to accomplish the Sequences of Control for heating, ventilating, air-conditioning and other building-level equipment and systems as described herein.
- C. Furnish all labor, materials, equipment and service necessary for a complete and operational DDC BAS pursuant with this specification and as shown on the associated contract drawings.
- D. Provide all labor, material, equipment and service not specifically referred to in this specification or on associated drawings that are required to fulfill the functional intent of this specification at no additional cost to the Owner.

1.2 DEFINITIONS

- A. B-AAC: Advanced Application Controllers
- B. B-ASC: Application Specific Controllers
- C. ATC: Automatic Temperature Control
- D. BAS: Building Automation System
- E. B-AWS: Advanced Workstation Software
- F. B-OWS: Operator Workstation Software
- G. B-BC: Building Controllers
- H. BTL: BACnet Testing Laboratories
- I. DDC: Direct digital control.
- J. HLC: Heavy load conditions.
- K. I/O: Input/output.
- L. MS/TP: Multidrop Serial Bus/Token Passing.
- M. PC: Personal computer.
- N. PID: Proportional plus integral plus derivative.

- O. RSTP: Rapid spanning tree protocol.
- P. RTD: Resistance temperature detector.

1.3 CODES

- A. Comply with all applicable current codes, ordinances, and regulations.

1.4 REFERENCE STANDARDS

- A. The latest published edition of a reference shall be applicable to this Project unless identified by a specific edition date.
- B. All materials, installation and workmanship shall comply with the applicable requirements and standards addressed within the following references:
 - 1. American Society of Heating, Refrigeration and Air Conditioning Engineers (ASHRAE)
 - a. ANSI/ASHRAE Standard 135, BACnet
 - b. ASHRAE Guideline 36, High-Performance Sequences of Operation for HVAC Systems
 - 2. American National Standards Institute (ANSI)
 - 3. UL 916: Energy Management Systems
 - 4. BACnet Testing Lab
 - 5. UL 864 UUKL

1.5 DDC SYSTEM REQUIREMENTS

- A. DDC Systems installed under this specification shall strictly adhere to the following characteristics:
 - 1. Building Automation System (BAS) Direct Digital Controls (DDC) shall consist of native BACnet, microprocessor-based, peer-to-peer, networked, distributed devices utilizing the BACnet communication protocol in an open, interoperable system. The BAS also includes operator interface devices, programming and configuration software applications, DDC input/output devices, non-DDC automatic temperature controls, enclosures and interconnecting conduit and wire.
 - a. The BACnet operating stack must be embedded directly in every Device at the board level, and in all operator interface software packages.
 - b. No Gateways, Communication Bridges, Protocol Translators or any other device that translates any proprietary or other communication protocol to the BACnet communication protocol shall be permitted as a part of the BAS installation pursuant with this specification section. Gateways may only be used as required for communication to existing systems or systems installed pursuant with other specification sections. This requirement applies to non-Siemens or non-FMCS-compatible controllers, and that all controllers must comply with Siemens Desigo platform capabilities as approved by the SI Systems Engineering Division – Controls Branch.
 - c. DDC controllers that are not BACnet compliant shall not be acceptable under this specification and are strictly prohibited.

- d. The BAS provided under this section shall be manufactured by Siemens Industry, Beltsville, MD branch office, utilizing the Siemens Desigo platform. The system shall be an extension of, and fully integrated with, the existing SI-wide Siemens Facility Management and Control System (FMCS).
- e. The Owner shall receive ownership of all job specific configuration documentation, data files, programming tools, and application-level software developed for the project. This shall include all custom, job specific software code, databases and documentation for all configuration and programming that is generated for a given project and/or configured for use with the B-BC, BAS Server, and any related LAN / WAN / Intranet and Internet connected routers and devices. Any and all required IDs and passwords for admin and programming level access to any component or software program shall be provided to the Owner.
- 2. The BAS shall be modular in nature and comprised of a network of stand-alone DDC devices. The System shall be designed and implemented in such a way that it may be expanded in both capacity and functionality through the addition of DDC Devices, sensors, actuators, etc.
- 3. All BAS controllers shall be tested, certified, clearly stamped and listed by the BACnet Testing Laboratories (BTL).
- 4. Program database, data acquisition, and all control sequence logic shall reside in each DDC Device. The BAS shall not be dependent upon connection to a Server or Supervisor Controller for performance of the Sequence of Control as outlined in this specification. Each individual Device shall, to the greatest possible extent, perform its programmed sequence without reliance on the BAS network.
- 5. All BAS DDC Devices at all levels shall be fully custom-programmable in the field using the standard Operators Workstation Software. No configurable, canned program application specific controllers will be permitted.
- 6. All BAS DDC Devices shall be capable of updating firmware using software via internet without replacing any hardware, microprocessors or chips.
- 7. The BAS shall support remote annunciation of alarms and system events via printer, e-mail, and mobile device notifications (e.g., SMS, push alerts, or app-based messaging).
- 8. Actuation of control devices shall be electronic. Spring return fail-safe actuation shall be provided when loss of property and/or property damage is possible and where specified.
- 9. DDC Automatic Temperature Control (ATC) System shall prevent all controlled equipment from simultaneously restarting after a power outage. The order in which equipment (or groups of equipment) is started; along with the time delay between starts shall be user-selectable.
- 10. All binary output points shall be protected from short cycling via output configuration and/or programming. This feature shall allow minimum on time and off-time to be configurable.
- 11. The DDC System Manufacturer product line selected shall be the most current and complete offering from the manufacturer and shall currently be actively manufactured and supported at the time that this project is bid.
- 12. This project shall not be used as a test site. First release and test version hardware, software and firmware shall not be implemented on this project under any circumstances.
- 13. DDC System devices and spare components or equivalent shall be readily available for a minimum of five (5) years after the completion and final acceptance of this project.

1.6 BASIC SYSTEM ARCHITECTURE

- A. The DDC BAS as provided and installed under this specification shall be a complete system from a single manufacturer designed for use on intranets and the internet.

- B. The BAS shall consist of a 4-Tier network architecture.
1. Tier 1: Enterprise IP Network
 - a. The Enterprise tier includes all components connected to the Owner's enterprise LAN that provide system-level management, visualization, and analytics.
 - b. Tier 1 hosts the BAS Server, Advanced Operators Workstations (B-AWS), Client computers, analytic software packages, and peripheral devices such as printers and kiosks.
 2. Tier 2: Building Infrastructure
 - a. Tier 2 provides the high-speed BACnet/IP backbone for BAS communication and connectivity to host Building Controllers (B-BC), Network Infrastructure devices, communications, and wiring.
 - b. The building infrastructure provides the connectivity to which networked control devices connect. The Tier 2 devices shall be connected to the network via Ethernet over TCP/IP.
 3. Tier 3: Equipment Level Controllers
 - a. Tier 3 consists of a serial communication network to host field level DDC controllers such as Advanced Application Controllers (B-AAC), and Application Specific Controllers (B-ASC).
 - b. The equipment level controllers are connected to the Tier 2 BAS devices via RS-485 serial communication.
 4. Tier 4: End Devices (Field Sensors and Actuators)
 - a. Tier 4 consists of physical sensors and actuators that provide input and output for the BAS.
 - b. Tier 4 devices shall connect to Tier 3 controllers via hardwired I/O.
- C. The primary BAS components shall include but not be limited to:
1. BACnet Advanced Operator Workstation Software (B-AWS)
 2. Remote BACnet Advanced Operator Workstation Software (Remote B-AWS)
 3. Portable Operator Workstation Software (Portable B-OWS)
 4. Building Controllers (B-BC)
 5. Advanced Application Controllers (B-AAC)
 6. Application Specific Controllers (B-ASC)
- D. B-BCs shall automatically route BACnet communications to all configured available BACnet networks.
- E. B-AWS shall be fully IT-compatible devices that communicate directly on a TCP/IP Local Area Network (LAN).
1. LAN shall be 10/100/1000 Mbps TCP/IP with the following minimum requirements:
 - a. Cable: 1000 base-T, UTP-8 wire, category 6 or greater
 - b. Minimum throughput: 10 Mbps with the ability to increase to 1000 Mbps
 2. The Tier 1 Network shall provide communication between B-BCs, B-OWS, remote B-OWS and Web Server using a B/IP LAN backbone.
 3. B-BCs shall connect directly to the LAN and communicate using BACnet/IP without a TCP/IP Gateway or network server.
 4. B-AACs and B-ASCs shall communicate with B-BCs via BACnet MS/TP as the typical field-level protocol. B-AACs and B-ASCs shall not require direct BACnet/IP connections to the Owner's LAN.
 5. Coordinate implementation of the BAS on the Owner's LAN without disruption.

- F. BAS Manufacturer must natively support the following BACnet data links as defined in the ANSI/ASHRAE Standard 135, BACnet:
1. Point-to-Point (PTP)
 2. Multidrop Serial Bus/Token Passing (MS/TP)
 3. Ethernet (ISO 8802-3)
 4. BACnet IP (B/IP)
- G. Special Network Architecture Requirements:
1. Air-Handling Systems: For control applications of an air-handling system that consists of air-handling unit(s) and VAV terminal units, include a dedicated LAN of application-specific controllers serving VAV terminal units connected directly to the controller that is controlling air-handling-system air-handling unit(s). Basically, create a DDC system LAN that aligns with the air-handling system being controlled.
 2. Tier 3 Serial Networks: All controllers on a common serial network shall be configured to a common communication baud rate.
- H. Field sensors and control devices shall connect to peer-to-peer, fully programmable B-BC, B-AAC & B-ASC as required to achieve the point monitoring and Sequence of Control as specified herein. All devices are to be monitored by a B-AWS. Final control devices are to be electronic.
- I. Each Mechanical System and/or major piece of Mechanical Equipment shall have one (1) dedicated B-BC controller with sufficient I/O capacity such that it shall be connected to ALL field devices and sensors associated with that system and/or piece of equipment. Distributed control of one (1) single piece of major mechanical equipment shall not be performed by multiple controllers.
- J. All BAS controllers, sensors and devices shall be UL listed.
1. All BAS controllers and interface devices must be UL 916 Listed.
- K. The new DDC BAS shall be connected to the Smithsonian's FMCS database server located within the Herndon Data Center (HDC) for full database management via Siemens software. All new controls shall be fully accessible through existing site-wide operator terminals and the FMCS database server. DDC panels and the FMCS database server shall be connected through the SI.edu network using TCP/IP over an Ethernet-routed network. The Controls Contractor is responsible for determining compatibility prior to submitting a bid and for all costs associated with connecting to the existing FMCS, including licensed software, programming, and training.
- 1.7 FMCS INTEGRATION REQUIREMENT
- A. Smithsonian operates on an existing FMCS (Siemens BAS). The intent of this specification is to extend and interoperate with this system. All components, software, and operations must be interoperable with the existing FMCS.
- B. The installed system shall interface directly with the existing FMCS database server. The existing software and database shall be modified with consultation from owner to accept new equipment. PC desktop icons that link to a separate system are not acceptable.

- C. Any costs associated with connecting to the existing FMCS, including licensed software, programming, and training, shall be part of the Controls Contractor's bid. The Contractor shall demonstrate the ability to perform the integration to the existing FMCS prior to bid submittal acceptance.
- D. The Controls Contractor shall coordinate all work associated with the FMCS connection. New DDC controls shall be connected/integrated to the FMCS over the SI.edu WAN via Ethernet connections.

1.8 SYSTEM PERFORMANCE

- A. Comply with the following performance requirements:
 - 1. DDC System Speed:
 - a. Response Time of Connected I/O:
 - 1) Update AI point values connected to DDC system every five seconds for use by DDC controllers. Points used globally to also comply with this requirement.
 - 2) Update BI point values connected to DDC system every five seconds for use by DDC controllers. Points used globally to also comply with this requirement.
 - 3) AO points connected to DDC system to begin to respond to controller output commands within two seconds. Global commands to also comply with this requirement.
 - 4) BO point values connected to DDC system to respond to controller output commands within two seconds. Global commands to also comply with this requirement.
 - b. Display of Connected I/O:
 - 1) Update and display analog point COV connected to DDC system every ten seconds for use by operator.
 - 2) Update and display binary point COV connected to DDC system every ten seconds for use by operator.
 - 3) Update graphic display refresh within 8 seconds.
 - 4) Point change of values and alarms displayed from workstation to workstation when multiple operators are viewing from multiple workstations shall not exceed graphic refresh rate indicated.
 - 2. Network Bandwidth: Design each network of DDC system to include spare bandwidth with DDC system operating under normal and heavy load conditions indicated. Calculate bandwidth usage, and apply a safety factor to ensure that requirement is satisfied when subjected to testing under worst case conditions. Minimum spare bandwidth as follows:
 - a. Tier 1 Networks: 30 percent.
 - b. Tier 2 Networks: 30 percent.
 - c. Tier 3 Networks: 30 percent
 - 3. DDC System Data Storage:
 - a. Include capability to archive not less than 48 consecutive months of historical data for all I/O points connected to system, including alarms, event histories, transaction logs, trends, and other information indicated.
 - b. Local Storage:
 - 1) Provide server with data storage indicated. Server(s) to use IT industry standard database platforms and be capable of functions described in "DDC Data Access" Paragraph.

4. DDC Data Access:
 - a. When logged into the system, operator able to also interact with any DDC controllers connected to DDC system as required for functional operation of DDC system.
 - b. Use for application configuration; for archiving, reporting, and trending of data; for operator transaction archiving and reporting; for network information management; for alarm annunciation; and for operator interface tasks and controls application management.
5. Future Expandability:
 - a. DDC system size is expandable to an ultimate capacity of at least 1.25 times total I/O points indicated.
 - b. Design and install system networks to achieve ultimate capacity with only addition of DDC controllers, I/O, and associated wiring and cable. Design and install initial network infrastructure to support ultimate capacity without having to remove and replace portions of network installation.
 - c. Operator interfaces installed initially do not require hardware and software additions and revisions for system when operating at ultimate capacity.
6. Object Scan: Transmit change of state and change of analog values to control units or workstation within six seconds.
7. B-BC, B-AAC, & B-ASC shall be able to execute control loops at a selectable frequency at least 1 time every second. The controller shall scan and update the process value and output generated by this calculation at this same frequency at a minimum.
8. Alarm Response Time: Annunciate alarm at workstation within 45 seconds. Multiple workstations must receive alarms within five seconds of each other.
9. Program Execution Frequency: Run capability of applications as often as five seconds, but selected consistent with mechanical process under control.
10. Performance: Programmable controllers shall execute DDC PID control loops, and scan and update process values and outputs at least once per second.
11. Reporting Accuracy and Stability of Control: Report values and maintain measured variables within tolerances as follows:
 - a. Water Temperature: Plus or minus 0.5 deg F (0.3 deg C).
 - b. Water Flow: Plus or minus 1 percent of full scale.
 - c. Water Pressure: Plus or minus 2 percent of full scale.
 - d. Space Temperature: Plus or minus 0.5 deg F (0.3 deg C).
 - e. Ducted Air Temperature: Plus or minus 0.5 deg F (0.3 deg C).
 - f. Outside Air Temperature: Plus or minus 0.5 deg F (0.3 deg C).
 - g. Dew Point Temperature: Plus or minus 3 deg F (1.5 deg C).
 - h. Temperature Differential: Plus or minus 0.25 deg F (0.15 deg C).
 - i. Relative Humidity: Plus or minus 5 percent.
 - j. Airflow (Pressurized Spaces): Plus or minus 3 percent of full scale.
 - k. Airflow (Measuring Stations): Plus or minus 5 percent of full scale.
 - l. Airflow (Terminal): Plus or minus 10 percent of full scale.
 - m. Air Pressure (Space): Plus or minus 0.01-inch wg (2.5 Pa).
 - n. Air Pressure (Ducts): Plus or minus 0.1-inch wg (25 Pa).
 - o. Carbon Monoxide: Plus or minus 5 percent of reading.
 - p. Oxygen: Plus or minus 2 percent of reading.
 - q. Carbon Dioxide: Plus or minus 50 ppm.
 - r. Nitrogen Dioxide: Plus or minus 50 ppm.
 - s. Electrical: Plus or minus 5 percent of reading.

12. Overall combined system repeatability of sensors, controllers and readout devices for a particular application shall be plus or minus 2% of full scale of the operating range. Repeatability of overall combined system of sensor, controller and readout device in a control loop application will be plus or minus 5% of full scale of the operating range.
13. Long-term electronic drift shall not exceed 0.4% per year.
14. All components provided as part of this system shall operate under ambient environmental conditions of 20F to 104F dry bulb and 10% to 90% relative humidity, noncondensing as a minimum. Sensors and control elements shall operate under the ambient environmental temperature, pressure, humidity, and vibration conditions encountered for the installed location. B-OWS equipment (hardware only), such as CRTs and printers, shall, unless designated otherwise, operate properly under ambient environmental conditions of 45F to 90F and a relative humidity of 10% to 90%.
15. Networked components of the system shall be able to operate at 90% to 110% of nominal voltage rating and shall perform an orderly shutdown below 80%.

B. Energy Dashboard

1. Provide interactive, educational dashboard using a web application to display real-time energy data and building performance metrics in a common area shown on the drawings. Incorporate Owner branding and coordinate content with the Owner and A/E of record. Provide user interface for content management that allows the Owner to update text and photos. Provide one 48 inches wall-mounted commercial-grade monitor and infrared multi-touch overlay with 3-year warranty. Provide 24/7 content scheduler.

1.9 SEQUENCE OF OPERATIONS

- A. See the contract drawings for system sequence of operations for each system to be controlled.
- B. Program each DDC controller, third party equipment, etc., to perform the sequences of operation provided on the construction documents. Provide all necessary hardware on each piece of equipment in order for the equipment to perform the specified sequence and to meet the requirements of the point lists where provided.
- C. The Contractor shall be responsible for all control wiring connections, auxiliary devices and control wiring diagrams to complete the control system and attain the described sequence of operation.

1.10 ACTION SUBMITTALS

- A. Submit in writing and so delineated at the beginning of each submittal, known substitutions and deviations from requirements of Contract Documents. Deviation from Contract Documents must be approved by the Engineer of record prior to submittal.
- B. Sequence of Operations, Controls Diagram, BAS architecture, Bill of Materials, Controls Matrix and Points lists shall be a SEPARATE submittal (under separate cover) from all equipment product data associated with the controls system. Documents should be word searchable and utilize bookmarks.
- C. Complete BAS Engineering Design Submittal & Drawings shall be prepared pursuant with the following guidelines:

1. Submittal documentation and drawings shall consistently use the same abbreviations, symbols, nomenclature and identifiers. Each control system element shall be assigned a unique identifier pursuant with the Contract Documents.
 2. Submittal documentation and drawings shall have at the beginning an Index and Design Drawing Legend.
 - a. Index shall list all design drawings and elements including the drawing number, sheet number, drawing title, etc.
 - b. Legend shall show and describe all symbols, abbreviations and acronyms used on the Design Drawings.
- D. Product Data: Include manufacturer's technical literature for each control device. Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product indicated.
1. DDC System Hardware: Bill of materials of equipment indicating quantity, manufacturer, and model number. Include technical data for operator workstation equipment, interface equipment, control units, transducers/transmitters, sensors, actuators, valves, relays/switches, control panels, and operator interface equipment.
 2. Control System Software: Include technical data for operating system software, operator interface, color graphics, and other third-party applications.
 3. Controlled Systems: Instrumentation list with element name, type of device, manufacturer, model number, and product data. Include written description of sequence of operation including schematic diagram.
- E. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
1. Bill of materials of equipment indicating quantity, manufacturer, and model number.
 2. Schematic flow diagrams showing fans, pumps, coils, dampers, valves, and control devices.
 3. Wiring Diagrams: Power, signal, and control wiring.
 4. Plan Drawings indicating the following:
 - a. Screened backgrounds of walls, structural grid lines, HVAC equipment, ductwork, and piping.
 - b. Room names and numbers with coordinated placement to avoid interference with control products indicated.
 - c. Each desktop workstation network port, server, gateway, router, DDC controller, control panel instrument connecting to DDC controller, and damper and valve connecting to DDC controller, if included in Project.
 - d. Exact placement of products in rooms, ducts, and piping to reflect proposed installed condition.
 - e. Network communication cable and raceway routing.
 - f. Information, drawn to scale.
 - g. Proposed routing of wiring, cabling, conduit, and tubing; coordinated with building services for review before installation.
 5. Riser diagram of the building communication network shall outline execution and details of all network cabling, BAS & Network Hardware including the following:
 - a. All BAS/DDC Hardware with controller number, unique identifier/tag, location, equipment and service.
 - b. All Network Hardware with unique identifier, location and service.
 - c. Network cabling configuration and execution specification.
 - d. Location of all cabling termination points and End of Line (EOL) terminators.

- e. Location of all network interface jacks.
- f. For each network, indicate communication protocol, speed, and physical means of interconnecting network devices, such as copper cable type, or optical fiber cable type. Indicate raceway type and size for each.
- g. A separate riser diagram shall be provided for each network segment.
6. Control panel drawings indicating the following:
 - a. Panel dimensions, materials, size, and location of field cable, raceways, and tubing connections.
 - b. Interior subpanel layout, drawn to scale and showing all internal components, cabling and wiring raceways, nameplates, and allocated spare space.
 - c. Front, rear, and side elevations and nameplate legend.
 - d. Unique drawing for each panel.
7. A schedule of all BAS network devices including the unique equipment identifier/tag, description, IP address, MAC address, control panel name, and installation location.
8. A schedule of all control valves including the unique equipment identifier/tag, valve size, dimensions and installation/maintenance clearance, model number (including pattern and connections), close-off rating, flow, CV, pressure drop, pressure rating and location. The valve schedule shall also contain actuator selection data supported by calculations of the force required to move, close and seal the valve at design conditions.
9. A schedule of all control dampers. This shall include the unique equipment identifier, unique damper identifier/tag, damper size, pressure drop, blade configuration, orientation and axis of frame, blade rotation, location and selection criteria of actuators, nominal and actual sizes, and manufacturer and model number. The Damper Schedule shall include the AMCA 500-D maximum leakage rate at the operating static-pressure differential.
10. Sequence of Operation shall be submitted for every piece of equipment being controlled by and/or associated with the BAS. No operational deviation from specified Sequences of Operation as outlined in Contract Documents shall be permitted without prior written approval. Sequences of Operation shall include and conform to the following:
 - a. Refer to equipment and control devices by their specific unique identifiers/tags pursuant with the Contract Documents and BAS Submittal package.
 - b. Clearly represent actual Application Programming methodology and functional control operation. Do not merely provide a copy of Contract Document specified Sequence of Control.
 - c. Include description of functional system operation under normal and failure conditions.
11. DDC System Hardware:
 - a. Wiring diagrams for control units with termination numbers.
 - b. Schematic diagrams and floor plans for field sensors and control hardware.
 - c. Schematic diagrams for control, communication, and power wiring, showing trunk data conductors and wiring between operator workstation and control unit locations.
12. Control System Software:
 - a. Cross-referenced listing of software to be loaded on each operator workstation, server, and DDC controller.
 - b. Description and technical data of all software provided and cross-referenced to products in which software will be installed.
 - c. Operating system software, operator interface and programming software, color graphic software, DDC controller software, maintenance management software, and third-party software.
 - d. Include a flow diagram and an outline of each subroutine that indicates each program variable name and units of measure.

- e. Listing and description of each engineering equation used with reference source.
 - f. Listing and description of each constant used in engineering equations and a reference source to prove origin of each constant.
 - g. Description of operator interface to alphanumeric and graphic programming.
 - h. Description of each network communication protocol.
 - i. Description of system database, including all data included in database, database capacity, and limitations to expand database.
 - j. Description of each application program and device drivers to be generated, including specific information on data acquisition and control strategies showing their relationship to system timing, speed, processing burden, and system throughout.
 - k. Controlled Systems: Instrumentation list with element name, type of device, manufacturer, model number, and product data. Include written description of sequence of operation including schematic diagram.
13. Color graphics indicating the following:
- a. Itemized list of color graphic displays to be provided.
 - b. For each display screen to be provided, a true color copy showing layout of pictures, graphics, and data displayed.
 - c. Intended operator access between related hierarchical display screens.
14. Controlled Systems:
- a. I/O points labeled with point names shown. Indicate instrument range, normal operating set points, and alarm set points. Indicate fail position of each damper and valve, if included in Project.
 - b. I/O listed in table format showing point name, point type, type of device, manufacturer, model number, trend configuration, and cross-reference to product data sheet number.
 - c. A graphic showing location of control I/O in proper relationship to HVAC system.
 - d. Wiring diagram with each I/O point having a unique identification and indicating labels for all wiring terminals.
 - e. Unique identification of each I/O that to be consistently used between different drawings showing same point.
 - f. Elementary wiring diagrams of controls for HVAC equipment motor circuits including interlocks, switches, relays, and interface to DDC controllers.
 - g. Narrative sequence of operation.
 - h. Graphic sequence of operation, showing all inputs and output logical blocks.
- 1.11 INFORMATIONAL SUBMITTALS
- A. Data Communications Protocol Certificates: Certify that each proposed DDC system component complies with ASHRAE 135.
 - B. Qualification Data: For Installer and manufacturer.
 - C. Software Upgrade Kit: For Owner to use in modifying software to suit future systems revisions or monitoring and control revisions.
 - D. Field quality-control test reports.

1.12 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For HVAC instrumentation and control system to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 01 7823 "Operation and Maintenance Data," include the following:
1. Operator's Manual with procedures for operating control systems including logging on and off, handling alarms, producing point reports, trending data, overriding computer control, and changing set points and variables.
 2. Programming Manual including:
 - a. Documentation of all project specific Application and DDC programs.
 - b. All necessary system Administrator-Level passwords and/or required access credentials.
 - c. Information required for programming BAS.
 - d. Complete Final Point Schedule including all hardware and software data points and documentation of calibration and configuration values for all Inputs, Outputs, Variables and PID Loops at the conclusion of systems commissioning and functional testing.
 - e. Routine preventative maintenance procedures, corrective diagnostic troubleshooting procedures and calibration processes.
 - f. Final Bill of Material with all installed parts, manufacturers, manufacturers' part numbers and ordering information.
 - g. A schedule of recommended spare parts with part numbers and supplier.
 3. Complete system database as functional at the conclusion of systems commissioning and functional testing including all graphics and images used by and/or created for BAS on electronic format as accepted by Owner.
 4. Maintenance instructions and lists of recommended spare parts for each type of control device.
 5. Interconnection wiring diagrams with identified and numbered system components and devices.
 6. Keyboard illustrations and step-by-step procedures indexed for each operator function.
 7. Inspection period, cleaning methods, cleaning materials recommended, and calibration tolerances.
 8. Calibration records and list of set points. Including calibrated trip points for differential pressure switches.
 9. Testing and commissioning reports and checklists of completed final versions of reports, checklists, and trend logs.
 10. Names, addresses, email addresses, and 24-hour telephone numbers of Installer and service representatives for DDC system and products.
 11. Owner training materials.
- B. Software and Firmware Operational Documentation: Include the following:
1. Software operating and upgrade manuals.
 2. Program Software Backup: On a magnetic media or compact disc, complete with data files.
 3. Device address list.
 4. Printout of software application and graphic screens for all major equipment or systems, such as; chilled water plant including all components, typical air handling units, etc.
 5. Software license required by and installed for DDC workstations and control systems.

- C. Project Record Documents. Upon completion of installation and systems commissioning submit record documents for review. As-Built• Project Record Documents should include:
1. Project Record Application Engineering Drawings shall include all BAS System Engineering Design Submittal with Drawings updated to reflect actual field conditions, architecture and execution.

1.13 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish a recommended list of materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Two Relays each type.
 2. Two Space sensors each type.
 3. One Duct sensor each type.
 4. One actuator each type.
 5. One duct pressure DPT.
 6. One transformer each type.
 7. One controller each type.
 8. One Supervisory controller each type.

1.14 QUALITY ASSURANCE

- A. DDC System Manufacturer Qualifications:
1. Nationally recognized manufacturer of DDC systems and products.
 2. DDC systems with similar requirements to those indicated for a continuous period of five years within time of bid.
 3. DDC systems and products that have been successfully tested and in use on at least five past projects.
 4. Having complete published catalog literature, installation, operation, and maintenance manuals for all products intended for use.
 5. Having full-time in-house employees for the following:
 - a. Product research and development.
 - b. Product and application engineering.
 - c. Product manufacturing, testing, and quality control.
 - d. Technical support for DDC system installation training, commissioning, and troubleshooting of installations.
 - e. Owner operator training.
- B. DDC System Provider Qualifications:
1. Authorized representative of, and trained by, DDC system manufacturer.
 2. Authorized Siemens Industry representative operating from the Siemens factory/corporate branch office in Beltsville, MD, in accordance with Smithsonian Design Standards §23.2.16.2. In-place facility located within 50 miles of Project.
 3. Demonstrate past experience with installation of DDC system products being installed for period within five consecutive years before time of bid.
 4. Demonstrate past experience on five projects of similar complexity, scope, and value.
 5. Demonstrate past experience of each person assigned to Project.
 6. Staffing resources of competent and experienced full-time employees that are assigned to execute work according to schedule.
 7. Service and maintenance staff assigned to support Project during warranty period.

8. Product parts inventory to support ongoing DDC system operation for a period of not less than five years after Substantial Completion.
 9. DDC system manufacturer's backing to take over execution of the Work if necessary to comply with requirements indicated. Include Project-specific written letter, signed by manufacturer's corporate officer, if requested.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. Comply with ASHRAE 135 for DDC system components.
- 1.15 EXTENDED WARRANTIES
- A. Warrant all DDC controllers to be free of defect in material and workmanship under normal operation and expected service as published by the manufacturer in the unit's performance specifications for a period of two (2) years at a minimum.
- B. Warrant all carbon dioxide (CO₂) sensing elements to be free of defect in material and workmanship under normal operation and expected service as published by the manufacturer in the unit's performance specifications for a period of three (3) years at a minimum.
- C. Warrant all relative humidity (RH) sensing elements to be free of defect in material and workmanship under normal operation and expected service as published by the manufacturer in the unit's performance specifications for a period of three (3) years at a minimum.
- D. Warrant all other components of the BAS and installation to be free of defects in workmanship and material under normal expected service and use for a period of two (2) years from the date of final acceptance of the BAS by the Owner.
- E. During the warranty period, provide all labor and materials required to repair or to replace all items or components that fail due to defects in workmanship or manufacture at no charge or reduction in service to the Owner.
- F. Except in the event of property loss or damage, warranty service shall be provided during regular working hours Monday through Friday at no charge unless otherwise explicitly outlined in the Contract Documents. Warranty work outside these periods and associated charges shall be coordinated with Owner.
- 1.16 DELIVERY, STORAGE, AND HANDLING
- A. Factory-Mounted Components: Where control devices specified in this Section are indicated to be factory mounted on equipment, arrange for shipping of control devices to equipment manufacturer.
- B. System Software: Update to latest version of software at Project completion.
- 1.17 COORDINATION
- A. Coordinate location of all thermostats, humidistats, and other exposed control sensors with plans and room details before installation.

- B. Coordinate with all related systems, subcontractors and the associated manufacturers responsible for the system to determine the points that are to be mapped from the third party system to the BAS. At a minimum, provide mapping, alarm configuration, and graphic creation for each system.
- C. Coordinate systems outside of Divisions 23 that have been included as a part of the overall BAS system. Achieve compatibility with systems and equipment that interfaces with the BAS systems. Such systems may include;
 - 1. Plumbing Metering.
 - 2. Plumbing Equipment provided under Division 22.
 - 3. Intrusion Detection.
 - 4. Access Control and Security Systems.
 - 5. Clock Systems.
 - 6. PLC Electronic Detention Monitoring and Control Systems.
 - 7. Addressable-fixture Lighting Controls.
 - 8. Digital, Addressable Fire Alarm System.
 - 9. Electrical Power Monitoring and Control.
 - 10. Panelboards.
 - 11. Motor-Control Centers.
 - 12. Emergency Power Equipment.
 - 13. Conditioned electrical branch circuits for BAS devices.
 - 14. Natural Gas Metering System.
 - 15.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Siemens Building Technologies.
- B. The DDC BAS shall be provided by Siemens Industry, factory/corporate branch office in Beltsville, MD. The system shall utilize the Siemens Desigo platform and shall be an extension of the existing SI-wide Siemens Facility Management and Control System (FMCS) per Smithsonian Design Standards §23.2.16.2.
- C. Control system shall consist of sensors, indicators, actuators, final control elements, interface equipment, other apparatus, accessories, and software connected to distributed controllers operating in multiuser, multitasking environment on token-passing network and programmed to control mechanical systems. An operator workstation permits interface with the network via dynamic color graphics with each mechanical system, building floor plan, and control device depicted by point-and-click graphics.
- D. Incorporate other monitored or controlled systems identified in paragraph 1.17.C above.

2.2 BACNET ADVANCED OPERATORS WORKSTATION PLATFORM (B-AWS)

- A. The BACnet Advanced Operator Workstation Platform (B-AWS) provides complete configuration, monitoring, modification and operation of the entire DDC System by advanced building operators and technicians.
- B. Provide as specified herein complete all associated Operating System, Operators Workstation Application Software and Third-Party Software Applications preloaded and configured.
- C. BACnet Advanced Operator Workstation Platform (B-AWS) shall reside on the Tier 1 Network using the BACnet/IP data link as specified in ANSI/ASHRAE Standard 135.
- D. Communications and Protocols
 - 1. B-AWS information access for the control system shall utilize the BACnet protocol only for communication to B-BCs, B-AACs, B-ASCs and all other BAS DDC controllers.
 - 2. B-AWS shall reside on the same LAN as B-BCs. B-AWS shall as a minimum support point-to-point (PTP) and BACnet/IP physical/data link layer protocols.
 - 3. The B-AWS specified here may, at the Owner's option, be located remote from the BACnet internetwork. Other than the difference in B-AWS communication speed, the system shall be capable of remote operation via BACnet LAN types with no degradation in application performance.
 - 4. B-AWS Operating System (OS) Software shall be consistent on all B-AWS hardware platforms provided.
 - 5. B-AWS Application Software shall be provided and licensed to Owner. Provide latest versions of software available.

2.3 CONTROL SYSTEM ADVANCED OPERATORS WORKSTATION (B-AWS) APPLICATION SOFTWARE

- A. BACnet Advanced Operator Workstation Platform (B-AWS) software shall comply with the minimum requirements of ANSI/ASHRAE Standard 135 Annex L for a B-AWS and shall be certified and listed by the BACnet Testing Laboratories (BTL) as a B-OWS. BTL product listings are available from BACnet international.
- B. System Configuration
 - 1. The workstation shall provide a complete engineering tool for the configuration of the system. This shall allow for future system changes under proper password protection including dynamic creation, deletion and modification of all configuration parameters, programs, graphics, trend logs, alarms, schedules and every BACnet object used in the installed system.
- C. Security
 - 1. Each operator shall be required to log on to the system with a unique user name and password in order to view, edit, add or delete data.
- D. Operators will be able to perform only those commands available for their respective passwords.
 - 1. System security permissions shall be multi layered and defined for each individual operator to restrict/permit day-to-day operations and system configuration.

- a. A minimum of 10 levels of access shall be supported with a configurable matrix of operator actions allowed for each access level, broken down into at least 200 possible operator actions.
 - b. A minimum of 50 passwords shall be supported at each B-OWS.
 2. An administrator-level operator shall have the ability to configure credentials for all other operators.
 3. User-definable, automatic log-off timers of from 1 to 60 minutes shall be provided to prevent operators from inadvertently leaving B-AWS in an unsupervised logged-in state.
 4. Security data shall be stored in an encrypted format.
- E. Alarming and Event Notification
 1. B-AWS shall utilize BACnet Alarm Events and Protocol Implementation Conformance Statement (PICS) shall support at a minimum the following BACnet Interoperability Building Blocks (BIBBs):
 - a. Alarm and Event - Acknowledge-A (AE-ACK-A)
 - b. Alarm and Event - Notification-A (AE-N-A)
 - c. Alarm and Event - Alarm Summary View-A (AE-AS-A)
 - d. Alarm and Event - View and Modify-A (AE-VM-A)
 - e. Alarm and Event - View Notifications-A (AE-VN-A)
 2. The workstation shall display and log alarms and events from any BACnet object in the system and shall support operator configuration of the alarm limits, differentials, states and reactions for each object in the system.
 3. The alarms shall be filterable based on level, date, and time. Nuisance alarms shall be suppressed using hierarchical alarm suppression and delay logic.
 4. There shall be 4 levels of alarms:
 - a. Level 1: Critical/Life Safety
 - b. Level 2: Critical Equipment Message
 - c. Level 3: Urgent Message
 - d. Level 4: Normal Message
 5. B-AWS terminal shall provide audible, visual, and printed means of alarm and event notification.
 6. System shall provide log of notification messages. Complete Alarm log of all system and operator transactions shall be archived to the hard disk of the system B-AWS.
 7. Alarm messages shall be in user-definable text (English) and shall be entered either at the B-AWS terminal or via remote communication.
 8. An alarm summary shall be available to show all alarms whether including but not limited to whether or not they have been acknowledged.
 9. System shall provide ability to prioritize and differentiate communications for at least 20 different levels of alarms.
 10. Alarm messages shall be fully customizable in size, content, behavior and sound.
 11. The operator shall be able to view all system alarms from any location in the internetwork. With the proper credentials, an operator shall be able to acknowledge and clear alarms. Alarm and Event Log shall be configurable per workstation and shall display at a minimum alarm time, received time, state, notification class, priority, message, source, time acknowledged, acknowledged by user and action.
 12. All critical alarms shall be hard-wired between the DDC control panel and equipment. Use of network communications alone for annunciation of critical alarms is not acceptable per Smithsonian Design Standards §23.2.16.6.b. Network alarm annunciation may be provided in addition to, but not as a substitute for, hard-wired critical alarm connections.

- F. Weekly Annual and Special Event Scheduling
1. B-AWS Software shall utilize BACnet Schedules and PICS shall support at a minimum the following BIBBs:
 - a. Scheduling - Advanced View and Modify-A (SCH-AVM-A)
 2. Provide ability to view and modify the schedule for the calendar week and up to 255 special events in a graphical format. Each calendar day and special event shall provide at least ten time/value entries per day.
 3. Provide the ability for the operator to select scheduling for either binary, analog, or multi-state object values.
 4. Provide the ability for the operator to designate days, date ranges, or repeating date patterns as exception schedules.
 5. Provide the capability for the operator to define special or holiday schedules and to link the BACnet schedule to a BACnet calendar, thereby over-riding weekly schedule programming on holidays defined in the BACnet calendar.
 6. There shall be a provision with proper password access to manually override each schedule.
 7. Provide the capability to designate any exception schedule to be "Executed Once• " then automatically cleared.
 8. Provide the ability to name each exception schedule with a user defined term to describe each special event.
 9. The schedule objects shall reside in each individual device. Workstation or server-based scheduling shall not be acceptable.
- G. Trend Log Graphing
1. The B-AWS shall support both the BACnet Trend Log and the BACnet Trend Log Multiple standard objects for defining custom trend logs for any object in the system. This definition shall include interval, length, start time and end time.
 - a. The trend data shall be sampled and stored in each individual BACnet device where the object is stored. The workstation or another field level integration platform shall not be required for storage of custom trend logs.
 - b. All long-term data archival to hard-disk shall be performed by a BTL-Listed BACnet device dedicated for this service.
 2. PICS shall support at a minimum the following BIBBs:
 - a. Trending - View-A (T-V-A)
 3. All data points (both hardware and software) system-wide shall be assignable to a historical trending program by gathering configurable historical samples of object data stored in the local controller (B-BC, B-AAC, B-ASC).
 4. All trend log information shall be displayable in text and graphic format. All information shall be able to be printed in black & white and color and exported directly to a Microsoft Excel Spreadsheet.
 5. The B-AWS shall perform the following at a minimum:
 - a. Be capable of automatically retrieving any trend-log from any device on the network without user-intervention.
 - b. Manage connection to internetwork automatically based upon configurable data acquisition thresholds; retrieving data only when necessary rather than streaming data.
 - c. Shall operate as a Microsoft Windows service.
 - d. Be capable of exporting data directly to Microsoft Excel.

- e. Not require a separate viewer • but shall seamlessly present all archived data together with real-time data stored in device using the standard B-AWS Trend Log Viewer.
- H. Runtime Log Information
- 1. B-OWS Software shall be capable of displaying Runtime and On/Off Cycle data of all Binary data points (both hardware and software) system-wide.
 - 2. Runtime data shall be sampled and stored in each individual BACnet device where the object is stored using standard BACnet objects and published properties. The workstation shall not be required for storage of custom runtime logs.
 - 3. At a minimum, the Runtime data shall include:
 - a. Total accumulated active time.
 - b. Total accumulated active transitions and active transitions for the current day.
 - c. Timestamp and duration for each change of state for the last 100 transitions.
- I. System Configuration, Set-Up and Definition
- 1. Device and network status shall be displayed for any device on the BACnet internetwork. At a minimum the following Device Management BIBBs shall be supported:
 - a. Device Management - Automatic Device Mapping-A (DM-ADM-A).
 - b. Device Management - Automatic Network Mapping-A (DM-ANM-A).
 - 2. All control strategies and energy management routines shall be stored in the controller and shall allow modification and additions by the operator using the B-AWS software. No strategies or routines shall be stored on the B-AWS platform.
 - 3. B-AWS Software shall have the capability to back-up and restore the programming and database of any BACnet device on the BACnet internetwork. The B-AWS BTL listing shall support the Device Management - Backup and Restore-A (DM-BR-A) BIBB.
 - 4. Provide a context sensitive, on-line help system to assist the operator in operation and editing of the system.
- J. Graphical User Interface (GUI)
- 1. B-AWS Software shall support, at a minimum, the following graphic file formats: PNG, JPG, TIF, DIB, SVG, EMF, and HTML5. The GUI shall allow for the use of custom animations and interactive elements developed using modern web technologies such as JavaScript and URL hyperlinks. Deprecated formats such as Flash (SWF) shall not be used.
 - 2. B-AWS Software shall provide a color graphics package to allow the user to generate custom dynamic graphics for graphical representation of system design and system parameters. Graphic images may reside on the B-AWS or server; however, all dynamic data and attributes must reside in the controller.
 - a. A listed set of symbols and graphic slides shall be available to allow operators to select from the graphics table to assist in graphic generation.
 - b. All color graphic displays shall be dynamic with current point data automatically updated from the BACnet internetwork to the B-AWS workstation without operator intervention.
 - c. The operator shall be able to manually adjust all data point values (hardware or software) in the system, adjust values of control loops, and command points to local mode or release points to automatic mode.
 - d. The windowing environment of the B-AWS shall allow the user to simultaneously view several graphics at the same time to analyze total building operation, and/or to allow the display of a graphic associated with an alarm to be viewed without interrupting work in progress.

- e. Pre-packaged animations for display of fans, pumps, dampers, etc., and shall allow custom user-created animations to be used to display objects on graphic displays.
- K. Programming Software:
- 1. Include programming software to execute sequences of operation indicated.
 - 2. Include programming routines in simple and easy to follow logic with detailed text comments describing what the logic does and how it corresponds to sequence of operation.
 - 3. Programming Software: Any of the following:
 - a. Graphic-based programming is the easiest method of programming options indicated and best suited for operators with limited programming experience. Not all DDC system manufacturers offer graphic-based programming. Consult manufacturers.
 - 1) Graphic Based: Use a library of function blocks made from preprogrammed code designed for DDC control systems.
 - 2) Assemble function blocks with interconnection lines that represent to control sequence in a flowchart.
 - b. Make programming tools viewable in real time to show present values and logical results of each function block.
 - c. Menu Based: Done by entering parameters, definitions, conditions, requirements, and constraints.
 - d. Line by Line and Text Based: Programming is to declare variable types such as local, global, real, integer, and so on, at the beginning of the program. Use descriptive comments frequently to describe programming code.
 - 4. Include means for detecting programming errors and testing software control strategies with a simulation tool before implementing in actual control. Simulation tool may be inherent with programming software or as a separate product.
- L. The BAS shall include fully automated diagnostic procedures for verification of internetwork communication integrity. Upon detection of a communications failure, the system shall automatically generate an alarm. The B-AWS software shall support remote annunciation of alarms and system events via printer, e-mail, and mobile device notifications (e.g., SMS, push alerts, or app-based messaging).
- M. Control Summaries, Reports and Logging:
- 1. The system shall provide self-documentation reporting to summarize control strategies for any point or any user selected group of points within the Control System.
 - 2. The B-AWS reporting package shall allow the user to configure the point information display in custom format.
 - 3. The B-AWS shall enable operator to perform Wild Card data point sorting and searches.
 - 4. The B-AWS shall perform automated network back-up of runtime databases in all devices on the BACnet network according to operator configurable schedule and storage directory structure.
 - 5. Standard Reports: Provide standard DDC system reports with operator ability to customize reports later.
 - a. All I/O: With current status and values.
 - b. Alarm: All current alarms, except those in alarm lockout.
 - c. Disabled I/O: All I/O points that are disabled.
 - d. Alarm Lockout I/O: All I/O points in alarm lockout, whether manual or automatic.
 - e. Alarm Lockout I/O in Alarm: All I/O in alarm lockout that are currently in alarm.
 - f. Logs:

- 1) Alarm history.
 - 2) System messages.
 - 3) System events.
 - 4) Trends.
6. Custom Reports: Operator able to easily define and prepare any system data into a daily, weekly, monthly, annual, or other historical report. Reports to include a title with time and date stamp.

2.4 BUILDING LEVEL CONTROLLERS (B-BC)

- A. All building level controllers shall comply with the minimum requirements of ANSI/ASHRAE Standard 135 Annex L for a BACnet Building Controllers (B-BCs) and shall be certified and listed by the BACnet testing Laboratories (BTL) as a B-BC.
- B. Furnish B-BC(s) as necessary to control large point count major mechanical equipment, and execution of BAS global strategies, and as noted in the execution portion of this specification.
 1. Each Mechanical System and/or major piece of Mechanical Equipment (e.g., Chilled Water, Heating Water, Large AHU, etc.) shall have one (1) dedicated DDC controller with sufficient I/O capacity such that it shall be connected to ALL field devices and sensors associated with that system and/or piece of equipment. Distributed control of one (1) single piece of major mechanical equipment shall not be performed by multiple controllers.
 2. Each B-BC shall support local hardware Inputs and Outputs (I/O) by the use of on-board I/O and/or I/O expansion modules.
- C. Building level controllers shall reside on the Tier 2 network using BACnet/IP, BACnet/Ethernet, or MS/TP data links as specified in ANSI/ASHRAE Standard 135
- D. Building level controllers (B-BCs) shall reside on the field MS/TP network for communication with downstream B-AAC and B-ASC devices. B-BCs shall additionally provide a BACnet/IP interface port for upstream connection to the SI.edu network and the FMCS database server only. B-BCs shall support both BACnet MS/TP (field side, typical) and BACnet/IP (server side, for FMCS connectivity) simultaneously.
- E. B-BC shall be capable of locally executing global strategies for the BAS based on information from any object in the internetwork. Control Systems that require a higher-level host processor for update, time stamps, global point data, COS transfer, on-line control instruction, or communications control between B-BC panels shall not be acceptable.
- F. BAS shall communicate with all B-AWS, B-BC, B-AAC & B-ASC on a peer-to-peer basis, and shall provide real-time clock functions for scheduling and network-wide time synchronization.
- G. B-BC shall have sufficient memory to support its operating system, database, and programming requirements. Battery/capacitor shall retain static RAM memory and clock functions for a minimum of 72 hours.
 1. B-BC operating system, field database, and application programs shall reside in EEPROM.
 2. B-BC run-time field database and application programs shall reside in battery backed-up on-board memory of EEPROM.
- H. B-BC shall comply with the following Hardware Configuration:

1. B-BC shall have integral power switch. If the device manufacturer provides no on-board switch then the System Contractor shall provide a separate dedicated transformer and switch within each enclosure for each controller present.
 2. B-BC shall provide diagnostic LEDs for power, communications and processor status. The B-BC shall continually check the status of its processor and memory circuits.
 3. Controller wiring terminals shall be removable terminal strips for ease of installation and service replacement.
 4. All hardware inputs shall be Universal (i.e., binary or analog) configured on hardware and/or in software.
 - a. Inputs shall accept dry-contact, thermistor, 4-20 mA, 0-5VDC, and 0-10VDC.
 - b. Pulse accumulation shall accommodate a maximum frequency of 40Hz.
 - c. Inputs shall have a minimum 10 Bit A/D conversion resolution.
 - d. 24VAC over-voltage protection
 - e. Status LED indicators for each input
 5. All hardware outputs shall be Universal and configured on hardware and/or in software.
 - a. Outputs shall provide configurable modulating signal to industry standard 0-5VDC, 0-10VDC, and 4-20 mA analog control devices and relays.
 - b. Outputs shall be capable of sourcing 75mA at 12VDC.
 - c. Outputs shall have a minimum 8 Bit D/A conversion resolution.
 - d. 24VAC over-voltage and short protection
- I. B-BC shall interact with the Control System Application Software in compliance with the following:
1. Database programming, configuration and modification shall be accomplished through the B-AWS online with the B-BC. The complete database and application program shall reside in the B-BC. The System Contractor shall configure the software to attain the proper sequence of control and to accomplish all other control system functions indicated in the Contract Documents. Provide a copy of all programming on disc to the Owner.
 2. The B-BC shall function in a real-time, multi-tasking networked operating environment; able to display database values, programs, and control loops in real-time while functional and online using the B-AWS. The user shall be able to add, delete, or modify objects on-line as required without taking the B-BC offline. The programming shall provide all the necessary mathematics, logic, utility and control functions necessary to execute the specified sequence of control.
 3. All required application programming shall be resident in the B-BC, B-AAC & B-ASC, and not in the B-AWS.
 4. B-BC shall manage system-wide alarms by performing distributed, independent alarm analysis and filtering. At no time shall the B-BC panel's ability to report alarms be affected by either operator activity at a B-AWS or local I/O device, or communications with other B-BC on the network.
 - a. B-BCs shall have capability to broadcast alarm conditions automatically across the Tier 1 or Tier 2 network. Alarm Event notifications shall be sent to off-site computer or serial printer. A minimum of one B-BC per site shall be capable of sending SMTP email messages to an email server for configured alarm conditions.
 - b. Active Alarm Events log shall be stored on the B-BC and may be viewed locally or remotely.
 - c. All alarm or point change reports shall include the point's English language description, and the time and date of occurrence.

- d. The user shall be able to define the specific system reaction for each point alarm and shall be able to customize reaction and filtering to minimize nuisance reporting. Each B-BC panel shall automatically inhibit the reporting of selected alarms during the standby power modes of operation, loss of power, fire alarm mode, and normal system shutdown and start-up. Users shall have the ability to manually inhibit alarm reporting for each point.
 - e. Alarm reports, messages, and files can be directed to a user-defined list of operator devices, or PCs used for archiving alarm information.
 - 5. B-BC shall perform and manage historical data collection. Minimum sampling time shall be configurable with a minimum sample rate of once per second.
 - a. B-BC panels shall store point history files for all analog and binary inputs and outputs.
 - b. Measured and calculated analog and binary data shall also be assignable to user-definable trends.
 - c. Trend data shall be stored at the stand-alone B-BC panels, and uploaded to hard disk storage automatically at preconfigured intervals when archival is desired. B-BC shall be equipped with enough storage for a minimum of 24 hours of trend data.
 - 6. Stand-alone B-BC panels shall automatically accumulate and store runtime hours for binary input and output points.
 - 7. B-BC panels shall automatically sample, calculate and store consumption totals on a daily, weekly, or monthly basis for user-selected analog and binary pulse input-type points.
 - 8. B-BC panels shall have the ability to count and/or execute events on a daily, weekly, or monthly basis.
- J. Communication and Protocols
- 1. The B-BC shall continuously scan the BACnet network and maintain a current database of field data in on board battery/capacitor backed RAM or EEPROM, including alarms, passwords, binding tables, device status, etc. The B-BC shall communicate with BACnet devices on the Tier 3 network using the BACnet physical data link MS/TP at a baud rate of no less than 76.8 Kbps where not limited by third party BACnet devices such as variable frequency drives, utility meters, etc.
 - 2. The B-BC shall provide a communications port for connection of the Portable Operators Terminal using Point-to-Point BACnet physical data link layer protocol or a connection to the network using BACnet/IP.
 - 3. B-BC shall support and be capable of monitoring and controlling a network of communicating remote space sensors. These networked sensors shall occupy input/output hardware points in the B-BC.
 - 4. B-BC shall support at a minimum of two (2) distinct dedicated BACnet/IP (B/IP) data link networks using TCP/IP and one (1) BACnet/Ethernet data link network simultaneously.
 - 5. Building level controllers shall support the following communications requirements at a minimum:
 - a. Client and Server BACnet Subscribe Change of Value (COV) Service.
 - b. Client and Server BACnet Read Property Multiple (RPM) Service.
 - c. BACnet transmit and receive frame segmentation.
 - d. Post-installation, field-configurable maximum information frames, APDU frame timeout, APDU segment timeout and APDU retries.
 - 6. Building level controllers shall support SMTP and provide stand-alone remote annunciation of alarms via e-mail without additional hardware, B-AWS or web-server.

2.5 ADVANCED APPLICATION CONTROLLERS (B-AAC)

- A. B-AAC shall comply with all aforementioned BAS System Requirements and shall comply with or exceed the BACnet profile for Advanced Application Controllers (B-AAC).
- B. Furnish one dedicated B-AAC(s) for each small or medium sized mechanical system. Additionally, furnish one dedicated B-AAC for each Terminal Unit Mechanical Device on the project. Those include Variable Air Volume (VAV) Air Terminal Units (ATU), Serial and Parallel Fan-Powered (FP) VAV ATUs, Unit Heaters (UH), Unit Ventilators (UV), Fan Coil Units (FCU) and Individual Fans.
- C. Each B-AAC shall acquire, process, and store point input data on a real time basis for internal use and for sharing with other controllers. Each B-AAC shall also maintain and supervise digital and analog output signals to the control devices and have a real time operating system capable of time of day scheduling and other time based functions.
 - 1. If the hardware point requirements of any medium-sized system should exceed the I/O configuration of available B-AAC offerings then a B-BC must be used. Control of one piece of mechanical equipment may not be performed by more than one controller.
- D. B-AAC shall provide microprocessor based self-contained stand-alone fully programmable operation of local process control loops. All local level application programs shall be installed on individual controllers in non-volatile memory.
- E. Each B-AAC shall be capable of sharing point information with other B-BC, B-AAC, or B-ASC on a peer-to-peer basis via the BACnet Tier 2 or Tier 3 network.
- F. Control systems that utilize canned programs or programmable read only memory (PROM) level application programming are not acceptable.
- G. Once downloaded, a B-AAC shall not require further communication with the B-AWS except for data base changes, operator commands, and requests from the B-AWS for B-AAC data. Programming of B-AACs shall be completely modifiable in the field, over the installed BACnet network.
- H. Each B-AAC shall be provided with the ability to prevent unauthorized access to its software program.
- I. B-AAC shall have sufficient memory to support its operating system, database, and programming requirements.
 - 1. B-AAC operating system, field database, and application programs shall reside in EEPROM.
- J. B-AAC run-time field database and application programs shall reside in on-board memory or EEPROM.
- K. B-AAC shall feature real-time 24-hour clock and 365-day calendar. Battery or capacitor back-up of these functions is required where the B-AAC is installed as a standalone controller.

- L. B-AAC shall feature a software configurable audible enunciator which shall be configured to trigger on the occurrence of selected alarms, and shall be audible and acknowledgeable either to all users, or only to those users with sufficient password authority.
- M. B-AAC shall comply with the following Hardware Configuration:
1. B-AAC shall provide diagnostic LEDs for power, communications and processor status. The B-AAC shall continually check the status of its processor and memory circuits.
 2. Universal field device hardware inputs shall be provided and configured on hardware and/or in software and comply with the following:
 - a. Inputs shall accept dry-contact, thermistor, 4-20 mA, 0-5VDC, and 0-10VDC
 - b. Pulse accumulation shall accommodate a maximum frequency of 100Hz
 - c. Inputs shall have a minimum 10 Bit A/D conversion resolution
 - d. 24VAC over-voltage protection
 3. Hardware Outputs shall be configured as to be modular in nature.
 4. Universal hardware outputs shall be provided and configured on hardware or in software and comply with the following:
 - a. Universal Outputs shall provide configurable modulating signal to industry standard 0-5VDC, 0-10VDC, and 4-20 mA analog control devices and relays.
 - b. Outputs shall be capable of sourcing 75mA at 12VDC and 24VDC.
 - c. Outputs shall have a minimum 8 Bit D/A conversion resolution.
 - d. 24VAC over-voltage and short protection.
- N. B-AAC for VAV ATUs application shall comply with the following additional requirements:
1. B-AAC shall be provided with integral damper actuator. Actuator shall feature the following at a minimum:
 - a. 35 in-lbs of torque.
 - b. Brushless DC Operator.
 - c. Actual damper position feedback. Drive time or other software calculated damper position shall not be accepted.
 - d. Damper End Switch using motor current sense or equivalent for positive feedback of both end stop positions.
 - e. Software selectable rotation.
 2. Hardware Outputs shall be configured on hardware and/or in software and comply with the following:
 - a. Each TRIAC Output shall source 500 mA current, 24 VAC 0.5 ACA.
 3. Airflow Calibration, Test and Air Balance, etc. shall be performed via dedicated handheld configuration tool connected directly to communication port located at ATU B-ASC sensor. Special proprietary software and/or applications loaded on a computer, tablet or other similar device shall not be acceptable to perform this function.
- O. B-AAC for unitary applications shall comply with the following additional requirements:
1. Controller wiring terminals shall be removable terminal strips for ease of installation and service replacement.
 2. Hardware Outputs shall be configured on hardware and/or in software and comply with the following:
 - a. Each TRIAC Output shall source 500 mA current, 24 VAC 0.5 ACA.
- P. Control System Application Software:
1. The B-AAC application software shall be the same as and indistinguishable from the B-BC specified interaction with the Control System Application Software.

2. The controller software shall reside in a real time, multi-tasking, networking operating environment. Database definition shall be accomplished through the B-AWS online with the B-AAC. The complete database and application program shall reside in the B-AAC. Configure the software to attain the proper sequence of control and to accomplish all other control system functions indicated in the Contract Documents.
3. The user shall be able to add, delete, or modify objects on-line as required. The programming shall provide all the necessary mathematics, logic, utility and control functions necessary for proper sequence of control.

Q. Communications and Protocols

1. When connected to the Tier 2 network, the B-AAC shall communicate with field devices and controllers using the BACnet physical IP data link. The B-AAC shall support daisy chain, star, or IP ring topology as required.
2. When connected to the Tier 3 network, the B-AAC shall communicate with field devices and controllers using the BACnet physical data link MS/TP at 76.8 Kbps where not limited by third party devices such as variable frequency drives, utility meters, etc.
3. The B-AAC shall provide a communications port for connection of the Portable Operators Terminal using Point-to-Point BACnet physical data link layer protocol or a connection to the network.
4. B-AAC shall support and be capable of monitoring and controlling a network of a minimum of four (4) communicating remote space sensors. These networked sensors shall not consume input/output hardware points in the B-AAC.

R. B-AAC shall perform and manage historical data collection. Minimum sampling time shall be configurable with a minimum sample rate of once per second.

1. B-AAC panels shall store point history files for all analog and binary inputs and outputs.
2. Measured and calculated analog and binary data shall also be assignable to user-definable trends.
3. Trend data shall be stored at the stand-alone B-AAC panels, and uploaded to hard disk storage automatically at preconfigured intervals when archival is desired. B-AAC shall be equipped with enough storage for a minimum of 24 hours of trend data.

S. Stand-alone B-AAC panels shall automatically accumulate and store runtime hours for binary input and output points.

T. B-AAC panels shall automatically sample, calculate and store consumption totals on a daily, weekly, or monthly basis for user-selected analog and binary pulse input-type points.

U. B-AAC panels shall have the ability to count and/or execute events on a daily, weekly, or monthly basis.

V. B-AAC shall support, transmit, and receive of segmented messages.

2.6 APPLICATION SPECIFIC CONTROLLERS (B-ASC)

- A. B-ASC shall comply with all aforementioned BAS System Requirements and shall comply with the BACnet profile for Application Specific Controllers (B-ASC).
- B. B-ASC shall reside on the Tier 2 or Tier 3 network using the BACnet/IP or BACnet MS/TP data link as specified in ANSI/ASHRAE Standard 135 in compliance with the following requirements at a minimum:

1. Automatically detect the baud of the MS/TP network and then configure the device's communication baud to match that of the MS/TP network.
- C. B-ASC shall support the following communications requirements at a minimum:
 1. Client and Server BACnet Subscribe Change of Value (COV) Service.
 2. Client and Server BACnet Read Property Multiple (RPM) Service.
 3. BACnet transmit and receive frame segmentation.
 4. Post-installation, field-configurable maximum information frames, APDU frame timeout, APDU segment timeout and APDU retries.
- D. B-ASC controllers are only permitted when they can meet the full requirements of the project's sequence of operation. Provide one dedicated B-ASC for each Terminal Unit Mechanical Device on the project. Those include Variable Air Volume (VAV) Air Terminal Units (ATU), Serial and Parallel Fan-Powered (FP) VAV ATU's, Unit Heaters (UH), Unit Ventilators (UV), Fan Coil Units (FCU) and Individual Fans.
- E. B-ASC shall provide microprocessor based self-contained stand-alone fully programmable operation of local process control loops. All local level application programs shall be installed on individual controllers in non-volatile memory.
- F. Each B-ASC shall be capable of sharing point information with other B-BC, B-AAC, or B-ASC on a peer-to-peer basis via the BACnet Tier 2 or Tier 3 network.
- G. Control systems that utilize canned programs or programmable read only memory (PROM) level application programming are not acceptable.
- H. Once downloaded, a B-ASC shall not require further communication with the B-AWS except for data base changes, operator commands, and requests from the B-AWS for B-ASC data. Programming of B-ASCs shall be completely modifiable in the field, over installed BACnet Internetwork.
 1. Each B-ASC shall be provided with the ability to prevent unauthorized access to its software program.
 2. B-ASC shall have sufficient memory to support its operating system, database, and programming requirements.
 3. B-ASC operating system, field database, and application programs shall reside in EEPROM.
 4. B-ASC run-time field database and application programs shall reside in on-board non-volatile memory or EEPROM.
- I. B-ASC shall perform and manage historical data collection. Minimum sampling time shall be configurable with a minimum sample rate of once per second.
 1. B-ASC panels shall store point history files for all analog and binary inputs and outputs.
 2. Measured and calculated analog and binary data shall also be assignable to user-definable trends.
 3. Trend data shall be stored at the stand-alone B-ASC panels, and uploaded to hard disk storage automatically at pre-configured intervals when archival is desired. B-ASC shall be equipped with enough storage for a minimum of 24 hours of trend data.
- J. Stand-alone B-ASC panels shall automatically accumulate and store runtime hours for binary input and output points.

- K. B-ASC panels shall automatically sample, calculate and store consumption totals on a daily, weekly or monthly basis for user-selected analog and binary pulse input-type points.
- L. B-ASC panels shall have the ability to count and/or execute events on a daily, weekly, or monthly basis.
- M. B-ASC for VAV ATUs application shall comply with the following:
1. B-ASC shall be provided with integral damper actuator. Actuator shall feature the following at a minimum:
 - a. 35 in-lbs of torque.
 - b. Brushless DC Operator.
 - c. Actual damper position feedback. Drive time or other software calculated damper position shall not be accepted.
 - d. Damper End Switch using motor current sense or equivalent for positive feedback of both end stop positions.
 - e. Software selectable rotation.
 2. Universal field device hardware inputs shall be provided and configured on hardware and/or in software and comply with the following:
 - a. Inputs shall accept dry-contact, thermistor, 4-20 mA, 0-5VDC, and 0-10VDC.
 - b. Pulse accumulation shall accommodate a minimum frequency of 40Hz.
 - c. Inputs shall have a minimum 10 Bit A/D conversion resolution.
 - d. 24VAC over-voltage protection.
 3. Hardware Outputs shall be configured on hardware and/or in software and comply with the following:
 - a. Universal Outputs shall provide configurable modulating signal to industry 0-5VDC, 0-10VDC, and 4-20 mA analog control devices and relays.
 - b. Each TRIAC Output shall source 500 mA current, 24 VAC 0.5 ACA.
 - c. Universal Output shall be capable of sourcing 75mA at 12VDC.
 - d. Outputs shall have a minimum 8 Bit D/A conversion resolution.
 - e. 24VAC over-voltage and short protection.
 4. Airflow Calibration, Test and Air Balance, etc. shall be performed via dedicated handheld configuration tool connected directly to communication port located at ATU B-ASC sensor. Special proprietary software and/or applications loaded on a computer, tablet or other similar device shall not be acceptable to perform this function.
 5. B-ASC shall provide diagnostic LEDs for power, communications and processor status. The B-ASC shall continually check the status of its processor and memory circuits.
- N. B-ASC for unitary applications shall comply with the following:
1. B-ASC shall provide diagnostic LEDs for power, communications and processor status. The B-ASC shall continually check the status of its processor and memory circuits.
 2. Controller wiring terminals shall be removable terminal strips for ease of installation and service replacement.
 3. Universal field device hardware inputs shall be provided and configured on hardware and/or in software and comply with the following:
 - a. Inputs shall accept dry-contact, thermistor, 4-20 mA, and 0-5VDC.
 - b. Pulse accumulation shall accommodate a minimum frequency of 40Hz.
 - c. Inputs shall have a minimum 10 Bit A/D conversion resolution.
 - d. 24VAC over-voltage protection.
 4. Hardware Outputs shall be configured on hardware and/or in software and comply with the following:

- a. Universal Outputs shall provide configurable modulating voltage signal to industry 0-5VDC and 0-10VDC analog control devices and relays.
 - b. Each TRIAC Output shall source 500 mA current, 24 VAC 0.5 ACA.
 - c. Universal Output shall be capable of sourcing 75mA at 12VDC.
 - d. Outputs shall have a minimum 8 Bit D/A conversion resolution.
 5. 24VAC over-voltage and short protection.
- O. Control System Application Software:
1. The B-ASC application software shall be the same as and indistinguishable from the B-BC specified interaction with the Control System Application Software.
 2. The controller software shall reside in a real time, multi-tasking, networking operating environment. Database definition shall be accomplished through the B-AWS online with the B-ASC. The complete database and application program shall reside in the B-ASC. Configure the software to attain the proper sequence of control and to accomplish all other control system functions indicated in the Contract Documents.
 3. The user shall be able to add, delete, or modify objects on-line as required. The programming shall provide all the necessary mathematics, logic, utility and control functions necessary for proper sequence of control.
- P. Communications and Protocols
1. When connected to the Tier 2 network, the B-ASC shall communicate with field devices and controllers using the BACnet physical IP data link. The B-ASC shall support daisy chain, star, or IP ring topology as required.
 2. When connected to the Tier 3 network, The B-ASC shall communicate with field devices and controllers using the BACnet physical data link MS/TP at 76.8 Kbps where not limited by third party devices such as variable frequency drives, utility meters, etc.
 3. The B-ASC shall provide a communications port for connection of the Portable Operators Terminal using Point-to-Point BACnet physical data link layer protocol or a connection to the inter-network.
 4. B-ASC shall support, transmit, and receive of segmented messages.
- Q. I/O Interface: Hardwired inputs and outputs may tie into system through controllers. Protect points so that shorting will cause no damage to controllers.
1. Binary Inputs: Allow monitoring of on-off signals without external power.
 2. Pulse Accumulation Inputs: Accept up to 10 pulses per second.
 3. Analog Inputs: Allow monitoring of low-voltage (0- to 10-V dc), current (4 to 20 mA), or resistance signals.
 4. Binary Outputs: Provide on-off or pulsed low-voltage signal, selectable for normally open or normally closed operation with three-position (on-off-auto) override switches and status lights.
 5. Analog Outputs: Provide modulating signal, either low voltage (0- to 10-V dc) or current (4 to 20 mA) with status lights, two-position (auto-manual) switch, and manually adjustable potentiometer.
 6. Tri-State Outputs: Provide two coordinated binary outputs for control of three-point, floating-type electronic actuators.
 7. Universal I/Os: Provide software selectable binary or analog outputs.
- R. Power Supplies: Transformers with Class 2 current-limiting type or overcurrent protection; limit connected loads to 80 percent of rated capacity. DC power supply shall match output current and voltage requirements and be full-wave rectifier type with the following:
1. Output ripple of 5.0 mV maximum peak to peak.

2. Combined 1 percent line and load regulation with 100-mic.sec. response time for 50 percent load changes.
3. Built-in overvoltage and overcurrent protection and be able to withstand 150 percent overload for at least 3 seconds without failure.

2.7 ENCLOSURES AND SUB-PANELS

- A. Provide pedestal base or wall mounted local control enclosure to house all control components associated with each area, system or mechanical equipment room.
 1. The enclosures shall be minimum 16 gauge steel or aluminum, totally enclosed on all sides and painted with a baked enamel finish. All enclosures must maintain a minimum separation of 1" from the back wall.
 2. Enclosures located in wet indoor conditions or located outdoors shall meet NEMA 4X.
 3. Penetrations are permitted on bottom of enclosure only. Do not make conduit penetrations in top or side of enclosure. Each enclosure shall be equipped with a wire gutter below with a minimum of six ¾" minimum conduit penetrations into the bottom of the enclosure to accommodate system wiring.
 4. Where required by AHJ, enclosures located in mechanical or electrical rooms shall meet NEMA 2 requirements.
 5. Enclosures located in all other locations including but not limited to mechanical or electrical rooms not requiring NEMA 2, occupied spaces, above ceilings and plenums shall be the same NEMA classification as all other enclosures located in the same environment, except if location requires additional protection due to potential vandalism or environmental conditions and shall at a minimum meet NEMA 1 requirements.
 6. Enclosures provided as an integral (pre-packaged) part of another product and/or piece of equipment are acceptable.
 7. Provide a continuous piano hinged door, keyed locking latch and removable sub-panel. A single key shall be common to all control enclosures.
- B. Provide each DDC panel with a line filter, surge suppressor, electrical disconnect, control fuse, and control transformer.
- C. Provide power supplies located inside control enclosures shall be fully enclosed with external 24 Vac terminals, on/off control, equipment overcurrent protection, power indication, high/low voltage separation, and convenience 120VAC outlets.
- D. Provide insulated, modular, feed-through, clamp-style terminal blocks suitable for rail-mounting with end plates and partitions for the termination of all field wiring in control enclosures. Field wiring to equipment with integral terminals and/or unitary equipment (i.e., VAVs ATUs, EFs, &c.) shall not be required to have terminal blocks.
- E. Rail mounted terminal blocks shall be color coded to match the associated conductor colors.
- F. All DDC control enclosures and panels shall be permanently labeled with engraved plastic nameplates, white with black center cores.
- G.

2.8 TEMPERATURE SENSORS

- A. Description: Vibration and corrosion resistant; for wall, immersion, or duct mounting as required.
- B. Platinum RTDs: Common Requirements:
1. 100 or 1000 ohms at zero deg C and a temperature coefficient of 0.00385 ohm/ohm/deg C.
 2. Two-wire, PTFE-insulated, 22-gage stranded copper leads.
 3. Performance Characteristics:
 - a. Range: Minus 50 to 275 deg F (Minus 46 to 135 deg C).
 - b. Interchangeable Accuracy: At 32 deg F (zero deg C) within 0.5 deg F (0.3 deg C).
 - c. Repeatability: Within 0.5 deg F (0.3 deg C).
 - d. Self-Heating: Negligible.
 4. Transmitter Requirements:
 - a. Transmitter required for each 100-ohm RTD.
 - b. Transmitter optional for 1000-ohm RTD, contingent on compliance with end-to-end control accuracy.
- C. Platinum RTD, Single-Point Air Temperature Duct Sensors:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Minco; S400 Series PD or PF.
 - b. BEC Controls Corporation.
 - c. MAMAC Systems, Inc.
 - d. RDF Corporation.
 2. 1000 ohms.
 3. Temperature Range: Minus 50 to 275 deg F (Minus 45 to 135 deg C).
 4. Probe: Single-point sensor with a stainless-steel sheath.
 5. Length: As required by application to achieve tip at midpoint of air tunnel, up to 18 inches ((450 mm) long).
 6. Enclosure: Junction box with removable cover; NEMA 250, Type 1 for indoor applications and Type 4 for outdoor applications.
 7. Gasket for attachment to duct or equipment to seal penetration airtight.
 8. Conduit Connection: 1/2-inch ((16-mm) trade size.)
- D. Platinum RTD, Air Temperature Averaging Sensors:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Minco; S400 Series PD or PF.
 - b. BEC Controls Corporation.
 - c. MAMAC Systems, Inc.
 - d. RDF Corporation.
 2. 1000 ohms.
 3. Temperature Range: Minus 50 to 275 deg F (Minus 45 to 135 deg C).
 4. Multiple sensors to provide average temperature across entire length of sensor.
 5. Rigid probe of aluminum, brass, copper, or stainless-steel sheath.
 6. Flexible probe of aluminum, brass, copper, or stainless-steel sheath and formable to a 4-inch (100-mm) radius.
 7. Length: As required by application to cover entire cross section of air tunnel.
 8. Enclosure: Junction box with removable cover; NEMA 250, Type 1 for indoor applications and Type 4 for outdoor applications.

9. Gasket for attachment to duct or equipment to seal penetration airtight.
 10. Conduit Connection: 1/2-inch (16-mm) trade size.)
- E. Platinum RTD Outdoor Air Temperature Sensors:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Minco; S400 Series PD or PF.
 - b. BEC Controls Corporation.
 - c. MAMAC Systems, Inc.
 - d. RDF Corporation.
 2. 1000 ohms.
 3. Temperature Range: Minus 50 to 275 deg F (Minus 45 to 135 deg C).
 4. Probe: Single-point sensor with a stainless-steel sheath.
 5. Solar Shield: Stainless steel.
 6. Enclosure: NEMA 250, Type 4 or 4X junction box or combination conduit and outlet box with removable cover and gasket.
 7. Conduit Connection: 1/2-inch (16-mm) trade size.
- F. Platinum RTD Space Air Temperature Sensors:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Minco; S400 Series PD or PF.
 - b. BEC Controls Corporation.
 - c. MAMAC Systems, Inc.
 - d. RDF Corporation.
 2. 1000 ohms.
 3. Temperature Range: Minus 50 to 212 deg F ((Minus 45 to 100 deg C).)
 4. Sensor assembly shall include a temperature sensing element mounted under a bright white, non-yellowing, plastic cover.
 5. Provide a mounting plate that is compatible with the surface shape that it is mounted to and electrical box used.
 6. Concealed wiring connection.
- G. Space Air Temperature Sensors for Use with DDC Controllers Controlling Terminal Units:
1. 1000-ohm platinum RTD.
 2. Temperature Transmitter Requirements:
 - a. Mating transmitter required with each 100-ohm RTD.
 - b. Mating transmitters optional for 1000-ohm RTD and thermistor, contingent on compliance with end-to-end control accuracy.
 3. Provide digital display of sensed temperature.
 4. Provide sensor with local control.
 - a. Local override to turn HVAC on.
 - b. Local adjustment of temperature set point.
 - c. Both features shall be capable of manual override through control system operator.
- H. Room sensor accessories include the following:
1. Insulating Bases: For sensors located on exterior walls.
 2. Sensor Protective Guards: Locking; heavy-duty, transparent plastic; mounted on separate base.
 - a. Adjusting Key: As required for calibration and cover screws.
- I. Liquid Temperature Sensors
1. RTD, Commercial Grade:

- a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Automation Components, Inc. (ACI)
 - 2) MAMAC Systems, Inc.
 - 3) Dwyer Instruments, Inc.
 - 4) Approved performance equal.
- 2. Description:
 - a. Platinum with a value of 100 or 1000 ohms at 0 deg C and a temperature coefficient of 0.00385 ohm/ohm/deg C.
 - b. Encase RTD in a stainless steel sheath with a 0.25-inch OD.
 - c. Sensor Length: 4, 6, or 8 inches as required by application.
 - d. Process Connection: Threaded, NPS 1/2.
 - e. Two-stranded copper lead wires.
 - f. Powder-coated steel enclosure, NEMA 250, Type 4.
 - g. Conduit Connection: 1/2-inch trade size.
 - h. Performance Characteristics:
 - 1) Range: Minus 40 to 210 deg F.
 - 2) Interchangeable Accuracy: Within 0.50 deg F at 32 deg F.
 - i. Thermowells, Commercial Grade:
 - 1) Stem: Straight shank formed from solid bar stock.
 - 2) Material: stainless steel.
 - 3) Process Connection: Threaded, NPS 3/4.
 - 4) Sensor Connection: Threaded, NPS 1/2.
 - 5) Bore: Sized to accommodate sensor with tight tolerance between sensor and well.
 - 6) Furnish thermowells installed in insulated pipes and equipment with an extended neck.
 - 7) Length: 4, 6, or 8 inches as required by application.
 - 8) Thermowells furnished with heat-transfer compound to eliminate air gap between wall of sensor and thermowell and to reduce time constant.

2.9 HUMIDITY SENSORS

- A. Humidity Sensors: Bulk polymer sensor element.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BEC Controls Corporation.
 - b. General Eastern Instruments.
 - c. MAMAC Systems, Inc.
 - d. ROTRONIC Instrument Corp.
 - e. Vaisala.
 - 2. Accuracy: 5 percent full range with linear output.
 - 3. Room Sensor Range: 20 to 80 percent relative humidity.
 - 4. Room Sensor Cover Construction: Manufacturer's standard locking covers.
 - a. Set-Point Adjustment: Concealed.
 - b. Set-Point Indication: Concealed.
 - c. Thermometer: Concealed.
 - d. Color: White.
 - e. Orientation: Vertical.
 - 5. Duct Sensor: 20 to 80 percent relative humidity range with element guard and mounting plate.

6. Outside-Air Sensor: 20 to 80 percent relative humidity range with mounting enclosure, suitable for operation at outdoor temperatures of minus 40 to plus 170 deg F (minus 40 to plus 76 deg C).
7. Duct and Sensors: With element guard and mounting plate, range of 0 to 100 percent relative humidity.

2.10 PRESSURE SENSORS

1. Manufacturers; Subject to compliance with requirements, provide products by one of the following:
 - a. BEC Controls Corporation.
 - b. General Eastern Instruments.
 - c. MAMAC Systems, Inc.
 - d. ROTRONIC Instrument Corp.
 - e. Setra
 - f. Vaisala.
2. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.
 - a. Accuracy: 2 percent of full scale with repeatability of 0.5 percent.
 - b. Output: 4 to 20 mA.
 - c. Building Static-Pressure Range: 0- to 0.25-inch wg (0 to 62 Pa).
 - d. Duct Static-Pressure Range: 0- to 5-inch wg (0 to 1240 Pa).
3. Water Pressure Transducers: Stainless-steel diaphragm construction, suitable for service; minimum 150-psig (1034-kPa) operating pressure; linear output 4 to 20 mA.
4. Water Differential-Pressure Transducers: Stainless-steel diaphragm construction, suitable for service; minimum 150-psig (1034-kPa) operating pressure and tested to 300-psig (2070-kPa); linear output 4 to 20 mA.
5. Pressure Transmitters: Direct acting for gas, liquid, or steam service; range suitable for system; linear output 4 to 20 mA.

2.11 STATUS SENSORS

- A. Status Inputs for Fans:
 1. Differential-pressure switch with pilot-duty rating and with adjustable range of 0- to 5-inch wg (0 to 1240 Pa).
 2. Comply with ISA 50.00.01, current-sensing fixed- or split-core transformers with self-powered transmitter, adjustable and suitable for 175 percent of rated motor current.
- B. Status Inputs for Pumps:
 1. Differential-pressure switch with pilot-duty rating and with adjustable pressure-differential range of 8 to 60 psig (55 to 414 kPa), piped across pump.
 2. Comply with ISA 50.00.01, current-sensing fixed- or split-core transformers with self-powered transmitter, adjustable and suitable for 175 percent of rated motor current.
- C. Status Inputs for Electric Motors: Comply with ISA 50.00.01, current-sensing fixed- or split-core transformers with self-powered transmitter, adjustable and suitable for 175 percent of rated motor current.
- D. Voltage Transmitter (100- to 600-V ac): Comply with ISA 50.00.01, single-loop, self-powered transmitter, adjustable, with suitable range and 1 percent full-scale accuracy.

- E. Power Monitor: 3-phase type with disconnect/shorting switch assembly, listed voltage and current transformers, with pulse kilowatt hour output and 4- to 20-mA kW output, with maximum 2 percent error at 1.0 power factor and 2.5 percent error at 0.5 power factor.
- F. Current Switches: Self-powered, solid-state with adjustable trip current, selected to match current and system output requirements.
- G. Electronic Valve/Damper Position Indicator: Visual scale indicating percent of travel and 2- to 10-V dc, feedback signal.
- H. Differential-Pressure Switch (Air or Water): Snap acting, with pilot-duty rating and with suitable scale range and differential.
 - 1. Manufacturers; Subject to compliance with requirements, provide products by one of the following:
 - a. BEC Controls Corporation.
 - b. I.T.M. Instruments Inc.
- I. Low Temperature Switch for Duct Applications:
 - 1. Manufacturers; Subject to compliance with requirements, provide products by one of the following:
 - a. Johnson Controls
 - b. Siemens
 - c. Approved performance equal.
 - 2. Description:
 - a. Two-position control.
 - b. Field-adjustable set point.
 - c. Manual reset.
 - d. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - 3. Performance:
 - a. Operating Temperature Range: 15 to 55 deg F.
 - b. Temperature Differential: 5 deg F, non-adjustable and additive.
 - c. Enclosure Ambient Temperature: Minus 20 to 140 deg F.
 - d. Sensing Element Maximum Temperature: 250 deg F.
 - e. Voltage: 120-V ac.
 - f. Current: 16 FLA.
 - g. Switch Type: Two SPDT snap switches operate on coldest 12-inch section along element length.
 - 4. Construction:
 - a. Vapor-Filled Sensing Element: Nominal 20 ft long.
 - b. Dual Temperature Scale: Fahrenheit and Celsius visible on face.
 - c. Set-Point Adjustment: Screw.
 - d. Enclosure: Painted metal, NEMA 250, Type 1.
 - e. Electrical Connections: Screw terminals.
 - f. Conduit Connection: 1/2-inch trade size.

2.12 OCCUPANCY SENSORS

- A. Manufacturers; Subject to compliance with requirements, provide products by one of the following:

1. Veris
 2. Kele
 3. Approved performance equal.
- B. Description: Wall- or ceiling-mounted, solid-state units with a separate relay unit.
- C. General Requirements for Sensors:
1. Sensor Operation: Unless otherwise indicated, operate HVAC according to occupied mode when covered area is occupied and operate HVAC according to unoccupied mode when unoccupied; with a time delay for turning off, adjustable over a minimum range of 1 to 15 minutes.
 2. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor powered from the relay unit.
 3. Relay Unit: Dry contacts rated for 20 A load at 120 and 277 Vac. Power supply to sensor is to be 24 V dc, 150 mA, Class 2 power source as defined by NFPA 70.
 4. DDC System Connection: Hardwired.
 5. Mounting:
 - a. Sensor: Suitable for mounting in any position in a standard device box or outlet box.
 - b. Relay: Externally mounted through a 1/2-inch knock out in a standard electrical enclosure.
 - c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
 6. Indicator: Digital display, to show when motion is being detected during testing and normal operation of the sensor.
 7. Bypass Switch: Override the on function in case of sensor failure.
 8. Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
- D. Motion Sensors - Passive Infrared: Ceiling or wall mounting; detect occupancy by sensing a combination of heat and movement in coverage area.
1. Detector Sensitivity: Detect occurrences of 6-inch- minimum movement of any portion of a human body that presents a target of not less than 36 sq. in.
 2. Detection Coverage (Room, Ceiling Mounted): Detect occupancy anywhere in a circular area of 1000 sq. ft. when mounted on a 96-inch-high ceiling.
 3. Detection Coverage (Room, Wall Mounted): Detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of 2000 sq. ft. when mounted 48 inches above finished floor.
 4. Detection Coverage (Corridor, Ceiling Mounted): Detect occupancy within 90 ft. when mounted on a 10-foot-high ceiling.
 5. Actual sensor quantity and placement shall be verified during installation and commissioning to ensure complete zone coverage. Additional sensors shall be provided as required to eliminate detection gaps caused by room geometry, furnishings, partitions, or other obstructions.
- 2.13 CARBON MONOXIDE SENSORS

- A. Manufacturers; Subject to compliance with requirements, provide products by one of the following:
1. MSA

2. Armstrong Monitoring
 3. Greystone Energy Systems, Inc.
 4. Honeywell
 5. Intec Controls, Inc.
 6. Dwyer
 7. Approved performance equal.
- B. Description: Electrochemical measurement technology or equivalent technology that provides performance indicated, long-term stability, and reliability. Sensors with a 3-year minimum life.
1. Individual Sensor/Transmitter Applications: Each sensor/transmitter connected directly to DDC system.
 2. Multiple Sensor/Transmitters for Zoned Applications: Multiple sensor/transmitters arranged in zones as indicated on Drawings and directly connected to carbon monoxide monitoring system controller; furnished with sensors and transmitters as part of a complete system furnished by single manufacturer.
- C. Performance:
1. Carbon Monoxide Concentration Range: Zero to 100 ppm.
 2. Accuracy: Within 5 percent of full-scale range.
 3. Ambient Temperature: 0 to 104 deg F.
- D. Sensor and Transmitter Output Signals:
1. Analog Output Signal: 4 to 20 mA.
 2. 2 factory-calibrated alarm levels at 50 and 100 ppm
- E. Sensor and Transmitter Construction:
1. Enclosure: Painted metal or plastic
 2. Electrical Connections: Screw terminals
- F. Calibration Kit: Provide kit and turn over to Owner at start of warranty period.
- 2.14 CARBON DIOXIDE SENSORS
- A. Manufacturers; Subject to compliance with requirements, provide products by one of the following:
1. Vaisala
 2. Armstrong Monitoring
 3. Greystone Energy Systems, Inc.
 4. Honeywell
 5. Intec Controls, Inc.
 6. Veris
 7. Approved performance equal.
- B. Description:
1. NDIR or equivalent technology that provides performance indicated, long-term stability, and reliability.
- C. Performance:
1. Carbon Dioxide Concentration Range: Zero to 2000 ppm.
 2. Accuracy: Within 3 percent of reading, plus or minus 40 ppm.
 3. Response Time: Within 60 seconds.

4. Warm-up Time: Within 3 minute(s).
5. Ambient Relative Humidity: Zero to 95 percent noncondensing.
6. Ambient Temperature: 32 to 122 deg F.

D. Output Signals:

1. Analog Output Signal: 4 to 20 mA output signal, linearized to carbon dioxide concentration in parts per million (ppm).

E. Construction:

1. Enclosure: Painted metal or plastic.
2. Electrical Connections: Screw terminals.

F. Calibration Kit: Provide kit and turnover to Owner at start of warranty period.

2.15 OXYGEN SENSORS

A. Manufacturers; Subject to compliance with requirements, provide products by one of the following:

1. PureAire
2. MSA
3. Honeywell
4. Armstrong Monitoring
5. Intec Controls, Inc.
6. Approved performance equal.

B. Description: Single wall mounted detector using long-life zirconium oxide sensor cell or electrochemical sensor technology that provides performance indicated, long-term stability, and reliability.

C. Performance:

1. Oxygen Concentration Range: Zero to 25%.
2. Accuracy: Within 1 percent of full-scale range.
3. Ambient Temperature: Minus 40 to 140 deg F.

D. Sensor and Transmitter Output Signals:

1. Analog Output Signal: 4 to 20 mA.
2. 2 SPDT relay contacts

E. Sensor and Transmitter Construction:

1. Enclosure: Painted metal or plastic

F. Installation Requirements:

1. Mounting Height: 4 to 5 feet above finished floor (breathing zone height).
2. Alarm Devices: Provide strobe light and horn outside monitored space. Strobe must be visible from 50 feet; horn must be ≥ 90 dB at 10 feet.
3. Alarm Activation: Triggered when oxygen level falls below 19.5%.
4. Alarm Reset: Automatic reset when oxygen levels normalize.
5. Signage: Install EHRS-approved signage on all entry doors indicating potential oxygen deficiency hazard.

2.16 REFRIGERANT VAPOR DETECTION SYSTEM

- A. Provide a refrigerant vapor detection system to meet the latest version of ASHRAE 15 and the applicable local codes. The system shall sample and monitor a minimum of two (2) remote sampling points per Chiller.
- B. Provide the following accessories:
 - 1. One alarm relay for each level of alarm and one relay for flow failure or horn silence. Failure relay output that shall energize upon failure of monitor system operation. Failures include but are not limited to the following: low airflow through monitor, power circuit failure, and a saturated or absent sensor signal.
 - 2. Analog Output 4-20 mA or 0-5 VDC.
 - 3. Enclosure type: NEMA 4X.
- C. Sampling Tubing shall be Type L or hard drawn copper tubing.
- D. The read out/control unit shall be wall mounted pursuant with contract drawings. Remote sampling points shall be located within the central plant area according to the drawings.

2.17 LIQUID LEAK DETECTION SWITCHES

- A. Point-Type, Leak-Detection Switches:
 - 1. Manufacturers; Subject to compliance with requirements, provide products by one of the following:
 - a. Kele
 - b. Bapi
 - c. Greystone
 - d. Approved performance equal.
 - 2. Features:
 - a. Alarms: Visual alarm with relay output for remote indication.
 - b. Operation: Alarm activation based on detection of liquid by change in resistance.
 - 3. Performance:
 - a. Field Power: 24 V ac or dc.
 - b. Service: Water.
 - c. Temperature Limits: 32 to 122 deg F.
 - d. Sensing Height: Adjustable.
 - 4. Construction:
 - a. Enclosure: Acrylic, ABS plastic or painted metal.
 - b. Switch Type: SPDT relay.
- B. Cable-Type, Leak-Detection Switches:
 - 1. Manufacturers; Subject to compliance with requirements, provide products by one of the following:
 - a. Kele
 - b. Bapi
 - c. Greystone
 - d. Approved performance equal.
 - 2. Control Module Features:
 - a. Power and alarm LEDs.
 - b. Continuous cable integrity self-check.

3. Performance:
 - a. Service: Water or other conductive liquid.
 - b. Switch Type: 2 SPDT relays
4. Construction:
 - a. Control Module Enclosure: Painted metal.
 - b. Cable: Hydrophobic.
 - c. Cable Length: As required by application.
5. Field Power: 24 V ac or 24 to 30 V dc unless otherwise required by application.

2.18 WATER FLOW METERS

- A. Manufacturers; Subject to compliance with requirements, provide products by one of the following:
 1. Onicon F-3200 Series
 2. Approved performance equal.
- B. Description: In-line body flow meter using electromagnetic technology.
 1. No moving parts.
 2. Continuous auto-zero function.
 3. Inherent bidirectional flow measurement.
 4. Flow-measurement applications with three pipe diameters upstream and two pipe diameters downstream.
- C. Factory Calibration: Wet calibrate each meter to standards traceable to NIST. Tag each meter and provide each meter with a certificate of calibration.
- D. Performance:
 1. Ambient Temperature: Minus 4 to plus 140 deg F.
 2. Conductivity: Suitable for flow measurement of fluids with electrical conductivity greater than 5 microseimens per centimeter.
 3. Flow Velocity Range: 0.1 to 33 fps.
 4. Flow Accuracy: Within 0.2 percent of reading for flow velocities between 1.6 to 33 fps and within 0.0033 fps of reading for flow velocities 1.6 fps and less.
 5. Process Pressure and Temperature: Suitable for system maximum operating pressure and temperature.
 6. Pressure Drop: No permanent pressure drop.
- E. Analog Output Current Signal:
 1. Two-wire, 4 to 20 mA dc current source.
 2. Digital Output Signal: Two, programmable, digital/pulse outputs configurable for frequency, pulse, or directional flow.
 3. Communication Interface: BACnet IP or BACnet MS/TP capable with associated flow meter display.
 4. Operator Interface: Keypad with backlit digital display.
 - a. Each flow meter shall be factory programmed for its specific application, and shall be re-programmable using the integral keypad on the converter (no special interface device or computer required). Each flow meter shall be covered by the manufactures two-year warranty.
 5. Multiple-line digital display of alphanumeric characters.
 6. LED for normal and alarm operation.

F. Construction:

1. Body Material: Epoxy-coated carbon steel.
2. PTFE body liner offers better performance over larger size and temperature range. Consult manufacturer for other liner options.
3. Body Liner Material: Polypropylene or Ebonite for low temperature service, PTFE for hot water service.
4. Flow Tube Material: Type 304 or 316 stainless steel.
5. Body End Connections: ASME B16.5, Class 150 or 300 as required by pressure and temperature.
6. Electrodes: Type 316 stainless steel. Quantity determined by manufacturer based on application.
7. Electronics Enclosure:
 - a. Location: Integral or remote from meter body.
 - b. Material: Painted aluminum.
 - c. Removable cover.
 - d. Rating: NEMA 250, Type 4, 4X, or 6.
8. For installations in non-metallic pipe, install grounding rings between flanges.

2.19 HYDRONIC THERMAL ENERGY (BTU) METERS

A. Manufacturers; Subject to compliance with requirements, provide products by one of the following:

1. Onicon System-10
2. Approved performance equal.

B. Description:

1. Factory-packaged meter consisting of supply and return temperature sensors, flow sensor, digital display, keypad user interface, installation hardware, color-coded interconnecting cabling, and installation instructions.
2. Factory calibrate each thermal energy meter and provide with calibration certification traceable to NIST.

C. Performance:

1. Ambient Operating Temperature: Minus 20 to plus 140 deg F.
2. Energy Calculation Nonlinearity: Within 0.05 percent.
3. Fluid Electrical Conductivity: Suitable for fluids with electrical conductivity greater than 5 microseimens per centimeter.
4. Flow Sensor: Refer to Section "WATER FLOW METERS" for flow sensor requirements.
5. Process Pressure and Temperature: Suitable for system maximum operating pressure and temperature.
6. Process Temperature Accuracy: Differential temperature accuracy within 0.15 deg F over the calibrated range.

D. Meter Display: Backlit, LCD alphanumeric display of the following on face of meter enclosure:

1. Total energy consumption.
2. Energy rate.
3. Flow rate.
4. Supply temperature.
5. Return temperature.

6. Visual indication of power status (on/off) on face of enclosure.
- E. Meter Electronics Enclosure:
 1. Remote mounted from temperature and flow sensors.
 2. Indoor Applications: NEMA 250, Type 4 or 13.
 3. Outdoor Applications: NEMA 250, Type 4.
 4. Labeled terminal strip for field wiring connections.
 5. Connections: Suitable for mating to field-installed conduit.
 - F. Power Supply:
 1. Field Power: 24, 120, 240 V ac, 50 or 60 Hz as required by the application.
 2. Internal Power: As required by flow meter.
 - G. Programming:
 1. Factory programmed for specific application and field programmable through keypad on face of enclosure.
 2. Programmed parameters and total energy consumption stored in non-volatile EEPROM memory.
 - H. Output Signals:
 1. Total Energy Consumption: Isolated solid-state dry contact with 100 mA, 50 V rating and contact duration of 0.5, 1, 2, or 6 seconds.
 2. Energy Rate, Flow Rate, Supply Temperature, Return Temperature: 4 to 20 mA or zero to 10 V dc for each.
 3. Communication Interface: BACnet IP or BACnet MS/TP capable to share total energy consumption, energy rate, flow rate, and supply and return temperature data.
 - I. Temperature Sensors:
 1. Enclosure: NEMA 250, Type 4 with conduit connections.
 2. Sensor Cable: As required by manufacturer for application.
 3. Temperature Range: Matched pair; suitable for application.
 4. Thermowells: Stainless steel; with NPT
- 2.20 DUCT AIR FLOW MEASURING STATIONS
- A. Manufacturers, Subject to compliance with requirements, provide products by one of the following:
 1. EBTRON, Inc.
 2. Onicon Incorporated.
 3. Approved performance equal.
 - B. General:
 1. Provide an EBTRON, Inc. model GTx116-P+ duct airflow measuring station.
 2. Airflow measurement devices shall use the principle of thermal dispersion and provide one self-heated bead-in-glass thermistor and one zero power bead-in-glass thermistor at each sensing node.
 - a. Thermal dispersion devices that indirectly heat a thermistor are not acceptable.
 3. Substitution requests for acceptance less than 60 days prior to bid date or products submitted in non-conformance with the requirements of this specification will not be considered.

- a. For any product to be considered for substitution, a written document shall be submitted to the engineer detailing exceptions and compliance, section-by-section with supporting documentation, before an approval will be considered.
 - b. Any product submitted as an equal shall be expected to comply with all performance capabilities and functional aspects of this specification.
- 4. Excluded devices
 - a. Fan Inlet airflow measurement devices.
 - b. Measurement technologies using chip-in-glass, chip-in-epoxy or other chip type thermistors for the heated sensor component are not acceptable.
 - c. Pitot tubes, Pitot arrays, Piezo rings and other differential pressure based devices are not acceptable.
 - d. Vortex shedding devices are not acceptable.
- C. Required product performance:
 - 1. Airflow Measurement Devices (AMD) with Temperature Output and Airflow Alarming Capability
 - 2. General
 - a. Provide one AMD for each measurement location provided on the plans, schedules and/or control diagrams to determine the average airflow rate and temperature at each measurement location.
 - b. Each AMD shall be provided with a microprocessor-based transmitter and one or more sensor probes.
 - 1) Devices that have electronic signal processing components on or in the sensor probe are not acceptable.
 - c. Airflow measurement shall be field configurable to determine the average Actual or Standard mass airflow rate.
 - 1) Actual airflow rate calculations shall have the capability of being corrected by the transmitter for altitudes other than sea level.
 - d. Temperature measurement shall be field configurable with velocity weighted average as the default, or manual selection of arithmetic average temperature.
 - 3. Sensor Probes
 - a. Sensor probes shall be constructed of gold anodized, 6063 aluminum alloy tube, 316 stainless steel tube are available when required.
 - b. Sensor probe mounting brackets shall be constructed of 304 stainless steel.
 - c. Probe internal wiring between the connecting cable and sensor nodes shall be Kynar coated copper.
 - 1) PVC jacketed internal wiring is not acceptable.
 - d. Probe internal wiring connections shall consist of solder joints and spot welds.
 - 1) Internal wiring connections shall be sealed and protected from the elements. They shall be capable of direct exposure to water without affecting instrument operation.
 - 2) Connectors of any type within the probe are not acceptable.
 - 3) Printed circuit boards within the probe are not acceptable.
 - e. Each sensor probe shall be provided with an integral, FEP jacket, plenum rated CMP/CL2P, UL/cUL Listed cable rated for exposures from -67° F to 392° F (-55° C to 200° C) and continuous and direct UV exposure.
 - 1) Plenum rated PVC jacket cables are not acceptable.
 - f. Each sensor probe cable shall be provided with a connector plug with gold plated pins for connection to the transmitter.
 - g. Each sensor probe shall contain one or more independently wired sensing nodes.

- h. Sensor node airflow and temperature calibration data shall be stored in a serial memory chip in the cable connecting plug and not require matching or adjustments to the transmitter in the field.
 - i. Each sensor node shall be provided with two bead-in-glass, hermetically sealed thermistors potted in a marine grade waterproof epoxy with sensor housings constructed of glass-filled polypropylene. Upon request, the manufacture shall provide a written independent laboratory test result of 100% survival rate in a 30 day saltwater and acid vapor test.
 - 1) Devices that use epoxy or glass encapsulated chip thermistors are not acceptable.
 - 2) Devices with exposed leads are not acceptable.
 - j. Each thermistor shall be individually calibrated at a minimum of 3 temperatures to NIST-traceable temperature standards.
 - k. Each sensor node shall be individually calibrated at 16 measurement points to airflow standards directly calibrated at NIST to the NIST Laser Doppler Anemometer (LDA) primary velocity standard and have an accuracy of $\pm 2\%$ of reading over the entire calibrated airflow range of 0 to 5,000 FPM (25.4 m/s).
 - 1) Upon request the manufacture shall submit for AMD approval a copy of the NIST report of calibration used for the reference standard used.
 - a) Devices claiming NIST traceability to third party laboratories and not directly to NIST are not acceptable.
 - b) Devices calibrated against standards other than the NIST LDA are not acceptable.
 - l. Accuracy shall include the combined uncertainty of the sensor nodes and transmitter.
 - m. The installed airflow accuracy shall be:
 - 1) Ducts - $\pm 3\%$ of reading when installed in accordance with the manufactures recommended placement guidelines.
 - 2) Non-ducted Outdoor Air intakes better than or equal to $\pm 5\%$ of reading when installed in accordance with the manufactures recommended placement guidelines.
 - n. Devices whose overall accuracy is based on individual accuracy specifications of the sensor probes and transmitter shall demonstrate compliance with this requirement over the entire operating range.
 - o. Each sensing node shall have a temperature accuracy of $\pm 0.15^\circ \text{F}$ (0.08°C) over an operating range of -20°F to 160°F . (-28.9°C to 71.1°C) and humidity range of 0 to 100% RH.
4. Transmitter
- a. A remotely located microprocessor-based transmitter shall be provided for each measurement location.
 - b. The transmitter shall be comprised of a main circuit board and interchangeable interface card.
 - c. All printed circuit board interconnects, edge fingers, receptacle plug pins and PCB test points shall be gold plated.
 - d. All printed circuit boards shall be electroless nickel immersion gold (ENIG) plated.
 - e. All integrated circuitry shall be temperature rated as industrial-grade. Submissions containing commercial-grade integrated circuitry are not acceptable.
 - f. The transmitter shall be capable of determining the airflow rate and temperature average of all connected sensor nodes in an array for a single location.

- 1) Separate integration buffers shall be provided for display airflow output, airflow signal output (analog and network) and individual sensor output (IR-interface).
- g. The transmitter shall be capable of providing a high and/or low airflow alarm with user-defined set point and % of set point tolerance. Alarm shall be capable of being manually or automatically reset and low-limit cutoff value may be selected to disable the alarm. An alarm delay function shall also be field defined.
- h. The transmitter shall be capable of identifying an AMD malfunction via the system status alarm and ignore any sensor node that is in a fault condition.
- i. The transmitter shall be capable of field configuration, diagnostics and include Field Output Adjustment Wizard that allows for a one or two point field adjustment to factory calibration for installations that require adjustment.
- j. The transmitter shall be provided with a 16-character, alpha-numeric, LCD display.
- k. The transmitter shall be provided with two field selectable (0-5/0-10 VDC or 4-20mA), scalable, isolated and over-current protected analog output signals (AO1=airflow, AO2=temperature or alarm), in combination with either of the following:
 - 1) one isolated RS-485 (field selectable BACnet MS/TP or Modbus RTU) network connection
 - 2) one isolated Ethernet (simultaneously supported BACnet Ethernet or BACnet IP, Modbus TCP and TCP/IP) network connection
- l. The analog signal capability shall include two output terminals: the first (AO1), shall provide the total airflow rate and the second output (AO2) shall be field configurable to provide temperature information.
- m. The transmitter shall also be available with a single isolated LonWorks Free Topology network interface. Transmitters shall be available alternatively with one USB connection for thumb-drive data logging of sensor data. Neither of these options shall include analog output signals.
- n. The network communications RS-485 (BACnet MS/TP or Modbus RTU) or Ethernet (BACnet Ethernet or BACnet IP, Modbus TCP and TCP/IP) shall provide: the average airflow rate, temperature, hi and/or low airflow set point alarm, system status alarm, individual sensor node airflow rates and individual sensor node temperatures. Individual node airflow rates and temperatures shall NOT be available via the network with Lon.
- o. The transmitter shall have an on-off power switch. Isolation transformers shall not be required.
- p. The transmitter shall be powered by 24 VAC (22.8 to 26.4 under load) @20 V-A maximum and use a switching power supply that is over-current and over-voltage protected.
- q. The transmitter shall use a watchdog timer circuit to ensure automatic reset after power disruption, transients and brown-outs.
- r. Each transmitter shall have an operating temperature range of -20° F to 120° F (-28.9° C to 48.9° C) and humidity range of 5 to 95% RH.
5. Listings and Certifications
 - a. The AMD shall be UL/cUL 873 Listed as an assembly.
 - 1) Devices claiming compliance with the UL Listing based on individual UL component listing are not acceptable.
 - b. All network-capable AMD models supplied with RS-485 interface and BACnet protocol shall be BTL Listed.

- c. The AMD shall be tested for compliance with the EMC Directive's requirements and be certified to carry the CE Mark for European Union Shipments.
- 6. Installation
 - a. Install in accordance with manufacturer's placement guidelines. A written report shall be submitted to the consulting mechanical engineer if any discrepancies are found.

2.21 FAN AIR FLOW MEASURING STATIONS

- A. Manufacturers; Subject to compliance with requirements, provide products by one of the following:
 - 1. EBTRON, Inc.
 - 2. Onicon Incorporated.
 - 3. Approved performance equal.
- B. General
 - 1. Provide an EBTRON, Inc. model GTx108-F fan airflow measuring device.
 - 2. Airflow measurement devices shall use the principle of thermal dispersion and provide one self-heated bead-in-glass thermistor and one zero power bead-in-glass thermistor at each sensing node.
 - a. Thermal dispersion devices that indirectly heat a thermistor are not acceptable.
 - 3. Substitution requests for acceptance less than 60 days prior to bid date or products submitted in non-conformance with the requirements of this specification will not be considered.
 - a. For any product to be considered for substitution, a written document shall be submitted to the engineer detailing exceptions and compliance, section-by-section with supporting documentation, before an approval will be considered.
 - b. Any product submitted as an equal shall be expected to comply with all performance capabilities and functional aspects of this specification.
 - 4. Excluded devices
 - a. Fan Inlet airflow measurement devices.
 - b. Measurement technologies using chip-in-glass, chip-in-epoxy or other chip-type thermistors for the heated sensor component are not acceptable.
 - c. Pitot tubes, Pitot arrays, Piezo rings and other differential pressure based devices are not acceptable.
 - d. Vortex shedding devices are not acceptable.
- C. Required product performance
 - 1. Airflow Measurement Devices (AMD) with Temperature Output and Airflow Alarming Capability
 - 2. General
 - a. Provide one AMD for each measurement location provided on the plans, schedules and/or control diagrams to determine the average airflow rate and temperature at each measurement location.
 - b. Each AMD shall be provided with a microprocessor-based transmitter and one or more sensor probes.
 - 1) Devices that have electronic signal processing components on or in the sensor probe are not acceptable.
 - c. Airflow measurement shall be field configurable to determine the average Actual or Standard mass airflow rate.

- 1) Actual airflow rate calculations shall have the capability of being corrected by the transmitter for altitudes other than sea level.
- d. Temperature measurement shall be field configurable with velocity weighted average as the default, or manual selection of arithmetic average temperature
3. Sensor probes
 - a. Sensor probes shall consist of one sensor node mounted on a 304 stainless steel block with two adjustable zinc plated steel rods connected to 304 stainless steel pivoting mounting feet.
 - b. Sensor node internal wiring connections shall be sealed and protected from the elements and suitable for direct exposure to water.
 - c. Each sensor probe shall be provided with an integral, FEP jacket, plenum rated CMP/CL2P, UL/cUL Listed cable rated for exposures from -67°F to 392 °F (-55° C to 200° C) and continuous and direct UV exposure.
 - 1) Plenum rated PVC jacket cables are not acceptable.
 - d. Each sensor probe cable shall be provided with a connector plug with gold plated pins for connection to the transmitter.
 - e. Sensor node airflow and temperature calibration data shall be stored in a serial memory chip in the cable connecting plug and not require matching or adjustments to the transmitter in the field.
 - f. Each sensor node shall be provided with two bead-in-glass, hermetically sealed thermistors potted in a marine grade waterproof epoxy with sensor housings constructed of glass-filled polypropylene. Upon request, the manufacture shall provide a written independent laboratory test result of 100% survival rate in a 30 day saltwater and acid vapor test.
 - 1) Devices that use epoxy or glass encapsulated chip thermistors are not acceptable.
 - 2) Devices with exposed leads are not acceptable.
 - g. Each thermistor shall be individually calibrated at a minimum of 3 temperatures to NIST-traceable temperature standards.
 - h. Each sensor node shall be individually calibrated at 16 measurement points to airflow standards directly calibrated at NIST to the NIST Laser Doppler Anemometer (LDA) primary velocity standard and have an accuracy of $\pm 2\%$ of reading over the entire calibrated airflow range of 0 to 10,000 FPM (50.8 m/s).
 - 1) Upon request the manufacture shall submit for AMD approval a copy of the NIST report of calibration used for the reference standard used.
 - a) Devices calibrated against standards other than the NIST LDA or against NIST temperature standards only are not acceptable.
 - 2) Accuracy shall include the combined uncertainty of the sensor nodes and transmitter.
 - 3) Devices whose overall accuracy is based on individual accuracy specifications of the sensor probes and transmitter shall demonstrate compliance with this requirement over the entire operating range.
 - i. Each sensing node shall have a temperature accuracy of $\pm 0.15^\circ \text{ F}$ (0.08° C) over an operating range of -20° F to 160° F (-28.9° C to 71.1° C) and humidity range of 0 to 100% RH.
 - j. The number of independent sensor nodes provided shall be as follows:
 - 1) SWSI and DWDI fans: 2 probes x 1 sensor node/per probe in each fan inlet
 - 2) Fan Arrays (1 to 8 fans): 2 probes x 1 sensor node probe in each fan inlet
4. Transmitter
 - a. A remotely located microprocessor-based transmitter shall be provided for each measurement location.

- b. The transmitter shall be comprised of a main circuit board and interchangeable interface card.
- c. All printed circuit board interconnects, edge fingers, and test points shall be gold plated.
- d. All printed circuit boards shall be electroless nickel immersion gold (ENIG) plated.
- e. All integrated circuitry shall be temperature rated as industrial-grade. Submissions containing commercial-grade integrated circuitry are not acceptable.
- f. The transmitter shall be capable of determining the airflow rate and temperature of each fan
 - 1) Separate integration buffers shall be provided for display airflow output, airflow signal output (analog and network) and individual sensor output (IR-interface).
- g. The transmitter shall have startup firmware to facilitate setup of multiple fans and fan areas.
- h. The transmitter shall be capable of providing a low and/or high airflow set point alarm.
- i. The transmitter shall be capable of providing individual fan alarming on fan array configurations.
- j. The transmitter shall be capable of identifying an AMD malfunction via the system status alarm and ignore any sensor node that is in a fault condition.
- k. The transmitter shall be capable of field configuration, diagnostics and include Field Output Adjustment Wizard that allows for a one or two point field adjustment to factory calibration for installations that require adjustment.
- l. The transmitter shall be provided with a 16-character, alpha-numeric, LCD display.
- m. The transmitter shall be provided with two field selectable (0-5/0-10 VDC or 4-20mA), scalable, isolated and over-current protected analog output signals (AO1=airflow, AO2=temperature or alarm), in combination with either of the following:
 - 1) One isolated RS-485 (field selectable BACnet MS/TP or Modbus RTU) network connection
 - 2) One isolated Ethernet (simultaneously supported BACnet Ethernet or BACnet IP, Modbus TCP and TCP/IP) network connection
- n. Analog signal capability shall include two output terminals: the first (AO1), shall provide the total airflow rate; while the second output (AO2) shall be field configurable to provide temperature.
- o. The transmitter shall also be available with a single isolated LonWorks Free Topology network interface. Transmitters shall be available alternatively with one USB connection for thumb-drive data logging of sensor data. Neither of these options shall include analog output signals.
- p. Network communications RS 485 (BACnet MS/TP or Modbus RTU) or Ethernet (BACnet Ethernet or BACnet IP, Modbus TCP and TCP/IP) shall provide: the average airflow rate, temperature, hi and/or low airflow set point alarm, system status alarm, individual sensor node airflow rates and individual sensor node temperatures. Individual node airflow rates and temperatures shall be available via the network with Lon.
- q. The transmitter shall have an on-off power switch. Isolation transformers shall not be required.

- r. The transmitter shall be powered by 24 VAC (22.8 to 26.4 under load) @16 V-A maximum and use a switching power supply that is over-current and over-voltage protected.
- s. The transmitter shall use a watchdog timer circuit to ensure automatic reset after power disruption, transients and brown-outs.
- t. Each transmitter shall have an operating range of -20° F to 120° F (-28.9° C to 48.9° C) and humidity range of 5 to 95% RH.
- 5. Listing and Certifications
 - a. The AMD shall be UL/cUL 873 Listed as an assembly;
 - 1) Devices claiming compliance with the UL Listing based on individual UL component listing are not acceptable.
 - b. All network-capable AMD models supplied with RS-485 interface and BACnet protocol shall be BTL Listed
- 6. Installation
 - a. Install in accordance with manufacturer's placement guidelines. A written report shall be submitted to the consulting mechanical engineer if any discrepancies are found.

2.22 THERMOSTATS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Erie Controls.
 - 2. Danfoss Inc.; Air-Conditioning and Refrigeration Div.
 - 3. Heat-Timer Corporation.
 - 4. Honeywell Controls.
 - 5. Sauter Controls Corporation.
 - 6. tekmar Control Systems, Inc.
 - 7. Theben AG - Lumilite Control Technology, Inc.
- B. Electric, solid-state, microcomputer-based room thermostat with remote sensor.
 - 1. Automatic switching from heating to cooling.
 - 2. Preferential rate control to minimize overshoot and deviation from set point.
 - 3. Set up for four separate temperatures per day.
 - 4. Instant override of set point for continuous or timed period from 1 hour to 31 days.
 - 5. Short-cycle protection.
 - 6. Programming based on every day of week.
 - 7. Selection features include degree F or degree C display, 12- or 24-hour clock, keyboard disable, remote sensor, and fan on-auto.
 - 8. Battery replacement without program loss.
 - 9. Thermostat display features include the following:
 - a. Time of day.
 - b. Actual room temperature.
 - c. Programmed temperature.
 - d. Programmed time.
 - e. Duration of timed override.
 - f. Day of week.
 - g. System mode indications include "heating," "off," "fan auto," and "fan on."

- C. Low-Voltage, On-Off Thermostats: NEMA DC 3, 24-V, bimetal-operated, mercury-switch type, with adjustable or fixed anticipation heater, concealed set-point adjustment, 55 to 85 deg F (13 to 30 deg C) set-point range, and 2 deg F (1 deg C) maximum differential.
- D. Line-Voltage, On-Off Thermostats: Bimetal-actuated, open contact or bellows-actuated, enclosed, snap-switch or equivalent solid-state type, with heat anticipator; listed for electrical rating; with concealed set-point adjustment, 55 to 85 deg F (13 to 30 deg C) set-point range, and 2 deg F (1 deg C) maximum differential.
 - 1. Electric Heating Thermostats: Equip with off position on dial wired to break ungrounded conductors.
 - 2. Selector Switch: Integral, manual on-off-auto.
- E. Remote-Bulb Thermostats: On-off or modulating type, liquid filled to compensate for changes in ambient temperature; with copper capillary and bulb, unless otherwise indicated.
 - 1. Bulbs in water lines with separate wells of same material as bulb.
 - 2. Bulbs in air ducts with flanges and shields.
 - 3. Averaging Elements: Copper tubing with either single- or multiple-unit elements, extended to cover full width of duct or unit; adequately supported.
 - 4. Scale settings and differential settings are clearly visible and adjustable from front of instrument.
 - 5. On-Off Thermostat: With precision snap switches and with electrical ratings required by application.
 - 6. Modulating Thermostats: Construct so complete potentiometer coil and wiper assembly is removable for inspection or replacement without disturbing calibration of instrument.

2.23 HUMIDISTATS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. MAMAC Systems, Inc.
 - 2. ROTRONIC Instrument Corp.
- B. Duct-Mounting Humidistats: Electric insertion, 2-position type with adjustable, 2 percent throttling range, 20 to 80 percent operating range, and single- or double-pole contacts.

2.24 ACTUATORS

- A. Electric Motors: Size to operate with sufficient reserve power to provide smooth modulating action or two-position action.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Belimo Aircontrols (USA), Inc.
 - b. Siemens.
 - c. Johnson Controls.
 - d. Alerton.
 - e. Delta Controls.
 - f. IMI TA / Victaulic.
 - 2. Comply with requirements in Section 23 0513 "Common Motor Requirements for HVAC Equipment."

3. Permanent Split-Capacitor or Shaded-Pole Type: Gear trains completely oil immersed and sealed. Equip spring-return motors with integral spiral-spring mechanism in housings designed for easy removal for service or adjustment of limit switches, auxiliary switches, or feedback potentiometer.
 4. Nonspring-Return Motors for Valves Larger Than NPS 2-1/2 (DN 65): Size for running torque of 150 in. x lbf (16.9 N x m) and breakaway torque of 300 in. x lbf (33.9 N x m).
 5. Spring-Return Motors for Valves Larger Than NPS 2-1/2 (DN 65): Size for running and breakaway torque of 150 in. x lbf (16.9 N x m).
 6. Nonspring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running torque of 150 in. x lbf (16.9 N x m) and breakaway torque of 300 in. x lbf (33.9 N x m).
 7. Spring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running and breakaway torque of 150 in. x lbf (16.9 N x m).
 8. Combination Fire Smoke Dampers:
 - a. Size for torque required for damper seal at load conditions.
 - b. Coupling: V-bolt dual nut clamp with a V-shaped toothed cradle. Aluminum clamps or set screws are not acceptable.
 - c. Overload Protection: Microprocessor or an electronic based motor controller providing burnout protection if stalled before full rotation is reached. The actuator shall be electronically cut off at full open to eliminate noise generation with the holding noise level to be inaudible.
 - d. Power Requirements: 0.23A (running) and 0.09A (holding) at 24V-ac or 27 VA (running) and 10 VA (holding) at 120V-ac.
 - e. Actuator timing shall be 15 seconds or as required by local codes, whichever is more stringent.
 - f. Temperature Rating: Actuator shall have UL555 and UL555S listings by the damper manufacturer for 350°F.
 - g. Proportional Combination Fire and Smoke Damper Actuators shall meet all requirements specified above and shall modulate 0-100% open in response to a 2-10vdc or 4-20mA control signal. A 2-10vdc feedback output shall provide a 2-10vdc signal for position indication.
 - 1) Power Requirements (Proportional): Maximum (running) 12 VA at 24-V ac or 8 W at 24-V dc. Maximum (holding) 5VA at 24-V ac or 3 W at 24-V dc.
 - 2) A manual override winder and locking mechanism shall be provided for override operation of the actuator on a loss of power.
- B. Electronic Actuators: Direct-coupled type designed for minimum 60,000 full-stroke cycles at rated torque.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Belimo Aircontrols (USA), Inc.
 - b. Honeywell Controls Inc.
 2. Valves: Size for torque required for valve close off at maximum pump differential pressure.
 3. Dampers: Size for running torque calculated as follows:
 - a. Parallel-Blade Damper with Edge Seals: 7 inch-lb/sq. ft. (86.8 kg-cm/sq. m) of damper.
 - b. Opposed-Blade Damper with Edge Seals: 5 inch-lb/sq. ft. (62 kg-cm/sq. m) of damper.
 - c. Parallel-Blade Damper without Edge Seals: 4 inch-lb/sq. ft (49.6 kg-cm/sq. m) of damper.

- d. Opposed-Blade Damper without Edge Seals: 3 inch-lb/sq. ft. (37.2 kg-cm/sq. m) of damper.
- e. Dampers with 2- to 3-Inch wg (500 to 750 Pa) of Pressure Drop or Face Velocities of 1000 to 2500 fpm (5 to 13 m/s): Increase running torque by 1.5.
- f. Dampers with 3- to 4-Inch wg (750 to 1000 Pa) of Pressure Drop or Face Velocities of 2500 to 3000 fpm (13 to 15 m/s): Increase running torque by 2.0.
- 4. Coupling: V-bolt and V-shaped, toothed cradle.
- 5. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
- 6. Fail-Safe Operation: Mechanical, spring-return mechanism. Provide external, manual gear release on nonspring-return actuators.
- 7. Power Requirements (Two-Position Spring Return): 24 or 120]-V ac.
- 8. Power Requirements (Modulating): Maximum 25 VA at 24-V ac or 8 W at 24-V dc.
- 9. Proportional Signal: 0- to 10-V dc or 4 to 20 mA, and 2- to 10-V dc position feedback signal.
- 10. Temperature Rating: Minus 22 to plus 122 deg F (Minus 30 to plus 50 deg C).
- 11. Temperature Rating (Smoke Dampers): Minus 22 to plus 250 deg F (Minus 30 to plus 121 deg C).
- 12. Run Time: 12 seconds open, 5 seconds closed.
- 13. The manufacturer shall provide 5-year limited warranty from the date of sale covering defects in material or workmanship.
- 14. All actuators are to be delivered with a detailed written installation instruction.

2.25 CONTROL VALVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Belimo Aircontrols (USA), Inc.
 - 2. Siemens.
 - 3. Johnson Controls.
 - 4. Schneider Electric.
 - 5. IMI TA / Victaulic Modulator, Fusion P, Compact P.
- B. Control Valves: Factory fabricated, of type, body material, and pressure class based on maximum pressure and temperature rating of piping system, unless otherwise indicated.
- C. Hydronic System Characterized Ball valves shall have the following characteristics:
 - 1. 2" and Smaller: Nickel-plated forged brass body rated at no less than 400 psi, stainless steel ball and blowout proof stem, female NPT end fittings, with a dual EPDM O-ring packing design, fiberglass reinforced Teflon seats, and a TEFZEL or stainless steel flow characterizing disc.
 - 2. 2-1/2" through 6" : GG25 cast iron body, ANSI 125, class B, stainless steel ball and blowout proof stem, flange to match ANSI 125 with a dual EPDM O-ring package design, PTFE seats, and a stainless steel flow characterizing disc.
 - 3. Close-Off (Differential) Pressure Rating: Combination of actuator and trim shall provide minimum close-off pressure rating of 150 percent of total system (pump) head for two-way valves and 100 percent of pressure differential across valve or 100 percent of total system (pump) head.
 - 4. Sizing: 5-psig (35-kPa) maximum pressure drop at design flow rate or the following:
 - a. Two Position: Line size.
 - b. Two-Way Modulating: Twice the load pressure drop, but not more than value specified above.

- c. Three-Way Modulating: Twice the load pressure drop, but not more than value specified above.
 - 5. Valve assemblies shall be maintenance free.
- D. Hydronic System Globe valves shall have the following characteristics:
 - 1. NPS 2 (DN 50) and Smaller: Class 250 bronze body, bronze trim, rising stem, renewable composition disc, and screwed ends with back-seating capacity re-packable under pressure.
 - 2. NPS 2-1/2 (DN 65) and Larger: Class 125 iron body, bronze trim, rising stem, plug-type disc, flanged ends, and renewable seat and disc.
 - 3. Internal Construction: Replaceable plugs and stainless-steel or brass seats.
 - a. Single-Seated Valves: Cage trim provides seating and guiding surfaces for plug on top and bottom.
 - b. Double-Seated Valves: Balanced plug; cage trim provides seating and guiding surfaces for plugs on top and bottom.
 - 4. Sizing: 5-psig (35-kPa) maximum pressure drop at design flow rate or the following:
 - a. Two Position: Line size.
 - b. Two-Way Modulating: Twice the load pressure drop, but not more than value specified above.
 - c. Three-Way Modulating: Twice the load pressure drop, but not more than value specified above.
 - 5. Flow Characteristics: Two-way valves shall have equal percentage characteristics; three-way valves shall have linear characteristics.
 - 6. Close-Off (Differential) Pressure Rating: Combination of actuator and trim shall provide minimum close-off pressure rating of 150 percent of total system (pump) head for two-way valves and 100 percent of pressure differential across valve or 100 percent of total system (pump) head.
 - 7. Two- and three-way globe valves shall be used only if characterized control valves do not fit the sizing criteria or application.
- E. Hydronic System Butterfly Valves: Resilient Seat shall have the following characteristics:
 - 1. NPS 2 to 12: Valve body shall be full lugged ductile iron 200 psig body with a 304 stainless steel disc, EPDM seat, extended neck and shall meet ANSI Class 125/150 flange standards. Disc-to-stem connection shall utilize an internal spline. The shaft shall be supported at four locations by RPTFE bushings. A coated disc shell is not acceptable.
 - 2. NPS 14 and Larger: Valve body shall be full lugged ductile iron 200 psig body with a 304 stainless steel disc, EPDM seat, extended neck and shall meet ANSI Class 125/150 flange standards. Disc-to-stem connection shall utilize a dual-pin method to prevent the disc from settling onto the liner. The shaft shall be supported at four locations by RPTFE bushings. A coated disc shell is not acceptable.
 - 3. Sizing: Two-Position (on/off) butterfly valves shall be sized using the 90° Cv rating. Modulating butterfly valves shall be sized using the 60° Cv rating.
 - a. Maximum pressure drop shall not exceed 5-psig at design flow rate.
 - 4. Flow Characteristics: Modified equal percentage, unidirectional dead end service.
 - 5. Close-Off Pressure Rating: Bubble-tight shutoff (no leakage).
 - 6. The combination of two 2-way butterfly valves in a tee configuration cross-linked to ensure proper flow orientation shall be permitted. The tee shall be constructed of cast iron/stainless steel.
- F. Hydronic system Butterfly Valves - High Performance shall have the following characteristics:

1. Valve body shall be full lugged carbon steel ANSI Class 150 body with a 316 stainless steel disc without a nylon coating, RTFE seat, and be ANSI Class 150300 flange standards. Blowout-proof shaft shall be 17-4ph stainless steel and shall be supported at four locations by glass-backed TFE bushings. Valve packing shall be Chevron TFE and shall include fully adjustable packing flange and separable packing gland. Valve body shall have long stem design to allow for 2" insulation (minimum). Valve face-to-face dimensions shall comply with API 609 and MSS-SP-68. Valve assembly shall be completely assembled and tested, ready for installation.
 2. Sizing: Two-Position (on/off) butterfly valves shall be sized using the 90° Cv rating. Modulating butterfly valves shall be sized using the 60° Cv rating.
 - a. Maximum pressure drop shall not exceed 5-psig at design flow rate.
 3. Flow Characteristics: Modified equal percentage, full rated, bi-directional, dead end service with either flange removed.
 4. Close-Off Pressure Rating: Bubble-tight shutoff (no leakage).
 5. Media Temperature Range: ANSI Class 150 limitations.
 6. Max Differential Pressure: 285 psi @ 100 deg F for ANSI 150.
 7. The combination of two 2-way butterfly valves in a tee configuration cross-linked to ensure proper flow orientation shall be permitted. The tee should be constructed of cast iron/stainless steel.
- G. Hydronic Systems Pressure Independent Characterized Ball valves (Belimo) shall have the following characteristics:
1. ¾" and Smaller: Forged brass body rated at no less than 360 psi; stainless steel ball and blowout proof stem; female NPT end fittings, with a dual EPDM O-ring packing design; fiberglass reinforced Teflon seats and a stainless steel characterizing disc. An integral pressure regulator shall be located upstream of the ball to regulate pressure, to maintain a constant pressure differential while operating within a pressure differential range of 5 to 50 psig. Two internal P/T ports shall be incorporated for differential pressure verification. Replaceable cartridges are not permitted.
 2. 1" though 2": Forged brass body rated at no less than 360 psi; stainless steel ball and blowout proof stem; female NPT end fittings, with a dual EPDM O-ring packing design; fiberglass reinforced Teflon seats and a stainless steel or TEFZEL characterizing disc. An ultrasonic flow sensor (accuracy +/- 2%) shall be integrated with the characterized control valve to provide analog flow feedback. The valve shall reposition to maintain the required flow with a +/- 5% accuracy over a pressure differential range of 1 to 50 psig. The control valve assembly shall incorporate an algorithm to automatically compensate for the glycol concentration.
 3. 2-1/2" through 6": Cast iron body ANSI 125, Class B rated; stainless steel ball and blowout proof stem; pattern to mate with ANSI 125 flange, with a dual EPDM O-ring packing design; fiberglass reinforced Teflon seats and a stainless steel or TEFZEL characterizing disc. An ultrasonic flow sensor (accuracy +/- 2%) shall be integrated with the characterized control valve to provide analog flow feedback. The valve shall reposition to maintain the required flow with a +/- 5% accuracy over a pressure differential range of 1 to 50 psig. The control valve assembly shall incorporate an algorithm to automatically compensate for the glycol concentration.
 4. Close-Off (Differential) Pressure Rating: Combination of actuator and trim shall provide minimum close-off pressure rating of 150 percent of total system (pump) head for two-way valves and 100 percent of pressure differential across valve or 100 percent of total system (pump) head.
 5. Sizing: 5-psig maximum pressure drop at design flow rate.
 6. Valve assemblies shall be maintenance free.

H. Pressure Independent Control Valves (PICV/PICCV)

1. For accurate measurement for balancing, differential pressure control, trouble shooting, and power measurement in hydronic systems. Valve shall allow for adjustable flow settings, with valve and actuators supplied together ensuring optimum control performance.
2. NPS ½ through NPS 2: valves shall be suitable for working pressures to 230 ps and water temperature range of 32°F through +250°F. Valve shall consist of an Ametal (dezincification resistant alloy) / Stainless steel body and valve plug, EPDM spindle seal and O-rings, with seat seal of EPDM / stainless steel. The valve shall include stainless steel springs and spindles.
3. NPS 2-1/2 through NPS 6: valves shall be suitable for working pressures to 365 psi and water temperature range of +/-4°F through +250°F. shall consist of a ductile iron body and stainless steel valve plug, EPDM O-rings, with seat seal of EPDM/stainless steel.
4. Modulating Control: Valve shall be designed to operate with factory-provided actuator and have equal percentage (or EQM) control valve characteristic
5. Valve Actuator: Digitally configurable actuator for use with valve.
6. Sizing: 5-psig (35-kPa) maximum pressure drop at design flow rate or line size
7. Control Characteristics: Adjustable Cv, ability to measure flow through valve and deactivate DP portion of valve. Normally closed actuators shall be available factory installed.

I. Bypass and Injection Control Valves

1. Approved Manufacturer: Valve shall be VSI Series V - High Performance Segmented Ball Valve equipped with a Series 1000-X Electric Actuator. No substitutions permitted.
2. Valve Construction:
 - a. Close-Off Pressure Rating: Up to 250 psi for valves 1-6", and 285 psi for valves 8-12".
 - b. Operating Temperature Range: -20°F to 400°F.
 - c. Body: carbon steel or stainless steel.
 - d. Ball: 304 stainless steel.
 - e. Shaft: 304 stainless steel.
 - f. Seat: TFM 1700
 - g. Sealing components shall include ALFAS O-rings.
3. Sizing: Valves shall be sized to ensure a pressure drop between 3 psi and 6 psi at the design flow rate, unless otherwise noted on the drawings.
4. Flow Characteristic: Equal percentage.
5. Valve Actuator: Actuators shall be of the quarter turn type with a compact low-profile design to minimize space requirements. Valve actuators shall be digitally configurable and compatible with the valve for seamless integration and control. Valve actuators shall provide a minimum resolution of 200 discrete steps to ensure high-precision modulation and stable control performance.

2.26 DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Air Balance Inc.
2. TAMCO (T. A. Morrison & Co. Inc.).
3. Vent Products Company, Inc.

- B. Dampers: AMCA-rated, opposed-blade design; 0.108-inch- (2.8-mm-) minimum thick, galvanized-steel or 0.125-inch- (3.2-mm-) minimum thick, extruded-aluminum frames with holes for duct mounting; damper blades shall not be less than 0.064-inch- (1.6-mm-) thick galvanized steel with maximum blade width of 8 inches (200 mm) and length of 48 inches (1220 mm).
1. Secure blades to 1/2-inch- (13-mm-) diameter, zinc-plated axles using zinc-plated hardware, with oil-impregnated sintered bronze blade bearings, blade-linkage hardware of zinc-plated steel and brass, ends sealed against spring-stainless-steel blade bearings, and thrust bearings at each end of every blade.
 2. Operating Temperature Range: From minus 40 to plus 200 deg F (minus 40 to plus 93 deg C).
 3. Edge Seals, Low-Leakage Applications: Use inflatable blade edging or replaceable rubber blade seals and spring-loaded stainless-steel side seals, rated for leakage at less than 10 cfm per sq. ft. (50 L/s per sq. m) of damper area, at differential pressure of 4-inch wg (1000 Pa) when damper is held by torque of 50 in. x lbf (5.6 N x m); when tested according to AMCA 500D.

2.27 RELAYS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Functional Devices
 2. ROTRONIC Instrument Corp.
 3. Approved performance equal.
- B. General Requirements:
1. UL listed.
 2. Rated for at least 10 A at 250 V ac and 60 Hz.
 3. SPDT, DPDT, or three-pole double-throw, as required by control application.
 4. Construct contacts of silver, silver alloy, or gold.
 5. Enclose relay in a polycarbonate dust-tight cover.
 6. Include LED indication.
 7. Performance:
 - a. Mechanical Life: At least 10 million cycles.
 - b. Ambient Operating Temperatures: Minus 30 to 115 deg F.
 8. Equip relays with coil transient suppression to limit transients to non-damaging levels.
 9. Plug each relay into industry-standard, 35 mm DIN rail socket. Plug all relays located in control panels into sockets that are mounted on a DIN rail.
 10. Include relay socket with screw terminals. Mold into socket the coincident screw terminal numbers

2.28 CONTROL WIRE AND CABLE

- A. Wire: Single conductor control wiring above 24 V.
1. Wire Size: Minimum 14 AWG.
 2. Conductors: 7/24 soft annealed copper strand with 2- to 2.5-inch lay.
 3. Conductor Insulation: 600 V, Type THWN or Type THHN, and 90 deg C in accordance with UL 83.
 4. Conductor Insulation Colors: Black (hot), white (neutral), and green (ground).
 5. Furnish on spools.

- B. Single, Twisted-Shielded, Instrumentation Cable 24 V and Less:
 - 1. Wire Size: Minimum 18 AWG.
 - 2. Conductors: Twisted, 7/24 soft annealed copper stranding with a 2- to 2.5-inch lay.
 - 3. Conductor Insulation: Nominal 15-mil thickness, constructed from flame-retardant PVC.
 - 4. Conductor Insulation Colors:
 - a. Twisted Pair: Black and white.
 - b. Twisted Triad: Black, red, and white.
 - 5. Shielding: 100 percent type, 1.35-mil aluminum/polymer tape, helically applied with 25 percent overlap, and aluminum side in with tinned copper drain wire.
 - 6. Outer Jacket Insulation: 300 V, 105 deg C rating, and Type PLTC cable.
 - 7. Furnish on spools.
- C. LAN and Communication Cable: Comply with DDC system manufacturer requirements for network being installed.
 - 1. Electronic and fiber-optic cables for control wiring are specified in Section 27 1500 "Communications Horizontal Cabling."
 - a. Plenum rated.
 - b. Unique color that is different from other cables used on Project.
- D. Serial Communication Cable: Comply with DDC system manufacturer requirements for network being installed.
 - 1. Plenum rated.
 - 2. Shielded twisted pair.
 - 3. Comply with any third-party manufacturer requirements that are more stringent than the DDC system manufacturer's requirements.

2.29 PRESSURE INSTRUMENT SIGNAL AIR PIPING AND TUBING

- A. Products in this article are intended for use with the following:
 - 1. Main air and signal air to pneumatically controlled instruments, actuators, and other control devices and accessories.
 - 2. Signal air between pressure instruments, such as sensors, switches, transmitters, controllers, and accessories.
- B. Copper Tubing:
 - 1. Seamless phosphor deoxidized copper, drawn tempered, with chemical and physical properties in accordance with ASTM B75/B75M.
 - 2. Performance, dimensions, weight, and tolerance in accordance with ASTM B280.
 - 3. Diameter, as required by application, not less than nominal 1/4 inch.
 - 4. Wall thickness, as required by application, but not less than 0.030 inch.
 - 5. Copper Tubing Connectors and Fittings - Brass, Compression Type:
 - a. Single or double ferrule design creating a constant tension between fitting body and fitting nut for leak-free seal.
 - 6. Copper Tubing Connectors and Fittings - Copper, Solder-Joint Type:
 - a. Copper Solder-Joint Fittings: Cast, ASME B16.18 or wrought, ASME B16.22.
- C. Polyethylene Tubing: (For Pneumatic/Pressure Instrument Signal Air).
 - 1. Fire-resistant, black virgin polyethylene in accordance with ASTM D1248, Type 1, Class C, and Grade 5.
 - 2. Complying with stress crack test in accordance with ASTM D1693.

3. Diameter, as required by application, of not less than nominal 1/4 inch.
4. Polyethylene Tubing Connectors and Fittings - Brass, Barb Fittings:
 - a. Tapered and beaded hose barbs of push-on design; intended for low-pressure applications only.
5. Polyethylene Tubing Connectors and Fittings - Brass, Compression Type:
 - a. Specially designed for jointing polyethylene tubing to provide leak-free seal without twisting or weakening polyethylene tubing.

2.30 IDENTIFICATION

A. Instrument Air Pipe and Tubing:

1. Engraved tag bearing the following information:
 - a. Service (Example): "Instrument Air."
 - b. Pressure Range (Example): 0 to 30 psig.
2. Letter size minimum of 0.25 inch high.
3. Engraved phenolic consisting of three layers of rigid laminate. Top and bottom layers color-coded blue with contrasting white center exposed by engraving through outer layer.
4. Include tag with brass grommet, chain, and S-hook.

B. Control Equipment, Instruments, and Control Devices:

1. Self-adhesive label bearing unique identification.
 - a. Include instruments with unique identification identified by equipment being controlled or monitored, followed by point identification.
2. Letter size as follows:
 - a. Servers: Minimum of 0.5 inch high.
 - b. DDC Controllers: Minimum of 0.5 inch high.
 - c. Gateways: Minimum of 0.5 inch high.
 - d. Repeaters: Minimum of 0.5 inch high.
 - e. Enclosures: Minimum of 0.5 inch high.
 - f. Electrical Power Devices: Minimum of 0.25 inch high.
 - g. UPS units: Minimum of 0.5 inch high.
 - h. Accessories: Minimum of 0.25 inch high.
 - i. Instruments: Minimum of 0.25 inch high.
 - j. Control Damper and Valve Actuators: Minimum of 0.25 inch high.
 - k. Engraved phenolic consisting of three layers of rigid laminate. Top and bottom layers color-coded black with contrasting white center exposed by engraving through outer layer.
 - l. Fastened with drive pins.
 - m. Instruments, control devices, and actuators with Project-specific identification tags having unique identification numbers following requirements indicated and provided by original manufacturer do not require additional identification.

C. Valve Tags:

1. Brass tags and brass chains attached to valve.
2. Tag Size: Minimum 1.5 inches in diameter.
3. Include tag with unique valve identification indicating control influence such as flow, level, pressure, or temperature; followed by location of valve, and followed by three-digit sequential number. For example: TV-1.001.
4. Valves with Project-specific identification tags having unique identification numbers following requirements indicated and provided by original manufacturer do not require an additional tag.

- D. Raceway and Boxes:
 - 1. Comply with requirements for identification specified in Section 26 0553 "Identification for Electrical Systems."
 - 2. Paint cover plates on junction boxes and conduit same color as tape banding for conduits. After painting, label cover plate "HVAC Controls".
 - 3. For raceways housing pneumatic tubing, add phenolic tag labeled "HVAC Instrument Air Tubing."
 - 4. For raceways housing air signal tubing, add phenolic tag labeled "HVAC Air Signal Tubing."
- E. Equipment Warning Labels:
 - 1. Self-adhesive label with pressure-sensitive adhesive back and peel-off protective jacket.
 - 2. Lettering size at least 14-point type with white lettering on red background.
 - 3. Warning label to read "CAUTION-Equipment operated under remote automatic control and may start or stop at any time without warning. Switch electric power disconnecting means to OFF position before servicing."
 - 4. Lettering to be enclosed in a white line border. Edge of label is to extend at least 0.25 inch beyond white border.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that conditioned power supply is available to control units and operator workstation.

3.2 TEMPERATURE INSTRUMENT APPLICATIONS

- A. Air Temperature Sensors:
 - 1. Duct, : 1000-ohm platinum RTD.
 - 2. Outdoor, : 1000-ohm platinum RTD.
 - 3. Space, : 1000-ohm platinum RTD.
- B. Air Temperature Transmitters:
 - 1. Duct, : Air temperature RTD transmitter.
 - 2. Outdoor, : Air temperature RTD transmitter.
 - 3. Space, : Air temperature RTD transmitter.
- C. Liquid and Steam Temperature Sensors:
 - 1. System, : Liquid and steam temperature sensor, high-end commercial grade.
- D. Liquid and Temperature Transmitters:
 - 1. System, : Liquid and steam temperature transmitter, commercial grade.

3.3 GENERAL

- A. All control system components shall be installed in locations as required to properly sense the controlled medium.

- B. BAS Installation shall be performed by professionals in a workmanlike manner and in compliance with the Contract Documents, Division 26 Project Electrical System Specifications, the National Electric Code (NEC), and any/all applicable local codes and/or Authorities Having Jurisdiction (AHJ) and the following:
1. Complete BAS installation including all DDC Devices, Enclosures, wiring, equipment, control devices and sensors shall be installed in accordance with the manufacturers' recommended installation procedures and as specified.
 2. All flow stations (air and water) shall be installed according to the manufacturer's installation guidelines. This includes but is not limited to installation location, device orientation, flow direction, up/downstream distances from disturbances, and straight run requirements.
 3. All control devices are to be provided and installed with all required gaskets, seals, flanges, connection enclosures, thermal compounds, insulation, piping, fittings and valves as required for design operation, isolation, equalization, purging and calibration.
 4. Strap-on control devices shall not be permitted except as explicitly called out.
 5. All control devices mounted outdoors shall be protected by a weather-shield, integral outdoor enclosure, from ambient elements in such a manner as to not impede design functionality and/or sensing.
 6. BAS installation shall be such that it provides sufficient clearance for system maintenance by maintaining sufficient access for equipment, device and/or component service, calibration, removal, repair or replacement.
 7. BAS installation shall not interfere with required clearance for mechanical and/or electrical equipment maintenance.
 8. Penetrations through and mounting holes in the building exterior associated with the BAS installation shall be sealed and made water-tight.
 9. Dielectric isolation shall be provided where dissimilar metals are used in installation for connection and support.
- C. Installation, wiring and material shall be protected from damage or theft before, during, and after installation. Any damaged or stolen installation, wiring, or material shall be repaired or replaced.
- D. After completion of installation, calibrate and commission all components provided as part of the Control System and demonstrate proper sequence of operation in compliance with the specifications. BAS components not operating correctly shall be field corrected or replaced.

3.4 BAS APPLICATION SOFTWARE

- A. At time of acceptance all operating system, Third party and Control System Application software shall be at least the latest official release version available.
- B. Software programs are described to their general intent. It is recognized that Networked System manufacturer's software differ; however, the Application software provided shall incorporate the features described fully implemented and optimized to provide the sequences described, minimize energy consumption and prolong equipment life.
- C. When programming the system BACnet addressing rules will be strictly adhered to. All addressing strategies will have to be approved by Owner and Engineer of Record prior to configuring any LAN types.

- D. All analog and binary values shall be programmed with appropriate alarms.
- E. Except as specified otherwise, throttling ranges, proportional bands, and switching differentials shall be centered on the associated set point.
- F. All set points unless otherwise indicated are adjustable and shall be programmable for all control loops.
- G. Each control loop and/or interlock(s) for all mechanical system including terminal unit systems shall be programmed with a control loop specific graphical trend to trend all values associated with each specific control loop or system interlock.
- H. Where any sequence or occupancy schedule calls for more than one motorized unit to start simultaneously, the system start commands shall be staggered by 15-second (adj.) intervals to minimize inrush current.
- I. Scheduling shall be developed for each mechanical system. Final schedules shall be coordinated with the Owner and Engineer of Record prior to system commissioning.
- J. Optimal start/stop programs shall be applied to all regularly scheduled mechanical and electrical systems.
- K. At a minimum, trend log/historical data shall be implemented for every hardware point on the system. Additionally all software (virtual) points used as setpoints shall be trended. Point trends shall be grouped into logically interrelated points for individual mechanical and building systems. Initial set-up shall be to log values once every 5 minutes.
- L. B-AWS graphics shall conform to Smithsonian Institution graphic standards. All graphics shall be submitted to the SI and the Engineer of Record for review and approval prior to implementation. The Controls Contractor shall install all graphic displays for all systems and controlled devices in the FMCS database server located in the Herndon Data Center (HDC). Graphics shall display dynamic sensor readings in engineering units. Provide an overall riser diagram page, individual floor plan graphics for each floor, and system-level graphics. All space temperature and humidity readings available on the DDC system shall be interactively displayed on floor plan graphics.
- M. The Controls Contractor shall update the SI Siemens FMCS database with all set points, analog and digital input points, analog and digital output points, programs, application-specific controllers, schedules, alarm parameters, and user rights. The FMCS database server shall contain an exact copy of all DDC control sequences in the project.
- N. B-AWS Graphical User Interface (GUI) must be approved by the Owner and Engineer of Record and shall incorporate at a minimum the following:
 - 1. At a minimum, all physical hardware, sensors, control devices and set points shall be visible on a B-AWS in graphical form.
 - 2. All mechanical systems shall have a programmed real time color graphic for primary graphical user interface.
 - 3. Individual floor plan graphics will be programmed for each floor or area of the building. All space sensors shall be visible on floor plan graphics and system graphic.

3.5 B-AWS HARDWARE

- A. Provide as specified for each PC-Based B-AWS.
- B. Assemble server components in a configuration that allows easy operator access to all necessary components from one position.
- C. Provide sufficient permanent and removable storage drives for 25% free memory after provision for all operating system, Third party and Control System Application software, all fully configured point databases, storage/back-up of all B-BC, B-AAC and B-ASC application programming, all graphic files, all user-defined reports and a three year archive of all trend and historical data described in this specification.
- D. Provide sufficient RAM to meet system performance requirements.

3.6 BACNET PROTOCOL VERIFICATION SOFTWARE

- A. Use BACnet protocol verification software to confirm that all BACnet devices communicate correctly across all network segments and conform to the current BACnet standard (ANSI/ASHRAE 135). Verify that any integration with third-party systems or devices does not interfere with BACnet communication or cause degradation in network performance.

3.7 BUILDING CONTROLLER (B-BC)

- A. Provide as required to meet performance requirements of the system with a 10% increase in connected B-AAC and B-ASC on any individual network. Provide a dedicated B-BC for all project specific equipment requiring this controller type.
- B. Locate strategically such that B-BC locations are as equally distributed throughout the project as possible.
- C. All points used for a single mechanical system shall be connected to the same B-BC. Points used for control loop reset based on outside air, or space/zone temperature, or extremely remote differential pressure sensors on slow acting control loops are exempt from this requirement.
- D. Network Protocol Configuration: B-BCs shall be configured with BACnet MS/TP as the field-side (downstream) communication protocol for all connections to B-AACs, B-ASCs, and third-party devices. The B-BC BACnet/IP port shall be configured exclusively for upstream connection to the Owner's SI.edu network and the FMCS database server. The Controls Contractor shall confirm this dual-port configuration with the SI Systems Engineering Division – Controls Branch and Siemens Beltsville prior to submittal. Cross-connection of IP traffic to the field MS/TP network is strictly prohibited.
- E. Provide spare additional I/O such that future use of spare capacity shall require providing only the field device, field wiring, point database definition and operational sequence programming changes as required. Additional point modules may be required to implement use of these spare points.

1. Controllers shall be selected to provide a minimum of 15% spare I/O point capacity for each point type found at each location. If input points are not universal, 15% of each type is required. If outputs are not universal, 15% of each type is required. A minimum of one spare is required for each type of point used.

3.8 ADVANCED APPLICATION CONTROLLERS (B-AAC)

- A. Provide a dedicated B-AAC for each medium-sized mechanical system. Additionally, furnish one dedicated B-AAC for each Terminal Unit Mechanical Device on the project, including VAV and Fan Powered Terminal Units, Unit Heaters, and Individual Fans.
- B. All points used for a single mechanical system shall be connected to the same B-AAC. Points used for control loop reset based on outside air, or space/zone temperature, or extremely remote differential pressure sensors on slow acting control loops are exempt from this requirement.
- C. Provide spare additional I/O such that future use of spare capacity shall require providing only the field device, field wiring, point database definition and operational sequence programming changes as required. Additional point modules may be required to implement use of these spare points.
 1. Controllers shall be selected to provide a minimum of 15% spare I/O point capacity for each point type found at each location. If input points are not universal, 15% of each type is required. If outputs are not universal, 15% of each type is required. A minimum of one spare is required for each type of point used.
- D. VAV ATU and FP-VAV ATU Controllers
 1. Provide networked B-AAC for each VAV ATU and FP-VAV ATU consisting of a controller, damper actuator, and velocity transducer.
 2. The ATU shall be provided with multi-point averaging type flow sensor factory piped to the velocity transducer.

3.9 APPLICATION SPECIFIC CONTROLLERS (B-ASC)

- A. B-ASC controllers are only permitted when they can meet the full requirements of the project's sequences of operation. Provide a dedicated B-ASC for each Terminal Unit Mechanical Device on the project, including VAV and Fan Powered Terminal Units, Unit Heaters, and Individual Fans.
- B. All points used for a single Terminal Unit Mechanical Device shall be connected to a dedicated B-ASC. Points used for control loop reset based on outside air, or space/zone temperature, or extremely remote differential pressure sensors on slow acting control loops are exempt from this requirement.
- C. Provide spare additional I/O such that future use of spare capacity shall require providing only the field device, field wiring, point database definition and operational sequence programming changes as required. Additional point modules may be required to implement use of these spare points.
 1. Controllers shall be selected to provide a minimum of 15% spare I/O point capacity for each point type found at each location. If input points are not universal, 15% of each type is required. If outputs are not universal, 15% of each type is required. A minimum of one spare is required for each type of point used.

- D. VAV ATU and FP-VAV ATU Controllers
 - 1. Provide networked B-ASC for each VAV ATU and FP-VAV ATU consisting of a controller, damper actuator, and velocity transducer.
 - 2. The ATU shall be provided with multi-point averaging type flow sensor factory piped to the velocity transducer.

3.10 LOCAL SYSTEM NETWORK INTERFACE

- A. At a minimum the Portable B-AWS shall be able to connect to the BACnet Internetwork within each mechanical equipment space within the project.

3.11 CYBERSECURITY REQUIREMENTS

- A. General
 - 1. Implement cybersecurity measures to protect the BAS and connected networks from unauthorized access, data loss, and service interruption.
 - 2. Configure all devices, servers, and software to comply with these requirements during installation, setup, and commissioning.
 - 3. Coordinate with the Owner's IT department regarding network addressing, firewall configuration, and remote access policies.
- B. Network Configuration
 - 1. Segregate BAS network traffic from other building or enterprise networks using VLANs or firewalls approved by the Owner's IT department.
 - 2. Disable unused physical ports, communication services, and protocols.
 - 3. Restrict all inbound and outbound connections to those necessary for BAS operation.
 - 4. BACnet/IP traffic shall be limited to approved network segments and ports; block unnecessary broadcast traffic at the firewall.
 - 5. All web-based and remote access shall use secure protocols (HTTPS with TLS 1.2 or higher, SSH for administration, SFTP for file transfer).
 - 6. Remote or cloud connections shall be disabled unless explicitly approved by the Owner and secured via VPN or equivalent secure method.
- C. Device and Controller Configuration
 - 1. Remove or change all factory default usernames and passwords prior to commissioning.
 - 2. Configure strong passwords meeting Owner's minimum requirements (minimum 12 characters, complexity, expiration ≤ 90 days).
 - 3. Implement role-based access control (RBAC) and provide unique credentials for each user; enable multi-factor authentication (MFA) for administrative accounts where supported.
 - 4. Maintain logs of user access, configuration changes, and alarms; retain logs for at least 12 months.
 - 5. Install only necessary firmware, drivers, and software components; disable or remove all unnecessary applications and services.
 - 6. Verify that controller firmware and software are current and obtained from trusted sources.
- D. Server and Workstation Configuration
 - 1. Use currently supported operating systems and apply all critical security patches prior to turnover.

2. Configure automatic system updates where approved by the Owner.
3. Install and enable antivirus or endpoint protection software.
4. Configure local firewalls to permit only required BAS services and ports.
5. Provide the Owner with administrative credentials upon project completion.

E. Testing and Verification

1. Demonstrate that unsecured protocols (HTTP, Telnet, FTP) are disabled on all BAS devices and servers.
2. Demonstrate secure user authentication and access control.
3. Verify that BACnet/IP traffic is restricted to approved VLANs and ports.
4. Confirm that controllers and servers cannot be accessed from public networks without VPN or Owner-approved secure remote access.
5. Submit a final cybersecurity checklist documenting compliance with these requirements.

F. Documentation

1. Provide as-built network diagrams showing all BAS IP devices, addressing, and network segmentation.
2. Submit final list of user accounts, assigned roles, and access permissions.
3. Provide firmware and software version records for all controllers, servers, and gateways.
4. Deliver record of applied security updates and configuration changes at project closeout.

3.12 ENCLOSURES & SUB-PANELS

- A. All system components not designed for or required to be field installed shall be mounted in a control enclosure. Those components shall be sub panel mounted except components that are mounted on the panel face. Provide on/off power switch with over-current protection for control power sources in each local enclosure.
- B. All control enclosures shall be located so that visual observation and adjustment can be accomplished while standing flatfooted on the floor in a convenient location adjacent to the equipment served. Install all equipment in readily accessible location as defined by Chapter 1 Article 100 Part A of the NEC.
- C. Label all control system components.
- D. A copy of the As-built application engineering for the system served shall be laminated in clear plastic, shall be legible and suspended within enclosure.
- E. All B-BC shall be mounted in an enclosure.

3.13 INSTALLATION

- A. Install software in control units and operator workstation(s). Implement all features of programs to specified requirements and as appropriate to sequence of operation.
- B. Connect and configure equipment and software to achieve sequence of operation specified.
- C. Verify location of thermostats, humidistats, and other exposed control sensors with Drawings and room details before installation. Install devices 48 inches (1220 mm) above the floor.
 1. Install averaging elements in ducts and plenums in crossing or zigzag pattern.

- D. Install guards on thermostats in the following locations:
 - 1. Entrances.
 - 2. Public areas.
 - 3. Where indicated.
- E. Install automatic dampers according to Section 23 3300 "Air Duct Accessories."
- F. Install damper motors on outside of duct in warm areas, not in locations exposed to outdoor temperatures.
- G. Install labels and nameplates to identify control components according to Section 23 0553 "Identification for HVAC Piping and Equipment."
- H. Install hydronic instrument wells, valves, and other accessories according to Section 23 2116 Hydronic Piping Specialties."
- I. Install steam and condensate instrument wells, valves, and other accessories according to Section 23 2216 Steam and Condensate Piping Specialties."
- J. Install refrigerant instrument wells, valves, and other accessories according to Section 23 2300 "Refrigerant Piping."
- K. Install duct volume-control dampers according to Section 23 3113 "Metal Ducts" and Section 23 3116 "Nonmetal Ducts."
- L. Install electronic and fiber-optic cables according to Section 27 1500 "Communications Horizontal Cabling."

3.14 ELECTRICAL WIRING AND CONNECTION INSTALLATION

- A. General
 - 1. Provide all wiring required for a complete Control System.
 - 2. Control system wiring and cabling installed for this project shall be performed by professionals in a workmanlike manner and in accordance with the Contract Documents, Division 26 Project Electrical System Specifications, the National Electric Code (NEC), and any/all applicable local codes and/or Authorities Having Jurisdiction (AHJ) and shall include but may not be limited to the following:
 - a. All power wiring required not indicated on the electrical plans and specifications.
 - b. Power to all actuators and sensors.
 - c. Provide all wiring and cabling for network communications except for owner provided LANs/WANs.
 - d. All sensor and control device input and output wiring.
 - e. All interconnecting cabling between and amongst network devices, PCs printers, etc.
 - f. Interlock wiring between devices, variable frequency drives and between motor starters.
 - g. All other necessary wiring for fully complete and functional system as specified.
 - h. Install piping, wiring/cabling routed parallel to or at right angles with the structure, properly supported every six (6) feet at a minimum and installed in a workmanlike manner.

3. Maximum allowable voltage for control wiring shall be 120-volts.
 4. All wiring shall be installed as continuous links. Any required splices shall be made only within an approved junction box or other approved protective device with a maximum fill of 50%.
 - a. BACnet network cabling shall not be field spliced.
 5. Verify integrity of all wiring to ensure continuity and freedom from shorts and grounds.
 6. Terminate all control and/or interlock wiring and shall maintain updated (as-built) wiring diagrams with terminations identified at the job site.
- B. Power Wiring and Cabling
1. Obtain power and provide wiring for all enclosures and controls equipment, including branch circuit wiring from circuit breaker panels unless specifically shown on the Plans or Specifications to be provided under Division 26.
 2. All B-AWS equipment shall be served from isolated ground receptacles via UPS by dedicated branch circuits.
 3. All other enclosures, sensor and control devices shall be fed from separate circuits in the electrical distribution panels and shall not be served from the typical floor receptacle or lighting circuits.
- C. Network Wiring and Cabling
1. Network installation shall strictly adhere to the manufacturer's networking installation instructions and procedures.
 2. Network installation shall conform to standards for the LAN types and cabling types selected. Specific network rules inherent to the ANSI/ASHRAE Standard 135, BACnet shall be followed. Those include but are not limited to:
 - a. Only one path can exist from any BACnet device to another.
 - b. Each BACnet device connected to an internetwork LAN must have a unique device instance (0 - 4,194,303).
 - c. Each internetwork LAN must have a unique Network Number (1 - 65,545).
 3. Primary LAN Network wire and cable shall be run separately from all other wiring.
 4. Other LAN Network wire and cabling shall be installed separate from any wiring over thirty (30) volts.
 5. All communications shielding shall be grounded as per Networked System manufacturer's recommendations.
- D. Installation
1. Install raceways, boxes, and cabinets according to Section 26 0533 "Raceways and Boxes for Electrical Systems."
 2. Install building wire and cable according to Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
 3. Install signal and communication cable according to Section 27 1500 "Communications Horizontal Cabling."
 - a. Conceal cable, except in mechanical rooms and areas where other conduit and piping are exposed.
 - b. Install exposed cable in raceway.
 - c. Install concealed cable in raceway.
 - d. Bundle and harness multiconductor instrument cable in place of single cables where several cables follow a common path.
 - e. Fasten flexible conductors, bridging cabinets and doors, along hinge side; protect against abrasion. Tie and support conductors.

- f. Number-code or color-code conductors for future identification and service of control system, except local individual room control cables.
- g. Install wire and cable with sufficient slack and flexible connections to allow for vibration of piping and equipment.
- 4. Connect manual-reset limit controls independent of manual-control switch positions. Automatic duct heater resets may be connected in interlock circuit of power controllers.
- 5. Connect hand-off-auto selector switches to override automatic interlock controls when switch is in hand position.

3.15 INSTALLATION OF SENSORS

A. Temperature

- 1. All wires attached to sensors shall be air sealed in their conduits or in the wall to stop air transmitted from other areas affecting sensor readings.
- 2. Install and properly support all enclosures and sensing elements as much as possible in the center of duct cross section and in straight duct runs. In condensing environments use stainless steel flanges to support sensing elements.
- 3. Sensors mounted on air ducts having exterior insulation shall be provided with handy-box mounting with insulating material firmly fitted around handy-box.
- 4. Averaging type sensors: provide a minimum of 1 linear foot of sensor per 4 square feet of duct/coil area or equal to duct/coil width where installed, whichever is longer. Averaging sensing tubing shall serpentine vertically across airstream and be supported firmly by mechanical clips.
- 5. Low-limit sensors used in mixing plenums shall be installed in a serpentine manner horizontally across duct. Each bend shall be supported with a capillary clip. Provide 10 ft of sensing element for each 1 ft of sensing element for each 1 ft² of coil area.
- 6. Temperature sensors installed in piping or tanks shall be in separable thermowells. Sensors shall be inserted into thermowells with conductive paste. Assembly shall allow removal of sensor without loss of fluid.
- 7. At a minimum one outside air temperature sensor shall be installed. It shall be mounted outside on a northern exposure as high as serviceable on the building. The sensor shall be mounted within a ventilated enclosure to shield the sensor from the effects of the sun. The sensor location shall be selected such that it may not be affected by artificial and/or mechanical airstreams (i.e., building exhaust, building relief, etc.).
- 8. Terminal Unit Sensors shall be provided one per terminal unit device.
 - a. They shall be wall mounted in the space served 60" inches above finished floor and located as shown on drawings.
 - b. Provide a minimum of 16 feet of coiled temperature sensor control wiring for equipment with space sensor not located on the Drawings.
- 9. In all areas where terminal unit sensor locations are not known at the time of building startup, sensors shall be hung approximately 24 inches from the ceiling in the area of the controlled zone and connected. Control wiring shall be neatly coiled and attached to ceiling grid.
- 10. Zone temperature sensors shall not be located on perimeter walls. Where explicitly indicated on drawings to do so and/or in locations near exterior walls and/or subject to drafts sensors shall have insulated mounting bases to prevent false room temperature readings.
- 11. Where wall sensors are mounted in an area subject to damage provide suitable protective guard.
- 12. Where wall sensors are mounted in public spaces with adjustable set points provide suitable security guard.

- B. Wet Bulb
 - 1. For outside air mount same as outside air temperature sensor.
 - 2. For duct mounting execute same as duct mounted temperature sensor.
- C. Pressure
 - 1. Orient static pressure sensing taps faced directly down-stream in the airflow so as to eliminate velocity pressure effects. Locate pressure transducers within 10 feet of sensing point and use tubing sized such as to prevent signal phase lag.
 - a. Final location of static/differential pressure sensing taps shall be pursuant with Contract Documents and as indicated on drawings. Where not explicitly indicated on drawings, pressure sensing taps shall be located as follows:
 - 1) Duct static pressure control sensor tap shall be located 2/3 distance from the Air Handling Unit of the total duct length in a straight section of ductwork with a minimum of four (4) duct diameters in both directions.
 - 2) Positive static high-pressure safety cut-outs shall be located at Air Handling Unit immediately downstream of fan section.
 - 3) Mixed-Air static and/or differential sensor tap shall be located in mixing box section.
 - 4) Negative static pressure safety cut-outs shall be located immediately upstream of fan section.
 - 5) Filter differential pressure taps shall be installed on both filter inlet and outlet.
 - 6) Building Static Pressure. Pipe the low-pressure port of the pressure sensor to the static pressure port located on the outside of the building through a high-volume accumulator. Pipe the high-pressure port to a location behind a thermostat cover.
 - 7) The piping to the pressure ports on all pressure transducers shall contain a capped test port located adjacent to the transducer.
 - 8) All pressure transducers, other than those controlling VAV boxes, shall be located in field device panels, not on the equipment monitored or on ductwork. Mount transducers in a location accessible for service without use of ladders or special equipment.
 - b. Mount air differential pressure taps so that true differential is sensed.
 - 2. Water gauge taps shall include snubbers and isolation valves.
 - 3. Water differential pressure sensors shall be piped through a five-valve bypass assembly with snubbers.

3.16 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:
 - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation. Remove and replace malfunctioning units and retest.
 - 2. Test and adjust controls and safeties.
 - 3. Test calibration of electronic controllers by disconnecting input sensors and stimulating operation with compatible signal generator.
 - 4. Test each system for compliance with sequence of operation.

5. Test software and hardware interlocks.

C. DDC Verification:

1. Verify that instruments are installed before calibration, testing, and loop or leak checks.
2. Check instruments for proper location and accessibility.
3. Check instrument installation for direction of flow, elevation, orientation, insertion depth, and other applicable considerations.
4. Check instrument tubing for proper fittings, slope, material, and support.
5. Check installation of air supply for each instrument.
6. Check flow instruments. Inspect tag number and line and bore size, and verify that inlet side is identified and that meters are installed correctly.
7. Check pressure instruments, piping slope, installation of valve manifold, and self-contained pressure regulators.
8. Check temperature instruments and material and length of sensing elements.
9. Check control valves. Verify that they are in correct direction.
10. Check DDC system as follows:
 - a. Verify that DDC controller power supply is from emergency power supply, if applicable.
 - b. Verify that wires at control panels are tagged with their service designation and approved tagging system.
 - c. Verify that spare I/O capacity has been provided.
 - d. Verify that DDC controllers are protected from power supply surges.

- D. Replace damaged or malfunctioning controls and equipment and repeat testing procedures.

3.17 PROGRAMMING

- A. Provide sufficient internal memory for the specified sequences of operation and trend logging. There shall be a minimum of 25% of available memory free for future use.
- B. Point Naming. System point names shall be modular in design, allowing easy operator interface without the use of a written point index.
- C. Use device identification that is consistent with the established naming conventions at the place of work. Coordinate identification of equipment and systems supplied by other divisions to ensure that identical naming conventions are used.
- D. The BAS device network shall support up to a 32 character object name consisting only of ASCII printable characters. The convention to be used for all object names is as follows:
 1. Object name format shall be in the form of “xyz#-aaaaa-nnn-aaaaaaaaaaaa,” where “a” designates an alphanumeric character and “n” is a digit from 0 to 9. The underscore character is not allowed so that all names are compliant with domain naming conventions.
 2. The next three digits, “xyz#” followed by a dash “-”, designate a building identifier number. If fewer than three digits are used, the front of the building number must be padded with leading zeros.
 3. The next six alphanumeric characters, “aaaaa” followed by a dash “-”, designate the equipment or system name. No spaces are allowed in the equipment/system name; however, the name length may be shortened as required to no fewer than three alphanumeric characters.

4. The three digits “nnn” followed by a dash “-” designate the system number. If fewer than three digits are used, the front of the system number must be padded with leading zeros.
 5. The final thirteen alphanumeric characters, “aaaaaaaaaaaa,” designate the device or sensor connected to that system. No spaces are allowed in the device/sensor name; however, the name length may be shortened as required to no fewer than six alphanumeric characters.
- E. This naming convention applies to all objects provided by this contractor as well as to all objects that are mapped from the BACnet devices provided by others in the work.
- F. If the contractor’s panel does not support a maximum 32 character object name, map all objects to a BAS panel that supports this requirement.
- G. Software Programming
1. Provide programming for the system and adhere to the sequences of operation provided. All other system programming necessary for the operation of the system, but not specified in this document, also shall be provided by the contractor. Embed into the control program sufficient comment statements to clearly describe each section of the program. The comment statements shall reflect the language used in the sequences of operation. Use the appropriate technique based on the following programming types:
 2. Text-based
 - a. Must provide actions for all possible situations
 - b. Must be modular and structured
 - c. Must be commented
 3. Graphic-based
 - a. Must provide actions for all possible situations
 - b. Must be documented
 4. Parameter-based
 - a. Must provide actions for all possible situations
 - b. Must be documented
 5. Submit sample programming of representative systems for approval by BAS designer.
- H. Operator Interface
1. Standard graphics—provide graphics for all mechanical systems and floor plans of the building. This includes each chilled-water system, hot-water system, chiller, boiler, air handler, and all terminal equipment. Point information on the graphic displays shall dynamically update. Show on each graphic all input and output points for the system. Also show relevant calculated points, such as set points.
 2. Submit sample graphic page layouts for approval by BAS designer.
 3. Show terminal equipment information on a graphic summary table. Provide dynamic information for each point shown.
 4. The contractor shall provide all the labor necessary to install, initialize, start up, and trouble- shoot all operator interface software and its functions as described in this section. This includes any operating system software, the operator interface database, and any third- party software installation and integration required for successful operation of the operator interface.
 5. All setpoints, timers, deadbands, PID gains, etc. listed in sequences shall be adjustable through the BAS interface by the user with appropriate access level whether indicated as adjustable in sequences or not. Fixed scalar numbers shall not be embedded in programs except for physical constants and conversion factors.

3.18 CALIBRATION, COMMISSIONING. DEMONSTRATION AND ACCEPTANCE

A. Commissioning, Calibrating and Adjusting:

1. Comply with field testing requirements and procedures indicated by ASHRAE's Guideline 11, "Field Testing of HVAC Controls Components," in the absence of specific requirements, and to supplement requirements indicated. Confirm in writing to the Owner and Architect the compliance with the field testing requirements and procedures indicated by ASHRAE's Guideline 11, "Field Testing of HVAC Controls Components".
2. Pretest Checklist and Test Plan
 - a. Perform validation tests before requesting final review of system. Before beginning testing, first submit Pretest Checklist and Test Plan.
 - b. After approval by Owner or Architect of the Pretest Checklist and Test Plan, execute all tests and procedures indicated in plan.
 - c. After testing is complete, submit completed Pretest Checklist.
 - d. Pretest Checklist: Submit the following list with items checked off once verified:
 - 1) Detailed explanation for any items that are not completed or verified.
 - 2) Required mechanical installation work is successfully completed and HVAC equipment is working correctly.
 - 3) HVAC equipment motors operate below full-load amperage ratings.
 - 4) Required DDC system components, wiring, and accessories are installed.
 - 5) Installed DDC system architecture matches approved Drawings.
 - 6) Control electric power circuits operate at proper voltage and are free from faults.
 - 7) Required surge protection is installed.
 - 8) DDC system network communications function properly, including uploading and downloading programming changes.
 - 9) Using BACnet protocol analyzer, verify that communications are error free.
 - 10) Each controller's programming is backed up.
 - 11) Equipment, products, tubing, wiring cable, and conduits are properly labeled.
 - 12) All I/O points are programmed into controllers.
 - 13) Testing, adjusting, and balancing work affecting controls is complete.
 - 14) Dampers and actuators zero and span adjustments are set properly.
 - 15) Each control damper and actuator goes to failed position on loss of power and loss of signal.
 - 16) Valves and actuators zero and span adjustments are set properly.
 - 17) Each control valve and actuator goes to failed position on loss of power and loss of signal.
 - 18) Meter, sensor, and transmitter readings are accurate and calibrated.
 - 19) Control loops are tuned for smooth and stable operation.
 - 20) View trend data where applicable.
 - 21) Each controller works properly in standalone mode.
 - 22) Safety controls and devices function properly.
 - 23) Interfaces with fire-alarm system function properly.
 - 24) Electrical interlocks function properly.
 - 25) Operator workstations and other interfaces are delivered, all system and database software is installed, and graphics are created.
 - 26) Record Drawings are completed.
 - e. Test Plan:

- 1) Prepare and submit validation Test Plan including test procedures for performance validation tests.
- 2) Address all specified functions of DDC system and sequences of operation in Test Plan.
- 3) Explain detailed actions and expected results to demonstrate compliance with requirements indicated.
- 4) Explain method for simulating necessary conditions of operation used to demonstrate performance.
- 5) Include Test Checklist to be used to check and initial that each test has been successfully completed.
- 6) Submit Test Plan documentation twenty business days before start of tests.
3. Fully commission the entire BAS. All commissioning shall be fully documented and all documentation shall be submitted prior to Demonstration and Acceptance testing.
 - a. Commissioning shall include a point-to-point • check-out of all I/O points in the DDC system.
 - b. Verify that all Temperature Control Panels (TCP), BAS equipment, controllers, devices and sensors are installed and operational according to the specifications, submittals and manufacturer's installation and application instructions.
 - c. Calibrate all inputs by comparing the actual site condition with the B-AWS point display.
 - d. Verify all outputs from B-AWS command to observed response of controlled device.
 - e. Verify failure response and fail-safe conditions of all devices and safeties.
 - f. Each control program shall be fully commissioned and tested for complete design intent compliance and functionality.
 - 1) Adjust control loop proportional, integral, and derivative settings to achieve optimum performance while complying with performance requirements indicated. Document testing of each control loop's precision and stability via trend logs.
 - g. Verify overall network performance of BAS for complete design intent compliance and functionality with all devices on-line, communicating and fully-operational.
 - h. Subsystems not directly controlled by the BAS but associated with the ATC shall also be fully tested and commissioned as to design intent compliance and functionality.
 - i. Validation Test:
 - 1) Verify operating performance of each I/O point in DDC system.
 - a) Verify analog I/O points at operating value.
 - b) Make adjustments to out-of-tolerance I/O points.
 - c) Identify I/O points for future reference.
 - d) Simulate abnormal conditions to demonstrate proper function of safety devices.
 - e) Replace instruments and controllers that cannot maintain performance indicated after adjustments.
 - 2) Simulate conditions to demonstrate proper sequence of control.
 - 3) Readjust settings to design values and observe ability of DDC system to establish desired conditions.
 - 4) 24 hours after initial validation test, do as follows:
 - a) Re-check I/O points that required corrections during initial test.
 - b) Identify I/O points that still require additional correction and make corrections necessary to achieve desired results.
 - 5) 24 Hours after second validation test, do as follows:

- a) Re-check I/O points that required corrections during second test.
 - b) Continue validation testing until I/O point is normal on two consecutive tests.
- 6) Completely check out, calibrate, and test all connected hardware and software to ensure that DDC system performs according to requirements indicated.
- 7) After validation testing is complete, prepare and submit report indicating results of testing. For all I/O points that required correction, indicate how many validation re-tests it took to pass. Identify adjustments made for each test and indicate instruments that were replaced.
- j. DDC System Response Time Test:
 - 1) Simulate HLC.
 - a) Heavy load to be occurrence of 50 percent of total connected binary COV, one-half of which represents "alarm" condition, and 50 percent of total connected analog COV, one-half of which represents "alarm" condition, that are initiated simultaneously on a one-time basis.
 - 2) Initiate 10 successive occurrences of HLC and measure response time to typical alarms and status changes.
 - 3) Measure with timer having at least 0.1-second resolution and 0.01 percent accuracy.
 - 4) Purpose of test is to demonstrate DDC system, as follows:
 - a) Reaction to COV and alarm conditions during HLC.
 - b) Ability to update DDC system database during HLC.
 - 5) Passing test is contingent on the following:
 - a) Alarm reporting at printer beginning no more than two seconds after initiation (time zero) of HLC.
 - b) All alarms, both binary and analog, are reported and printed; none are lost.
 - c) Compliance with response times specified.
 - 6) Prepare and submit report documenting HLC tested and results of test including time stamp and print out of all alarms.
- k. DDC System Network Bandwidth Test:
 - 1) Test network bandwidth usage on all DDC system networks to demonstrate bandwidth usage under DDC system normal operating conditions and under simulated HLC.
 - 2) To pass, none of DDC system networks are to use more than 70 percent of available bandwidth under normal and HLC operation.
- 4. Calibrate instruments.
 - a. Make three-point calibration test for both linearity and accuracy for each analog instrument.
- 5. Calibrate equipment and procedures using manufacturer's written recommendations and instruction manuals. Use test equipment with accuracy at least double that of instrument being calibrated.
- 6. Control System Inputs and Outputs:
 - a. Check analog inputs at 0, 50, and 100 percent of span.
 - b. Check analog outputs using milliampere meter at 0, 50, and 100 percent output.
 - c. Check digital inputs using jumper wire.
 - d. Check digital outputs using ohmmeter to test for contact making or breaking.
 - e. Check resistance temperature inputs at 0, 50, and 100 percent of span using a precision-resistant source.
- 7. Flow:

- a. Set differential pressure flow transmitters for 0 and 100 percent values with 3-point calibration accomplished at 50, 90, and 100 percent of span.
 - b. Manually operate flow switches to verify that they make or break contact.
 8. Pressure:
 - a. Calibrate pressure transmitters at 0, 50, and 100 percent of span.
 - b. Calibrate pressure switches to make or break contacts, with adjustable differential set at minimum.
 9. Temperature:
 - a. Calibrate resistance temperature transmitters at 0, 50, and 100 percent of span using a precision-resistance source.
 - b. Calibrate temperature switches to make or break contacts.
 10. Stroke and adjust control valves and dampers without positioners, following the manufacturer's recommended procedure, so that valve or damper is 100 percent open and closed.
 11. Stroke and adjust control valves and dampers with positioners, following manufacturer's recommended procedure, so that valve and damper is 0, 50, and 100 percent closed.
 12. Provide diagnostic and test instruments for calibration and adjustment of system.
 13. Provide written description of procedures and equipment for calibrating each type of instrument. Submit procedures review and approval before initiating startup procedures.
 - B. Adjust initial temperature and humidity set points.
 - C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to three visits to Project during other than normal occupancy hours for this purpose.
 - D. Demonstration and Acceptance
 1. Demonstrate compliance of the BAS with the contract documents and operational functionality pursuant with the design Sequences of Operation. Using the documented calibration and commissioning test data the Owner and/or its representative shall select, at random, results to be demonstrated. At least 95% of the results demonstrated must perform as specified and documented on commissioning data sheets or the system must be re-calibrated and re-commissioned before being re-tested.
 2. When the Calibration, Commissioning, Demonstration and Acceptance process has been completed and approved by Owner, obtain signed letter from Owner indicating Acceptance within thirty (30) days of approval.
- 3.19 CONTROL VALVE INSTALLATION
- A. Valve submittals shall be coordinated for type, quantity, size, and piping configuration to ensure compatibility with pipe design.
 - B. Slip-stem control valves shall be installed so that the stem position is not more than 60 degrees from the vertical up position. Ball-type control valves shall be installed with the stem in the horizontal position.
 - C. Valves shall be installed in accordance with the manufacturer's recommendations.
 - D. Control valves shall be installed so that they are accessible and serviceable and so that actuators may be serviced and removed without interference from structure or other pipes and/or equipment.

- E. Provide tags for all control valves indicating service and number. Tags shall be brass, 1.5 in. diameter with 0.25 in. high letters. Securely fasten with chain and hook. Match identification numbers as shown on approved controls shop drawings.

3.20 CONTROL DAMPER INSTALLATION

- A. Damper submittals shall be coordinated for type, quantity, and size to ensure compatibility with sheet metal design.
- B. Duct openings shall be free of any obstruction or irregularities that might interfere with blade or linkage rotation or actuator mounting. Duct openings shall measure 0.25 in. larger than damper dimensions and shall be square, straight, and level.
- C. Individual damper sections, as well as entire multiple section assemblies, must be completely square and free from racking, twisting, or bending. Measure diagonally from upper corners to opposite lower corners of each damper section. Both dimensions must be within 0.125 in. of each other.
- D. Follow the manufacturer's instructions for field installation of control dampers. Unless specifically designed for vertical blade application, dampers must be mounted with blade axis horizontal.
- E. Install extended shaft or jackshaft according to manufacturer's instructions.
- F. Damper blades, axles, and linkage must operate without binding. Before system operation, cycle damper after installation to ensure proper operation. On multiple section assemblies, all sections must open and close simultaneously.
- G. Provide a visible and accessible indication of damper position on the drive shaft end.
- H. Support ductwork in area of damper when required to prevent sagging due to damper weight.
- I. After installation of low-leakage dampers with seals, caulk between frame and duct or opening to prevent leakage around perimeter of damper.

3.21 ACTUATORS

- A. Mount and link control damper actuators according to manufacturer's instructions.
- B. To compress seals when spring-return actuators are used on normally closed dampers, power actuator to approximately 5 degrees open position, manually close the damper, and then tighten the linkage.
- C. Check operation of damper/actuator combination to confirm that actuator modulates damper smoothly throughout stroke to both open and closed positions.
- D. Provide all mounting hardware and linkages for actuator installation.
- E. Electric/Electronic Actuators

1. Dampers. Actuators shall be direct-mounted on damper shaft or jackshaft unless shown as a linkage installation. For low-leakage dampers with seals, the actuator shall be mounted with a minimum 5 degrees available for tightening the damper seals. Actuators shall be mounted following manufacturer's recommendations.
2. Valves. Actuators shall be connected to valves with adapters approved by the actuator manufacturer. Actuators and adapters shall be mounted following the actuator manufacturer's recommendations.

F. Pneumatic Actuators

1. Size pneumatic damper actuator to operate the related control damper(s) with sufficient reserve power to provide smooth modulating action or two-position action. Actuator also shall be sized for proper speed of response at the velocity and pressure conditions to which the control damper is subject.
2. Pneumatic damper actuators shall produce sufficient torque to close off against the maximum system pressures encountered. Size the pneumatic damper actuator to close off against the fan shutoff pressure, as a minimum.
3. Where two or more pneumatic damper actuators are installed for interrelated operation in unison, such as dampers used for mixing, provide the dampers with a positive pilot positioner. The positive pilot positioner shall be directly mounted to the pneumatic damper actuator and have pressure gages for supply input and output pressures.
4. The total damper area operated by an actuator shall not exceed 80% of the manufacturer's maximum area rating. Provide at least one actuator for each damper section. Each damper actuator shall not power more than 20 ft² of damper.
5. Use line shafting or shaft couplings (jackshafting) in lieu of blade-to-blade linkages or shaft coupling when driving axially aligned damper sections.

3.22 CLEANING

- A. The contractor shall clean up all debris resulting from his/her activities daily. The contractor shall remove all cartons, containers, crates, etc., under his/her control as soon as their contents have been removed. Waste shall be collected and placed in a designated location.
- B. At the completion of work in any area, the contractor shall clean all work, equipment, etc., keeping it free from dust, dirt, and debris, etc.
- C. At the completion of work, all equipment furnished under this section shall be checked for paint damage, and any factory-finished paint that has been damaged shall be repaired to match the adjacent areas. Any cabinet or enclosure that has been deformed shall be replaced with new material and repainted to match the adjacent areas

3.23 TRAINING

- A. Refer to Section 01 7900 "Demonstration and Training."
- B. Provide instruction on the adjustment, operation and maintenance of the BAS as installed including all hardware and software provided by a manufacturer-trained, competent application engineer and/or technician with sufficient experience in the installation, programming and operation of the BAS. Provide all training equipment and material.
- C. Training Schedule:
 1. Schedule training with Owner 20 business days before expected Substantial Completion.

2. Schedule training to provide Owner with at least 20 business days of notice in advance of training.
 3. Training to occur within normal business hours at mutually agreed on time. Unless otherwise agreed to, training to occur Monday through Friday, except on U.S. Federal holidays, with two morning sessions and two afternoon sessions. Each morning session and afternoon session to be split in half with 15 -minute break between sessions. Morning and afternoon sessions to be separated by 60 -minute lunch period. Training, including breaks and excluding lunch period, are not to exceed eight hours per day.
 4. Provide staggered training schedule as requested by Owner.
- D. Training Attendee List and Sign-in Sheet:
1. Request from Owner in advance of training a proposed attendee list with name, phone number, and email address.
 2. Provide preprinted sign-in sheet for each training session with proposed attendees listed and no fewer than six blank spaces to add additional attendees.
 3. Include preprinted sign-in sheet with training session number, date and time, instructor name, phone number, email address, and brief description of content to be covered during session. List attendees with columns for name, phone number, and email address and a column for attendee signature or initials.
 4. Circulate sign-in sheet at beginning of each session and solicit attendees to sign or initial in applicable location.
 5. At end of each training day, send Owner an email with attachment of scanned copy (PDF) of circulated sign-in sheet for each session..
- E. Attendee Training Manuals:
1. Provide each attendee with access to comprehensive training materials in both digital and optional printed formats.
 2. Digital Training Package:
 - a. A downloadable PDF binder containing all training content, organized with a hyperlinked table of contents and bookmarks for easy navigation.
 - b. Supplementary materials such as interactive presentations, video tutorials, and simulation exercises, accessible via a secure cloud-based platform or Learning Management System (LMS).
 - c. All files shall be compatible with standard devices and browsers, and accessible offline if needed.
 3. Printed Materials (Optional):
 - a. Upon request, provide a color-printed binder with tabbed dividers for each major topic area.
 - b. Include space for handwritten notes and printed copies of key visuals and diagrams.
- F. Organization of Training Sessions:
1. Organize training sessions into logical groupings of technical content and to reflect different levels of operators having access to system. Plan training sessions to accommodate the following three levels of operators:
 - a. Daily operators.
 - b. Advanced operators.
 - c. System managers and administrators.
 2. Plan and organize training sessions to group training content to protect DDC system security. Some attendees may be restricted to some training sessions to ensure DDC system security.

- G. Training Outline:
1. Submit training outline for Owner review at least ten business day before scheduling training.
 2. Include in outline a detailed agenda for each training day that is broken down into each of four training sessions that day, training objectives for each training session, and synopses for each lesson planned.
- H. On-Site Training:
1. Owner will provide conditioned classroom or workspace with ample desks or tables, chairs, power, and data connectivity for instructor and each attendee.
 2. Provide training materials, projector, and other audiovisual equipment used in training.
 3. Provide as much of training located on-site as deemed feasible and practical by Owner.
 4. Include on-site training with regular walk-through tours, as required, to observe each unique product type installed with hands-on review of operation, calibration, and service requirements.
 5. Use operator workstation that is to be used with DDC system in the training. If operator workstations are unavailable, provide temporary workstation to convey training content.
- I. Training Content for Daily Operators:
1. Basic operation of system.
 2. Understanding DDC system architecture and configuration.
 3. Understanding each unique product type installed including performance and service requirements for each.
 4. Understanding operation of each system and equipment controlled by DDC system including sequences of operation, each unique control algorithm, and each unique optimization routine.
 5. Operating operator workstations, printers, and other peripherals.
 6. Logging on and off system.
 7. Accessing graphics, reports, and alarms.
 8. Adjusting and changing set points and time schedules.
 9. Recognizing DDC system malfunctions.
 10. Understanding content of operation and maintenance manuals including control drawings.
 11. Understanding physical location and placement of DDC controllers and I/O hardware.
 12. Accessing data from DDC controllers.
 13. Operating portable operator workstations.
 14. Review of DDC testing results to establish basic understanding of DDC system operating performance and HVAC system limitations as of Substantial Completion.
 15. Running each specified report and log.
 16. Displaying and demonstrating each data entry to show Project-specific customizing capability. Demonstrating parameter changes.
 17. Stepping through graphics penetration tree, displaying all graphics, demonstrating dynamic updating, and direct access to graphics.
 18. Executing digital and analog commands in graphic mode.
 19. Demonstrating control loop precision and stability via trend logs of I/O for not less than 10 percent of I/O installed.
 20. Demonstrating DDC system performance through trend logs and command tracing.
 21. Demonstrating scan, update, and alarm responsiveness.
 22. Demonstrating spreadsheet and curve plot software, and its integration with database.
 23. Demonstrating on-line user guide, and help function and mail facility.

24. Demonstrating multitasking by showing dynamic curve plot, and graphic construction operating simultaneously via split screen.
25. Demonstrating the following for HVAC systems and equipment controlled by DDC system:
 - a. Operation of HVAC equipment in normal-off, normal-on, and failed conditions while observing individual equipment, dampers, and valves for correct position under each condition.
 - b. For HVAC equipment with factory-installed software, show that integration into DDC system is able to communicate with DDC controllers or gateways, as applicable.
 - c. Using graphed trends, show that sequence of operation is executed in correct manner, and HVAC systems operate properly through complete sequence of operation including seasonal change, occupied and unoccupied modes, warm-up and cool-down cycles, and other modes of operation indicated.
 - d. Hardware interlocks and safeties function properly and DDC system performs correct sequence of operation after electrical power interruption and resumption after power is restored.
 - e. Reporting of alarm conditions for each alarm, and confirm that alarms are received at assigned locations, including operator workstations.
 - f. Each control loop responds to set-point adjustment and stabilizes within time period indicated.
 - g. Sharing of previously graphed trends of all control loops to demonstrate that each control loop is stable and set points are being maintained.
- J. Training Content for Advanced Operators:
 1. Making and changing workstation graphics.
 2. Creating, deleting, and modifying alarms including annunciation and routing.
 3. Creating, deleting, and modifying point trend logs including graphing and printing on an ad-hoc basis and operator-defined time intervals.
 4. Creating, deleting, and modifying reports.
 5. Creating, deleting, and modifying points.
 6. Creating, deleting, and modifying programming including ability to edit control programs offline.
 7. Creating, deleting, and modifying system graphics and other types of displays.
 8. Adding DDC controllers and other network communication devices such as gateways and routers.
 9. Adding operator workstations.
 10. Performing DDC system checkout and diagnostic procedures.
 11. Performing DDC controllers operation and maintenance procedures.
 12. Performing operator workstation operation and maintenance procedures.
 13. Configuring DDC system hardware including controllers, workstations, communication devices, and I/O points.
 14. Maintaining, calibrating, troubleshooting, diagnosing, and repairing hardware.
 15. Adjusting, calibrating, and replacing DDC system components.
- K. Training Content for System Managers and Administrators:
 1. DDC system software maintenance and backups.
 2. Uploading, downloading, and offline archiving of all DDC system software and databases.
 3. Interface with Project-specific, third-party operator software.
 4. Understanding password and security procedures.

5. Adding new operators and making modifications to existing operators.
 6. Operator password assignments and modification.
 7. Operator authority assignment and modification.
 8. Workstation data segregation and modification.
- L. Video of Training Sessions:
1. Provide digital video and audio recording of each training session. Create separate recording file for each session.
 2. Stamp each recording file with training session number, session name, and date.
 3. Provide Owner with two copies of digital files on cloud and flash drives for later reference and for use in future training.
 4. Owner retains right to make additional copies for intended training purposes without having to pay royalties.

END OF SECTION

FOR REFERENCE ONLY

SECTION 23 1123 - FACILITY NATURAL-GAS PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Pipes, tubes, and fittings.
 - 2. Piping specialties.
 - 3. Joining materials.
 - 4. Manual gas shutoff valves.
 - 5. Pressure regulators.
 - 6. Dielectric fittings.
- B. Related Requirements:
 - 1. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.

1.2 DEFINITIONS

- A. CWP: Cold working pressure.
- B. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. An example includes rooftop locations.
- C. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- D. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspace, and tunnels.

1.3 ACTION SUBMITTALS

- A. Product Data:
 - 1. Piping specialties.
 - 2. Corrugated, stainless steel tubing with associated components.
 - 3. Valves. Include pressure rating, capacity, settings, and electrical connection data of selected models.
 - 4. Pressure regulators. Indicate pressure ratings and capacities.
 - 5. Dielectric fittings.
- B. Shop Drawings: For facility natural-gas piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.
 - 1. Shop Drawing Scale: 1/4 inch per foot (1:50).
 - 2. Detail mounting, supports, and valve arrangements for pressure regulator assembly.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans and details, drawn to scale, on which natural-gas piping is shown and coordinated with other installations, using input from installers of the items involved.
- B. Welding certificates.
- C. Site Survey: Plans, drawn to scale, on which natural-gas piping is shown and coordinated with other services and utilities.
- D. Field quality-control reports.
- E. Qualification Statements: For professional engineer.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For motorized gas valves pressure regulators service meters to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Steel Support Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators in accordance with the ASME Boiler and Pressure Vessel Code.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Handling Flammable Liquids: Remove and dispose of liquids from existing natural-gas piping in accordance with requirements of authorities having jurisdiction.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating, and protect from direct sunlight.
- D. Protect stored PE pipes and valves from direct sunlight.

1.8 PROJECT CONDITIONS

- A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.
- B. Interruption of Existing Natural-Gas Service: Do not interrupt natural-gas service to facilities occupied by Owner or others unless permitted under the following conditions, and then only after arranging to provide purging and startup of natural-gas supply in accordance with requirements indicated:

1. Notify Owner no fewer than two days in advance of proposed interruption of natural-gas service.
2. Do not proceed with interruption of natural-gas service without Owner's written permission.

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate requirements for piping identification for natural-gas piping. Comply with requirements in Section 22 0553 "Identification of Plumbing Piping and Equipment."

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain each product type from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Comply with the International Fuel Gas Code.
- B. Minimum Operating-Pressure Ratings:
 1. Piping and Valves: 100 psig (690 kPa) minimum unless otherwise indicated.
- C. Natural-Gas System Pressure within Buildings:
 1. Two pressure ranges. Primary pressure is more than 0.5 psig (3.45 kPa), but not more than 2 psig (13.8 kPa), and is reduced to secondary pressure of 0.5 psig (3.45 kPa) or less.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 PIPES, TUBES, AND FITTINGS

- A. Steel Pipe: ASTM A53/A53M, black steel, Schedule 40, Type E or S, Grade B.
 1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
 2. Wrought-Steel Welding Fittings: ASTM A234/A234M for butt welding and socket welding.
 3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
 4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - a. Material Group: 1.1.
 - b. End Connections: Threaded or butt welding to match pipe.
 - c. Lapped Face: Not permitted underground.
 - d. Gasket Materials: ASME B16.20, metallic, flat, asbestos free, aluminum O-rings, and spiral-wound metal gaskets.
 - e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground and stainless steel underground.
 5. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.

- a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.
- 6. Mechanical Couplings:
 - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) Baker Hughes Company.
 - 2) Smith-Blair, a Xylem brand.
 - 3) Insert manufacturer's name.
 - b. Steel flanges and tube with epoxy finish.
 - c. NBR seals.
 - d. Steel bolts, washers, and nuts.
 - e. Coupling is to be capable of joining PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
 - f. Steel body couplings installed underground on plastic pipe are to be factory equipped with anode.

2.4 PIPING SPECIALTIES

- A. Appliance Flexible Connectors:
 - 1. Indoor, Fixed-Appliance Flexible Connectors: Comply with ANSI Z21.24.
 - 2. Indoor, Movable-Appliance Flexible Connectors: Comply with ANSI Z21.69.
 - 3. Outdoor, Appliance Flexible Connectors: Comply with ANSI Z21.75.
 - 4. Corrugated, stainless steel tubing with polymer coating.
 - 5. Operating-Pressure Rating: 0.5 psig (3.45 kPa).
 - 6. End Fittings: Zinc-coated steel.
 - 7. Threaded Ends: Comply with ASME B1.20.1.
 - 8. Maximum Length: 72 inches (1830 mm).
- B. Quick-Disconnect Devices: Comply with ANSI Z21.41.
 - 1. Copper-alloy convenience outlet and matching plug connector.
 - 2. Seals: Nitrile.
 - 3. Hand operated with automatic shutoff when disconnected.
 - 4. For indoor or outdoor applications.
 - 5. Adjustable, retractable restraining cable.
- C. Y-Pattern Strainers:
 - 1. Body: ASTM A126, Class B, cast iron with bolted cover and bottom drain connection.
 - 2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
 - 3. Strainer Screen: 40 60-mesh startup strainer, and perforated stainless steel basket with 50 percent free area.
 - 4. CWP Rating: 125 psig (862 kPa).
- D. Basket Strainers:
 - 1. Body: ASTM A126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
 - 2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
 - 3. Strainer Screen: 40 60-mesh startup strainer, and perforated stainless steel basket with 50 percent free area.
 - 4. CWP Rating: 125 psig (862 kPa).

- E. T-Pattern Strainers:
 - 1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
 - 2. End Connections: Grooved ends.
 - 3. Strainer Screen: 40 -mesh startup strainer, and perforated stainless steel basket with 57 percent free area.
 - 4. CWP Rating: 750 psig (5170 kPa).
- F. Weatherproof Vent Cap:
 - 1. Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

2.5 JOINING MATERIALS

- A. Joint Compound and Tape: Suitable for natural gas.
- B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- C. Brazing Filler Metals: Alloy with melting point greater than 1000 deg F (540 deg C) complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.

2.6 MANUAL GAS SHUTOFF VALVES

- A. General Requirements for Metallic Valves, NPS 2 (DN 50) and Smaller: Comply with ASME B16.33.
 - 1. CWP Rating: 125 psig (862 kPa).
 - 2. Threaded Ends: Comply with ASME B1.20.1.
 - 3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.
 - 4. Tamperproof Feature: Locking feature for valves indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
 - 5. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves 1 inch (25 mm) and smaller.
 - 6. Service Mark: Valves NPS 1-1/4 to NPS 2 (DN 32 to DN 50) having initials "WOG" permanently marked on valve body.
- B. General Requirements for Metallic Valves, NPS 2-1/2 (DN 65) and Larger: Comply with ASME B16.38.
 - 1. CWP Rating: 125 psig (862 kPa).
 - 2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
 - 3. Tamperproof Feature: Locking feature for valves indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
 - 4. Service Mark: Initials "WOG" permanently marked on valve body.
- C. One-Piece, Bronze Ball Valve with Bronze Trim: MSS SP-110.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. A.Y. McDonald Mfg. Co.
 - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - c. BrassCraft Manufacturing Co.; a Masco company.
 - d. Perfection Corporation.
 - e. R.W. Lyall; brand of Hubbell Utility Solutions; Hubbell Incorporated.
 - f. Insert manufacturer's name.
 2. Body: Bronze, complying with ASTM B584.
 3. Ball: Chrome-plated brass.
 4. Stem: Bronze; blowout proof.
 5. Seats: Reinforced TFE; blowout proof.
 6. Packing: Separate packnut with adjustable-stem packing threaded ends.
 7. Ends: Threaded, flared, or socket as indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
 8. CWP Rating: 600 psig (4140 kPa).
 9. Listing: Valves NPS 1 (DN 25) and smaller are to be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- D. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. A.Y. McDonald Mfg. Co.
 - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - c. BrassCraft Manufacturing Co.; a Masco company.
 - d. Perfection Corporation.
 - e. R.W. Lyall; brand of Hubbell Utility Solutions; Hubbell Incorporated.
 - f. Insert manufacturer's name.
 2. Body: Bronze, complying with ASTM B584.
 3. Ball: Chrome-plated bronze.
 4. Stem: Bronze; blowout proof.
 5. Seats: Reinforced TFE; blowout proof.
 6. Packing: Threaded-body packnut design with adjustable-stem packing.
 7. Ends: Threaded, flared, or socket as indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
 8. CWP Rating: 600 psig (4140 kPa).
 9. Listing: Valves NPS 1 (DN 25) and smaller are to be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- E. Two-Piece, Regular-Port Bronze Ball Valves with Bronze Trim: MSS SP-110.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. A.Y. McDonald Mfg. Co.
 - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - c. BrassCraft Manufacturing Co.; a Masco company.
 - d. Perfection Corporation.

- e. R.W. Lyall; brand of Hubbell Utility Solutions; Hubbell Incorporated.
 - f. Insert manufacturer's name.
 2. Body: Bronze, complying with ASTM B584.
 3. Ball: Chrome-plated bronze.
 4. Stem: Bronze; blowout proof.
 5. Seats: Reinforced TFE.
 6. Packing: Threaded-body packnut design with adjustable-stem packing.
 7. Ends: Threaded, flared, or socket as indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
 8. CWP Rating: 600 psig (4140 kPa).
 9. Listing: Valves NPS 1 (DN 25) and smaller are to be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- F. Bronze Plug Valves: MSS SP-78.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. A.Y. McDonald Mfg. Co.
 - b. Lee Brass Company.
 - c. Insert manufacturer's name.
 2. Body: Bronze, complying with ASTM B584.
 3. Plug: Bronze.
 4. Ends: Threaded, socket, or flanged as indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
 5. Operator: Square head or lug type with tamperproof feature where indicated.
 6. Pressure Class: 125 psig (862 kPa).
 7. Listing: Valves NPS 1 (DN 25) and smaller are to be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 8. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- G. Cast-Iron, Nonlubricated Plug Valves: MSS SP-78.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. A.Y. McDonald Mfg. Co.
 - b. Mueller Co. LLC; Mueller Water Products, Inc.
 - c. XOMOX; Crane ChemPharma & Energy.
 - d. Insert manufacturer's name.
 2. Body: Cast iron, complying with ASTM A126, Class B.
 3. Plug: Bronze or nickel-plated cast iron.
 4. Seat: Coated with thermoplastic.
 5. Stem Seal: Compatible with natural gas.
 6. Ends: Threaded or flanged as indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
 7. Operator: Square head or lug type with tamperproof feature where indicated.
 8. Pressure Class: 125 psig (862 kPa).
 9. Listing: Valves NPS 1 (DN 25) and smaller are to be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

H. Cast-Iron, Lubricated Plug Valves: MSS SP-78.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. A.Y. McDonald Mfg. Co.
 - b. Flowserve Corporation.
 - c. Homestead Valve: a division of Olson Technologies, Inc.
 - d. Milliken Valve Company; a Mueller brand.
 - e. Mueller Co. LLC; Mueller Water Products, Inc.
 - f. R & M Energy Systems; Robbins & Myers.
 - g. Insert manufacturer's name.
2. Body: Cast iron, complying with ASTM A126, Class B.
3. Plug: Bronze or nickel-plated cast iron.
4. Seat: Coated with thermoplastic.
5. Stem Seal: Compatible with natural gas.
6. Ends: Threaded or flanged as indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
7. Operator: Square head or lug type with tamperproof feature where indicated.
8. Pressure Class: 125 psig (862 kPa).
9. Listing: Valves NPS 1 (DN 25) and smaller are to be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

2.7 PRESSURE REGULATORS

A. General Requirements:

1. Single stage and suitable for natural gas.
2. Steel jacket and corrosion-resistant components.
3. Elevation compensator.
4. End Connections: Threaded for regulators NPS 2 (DN 50) and smaller; flanged for regulators NPS 2-1/2 (DN 65) and larger.

B. Line Pressure Regulators: Comply with ANSI Z21.80A.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Actaris: a brand of ITT Controls.
 - b. American Meter Company.
 - c. Dormont; A Watts Water Technologies Company.
 - d. Eclipse Innovative Thermal Technologies.
 - e. Fischer; Emerson Electric Co., Automation Solutions.
 - f. Itron Inc.
 - g. Maxitrol Company.
 - h. Richards Industrials.
 - i. Schneider Electric USA, Inc.
 - j. Insert manufacturer's name.
2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: NBR; resistant to gas impurities, abrasion, and deformation at the valve port.

6. Orifice: Aluminum; interchangeable.
7. Seal Plug: UV-stabilized, mineral-filled nylon.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to regulator.
9. Pressure regulator is to maintain discharge pressure setting downstream and is to not exceed 150 percent of design discharge pressure at shutoff.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: 5 psig (34.5 kPa).

C. Appliance Pressure Regulators: Comply with ANSI Z21.18.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Canadian Meter Company, LLC; a Honeywell Company.
 - b. Dormont; A Watts Water Technologies Company.
 - c. Eaton.
 - d. Harper Wyman Co.
 - e. Maxitrol Company.
 - f. SCP, Inc.
 - g. Insert manufacturer's name.
2. Body and Diaphragm Case: Die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: NBR.
6. Seal Plug: UV-stabilized, mineral-filled nylon.
7. Factory-Applied Finish: Minimum three-layer polyester and polyurethane paint finish.
8. Regulator may include vent limiting device, instead of vent connection, if approved by authorities having jurisdiction.
9. Maximum Inlet Pressure: 1 psig (6.9 kPa).

2.8 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. A.Y. McDonald Mfg. Co.
 - b. Capitol Manufacturing Company.
 - c. GF Piping Systems: Georg Fischer LLC.
 - d. HART Industrial Unions, LLC.
 - e. Jomar Valve.
 - f. Matco-Norca.
 - g. WATTS; A Watts Water Technologies Company.
 - h. Wilkins.
 - i. Zurn Industries, LLC.
 - j. Insert manufacturer's name.

2. Description:
 - a. Standard: ASSE 1079.
 - b. Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C) 150 psig (1035 kPa) 250 psig (1725 kPa) Insert pressure.
 - c. End Connections: Solder-joint copper alloy and threaded ferrous.
 - C. Dielectric Flanges:
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Capitol Manufacturing Company.
 - b. GF Piping Systems: Georg Fischer LLC.
 - c. Matco-Norca.
 - d. WATTS; A Watts Water Technologies Company.
 - e. Wilkins.
 - f. Insert manufacturer's name.
 2. Description:
 - a. Standard: ASSE 1079.
 - b. Factory-fabricated, bolted, companion-flange assembly.
 - c. Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C) 150 psig (1035 kPa) 175 psig (1200 kPa) 300 psig (2070 kPa) Insert pressure.
 - d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
 - D. Dielectric-Flange Insulating Kits:
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Advance Products & Systems, LLC.
 - b. CALPICO, Inc.
 - c. GF Piping Systems: Georg Fischer LLC.
 - d. GPT; a division of EnPRO Industries.
 - e. Insert manufacturer's name.
 2. Description:
 - a. Nonconducting materials for field assembly of companion flanges.
 - b. Pressure Rating: 150 psig (1035 kPa).
 - c. Gasket: Neoprene or phenolic.
 - d. Bolt Sleeves: Phenolic or polyethylene.
 - e. Washers: Phenolic with steel backing washers.
- 2.9 LABELING AND IDENTIFYING
- A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches (150 mm) wide and 4 mils (0.1 mm) thick, continuously inscribed with a description and rated pressure of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches (750 mm) deep; colored yellow.
 - B. Label and identify gas piping and pressure outside a multitenant building by tenant.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Close equipment shutoff valves before turning off natural gas to premises or piping section.
- B. Inspect natural-gas piping in accordance with the International Fuel Gas Code to determine that natural-gas utilization devices are turned off in piping section affected.
- C. Comply with the International Fuel Gas Code requirements for preventing accidental ignition.

3.3 INSTALLATION OF OUTDOOR PIPING

- A. Comply with the International Fuel Gas Code for installation and purging of natural-gas piping.
- B. Install underground, natural-gas piping buried at least 36 inches (900 mm) below finished grade. Comply with requirements in Section 31 2000 "Earth Moving" for excavating, trenching, and backfilling.
 - 1. If natural-gas piping is installed less than 36 inches (900 mm) below finished grade, install it in containment conduit.
- C. Install underground, PE, natural-gas piping in accordance with ASTM D2774.
- D. Steel Piping with Protective Coating:
 - 1. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.
 - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
 - 3. Replace pipe having damaged PE coating with new pipe.
- E. Copper Tubing with Protective Coating:
 - 1. Apply joint cover kits over tubing to cover, seal, and protect joints.
 - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
- F. Install fittings for changes in direction and branch connections.
- G. Install pressure gauge upstream and downstream from each service regulator. Pressure gauges are specified in Section 23 0500 "Common Work Results for HVAC."

3.4 INSTALLATION OF INDOOR PIPING

- A. Comply with the International Fuel Gas Code for installation and purging of natural-gas piping.

- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- D. Do not install piping in concealed locations unless sleeved with the sleeve open at both ends.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Where installing piping above accessible ceilings, allow sufficient space for ceiling panel removal.
- G. Locate valves for easy access. Do not locate valves within return air plenums.
- H. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Verify final equipment locations for roughing-in.
- L. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.
- M. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.
 - 1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches (75 mm) long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
 - 2. Install sediment trap on both sides of regulators for gas reduction to 2 psig (13.8 kPa) with valve and cap.
- N. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.
- O. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.
- P. Concealed Location Installations: Except as specified below, install concealed natural-gas piping and piping installed under the building in containment conduit constructed of steel pipe with welded joints as described in Part 2. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.

1. In Floors: Install natural-gas piping with welded or brazed joints and protective coating in cast-in-place concrete floors. Cover piping to be cast in concrete slabs with minimum of 1-1/2 inches (38 mm) of concrete. Piping may not be in physical contact with other metallic structures such as reinforcing rods or electrically neutral conductors. Do not embed piping in concrete slabs containing quick-set additives or cinder aggregate.
 2. In Floor Channels: Install natural-gas piping in floor channels. Channels must have cover and be open to space above cover for ventilation.
 3. In Walls or Partitions: Protect tubing installed inside partitions or hollow walls from physical damage using steel striker barriers at rigid supports.
 - a. Exception: Tubing passing through partitions or walls does not require striker barriers.
 4. Prohibited Locations:
 - a. Do not install natural-gas piping in or through circulating air ducts, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
 - b. Do not install natural-gas piping in solid walls or partitions.
- Q. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- R. Connect branch piping from top or side of horizontal piping.
- S. Install unions in pipes NPS 2 (DN 50) and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.
- T. Do not use natural-gas piping as grounding electrode.
- U. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.
- V. Install pressure gauge upstream and downstream from each line regulator. Pressure gauges are specified in Section 23 0500 "Common Work Results for HVAC."
- W. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 23 0500 "Common Work Results for HVAC."
- X. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 23 0500 "Common Work Results for HVAC."
- Y. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 23 0500 "Common Work Results for HVAC."
- 3.5 INSTALLATION OF VALVES
- A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless steel tubing, aluminum, or copper connector.
- B. Install underground valves with valve boxes.

- C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.
- D. Install earthquake valves aboveground outside buildings according to listing.
- E. Install anode for metallic valves in underground PE piping.
- F. Do not install valves in return-air plenums.

3.6 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints:
 - 1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
 - 2. Cut threads full and clean using sharp dies.
 - 3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
 - 4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
 - 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints:
 - 1. Construct joints in accordance with AWS D10.12/D10.12M, using qualified processes and welding operators.
 - 2. Bevel plain ends of steel pipe.
 - 3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.
- E. Brazed Joints: Construct joints in accordance with AWS's "Brazing Handbook," "Pipe and Tube" Chapter.
- F. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.
- G. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, and then use wrench. Do not overtighten.
- H. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join in accordance with ASTM D2657.
 - 1. Plain-End Pipe and Fittings: Use butt fusion.
 - 2. Plain-End Pipe and Socket Fittings: Use socket fusion.

3.7 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements for seismic-restraint devices specified in Section 23 0548 "Vibration and Seismic Controls for HVAC."
- B. Comply with requirements in Section 23 0529 "Hangers and Supports for HVAC Piping and Equipment" for hangers, supports, and anchor devices.
- C. Install hangers for steel piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- D. Install hangers for corrugated stainless steel tubing, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- E. Support horizontal piping within 12 inches (300 mm) of each fitting.
- F. Support vertical runs of steel piping to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- G. Support vertical runs of corrugated stainless steel tubing to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

3.8 PIPING CONNECTIONS

- A. Connect to utility's gas main according to utility's procedures and requirements.
- B. Install natural-gas piping electrically continuous, and bonded to gas-appliance equipment grounding conductor of the circuit powering the appliance in accordance with NFPA 70.
- C. Where installing piping adjacent to appliances, allow space for service and maintenance of appliances.
- D. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches (1800 mm) of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.

3.9 LABELING AND IDENTIFICATION

- A. Comply with requirements in Section 23 0553 "Identification for HVAC Piping and Equipment" for piping and valve identification.
- B. Install detectable warning tape directly above gas piping, 12 inches (300 mm) below finished grade, except 6 inches (150 mm) below subgrade under pavements and slabs.

3.10 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base

1. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of the base.
3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Use 3000 psig (20.7 MPa), 28-day, compressive-strength concrete and reinforcement as specified in Section 03 3000 "Cast-in-Place Concrete."

3.11 FIELD QUALITY CONTROL

- A. Tests and Inspections:
 1. Test, inspect, and purge natural gas in accordance with the International Fuel Gas Code and authorities having jurisdiction.
 2. Natural-gas piping will be considered defective if it does not pass tests and inspections.
- B. Prepare test and inspection reports.

3.12 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain earthquake valves.

3.13 OUTDOOR PIPING SCHEDULE

- A. Underground natural-gas piping is to be the following:
 1. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
- B. Aboveground natural-gas piping is to be one of the following:
 1. Steel pipe with malleable-iron fittings and threaded joints.
 2. Steel pipe with wrought-steel fittings and welded joints.

3.14 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES LESS THAN 0.5 PSIG (3.45 kPa)

- A. Aboveground, branch piping NPS 1 (DN 25) and smaller is to be one of the following:
 1. Corrugated stainless steel tubing with mechanical fittings having socket or threaded ends to match adjacent piping.
 2. Steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, distribution piping is to be one of the following:
 1. Steel pipe with malleable-iron fittings and threaded joints.
 2. Steel pipe with wrought-steel fittings and welded joints.

3.15 ABOVEGROUND, MANUAL GAS SHUTOFF VALVE SCHEDULE

- A. Valves for pipe sizes NPS 2 (DN 50) and smaller at service meter are to be one of the following:
1. One-piece, bronze ball valve with bronze trim.
 2. Two-piece, regular-port, bronze ball valves with bronze trim.
 3. Bronze plug valve.
- B. Valves for pipe sizes NPS 2-1/2 (DN 65) and larger at service meter are to be one of the following:
1. Two-piece, regular-port, bronze ball valves with bronze trim.
 2. Bronze plug valve.
 3. Cast-iron, nonlubricated plug valve.
- C. Distribution piping valves for pipe sizes NPS 2 (DN 50) and smaller are to be one of the following:
1. One-piece, bronze ball valve with bronze trim.
 2. Two-piece, regular-port, bronze ball valves with bronze trim.
 3. Bronze plug valve.
- D. Distribution piping valves for pipe sizes NPS 2-1/2 (DN 65) and larger are to be one of the following:
1. Two-piece, regular-port, bronze ball valves with bronze trim.
 2. Bronze plug valve.
 3. Cast-iron, nonlubricated plug valve.
- E. Valves in branch piping for single appliance are to be one of the following:
1. One-piece, bronze ball valve with bronze trim.
 2. Two-piece, regular-port, bronze ball valves with bronze trim.
 3. Bronze plug valve.

END OF SECTION

SECTION 23 2113 - HYDRONIC PIPING**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
 - 1. Copper tube and fittings.
 - 2. Steel pipe and fittings.
 - 3. Stainless steel pipe and fittings.
 - 4. Piping joining materials.
 - 5. Transition fittings.
 - 6. Dielectric fittings.
- B. Related Requirements:
 - 1. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of the following:
 - 1. Pipe and tube.
 - 2. Fittings.
 - 3. Joining materials.
 - 4. Transition fittings.
- B. Sustainable Design Submittals:
 - 1. Product Data: For adhesives, indicating VOC content.
 - 2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
 - 3. Environmental Product Declaration: For each product.
 - 4. Health Product Declaration: For each product.
 - 5. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
 - 6. Environmental Product Declaration: For each product.
 - 7. Environmental Product Declaration: For each product.
 - 8. Third-Party Certifications: For each product.
 - 9. Third-Party Certified Life Cycle Assessment: For each product.
- C. Delegated-Design Submittal: Refer to Section 01 3573 "Delegated Design Requirements and Procedures" for delegated design submittal procedures and requirements.
 - 1. Provide delegated-design submittal for the following:
 - a. Design calculations and detailed fabrication and assembly of pipe anchors and alignment guides, hangers and supports for multiple pipes, expansion joints and loops, and attachments of the same to the building structure.
 - b. Locations of pipe anchors, alignment guides, and expansion joints and loops.
 - c. Locations of and details for penetrations, including sleeves and sleeve seals for exterior walls, floors, basement, and foundation walls.
 - d. Locations of and details for penetration and firestopping for fire- and smoke-rated wall and floor and ceiling assemblies.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Piping layout, or BIM model, drawn to scale, indicating the items described in this Section, and coordinated with all building trades.
- B. Qualification Data: For Installer.
- C. Welding certificates.

1.4 QUALITY ASSURANCE

- A. Steel Support Welding: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M.
- B. Pipe Welding: Qualify procedures and operators in accordance with ASME Boiler and Pressure Vessel Code: Section IX.
 - 1. Comply with ASME B31.9 for materials, products, and installation.
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

1.5 WARRANTY

- A. PP-R and PP-RCT Manufacturer's Warranty: Manufacturer agrees to repair or replace PP-R and PP-RCT pipe and fittings that fail in materials or workmanship within 10 years from date of Substantial Completion.
 - 1. Warranty is to cover labor and material costs of repairing and/or replacing defective materials and repairing any incidental damage caused by failure of the piping system due to defects in materials or manufacturing.
 - 2. Warranty is to be in effect only upon submission by Contractor to manufacturer of valid pressure/leak documentation indicating that the system was tested and passed manufacturer's pressure/leak test and any other manufacturer requirements.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a registered design professional, as defined in Section 01 3573 "Delegated Design Requirements and Procedures" to design hydronic piping.
 - 1. Material properties indicated in this Section shall be considered as minimum properties.
- B. Hydronic piping components and installation are to be capable of withstanding the following minimum working pressures and temperatures unless otherwise indicated:
 - 1. Hot-Water Heating Piping: 250 psig (1724 kPa) at 200 deg F (93 deg C).
 - 2. Chilled-Water Piping: 250 psig (1724 kPa) at 73 deg F (22 deg C).
 - 3. Energy Recovery Glycol Water Piping: 150 psig (1034 kPa) at 150 deg F (66 deg C).
 - 4. Makeup-Water Piping: 150 psig (1034 kPa) at 150 deg F (66 deg C).
 - 5. Condensate-Drain Piping: 180 deg F (82 deg C).
 - 6. Air-Vent Piping: 200 deg F (93 deg C).
 - 7. Pressure-Relief-Valve-Inlet and -Outlet Piping: Equal to the pressure of the piping system to which it is attached.

2.2 COPPER TUBE AND FITTINGS

- A. Drawn-Temper Copper Tube: ASTM B88, Type L (ASTM B88M, Type B).
- B. DWV Copper Tube: ASTM B306, Type DWV.
- C. Cast-Copper, Solder-Joint Fittings: ASME B16.18 pressure fittings. Do not use solder joints on pipe sizes greater than NPS 4 (DN 100).
- D. Wrought-Copper, Solder-Joint Fittings: ASME B16.22 pressure fittings. Do not use solder joints on pipe sizes greater than NPS 4 (DN 100).
- E. Bronze Flanges: ASME B16.24, Class 150, with solder-joint ends. Do not use solder joints on pipe sizes greater than NPS 4 (DN 100).
- F. Cast-Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces and solder-joint or threaded ends. Do not use solder joints on pipe sizes greater than NPS 4 (DN 100).
- G. Wrought-Copper Unions: ASME B16.22. Do not use solder joints on pipe sizes greater than NPS 4 (DN 100).

2.3 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A53/A53M black steel with plain ends; welded and seamless, Grade B, and schedule number as indicated in Part 3, "Piping Applications" Article.
- B. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125 and 250 as indicated in Part 3, "Piping Applications" Article.
- C. Malleable-Iron Threaded Fittings: ASME B16.3, Classes 150 and 300 as indicated in Part 3, "Piping Applications" Article.
- D. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300 as indicated in Part 3, "Piping Applications" Article.
- E. Cast-Iron Pipe Flanges and Flanged Fittings: ASME B16.1, Classes 25, 125, and 250; raised ground face, and bolt holes spot faced as indicated in "Piping Applications" Article.
- F. Wrought-Steel Fittings: ASTM A234/A234M; wall thickness to match adjoining pipe.
- G. Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - 1. Material Group: 1.1.
 - 2. End Connections: Butt welding.
 - 3. Facings: Raised face.
- H. Steel Pipe Nipples: ASTM A733, made of same materials and wall thicknesses as pipe in which they are installed.

2.4 STAINLESS STEEL PIPE AND FITTINGS

- A. Stainless Steel Pipe, Plain Ends: ASTM A312/A312M plain ends, seamless; stainless steel of types and schedules as indicated in Part 3 "Piping Applications" Article.
- B. Stainless Steel Piping, Pressure-Seal-Joint Fittings:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International/Smith-Cooper International; Tailwind Capital, LLC.
 - b. Smith-Cooper International.
 - c. Victaulic Company.
 - d. Viega LLC.
 - 2. Obtain stainless steel piping pressure-seal-joint fittings from single manufacturer.
 - 3. Material: ASTM A312/A312M, Type 316, stainless steel, Schedule 10.
 - 4. Fittings: Type O-Rings and Pipe Stop: EPDM.
 - 5. Tools: Manufacturer's special tool.
 - 6. Minimum 300 psig (2070 kPa) working-pressure rating at 230 deg F (110 deg C).

2.5 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch (3.2-mm) maximum thickness unless otherwise indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
- B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- C. Solder Filler Metals: ASTM B32, lead-free alloys.
- D. Flux: ASTM B813, water flushable.
- E. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.
- F. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.6 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. A.Y. McDonald Mfg. Co.
 - b. Capitol Manufacturing Company.
 - c. GF Piping Systems: Georg Fischer LLC.

- d. HART Industrial Unions, LLC.
 - e. Jomar Valve.
 - f. Matco-Norca.
 - g. WATTS.
 - h. Wilkins.
 - i. Zurn Industries, LLC.
 2. Source Limitations: Obtain dielectric unions from single manufacturer.
 3. Description:
 - a. Standard: ASSE 1079.
 - b. Pressure Rating: 250 psig (1725 kPa).
 - c. End Connections: Solder-joint copper alloy and threaded ferrous. Solder joints are not to be used on pipe sizes greater than NPS 4 (DN 100).
- C. Dielectric Flanges:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. GF Piping Systems: Georg Fischer LLC.
 - b. WATTS.
 - c. Wilkins.
 - d. Zurn Industries, LLC.
 2. Source Limitations: Obtain dielectric flanges from single manufacturer.
 3. Description:
 - a. Standard: ASSE 1079.
 - b. Factory-fabricated, bolted, companion-flange assembly.
 - c. Pressure Rating: 300 psig (2070 kPa).
 - d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
- D. Dielectric-Flange Insulating Kits:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, LLC.
 - b. Calpico, Inc.
 - c. GF Piping Systems: Georg Fischer LLC.
 - d. GPT; a division of EnPRO Industries.
 2. Source Limitations: Obtain dielectric-flange insulating kits from single manufacturer.
 3. Description:
 - a. Nonconducting materials for field assembly of companion flanges.
 - b. Pressure Rating: 150 psig (1035 kPa).
 - c. Gasket: Neoprene or phenolic.
 - d. Bolt Sleeves: Phenolic or polyethylene.
 - e. Washers: Phenolic with steel backing washers.
- E. Dielectric Nipples:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International/Smith-Cooper International; Tailwind Capital, LLC.
 - b. Elster Perfection; a Honeywell Company .
 - c. GPT; a division of EnPRO Industries.
 - d. Matco-Norca.
 - e. Precision Plumbing Products.

- f. Sioux Chief Manufacturing Company, Inc.
 - g. Victaulic Company.
2. Source Limitations: Obtain dielectric nipples from single manufacturer.
3. Description:
 - a. Standard: IAPMO PS 66.
 - b. Electroplated steel nipple, complying with ASTM F1545.
 - c. Pressure Rating: Minimum 300 psig (2070 kPa) at 225 deg F (107 deg C).
 - d. End Connections: Male threaded or grooved.
 - e. Lining: Inert and noncorrosive, propylene.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

- A. Hot-Water Heating Piping, Aboveground, NPS 2 (DN 50) and Smaller, to Be Any of the Following:
 1. Type L (Type B), drawn-temper copper tubing, wrought-copper fittings, and soldered brazed joints.
 2. Schedule 40, Grade B, steel pipe; Class 250, cast-iron fittings; and threaded joints.
 3. Schedule 5, Type 304, stainless steel pipe; Type 316, stainless steel pressure-seal fittings; and pressure-seal joints.
- B. Hot-Water Heating Piping, Aboveground, NPS 2-1/2 (DN 65) and Larger, to Be Any of the Following:
 1. Schedule 40, Grade B, steel pipe; Class 250 cast-iron fittings; welded joints, cast-iron flanges, flange-fittings, and flanged joints.
- C. Chilled-Water Piping, Aboveground, NPS 2 (DN 50) and Smaller, to be Any of the Following:
 1. Type L (Type B), drawn-temper copper tubing, wrought-copper fittings, and soldered brazed joints.
 2. Schedule 40, Grade B steel pipe; Class 250, cast-iron fittings; and threaded joints.
 3. Schedule 5, Type 304, stainless steel pipe; Type 316, stainless steel pressure-seal fittings; and pressure-seal joints.
- D. Chilled-Water Piping, Aboveground, NPS 2-1/2 (DN 65) and Larger, to Be Any of the Following:
 1. Schedule 40, Grade B, steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
- E. Glycol Cooling-Water Piping, Aboveground, NPS 2 (DN 50) and Smaller, to Be Any of the Following:
 1. Type L (Type B), drawn-temper copper tubing, wrought-copper fittings, and soldered brazed joints.
 2. Schedule 40, steel pipe; Class 250, cast-iron fittings; and threaded joints.
 3. Schedule 5, Type 304, stainless steel pipe; Type 316, stainless steel pressure-seal couplings and fittings; and pressure-seal joints.
- F. Glycol Cooling-Water Piping, Aboveground, NPS 2-1/2 (DN 65) and Larger, to Be Any of the Following:
 1. Schedule 40, Grade B, steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.

- G. Makeup-Water Piping Installed Aboveground to Be Any of the Following:
 - 1. Type L (Type B), drawn-temper copper tubing, wrought-copper fittings, and soldered brazed joints.
 - 2. Schedule 5, Type 304, stainless steel pipe; Type 316, stainless steel pressure-seal couplings and fittings; and pressure-seal joints.
- H. Condensate-Drain Piping Installed Aboveground to Be Any of the Following:
 - 1. Type L (Type B), drawn-temper copper tubing, wrought-copper fittings, and soldered brazed pressure-seal joints.
 - 2. Schedule 5, Type 304, stainless steel pipe; Type 316, stainless steel pressure-seal couplings and fittings; and pressure-seal joints.
- I. Air-Vent Piping:
 - 1. Inlet: Same as service where installed with metal-to-plastic transition fittings for plastic piping systems, according to piping manufacturer's written instructions.
 - 2. Outlet: Type K (Type A), annealed-temper copper tubing with soldered or flared joints.
- J. Pressure-Relief-Valve-Inlet and -Outlet Piping for Hot-Water Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed, with metal-to-plastic transition fittings for plastic piping systems, according to piping manufacturer's written instructions.

3.2 INSTALLATION OF PIPING

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Select system components with pressure rating equal to or greater than system operating pressure.

- K. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.
- L. Install drains, consisting of a tee fitting, NPS 3/4 (DN 20) ball valve, and short NPS 3/4 (DN 20) threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
- M. Install piping at a uniform grade of 0.2 percent upward in direction of flow.
- N. Reduce pipe sizes using eccentric reducer fitting installed with level side up.
- O. Install branch connections to mains using mechanically formed tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.
- P. Install valves according to the following:
 - 1. Section 23 0523.11 "Globe Valves for HVAC Piping."
 - 2. Section 23 0523.12 "Ball Valves for HVAC Piping."
 - 3. Section 23 0523.13 "Butterfly Valves for HVAC Piping."
 - 4. Section 23 0523.14 "Check Valves for HVAC Piping."
 - 5. Section 23 0523.15 "Gate Valves for HVAC Piping."
- Q. Install air vents and pressure-relief valves in accordance with Section 23 2116 "Hydronic Piping Specialties."
- R. Install unions in piping, NPS 2 (DN 50) and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.
- S. Install flanges in piping, NPS 2-1/2 (DN 65) and larger, at final connections of equipment and elsewhere as indicated.
- T. Install shutoff valve immediately upstream of each dielectric fitting.
- U. Comply with requirements in Section 23 0516 "Expansion Fittings and Loops for HVAC Piping" for installation of expansion loops, expansion joints, anchors, and pipe alignment guides.
- V. Comply with requirements in Section 23 0553 "Identification for HVAC Piping and Equipment" for identifying piping.
- W. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 23 0517 "Sleeves and Sleeve Seals for HVAC Piping."
- X. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 23 0517 "Sleeves and Sleeve Seals for HVAC Piping."
- Y. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 23 0518 "Escutcheons for HVAC Piping."

3.3 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Soldered Joints: Apply ASTM B813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints in accordance with ASTM B828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B32.
- D. Brazed Joints: Construct joints in accordance with AWS's "Brazing Handbook," "Pipe and Tube" chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8/A5.8M.
- E. Threaded Joints: Thread pipe with tapered pipe threads in accordance with ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- F. Welded Joints: Construct joints in accordance with AWS D10.12M/D10.12, using qualified processes and welding operators in accordance with "Quality Assurance" Article.
- G. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- H. Plastic Piping Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings in accordance with the following:
 - 1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements.
 - 2. CPVC Piping: Join in accordance with ASTM D2846/D2846M Appendix.
 - 3. PVC Pressure Piping: Join ASTM D1785 schedule number, PVC pipe, and PVC socket fittings in accordance with ASTM D2672. Join other-than-schedule-number PVC pipe and socket fittings in accordance with ASTM D2855.
 - 4. PVC Nonpressure Piping: Join in accordance with ASTM D2855.
- I. Fiberglass-Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.
- J. Mechanically Formed Tee Fittings: Use manufacturer-recommended tools, procedure, and brazed joints.
- K. Pressure-Seal Joints: Use manufacturer-recommended tools and procedure. Leave insertion marks on pipe after assembly.

3.4 INSTALLATION OF DIELECTRIC FITTINGS

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. Dielectric Fittings for NPS 2 (DN 50) and Smaller: Use dielectric unions.
- C. Dielectric Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric flange kits.
- D. Dielectric Fittings for NPS 5 (DN 125) and Larger: Use dielectric flange kits.

3.5 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements in Section 23 0529 "Hangers and Supports for HVAC Piping and Equipment" for hangers, supports, and anchor devices.
- B. Install hangers for copper tubing and steel piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- C. Install hangers for plastic piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- D. Install hangers for fiberglass piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- E. Support horizontal piping within 12 inches (300 mm) of each fitting and coupling.
- F. Support vertical runs of copper tubing and steel piping to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- G. Support vertical runs of fiberglass piping to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

3.6 TERMINAL EQUIPMENT CONNECTIONS

- A. 1/2 inch piping is not allowed. Provide end reducers if needed.
- B. Sizes for supply and return piping connections are to be the same as or larger than equipment connections.
- C. Install control valves in accessible locations close to connected equipment.
- D. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.
- E. Install ports for pressure gauges and thermometers at coil inlet and outlet connections. Comply with requirements in Section 23 0519 "Meters and Gauges for HVAC Piping."

3.7 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification materials and installation in Section 23 0553 "Identification for HVAC Piping and Equipment."

3.8 SYSTEM STARTUP

- A. Perform the following before operating the system:
 1. Open manual valves fully.
 2. Inspect pumps for proper rotation.
 3. Set makeup pressure-reducing valves for required system pressure.
 4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
 5. Set temperature controls so all coils are calling for full flow.
 6. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
 7. Verify lubrication of motors and bearings.

3.9 FIELD QUALITY CONTROL

- A. Prepare hydronic piping in accordance with ASME B31.9 and as follows:
 1. Leave joints, including welds, uninsulated and exposed for examination during test.
 2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
 3. Flush hydronic piping systems with clean water; then remove and clean or replace strainer screens.
 4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure is to be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
 5. Install pressure-relief valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.
- B. Perform the following tests on hydronic piping:
 1. Use ambient-temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
 2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
 3. Isolate expansion tanks and determine that hydronic system is full of water.
 4. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure is not to exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times the "SE" value in Appendix A in ASME B31.9.
 5. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
 6. Prepare written report of testing.

END OF SECTION

FOR REFERENCE ONLY

SECTION 23 2116 - HYDRONIC PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Hydronic specialty valves.
 - 2. Air vents.
 - 3. Expansion tanks and fittings.
 - 4. Air/dirt separators and purgers.
 - 5. Strainers.
 - 6. Flexible connectors.
 - 7. Coil Connection Kits.
- B. Related Requirements:
 - 1. Section 23 0500 "Common Work Results for HVAC" for expansion fittings and loops.
 - 2. Section 23 0523 "General-Duty Valves for HVAC Piping" for specification and installation requirements for general-duty valves common to most piping systems.
 - 3. Section 23 0923.11 "Control Valves" for automatic control valve and sensor specifications, installation requirements, and locations.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product:
 - 1. Include construction details and material descriptions for hydronic piping specialties.
 - 2. Include rated capacities, operating characteristics, and furnished specialties and accessories.
 - 3. Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For hydronic piping specialties to include in emergency, operation, and maintenance manuals.

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Differential Pressure Meter: For each type of balancing valve and automatic flow control valve, include flowmeter, probes, hoses, flow charts, and carrying case.

1.5 QUALITY ASSURANCE

- A. Pipe Welding: Qualify procedures and operators in accordance with ASME BPVC, Section IX.
- B. Pressure-relief and safety-relief valves and pressure vessels bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME BPVC, Section VIII, Division 1.

PART 2 - PRODUCTS

2.1 HYDRONIC SPECIALTY VALVES

A. Bronze, Calibrated-Orifice, Balancing Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil; an ASC Engineered Solution.
 - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - c. Armstrong Fluid Technology.
 - d. Bell & Gossett; a Xylem brand.
 - e. Flamco; a division of AALBERTS Ind.
 - f. Gerand Engineering Co.
 - g. Griswold Controls, LLC.
 - h. Hays Fluid Controls.
 - i. HCI; Hydronics Components Inc.
 - j. IMI Flow Design, Inc.
 - k. Jenkins Valves; a Crane Co. brand.
 - l. Jomar Valve.
 - m. Nexus Valve, Inc.; Aalberts Hydronic Flow Control.
 - n. NIBCO INC.
 - o. NuTech Hydronic Specialty Products.
 - p. Oventrop Corporation.
 - q. Red-White Valve Corp.
 - r. Taco Comfort Solutions.
 - s. Tour & Andersson; available through Victaulic Company.
 - t. Tunstall Corporation.
 - u. Victaulic Company.
 - v. WATTS; A Watts Water Technologies Company.
2. Body: Bronze, ball or plug type with calibrated orifice or venturi.
3. Ball: Brass or stainless steel.
4. Plug: Resin.
5. Seat: PTFE.
6. End Connections: Threaded or socket.
7. Pressure Gauge Connections: Integral seals for portable differential pressure meter.
8. Handle Style: Lever, with memory stop to retain set position.
9. CWP Rating: Minimum 125 psig (860 kPa).
10. Maximum Operating Temperature: 250 deg F (121 deg C).

B. Cast-Iron or Steel, Calibrated-Orifice, Balancing Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil; an ASC Engineered Solution.
 - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - c. Armstrong Fluid Technology.
 - d. ASC Engineered Solutions.
 - e. Bell & Gossett; a Xylem brand.
 - f. Flamco; a division of AALBERTS Ind.
 - g. Gerand Engineering Co.

- h. Griswold Controls, LLC.
 - i. Hammond Valve.
 - j. Hays Fluid Controls.
 - k. HCI; Hydronics Components Inc.
 - l. IMI Flow Design, Inc.
 - m. IMI Hydronic Engineering Inc.
 - n. Jenkins Valves; a Crane Co. brand.
 - o. Jomar Valve.
 - p. KITZ Corporation.
 - q. Nexus Valve, Inc.; Aalberts Hydronic Flow Control.
 - r. NIBCO INC.
 - s. NuTech Hydronic Specialty Products.
 - t. Oventrop Corporation.
 - u. Red-White Valve Corp.
 - v. Tour & Andersson; available through Victaulic Company.
 - w. Tunstall Corporation.
 - x. Victaulic Company.
 - y. WATTS; A Watts Water Technologies Company.
 - 2. Body: Cast-iron or steel body, ball, butterfly, plug, or globe pattern with calibrated orifice or venturi.
 - 3. Ball: Brass or stainless steel.
 - 4. Stem Seals: EPDM O-rings.
 - 5. Disc: Glass- and carbon-filled PTFE.
 - 6. Seat: PTFE.
 - 7. End Connections: Flanged or grooved.
 - 8. Pressure Gauge Connections: Integral seals for portable differential pressure meter.
 - 9. Handle Style: Lever, with memory stop to retain set position.
 - 10. CWP Rating: Minimum 125 psig (860 kPa).
 - 11. Maximum Operating Temperature: 250 deg F (121 deg C).
- C. Diaphragm-Operated, Pressure-Reducing Valves: ASME labeled.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Bell & Gossett; a Xylem brand.
 - c. Caleffi North America.
 - d. Jenkins Valves; a Crane Co. brand.
 - e. Keckley Company.
 - f. NIBCO INC.
 - g. Oventrop Corporation.
 - h. Spence Engineering Company, Inc.
 - i. Taco Comfort Solutions.
 - j. Victaulic Company.
 - k. WATTS; A Watts Water Technologies Company.
 - l. Zurn Industries, LLC.
 - 2. Body: Bronze or brass.
 - 3. Disc: Brass.
 - 4. Seat: Brass.
 - 5. Stem Seals: EPDM O-rings.
 - 6. Diaphragm: EPDM.
 - 7. Low inlet-pressure check valve.

8. Inlet Strainer: , removable without system shutdown.
 9. Valve Seat and Stem: Noncorrosive.
 10. Valve Size and Capacity: As indicated on Drawings.
 11. Operating Pressure: Factory set and field adjustable.
- D. Diaphragm-Operated Pressure-Relief Valves: ASME labeled.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Bell & Gossett; a Xylem brand.
 - c. Flamco; a division of AALBERTS Ind.
 - d. Keckley Company.
 - e. WATTS; A Watts Water Technologies Company.
 - f. Zurn Industries, LLC.
 2. Body: Bronze or brass.
 3. Disc: Steel.
 4. Seat: Steel.
 5. Stem Seals: EPDM O-rings.
 6. Diaphragm: EPDM.
 7. Valve Seat and Stem: Noncorrosive.
 8. Valve Size, Capacity, and Operating Pressure: Comply with ASME BPVC, Section IV, and selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.
- E. Automatic Flow-Control Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil; an ASC Engineered Solution.
 - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - c. Bell & Gossett; a Xylem brand.
 - d. Caleffi North America.
 - e. Flamco; a division of AALBERTS Ind.
 - f. Flowcon Americas LLC.
 - g. Griswold Controls, LLC.
 - h. Hays Fluid Controls.
 - i. HCI; Hydronics Components Inc.
 - j. IMI Flow Design, Inc.
 - k. Nexus Valve, Inc.; Aalberts Hydronic Flow Control.
 - l. NIBCO INC.
 - m. NuTech Hydronic Specialty Products.
 - n. Oventrop Corporation.
 - o. Red-White Valve Corp.
 - p. Spence Engineering Company, Inc.
 - q. Tunstall Corporation.
 - r. Victaulic Company.
 - s. WATTS; A Watts Water Technologies Company.
 2. Body: Brass or ferrous metal.
 3. Combination Assemblies: Include bronze or brass-alloy ball valve.
 4. Identification Tag: Marked with zone identification, valve number, and flow rate.
 5. Size and Capacity: For each application, provide a valve with rated capacity equal to or greater than capacity of device being served.

6. Performance: Maintain constant flow within plus or minus 10 percent, regardless of system pressure fluctuations.
7. Minimum CWP Rating: 300 psig (2070 kPa).
8. Maximum Operating Temperature: 200 deg F (93 deg C).

2.2 AIR VENTS

A. Manual Air Vents:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Bell & Gossett; a Xylem brand.
 - c. Caleffi North America.
 - d. Flamco; a division of AALBERTS Ind.
 - e. HCI; Hydronics Components Inc.
 - f. Nexus Valve, Inc.; Aalberts Hydronic Flow Control.
 - g. NuTech Hydronic Specialty Products.
 - h. Taco Comfort Solutions.
 - i. WATTS; A Watts Water Technologies Company.
2. Body: Bronze.
3. Internal Parts: Nonferrous.
4. Operator: Screwdriver or thumbscrew.
5. Inlet Connection: NPS 1/2 (DN 15).
6. Discharge Connection: NPS 1/8 (DN 6).
7. CWP Rating: 150 psig (1035 kPa).
8. Maximum Operating Temperature: 225 deg F (107 deg C).

B. Automatic Air Vents:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Bell & Gossett; a Xylem brand.
 - c. Caleffi North America.
 - d. Flamco; a division of AALBERTS Ind.
 - e. Flo Fab Inc.
 - f. Metraflex Company (The).
 - g. Nexus Valve, Inc.; Aalberts Hydronic Flow Control.
 - h. NuTech Hydronic Specialty Products.
 - i. Oventrop Corporation.
 - j. Spirotherm, Inc.
 - k. Taco Comfort Solutions.
 - l. WATTS; A Watts Water Technologies Company.
2. Body: Bronze or cast iron.
3. Internal Parts: Nonferrous.
4. Operator: Noncorrosive metal float.
5. Inlet Connection: NPS 1/2 (DN 15).
6. Discharge Connection: NPS 1/4 (DN 8).
7. CWP Rating: 150 psig (1035 kPa).
8. Maximum Operating Temperature: 240 deg F (116 deg C).

2.3 EXPANSION TANKS AND FITTINGS

- a. AMTROL, Inc.
- b. AMTROL, Inc.

B. Bladder-Type ASME Expansion Tanks:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMTROL, Inc.
 - b. Armstrong Fluid Technology.
 - c. Bell & Gossett; a Xylem brand.
 - d. Flo Fab Inc.
 - e. Taco Comfort Solutions.
 - f. WATTS; A Watts Water Technologies Company.
2. Tank: Welded steel, rated for 125 psig (860 kPa) working pressure and 375 deg F (191 deg C) maximum operating temperature. Factory test after taps are fabricated and supports installed and are labeled in accordance with ASME BPVC, Section VIII, Division 1.
3. Bladder: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity. Field-replaceable bladder.
4. Sight glass.
5. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.
 - a. AMTROL, Inc.
 - b. Flamco; a division of AALBERTS Ind.

2.4 AIR/DIRT SEPARATORS AND PURGERS

A. Coalescing-Type Air and Dirt Separators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMTROL, Inc.
 - b. Armstrong Fluid Technology.
 - c. Bell & Gossett; a Xylem brand.
 - d. Caleffi North America.
 - e. Flamco; a division of AALBERTS Ind.
 - f. Flo Fab Inc.
 - g. Nexus Valve, Inc.; Aalberts Hydronic Flow Control.
 - h. Spirotherm, Inc.
 - i. Taco Comfort Solutions.
2. Tank: Fabricated steel tank; ASME constructed and stamped for 125 psig (862 kPa) working pressure and 270 deg F (130 deg C) maximum operating temperature.
3. Coalescing Medium: Stainless steel Insert material.
4. Air Vent: Threaded to top of separator.
5. Inline Inlet and Outlet Connections: Threaded for NPS 2 (DN 50) and smaller; Class 150 flanged connections for NPS 2-1/2 (DN 65) and larger.
6. Blowdown Connection: Threaded to bottom of separator.
7. Size: Match system flow capacity.
 - a. AMTROL, Inc.
 - b. Flamco; a division of AALBERTS Ind.
 - c. Spirotherm, Inc.
 - d. AMTROL, Inc.
 - e. Flamco; a division of AALBERTS Ind.

- f. Spirotherm, Inc.
- g. Spirotherm, Inc.

2.5 STRAINERS

A. Y-Pattern Strainers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. ASC Engineered Solutions.
 - c. Caleffi North America.
 - d. Flexicraft Industries.
 - e. Flo Fab Inc.
 - f. FNW; Ferguson Enterprises, Inc.
 - g. Griswold Controls, LLC.
 - h. Hays Fluid Controls.
 - i. Keckley Company.
 - j. Metraflex Company (The).
 - k. Nexus Valve, Inc.; Aalberts Hydronic Flow Control.
 - l. Titan Flow Control, Inc.
 - m. Victaulic Company.
 - n. WATTS; A Watts Water Technologies Company.
 - o. Zurn Industries, LLC.
2. Body: ASTM A126, Class B, cast iron with bolted cover and bottom drain connection.
3. Minimum size = NPS 0.75"
4. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
5. Strainer Screen: Stainless steel, Typically 20 -mesh strainer, or perforated stainless steel basket. See drawings for 20-mesh strainer, or perforated stainless steel basket, where called out.
6. CWP Rating: 125 psig (860 kPa).

B. Basket Strainers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flexicraft Industries.
 - b. Flo Fab Inc.
 - c. Keckley Company.
 - d. Metraflex Company (The).
 - e. Titan Flow Control, Inc.
 - f. WATTS; A Watts Water Technologies Company.
 - g. Zurn Industries, LLC.
2. Body: ASTM A126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
3. Minimum size = NPS 0.75"
4. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
5. Strainer Screen: 40 -mesh startup strainer and perforated stainless steel basket with 50 percent free area.
6. CWP Rating: 125 psig (860 kPa).

2.6 FLEXIBLE CONNECTORS

A. Stainless Steel Bellows, Flexible Connectors:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flexicraft Industries.
 - b. Flo Fab Inc.
 - c. Metraflex Company (The).
2. Body: Stainless steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.
3. End Connections: Threaded or flanged to match equipment connected.
4. Performance: Capable of 3/4-inch (20-mm) misalignment.
5. CWP Rating: 150 psig (1035 kPa).
6. Maximum Operating Temperature: 250 deg F (121 deg C).

2.7 COIL CONNECTION KITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Nexus
2. Nibco
3. Griswold
4. Bell and Gossett

B. General Performance Criteria:

1. Coil Connection Kits shall be designed for a minimum 600 PSIG WOG working pressure for sizes 0.75" through 2½" and up to 325 degrees F.
2. Each Coil Connection Kit shall include a combination automatic flow control valve, isolation valve, and union with (2) pressure & temperature test plugs; combination y-strainer, isolation valve, blow down/ drain valve, and union with (1) pressure and temperature test plug; accessory port union with (1) manual air vent and (1) pressure and temperature test plug.
3. Extended handles shall not break the vapor barrier when operated.
4. Optional extended pressure and temperature test plugs, manual air vents and handles shall be available.
5. Minimum size of kit shall be NPS 3/4". Provide end reducers for final connection, as needed, if equipment connection terminals are smaller than NPS 3/4".

C. Automatic Flow Control Valves:

1. The flow cartridge's non-clogging single orifice design shall include no metal-to-metal contact, no segmented ports, no rolling diaphragm, and incorporate a tapered profile flow nozzle and metering disk controlled by a pressure compensating spring.
2. The flow cartridge shall be a single assembly, constructed with stainless steel moving parts and be accessible without removing the valve from the piping. Flow cartridges constructed with composite or rubber materials are not acceptable.
3. The flow cartridge shall be factory flow tested and calibrated to maintain accuracy of ±5%; the accuracy shall be maintained over a standard operating range of 2 - 45 PSIG. Cartridges that prevent flow above the maximum operating range are not acceptable.

4. The flow cartridge shall be clearly inscribed with the designed manufactured flow rate. Cartridges that are not marked with the manufacture designed flow rate or use a coding system are not acceptable.
5. Manufacturer shall provide a full 100% cartridge exchange for up to one (1) year from date of delivery at no charge. Exchange shall be provided for flow rate changes within same valve body.
6. The flow cartridge and valve shall carry a 5-year product warranty.
7. Valves 1½" and smaller shall be a forged brass Y-pattern body and valves 2" - 2½" shall be a cast brassy-pattern body with integrated ball valve, (2) pressure/temperature test ports, a tag indicating the model, flow rate and PSIG range, blowout proof stem with dual FKM o-ring seals, interchangeable union end with FKM o-ring seal, hard chrome plated solid ball with Teflon seats, and rated at 600 PSI WOG, 325 degrees F.

D. Y Strainers:

1. Minimum size = 0.75"
2. Y type strainers 0.75" through 2½" shall be a combination Y Strainer and Ball Valve with integrated Union.
3. Valves shall be a forged brass construction for sizes ½" through 1½" and cast brass for sizes 2" - 2½" with the following features:
 - a. A minimum of 600 PSI WOG, 325 degrees F.
 - b. Interchangeable union end with FKM o-ring seal.
 - c. Multiple ¼" tapped ports for test plugs, vents or other accessories.
 - d. Blowout proof stem with dual FKM o-rings.
 - e. Hard chrome plated ball with Teflon seats.
 - f. A 304 stainless steel filter screen accessible without affecting the valve piping.
 - g. A port in the filter cap for a blow down/drain valve.
 - h. Valve shall carry a 5-year product warranty.

E. Unions

1. Unions ½" through 2½" shall be a combination ported type. Unions shall be a forged brass construction with the following features:
 - a. A minimum of 600 PSI WOG, 325 degrees F.
 - b. Interchangeable union end with Viton o-ring seal.
 - c. Multiple ¼" tapped ports for test plugs, vents or other accessories.
 - d. Union shall carry a 5-year product warranty.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine all piping specialties for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Examine threads on all devices for form and cleanliness.
- C. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

- D. Do not attempt to repair defective piping specialties; replace with new devices. Remove defective piping specialties from site.

3.2 INSTALLATION OF VALVES

- A. Install calibrated-orifice balancing valve at each branch connection to return main.
- B. Install calibrated-orifice, balancing valve in the return pipe of each heating or cooling terminal.
- C. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.
- D. Install pressure-relief and safety-relief valves at hot-water generators and elsewhere as required by ASME BPVC. Pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME BPVC, Section VIII, Division 1, for installation requirements.

3.3 HYDRONIC SPECIALTIES INSTALLATION

- A. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.
- B. Install automatic air vents at high points of system piping in mechanical equipment rooms only.
 - 1. Provide air outlet drain line full size of air outlet to floor drain or to other point indicated on Drawings.
- C. Install manual vents at heat-transfer coils and elsewhere as required for air venting.
- D. Install in-line air separators in pump suction. Install drain valve on air separators NPS 2 (DN 50) and larger.
- E. Install diaphragm- or bladder-type expansion tanks on the floor.
- F. Vent and purge air from hydronic system, and ensure that tank is properly charged with air to suit system Project requirements.
- G. Coil connection kit size shall match the pipe size shown on floor plans. Furnish end fittings as needed if the equipment connectors do not match the kit size.

END OF SECTION

SECTION 23 2123 - HYDRONIC PUMPS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Close-coupled, in-line centrifugal pumps.

1.2 DEFINITIONS

- A. ECM: Electronically commutated motor.
- B. EPDM: Ethylene propylene diene monomer.
- C. EPR: Ethylene propylene rubber.
- D. FKM: Fluoroelastomer polymer.
- E. HI: Hydraulic Institute.
- F. NBR: Nitrile rubber or Buna-N.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of pump.
 - 1. Include certified performance curves and rated capacities, operating characteristics, furnished specialties, final impeller dimensions, and accessories for each type of product indicated.
 - 2. Indicate pump's operating point on curves.
- B. Shop Drawings: For each pump.
 - 1. Show pump layout and connections.
 - 2. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.
 - 3. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans, or BIM model, drawn to scale, showing the items described in this Section, and coordinated with all building trades.
- B. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For pumps to include in emergency, operation, and maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Mechanical Seals: One mechanical seal(s) for each pump.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 CLOSE-COUPLED, IN-LINE CENTRIFUGAL PUMPS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1. American-Marsh Pumps.
 - 2. Armstrong Fluid Technology.
 - 3. Aurora Pump; Pentair Ltd.
 - 4. Crane Pumps & Systems.
 - 5. Flowserve Corporation.
 - 6. Grundfos Pumps Corporation.
 - 7. ITT Corporation.
 - 8. Mepco, LLC.
 - 9. PACO Pumps; Grundfos Pumps Corporation, USA.
 - 10. Patterson Pump Company; a Gorman-Rupp company.
 - 11. Peerless Pump Company.
 - 12. Taco Comfort Solutions.
 - 13. Thrush Co. Inc.
 - 14. Insert manufacturer's name.
- B. Source Limitations: Obtain pumps from single source from single manufacturer.
- C. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, close-coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally or vertically.
- D. Pump Construction:
 - 1. Casing: Radially split, cast iron, with threaded gauge tappings at inlet and outlet, replaceable bronze wear rings, and threaded companion-flange union-end connections.
 - 2. Impeller: ASTM B584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. For constant-speed pumps, trim impeller to match specified performance.
 - 3. Pump Shaft Sleeve: Bronze Type 304 stainless steel.
 - 4. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless steel spring, and NBR EPDM FKM Insert material rubber bellows and gasket. Include water slinger on shaft between motor and seal.

5. Seal Flushing: Flush, cool, and lubricate pump seal by directing pump discharge water to flow over the seal.
- E. Shaft Coupling: Rigid, axially-split spacer coupling to allow service of pump seal without disturbing pump or motor.
- F. Motor: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 23 0500 "Common Work Results for HVAC."
 1. Enclosure : **[Totally enclosed, fan cooled]** <Insert enclosure type>.
 2. NEMA Premium Efficient motors as defined in NEMA MG 1.
 3. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 4. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
 5. **[Single]** **[Variable]**-speed motor.
 6. Provide integral pump motor variable-speed controller.
 7. **<Insert unique motor characteristics>**.

2.3 PUMP SPECIALTY FITTINGS

- A. Suction Diffuser:
 1. Angle pattern.
 2. 175-psig (1204-kPa) 300-psig (2060-kPa) pressure rating, cast ductile-iron body and end cap, pump-inlet fitting.
 3. Bronze 16-mesh wire startup and bronze Type 304 stainless steel permanent strainers with 3/16-inch (4.8-mm) perforations and 51 percent open area).
 4. Bronze Carbon steel Type 304 stainless steel straightening vanes.
 5. Drain plug.
 6. Factory-fabricated support.
- B. Triple-Duty Valve:
 1. Angle or straight pattern.
 2. 175-psig (1204-kPa) 300-psig (2060-kPa) pressure rating, **[cast]** **[ductile]**-iron body, pump-discharge fitting.
 3. Valve with multi-turn stem and memory stop to allow valve to be returned to its original position after shutoff.
 4. Brass valve disc with EPDM rubber seat.
 5. Type 304 stainless steel valve stem.
 6. Drain plug and bronze-fitted shutoff, balancing, and check valve features.
 7. Brass gauge ports with integral check valve and orifice for flow measurement.

2.4 INTEGRAL PUMP MOTOR VARIABLE-SPEED CONTROLLERS

- A. Where specified or scheduled, provide pumps with an integral pump motor speed controller.
 1. Motor: Operates as constant- or variable-speed pump with speed regulated by an integrated variable-speed drive.
 2. Integrated Pump Controller: Supports direct communication with the building management system (BMS) with built-in support for the following protocols: Modbus RTU BACnetTM MS/TP Metasys N2.
 3. Commissioning and pump set up access to pump controls via the following:
 - a. A web interface (data exchange).

- b. A user interface located on the face of speed controller to adjust modes and mode values.
 - c. An electronic display that reads real-time mode set values, flow, head, speed, and power and that locks out unauthorized adjustment of pump.
 - 4. Provide electronics with "Auto" as factory default but slope of the proportional curve will automatically match the required system curve, constant pressure control ($\Delta p/c$), variable differential pressure control ($\Delta p/v$), constant curve duty (uncontrolled pump), and rpm regulation. RPM (speed) regulation can be accomplished by the following:
 - a. Manual (via user interface or HTML).
 - b. Remote via 0 to 10 V dc.
 - c. Data protocol communications with the BMS.
 - 5. Pump Electronics: Standard with multiple digital inputs and one external digital output to be available for additional mechanical room control and pump status monitoring.
 - 6. Controller: Mounted on or adjacent to the motor. Provide enclosure rated to UL Type 12.
 - 7. Electronically Protected Pumps: Rated for continuous duty and with built-in startup circuit. Provide overcurrent, line surge and current limit protection, thermal monitoring, heat sink status and over temperature protection.
 - 8. Pump capable of being monitored continuously via integrated Internet link.
 - 9. Integrated pump controller system to have the following features:
 - a. Controller software shall be capable of sensorless control in variable-volume systems without need for pump-mounted (internal/external) or remotely mounted differential pressure sensor.
 - b. Integrated Pump Controller Sensorless Control: Operates under Quadratic Pressure Control (QPC) to ensure that head reduction with reducing flow conforms to quadratic control curve.
 - c. Controller:
 - 1) Minimum head of 40 percent of design duty head.
 - 2) User-adjustable control mode settings and minimum/maximum head set points using built-in programming interface.
 - d. Controller Integrated Control Software:
 - 1) Capable of controlling pump performance for non-overloading power at every point of operation.
 - 2) Capable of maintaining flow rate data.
- 2.5 ELECTRONICALLY COMMUTATED MOTOR (ECM)
- A. Provide pumps so they are specified or scheduled with ECM.
- 1. Synchronous, constant torque, ECM with permanent magnet rotor. Rotor magnets to be time-stable, nontoxic ceramic magnets (Sr-Fe).
 - 2. Driven by a frequency converter with an integrated power factor correction filter. Conventional induction motors will not be acceptable.
 - 3. Each motor with an integrated variable-frequency drive, tested as one unit by manufacturer.
 - 4. Motor speed adjustable over full range from 0 rpm to maximum scheduled speed.
 - 5. Variable motor speed to be controlled by a 0- to 10 V-dc or 4- to 20-mA input.
 - 6. Integrated motor protection verified by UL to protect the pump against over-/undervoltage, overtemperature of motor and/or electronics, overcurrent, locked rotor, and dry run (no-load condition).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine equipment foundations and anchor-bolt locations for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before pump installation.
- C. Examine foundations and inertia bases for suitable conditions where pumps will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PUMP INSTALLATION

- A. Comply with [HI 1.4] [and] [HI 2.4].
- B. Install pumps to provide access for periodic maintenance including removing motors, impellers, couplings, and accessories.
- C. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.
- D. Automatic Condensate Pump Units: Install units for collecting condensate and extend to open drain.
- E. Equipment Mounting:
 - 1. Install base-mounted pumps on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 03 3000 "Cast-in-Place Concrete."
 - 2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 23 0548 "Vibration and Seismic Controls for HVAC."
 - 3. Comply with requirements for vibration isolation devices specified in Section 23 0548.13 "Vibration Controls for HVAC."
- F. Equipment Mounting for In-Line Pumps Suspended from Structure: Install in-line pumps with continuous-thread hanger rods and [elastomeric hangers] [spring hangers] [spring hangers with vertical-limit stop] of size required to support weight of in-line pumps.
 - 1. Comply with requirements for seismic-restraint devices specified in Section 23 0548 "Vibration and Seismic Controls for HVAC."
 - 2. Comply with requirements for hangers and supports specified in Section 23 0529 "Hangers and Supports for HVAC Piping and Equipment."

3.3 ALIGNMENT

- A. Perform alignment service. When required by manufacturer to maintain warranty coverage, engage a factory-authorized service representative to perform it.

- B. Comply with requirements in HI standards for alignment of pump and motor shaft. Add shims to the motor feet and bolt motor to base frame. Do not use grout between motor feet and base frame.
- C. Comply with pump and coupling manufacturers' written instructions.
- D. After alignment is correct, tighten foundation bolts evenly but not too firmly. Completely fill baseplate with nonshrink, nonmetallic grout while metal blocks and shims or wedges are in place. After grout has cured, fully tighten foundation bolts.

3.4 PIPING CONNECTIONS

- A. Comply with requirements for piping specified in Section 23 2213 "Steam and Condensate Heating Piping" and Section 23 2216 "Steam and Condensate Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to pump, allow space for service and maintenance.
- C. Connect piping to pumps. Install valves that are same size as piping connected to pumps.
- D. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.
- E. Install **[check, shutoff, and throttling valves]** **[check valve and throttling valve with memory stop]** **[triple-duty valve]** on discharge side of pumps.
- F. Install **[Y-type strainer]** **[suction diffuser]** and shutoff valve on suction side of pumps.
 - 1. Use startup strainer for initial system startup. Install permanent strainer element before turnover of system to Owner.
- G. Install flexible connectors on suction and discharge sides of base-mounted pumps between pump casing and valves.
- H. Install pressure gauges on pump suction and discharge or at integral pressure-gauge tapping, or install single gauge with multiple-input selector valve.
- I. Install check valve on each condensate pump unit discharge unless unit has a factory-installed check valve.

3.5 ELECTRICAL CONNECTIONS

- A. Connect wiring in accordance with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment in accordance with Section 26 0526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 26 0553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.6 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring in accordance with Section 26 0523 "Control-Voltage Electrical Power Cables."

3.7 STARTUP SERVICE

- A. **[Engage a factory-authorized service representative to perform] [Perform]** startup service.
 1. Complete installation and startup checks in accordance with manufacturer's written instructions.
 2. Check piping connections for tightness.
 3. Clean strainers on suction piping. Use startup strainer for initial startup.
 4. Perform the following startup checks for each pump before starting:
 - a. Verify bearing lubrication.
 - b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
 - c. Verify that pump is rotating in correct direction.
 5. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
 6. Start motor.
 7. Open discharge valve slowly.

3.8 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Hydronic pumps will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.9 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain hydronic pumps.

END OF SECTION

SECTION 23 2513 - WATER TREATMENT FOR CLOSED-LOOP HYDRONIC SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Water treatment for closed-loop hydronic systems.
2. Manual chemical-feed equipment.
3. Automatic chemical-feed equipment.
4. Chemicals.
5. Inhibited ethylene glycol and propylene glycol.

B. Related Requirements:

1. Section 23 2533 "HVAC Makeup-Water Filtration Equipment" for water treatment of water softeners, RO equipment, and filtration equipment.
2. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.

1.2 DEFINITIONS

A. RO: Reverse osmosis.

B. TDS: Total dissolved solids consist of salts and other materials that combine with water as a solution.

C. TSS: Total suspended solids include both organic and inorganic solids that are suspended in the water. These solids may include silt, plankton, and industrial wastes.

1.3 ACTION SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, and furnished specialties and accessories for the following products:

1. Bypass feeders.
2. Water meters.
3. Inhibitor injection timers.
4. pH controllers.
5. Chemical solution tanks.
6. Injection pumps.
7. Chemical-treatment test equipment.
8. Chemical material safety data sheets.
9. Inhibited ethylene glycol.
10. Inhibited propylene glycol.

B. Shop Drawings: Pretreatment and chemical-treatment equipment, showing tanks, maintenance space required, and piping connections to hydronic systems.

1. Include plans, elevations, sections, and attachment details.
2. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Water-Analysis Provider Qualifications: Verification of experience and capability of HVAC water-treatment service provider.
- B. Field quality-control reports.
- C. Water-Treatment Program: Written sequence of operation on an annual basis for the application equipment required to achieve water quality defined in "Performance Requirements" Article.
- D. Water Analysis: Illustrate water quality available at Project site.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For sensors, injection pumps, and controllers to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-treatment service provider, capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.

PART 2 - PRODUCTS

2.1 WATER TREATMENT FOR CLOSED-LOOP HYDRONIC SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Anderson Chemical Company.
 - 2. Aqua-Chem, Inc.
 - 3. Barclay Water Management, Inc.
 - 4. Boland Trane Services.
 - 5. Cascade Water Services, Inc.
 - 6. Earthwise Environmental Inc.
 - 7. H-O-H Water Technology, Inc.
 - 8. Metro Group, Inc. (The).
 - 9. Nalco; an Ecolab company.
 - 10. Sonitec-Vortisand Inc.
 - 11. Suez Water Technologies (Formerly GE Water).
 - 12. Watcon, Inc.

2.2 PERFORMANCE REQUIREMENTS

- A. Provide all hardware, chemicals, and other material necessary to maintain HVAC water quality in all systems, as indicated in this Specification. Water quality for hydronic systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of hydronic equipment without creating a hazard to operating personnel or the environment.

- B. Base HVAC water treatment on quality of water available at Project site, hydronic system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.
- C. Closed hydronic systems, including glycol heating and glycol cooling shall have the following water qualities:
 - 1. pH: Maintain a value within **<Insert range>**.
 - 2. Alkalinity: Maintain a value within **<Insert range>** mg/L as CaCO₃.
 - 3. Steel Corrosion Inhibitors: Provide sufficient inhibitors to limit mild steel corrosion to **<Insert number>** mils per year. Maintain soluble iron concentrations at or below **<Insert value>** mg/L.
 - 4. Yellow Metal Corrosion Inhibitor: Provide sufficient copper and brass corrosion inhibitors to limit copper corrosion to **<Insert number>** mils per year. Maintain soluble copper concentrations at or below **<Insert value>** mg/L.
 - 5. Scale Control: Provide softened water for initial fill and makeup. **[Where softened water is not used, provide sufficient scale inhibitors to prevent formation of scale and maintain all scale-forming material in solution.]**
 - 6. Dispersants: Provide sufficient dispersants to prevent sedimentation of fine particulate matter.
 - 7. Microbiological Limits:
 - a. Total Aerobic Plate Count: Maintain a maximum value of **<Insert number>** organisms/mL.
 - b. Total Anaerobic Plate Count: Maintain a maximum value of **<Insert number>** organisms/mL.
 - c. Nitrate Reducers: Maintain a maximum value of **<Insert number>** organisms/mL.
 - d. Sulfate Reducers: Maintain a maximum value of **<Insert number>** organisms/mL.
 - e. Iron Bacteria: Maintain a maximum value of **<Insert number>** organisms/mL.
 - 8. **<Insert other applicable requirements>**.

2.3 MANUAL CHEMICAL-FEED EQUIPMENT

- A. Bypass Feeders: Provide steel feeders with corrosion-resistant exterior coating, minimum 3-1/2-inch (89-mm) fill opening in the top, and NPS 3/4 (DN 20) bottom inlet and top side outlet. Provide quarter turn or threaded fill cap with gasket seal and diaphragm to lock the top on the feeder when exposed to system pressure in the vessel.
 - 1. Capacity: 2 gal. (7.6 L) 5 gal. (19 L) Insert value.
 - 2. Minimum Working Pressure: 125 psig (860 kPa) 175 psig (1210 kPa) Insert value.

2.4 AUTOMATIC CHEMICAL-FEED EQUIPMENT

- A. Water Meter, Piston Type, Threaded:
 - 1. AWWA C700, oscillating-piston, magnetic-drive, totalization meter.
 - 2. Body: Bronze.
 - 3. Minimum Working-Pressure Rating: 150 psig (1035 kPa).
 - 4. Maximum Pressure Loss at Design Flow: 3 psig (20 kPa).
 - 5. Registration: Gallons (Liters) or cubic feet (cubic meters).
 - 6. End Connections: Threaded.
 - 7. **[Controls: Flow-control switch with normally open contacts, rated for maximum 10 A, 250-V ac, that will momentarily close at adjustable increments of total flow.]**

8. **[Electronic or digital interface for flow rate indication at central workstation compatible with DDC system, as described in Section 23 0923 "Direct Digital Control (DDC) System for HVAC." Low-voltage signal must be capable of transmitting 1000 feet (305 m).]**
 9. **[Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.]**
- B. Water Meter, Turbine Type, Threaded:
1. AWWA C701, turbine-type, totalization meter.
 2. Body: Bronze.
 3. Minimum Working-Pressure Rating: 100 psig (690 kPa).
 4. Maximum Pressure Loss at Design Flow: 3 psig (20 kPa).
 5. Registration: Gallons (Liters) or cubic feet (cubic meters).
 6. End Connections: Threaded.
 7. **[Controls: Flow-control switch with normally open contacts, rated for maximum 10 A, 250-V ac, that will momentarily close at adjustable increments of total flow.]**
 8. **[Electronic or digital interface for flow rate indication at central workstation compatible with DDC system, as described in Section 23 0923 "Direct Digital Control (DDC) System for HVAC." Low-voltage signal must be capable of transmitting 1000 feet (305 m).]**
 9. **[Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.]**
- C. Water Meter, Turbine Type, Flanged:
1. AWWA C701, turbine-type, totalization meter.
 2. Body: **[Bronze] [Epoxy-coated cast iron].**
 3. Minimum Working-Pressure Rating: 150 psig (1035 kPa).
 4. Maximum Pressure Loss at Design Flow: 3 psig (20 kPa).
 5. Registration: Gallons (Liters) or cubic feet (cubic meters).
 6. End Connections: Flanged.
 7. **[Controls: Flow-control switch with normally open contacts, rated for maximum 10 A, 250-V ac, that will momentarily close at adjustable increments of total flow.]**
 8. **[Electronic or digital interface for flow rate indication at central workstation compatible with DDC system, as described in Section 23 0923 "Direct Digital Control (DDC) System for HVAC." Low-voltage signal must be capable of transmitting 1000 feet (305 m).]**
 9. **[Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.]**
- D. Chemical Solution Tanks:
1. Chemical-resistant reservoirs fabricated from high-density opaque polyethylene with minimum 110 percent containment vessel.
 2. Molded cover with recess for mounting pump.
 3. Capacity: 30 gal. (114 L) 50 gal. (189 L) 120 gal. (454 L) Insert value.
- E. Chemical Solution Injection Pumps:
1. Self-priming, positive displacement; rated for intended chemical with minimum 25 percent safety factor for design pressure and temperature.

2. Adjustable flow rate.
 3. Metal and thermoplastic construction.
 4. Built-in relief valve.
 5. Fully enclosed, continuous-duty, single-phase motor. Comply with requirements in Section 23 0500 "Common Work Results for HVAC."
 6. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- F. Chemical Solution Tubing: Polyethylene tubing with compression fittings and joints except ASTM A269/A269M, Type 304 stainless steel for steam boiler injection assemblies.
- G. Injection Assembly:
1. Quill: Minimum NPS 1/2 (DN 15) with insertion length sufficient to discharge into at least 25 percent of pipe diameter.
 2. Ball Valve: Three Two-piece, stainless steel; selected to fit quill.
 3. Packing Gland: Mechanical seal on quill of sufficient length to allow quill removal during system operation.
 4. Assembly Pressure/Temperature Rating: Minimum 600 psig (4137 kPa) at 200 deg F (93 deg C).

2.5 CHEMICAL-TREATMENT TEST EQUIPMENT

- A. Test Kit: Manufacturer-recommended equipment and chemicals in a wall-mounted cabinet for testing pH, corrosion inhibitors, alkalinity, hardness, and other properties recommended by manufacturer.
- B. Corrosion Test-Coupon Assembly: Constructed of corrosive-resistant material, complete with piping, valves, and mild steel and copper coupons. Locate copper coupon downstream from mild steel coupon in the test-coupon assembly.
1. Two -station rack for closed-loop systems.

2.6 CHEMICALS

- A. Chemicals shall be as recommended by water-treatment system manufacturer, compatible with piping system components and connected equipment, and able to attain water quality specified in "Performance Requirements" Article.

2.7 INHIBITED ETHYLENE GLYCOL AND PROPYLENE GLYCOL

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
1. Dynalene.
 2. Fremont Industries.
 3. Houghton Chemical Corp.
 4. The Dow Chemical Company.
 5. Insert manufacturer's name.
- B. Inhibited Propylene Glycol:

1. Propylene glycol with inhibitor additive, to provide freeze protection for heat-transfer fluid and corrosion protection for carbon steel, brass, copper, stainless steel, and cast-iron piping and fittings.
2. Inhibitor creates a passive layer on all surfaces that contact propylene glycol to prevent corrosion and stabilizes fluid pH, to compensate for acids formed from glycol degradation.
3. pH value shall be maintained between <Insert range>, with reserve alkalinity greater than <Insert number> mL.
4. Concentrated inhibited propylene glycol is to be 95.5 percent propylene glycol by weight and 4.5 percent performance additives.
5. Concentrated inhibited propylene glycol is mixed with water in proper proportion specified by the manufacturer to provide freeze protection to [minus 20 deg F (minus 29 deg C)] <Insert number>. Premixed heat-transfer fluid may be used, or glycol/water mixture may be prepared at the time of installation. Use only deionized water for mixing.
6. Provide only propylene glycol that is specifically blended for HVAC application. Automotive-type antifreeze is unacceptable.

PART 3 - EXECUTION

3.1 WATER ANALYSIS

- A. Perform an analysis of supply water to determine quality of water available at Project site.

3.2 INSTALLATION

- A. Install chemical-application equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units, so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate. Install all chemical application equipment within a spill-containment area without floor drain.
- B. Install seismic restraints for equipment and floor-mounting accessories, and anchor to building structure. Comply with requirements in Section 23 0548 "Vibration and Seismic Controls for HVAC" for seismic restraints.
- C. Install water-testing equipment on wall near water-chemical-application equipment.
- D. Install interconnecting control wiring for chemical-treatment controls and sensors.
- E. Mount sensors and injectors in piping circuits.
- F. Bypass Feeders: Install in closed hydronic systems, including glycol heating, and glycol cooling, and equip with the following:
 1. Install bypass feeder in a bypass circuit around circulating pumps unless indicated otherwise on Drawings.
 2. Install water meter in makeup-water supply.
 3. Install test-coupon assembly in bypass circuit around circulating pumps unless otherwise indicated on Drawings.
 4. Install a gate or full-port ball isolation valves on inlet, outlet, and drain below the feeder inlet.
 5. Install a swing check on the inlet after the isolation valve.

- G. Install automatic fluid make-up equipment for glycol water system, and include the following:
 - 1. Chemical solution tanks.
 - 2. Chemical solution injection pumps.
 - 3. Water meter in makeup supply to system.
 - 4. Pressure switch to operate injection pump as necessary to maintain glycol system pressure.

3.3 PIPING CONNECTIONS

- A. Piping installation requirement are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to equipment, allow space for service and maintenance.
- C. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Dielectric fittings are specified in Section 23 2113 "Hydronic Piping."
- D. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Section 23 0523 "General-Duty Valves for HVAC Piping."
- E. Comply with requirements in Section 22 1119 "Domestic Water Piping Specialties" for backflow preventers required in makeup-water connections to potable-water systems.

3.4 ELECTRICAL CONNECTIONS

- A. Confirm applicable electrical requirements in electrical Sections for connecting electrical equipment.
- B. Ground equipment in accordance with Section 26 0526 "Grounding and Bonding for Electrical Systems."
- C. Connect wiring in accordance with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

- A. Testing Agency:
 - 1. Owner will engage a qualified testing agency to perform tests and inspections.
- B. Tests and Inspections:
 - 1. Inspect field-assembled components and equipment installation, including piping and electrical connections.
 - 2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
 - 3. Place HVAC water-treatment system into operation and calibrate controls during the preliminary phase of hydronic systems' startup procedures.
 - 4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.

5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
 7. Cap and subject piping to static water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
 8. Repair leaks and defects with new materials, and retest piping until no leaks exist.
- C. Equipment will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.
- E. At six -week intervals following Substantial Completion, perform separate water analyses on hydronic systems to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section. Submit written reports of water analysis, advising Owner of changes necessary to adhere to "Performance Requirements" Article.
- F. Comply with ASTM D3370 and with the following standards:
1. Silica: ASTM D859.
 2. Acidity and Alkalinity: ASTM D1067.
 3. Iron: ASTM D1068.
 4. Water Hardness: ASTM D1126.

3.6 MAINTENANCE SERVICE

- A. Scope of Maintenance Service: Provide chemicals and service program to maintain water conditions required above, to inhibit corrosion and scale formation for hydronic piping and equipment. Services and chemicals shall be provided for a period of one year from date of Substantial Completion and shall include the following:
1. Initial water analysis and HVAC water-treatment recommendations.
 2. Startup assistance for Contractor to flush the systems, clean with detergents, and initially fill systems with required chemical treatment prior to operation.
 3. Periodic field service and consultation.
 4. Customer report charts and log sheets.
 5. Laboratory technical analysis.
 6. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

3.7 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain HVAC water-treatment systems and equipment.

END OF SECTION

SECTION 23 3113 - METAL DUCTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Single-wall rectangular ducts and fittings.
 2. Single-wall round ducts and fittings.
 3. Sheet metal materials.
 4. Sealants and gaskets.
 5. Hangers and supports.
- B. Related Requirements:
 1. Section 23 0593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing requirements for metal ducts.
 2. Section 23 3116 "Nonmetal Ducts" for fibrous-glass ducts, thermoset fiber-reinforced plastic ducts, thermoplastic ducts, PVC ducts, and concrete ducts.
 3. Section 23 3119 "HVAC Casings" for factory- and field-fabricated casings for mechanical equipment.
 4. Section 23 3300 "Air Duct Accessories" for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of the following products:
 1. Liners and adhesives.
 2. Sealants and gaskets.
- B. Sustainable Design Submittals:
 1. Product Data: For ventilation equipment, indicating compliance with ASHRAE 62.1, Section 5 - "Systems and Equipment."
 2. Ventilation: Product Data for ventilation equipment, indicating compliance with ASHRAE 62.1, Section 5 - "Systems and Equipment."
 3. Product Data: For adhesives, indicating VOC content.
 4. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
 5. Product Data: For sealants, indicating VOC content.
 6. Laboratory Test Reports: For sealants, indicating compliance with requirements for low-emitting materials.
 7. Laboratory Test Reports: For antimicrobial coatings, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings:
 1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
 2. Factory- and shop-fabricated ducts and fittings.
 3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
 4. Elevation of top and bottom of ducts.
 5. Dimensions of all duct runs from building grid lines.
 6. Fittings.

7. Reinforcement and spacing.
8. Seam and joint construction.
9. Penetrations through fire-rated and other partitions.
10. Equipment installation based on equipment being used on Project.
11. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
12. Hangers and supports, including methods for duct and building attachment and vibration isolation.

D. Delegated Design Submittals:

1. Sheet metal thicknesses.
2. Joint and seam construction and sealing.
3. Reinforcement details and spacing.
4. Materials, fabrication, assembly, and spacing of hangers and supports.
5. Design Calculations: Calculations, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation for selecting hangers and supports.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: A single set of plans or BIM model, drawn to scale, showing the items described in this Section, and coordinated with all building trades.
- B. Welding certificates.
- C. Field quality-control reports.

1.4 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.
 3. AWS D9.1/D9.1M, "Sheet Metal Welding Code," for duct joint and seam welding.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Duct Design: Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and with performance requirements and design criteria indicated in "Duct Schedule" Article.
- B. Structural Performance: Duct hangers and supports are to withstand the effects of gravity loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and ASCE/SEI 7.
- C. Wind Performance: Ducts are to withstand the effects of wind determined in accordance with to ASCE/SEI 7. See Section 23 0548 "Vibration and Seismic Controls for HVAC."

- D. Airstream Surfaces: Surfaces in contact with airstream comply with requirements in ASHRAE 62.1.
- E. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment," and Section 7 - "Construction and System Startup."
- F. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."
- G. Duct Dimensions: Unless otherwise indicated, all duct dimensions indicated on Drawings are inside clear dimensions and do not include insulation or duct wall thickness.

2.2 SINGLE-WALL RECTANGULAR DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
 - 1. Construct ducts located entirely inside the building of galvanized sheet steel unless otherwise indicated.
 - a. If a length or a segment of duct run is outside the building (example, outside air intake for boilers), the paragraph below on "For ducts exposed to weather" shall apply to the entire run of the duct, including branches located indoors.
 - 2. For ducts exposed to weather, construct of Type 316 stainless steel indicated by manufacturer to be suitable for outdoor installation.
- B. Transverse Joints: Fabricate joints in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - 1. Utilize duct joining system for all ducts 6" and greater.
 - 2. For ducts with longest side less than 36 inches (914 mm), select joint types in accordance with Figure 2-1.
 - 3. For ducts with longest side 36 inches (914 mm) or greater, use factory prefabricated slide-on transverse flanged duct connection systems.
 - 4. Manufacturers: Subject to compliance with requirements, provide products by one of the following -
 - a. Ductmate Industries Inc.
 - b. Nexus PDQ, a Division of Shilco Holdings, Inc.
 - c. Ward Industries, Inc. a Division of Hart and Cooley, Inc.
 - 5. Pre-fabricated, manufactured flanged connectors shall be provided with:
 - a. Steel materials matching the duct construction.
 - b. Roll-formed flanges. Add-on flanged duct connectors may be used with Architect's or Engineer's approval.
 - c. Gage and shape to be in accordance with manufacturer's guidelines.
 - d. Manufacturer's duct construction and reinforcement guidelines with independent leakage testing, deflection and seismic performance.
 - e. Provide with manufacturer's installation criteria for fastener and cleat spacing.
 - f. Minimum independent test leakage rate at 10 inch water gage positive or negative.
 - 6. Where specified for specific applications, all joints are to be welded.

- C. Longitudinal Seams: Select seam types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible." All longitudinal seams are to be Pittsburgh lock seams unless otherwise specified for specific application.
 - 1. Where specified for specific applications, all joints are to be welded.
- D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Ch. 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.3 SINGLE-WALL ROUND DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Ch. 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated.
 - 1. Construct ducts of galvanized sheet steel unless otherwise indicated.
 - 2. For ducts exposed to weather, construct of Type 316 stainless steel indicated by manufacturer to be suitable for outdoor installation.
 - 3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elgen Manufacturing.
 - b. GSI; a DMI Company.
 - c. Linx Industries (formerly Lindab).
 - d. McGill AirFlow LLC.
 - e. MKT Metal Manufacturing.
 - f. Nordfab Ducting.
 - g. SEMCO, LLC; part of FlaktGroup.
 - h. Set Duct Manufacturing.
 - i. Sheet Metal Connectors, Inc.
 - j. Spiral Manufacturing Co., Inc.
 - k. Stamped Fittings Inc.
- B. Source Limitations: Obtain single-wall round ducts and fittings from single manufacturer.
- C. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension).
- D. Transverse Joints: Select joint types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

- E. Longitudinal Seams: Select seam types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - 1. Fabricate round ducts larger than 90 inches (2286 mm) in diameter with butt-welded longitudinal seams.
 - 2. Fabricate flat-oval ducts larger than 72 inches (1830 mm) in width (major dimension) with butt-welded longitudinal seams.
- F. Tees and Laterals: Select types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.4 SHEET METAL MATERIALS

- A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials are to be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A653/A653M.
 - 1. Galvanized Coating Designation: G90 (Z275).
 - 2. Finishes for Surfaces Exposed to View: Mill phosphatized.
 - 3. Any ductwork that is field painted shall be galvanized A60.
- C. Carbon-Steel Sheets: Comply with ASTM A1008/A1008M, with oiled, matte finish for exposed ducts.
- D. Stainless Steel Sheets: Comply with ASTM A480/A480M, Type 304 or 316, as indicated in "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish is to be No. 2B, No. 2D, No. 3, or No. 4 as indicated in "Duct Schedule" Article.
- E. Aluminum Sheets: Comply with ASTM B209 (ASTM B209M) Alloy 3003, H14 temper; with mill finish for concealed ducts, and standard, one-side bright finish for duct surfaces exposed to view.
- F. Factory- or Shop-Applied Antimicrobial Coating:
 - 1. Apply on all exhaust ductwork.
 - 2. Apply to the surface of sheet metal that will form the interior surface of the duct. An untreated clear coating is to be applied to the exterior surface.
 - 3. Antimicrobial compound is to be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
 - 4. Coating containing the antimicrobial compound is to have a hardness of 2H, minimum, when tested in accordance with ASTM D3363.
 - 5. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested in accordance with UL 723; certified by an NRTL.

6. Shop-Applied Coating Color: Black or White.
 7. Antimicrobial coating on sheet metal is not required for duct containing liner treated with antimicrobial coating.
- G. Reinforcement Shapes and Plates: ASTM A36/A36M, steel plates, shapes, and bars; black and galvanized.
1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.
- H. Tie Rods: Galvanized steel, 1/4-inch- (6-mm-) minimum diameter for lengths 36 inches (900 mm) or less; 3/8-inch- (10-mm-) minimum diameter for lengths longer than 36 inches (900 mm).

2.5 SEALANT AND GASKETS

- A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets are to be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested in accordance with UL 723; certified by an NRTL.
- B. Two-Part Tape Sealing System:
1. Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
 2. Tape Width: 3 inches (76 mm) 4 inches (102 mm) 6 inches (152 mm).
 3. Sealant: Modified styrene acrylic.
 4. Water resistant.
 5. Mold and mildew resistant.
 6. Maximum Static-Pressure Class: 10 inch wg (2500 Pa), positive and negative.
 7. Service: Indoor and outdoor.
 8. Service Temperature: Minus 40 to plus 200 deg F (Minus 40 to plus 93 deg C).
 9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum.
 10. Sealant shall have a VOC content of 420 g/L or less.
 11. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." and LEED v4.
- C. Water-Based Joint and Seam Sealant:
1. Application Method: Brush on.
 2. Solids Content: Minimum 65 percent.
 3. Shore A Hardness: Minimum 20.
 4. Water resistant.
 5. Mold and mildew resistant.
 6. VOC: Maximum 75 g/L (less water).
 7. Maximum Static-Pressure Class: 10 inch wg (2500 Pa), positive and negative.
 8. Service: Indoor or outdoor.
 9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.
- D. Solvent-Based Joint and Seam Sealant:
1. Application Method: Brush on.

2. Base: Synthetic rubber resin.
 3. Solvent: Toluene and heptane.
 4. Solids Content: Minimum 60 percent.
 5. Shore A Hardness: Minimum 60.
 6. Water resistant.
 7. Mold and mildew resistant.
 8. Sealant shall have a VOC content of 420 g/L or less.
 9. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." and LEED v4.
 10. Maximum Static-Pressure Class: 10-inch wg (2500 Pa), positive or negative.
 11. Service: Indoor or outdoor.
 12. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.
- E. Flanged Joint Sealant: Comply with ASTM C920.
1. General: Single-component, acid-curing, silicone, elastomeric.
 2. Type: S.
 3. Grade: NS.
 4. Class: 25.
 5. Use: O.
 6. Sealant shall have a VOC content of 420 g/L or less.
 7. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." and LEED v4.
- F. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.
- G. Round Duct Joint O-Ring Seals:
1. Seal is to provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch wg (0.14 L/s per sq. m at 250 Pa) and is to be rated for 10-inch wg (2500-Pa) static-pressure class, positive or negative.
 2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
 3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.
- 2.6 HANGERS AND SUPPORTS
- A. Hanger Rods for Noncorrosive Environments: Galvanized-steel rods and nuts.
- B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
- C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1 (Table 5-1M), "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct."
- D. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A603.

- E. Steel Cables for Stainless Steel Ducts: Stainless steel complying with ASTM A492.
- F. Steel Cable End Connections: Galvanized-steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- G. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- H. Trapeze and Riser Supports:
 - 1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
 - 2. Supports for Stainless Steel Ducts: Stainless steel shapes and plates.
 - 3. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

PART 3 - EXECUTION

3.1 DUCT INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and coordination drawings.
- B. Install ducts in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.
- C. Install ducts in maximum practical lengths with fewest possible joints.
- D. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.
- E. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.
- F. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- G. Install ducts with a clearance of 1 inch (25 mm), plus allowance for insulation thickness.
- H. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.
- I. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches (38 mm).

- J. Install fire, combination fire/smoke, and smoke dampers where indicated on Drawings and as required by code, and by local authorities having jurisdiction. Comply with requirements in Section 23 3300 "Air Duct Accessories" for fire and smoke dampers and specific installation requirements of the damper UL listing.
- K. Install heating coils, cooling coils, air filters, dampers, and all other duct-mounted accessories in air ducts where indicated on Drawings.
- L. Protect duct interiors from moisture, construction debris and dust, and other foreign materials both before and after installation. Comply with SMACNA's "IAQ Guidelines for Occupied Buildings Under Construction," Appendix G, "Duct Cleanliness for New Construction Guidelines."
- M. Elbows: Use long-radius elbows wherever they fit.
 - 1. Fabricate 90-degree rectangular mitered elbows to include turning vanes.
 - 2. Fabricate 90-degree round elbows with a minimum of three segments for 12 inches (300 mm) and smaller and a minimum of five segments for 14 inches (350 mm) and larger.
- N. Branch Connections: Use lateral or conical branch connections.

3.2 INSTALLATION OF EXPOSED DUCTWORK

- A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.
- B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.
- C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.
- D. Maintain consistency, symmetry, and uniformity in arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.
- E. Repair or replace damaged sections and finished work that does not comply with these requirements.

3.3 DUCTWORK EXPOSED TO WEATHER

- A. All external joints are to have secure watertight mechanical connections. Seal all openings to provide weatherproof construction.
- B. Construct ductwork to resist external loads of wind, snow, ice, and other effects of weather. Provide necessary supporting structures.
- C. Single Wall:
 - 1. Ductwork is to be Type 316 stainless steel.
 - 2. Ductwork is to be galvanized steel.

- a. If duct outer surface is uninsulated, protect outer surface with fully customized and suitable paint color approved by Architect. Paint materials and application requirements are specified in Section 09 9113 "Exterior Painting."
- 3. Where ducts have external insulation, provide weatherproof aluminum jacket. See Section 23 0713 "Duct Insulation."

3.4 DUCT SEALING

- A. Seal Class A; no exceptions.
- B. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

3.5 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
 - 1. Where practical, install concrete inserts before placing concrete.
 - 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
 - 3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches (100 mm) thick.
 - 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches (100 mm) thick.
 - 5. Do not use powder-actuated concrete fasteners for seismic restraints. Coordinate with Section 23 0548 "Vibration and Seismic Controls for HVAC."
- C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1 (Table 5-1M), "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches (610 mm) of each elbow and within 48 inches (1220 mm) of each branch intersection.
- D. Hangers Exposed to View: Threaded rod and angle or channel supports.
- E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum intervals of 16 feet (5 m).
- F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.6 DUCTWORK CONNECTIONS

- A. Make connections to equipment with flexible connectors complying with Section 23 3300 "Air Duct Accessories."

- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.7 PAINTING

- A. Paint interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Section 09 9113 "Exterior Painting" and Section 09 9123 "Interior Painting."

3.8 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Leakage Tests:
 1. Comply with SMACNA's "HVAC Air Duct Leakage Test Manual." Submit a test report for each test.
 - a. Ducts with a Pressure Class 3-inch wg and Higher: Test 100 percent for each designated pressure class.
 - b. Ducts with a Pressure Class Lower than 3-inch wg: Test representative duct sections, selected by Architect or Engineer from sections installed, totaling no less than 50 percent of total installed duct area.
 - c. Test pressure shall be equal to construction class.
 - d. Leakage from ductwork shall be no more than 2%.
 - e. Total allowable system leakage shall be no more than 5%.
 2. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
 3. Testing of each duct section is to be performed with access doors, coils, filters, dampers, and other duct-mounted devices in place as designed. No devices are to be removed or blanked off so as to reduce or prevent additional leakage.
 4. Test for leaks before applying external insulation.
 5. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If static-pressure classes are not indicated, test system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure.
 6. Give seven days' advance notice for testing.
- C. Duct System Cleanliness Tests:
 1. Visually inspect duct system to ensure that no visible contaminants are present.
 2. Test sections of metal duct system, chosen randomly by Owner, for cleanliness in accordance with "Description of Method 3 - NADCA Vacuum Test" in NADCA ACR, "Assessment, Cleaning and Restoration of HVAC Systems."
 - a. Acceptable Cleanliness Level: Net weight of debris collected on the filter media is to not exceed 0.75 mg/100 sq. cm.
- D. Duct system will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.9 DUCT CLEANING

- A. Clean new duct system(s) before testing, adjusting, and balancing.
- B. For cleaning of existing ductwork, see Section 23 0130.52 "Existing HVAC Air Distribution System Cleaning."
- C. Use duct cleaning methodology as indicated in NADCA ACR.
- D. Use service openings for entry and inspection.
 - 1. Provide openings with access panels appropriate for duct static-pressure and leakage class at dampers, coils, and any other locations where required for inspection and cleaning access. Provide insulated panels for insulated or lined duct. Patch insulation and liner as recommended by duct liner manufacturer. Comply with Section 23 3300 "Air Duct Accessories" for access panels and doors.
 - 2. Disconnect and reconnect flexible ducts as needed for cleaning and inspection.
 - 3. Remove and reinstall ceiling to gain access during the cleaning process.
- E. Particulate Collection and Odor Control:
 - 1. When venting vacuuming system inside the building, use HEPA filtration with 99.97 percent collection efficiency for 0.3-micron-size (or larger) particles.
 - 2. When venting vacuuming system to outdoors, use filter to collect debris removed from HVAC system, and locate exhaust downwind and away from air intakes and other points of entry into building.
- F. Clean the following components by removing surface contaminants and deposits:
 - 1. Air outlets and inlets (registers, grilles, and diffusers).
 - 2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
 - 3. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
 - 4. Coils and related components.
 - 5. Return-air ducts, dampers, actuators, and turning vanes except in ceiling plenums and mechanical equipment rooms.
 - 6. Supply-air ducts, dampers, actuators, and turning vanes.
 - 7. Dedicated exhaust and ventilation components and makeup air systems.
- G. Mechanical Cleaning Methodology:
 - 1. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
 - 2. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
 - 3. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
 - 4. Clean fibrous-glass duct liner with HEPA vacuuming equipment; do not permit duct liner to get wet. Replace fibrous-glass duct liner that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.

5. Clean coils and coil drain pans in accordance with NADCA ACR. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
6. Provide drainage and cleanup for wash-down procedures.
7. Antimicrobial Agents and Coatings: Apply EPA-registered antimicrobial agents if fungus is present. Apply antimicrobial agents in accordance with manufacturer's written instructions after removal of surface deposits and debris.

3.10 STARTUP

- A. Air Balance: Comply with requirements in Section 23 0593 "Testing, Adjusting, and Balancing for HVAC."

3.11 DUCT SCHEDULE

- A. Fabricate ducts with galvanized sheet steel except as otherwise indicated and as follows:
 1. Fabricate all ducts to achieve SMACNA pressure class, seal class, and leakage class as indicated below.
- B. Intermediate Reinforcement:
 1. Galvanized-Steel Ducts: Galvanized steel or carbon steel coated with zinc-chromate primer.
 2. Stainless Steel Ducts:
 - a. Exposed to Airstream: Match duct material.
 - b. Not Exposed to Airstream: Galvanized.
 3. Aluminum Ducts: Aluminum.
- C. Elbow Configuration:
 1. Rectangular Duct - Requirements for Different Velocities: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
 - a. Velocity 1000 fpm (5 m/s) or Lower:
 - 1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - 2) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows.," where radius elbows do not fit.
 - b. Velocity 1000 to 1500 fpm (5 to 7.6 m/s):
 - 1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - a) Radius Type RE 1 with minimum 1.0 radius-to-diameter ratio may be acceptable for occasional instances approved by Engineer.
 - 2) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows.," where radius elbows of 1.0 radius-to-diameter ratio do not fit.
 - c. Velocity 1500 fpm (7.6 m/s) or Higher:
 - 1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - 2) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows.," where radius elbows do not fit.

2. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "Round Duct Elbows."
 - a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
 - 1) Velocity 1000 fpm (5 m/s) or Lower: 0.5 radius-to-diameter ratio and three segments for 90-degree elbow.
 - 2) Velocity 1000 to 1500 fpm (5 to 7.6 m/s): 1.0 radius-to-diameter ratio and four segments for 90-degree elbow.
 - 3) Velocity 1500 fpm (7.6 m/s) or Higher: 1.5 radius-to-diameter ratio and five segments for 90-degree elbow.
 - b. Round Elbows, 12 (305) Inches (mm) and Smaller in Diameter: Stamped or pleated.
 - c. Round Elbows, 14 (356) Inches (mm) and Larger in Diameter: Standing seam.
- D. Branch Configuration:
 1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-6, "Branch Connection."
 - a. Rectangular Main to Rectangular Branch: 45-degree entry.
 - b. Rectangular Main to Round Branch: Conical spin in.
 2. Round and Flat Oval: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees." Saddle taps are permitted in existing duct.
 - a. Velocity 1000 fpm (5 m/s) or Lower: 90-degree tap.
 - b. Velocity 1000 to 1500 fpm (5 to 7.6 m/s): Conical tap.
 - c. Velocity 1500 fpm (7.6 m/s) or Higher: 45-degree lateral.

END OF SECTION

SECTION 23 3300 - AIR DUCT ACCESSORIES**PART 1 - GENERAL****1.1 SUMMARY****A. Section Includes:**

1. Backdraft and pressure relief dampers.
2. Barometric relief dampers.
3. Manual volume dampers.
4. Control dampers.
5. Fire dampers.
6. Ceiling radiation dampers.
7. Combination fire and smoke dampers.
8. Flange connectors.
9. Duct silencers.
10. Turning vanes.
11. Remote damper operators.
12. Duct-mounted access doors.
13. Duct access panel assemblies.
14. Flexible connectors.
15. Duct accessory hardware.

B. Related Requirements:

1. Section 23 3346 "Flexible Ducts" for insulated and non-insulated flexible ducts.
2. Section 23 3723 "HVAC Gravity Ventilators" for roof-mounted ventilator caps.
3. Section 28 4621.11 "Addressable Fire-Alarm Systems" for duct-mounted fire and smoke detectors.
4. Section 28 4621.13 "Conventional Fire-Alarm Systems" for duct-mounted fire and smoke detectors.

1.2 ACTION SUBMITTALS**A. Product Data:** For each type of product.

1. For duct silencers, include pressure drop, dynamic insertion loss, and self-generated noise data. Include breakout noise calculations for high-transmission-loss casings.

B. Sustainable Design Submittals:

1. Product data showing compliance with ASHRAE 62.1.

C. Shop Drawings: For duct accessories. Include plans, elevations, sections, details, and attachments to other work.

1. Detail duct accessories' fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:
 - a. Special fittings.
 - b. Manual volume damper installations.
 - c. Control-damper installations.
 - d. Fire-damper, smoke-damper, combination fire- and smoke-damper, ceiling, and corridor-damper installations, including sleeves; and duct-mounted access doors and remote damper operators.

- e. Duct security bars.
- f. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, or BIM model, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from installers of the items involved.
- B. Source quality-control reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fusible Links: Furnish quantity equal to 10 percent of amount installed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Comply with NFPA 90A and NFPA 90B.
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

2.2 BACKDRAFT AND PRESSURE RELIEF DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. American Warming and Ventilating; a Mestek Architectural Group company.
 - 2. Cesco Products; a division of MESTEK, Inc.
 - 3. Greenheck Fan Corporation.
 - 4. Lloyd Industries, Inc.
 - 5. Nailor Industries Inc.
 - 6. NCA Manufacturing, Inc.
 - 7. Pottorff.
 - 8. Ruskin Company.
 - 9. Safe Air - Dowco Products.
 - 10. United Enertech.
 - 11. Vent Products Co., Inc.
- B. Description: Gravity balanced.

- C. Performance:
1. Maximum Air Velocity: 3000 fpm (15 m/s).
 2. Maximum System Pressure: 6 inches wg (1.5 kPa).
 3. AMCA Certification: Test and rate in accordance with AMCA 511.
 4. Leakage:
 - a. Class IA: Leakage shall not exceed 3 cfm/sq. ft. (15.2 L/s per sq. m) against 1-inch wg (250-Pa) differential static pressure.
- D. Construction:
1. Frame:
 - a. Hat shaped.
 - b. 18-gauge- (1.3-mm-) thick stainless steel, with welded or mechanically attached corners and mounting flange.
 2. Blades:
 - a. Multiple single-piece blades.
 - b. Center pivoted, maximum 6-inch (150-mm) width, 26-gauge (0.48-mm) Type 304 stainless steel with sealed edges.
 3. Blade Action: Parallel.
- E. Blade Seals: Extruded vinyl, mechanically locked.
- F. Blade Axles:
1. Material: Aluminum.
 2. Diameter: 0.20 inch (5 mm).
- G. Tie Bars and Brackets: Aluminum.
- H. Return Spring: Adjustable tension.
- I. Bearings: Steel ball.
- J. Damper Actuator - Electric:
1. Electric - 24 V ac.
 2. UL 873 plenum rated.
 3. Fully modulating with fail-safe spring return.
 - a. Sufficient motor torque and spring torque to drive damper fully closed with adequate force to achieve required damper seal.
 - b. Minimum 90-degree drive rotation.
 4. Clockwise or counterclockwise drive rotation as required for application.
 5. Environmental Operating Range:
 - a. Temperature: Minus 40 to plus 130 deg F (Minus 40 to plus 55 deg C).
 - b. Humidity: 5 to 95 percent relative humidity noncondensing.
 6. Environmental Enclosure: NEMA 2.
 7. Actuator to be factory mounted and provided with a single-point wiring connection.
- K. Controllers, Electrical Devices, and Wiring:
1. Comply with requirements for electrical devices and connections specified in Section 23 0923 "Direct Digital Control (DDC) System for HVAC."
 2. Electrical Connection: 24 V, 60 Hz.

L. Accessories:

1. Adjustment device to permit setting for varying differential static pressure.
2. Counterweights and spring-assist kits for vertical airflow installations.
3. Chain pulls.
4. Screen Mounting:
 - a. Front mounted in sleeve.
 - 1) Sleeve Thickness: 20 gauge (1.0 mm) minimum.
 - 2) Sleeve Length: 6 inches (150 mm) minimum.
5. Screen Material: Aluminum.
6. Screen Type: Bird Insect.
7. 90-degree stops.

2.3 MANUAL VOLUME DAMPERS

A. Standard, Steel, Manual Volume Dampers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Balance; a division of MESTEK, Inc.
 - b. Aire Technologies.
 - c. American Warming and Ventilating; a Mestek Architectural Group company.
 - d. Arrow United Industries.
 - e. Cesco Products; a division of MESTEK, Inc.
 - f. Greenheck Fan Corporation.
 - g. Lloyd Industries, Inc.
 - h. McGill AirFlow LLC.
 - i. Nailor Industries Inc.
 - j. Pottorff.
 - k. Ruskin Company.
 - l. Safe Air - Dowco Products.
 - m. United Enertech.
 - n. Vent Products Co., Inc.
2. Performance:
 - a. Leakage Rating Class III: Leakage not exceeding 40 cfm/sq. ft. (203 L/s per sq. m) against 1-inch wg (250-Pa) differential static pressure.
3. Construction:
 - a. Linkage out of airstream.
 - b. Suitable for horizontal or vertical airflow applications.
4. Frames:
 - a. Hat-shaped, 18-gauge- (1.3-mm-) thick stainless steel.
 - b. Mitered and welded corners.
 - c. Flanges for attaching to walls and flangeless frames for installing in ducts.
5. Blades:
 - a. Multiple or single blade.
 - b. Parallel- or opposed-blade design.
 - c. Stiffen damper blades for stability.
 - d. Stainless steel; 16 gauge (1.6 mm) thick.
6. Blade Axles: Stainless steel.
7. Bearings:
 - a. Oil-impregnated stainless steel sleeve.

- b. Dampers mounted with vertical blades to have thrust bearing at each end of every blade.
- 8. Tie Bars and Brackets: Galvanized steel.
- 9. Locking device to hold damper blades in a fixed position without vibration.
- B. Jackshaft:
 - 1. Size: 1-inch (25-mm) diameter.
 - 2. Material: Galvanized-steel pipe rotating within pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
 - 3. Length and Number of Mountings: As required to connect linkage of each damper in multiple-damper assembly.
- C. Damper Hardware:
 - 1. Zinc-plated, die-cast core with dial and handle, made of 3/32-inch- (2.4-mm-) thick zinc-plated steel, and a 3/4-inch (19-mm) hexagon locking nut.
 - 2. Include center hole to suit damper operating-rod size.
 - 3. Include elevated platform for insulated duct mounting.

2.4 COMBINATION FIRE AND SMOKE DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Air Balance; a division of MESTEK, Inc.
 - 2. Aire Technologies.
 - 3. Arrow United Industries.
 - 4. Cesco Products; a division of MESTEK, Inc.
 - 5. CL WARD & Family Inc.
 - 6. Greenheck Fan Corporation.
 - 7. NCA Manufacturing, Inc.
 - 8. Pottorff.
 - 9. Ruskin Company.
 - 10. Safe Air - Dowco Products.
 - 11. United Enertech.
- B. General Requirements:
 - 1. Label to indicate conformance to UL 555 and UL 555S by an NRTL.
 - 2. Label to indicate conformance to NFPA 80 and NFPA 90A by an NRTL.
 - 3. Unless otherwise indicated, use parallel-blade configuration.
- C. Closing rating in ducts up to 4-inch wg (1-kPa) static pressure class and minimum 2000 fpm (10 m/s) velocity.
- D. Fire Rating: 3 hours.
- E. Performance:
 - 1. AMCA Certification: Test and rate in accordance with AMCE Publication 511.
 - 2. Leakage:
 - a. Class IA: Leakage shall not exceed 3 cfm/sq. ft. (15.2 L/s per sq. m) against 1-inch wg (250-Pa) differential static pressure.
 - 3. Pressure Drop: 0.05 in. wg (12.5 Pa) at 1500 fpm (7.6 m/s) across a 24-by-24-inch (600-by-600-mm) damper when tested in accordance with AMCA 500-D, Figure 5.3.

4. Velocity: Up to 3000 fpm (15 m/s).
 5. Temperature: Minus 25 to plus 180 deg F (Minus 32 to plus 83 deg C).
 6. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length.
- F. Construction:
1. Suitable or horizontal or vertical airflow applications.
 2. Linkage out of airstream.
 3. Frame:
 - a. Hat shaped.
 - b. Stainless steel, with welded corners and mounting flange.
 - c. Gauge is to be in accordance with UL listing.
 4. Blades:
 - a. Roll-formed, horizontal, airfoil, stainless steel.
 - b. Maximum width and gauge in accordance with UL listing.
 5. Blade Edging Seals:
 - a. Silicone rubber.
 6. Blade Jamb Seal: Flexible stainless steel, compression type.
 7. Blade Axles: 1/2-inch- (13-mm-) diameter; stainless steel; blade-linkage hardware of zinc-plated steel and brass; ends sealed against blade bearings. Linkage mounted out of airstream.
 8. Bearings:
 - a. Oil-impregnated stainless steel sleeve.
- G. Mounting Sleeve:
1. Factory installed, galvanized sheet steel.
 2. Length to suit wall or floor application with factory-furnished silicone caulking.
 3. Gauge in accordance with UL listing.
- H. Heat-Responsive Device:
1. Resettable Replaceable, 212 deg F (100 deg C) rated, fusible links.
 2. Electric resettable link and switch package, factory installed, rated.
- I. Master control panel for use in dynamic smoke-management systems.
- J. Damper Actuator - Electric:
1. Electric - 120 V ac or 24 V ac.
 2. UL 873, plenum rated.
 3. Designed to operate in smoke-control systems complying with UL 555S requirements.
 4. Fully modulating with fail-safe spring return.
 - a. Sufficient motor torque and spring torque to drive damper fully open and fully closed with adequate force to achieve required damper seal.
 - b. Maximum 15-second full-stroke closure.
 - c. Minimum 90-degree drive rotation.
 5. Clockwise or counterclockwise drive rotation as required for application.
 6. Environmental Operating Range:
 - a. Temperature: Minus 40 to plus 130 deg F (Minus 40 to plus 55 deg C).
 - b. Humidity: 5 to 95 percent relative humidity noncondensing.
 7. Environmental Enclosure: NEMA 2.
 8. Actuator to be factory mounted and provided with single-point wiring connection.

- K. Controllers, Electrical Devices, and Wiring:
 - 1. Comply with requirements for electrical devices and connections specified in Section 23 0923 "Direct Digital Control (DDC) System for HVAC."
 - 2. Electrical Connection: 115 V, single phase, 60 Hz or 24 V, 60 Hz.
- L. Accessories:
 - 1. Auxiliary switches for signaling fan control position indication.
 - 2. Momentary test switch Test and reset switches, damper remote mounted.
 - 3. Smoke Detector: Integral, factory wired for single-point connection.

2.5 FLANGE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. CL WARD & Family Inc.
 - 2. Ductmate Industries, Inc.
 - 3. DynAir; a Carlisle Company.
 - 4. Elgen Manufacturing.
 - 5. Ward Industries; a brand of Hart & Cooley, Inc.
- B. Description: Add-on or roll-formed, factory fabricated, slide-on transverse flange connectors, gaskets, and components.
- C. Material: Galvanized steel.
- D. Gauge and Shape: Match connecting ductwork.

2.6 DUCT SILENCERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. FläktGroup.
 - 2. Flexmaster U.S.A., Inc.
 - 3. IAC Acoustics; a division of Sound Seal.
 - 4. McGill AirFlow LLC.
 - 5. Metal Form Mfg/Commercial Acoustics.
 - 6. Pottorff.
 - 7. Price Industries.
 - 8. Ruskin Company.
 - 9. Vibro-Acoustics.
- B. General Requirements:
 - 1. Factory fabricated.
 - 2. Fire-Performance Characteristics: Adhesives, sealants, packing materials, and accessory materials shall have flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested in accordance with ASTM E84.
 - 3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
 - 4. Bearing AMCA's Certified Ratings Seal for prefabricated silencer sound and air performance.

- C. Shape:
 - 1. Rectangular straight with splitters or baffles.
- D. Rectangular Silencer Outer Casing: ASTM A653/A653M, G90 (Z275), galvanized sheet steel, 0.040 inch (1.02 mm) thick.
- E. Inner Casing and Baffles: ASTM A653/A653M, G90 (Z275) galvanized sheet metal, 22 gauge (0.85 mm) thick, and with 1/8-inch- (3-mm-) diameter perforations.
- F. Special Construction:
 - 1. Suitable for outdoor use.
 - 2. High transmission loss to achieve STC 45.
- G. Connection Sizes: Match connecting ductwork unless otherwise indicated.
- H. Principal Sound-Absorbing Mechanism:
 - 1. Controlled impedance membranes and broadly tuned resonators without absorptive media.
 - 2. Dissipative type with fill material.
 - a. Fill Material: Moisture-proof nonfibrous material.
 - b. Erosion Barrier: Polymer bag enclosing fill, heat-sealed before assembly.
 - 3. Lining: None Insert material.
- I. Fabricate silencers to form rigid units that will not pulsate, vibrate, rattle, or otherwise react to system pressure variations. Do not use mechanical fasteners for unit assemblies.
 - 1. Joints: Lock formed and sealed or flanged connections.
 - 2. Suspended Units: Factory-installed suspension hooks or lugs attached to frame in quantities and spaced to prevent deflection or distortion.
 - 3. Reinforcement: Cross or trapeze angles for rigid suspension.
- J. Accessories:
 - 1. Factory-installed end caps to prevent contamination during shipping.
 - 2. Removable splitters.
 - 3. Airflow-measuring devices.
- K. Source Quality Control:
 - 1. Test in accordance with ASTM E477.
 - 2. Testing of mockups to be witnessed by Architect.
 - 3. Record acoustic ratings, including dynamic insertion loss and generated-noise power levels with an airflow of at least 2000 fpm (10 m/s) face velocity.
 - 4. Leak Test: Test units for airtightness at 200 percent of associated fan static pressure or 6-inch wg (1500-Pa) static pressure, whichever is greater.

2.7 TURNING VANES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Aero-Dyne Sound Control Co.
 - 2. CL WARD & Family Inc.
 - 3. Ductmate Industries, Inc.

4. Duro Dyne Inc.
 5. DynAir; a Carlisle Company.
 6. Elgen Manufacturing.
 7. Ward Industries; a brand of Hart & Cooley, Inc.
- B. Manufactured Turning Vanes for Metal Ducts: Fabricate curved blades of galvanized sheet steel; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
1. Acoustic Turning Vanes: Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill.
- C. Manufactured Turning Vanes for Nonmetal Ducts: Fabricate curved blades of resin-bonded fiberglass with acrylic polymer coating; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
- D. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
- E. Vane Construction:
1. Single wall for ducts up to 48 inches (1200 mm) wide and double wall for larger dimensions.

2.8 REMOTE DAMPER OPERATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. DynAir; a Carlisle Company.
 2. METALAIRE, Inc.
 3. United Enertech.
 4. Young Regulator Company.
- B. Description: Cable system designed for remote manual damper adjustment.
- C. Tubing: Aluminum.
- D. Cable: Stainless steel.
- E. Wall-Box Mounting: Recessed.
- F. Wall-Box Cover-Plate Material: Steel.

2.9 DUCT-MOUNTED ACCESS DOORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Aire Technologies.
 2. Arrow United Industries.
 3. Cesco Products; a division of MESTEK, Inc.
 4. CL WARD & Family Inc.
 5. Ductmate Industries, Inc.

6. Duro Dyne Inc.
7. Elgen Manufacturing.
8. Flexmaster U.S.A., Inc.
9. McGill AirFlow LLC.
10. Ruskin Company.
11. United Enertech.
12. Ventfabrics, Inc.
13. Ward Industries; a brand of Hart & Cooley, Inc.

B. Duct-Mounted Access Doors: Fabricate access panels in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figure 7-2 (7-2M), "Duct Access Doors and Panels," and Figure 7-3, "Access Doors - Round Duct."

1. Door:
 - a. Double wall, rectangular.
 - b. Galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class.
 - c. 0.032-inch (0.81-mm) thick aluminum door panel.
 - d. Vision panel.
 - e. Hinges and Latches: 1-by-1-inch (25-by-25-mm) butt or piano hinge and cam latches.
 - f. Fabricate doors airtight and suitable for duct pressure class.
2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.
 - a. 24-gauge- (0.70-mm-) thick galvanized steel or 0.032-inch- (0.81-mm-) thick aluminum <Insert value> frame.
3. Number of Hinges and Locks:
 - a. Access Doors Less Than 12 Inches (300 mm) Square: No hinges and two sash locks.
 - b. Access Doors up to 18 Inches (460 mm) Square: Continuous and two sash locks.
 - c. Access Doors up to 24 by 48 Inches (600 by 1200 mm): Continuous and two compression latches with outside and inside handles.
 - d. Access Doors Larger Than 24 by 48 Inches (600 by 1200 mm): Continuous and two compression latches with outside and inside handles.

C. Pressure Relief Access Door:

1. Door and Frame Material: Galvanized sheet steel.
 - a. 24-gauge- (0.70-mm-) thick galvanized steel door panel.
2. Door: Double wall with insulation fill with metal thickness applicable for duct pressure class.
3. Operation: Open outward for positive-pressure ducts and inward for negative-pressure ducts.
4. Factory set at 10 inches wg (2500 Pa).
5. Doors close when pressures are within set-point range.
6. Hinge: Continuous piano.
7. Latches: Cam.
8. Seal: Neoprene or foam rubber.
9. Insulation Fill: 1-inch- (25-mm-) thick, fibrous-glass or polystyrene-foam board.

2.10 DUCT ACCESS PANEL ASSEMBLIES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. CL WARD & Family Inc.
2. Ductmate Industries, Inc.

3. Flame Gard, Inc.
 - B. Access panels used in cooking applications:
 1. Labeled compliant to NFPA 96 for grease duct access doors.
 2. Labeled in accordance with UL 1978 by an NRTL.
 - C. Panel and Frame: Minimum thickness 16-gauge (1.6-mm) carbon Insert value and steel type steel.
 - D. Fasteners: Carbon steel. Panel fasteners shall not penetrate duct wall.
 - E. Gasket: Comply with NFPA 96, grease-tight, high-temperature ceramic fiber, rated for minimum 2000 deg F (1093 deg C).
 - F. Minimum Pressure Rating: 10 inches wg (2500 Pa) positive or negative.
- 2.11 FLEXIBLE CONNECTORS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. CL WARD & Family Inc.
 2. Ductmate Industries, Inc.
 3. Duro Dyne Inc.
 4. DynAir; a Carlisle Company.
 5. Elgen Manufacturing.
 6. Ventfabrics, Inc.
 7. Ward Industries; a brand of Hart & Cooley, Inc.
 - B. Fire-Performance Characteristics: Adhesives, sealants, fabric materials, and accessory materials shall have flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested in accordance with ASTM E84.
 - C. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
 - D. Materials: Flame-retardant or noncombustible fabrics.
 - E. Coatings and Adhesives: Comply with UL 181, Class 1.
 - F. Metal-Edged Connectors: Factory fabricated with a fabric strip 5-3/4 inches (146 mm) wide attached to two strips of 2-3/4-inch- (70-mm-) wide, 0.028-inch- (0.7-mm-) thick, galvanized sheet steel or 0.032-inch- (0.8-mm-) thick aluminum sheets. Provide metal compatible with connected ducts.
 - G. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.
 1. Minimum Weight: 26 oz./sq. yd. (880 g/sq. m).
 2. Tensile Strength: 480 lbf/inch (84 N/mm) in the warp and 360 lbf/inch (63 N/mm) in the filling.
 3. Service Temperature: Minus 40 to plus 200 deg F (Minus 40 to plus 93 deg C).

- H. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.
 - 1. Minimum Weight: 24 oz./sq. yd. (810 g/sq. m).
 - 2. Tensile Strength: 530 lbf/inch (93 N/mm) in the warp and 440 lbf/inch (77 N/mm) in the filling.
 - 3. Service Temperature: Minus 50 to plus 250 deg F (Minus 45 to plus 121 deg C).
- I. High-Temperature System, Flexible Connectors: Glass fabric coated with silicone rubber.
 - 1. Minimum Weight: 16 oz./sq. yd. (542 g/sq. m).
 - 2. Tensile Strength: 285 lbf/inch (50 N/mm) in the warp and 185 lbf/inch (32 N/mm) in the filling.
 - 3. Service Temperature: Minus 67 to plus 500 deg F (Minus 55 to plus 260 deg C).
- J. Thrust Limits: Combination coil spring and elastomeric insert with spring and insert in compression, and with a load stop. Include rod and angle-iron brackets for attaching to fan discharge and duct.
 - 1. Frame: Steel, fabricated for connection to threaded rods and to allow for a maximum of 30 degrees of angular rod misalignment without binding or reducing isolation efficiency.
 - 2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 - 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 - 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 - 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 - 6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
 - 7. Coil Spring: Factory set and field adjustable for a maximum of 1/4-inch (6-mm) movement at start and stop.

2.12 DUCT ACCESSORY HARDWARE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. CL WARD & Family Inc.
 - 2. Ductmate Industries, Inc.
 - 3. Duro Dyne Inc.
 - 4. DynAir; a Carlisle Company.
 - 5. Elgen Manufacturing.
 - 6. Hardcast; a Carlisle Company.
 - 7. United Enertech.
 - 8. Ventfabrics, Inc.
 - 9. Ward Industries; a brand of Hart & Cooley, Inc.
- B. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.
- C. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

2.13 MATERIALS

- A. Galvanized Sheet Steel: Comply with ASTM A653/A653M.
 - 1. Galvanized Coating Designation: G90 (Z275).
 - 2. Exposed-Surface Finish: Mill phosphatized.
- B. Stainless Steel Sheets: Comply with ASTM A480/A480M, Type 304, and having a No. 2 finish for concealed ducts and finish for exposed ducts.
- C. Aluminum Sheets: Comply with ASTM B209 (ASTM B209M), Alloy 3003, Temper H14; with mill finish for concealed ducts and standard, one-side bright finish for exposed ducts.
- D. Extruded Aluminum: Comply with ASTM B221 (ASTM B221M), Alloy 6063, Temper T6.
- E. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless steel ducts.
- F. Tie Rods: Galvanized steel, 1/4-inch (6-mm) minimum diameter for lengths 36 inches (900 mm) or less; 3/8-inch (10-mm) minimum diameter for lengths longer than 36 inches (900 mm).

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install duct accessories in accordance with applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116 for fibrous-glass ducts.
- B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless steel accessories in stainless steel ducts, and aluminum accessories in aluminum ducts.
- C. Install control dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.
- D. Where multiple damper sections are necessary to achieve required dimensions, provide reinforcement to fully support damper assembly when fully closed at full system design static pressure.
- E. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
 - 1. Install steel volume dampers in steel ducts.
 - 2. Install aluminum volume dampers in aluminum ducts.
- F. Set dampers to fully open position before testing, adjusting, and balancing.
- G. Install test holes at fan inlets and outlets and elsewhere as indicated and as needed for testing and balancing.

- H. Install fire and smoke dampers in accordance with UL listing.
 - I. Connect ducts to duct silencers with flexible duct connectors.
 - J. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
 - 1. On both sides of duct coils.
 - 2. Upstream and downstream from duct filters.
 - 3. At outdoor-air intakes and mixed-air plenums.
 - 4. At drain pans and seals.
 - 5. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
 - 6. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
 - 7. At each change in direction and at maximum 50-ft. (15-m) spacing.
 - 8. Upstream and downstream from turning vanes.
 - 9. Upstream or downstream from duct silencers.
 - 10. For grease ducts, install at locations and spacing as required by NFPA 96.
 - 11. Control devices requiring inspection.
 - 12. Elsewhere as indicated.
 - K. Install access doors with swing against duct static pressure.
 - L. Access Door Sizes:
 - 1. One-Hand or Inspection Access: 8 by 5 inches (200 by 125 mm).
 - 2. Two-Hand Access: 12 by 6 inches (300 by 150 mm).
 - 3. Head and Hand Access: 18 by 10 inches (460 by 250 mm).
 - 4. Head and Shoulders Access: 21 by 14 inches (530 by 355 mm).
 - 5. Body Access: 25 by 14 inches (635 by 355 mm).
 - 6. Body plus Ladder Access: 25 by 17 inches (635 by 430 mm).
 - M. Label access doors according to Section 23 0553 "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.
 - N. Install flexible connectors to connect ducts to equipment.
 - O. For fans developing static pressures of 5 inches wg (1250 Pa) and more, cover flexible connectors with loaded vinyl sheet held in place with metal straps.
 - P. Install duct test holes where required for testing and balancing purposes.
 - Q. Install thrust limits at centerline of thrust, symmetrical on both sides of equipment. Attach thrust limits at centerline of thrust and adjust to a maximum of 1/4-inch (6-mm) movement during start and stop of fans.
- 3.2 FIELD QUALITY CONTROL
- A. Tests and Inspections:

1. Operate dampers to verify full range of movement.
2. Inspect locations of access doors, and verify that size and location of access doors are adequate to perform required operation.
3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and that proper heat-response device is installed.
4. Inspect turning vanes for proper and secure installation, and verify that vanes do not move or rattle.
5. Operate remote damper operators to verify full range of movement of operator and damper.

FOR REFERENCE ONLY

SECTION 23 3346 - FLEXIBLE DUCTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Flexible ducts, noninsulated.
 - 2. Flexible ducts, insulated.
 - 3. Flexible duct connectors.

1.2 ACTION SUBMITTALS

- A. Product Data:
 - 1. Flexible ducts, noninsulated.
 - 2. Flexible ducts, insulated.
 - 3. Flexible duct connectors.
- B. Product Data Submittals: For each type of product.
- C. Sustainable Design Submittals:
 - 1. Product data showing compliance with ASHRAE 62.1.
 - 2. Product Data: For adhesives and sealants, indicating VOC content.
- D. Shop Drawings: For flexible ducts.
 - 1. Include plans showing locations, mounting details, and attachment details.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from installers of the items involved.

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTION

- A. Comply with NFPA 90A and NFPA 90B.
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials must be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- C. Comply with the Air Duct Council's (formerly, Air Diffusion Council) "ADC Flexible Air Duct Test Code - FD 72-R1" and "Flexible Duct Performance & Installation Standards."
- D. Comply with ASTM E96/E96M.

2.2 FLEXIBLE DUCTS, INSULATED

- A. Standard: Product is to be UL 181 listed and bearing the UL label.
- B. Flexible Ducts, Insulated - Class 1, Two-Ply Vinyl Film Supported by Helically Wound, Spring-Steel Wire; Fibrous-Glass Insulation:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ATCO Rubber Products, Inc.
 - b. Flexmaster U.S.A., Inc.
 - c. JP Lamborn Co.
 - d. Thermaflex; a Flex-Tek Group company.
 - 2. Pressure Rating: 10 inch wg (2500 Pa) positive and 1.0 inch wg (250 Pa) negative.
 - 3. Maximum Air Velocity: 4000 fpm (20 m/s).
 - 4. Temperature Range: Minus 10 to plus 160 deg F (Minus 23 to plus 71 deg C).
 - 5. Insulation R-Value: Comply with ASHRAE/IES 90.1.
 - 6. Vapor-Barrier Film: Polyethylene.

2.3 FLEXIBLE DUCT CONNECTORS

- A. Clamps: Stainless steel band with stainless steel or zinc-plated hex screw to tighten band with a worm-gear action in sizes 3 through 18 inches (75 through 460 mm), to suit duct size.
- B. Non-Clamp Connectors: Adhesive plus sheet metal screws.

PART 3 - EXECUTION

3.1 INSTALLATION OF FLEXIBLE DUCTS

- A. Install flexible ducts in accordance with applicable details in the following publications:
 - 1. ADC's "Flexible Duct Performance & Installation Standards" for flexible ducts.
 - 2. NAIMA AH116.
 - 3. SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts.
 - 4. SMACNA's "Fibrous Glass Duct Construction Standards" for fibrous-glass ducts.
- B. Install in indoor applications only. Do not install flexible duct in locations where it will be exposed to UV lighting.
- C. Connect terminal units to supply ducts with maximum 12-inch (300-mm) lengths of flexible duct. Do not use flexible ducts to change directions.
- D. Connect diffusers and light troffer boots to ducts with maximum 60-inch (1500-mm) lengths of flexible duct clamped or strapped in place.
- E. Connect flexible ducts to metal ducts with liquid adhesive plus tape.
- F. Installation:
 - 1. Install ducts fully extended.
 - 2. Do not bend ducts across sharp corners.
 - 3. Bends of flexible ducting must not exceed a minimum of one-duct diameter.

4. Avoid contact with metal fixtures, water lines, pipes, or conduits.
5. Install flexible ducts in a direct line, without sags, twists, or turns.
6. Install in accordance with ADC instructions.

G. Supporting Flexible Ducts:

1. Support flexible duct at manufacturer's recommended intervals, but at no greater distance than 4 ft. (1.2 m). Provide sufficient support so that maximum centerline sag is 1/2 in. per ft. (42 mm per meter) between supports. A connection to rigid duct or equipment may be considered a support joint.
2. Install extra supports at bends placed approximately one-duct diameter from center line of the bend.
3. Ducts may rest on ceiling joists or truss supports. Spacing between supports must not exceed the maximum spacing in accordance with manufacturer's written installation instructions.
4. Vertically installed ducts must be stabilized by support straps at a maximum of 72 inches (1800 mm) o.c.

END OF SECTION

FOR REFERENCE ONLY

SECTION 23 3400 - HVAC FANS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Fans, centrifugal, inline - square.
2. Fans, plenum.
 - a. Only applicable instance within the air handling unit. See 23 73 13.
3. Fans, plug.
4. Fans, propeller - sidewall mounted.

1.2 ACTION SUBMITTALS

A. Product Data:

1. For each type of product.
 - a. Construction details, material descriptions, dimensions of individual components and profiles, and finishes for fans.
 - b. Rated capacities, furnished specialties, and accessories for each fan.
 - c. Fans:
 - 1) Certified fan performance curves with system operating conditions indicated.
 - 2) Certified fan sound-power ratings.
 - 3) Fan construction and accessories.
 - 4) Motor ratings and electrical characteristics, plus motor and electrical accessories.
 - 5) Fan speed controllers.
 - d. Material thickness and finishes, including color charts.
 - e. Dampers, including housings, linkages, and operators.

B. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.
4. Design Calculations: Calculate requirements for selecting vibration isolators and for designing vibration isolation bases.
5. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

C. Sustainable Design Submittals:

1. Product data showing compliance with ASHRAE 62.1.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans showing fan rooms and fan system layouts, reflected ceiling plans, and other drawings required to illustrate relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.
- B. Startup service reports.
- C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fans and ventilators, include the following:
 - 1. Operation in normal and emergency modes.
 - 2. Operation and maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective coverage for storage and identified with labels describing contents.
 - 1. Belts: One set(s) for each belt-driven unit.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of unit components.
- C. ASHRAE 62.1 Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- E. Service Conditions:
 - 1. Ambient Temperature: 72 deg F (deg C).
 - 2. Altitude: 40 feet (m) above sea level.
 - 3. Humidity: 61 deg F (deg C) wet bulb.

2.2 FANS, CENTRIFUGAL, INLINE - SQUARE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Greenheck Fan Corporation.
 - 2. Twin Cities.

- B. Source Limitations: Obtain square inline centrifugal fans from single manufacturer.
- C. Description: Square-housing in-line centrifugal fans.
- D. Standards: Comply with UL 705.
- E. Housing:
 - 1. Housing Material: See schedule.
 - 2. Housing Coating: See schedule.
 - 3. Housing Construction: Side panels are to be easily removable for service. Include inlet and outlet flanges, and support bracket adaptable to floor, side wall, or ceiling mounting.
- F. Direct-Drive Units: Motor mounted in airstream, factory wired to disconnect switch located on outside of fan housing; with wheel, inlet cone, and motor on swing-out service door.
- G. Belt-Driven Units: Motor mounted on adjustable base, with adjustable sheaves, enclosures around belts within fan housing, and lubricating tubes from fan bearings extended to outside of fan housing.
- H. Fan Wheels: Aluminum airfoil blades welded to aluminum hub.
- I. Motor Enclosure: Open, drip-proof Totally enclosed, fan cooled Totally enclosed, air over Explosion-proof Insert motor enclosure type.
- J. Accessories:
 - 1. Access for Inspection, Cleaning, and Maintenance: Comply with requirements in ASHRAE 62.1.
 - 2. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
 - 3. Volume-Control Damper: Manually operated with quadrant lock, located in fan outlet.
 - 4. Companion Flanges: For inlet and outlet duct connections.
 - 5. Fan Guards: 1/2- by 1-inch (13- by 25-mm) mesh of galvanized steel in removable frame. Provide guard for inlet or outlet for units not connected to ductwork.
 - 6. Motor: Epoxy-coated steel.
 - 7. Belt Guards: Fabricate of prime-coated steel to comply with OSHA and SMACNA requirements for motors with exposed drive belt. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
 - 8. Side Discharge: Flange connector and attachment hardware to provide right-angle discharge on side of unit.
 - 9. Greenheck Fan Corporation.

2.3 FANS, PLUG

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Aerovent; a division of Twin City Fan Companies, Ltd.
 - 2. Chicago Blower Corporation.
 - 3. Cincinnati Fan.
 - 4. Loren Cook Company.
 - 5. New York Blower Company (The).

6. Northern Blower, Inc.
- B. Source Limitations: Obtain plug fans from single manufacturer.
- C. Description:
 1. Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans, consisting of wheel, fan shaft, bearings, motor, drive assembly, and support structure.
 2. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations.
 3. Factory-installed and -wired disconnect switch.
- D. Standards: Comply with UL 705.
- E. Wheels:
 1. Wheel Configuration: SWSI construction with curved inlet flange and heavy backplate; fastened to shaft with setscrews.
 2. Wheel and Blade Material: Steel Aluminum One-piece fiberglass-reinforced plastic See schedule.
 - a. Spark-Resistant Construction: Classified in accordance with AMCA 99, Section 8 Type A Type B Type C.
 3. Wheel and Blade Coating: None Thermoplastic vinyl Epoxy Synthetic resin Phenolic Hot-dip galvanized Powder-baked enamel See schedule Insert manufacturer's name and trade name.
 4. Backward-Inclined Airfoil Blades: Hollow, die-formed, airfoil-shaped blades continuously welded at tip flange and backplate.
- F. Shafts:
 1. Statically and dynamically balanced, and selected for continuous operation at maximum-rated fan speed and motor horsepower, with adjustable alignment and belt tensioning.
 2. Turned, ground, and polished hot-rolled steel with keyway. Ship with protective coating of lubricating oil.
 3. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
- G. Bearings:
 1. Prelubricated and Sealed Shaft Bearings:
 - a. Self-aligning, pillow-block-type ball bearings.
 - b. Ball-Bearing Rating Life: ABMA 9, L10 at 50,000 120,000 Insert number hours.
 - c. Roller-Bearing Rating Life: ABMA 11, L10 at 50,000 120,000 Insert number hours.
 2. Grease-Lubricated Shaft Bearings, Tapered Roller:
 - a. Self-aligning, pillow-block-type, tapered roller bearings with double-locking collars and two-piece, cast-iron housing.
 - b. Ball-Bearing Rating Life: ABMA 9, L10 at 50,000 120,000 Insert number hours.
 - c. Roller-Bearing Rating Life: ABMA 11, L10 at 50,000 120,000 Insert number hours.
 - d. Extended Lubrication Lines: Extend lines to accessible location.
 3. Grease-Lubricated Shaft Bearings, Ball or Roller:
 - a. Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing.
 - b. Ball-Bearing Rating Life: ABMA 9, L10 at 50,000 120,000 Insert number hours.

- c. Roller-Bearing Rating Life: ABMA 11, L10 at 50,000 120,000 Insert number hours.
 - d. Extended Lubrication Lines: Extend lines to accessible location.
 - H. Belt Drives:
 - 1. Factory mounted, with adjustable alignment and belt tensioning.
 - 2. Service Factor Based on Fan Motor Size: 1.5 1.4 1.3 1.2.
 - 3. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
 - 4. Motor Pulleys: Adjustable pitch for use with motors through 5 Insert number hp. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions. Provide fixed pitch for use with larger motors.
 - 5. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
 - 6. Belt Guards: Comply with OSHA and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; 0.146-inch- (2.7-mm-) Insert dimension thick, 3/4-inch (20-mm) Insert dimension diamond-mesh wire screen, welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short-circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
 - 7. Motor Mount: Adjustable for belt tensioning.
 - I. Motor Enclosure: Open, dripproof Totally enclosed, fan cooled Totally enclosed, air over Explosion proof.
 - J. Accessories:
 - 1. Inlet Safety Screen: Comply with OSHA and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible." Diamond mesh wire screen is welded to steel angle frame or equivalent, prime coated.
 - 2. Safety Enclosure: Comply with OSHA and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible." Diamond mesh wire screen is welded to steel angle frame or equivalent, prime coated.
 - 3. Belt Guard: Comply with OSHA and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible." Diamond mesh wire screen is welded to steel angle frame or equivalent, prime coated.
 - 4. Inlet Companion Flange: Rolled flanges for duct connections of same material as housing.
 - 5. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.
 - 6. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.
- 2.4 FANS, UTILITY SET
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Aerovent; a division of Twin City Fan Companies, Ltd.
 - 2. American Coolair Corporation.
 - 3. Canarm Ltd.
 - 4. Carnes Company.
 - 5. Delhi Industries Inc.
 - 6. JencoFan.
 - 7. Loren Cook Company.

8. New York Blower Company (The).
 9. Peerless Blowers.
 10. PennBarry; division of Air System Components.
 11. Quietaire Inc.
 12. Rupp Air Management Systems.
 13. S & P USA Ventilation Systems, LLC.
- B. Source Limitations: Obtain fan utility sets from single manufacturers.
- C. Description:
1. Factory-fabricated, -assembled, -tested, and -finished, **[belt-]** **[direct-]**driven centrifugal fan utility vent sets, consisting of housing, wheel, fan shaft, bearings, motor, drive assembly, and support structure.
- D. Standards: Comply with UL 705.
- E. Housings:
1. Housing Material: Reinforced steel Shaped fiberglass-reinforced plastic Aluminum Stainless steel See schedule Insert material.
 2. Housing Coating: None Thermoplastic vinyl Epoxy Synthetic resin Phenolic Hot-dip galvanized Powder-baked enamel See schedule Insert manufacturer's name and trade name.
 3. Formed panels to make curved-scroll housings with shaped cutoff.
 4. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
 5. Discharge Arrangement: Fan scroll housing field rotatable to any of seven eight discharge positions. Provide fan with discharge positioned in proper direction to minimize connected duct turns.
- F. Wheels:
1. Wheel Configuration: SWSL with hub keyed to shaft.
 2. Wheel and Blade Materials: Steel Aluminum One-piece fiberglass-reinforced plastic Stainless steel See schedule.
 - a. Spark-Resistant Construction: Classified in accordance with AMCA 99, Section 8 Type A Type B Type C.
 3. Wheel and Blade Coating: None Thermoplastic vinyl Epoxy Synthetic resin Phenolic Hot-dip galvanized Powder-baked enamel See schedule Insert manufacturer's name and trade name.
 4. Backward-Inclined Airfoil Blades:
 - a. Aerodynamic design.
 - b. Heavy backplate.
 - c. Hollow die-formed, airfoil-shaped blades continuously welded at tip flange and backplate.
 5. Backward-Inclined Curved Blades:
 - a. Curved design.
 - b. Heavy backplate.
 - c. Single-thickness blades continuously welded at tip flange and backplate.
 6. Backward-Inclined Flat Blades:
 - a. Flat design.
 - b. Heavy backplate.
 - c. Single-thickness blades continuously welded at tip flange and backplate.

7. Forward-Curved Blades:
 - a. Curved design.
 - b. Heavy backplate.
 - c. Single-thickness blades continuously welded or riveted at tip flange and backplate.
- G. Shafts:
 1. Turned, ground, and polished steel; keyed to wheel hub. First critical speed at least 1.4 times maximum class speed.
- H. Bearings:
 1. Heavy-duty regreasable ball or roller type in a cast-iron pillowblock housing.
 2. Ball-Bearing Rating Life: ABMA 9, L50 of 200,000 hours L10 of 80,000 hours Insert life.
 3. Roller-Bearing Rating Life: ABMA 11, L50 of 200,000 hours L10 of 80,000 hours Insert life.
 4. Extend grease fitting to accessible location outside of unit.
- I. Belt Drive:
 1. Factory mounted, with final alignment and belt adjustment made after installation.
 2. Service Factor Based on Fan Motor Size: 1.5 1.4 1.3 1.2.
 3. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
 4. Motor Pulleys: Adjustable pitch for use with motors through 5 Insert value hp; fixed pitch for use with motors larger than 5 Insert number hp. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
 5. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
 6. Belt Guards: Comply with OSHA and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," 0.146-inch- (2.7-mm-) Insert dimension thick, 3/4-inch (20-mm) Insert dimension diamond-mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short-circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
- J. Motor Enclosure: Open, dripproof Totally enclosed, fan cooled Explosion proof Insert motor enclosure type.
- K. Accessories:
 1. Inlet and Outlet: Flanged.
 2. Companion Flanges: Rolled flanges for duct connections of same material as housing.
 3. Backdraft Dampers: Gravity actuated with counterweight and interlocking aluminum blades, with felt edges in steel frame installed on fan discharge.
 4. Access Door: Gasketed door in scroll with latch-type handles.
 5. Scroll Dampers: Single-blade damper installed at fan scroll top with adjustable linkage.
 6. Inlet Screens: Removable wire mesh.
 7. Outlet Screens: Removable wire mesh.
 8. Belt Guard: OSHA-compliant, fabricated in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible." Diamond mesh wire screen welded to steel angle frame or equivalent, prime coated.
 9. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.

10. Drain Connections: NPS 3/4 (DN 20) threaded coupling drain connection installed at lowest point of housing.
11. Weather Hoods: Weather resistant with stamped vents over motor and drive compartment.
12. Discharge Dampers: Assembly with parallel opposed blades constructed of two plates formed around, and to, shaft, channel frame, and sealed ball bearings, with blades linked outside of airstream to single control lever of same material as housing.
13. Grease Collection Trough and Receiver: For restaurant exhaust application.
14. Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.

2.5 FANS, PROPELLER - SIDEWALL MOUNTED

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
1. Acme Engineering & Manufacturing Corp.
 2. Aerovent; a division of Twin City Fan Companies, Ltd.
 3. Airmaster Fan; a brand of MAICO.
 4. American Coolair Corporation.
 5. Canarm Ltd.
 6. Carnes Company.
 7. JencoFan.
 8. Loren Cook Company.
 9. Moffitt Corporation.
 10. Peerless Blowers.
 11. PennBarry; division of Air System Components.
 12. Quietaire Inc.
 13. Insert manufacturer's name.
- B. Source Limitations: Obtain sidewall-mounted propeller fans from single manufacturer.
- C. Standards: Comply with UL 705.
- D. Housing: Galvanized-steel sheet with flanged edges and integral orifice ring, with baked-enamel finish coat applied after assembly.
- E. Fan Wheels: Formed-steel blades riveted to heavy-gauge steel spider bolted to cast-iron hub.
- F. Fan Wheel: Replaceable, cast extruded-aluminum, airfoil blades fastened to cast-aluminum hub; factory set pitch angle of blades.
- G. Fan Drive, Direct: Direct-drive motor mounted in airstream, factory wired to disconnect switch located on outside of fan housing.
- H. Fan Drive, Belt:
1. Belt drive.
 2. Resiliently mounted to housing.
 3. Statically and dynamically balanced.
 4. Selected for continuous operation at maximum-rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.
 5. Extend grease fitting to accessible location outside of unit.

6. Service Factor Based on Fan Motor Size: 1.4.
7. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
8. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
 - a. Ball-Bearing Rating Life: ABMA 9, L10 of 100,000 hours Insert life.
9. Pulleys: Cast iron with split, tapered bushing; dynamically balanced at factory.
10. Motor Pulleys: Adjustable pitch for use with motors through 5 insert value hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
11. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.

I. Accessories:

1. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
2. Dampers: Counterbalanced, parallel-blade, backdraft dampers factory set to close when fan stops.
3. Motorized Dampers: Parallel-blade dampers with electric actuator wired to close when fan stops.
4. Motor-Side Back Guard: Galvanized steel, complying with OSHA specifications, removable for maintenance.
5. Wall Sleeve: Galvanized steel to match fan and accessory size.
6. Weathershield Hood: Galvanized steel to match fan and accessory size.
7. Weathershield Front Guard: Galvanized steel with expanded metal screen.
8. Belt Guard: For motor mounted on outside of fan cabinet. Comply with OSHA and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; 0.146-inch- (2.7-mm-) Insert dimension thick, 3/4-inch (20-mm) Insert dimension diamond-mesh wire screen, welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short-circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.

2.6 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 23 0500 "Common Work Results for HVAC."
- B. Where variable-frequency drives are indicated or scheduled, provide fan motor compatible with variable-frequency drive.

2.7 SOURCE QUALITY CONTROL

- A. AMCA Certification for Fan Sound Performance Rating: Test, rate, and label in accordance with AMCA 311.
- B. AMCA Certification for Fan Aerodynamic Performance Ratings: Test, rate, and label in accordance with AMCA 211.
- C. AMCA Certification for Fan Energy Index (FEI): Test, rate, and label in accordance with AMCA 211.
- D. Fan Operating Limits: Classify fans in accordance with AMCA 99, Section 14.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Install fans level and plumb.
- B. Disassemble and reassemble units, as required for moving to the final location, in accordance with manufacturer's written instructions.
- C. Lift and support units with manufacturer's designated lifting or supporting points.
- D. Equipment Mounting:
 - 1. Support duct-mounted and other hanging fans directly from the building structure, using suitable hanging systems as specified in Section 23 0529 "Hangers and Supports for HVAC Piping and Equipment."
 - 2. Comply with requirements for vibration isolation devices specified in Section 23 0548.13 "Vibration Controls for HVAC."
- E. Install units with adequate clearances for service and maintenance.
- F. Label fans in accordance with requirements specified in Section 23 0553 "Identification for HVAC Piping and Equipment."

3.2 DUCTWORK CONNECTIONS

- A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 23 3300 "Air Duct Accessories."
- B. Where installing ducts adjacent to fans, allow space for service and maintenance.

3.3 PIPING CONNECTIONS

- A. Install piping from scroll drain connection, with trap with seal equal to 1.5 times specified static pressure, to nearest floor drain with pipe sizes matching the drain connection.

3.4 ELECTRICAL CONNECTIONS

- A. Connect wiring in accordance with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment in accordance with Section 26 0526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate is to be laminated acrylic or melamine plastic signs, as specified in Section 26 0553 "Identification for Electrical Systems."
2. Nameplate is to be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.5 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect wiring in accordance with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

3.6 STARTUP SERVICE:

- A. Perform startup service.
 1. Complete installation and startup checks in accordance with manufacturer's written instructions.
 2. Verify that shipping, blocking, and bracing are removed.
 3. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
 4. Verify that cleaning and adjusting are complete.
 5. For direct-drive fans, verify proper motor rotation direction and verify fan wheel free rotation and smooth bearing operation.
 6. For belt-drive fans, disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
 7. Adjust belt tension.
 8. Adjust damper linkages for proper damper operation.
 9. Verify lubrication for bearings and other moving parts.
 10. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
 11. Disable automatic temperature-control operators, energize motor and confirm proper motor rotation and unit operation, adjust fan to indicated rpm, and measure and record motor voltage and amperage.
 12. Shut unit down and reconnect automatic temperature-control operators.
 13. Remove and replace malfunctioning units and retest as specified above.

3.7 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Adjust belt tension.
- C. Lubricate bearings.
- D. Comply with requirements in Section 23 0593 "Testing, Adjusting, and Balancing for HVAC."

3.8 CLEANING

- A. After completing system installation and testing, adjusting, and balancing and after completing startup service, clean fans internally to remove foreign material and construction dirt and dust.

3.9 FIELD QUALITY CONTROL

- A. Testing Agency: Contractor will engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections with the assistance of a factory-authorized service representative.
 - 1. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 2. Test and adjust controls and safeties.
 - 3. Fans and components will be considered defective if they do not pass tests and inspections.
 - 4. Prepare test and inspection reports.

3.10 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain HVAC fans.

END OF SECTION

SECTION 23 3433.13 - COMMERCIAL AIR CURTAINS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes commercial air-curtain unit.
- B. Related Requirements:
 - 1. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For air curtain units.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include diagrams for power, signal, and control wiring.
- C. Delegated-Design Submittal: Refer to Section 01 3573 "Delegated Design Requirements and Procedures" for delegated design submittal procedures and requirements.
 - 1. Provide delegated-design submittal for air curtain units indicated to comply with performance requirements and design criteria.
 - a. Detail fabrication and assembly of air-curtain unit mounting assemblies.
 - b. Include design calculations for selecting vibration isolators.

1.3 INFORMATIONAL SUBMITTALS

- A. Sample Warranties: For special warranties.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air curtain units to include in operation and maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Furnish one set of filters for each unit installed.

1.6 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of air curtain units that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period (Hot-Water or Steam Heating Units): 18 months.

PART 2 - PRODUCTS

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine work areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for hot-water piping systems to verify actual locations of piping connections before air-curtain installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Install air curtains with clearance for equipment service and maintenance.
- B. Equipment Installation: Install air curtains. Comply with requirements for seismic-restraint devices specified in Section 23 0548 "Vibration and Seismic Controls for HVAC."
- C. Comply with requirements for hangers and supports specified in Section 23 0529 "Hangers and Supports for HVAC Piping and Equipment."

3.3 PIPING CONNECTIONS

- A. Comply with requirements for heating hot-water piping specified in Section 23 2113 "Hydronic Piping" and Section 23 2116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements for steam piping specified in Section 23 2213 "Steam and Condensate Heating Piping" and Section 23 2216 "Steam and Condensate Heating Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Where installing piping adjacent to equipment, allow space for service and maintenance.

3.4 ELECTRICAL CONNECTIONS

- A. Connect wiring in accordance with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment in accordance with Section 26 0526 "Grounding and Bonding for Electrical Systems."

- C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
 - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 26 0553 "Identification for Electrical Systems."
 - 2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.5 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring in accordance with Section 26 0523 "Control-Voltage Electrical Power Cables."

3.6 ADJUSTING

- A. Adjust motor speed to achieve specified airflow.
- B. Adjust discharge louver and dampers to regulate airflow.
- C. Adjust air-directional vanes.

3.7 FIELD QUALITY CONTROL

- A. Testing Agency: Contractor will engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
- D. Tests and Inspections:
 - 1. After installing air curtains completely, perform visual and mechanical check of individual components.
 - 2. After electrical circuitry has been energized, start unit to confirm motor rotation and unit operation. Certify compliance with test parameters.
 - 3. Inspect for water leaks.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- E. Air-curtain unit will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

3.8 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain commercial air curtains.

END OF SECTION

FOR REFERENCE ONLY

SECTION 23 3600 - AIR TERMINAL UNITS**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
 - 1. Modulating, single-duct air terminal units.
 - 2. Exhaust single-duct terminal units.

1.2 ACTION SUBMITTALS

- A. Provide a paragraph by paragraph analysis of this specification and indicate compliance (C), deviation (D), or exception (E) from specification. Submittals that do not contain specification compliance documentation will be returned to the Contractor without review, and will require resubmission.
- B. Product Data: For each type of air terminal unit.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for air terminal units.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Manufacturer shall include terminal unit schedules listing discharge and radiated sound power level, at AHRI Certification Rating Points, for each of the second through seventh octave bands (125-4000Hz) at specified differential static pressures.
 - 4. Manufacturer shall include terminal unit schedules listing discharge and radiated sound power level, at AHRI Certification Rating Points, for each of the second through seventh octave bands (125-4000Hz) at inlet static pressures from 1 to 4 inch water gauge.
 - 5. Manufacturer shall include terminal unit schedules listing radiated sound power level in the occupied space and resulting NC level, based on actual project conditions (including ceiling construction and elevation) at AHRI Certification Rating Points, for each of the second through seventh octave bands (125-4000Hz) at specified differential static pressures.
 - 6. Manufacturer shall include terminal unit schedules listing radiated sound power level in the occupied space and resulting NC level, based on actual project conditions (including ceiling construction and elevation) at AHRI Certification Rating Points, for each of the second through seventh octave bands (125-4000Hz) at inlet static pressures from 1 to 4 inch water gauge.
- C. Sustainable Design Submittals:
 - 1. Product Data: For adhesives, indicating VOC content.
 - 2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
 - 3. Product data showing compliance with ASHRAE 62.1.
- D. Shop Drawings: For air terminal units.
 - 1. Include plans, elevations, sections, and mounting details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include diagrams for power, signal, and control wiring.

4. Hangers and supports, including methods for duct and building attachment and vibration isolation.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans and other details, or BIM model, drawn to scale, indicating the items described in this Section, and coordinated with all building trades.
- B. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals.
 1. In addition to items specified in Section 01 7823 "Operation and Maintenance Data," include the following:
 - a. Instructions for resetting minimum and maximum air volumes.
 - b. Instructions for adjusting software set points.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a Qualified Electrical Testing Laboratory, and marked for intended location and application.
- B. ASHRAE 62.1 Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment," and Section 7 - "Construction and System Start-up."
- C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, "Section 6 - Heating, Ventilating, and Air Conditioning."

2.2 MODULATING, SINGLE-DUCT AIR TERMINAL UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Carrier Global Corporation.
 2. ENVIRO-TEC; brand of Johnson Controls International plc, Building Solutions North America.
 3. Johnson Controls, Inc.
 4. Krueger-HVAC; brand of Johnson Controls International plc, Global Products.
 5. Nailor Industries Inc.
 6. Price Industries Limited.
 7. Titus; brand of Johnson Controls International plc, Global Products.
 8. Trane.

- B. Description: Volume-damper assembly inside unit casing with control components inside a protective metal shroud.
- C. Casing: Minimum 20-gauge- thick galvanized steel.
 - 1. Casing Liner: Comply with requirements in "Casing Liner" Article below for "Casing Liner, Flexible Elastomeric" Paragraph.
 - 2. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
 - 3. Air Outlet: S-slip and drive connections, size matching inlet size.
 - 4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
- D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
 - 1. Maximum Damper Leakage: AHRI 880 rated, 2 percent of nominal airflow at 3-inch wg (750-Pa) inlet static pressure.
- E. Velocity Sensors: Multipoint array with velocity inlet sensors.
- F. Attenuator Section: Casing material and thickness matching associated air terminal unit casing. Provide packless attenuator integral with the air terminal unit, with noise transmission loss performance as required in schedules on Drawings.
- G. Hydronic Heating Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.08 inch (2.0 mm). Include manual air vent and drain valve. Provide hydronic heating coils for air terminal units scheduled on Drawings.
- H. Direct Digital Controls:
 - 1. Terminal Unit Controller: Pressure-independent, VAV controller and integrated actuator, and electronic airflow transducer with multipoint velocity sensor at air inlet, factory calibrated to minimum and maximum air volumes.
 - a. Occupied and unoccupied operating mode.
 - b. Remote reset of airflow or temperature set points.
 - c. Adjusting and monitoring with portable terminal.
 - d. Communication with temperature-control system specified in Section 23 0923 "Direct Digital Control (DDC) System for HVAC."
 - 2. Room Sensor: Wall mounted with temperature set-point adjustment and access for connection of portable operator terminal.
- I. Control Sequence: See Drawings for control sequences.

2.3 EXHAUST SINGLE-DUCT TERMINAL UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Anemostat Air Distribution; Anemostat, Inc.; Mestek, Inc.
 - 2. Nailor Industries Inc.
 - 3. Price Industries Limited.
- B. Description: Volume-damper assembly inside unit casing with control components inside a protective metal shroud, for exhaust applications where pressurization control via exhaust and supply airflow control is desired.

- C. Casing: Minimum 20-gauge- thick galvanized steel.
 - 1. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
 - 2. Air Outlet: S-slip and drive connections, size matching inlet size.
 - 3. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
- D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
 - 1. Maximum Damper Leakage: AHRI 880 rated, 1 percent of nominal airflow at 3-inch wg (750-Pa) inlet static pressure.
- E. Attenuator Section: Casing material and thickness matching associated air terminal unit casing. Provide packless attenuator integral with the air terminal unit, of noise transmission loss performance as required in schedules on Drawings.
- F. Direct Digital Controls:
 - 1. Terminal Unit Controller: Pressure-independent, controller and integrated spring-return open spring-return closed fail-in-last-position actuator (actual actuator fail position shall be per drawings), and electronic airflow transducer with multipoint velocity sensor at air inlet, factory calibrated to minimum and maximum air volumes.
 - a. Occupied and unoccupied operating mode.
 - b. Remote reset of airflow or temperature set points.
 - c. Adjusting and monitoring with portable terminal.
 - d. Communication with temperature-control system specified in Section 23 0923 "Direct Digital Control (DDC) System for HVAC."
 - 2. Room Sensor: Wall mounted with differential pressure set-point adjustment and access for connection of portable operator terminal.
 - 3. Damper Actuator: 24 V, spring-return open spring-return closed fail in last position. See drawings for actuator fail positions.
- G. Control Sequence: See Drawings for control sequences.

2.4 SOURCE QUALITY CONTROL

- A. AHRI 880 Certification: Test, rate, and label assembled air terminal units in accordance with AHRI 880.
- B. AHRI 880: Test and rate assembled air terminal units in accordance with AHRI 880.
- C. Water Coils: Factory pressure test to 300 psig (2070 kPa) in accordance with AHRI 410 and ASHRAE 33.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Comply with Section 23 0529 "Hangers and Supports for HVAC Piping and Equipment" and Section 23 3113 "Metal Ducts" for hangers and supports.
- B. Install air terminal units according to NFPA 90A.

- C. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.
- D. Install wall-mounted thermostats.

3.2 PIPING CONNECTIONS

- A. Where installing piping adjacent to air terminal unit, allow space for service and maintenance.
- B. Hot-Water Piping: Comply with requirements in Section 23 2113 "Hydronic Piping" and Section 23 2116 Hydronic Piping Specialties," and connect heating coils to supply piping with shutoff valve, strainer, control valve, and union or flange; and to return piping with balancing valve and union or flange.

3.3 DUCTWORK CONNECTIONS

- A. Comply with requirements in Section 23 3113 "Metal Ducts" for connecting ducts to air terminal units.
- B. Make connections to air terminal units with flexible connectors complying with requirements in Section 23 3300 "Air Duct Accessories."

3.4 ELECTRICAL CONNECTIONS

- A. Install field power to each air terminal unit electrical power connection. Coordinate with air terminal unit manufacturer and installers.
- B. Connect wiring in accordance with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Ground equipment in accordance with Section 26 0526 "Grounding and Bonding for Electrical Systems."
- D. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.
- E. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
 - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 26 0553 "Identification for Electrical Systems."
 - 2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.5 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring in accordance with Section 26 0523 "Control-Voltage Electrical Power Cables."

3.6 IDENTIFICATION

- A. Label each air terminal unit with drawing designation, nominal airflow, maximum and minimum factory-set airflows, and coil type. Comply with requirements in Section 23 0553 "Identification for HVAC Piping and Equipment" for equipment labels and warning signs and labels.

3.7 STARTUP SERVICE

- A. Perform startup service.
 - 1. Complete installation and startup checks in accordance with manufacturer's written instructions.
 - 2. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.
 - 3. Verify that controls and control enclosure are accessible.
 - 4. Verify that control connections are complete.
 - 5. Verify that nameplate and identification tag are visible.
 - 6. Verify that controls respond to inputs as specified.

3.8 ADJUSTING

- A. Comply with requirements in Section 23 0593 "Testing, Adjusting, and Balancing for HVAC" for air terminal unit testing, adjusting, and balancing.

3.9 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
 - 2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Air terminal unit will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.10 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain air terminal units.

SmithGroup Project No. 00100084

END OF SECTION

FOR REFERENCE ONLY

SECTION 23 3713 - DIFFUSERS, REGISTERS, AND GRILLES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Rectangular and square ceiling diffusers.
 - 2. Linear slot diffusers.
 - 3. Adjustable bar registers and grilles.
- B. Related Requirements:
 - 1. Section 08 9116 "Operable Wall Louvers" and Section 08 9119 "Fixed Louvers" for fixed and adjustable louvers and wall vents, whether or not they are connected to ducts.
 - 2. Section 23 3300 "Air Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated, include the following:
 - 1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
 - 2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.
- B. Samples for Initial Selection: For diffusers, registers, and grilles with factory-applied color finishes.
- C. Samples for Verification: For diffusers, registers, and grilles, in manufacturer's standard sizes to verify color selected.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
 - 1. Ceiling suspension assembly members.
 - 2. Method of attaching hangers to building structure.
 - 3. Size and location of initial access modules for acoustical tile.
 - 4. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
 - 5. Duct access panels.
- B. Source quality-control reports.

PART 2 - PRODUCTS

2.1 CEILING DIFFUSERS

- A. Rectangular and Square Ceiling Diffusers :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anemostat Products; a Mestek company.
 - b. Krueger.
 - c. Nailor Industries Inc.
 - d. Price Industries.
 - e. Titus.
2. Devices shall be specifically designed for variable-air-volume flows.
3. Material: Aluminum.
4. Finish: Baked enamel, color selected by Architect.
5. Face Size: 24 by 24 inches (600 by 600 mm).
6. Face Style: Plaque.
7. Mounting: [Surface] [T-bar] [Snap in] [Spline] [Mounting panel].
8. Pattern: Fixed.
9. Dampers: Radial opposed blade.
10. Accessories:
 - a. Equalizing grid.
 - b. Plaster ring.
 - c. Safety chain.
 - d. Wire guard.
 - e. Sectorizing baffles.
 - f. Operating rod extension.

2.2 CEILING LINEAR SLOT OUTLETS

A. Linear Slot Diffuser :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Research Diffuser Products, Inc.
 - b. Anemostat Products; a Mestek company.
 - c. Carnes.
 - d. Krueger.
 - e. Nailor Industries Inc.
 - f. Price Industries.
 - g. Titus.
2. Devices shall be specifically designed for variable-air-volume flows.
3. Material - Shell: Aluminum, insulated.
4. Material - Pattern Controller and Tees: Aluminum.
5. Finish - Face and Shell: Baked enamel, black.
6. Finish - Pattern Controller: Baked enamel, black.
7. Finish - Tees: Baked enamel, color selected by Architect.
8. Slot Width: 3/4 inch (19 mm).
9. Number of Slots: Two.
10. Length: 48 inches (1200 mm).
11. Accessories: Plaster frame T-bar slot Center notch T-bar on both sides T-bar clips on both sides.

2.3 REGISTERS AND GRILLES

A. Adjustable Bar Grille :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. A-J Manufacturing Co., Inc.
 - b. Anemostat Products; a Mestek company.
 - c. Carnes.
 - d. Dayus Register & Grille Inc.
 - e. Hart & Cooley Inc.
 - f. Krueger.
 - g. METALAIRE, Inc.
 - h. Nailor Industries Inc.
 - i. Price Industries.
 - j. Titus.
 - k. Tuttle & Bailey.
2. Material: Aluminum.
3. Finish: Baked enamel, color selected by Architect.
4. Face Blade Arrangement: Horizontal spaced 3/4 inch (19 mm) apart.
5. Core Construction: Removable.
6. Rear-Blade Arrangement: Vertical spaced 3/4 inch (19 mm) apart.
7. Frame: 1-1/4 inches (32 mm) wide.
8. Mounting Frame: Filter.
9. Mounting: Countersunk screw.

2.4 SOURCE QUALITY CONTROL

- A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install diffusers, registers, and grilles level and plumb.
- B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.
- C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

3.3 ADJUSTING

- A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION

FOR REFERENCE ONLY

SECTION 23 5123 - GAS VENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Listed double-wall vents.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for product.
- B. Shop Drawings: For vents.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Detail fabrication and assembly of hangers and seismic restraints.

1.3 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For special warranty.

1.4 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
 - 2. AWS D9.1/D9.1M, "Sheet Metal Welding Code," for shop and field welding of joints and seams in vents.
- B. Certified Sizing Calculations: Manufacturer shall certify venting system sizing calculations.

PART 2 - PRODUCTS

2.1 LISTED TYPE B AND BW VENTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. American Metal Products.
 - 2. Cleaver-Brooks.
 - 3. FAMCO.
 - 4. Hart & Cooley Inc.
 - 5. Heat-Fab, Inc.
 - 6. Industrial Chimney Company.
 - 7. LSP Products Group, Inc.
 - 8. M&G DuraVent, Inc.; a member of the M&G Group; Duravent GV Type B Gas Vent.
 - 9. Metal-Fab, Inc.

10. Schebler Co. (The).
 11. Security Chimneys International.
 12. Selkirk Corporation; Selkirk Metalbestos and Air Mate.
 13. Tru-Flex Metal Hose Corp.
 14. Van-Packer Company, Inc.
 15. Insert manufacturer's name.
- B. Description: Double-wall metal vents tested according to UL 441 and rated for 480 deg F (248 deg C) continuously for Type B or 550 deg F (288 deg C) continuously for Type BW; with neutral or negative flue pressure complying with NFPA 211.
- C. Construction: Inner shell and outer jacket separated by at least a 1/4-inch (6-mm) airspace.
- D. Inner Shell: ASTM B 209 (ASTM B 209M), Type 1100 aluminum ASTM B 209 (ASTM B 209M), Type 3003 aluminum ASTM B 209 (ASTM B 209M), Type 3105 aluminum ASTM A 666, Type 430 stainless steel.
- E. Outer Jacket: Galvanized Aluminized steel.
- F. Accessories: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designs as vent-pipe straight sections; all listed for same assembly.
1. Termination: Stack cap designed to exclude minimum 90 percent of rainfall.
 2. Termination: Round chimney top designed to exclude minimum 98 percent of rainfall.
 3. Termination: Exit cone with drain section incorporated into riser.
 4. Termination: Antibackdraft.
 5. Termination: Insert termination.

2.2 LISTED TYPE L VENTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. American Metal Products.
 2. FAMCO.
 3. Heat-Fab, Inc.
 4. Industrial Chimney Company.
 5. LSP Products Group, Inc.
 6. M&G DuraVent, Inc.; a member of the M&G Group; Pellet Vent Pro.
 7. Metal-Fab, Inc.
 8. Schebler Co. (The).
 9. Security Chimneys International.
 10. Selkirk Corporation; Selkirk Metalbestos and Air Mate.
 11. Simpson Dura-Vent Co., Inc.; Subsidiary of Simpson Manufacturing Co.
 12. Tru-Flex Metal Hose Corp.
 13. Van-Packer Company, Inc.
 14. Insert manufacturer's name.
- B. Description: Double-wall metal vents tested according to UL 641 and rated for 570 deg F (300 deg C) continuously or 1700 deg F (926 deg C) for 10 minutes; with neutral or negative flue pressure complying with NFPA 211.

- C. Construction: Inner shell and outer jacket separated by at least a [1/4-inch (6-mm)] [1-inch (25-mm)] [2-inch (50-mm)] [4-inch (100-mm)] airspace filled with high-temperature, [ceramic-fiber] [mineral-wool] insulation.
- D. Inner Shell: ASTM A 666, Type 304 Type 316 stainless steel.
- E. Outer Jacket: Galvanized Aluminized Stainless steel.
- F. Accessories: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designs as vent-pipe straight sections; all listed for same assembly.
 - 1. Termination: Stack cap designed to exclude 90 percent of rainfall.
 - 2. Termination: Round chimney top designed to exclude 98 percent of rainfall.
 - 3. Termination: Exit cone with drain section incorporated into riser.
 - 4. Termination: Insert termination.

2.3 LISTED SPECIAL GAS VENTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Heat-Fab, Inc.
 - 2. Metal-Fab, Inc.
 - 3. Security Chimneys International.
 - 4. Selkirk Corporation; Selkirk Metalbestos and Air Mate.
 - 5. Z-Flex; a division of the Novaflex Group; Flexmaster Canada Limited.
 - 6. Insert manufacturer's name.
- B. Description: Double-wall metal vents tested according to UL 1738 and rated for 480 deg F (248 deg C) continuously, with positive or negative flue pressure complying with NFPA 211.
- C. Construction: Inner shell and outer jacket separated by at least a 1/2-inch (13-mm) airspace.
- D. Inner Shell: ASTM A 959, Type 29-4C stainless steel.
- E. Outer Jacket: Aluminized Stainless steel.
- F. Accessories: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designs as vent-pipe straight sections; all listed for same assembly.
 - 1. Termination: Stack cap designed to exclude minimum 90 percent of rainfall.
 - 2. Termination: Round chimney top designed to exclude minimum 98 percent of rainfall.
 - 3. Termination: Exit cone with drain section incorporated into riser.
 - 4. Termination: Insert termination.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of work.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATION

- A. Listed Type B and BW Vents: Vents for certified gas appliances.
- B. Listed Type L Vent: Vents for low-heat appliances.
- C. Listed Special Gas Vent: Condensing gas appliances.

3.3 INSTALLATION OF LISTED VENTS

- A. Coordinate installation of roof curbs, equipment supports, and roof penetrations.
- B. Comply with minimum clearances from combustibles and minimum termination heights according to product listing or NFPA 211, whichever is most stringent.
- C. Seal between sections of positive-pressure vents according to manufacturer's written installation instructions, using sealants recommended by manufacturer.
- D. Support vents at intervals recommended by manufacturer to support weight of vents and all accessories, without exceeding appliance loading.
- E. Lap joints in direction of flow.

3.4 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris, and repair damaged finishes.

END OF SECTION

SECTION 23 5216 - CONDENSING BOILERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes gas-fired, fire-tube condensing boilers, trim, and accessories for generating hot water.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for boilers.
 - 2. Include rated capacities, operating characteristics, and furnished specialties and accessories.
- B. Sustainable Design Submittals:
 - 1. Product Data: For energy performance.
- C. Shop Drawings: For boilers, boiler trim, and accessories.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include diagrams for power, signal, and control wiring.
- D. Delegated-Design Submittal: For each boiler.
 - 1. Design calculations and vibration isolation base details, signed and sealed by a qualified professional engineer.
 - a. Design Calculations: Calculate requirements for selecting vibration isolators .
 - b. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

1.4 INFORMATIONAL SUBMITTALS

- A. Source quality-control reports.
- B. Field quality-control reports.
- C. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For boilers to include in emergency, operation, and maintenance manuals.

1.6 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of boilers that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Fire-Tube Condensing Boilers:
 - a. Heat Exchanger Damaged by Thermal Stress and Corrosion: Nonprorated for 10 years from date of Substantial Completion.

PART 2 - PRODUCTS**2.1 PERFORMANCE REQUIREMENTS**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
- B. ASME Compliance: Fabricate and label boilers to comply with ASME Boiler and Pressure Vessel Code.
- C. ASHRAE/IES 90.1 Compliance: Boilers shall have minimum efficiency according to "Gas and Oil Fired Boilers - Minimum Efficiency Requirements."
- D. DOE Compliance: Minimum efficiency shall comply with 10 CFR 430, Subpart B, Appendix N.
- E. UL Compliance: Test boilers for compliance with UL 795. Boilers shall be listed and labeled by a testing agency acceptable to authorities having jurisdiction.
- F. Mounting Base: For securing boiler to concrete base.

2.2 FIRE-TUBE CONDENSING BOILERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Fulton.
 - 2. AERCO International, Inc.
 - 3. Cleaver-Brooks.
 - 4. Lochinvar, LLC.
- B. Description: Factory-fabricated, -assembled, and -tested, fire-tube condensing boiler with heat exchanger sealed pressure tight, built on a steel base, including ; flue-gas vent; combustion-air intake connections; water supply, return, and condensate drain connections; and controls. Water-heating service only. Medium mass design suitable for low flow/variable flow pumping systems.

- C. Heat Exchanger: The heat exchanger is defined as the surfaces of the pressure vessel where combustion gases transfer heat to the hydronic fluid.
1. The boiler shall be a firetube design, such that all combustion chamber components are within water-backed areas. Watertube boilers will not be accepted.
 2. Furnance to tube connections shall be constructed with low weld intensity, a tube to tube minimum spacing of 2 tube diameters center to center, minimum 1 tube diameter tube to tube ligament, and shall not contain any overlapping welds.
 3. Heat transfer capacity shall be maximized via the use of corrugated firetubes. The corrugation process shall not remove any material from the tubes. Finned, twisted tape, or coil type tube inserts negatively impact ease of maintenance and will not be accepted.
 4. The boiler shall compensate for heat exchanger thermal expansion using a stress relief deflection element external to the pressure vessel shell. The deflection element shall act to protect the boiler tubes and tubesheets from exposure to longitudinal thermal expansion stresses. The deflection element shall not be in contact with flue gases.
 5. Tubesheet to tube weld stresses while the boiler is in operation shall never exceed 1.0 ksi.
 6. The heat exchanger furnace, tubesheets, and firetubes shall be constructed of duplex alloy stainless steel.
 - a. For a long term durability, heat exchanger material of construction must have a minimum Ultimate Tensile Strength of 101 ksi, and a minimum 0.2% Yield Strength of 77 ksi. Weaker materials of construction with reduced strength are not accepted. Boilers seeking an approval must provide documentation that supports this requirement or will be rejected.
 - b. Heat exchangers constructed of cast aluminum, mild steel, cast iron or copper finned tube materials are not accepted.
- D. Exhaust manifold shall be minimum 0.5 in thick stainless steel, ASME designation SA-351 CF3M, and shall be a water-backed design to enhance heat transfer. Dry-back style flue gas condensate collection pan exhaust manifolds are not accepted.
- E. Pressure Vessel: Design and construction shall be in accordance with Section IV of the ASME Code for heating boilers.
1. The shell shall be minimum 0.375" thick steel.
 2. The top head shall be a minimum 0.50" thick steel.
 3. The pressure vessel shall be a counter-flow design with internal water baffling plates.
 4. The boiler return and supply water connections shall be 150# ANSI flanged. The water connections shall not be designed to support an external structural load from the piping system.
 5. The water volume of the boiler shall not be less than 80 gallons.
 6. The maximum water pressure drop across the boiler inlet and outlet connections shall not exceed 5.0 PSI at 289 GPM for 3,000 MBTU/hr boiler.
- F. Fuel/Air Mixture Combustion System. Air and gas pre-mix on the suction side of the fan.
1. Closed-loop oxygen sensor feedback shall automatically adjust the fuel/air ratio. O2 monitoring-only systems that cannot adjust for operation variability shall not be accepted.
 2. Combustion air flow shall be controlled by fan speed and a servo-motor actuated butterfly valve. Fuel flow shall be controlled by a servo-motor actuated butterfly valve. Zero governor or negative regulation systems offer less precision and are not capable of independent air and gas control, and are not accepted.
- G. Burner: Standard natural gas, forced draft, woven fiber mesh design.

1. Turndown: Shall be no less than 15:1.
 2. Excess Air: The burner shall operate at no greater than 7.0% excess O₂ over the entire modulation range to maximize seasonal combustion and thermal efficiencies.
 3. Emissions: When operating on natural gas, the burner shall maintain a NO_x level of <20 ppm, and CO emissions less than 50 ppm, over the complete combustion range at a 3% O₂ correction.
- H. Blower: Variable speed centrifugal fan to operate during each burner firing sequence and to pre-purge and post-purge the combustion chamber.
1. Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 23 0513 "Common Motor Requirements for HVAC Equipment."
 - a. Closed-loop brushless DC variable speed motor with hall effect sensor feedback; internal electronic commutation controller with built in speed control and protection features; long life, sealed, ball bearing with high temperature grease.
- I. VMain Fuel Train:
1. A factory mounted fuel train shall be supplied. The fuel train shall be fully assembled and enclosed within the boiler cabinet, complete with factory mounted and wired high and low gas pressure switches in compliance with CSD-1.
- J. Ignition:
1. Direct spark ignition with transformer. A UV scanner shall be utilized to ensure precise communication of flame status back to the flame programmer. Flame rods are not accepted.
- K. Boiler Enclosure:
1. Cabinet: Jacketed steel enclosure with left hinged full height front access door, fully removable latching access panels, mounted on a steel skid with steel plate decking.
 2. Control Enclosure: NEMA 250, Type 1.
 3. Finish: Cabinet shall be powder coated, pressure vessel assembly shall be painted.
 4. Combustion Air: Drawn from inside of the sealed cabinet, preheating the combustion air.
- L. Capacities and Characteristics:
1. Standard capacities shall be based on 100% water.
 2. Minimum Design Water Pressure Rating: 160 psig.
 3. Minimum Return Water Temperature: No minimum temperature requirements.
 4. Maximum Allowable Water Temperature (ASME): 210°F.
 5. Maximum Delta-T: 100°F
 6. Maximum Allowable Operating Setpoint: 200°F
 7. Jacket Losses: External convection and radiation heat losses to the boiler room from the boiler shall comply with IAW ASHRAE 103-2007, and shall not exceed 0.2% of the rated boiler input at maximum capacity.
- M. Flow Switches: Dedicated circulator pumps, or primary-secondary arrangements shall not be required to protect the boiler from thermal shock. Boilers requiring the use of flow switches or primary-secondary piping arrangements will not be accepted.

- N. The equipment shall be in strict compliance with the requirements of this specification and shall be the manufacturer's standard commercial product unless specified otherwise. Additional equipment features, details, accessories, etc. which are not specifically identified but which are a part of the manufacturer's standard commercial product, shall be included in the equipment being furnished.
- O. Trim
1. Safety Relief Valve: ASME rated 60 psig.
 2. Pressure and Temperature Gauge: Minimum 3-1/2" diameter, combination pressure and temperature gauge.
 3. Flue Gas Condensate Drain Trap: A flue gas condensate drain trap shall be provided to prevent positive pressure exhaust gases from entering the boiler room.
 4. Flue Gas Condensate Neutralization: pH neutralization shall be provided.
- P. Controls
1. The boiler electrical control panel shall include the following devices and features:
 - a. 7" color touch screen control display factory mounted on the front cabinet panel door.
 - 1) The control display shall serve as a user interface for programming parameters, boiler control and monitoring; and shall feature a screen saver, boiler status, configuration, history and diagnostics.
 - b. Controls Transformers: 120VAC, 24 VDC, 12 VDC.
 - c. Flame safeguard control with on the boiler shall be integrated with temperature control lead/lag sequencing modular boiler plant functionality..
 - d. All standard controls shall be factory mounted and wired according to UL requirements.
 2. Burner Operating Controls: To maintain safe operating conditions, factory mounted and wired burner safety controls limit burner operation:
 - a. High Limit: A manual reset mechanical Aquastat device shall stop the burner if operating conditions rise above maximum boiler design temperature.
 - b. Low-Water Cut Off: Electronic probe type mounted in the pressure vessel shall prevent burner operation on low water alarm.
 - c. Air Safety Switch: Prevent operation unless sufficient combustion air is proven.
 - d. Blocked Exhaust: Prevent operation in the event of a blocked flue gas exhaust stack.
 3. Boiler Operating Controls and Features:
 - a. Inlet Water Temperature Monitoring.
 - b. Combustion Air Temperature Monitoring.
 - c. Flue Gas Exhaust Temperature Monitoring: Sensor probe shall be stainless steel.
 - d. Proportional Integral Derivative (PID) temperature load control capability for hydronic and domestic hot water in standalone or lead/lag operation.
 - e. Operating temperature sensor for automatic start and stop.
 - 1) The temperature sensor shall have tolerance according to IEC 60751
 - f. Time of day display.
 - g. Customizable boiler name display.
 - h. Two customizable boiler interlock terminals displayed.
 - i. Alarm history for a minimum 100 most recent alarms including status at time of lockout.
 - j. Administrative password protection options.
 - k. Motorized isolation valve control:

- 1) Upon heat demand for the boiler, the control shall provide an enable/open signal.
- 2) After the burner is disabled and upon the heat exchanger delta-T dropping to a user programmable delta-T, the signal will be disabled.
 - a) Boilers which utilize only a time delay close as the only means of valve actuation are unable to optimize for residual heat, and will not be accepted.
- 3) In variable primary arrangements, the control shall hold the lead boiler isolation valve open at all times.
- l. Lead/Lag Control of Modular (Multiple) Boiler Plants: Lead/Lag capabilities shall be integral to the boiler controller for up to 8 boilers installed in the same hydronic loop and shall not require an external panel.
 - 1) The boiler manufacturer shall provide a supply water header temperature sensor.
 - a) The temperature sensor shall have tolerance according to IEC 60751, field installed in the common supply water piping.
 - 2) Lead/lag operation shall not require a master boiler or external control panel. Field wired sensors or communication may be connected to any boiler in the lead/lag sequence.
 - 3) The boilers shall communicate with each other via a private Ethernet/IP addressed network.
 - a) Field wiring between boilers shall be shielded Cat5e or Cat6 Ethernet cable.
 - b) In the event a communication cable becomes damaged or interrupted, communication shall be lost with only one boiler and not the entire lead/lag operation. Daisy chain style wiring lacks this redundancy and shall not be accepted.
- m. Building Automation System Interface: Hardware and software to enable building automation system (BAS) to monitor, control, and display boiler status and alarms.
 - 1) Hardwired Contacts:
 - a) Monitoring: Boiler Status, Burner Demand, General Alarm.
 - b) Control with Factory Installed Jumper: Safety Interlock for External Device, Remote Enable, Emergency Stop (E-Stop).
 - c) Remote Setpoint Signal: 4-20 mA or 0-10 VDC.
 - 2) Communication Protocol: A communication interface with BAS shall enable BAS operator to remotely enable and monitor the boiler plant from an operator workstation.
 - a) A BACnet MSTP and IP protocol communication gateway shall be provided. The BACnet gateway is field installed on a boiler. Additional boilers in the lead/lag system shall not require a dedicated BACnet gateway for the BAS to monitor status. A communication point mapping list shall be provided.
- Q. Electrical Power
 1. Single-Point Field Power Connection: Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to boiler.
 2. Electrical Characteristics
 - a. Voltage: 120V.
 - b. Phase: Single.
 - c. Frequency: 60 Hz.

- R. Venting
1. The boiler shall be capable of operating with a stack effect not exceeding $-0.04 \cdot W.C.$ and a combined air intake and exhaust venting pressure drop not exceeding: $+1.50 \cdot W.C.$.
 2. Combustion Air Intake: Direct vent the boiler using sealed combustion by drawing combustion air in from the outdoors.
 - a. Sealed Combustion: Smooth-walled galvanized steel, vent termination through wall, with $1/2" \times 1/2"$ mesh bird screen.
 - b. Flue Gas Exhaust: The flue gas exhaust stack shall be AL 29-4C or 316L stainless steel, listed and labeled to UL-1738 / C-UL S636 for use with Category II/IV appliances, guaranteed appropriate for the application by the manufacturer and supplier of the venting. Provide shop drawings for venting layout as verified and approved by manufacturer.
- S. Condensate drain piping must be galvanized, stainless steel, or Schedule 40 CPVC. Copper, carbon steel, or PVC pipe materials are not accepted.
1. Provide Manufacturer's standard multiple connection condensate trap and neutralization system.

2.3 SOURCE QUALITY CONTROL

- A. Burner and Hydrostatic Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency; perform hydrostatic test.
- B. Test and inspect factory-assembled boilers, before shipping, according to latest ASME Boiler and Pressure Vessel Code.
- C. Allow Owner access to source quality-control testing of boilers. Notify Architect 14 days in advance of testing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting performance of the Work.
1. Final boiler locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Examine mechanical spaces for suitable conditions where boilers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 BOILER INSTALLATION

- A. Equipment Mounting:
1. Comply with requirements for vibration isolation devices specified in Section 23 0548.13 "Vibration Controls for HVAC."

- B. Install gas-fired boilers according to NFPA 54.
- C. Assemble and install boiler trim.
- D. Install electrical devices furnished with boiler but not specified to be factory mounted.
- E. Install control wiring to field-mounted electrical devices.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to boiler to allow service and maintenance.
- C. Install piping from equipment drain connection (condensate neutralization outlet) to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.
- D. Connect piping to boilers, except safety relief valve connections, with flexible connectors of materials suitable for service. Flexible connectors and their installation are specified in Section 23 2116 "Hydronic Piping Specialties."
- E. Connect gas piping to boiler gas-train inlet with union. Piping shall be at least full size of gas-train connection. Provide a reducer if required. Provide line pressure regulator as required.
- F. Connect hot-water piping to supply- and return-boiler tapings with shutoff valve and union or flange at each connection.
- G. Install piping from safety relief valves to nearest floor drain.
- H. Install piping from safety valves to drip-pan elbow and to nearest floor drain.
- I. Boiler Venting:
 - 1. Install flue venting and combustion-air intake.
- J. Ground equipment according to Section 26 0526 "Grounding and Bonding for Electrical Systems."
- K. Connect wiring according to Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Perform installation and startup checks according to manufacturer's written instructions.
 - 2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

- a. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level, and water temperature or steam pressure.
 - b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- B. Boiler will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.
- D. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion , provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.
- E. Performance Tests:
 - 1. Engage a factory-authorized service representative to inspect component assemblies and equipment installations, including connections, and to conduct performance testing.
 - 2. Boilers shall comply with performance requirements indicated, as determined by field performance tests. Adjust, modify, or replace equipment to comply.
 - 3. Perform field performance tests to determine capacity and efficiency of boilers.
 - a. Test for full capacity.
 - b. Test for boiler efficiency at low fire 20, 40, 60, 80, 100, 80, 60, 40, and 20 percent of full capacity. Determine efficiency at each test point.
 - 4. Repeat tests until results comply with requirements indicated.
 - 5. Provide analysis equipment required to determine performance.
 - 6. Provide temporary equipment and system modifications necessary to dissipate the heat produced during tests if building systems are inadequate.
 - 7. Notify Architect 24 hours minimum in advance of test dates.
 - 8. Document test results in a report and submit to Architect.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain boilers. Refer to Section 01 7900 "Demonstration and Training."

END OF SECTION

SECTION 23 6423.13 - AIR-COOLED, SCROLL WATER CHILLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes packaged, air-cooled, electric-motor-driven, scroll water chillers.
- B. Related Requirements:
 - 1. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.

1.3 DEFINITIONS

- A. BAS: Building automation system.
- B. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
- C. DDC: Direct digital control.
- D. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in Btu/h to the total power input given in watts at any given set of rating conditions.
- E. GFI: Ground fault interrupt.
- F. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit for a single chiller calculated per the method defined by AHRI 550/590 and referenced to AHRI standard rating conditions.
- G. I/O: Input/output.
- H. kW/Ton: The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons at any given set of rating conditions.
- I. NPLV: Nonstandard part-load value. A single number part-load efficiency figure of merit for a single chiller calculated per the method defined by AHRI 550/590 and intended for operating conditions other than the AHRI standard rating conditions.
- J. SCCR: Short-circuit current rating.
- K. TEAO: Totally enclosed air over.
- L. TENV: Totally enclosed nonventilating.

1.4 ACTION SUBMITTALS

- A. Assemble product data and shop drawings in a single submittal file (.pdf) that is bookmarked in coordination with an overall submittal Table of Contents, including and not limited to accessories, variable speed drives, and harmonic filters.
- B. Provide a paragraph by paragraph analysis of this specification and indicate compliance (C), deviation (D), or exception (E) from specification. Submittals that do not contain specification compliance documentation will be returned to the Contractor without review, and will require resubmission.
- C. Product Data: For each type of product.
1. Include refrigerant, rated capacities, operating characteristics, and furnished specialties and accessories.
 2. Performance at AHRI standard conditions and at conditions indicated.
 3. Performance at AHRI standard unloading conditions.
 4. Minimum evaporator flow rate.
 5. Refrigerant capacity of water chiller.
 6. Oil capacity of water chiller.
 7. Fluid capacity of evaporator.
 8. Characteristics of safety relief valves.
 9. Force and moment capacity of each piping connection.
- D. Sustainable Design Submittals:
1. Product Data for EA Prerequisite 3, "Fundamental Refrigerant Management": For refrigerants, indicating compliance with refrigerant management practices.
 2. Refrigerant: Product Data for refrigerants, indicating compliance with refrigerant management practices.
 3. Product Data: For refrigerants, indicating compliance with refrigerant management practices.
 4. Product Data: For energy performance.
- E. A summary page indicating following electrical information. Submittal deficient of this summary sheet will be returned without a review, and will require a resubmission -
1. Power requirement (FLA , MCA , MOCP , Voltage, Phase) for every single module.
 2. Quantity of compressors per module and RLA for each compressor.
 3. Type of compressor and factory installed VFD information (if applicable).
 4. Power requirement of heat trace circuit (FLA , MCA , MOCP , Voltage , Phase).
 5. Circuit diagram indicating wiring information and highlight location(s) where external power is to be provided.
- F. A calculation report that quantifies the de-rate of the array based on actual intended installed condition.
- G. Documentation on recommended Propylene Glycol (30%) fluid quality. Identify organic and inorganic concentration limits of all concerning chemicals to the construction of wetted parts.
- H. Provide factory programmed sequence of operations tailored to and based on project requirements.

- I. Labeled machine array output (including noise information, COP and EER) at design fluid flow rate and design temperature differential -
 1. 95 deg F ambient temperature and Design Day Cooling Load
 2. 85 deg F ambient temperature and Design Day Cooling Load
 3. 45 deg F 50% RH ambient temperature and Maximum Heating Output
 4. 45 deg F 100% RH ambient temperature and Maximum Heating Output
 5. 40 deg F 50% RH ambient temperature and Maximum Heating Output.
 6. 40 deg F 100% RH ambient temperature and Maximum Heating Output.
 7. 35 deg F 50% RH ambient temperature and Maximum Heating Output
 8. 35 deg F 100% RH ambient temperature and Maximum Heating Output
 9. 30 deg F 50% RH ambient temperature and Maximum Heating Output.
 10. 30 deg F 100% RH ambient temperature and Maximum Heating Output.
 11. 25 deg F 50% RH ambient temperature and Maximum Heating Output
 12. 20 deg F 50% RH ambient temperature and Maximum Heating Output
 13. 15 deg F 50% RH ambient temperature and Maximum Heating Output.
 14. 10 deg F 50% RH ambient temperature and Maximum Heating Output.
 15. 0 deg F 50% RH ambient temperature and Maximum Heating Output.

- J. Shop Drawings: Complete set of manufacturer's prints of water chiller assemblies, control panels, sections and elevations, and unit isolation. Include the following:
 1. Assembled unit dimensions.
 2. Weight and load distribution.
 3. Required clearances for maintenance and operation.
 4. Size and location of piping and wiring connections.
 5. Diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings:
 1. Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - a. Structural supports.
 - b. Piping roughing-in requirements.
 - c. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
 - d. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
 2. Coordination drawings showing plan, section and elevation views, drawn to 1:48 (1 inch on drawing is 48 inches to scale).
 3. Each view to show screened background with the following:
 - a. Column grids, beams, columns, and concrete housekeeping pads.
 - b. Layout with walls, floors, and roofs, including each room name and number.
 - c. Equipment and products of other trades that are located in vicinity of chillers and part of final installation, such as plumbing systems.

- B. Certificates: For certification required in "Quality Assurance" Article.

- C. Installation instructions.

- D. Source quality-control reports.

- E. Startup service reports.
- F. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each water chiller to include in emergency, operation, and maintenance manuals.
- B. Spare Parts List: Recommended spare parts list with quantity for each.
- C. Touchup Paint Description: Detailed description of paint used in application of finish coat to allow for procurement of a matching paint.
- D. Instructional Videos: Including those that are prerecorded and those that are recorded during training.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Tool kit to include the following:
 - 1. A tool kit specially designed by chiller manufacturer for use in servicing chiller(s) furnished.
 - 2. Special tools required to service chiller components not readily available to Owner service personnel in performing routine maintenance.
 - 3. Lockable case with hinged cover, marked with large and permanent text to indicate the special purpose of tool kit, such as "Chiller Tool Kit." Text size shall be at least 1 inch (25 mm) high.
 - 4. A list of each tool furnished. Permanently attach the list to underside of case cover. Text size shall be at least 1/2 inch (13 mm) high.
- B. Touchup Paint: 32 oz. (1 L) container of paint used for finish coat. Label outside of container with detailed description of paint to allow for procurement of a matching paint in the future.

1.8 QUALITY ASSURANCE

- A. AHRI Certification: Certify chiller according to AHRI 590 certification program.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Ship water chillers from the factory fully charged with refrigerant and filled with oil.
- B. Package water chiller for export shipping.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of water chillers that fail in materials or workmanship within specified warranty period.
 - 1. Extended warranties include, but are not limited to, the following:
 - a. Complete chiller including refrigerant and oil charge.
 - b. Complete compressor and drive assembly including refrigerant and oil charge.
 - c. Refrigerant and oil charge.

- 1) Loss of refrigerant charge for any reason due to manufacturer's product defect and product installation.
- d. Parts and labor.
2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Site Altitude: Chiller shall be suitable for altitude at which installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.
- B. Performance Tolerance: Comply with the following in lieu of AHRI 550/590:
 1. Allowable Capacity Tolerance: [Zero] <Insert number> percent.
 2. Allowable Full-Load Energy Efficiency Tolerance: [Zero] <Insert number> percent.
 3. Allowable Part-Load Energy Efficiency Tolerance: [Zero] <Insert number> percent.
- C. AHRI Rating: Rate water chiller performance according to requirements in AHRI 550/590.
- D. ASHRAE Compliance: ASHRAE 15 for safety code for mechanical refrigeration.
- E. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- F. ASME Compliance: Fabricate and stamp water chiller heat exchangers to comply with ASME Boiler and Pressure Vessel Code.
- G. Comply with NFPA 70.
- H. Comply with requirements of UL 1995, "Heating and Cooling Equipment," and include label by a qualified testing agency showing compliance.
- I. Operation Following Loss of Normal Power:
 1. Equipment, associated factory- and field-installed controls, and associated electrical equipment and power supply connected to backup power system shall automatically return equipment and associated controls to the operating state occurring immediately before loss of normal power without need for manual intervention by an operator when power is restored either through a backup power source, or through normal power if restored before backup power is brought on-line.
 2. See drawings for equipment served by backup power systems.
 3. Provide means and methods required to satisfy requirement even if not explicitly indicated.
- J. Outdoor Installations:
 1. Chiller shall be suitable for outdoor installation indicated. Provide adequate weather protection to ensure reliable service life over a 25 -year period with minimal degradation due to exposure to outdoor ambient conditions.

2. Chillers equipped to provide safe and stable operation while achieving performance indicated when operating at extreme outdoor temperatures encountered by the installation. Review historical weather database and provide equipment that can operate at extreme outdoor temperatures recorded over past 30 -year period.

2.2 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Trane.
 2. YORK; a Johnson Controls company.
 3. Swegon.

2.3 MANUFACTURED UNITS

- A. Description: Factory-assembled and run-tested water chiller complete with compressor(s), compressor motors and motor controllers, evaporator, condenser with fans, electrical power, controls, and indicated accessories.
- B. Sound-reduction package shall have the following:
 1. Acoustic enclosure around compressors.
 2. Reduced-speed fans with acoustic treatment.
 3. Designed to reduce sound level without affecting performance.

2.4 CABINET

- A. Base: Galvanized-steel base extending the perimeter of water chiller. Secure frame, compressors, and evaporator to base to provide a single-piece unit.
- B. Frame: Rigid galvanized-steel frame secured to base and designed to support cabinet, condenser, control panel, and other chiller components not directly supported from base.
- C. Casing: Galvanized steel.
- D. Finish: Coat base, frame, and casing with a corrosion-resistant coating capable of withstanding a 500 -hour salt-spray test according to ASTM B117.

2.5 COMPRESSOR-DRIVE ASSEMBLIES

- A. Compressors:
 1. Description: Positive-displacement direct drive with hermetically sealed casing.
 2. Each compressor provided with suction and discharge service valves, crankcase oil heater, and suction strainer.
 - a. For multiple compressor assemblies, it is acceptable to isolate each compressor assembly in lieu of each compressor.
 3. Operating Speed: Nominal 3600 rpm for 60-Hz applications.
 4. Capacity Control: On-off compressor cycling.
 - a. Digital compressor unloading is an acceptable alternative to achieve capacity control.
 5. Oil Lubrication System: Automatic pump with strainer, sight glass, filling connection, filter with magnetic plug or removable magnet in sump, and initial oil charge.

- a. Manufacturer's other standard methods of providing positive lubrication are acceptable in lieu of an automatic pump.
 - 6. Vibration Isolation: Mount individual compressors on vibration isolators.
 - a. For multiple compressor assemblies, it is acceptable to isolate each compressor assembly in lieu of each compressor.
 - B. Compressor Motors:
 - 1. Hermetically sealed and cooled by refrigerant suction gas.
 - 2. High-torque, two-pole induction type with inherent thermal-overload protection on each phase.
 - C. Compressor Motor Controllers:
 - 1. Across the Line: NEMA ICS 2, Class A, full voltage, nonreversing.
- 2.6 REFRIGERATION
- A. Refrigerant: R-454B. Classified as Safety Group A2L according to ASHRAE 34 - 2022.
 - B. Refrigerant Compatibility: Parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.
 - C. Refrigerant Circuit: Each circuit shall include a thermal-expansion valve, refrigerant charging connections, a hot-gas muffler, compressor suction and discharge shutoff valves, a liquid-line shutoff valve, a replaceable-core filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.
 - D. Refrigerant Isolation: Factory install positive shutoff isolation valves in the compressor discharge line and the refrigerant liquid-line to allow the isolation and storage of the refrigerant charge in the chiller condenser.
 - 1. For multiple compressor assemblies, it is acceptable to isolate each compressor assembly in each circuit in lieu of each compressor.
 - E. Pressure Relief Device:
 - 1. Comply with requirements in ASHRAE 15, ASHRAE 147, and applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - 2. Select and configure pressure relief devices to protect against corrosion and inadvertent release of refrigerant.
 - 3. ASME-rated, spring-loaded, pressure relief valve; single- or multiple-reseating type. Pressure relief valve(s) shall be provided for each heat exchanger.
- 2.7 EVAPORATOR
- A. Brazed Plate:
 - 1. Direct-expansion, single-pass, brazed-plate design.
 - 2. Type 316 stainless-steel construction.
 - 3. Code Compliance: Tested according to ASME Boiler and Pressure Vessel Code.
 - 4. Fluid Nozzles: Terminate with mechanical-coupling end connections for connection to field piping.[Furnish flange adapters to mate to flanged piping.]
 - 5. Inlet Strainer: Factory-furnished, 40 -mesh strainer for field installation in supply piping to evaporator. Manufacturer has option to factory install strainer.

- B. Flow Switch: Factory-furnished and -installed, thermal-type flow switch wired to chiller operating controls.
- C. Heater: Factory-installed and -wired electric heater with integral controls designed to protect the evaporator to minus 20 deg F (minus 29 deg C).
- D. Remote-Mounting Kit: Designed for remote field mounting where indicated. Provide kit for field installation.

2.8 AIR-COOLED CONDENSER

- A. Coil(s) with integral subcooling on each circuit.
- B. Copper Tube with Plate Fin Coils:
 - 1. Construct coils of copper tubes mechanically bonded to aluminum fins.
 - 2. Coating: Corrosion resistant.
- C. Aluminum Microchannel Coils:
 - 1. Series of flat tubes containing a series of multiple, parallel-flow microchannels layered between refrigerant header manifolds.
 - 2. Single- or multiple-pass arrangement.
 - 3. Construct fins, tubes, and header manifolds of aluminum alloy treated with a corrosion-resistant coating.
- D. Hail Protection: Provide condenser coils with louvers, baffles, or hoods to protect against hail damage.
- E. Fans: Direct-drive propeller type with statically and dynamically balanced fan blades, arranged for vertical air discharge.
- F. Fan Motors: TENV or TEAO enclosure, with sealed and permanently lubricated bearings, and having built-in overcurrent- and thermal-overload protection.
 - 1. Overcurrent- and thermal-overload protection not integral to motor is acceptable if provided with chiller electrical power package.
- G. Fan Guards: Removable steel safety guards with corrosion-resistant PVC coating.

2.9 HEAT RECOVERY CONDENSER

- A. Brazed Plate:
 - 1. Type 316 stainless-steel construction.
 - 2. Code Compliance: Tested according to ASME Boiler and Pressure Vessel Code.
 - 3. Fluid Nozzles: Terminate with mechanical-coupling end connections for connection to field piping.
 - 4. Inlet Strainer: Factory-furnished, 40 -mesh strainer for field installation in supply piping to condenser. Manufacturer has option to factory install strainer.
- B. Heater: Factory-installed and -wired electric heater with integral controls designed to protect the heat recovery condenser to minus 20 deg F (minus 29 deg C).

- C. Insulation: Insulation on heat recovery condenser shall match evaporator.
- D. Controls: Integral to chiller control package.

2.10 INSULATION

- A. Closed-cell, flexible, elastomeric thermal insulation complying with ASTM C534/C534M, Type I for tubular materials and Type II for sheet materials.
 - 1. Thickness: 1-1/2 inches (38 mm).
- B. Adhesive: As recommended by insulation manufacturer.
- C. Factory-applied insulation over all cold surfaces of chiller capable of forming condensation. Components shall include, but not be limited to, evaporator, evaporator water boxes including nozzles, refrigerant suction pipe from evaporator to compressor, cold surfaces of compressor, refrigerant-cooled motor, and auxiliary piping.
 - 1. Apply adhesive to 100 percent of insulation contact surface.
 - 2. Before insulating steel surfaces, prepare surfaces for paint, and prime and paint as indicated for other painted components. Do not insulate unpainted steel surfaces.
 - 3. Seal seams and joints to provide a vapor barrier.
 - 4. After adhesive has fully cured, paint exposed surfaces of insulation to match other painted parts.
 - 5. Manufacturer has option to factory or field insulate chiller components to reduce potential for damage during installation.
 - 6. Field-Applied Insulation:
 - a. Components that are not factory insulated shall be field insulated to comply with requirements indicated.
 - b. Manufacturer shall be responsible for chiller insulation whether factory or field installed to ensure that manufacturer is the single point of responsibility for chillers.
 - c. Manufacturer's factory-authorized service representative shall instruct and supervise installation of field-applied insulation.
 - d. After field-applied insulation is complete, paint insulation to match factory-applied finish.

2.11 ELECTRICAL

- A. Factory installed and wired, and functionally tested at factory before shipment.
- B. Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to each module of water chiller.
- C. House in a unit-mounted, NEMA 250, Type 3R enclosure with hinged access door with lock and key or padlock and key.
- D. Wiring shall be numbered and color-coded to match wiring diagram.

- E. Factory wiring shall be located outside of an enclosure in a metal raceway. Terminal connections shall be made with not more than a 24-inch (610-mm) length of liquidtight or flexible metallic conduit.
- F. Field power interface shall be to NEMA KS 1, heavy-duty, nonfused disconnect switch. Minimum SCCR according to UL 508 shall be as required by electrical power distribution system, but not less than 65,000 A.
- G. Each motor shall have branch power circuit and controls with one of the following disconnecting means having SCCR to match main disconnecting means:
 - 1. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
- H. Each motor shall have overcurrent protection.
- I. Overload relay sized according to UL 1995, or an integral component of water chiller control microprocessor.
- J. Phase-Failure and Undervoltage: Solid-state sensing with adjustable settings.
- K. Power Factor Correction: Capacitors to correct power factor to 0.90 at full load.
- L. Controls Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.
- M. Control Relays: Auxiliary and adjustable time-delay relays, or an integral to water chiller microprocessor.
- N. Service Receptacle:
 - 1. Unit-mounted, 120-V GFI duplex receptacle.
 - 2. Power receptacle from chiller internal electrical power wiring.
- O. Indicate the following for water chiller electrical power supply:
 - 1. Current, phase to phase, for all three phases.
 - 2. Voltage, phase to phase and phase to neutral for all three phases.
 - 3. Three-phase real power (kilowatts).
 - 4. Three-phase reactive power (kilovolt amperes reactive).
 - 5. Power factor.
 - 6. Running log of total power versus time (kilowatt hours).
 - 7. Fault log, with time and date of each.

2.12 CONTROLS

- A. Factory installed and wired, and functionally tested at factory before shipment.
- B. Standalone, microprocessor based, with all memory stored in nonvolatile memory so that reprogramming is not required on loss of electrical power.
- C. Enclosure: Share enclosure with electrical power devices or provide a separate enclosure of matching construction.

- D. Operator Interface: Keypad or pressure-sensitive touch screen. Multiple-character, digital display. Display the following:
1. Date and time.
 2. Operating or alarm status.
 3. Operating hours.
 4. Outside-air temperature if required for chilled-water reset.
 5. Temperature and pressure of operating set points.
 6. Chilled-water entering and leaving temperatures.
 7. Refrigerant pressures in evaporator and condenser.
 8. Saturation temperature in evaporator and condenser.
 9. No cooling load condition.
 10. Elapsed time meter (compressor run status).
 11. Pump status.
 12. Antirecycling timer status.
 13. Percent of maximum motor amperage.
 14. Current-limit set point.
 15. Number of compressor starts.
 16. Alarm history with retention of operational data before unit shutdown.
 17. Superheat.
- E. Control Functions:
1. Manual or automatic startup and shutdown time schedule.
 2. Capacity control based on evaporator leaving-fluid temperature.
 3. Capacity control compensated by rate of change of evaporator entering-fluid temperature.
 4. Chilled-water entering and leaving temperatures, control set points, and motor load limit. Chilled-water leaving temperature shall be reset based on return-water outside-air temperature.
 5. Current limit and demand limit.
 6. Condenser-water temperature.
 7. External water chiller emergency stop.
 8. Antirecycling timer.
 9. Automatic lead-lag switching.
 10. Ice-building mode.
- F. Manual-Reset Safety Controls: The following conditions shall shut down water chiller and require manual reset:
1. Low evaporator pressure or high condenser pressure.
 2. Low chilled-water temperature.
 3. Refrigerant high pressure.
 4. High or low oil pressure.
 5. High oil temperature.
 6. Loss of chilled-water flow.
 7. Loss of condenser-water flow.
 8. Control device failure.
- G. BAS System Interface: Factory-install hardware and software to enable system to monitor, control, and display chiller status and alarms.
1. Hardwired I/O Points:
 - a. Monitoring: On/off status, chilled water discharge temperature, heating hot water discharge temperature .

- b. Control: On/off operation, chilled-water discharge temperature set-point adjustment, heating hot-water discharge temperature set-point adjustment.
- 2. Communication Interface: ASHRAE 135 (BACnet) communication interface shall enable control system operator to remotely control and monitor the water chiller from an operator workstation. Control features and monitoring points displayed locally at water chiller control panel shall be available through DDC system for HVAC.

- H. Factory-installed wiring outside of enclosures shall be in NFPA 70-complaint raceway. Make terminal connections with liquidtight or flexible metallic conduit.

2.13 ACCESSORIES

- A. Electric Heat Trace or equivalent means of electric heat freeze protection on piping and heat exchangers internal to unit frame.
 - 1. Heat Trace shall be 120V single phase and shall comply with division 23 and division 26 documents for power requirements.
- B. Factory-installed reverse cycle heat pump to enable heating and cooling operation. Heat pump configuration shall include one motorized and two manual valves for each module evaporator.
- C. Variable speed condenser fan control shall be provided for all condenser fans to provide optimum head pressure control and operation in heating or cooling down to 20 deg F.
- D. Factory-furnished spring isolators for field installation.
 - 1. Spring Deflection: 2 inches (50 mm).

2.14 MATERIALS

- A. Steel:
 - 1. ASTM A36/A36M for carbon structural steel.
 - 2. ASTM A568/A568M for steel sheet.
- B. Stainless Steel:
 - 1. Manufacturer's standard grade for casing.
 - 2. Manufacturer's standard type, ASTM A240/A240M for bare steel exposed to airstream or moisture.
- C. Galvanized Steel: ASTM A653/A653M.
- D. Aluminum: ASTM B209.
- E. Comply with Section 23 0546 "Coatings for HVAC" for corrosion-resistant coating.
- F. Corrosion-Resistant Coating: Coat with a corrosion-resistant coating capable of withstanding a 3000 -hour salt-spray test according to ASTM B117.
 - 1. Standards:
 - a. ASTM B117 for salt spray.
 - b. ASTM D2794 for minimum impact resistance of 100 in-lb (11.3 N-m).
 - c. ASTM B3359 for cross hatch adhesion of 5B.
 - 2. Application: Spray.
 - 3. Thickness: 1 mil (0.025 mm).

4. Gloss: Minimum gloss of 60 on a 60-degree meter.

2.15 SOURCE QUALITY CONTROL

- A. Perform functional test of water chillers before shipping.
- B. Factory performance test water chillers, before shipping, according to AHRI 550/590.
 1. Test the following conditions:
 - a. Design conditions indicated.
 - b. AHRI 550/590 part-load points.
 2. Allow Owner access to place where water chillers are being tested. Notify Owner 30 days in advance of testing.
- C. Factory test and inspect evaporator and water-cooled condenser according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Stamp with ASME label.
- D. For water chillers located outdoors, rate sound power level according to AHRI 370 procedure.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Before water chiller installation, examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, controls, and electrical connections to verify actual locations, sizes, and other conditions affecting water chiller performance, maintenance, and operations.
 1. Water chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping, controls, and electrical connections.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 WATER CHILLER INSTALLATION

- A. Coordinate sizes and locations of bases with actual equipment provided. Cast anchor-bolt inserts into concrete bases.
- B. Equipment Mounting:
 1. Install water chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 03 3000 "Cast-in-Place Concrete."
 2. Comply with requirements for vibration isolation devices specified in Section 23 0548.13 "Vibration Controls for HVAC."
- C. Maintain manufacturer's recommended clearances for service and maintenance.
- D. Maintain clearances required by governing code.
- E. Chiller manufacturer's factory-trained service personnel shall charge water chiller with refrigerant if not factory charged and fill with oil if not factory installed.
- F. Install separate devices furnished by manufacturer and not factory installed.

1. Chillers shipped in multiple major assemblies shall be field assembled by chiller manufacturer's factory-trained service personnel.

3.3 PIPING CONNECTIONS

- A. Comply with requirements in Section 23 2113 "Hydronic Piping" and Section 23 2116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements in Section 23 2300 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Where installing piping adjacent to chillers, allow space for service and maintenance.
- D. Evaporator Fluid Connections:
 1. Connect to evaporator inlet with shutoff valve, strainer, thermometer, and plugged tee with pressure gage.
 2. Connect to evaporator outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with pressure gage, and drain connection with valve.
 3. Make connections to water chiller with a flange.
- E. Heat Recovery Condenser Fluid Connections:
 1. Connect to condenser inlet with shutoff valve, strainer, thermometer, and plugged tee with pressure gage.
 2. Connect to condenser outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with pressure gage, and drain connection with valve.
 3. Make connections to water chiller with a flange.
- F. Connect each drain connection with a drain valve, full size of drain connection. Connect drain pipe to drain valve with union and extend drain pipe to terminate over floor drain.
- G. Connect each chiller vent connection with an automatic or a manual vent, full size of vent connection.

3.4 ELECTRICAL POWER CONNECTIONS

- A. Connect wiring according to Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 26 0526 "Grounding and Bonding for Electrical Systems."
- C. Provide nameplate for each electrical connection indicating electrical equipment designation and circuit number feeding connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch (13 mm) high. Locate nameplate where easily visible.

3.5 CONTROLS CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.

- B. Connect control wiring between chillers and other equipment to interlock operation as required to provide a complete and functioning system.
- C. Connect control wiring between chiller control interface and DDC system for remote monitoring and control of chillers. Comply with requirements in Section 23 0923 "Direct Digital Control (DDC) System for HVAC."
- D. Provide nameplate on face of chiller control panel indicating control equipment designation serving chiller and the I/O point designation for each control connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch (13 mm) high.

3.6 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
- B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.
- C. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
 - 1. Verify that refrigerant charge is sufficient and water chiller has been leak tested.
 - 2. Verify that pumps are installed and functional.
 - 3. Verify that thermometers and gages are installed.
 - 4. Operate water chiller for run-in period.
 - 5. Check bearing lubrication and oil levels.
 - 6. Verify that refrigerant pressure relief device for chillers installed indoors is vented outside.
 - 7. Verify proper motor rotation.
 - 8. Verify static deflection of vibration isolators, including deflection during water chiller startup and shutdown.
 - 9. Verify and record performance of chilled- and heat recovery condenser-water flow and low-temperature interlocks.
 - 10. Verify and record performance of water chiller protection devices.
 - 11. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
- D. Visually inspect chiller for damage before starting. Repair or replace damaged components, including insulation. Do not start chiller until damage that is detrimental to operation has been corrected.
- E. Prepare a written startup report that records results of tests and inspections.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain water chillers. Video record the training sessions and provide electronic copy to Owner.
 - 1. Instructor shall be factory trained and certified.
 - 2. Provide not less than eight hours of training.

June 15, 2026

Smithsonian OPDC Project No. 2533105

SmithGroup Project No. 00100084

3. Train personnel in operation and maintenance and to obtain maximum efficiency in plant operation.
4. Provide instructional videos showing general operation and maintenance that are coordinated with operation and maintenance manuals.
5. Obtain Owner sign-off that training is complete.
6. Owner training shall be held at Project site.

END OF SECTION

FOR REFERENCE ONLY

SECTION 23 7313.19 - INDOOR, CUSTOM AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes indoor, custom air-handling units with capacities, characteristics, and configurations indicated on Drawings.
- B. Related Requirements:
 - 1. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.

1.2 ACTION SUBMITTALS

- A. Assemble product data and shop drawings in a single submittal file (.pdf) that is bookmarked in coordination with an overall submittal Table of Contents, including and not limited to accessories, variable speed drives, and harmonic filters.
- B. Provide a paragraph by paragraph analysis of this specification and indicate compliance (C), deviation (D), or exception (E) from specification. Submittals that do not contain specification compliance documentation will be returned to the Contractor without review, and will require resubmission.
- C. Product Data: For each air-handling unit.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Include unit dimensions and weight.
 - 4. Include cabinet material, metal thickness, finishes, insulation, and accessories.
 - 5. Fans:
 - a. Include certified fan-performance curves with system operating conditions indicated. For fans operating at variable speeds include curves in 10 percent speed increments starting at design speed down to minimum speed.
 - b. Include fan-sound power ratings in all eight octave bands. Include inlet or outlet sound power levels to coincide with sound requirements indicated on Drawings.
 - c. Include fan construction and accessories. Submit sufficient information to show product compliance with requirements indicated.
 - d. Include dimensions and weight.
 - e. Include motor ratings, electrical characteristics, and motor accessories.
 - 6. Vibration isolation product data with performance ratings. Uniquely identify and include information for each different isolator type and indicate for each air-handling unit where each isolator type is being used.
 - 7. Include certified coil-performance ratings with system operating conditions indicated. Product data to include dimensions, dry and operating weight, volume of fluid contained, materials of construction, and performance ratings with system operating conditions indicated.
 - 8. Casing insulation product data and performance ratings.
 - 9. Access door and access panel product data and performance ratings.

10. Paint product data and performance ratings.
 11. Electrical product data and performance ratings.
 12. Metal grating product data and performance ratings.
 13. Steam humidifier product data with performance ratings.
 14. Dampers product data, including housings, linkages, and operators with performance ratings.
 15. Filters product data with performance characteristics.
 16. UV-C lamp systems product data with performance ratings.
- D. Sustainable Design Submittals:
1. Product data showing compliance with ASHRAE 62.1.
 2. Product Data: For air filtration performance.
 3. Product Data: For adhesives, mastics, and sealants, indicating VOC content.
 4. Laboratory Test Reports: For adhesives, mastics, and sealants, indicating compliance with requirements for low-emitting materials.
- E. Shop Drawings: For each type and configuration of indoor, custom air-handling unit.
1. Prepared by manufacturer's factory employees with review and sign-off by those individuals responsible for manufacturing the air-handling units.
 2. Include plans, elevations, sections, and mounting details.
 3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, methods of field assembly, components, and location and size of each field connection.
 4. Detail fabrication and assembly of indoor, custom air-handling units, as well as procedures and diagrams.
 5. Indicate details of construction with materials description including applicable specified standards and material grades in sufficient detail for reviewers to evaluate point by point compliance with requirements indicated for each air-handling unit.
 6. Use actual dimensions of internal equipment in preparing Shop Drawings. Identify mechanical equipment shown on Shop Drawings with equipment designations on Drawings.
 7. Thickness and finish of all casing materials with cross references indicated where each is used. Uniquely identify and include information for each different casing construction.
 8. Details for each unique casing joint and reinforcing. Indicate wall joints, wall to floor joints, wall to roof joints, floor joints, and roof joints.
 9. Assembly details of base and casing for units consisting of multiple sections requiring field assembly.
 10. Sizes and dimensioned locations of field connections for ductwork, piping, electrical, and controls.
 11. Base and casing penetration and sealing details for factory-installed conduit.
 12. Base and casing penetration and sealing details for factory-installed piping including coils and steam humidifiers.
 13. Details of casing connections to field-installed ductwork.
 14. Size, shape, and layout of base members including localized support of internal components.
 15. Base materials, thickness, finishes, lifting provisions, and mounting requirements. Uniquely identify and include information for each different base construction. Clearly indicate for each air-handling unit.
 16. Recommended points of field attachment with dimensioned locations.
 17. Size and location of each access door, including clearing opening size, with door swing indicated.

18. Size and location of each access panel with service equipment superimposed to show relationship of panel to internal equipment.
19. Drain pans and associated piping, with sizes and locations dimensioned, including relationship to internal equipment.
20. Floor drains and associated piping, with sizes and locations dimensioned, including relation to internal equipment.
21. Coil framework and support including enlarged details showing framework attachment to air-handling unit base, coil attachment to framework, and means for individual coil removal.
22. Mounting details of all internal components, such as fans, filters, and dampers.
23. Hoist rails layout for internal equipment showing size of members, attachments to structure, and serviced equipment superimposed to indicate relationships.
24. Location of UV-C lamp systems, service clearances, and mounting details.
25. Location of receptacles, service lights, and switches.
26. Location of motor controllers and disconnect switches.
27. Size and location of junction boxes used for interface with field electrical power.
28. Point-to-point electrical power wiring diagrams including wire size, conduit size, motor controllers sizes, switch types and ratings, receptacle types and ratings, service light fixture types, and ratings.
29. Point-to-point control wiring diagrams including cable types and sizes, conduit sizes, and connected control devices.
30. Point-to-point control tubing diagrams including tubing types and sizes, conduit sizes, and connection controls devices.
31. Control panel drawings drawn to scale showing detailed internal layout.
32. Indicate code, operating, and maintenance clearances drawn to scale using dashed lines.
33. Indicate weights of internal components, weight of each separately shipped section, and air-handling unit total weight.
34. .

F. Comparison Schedule:

1. Submit a schedule to indicate performance of equipment scheduled on Drawings directly compared to performance of submitted equipment.
2. Clearly identify each line in schedule to indicate "Scheduled" where indicating performance scheduled on Drawings and "Submitted" where indicating performance of submitted equipment.
3. Organize schedule to first indicate performance scheduled on Drawings on one line followed by line directly below that indicates performance of submitted equipment.
4. Comparison schedule shall follow arrangement and organization of scheduled information indicated on Drawings.
5. Submitted equipment shall have a value for each scheduled value indicated.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, sections, and other details, or BIM model, drawn to scale, showing the items described in this Section and coordinated with all building trades.
- B. Source quality-control reports.
- C. Startup service reports.
- D. Field quality-control reports.

- E. Sample Warranty: For manufacturer's warranty.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air-handling units to include in emergency, operation, and maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Bag Filters: One set(s) for each air-handling unit.
 - 2. Cartridge Filters: One set(s) for each air-handling unit.
 - 3. Panel Filters: One set(s) for each air-handling unit.
 - 4. Access Door Gaskets: One set(s) for each unique access door.
- B. Tool Kit: Manufacturer to provide a tool kit including special tools required for air-handling unit service. See "Accessories" Article for additional requirements.

1.6 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate sizes and locations of structural-steel support members, if any, with actual equipment provided.

1.7 FACTORY VISITS FOR PRODUCT INSPECTION

- A. While units are being manufactured, and during factory normal working hours, allow escorted access to manufacturing facility for Owner or Owner's designated representative to verify product compliance with requirements indicated.
 - 1. As many as two persons shall visit factory for product inspection.
- B. Manufacturer shall provide Owner and Architect with written notice at least 30 business days before units go into assembly.
- C. Inspection visits shall be scheduled with manufacturer at least 10 business days before visit.
- D. Personnel making visits for purposes of product inspection shall comply with manufacturer requirements for visitors.

1.8 DELIVERY, STORAGE, HANDLING

- A. Deliver air-handling units with factory-installed shipping skids and lifting lugs; pack small components in factory-fabricated protective containers. Cover units with heat-shrinkable plastic sheeting suitable for shipping from point of manufacture to Project.
- B. Handle air-handling units carefully to avoid damage to components, casing, and finish. Do not install damaged components; replace and return damaged components to air-handling unit manufacturer.

- C. Store air-handling units in a clean dry place and protect them from weather and construction activities.
- D. Keep air-handling units fully covered and protected during construction. Remove dirt and debris and clean units to a factory-cleaned condition.
- E. Comply with manufacturer's written rigging and installation instructions for unloading air-handling units and moving them to their final locations.
- F. For air-handling units equipped with key locks on access doors, keep doors locked during construction.
 - 1. If access is required within air-handling units, only open the doors to sections that require access and lock doors at the end of each workday.
 - 2. Protect inside of air-handling units from damage and keep inside of units as clean as the factory-cleaned condition.

1.9 WARRANTY

- A. Warranty: Manufacturer agrees to repair or replace components of air-handling units that fails in materials or workmanship within specified warranty period.
 - 1. Warranty Period: One (1) year(s) from date of Substantial Completion.
- B. Extended warranties include, but are not limited to, the following:
 - 1. Complete Air-Handling Unit: Five years from date of Substantial Completion for entire air-handling unit and longer where indicated for individual components.
 - 2. Air-Handling Unit Casing: 30 years from date of Substantial Completion.
 - 3. Motors: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.
- C. ASHRAE 62.1 Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- E. Casing Structural Performance:
 - 1. Floor: Capable of withstanding positive/negative 8 inches wg (2000 Pa) of internal static pressure, without exceeding a deflection of L/300 of span.
 - 2. Walls and Roof: Capable of withstanding positive/negative 8 inches wg (2000 Pa) of internal static pressure, without exceeding a midpoint deflection of L/240 of span.

- F. Casing Leakage Performance: Comply with more stringent of the following requirements:
1. ASHRAE 111, Class 3 leakage or better at plus or minus 8 inches wg (2000 Pa).
 2. Not more than 0.5 percent of the total unit airflow at 8 inches wg (2000 Pa).
- G. Casing Thermal Performance:
1. Surface Condensation: Air-handling manufacturer shall evaluate potential for condensation and design and manufacture entire unit casing to prevent condensation at most extreme operating conditions encountered.
 2. Thermal Break: Incorporate a thermal break at each through metal path to prevent condensation from occurring on interior and exterior of casing.
 3. U-Value: Overall U-value or equivalent R-value of casing shall not exceed governing codes and ASHRAE/IES 90.1, while considering the effects of metal-to-metal contact and thermal bridging in calculations.
 4. Condensation shall not form anywhere on unit exterior with a 45 deg F supply air at 80 deg F DB / 68 deg F WB exterior ambient. Manufacturer shall supply an external condensation performance line, plotted on the psychrometric chart, based on actual test data. Plot shall show the exterior conditions at which unit will sweat given the design supply air temperature. Manufacturer shall clearly indicate whether the design conditions will or will not result in external condensation forming anywhere on the unit exterior. If the unit will sweat, indicate where sweating will occur. Unit exterior includes the base, base rail, roof, corners, doors, door frames, and under the cooling coil drain pan.
 5. The AHU Manufacturer shall provide, in writing, a guarantee against condensation forming on the unit exterior under then scheduled supply air temperature and the room's extreme ambient air design conditions. The guarantee shall note that the AHU manufacturer will cover all expenses associated with modifying the units in the field should external condensate form on them. Copies of the guarantee shall be provided to the Engineer and the Owner.
- H. Air Tunnel Aerodynamic Performance: Position air-handling unit internal components and transition between internal components to maintain uniform airflow; minimize sound levels and energy consumption. Use methods indicated and other means to ensure compliance.
1. Use turning vanes if necessary to direct the air path.
 - a. Design, manufacture, and install vanes in accordance with applicable requirements in ASHRAE and SMACNA guidelines, handbooks, and standards.
 - b. Install vanes firmly in place so that no vane movement occurs at worst-case airflow capacity possible.
 2. Use fan inlet and discharge transitions and other devices to maximize system regain and minimize airborne sound levels.
 3. Center system components such as coils, fans, and filters, vertically and horizontally, in airstream.
 4. Maintain spacing between components such that airflow patterns to adjacent components are as uniform as possible and that component "dead spots" or "jetted areas" are avoided.
 5. Design and install internal structural supports, piping, and conduit that do not block airflow and impede performance of coils, fans, filters, and other unit components, and service space clearances.
- I. Durability Performance: Design and manufacture air-handling units with underlying requirement to provide a highly durable piece of equipment.
1. Unit Life Expectancy: 25 years.

2. Supporting Documentation: Submit documentation showing proposed products to consider and include design features, components, and materials to satisfy requirement.
- J. Extreme Operating Conditions:
1. Corrosive Environments: Air-handling unit manufacturer shall evaluate the quality and potential corrosiveness of air passing through air-handling units and propose additional protective finishes and better-quality materials of a heavier thickness if required to comply with requirements indicated.
 - a. Unless otherwise indicated, air-handling units for HVAC applications may use up to 100 percent of outdoor air or a mix of outdoor air with return air from habitable areas served.
 2. Humidity and Temperatures: Materials and components of air-handling units shall be suitable for use in low and high humidity and temperature extremes when operating under normal and abnormal conditions without permanent degradation or loss in material performance.
- K. Safety:
1. Comply with OSHA regulations.
 2. Exposed sharp edges and corners of metal shall be protected or rounded to prevent injury to personnel not wearing gloves.
 3. Cover exposed ends of screws with plastic or metal covers to prevent injury to personnel coming in contact with screws.
- L. Serviceability:
1. Hoisting Provisions: Fans and motors weighing more than 200 lb (91 kg) to have full-length hoist rails mounted over the equipment to facilitate service, removal, and replacement.
 2. Mounting Location: Install internal components in readily accessible locations to facilitate ease of service and replacement.
 3. Service Access:
 - a. Internal components shall be serviceable through access sections with doors indicated on Drawings.
 - b. Internal components shall be removable and replaceable through access doors or panels.
 - c. Review requirements for access doors and panels indicated and recommend additional access doors and panels if required for uninhabited service, removal, and replacement of components.
 4. Tripping Hazards: Floors in accessible sections of air-handling unit shall be free of standing seams, reinforcing, supports, or section splits located in the walking path that is capable of causing a tripping hazard. Locate section splits immediately adjacent to internal walls.
- M. Quality: Type and thickness of materials indicated are the minimum acceptable. Provide better-quality materials of a heavier thickness if required to comply with performance requirements indicated.
1. If manufacturer's standard construction exceeds requirements indicated, use manufacturer's standard construction.
 2. If manufacturer's standard construction does not comply with requirements indicated, modify manufacturer's standard construction to comply with requirements.

- N. Vibration Performance: Air-handling unit manufacturer shall evaluate vibration of internal components installed inside of air-handling units and include internal vibration isolation required to limit the vibration transmitted to the building at a low enough level that vibration is not perceived by building occupants.

2.2 CAPACITIES AND CHARACTERISTICS

- A. See equipment schedules on Drawings.

2.3 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Air Enterprises, LLC.
 2. Temtrol; A Nortek Air Solutions Company.
 3. Trane; An Ingersoll Rand Company.
 4. York; a Johnson Controls company.

2.4 UNIT ARRANGEMENT AND CONFIGURATION

- A. Arrangement: Project-specific arrangement and configuration of air-handling units as indicated on Drawings. Do not deviate from requirements indicated without submitting a formal request clearly describing each deviation and reason for each deviation, and only after receiving Architect's written acceptance.
- B. Mounting Requirements: Units mounted on concrete housekeeping pads.
- C. Multiple Sections: Each air-handling unit shall consist of multiple sections for field assembly to comply with requirements indicated on Drawings.
- D. Multiple Sections, Splits: Air-handling unit manufacturer to determine number of sections and location of section splits required for each air-handling unit in accordance with the following criteria:
 1. Physical size and weight of each section, on-site path of travel, and methods for erection and installation. Air-handling manufacturer to review criteria with Installer before preparing Shop Drawings.
 2. Maximize physical size of each air-handling unit section considering, shipping, moving, erecting, and installation.
 3. Limit physical size to fit within available building openings without altering building construction.
 4. Minimize the number of air-handling unit sections requiring field assembly. Preference is for single-piece air-handling units where possible.

2.5 AIR-HANDLING UNIT BASE

- A. Performance:
 1. Air-handling unit manufacturer shall design and assemble air-handling unit casing and internal components for attachment and support by air-handling unit structural base.
 2. Design air-handling units to be lifted from only the air-handling unit structural base and not the casing.

3. Support air-handling units from only the perimeter base unless otherwise indicated on Drawings.
 4. Air-handling unit manufacturer to size and locate intermediate structural base supports as required to comply with structural performance indicated for air-handling unit floors.
 5. Level base before factory assembly of air-handling unit casing and internal components to ensure proper fit and alignment.
- B. Structural Member Size:
1. Air-handling unit manufacturer shall select size of base members and construction of base to withstand the rigors of loading, unloading, shipping, and rigging without damage to air-handling unit components or misalignment of factory-assembled components.
 2. Depth and weight of structural members shall be selected by air-handling unit manufacturer to comply with performance requirements indicated.
 3. Depth of perimeter base members is not less than 8 inches (200 mm) deep.
- C. Structural Member Spacing: Positioned as required to comply with requirements indicated, but not to exceed 24 inches (600 mm).
- D. Materials: Structural aluminum, ASTM B209 (ASTM B209M), Alloy 6061 T6.
1. Perimeter Members: I or W beam shapes.
 2. Intermediate Members (Spanning Full Width of Unit): I or W beam shapes.
 3. Cross Members (Spanning Intermediate Members): channel or tube.
- E. Welding Filler Metals: Comply with AWS welding codes for welding materials appropriate for thickness and chemical analysis of material being welded.
1. Use welding materials with corrosion properties equal to material being welded.
- F. Welding Procedures:
1. Structural Welding Codes: AWS D1.2/D1.2M for aluminum.
 2. Join structural members to one another using continuous or stitch welds.
 3. After welding and fabrication, deburr and grind exposed welds to provide smooth surfaces free of sharp edges.
- G. Penetrations through Base Perimeter: Seal weld pipe, tubing, and conduit penetrations through base perimeter members to provide a watertight assembly.
- H. Section Joints: Air-handling units consisting of multiple sections for field assembly shall be joined with structural joining plates.
1. Joining plate material type to match base.
 2. Joining plate of thickness required to join sections without resulting in a permanent deflection, minimum 1/2 inch (13 mm) thick.
 3. Continuously weld joining plates to each mating end of base.
 4. Joining plates shall not extend beyond outer edge of adjoining base.
 5. Plates to include at least three equally spaced holes for field connection using factory-furnished threaded hardware of a nominal diameter of at least 1/2 inch (13 mm).
- I. Lifting Provisions: Air-handling unit manufacturer to design and install lifting lugs of size and location required to comply with performance requirements indicated. Lifting lugs extending beyond the base shall be easily removable in the field after unit is installed.

2.6 UNIT CASINGS

A. Casing Assembly:

1. Appearance:
 - a. Exposed exterior surfaces of casing shall have a neat and finished appearance free of standing seams, exposed reinforcing, and other casing protrusions more than 0.25 inch (7 mm) beyond the exterior skin surface.
 - b. Underside of air-handling units with finished installation exposed to view shall have finished appearance matching casing walls. Casing shall be recessed within the perimeter structural base to provide a single contiguous plane.
 - c. Interior surfaces of casing shall have a neat and finished appearance free of standing seams, exposed reinforcing, and other casing protrusions more than 0.25 inch (7 mm) beyond the skin surface.
2. Dissimilar Metals: Isolate dissimilar metals that are in contact to prevent galvanic action and corrosion.
3. Framing and Supports: Interconnect and support individual casing wall and roof panels using either formed panel construction or framed construction with structural support members. For framed casing construction, materials used to construct casing of structural support members shall be as follows:
 - a. Casings with Aluminum Outer and Inner Skins: Aluminum extrusions in accordance with ASTM B211, Alloy 6063 T6.
 - b. Casings with Galvanized-Steel Outer and Inner Skins: Galvanized steel.
 - c. Casings with Galvanized-Steel Outer Skin and Aluminum or Stainless Steel Inner Skins: Stainless steel.
 - d. Casings with Stainless Steel Outer and Inner Skins: Stainless steel.
4. Seals: Seal interior and exterior joints and seams to make casing air- and watertight. Trim factory-applied sealant flush with adjacent surface.
5. Double-Wall Casings: Consisting of insulation sandwiched between an outer and inner metal wall. Use double-wall casings to construct air-handling units unless septum casings are required.
6. Penetrations: Seal voids around conduit, piping, and tubing penetrations.
 - a. Walls and Roofs:

- 1) Junction Boxes for routing sensor and power conductors, conduits and wiring -
 - a) Manufacturer shall reference applicable mechanical detail drawings of the air handling unit components and associated mechanical control diagrams indicating diagrammatic locations of all control devices.
 - b) Provide junction boxes at regular intervals along the AHU casing as required to facilitate routing and termination of conduits, conductors and wiring associated with sensors, control devices and power.
 - c) Coordinate exact locations and required opening dimensions with the General Contractor and all applicable sub contractors.
 - d) Size all casing openings to include a minimum of 25 percent additional capacity beyond the required conductor fill to allow for future modifications.
 - e) All penetrations through the AHU casing associated with junction boxes and wiring shall be sealed to maintain airtight and watertight integrity of the unit with air and vapor barrier, moisture/condensation mitigation under all operating conditions.
 - f) Provide removable and non-permanent sealing systems such as neoprene or EPDM grommets, flexible vapor-barrier boots or mechanically fastened access plates with gaskets, arranged to allow for removal and re-installation without damage to casing or conductors.
 - g) Seal all annular spaces with non-hardening vapor barrier compatible sealant or compressible gasketing materials, and provide escutcheon plates on both interior and exterior faces of the casing opening.
- 2) Pipe, and Tube Sizes NPS 3 (DN 80) and Smaller:
 - a) Seal void through casing with a nonhardening vapor-barrier caulk covered by an escutcheon on both interior and exterior sides of casing. Back caulk using formed insulation within a sheet metal sleeve.
 - b) Seal void using a friction fit neoprene or EPDM sheet material attached to casing using a bed of adhesive.
 - c) Cover penetration and sealing sheet material with metal escutcheon matching adjacent casing material.
- 3) Pipe, and Tube Sizes: Seal annular void using an adjustable compression-type sealing sleeve.
- b. Floors: Route pipe, and tube within a floor-mounted pipe sleeve.
 - 1) Sleeve:
 - a) Fabricate sleeve of aluminum or stainless steel pipe.
 - b) Extend top of sleeve above adjacent floor surface to prevent standing water on floor from entering annular space of sleeve.
 - c) Seal weld sleeve to top of floor for an air- and watertight seal.
 - 2) Seal annular void of sleeve using an adjustable compression seal or nonhardening packing material.
7. Floor Openings with Metal Grating:
 - a. Factory install walk-on safety gratings over any floor opening large enough to create a safety hazard for operators including, but not be limited to, supply-, return-, and exhaust-air openings.
 - b. Bar Grating:
 - 1) Materials: Use stainless steel grating for aluminum floors.

- 2) Air-handling unit manufacturer shall select depth and thickness of grating bars to limit deflection to 1/360 of span when subjected to a dynamic load of not less than 500 lb (227 kg).
- 3) Industry-standard welded grating with bars at least 1-1/2 inches (38 mm) deep by at least 3/16 inch (5 mm) thick with nominal 1-3/16-inch (30-mm) main bar spacing and 4-inch (100-mm) cross bar spacing.
- 4) Source: Product manufacturer specializing in metal gratings.
- 5) Grating bearing surface shall extend beyond clear opening in floor at least 2 inches (50 mm).
- c. Mounting Frame:
 - 1) Mount grating in a continuous structural angle or bar frame so no ends of grating bars are exposed. Top of frame to be flush with top of grating.
 - 2) Secure grating to frame with threaded hardware, so grating does not move when walked on but can be easily removed from top to gain access behind grating.
 - 3) Continuously weld mounting frame to air-handling unit floor.
 - 4) Fasten mounting frame to air-handling unit floor with hardware and seal attachment air- and watertight.
 - 5) For applications with automatic dampers installed at floor openings, elevate height of mounting frame and grating to enclose entire damper assembly including jackshaft so walk-on surface of grating is above damper assembly.
8. Waterproof Floors: Continuously weld floor joints, seams, and penetrations to completely seal floor. Roll all edges of floor up at least 1 inch (25 mm) to create a shallow tub capable of holding standing water.
9. Duct Connections - Direct to Casing: Frame and reinforce unit casing around perimeter of unit duct openings to accommodate direct attachment of field-installed ductwork. Coordinate requirements with Installer to accommodate field connection.
10. Duct Connections - Elevated Off Casing:
 - a. Terminate with angle flange face elevated 3 inches (75 mm) from exterior surface of casing.
 - b. Flange Thickness: 0.25 inch (6 mm).
 - c. Flange face with holes located not more than 4 inches (100 mm) o.c., starting at corners, and sized for 0.375-inch- (9-mm-) diameter, field-installed hardware.
 - d. Size flange face to mate to full face of duct flange.
 - 1) Clear inside dimension of unit connection to match clear inside dimension of duct.
 - 2) For connections to acoustically lined ducts, increase unit flange face to accommodate thickness of liner so end of duct liner is concealed by air-handling unit flange.
- B. Materials for Outer Skin of Casing Walls and Roofs:
 1. Aluminum Solid Sheet: ASTM B209 (ASTM B209M); Alloy 3003-H14, stucco-embossed texture finish; minimum (nominal) 0.063 inch (1.6 mm) thick.
 2. Application: See Drawings for application of different materials indicated.
- C. Materials for Inner Skin of Casing Walls and Roofs:
 1. Aluminum Solid Sheet: ASTM B209 (ASTM B209M); Alloy 3003-H14, smooth finish; minimum (nominal) 0.032 inch (0.8 mm) thick.
 2. Application: See Drawings for application of different materials indicated.
- D. Materials for Floor Walking Surface:

1. Aluminum Diamond Treadplate: ASTM B632/B632M, Alloy 6061 T6; mill finish; minimum (nominal) 0.125 inch (3.2 mm) thick.
 2. Application: See drawings for application of different materials indicated.
- E. Materials for Underside of Floor Insulation:
1. Aluminum Solid Sheet: ASTM B209 (ASTM B209M); Alloy 3003-H14, smooth finish; minimum (nominal) 0.040 inch (1.1 mm) thick.
 2. Application: See Drawings for application of different materials indicated.
- F. Materials for Internal Walls:
1. Aluminum Solid Sheet: ASTM B209 (ASTM B209M); Alloy 3003-H14, smooth finish; minimum (nominal) 0.063 inch (1.6 mm) thick.
 2. Application: See Drawings for application of different materials indicated.
- G. Surfaces in Contact with Airstream:
1. Comply with ASHRAE 62.1 and NFPA 90A.
- H. Insulation for Casing Walls and Roofs Not Exposed to Airstream:
1. Materials Not Exposed to Airstream: injected or sprayed polyurethane foam insulation with a minimum nominal density of 3 lb/cu. ft. (48 kg/cu. m).
 2. R-Value: Minimum R-13.
 3. Thickness: Minimum 2.5 inches (68 mm), if minimum R-value is met
 4. Insulation shall completely fill the casing cavity so no voids exist.
- I. Insulation for Casing Floors:
1. Materials: injected or sprayed polyurethane foam insulation with a minimum nominal density of 3 lb/cu. ft. (48 kg/cu. m).
 2. R-Value: Minimum R-13.
 3. Thickness: Minimum 2.5 inches (68 mm), if minimum R-value is met.
 4. Insulation shall completely fill the casing cavity so no voids exist.
- J. Access Doors:
1. Application: Install access doors in air-handling units at locations indicated on Drawings.
 2. Adjustment: Design doors for field adjustment capable of maintaining specified leakage rate.
 3. Mounting Height: Install bottom of door frame within 2 inches (50 mm) of air-handling unit floor walking surface.
 4. Performance: Leakage as required to satisfy overall unit leakage performance indicated, but not more than 1.0 cfm (0.47 L/s) per door when tested at 10 inch wg (2500 kPa).
 5. Fabrication: Formed and reinforced, constructed of same materials and thicknesses as casing.
 6. Swing: Arrange doors to be opened against pressure unless otherwise indicated on Drawings.
 7. Frame: Extruded aluminum with thermal break with welded mitered corners.
 8. Handles:
 - a. Secure door closed using not less than two roller-style latches with handles located at quarter points along door height.
 - b. If three latches with handles are included, install one at midpoint of door height and equally space others.

- c. Air-handling unit manufacturer has option to use a multipoint latching mechanism that is operable from a single door handle located at midpoint of door height, but secures door to frame at top, bottom, and handle location.
 - d. Include door handles on outside and inside of door to allow operator access to open and close door from outside and inside of unit.
 - e. Field adjustable to accommodate changes to fit and gasket compression.
 - f. Durable product capable of withstanding repeated opening and closing of door while operating under design pressure without damage.
9. Hinges: full-length, concealed, stainless steel piano hinge.
10. Gasket:
- a. Design: Specially formed with an internal air chamber specifically designed to seal on two surfaces without taking a permanent set.
 - b. Dual Gaskets: Primary and secondary gasket.
 - c. Location: Install gaskets around entire perimeter of doors or frames.
 - d. Material: EPDM, neoprene, or santoprene.
 - e. Protection: Seat gasket in a protective metal ribbed chamber integral to door or door frame to protect gasket from damage by operator incidental contact.
 - f. Service: Field replaceable.
 - g. Adhesive-backed tape-type gaskets adhered to a single flat surface are unacceptable.
11. Size of Door Frame Clear Opening: Large enough to allow for unobstructed access for inspection and maintenance of air-handling unit's internal components.
- a. Width: At least 18 inches (450 mm) clear inside of door frame.
 - b. Height: Full clear height of unit casing up to a maximum height of 60 inches (1500 mm) clear inside of door frame.
 - c. Door sizes indicated on Drawings.
12. Safety Latches and Stops:
- a. Safety Latches: Install safety latch with retainers on outward swing doors that do not open against pressure to allow restricted travel for purpose of pressure relief and so that doors do not open uncontrollably due to inside pressure.
 - b. Stops: Install cushioned door stops on inward swinging doors where necessary to limit door travel that could potentially damage the door or internal components.
13. Tie-Backs: Install tie-backs with retainers on access doors to hold doors in an open position during service.
14. Locks: Include each access door with an integral key lock. Pad locks are unacceptable.
- a. Incorporate key lock into door handle where feature is available.
 - b. A common key shall be used to lock and unlock access doors of all air-handling unit(s).
 - c. Include two keys for each air-handling unit.
 - d. Lock access doors at factory to ensure that unauthorized access is in place before air-handling unit packaging and shipment.
15. Windows:
- a. Construction: Fabricate windows with frame mounted in access doors of double-glazed safety glass with an airspace between panes and interior and exterior seals.
 - b. Condensation Control: Install desiccant material in airspace between panes if necessary to prevent condensation from forming on glazing.
 - c. Clear Viewing Size: Minimum 8 inches (200 mm), square or round.

- d. Mounting Location: Center window in door width. For doors up to 60 inches (1500 mm) high, locate top of window 6 inches (150 mm) below top of door. For taller doors, locate center of windows at optimal viewing height, approximately 60 inches (1500 mm) above floor adjacent to unit.
- e. Application: Install windows in all access doors.
- 16. Nameplates:
 - a. On each access door, include a nameplate defining the access to service within. Nameplates shall be included for, but not be limited to, the following:
 - 1) Dampers.
 - 2) Filters.
 - 3) Cooling Coils.
 - 4) Heating Coils.
 - 5) UV-C Lamp Systems.
 - 6) Supply Fans.
 - 7) Humidifiers.
 - 8) Air-handling unit designation.
 - 9) Where door access is to multiple components, list all components accessed. For example: Filter/Cooling Coil.
 - 10) For each door that does not open against static pressure, include a warning sign stating: "DANGER: DOOR UNDER PRESSURE. DO NOT OPEN WITH FAN ON."
 - b. Lettering Size and Style: At least 1-inch- (25-mm-) high, block style.
 - c. Material: Lettering engraved in black plastic on a white plastic back. Engraving shall penetrate through black plastic so lettering reads white.
 - d. Attachment: Attach nameplates to door using high-strength bonding cement and stainless steel screws.
 - e. Mounting Location:
 - 1) For access doors with windows, locate nameplate directly below window frame and center in door width.
 - 2) Align nameplates of all doors for uniform placement.
- K. Access Panels:
 - 1. Performance: Leakage as required to satisfy overall unit leakage performance indicated.
 - 2. Fabrication: Formed and reinforced panels of same material and thickness as casing.
 - 3. Fasteners: Adjustable, reusable type for multiple operations without degradation due to reuse. Do not use screws capable of stripping.
 - 4. Arrangement: Panels removable from exterior side of casing.
 - 5. Gasket: EPDM, neoprene, or santoprene similar to access doors, applied around entire perimeter of panels or frames.
 - 6. Location and Size:
 - a. Coils: Oversized access panel to allow removal and replacement without impacting adjacent casing.
 - b. Fans: Oversized access panel to allow removal and replacement of entire fan assembly without impacting adjacent casing.
 - c. Heat Wheels and Heat Exchangers: Oversized access panel to allow removal and replacement of internal components without impacting adjacent casing.
 - d. Humidifiers: Oversized access panel to allow removal and replacement without impacting adjacent casing.

2.7 CENTRIFUGAL PLENUM FANS

- A. Manufacturers: Subject to compliance with requirements, provide products by the following:
1. Greenheck Fan Corporation.
 2. New York Blower Company (The).
 3. Twin City Fan & Blower.
- B. Source Limitations: Obtain fans from single source from single manufacturer.
- C. Operating Performance:
1. Air-handling unit manufacturer shall account for, and include in, submitted fan selections any static pressure drops associated with unit, and system effect due to fan operating in the air-handling unit.
 - a. Add additional static pressure to fan scheduled total static pressure.
 - b. If fan motor horsepower is increased, notify Architect.
 2. Fans shall have sharply rising pressure characteristics at operating point and stable in operation. Fan horsepower characteristics shall be self-limiting and non-loading.
 3. Fan speed, brake horsepower, and sound power levels indicated are maximum acceptable.
 4. Motor horsepower, airflow rate, and static pressure are minimum acceptable. Motor horsepower shall be capable of handling maximum horsepower of fan at scheduled speed.
 5. Fan air performance ratings shall be based on tests in accordance with ASHRAE 51/AMCA 51 and AMCA 210.
 6. Base fans sound ratings on AMCA 300 and calculation methods in accordance with AMCA 301.
 7. As a minimum, fans shall have AMCA class indicated on Drawings.
 - a. Fan operating limits shall be in accordance with AMCA 99 for AMCA class indicated.
 - b. If AMCA class is not indicated, use AMCA 99 as basis for determining AMCA class.
 - c. AMCA class selected shall be capable of accommodating a plus 10 percent increase to fan static pressure indicated on Drawings.
 8. Motor starting torque shall exceed fan speed-torque requirements.
- D. Vibration Balance:
1. Each fan/motor assembly shall be factory balanced to AMCA 204, BV-5, Balance Quality Grade G1.0 or better through entire operating speed range from minimum speed to maximum speed. If minimum speed is not indicated on Drawings, assume minimum speed to be 10 percent of design speed.
 2. Identify and record each speed and speed range within the fan operating range that could cause potential vibration problems.
 3. Submit test reports as an information submittal for Project record.
- E. Operation and Service Requirements:
1. Each fan/motor assembly shall be capable of lock-out/tag-out procedure without interrupting operation of other fans in air-handling unit.
 2. Design and incorporate features to permit safe, rapid, and economical maintenance.
- F. Fan Base:

1. Mount fan, motor, and drive on a structural-steel or an aluminum base; except, where indicated on Drawings, install fan on a concrete-filled inertia base.
 2. Include base and vibration isolators in accordance with requirements indicated.
 3. Electrically weld the base.
 4. Size and design the base construction to withstand the rigors of shipping and rigging.
 5. Include the base with lifting lugs or holes.
 6. Construct base with gusseted brackets to accommodate spring isolators indicated.
- G. Fan Panel:
1. Construct fan panel of aluminum or powder-coated steel.
 2. Support fan wheel and bearings from a structural aluminum or powder-coated steel framework.
 3. Reinforce and brace fan panel to prevent vibration and pulsation.
 4. Include stiffeners to form a rigid panel that is free of structural resonance and vibration.
- H. Fan Inlet and Wheel Cone:
1. Precision-spun or die-formed, matched inlet and wheel cone to ensure streamlined airflow into the wheel and full loading of blades.
 2. Inlet and wheel cones shall be hyperbolic.
 3. Inlet cone shall be a single piece, constructed of aluminum or powder-coated carbon steel.
 4. Fasten inlet cone to fan panel using bolts, nuts, and washers to provide a positive and secure attachment that can be field removable.
 5. Inlet cones that are held in place using retaining clips are unacceptable.
- I. Fan Wheel:
1. Fan blades shall be a true hollow airfoil shape, continuously welded to backplate and wheel cone.
 2. Construct blades of aluminum, reinforced for AMCA fan class and operating conditions scheduled.
 3. Design blades to provide smooth and aerodynamic airflow over all surfaces of blade.
 4. Construct fan hubs of cast aluminum or cast iron, ASTM A48/A48M Class 20A and better, with integral bracing for extra strength and stiffness.
 - a. Castings shall be sound and free of shrink holes, blow holes, cracks, scale, blisters, or other similar injurious defects.
 - b. Clean surfaces of castings by blasting, pickling, or other standard method.
 - c. Mold-parting fins and remains of gates and risers shall be chipped, filed, and ground flush.
 - d. Design hubs to maintain a high resistance to fatigue and low relative wheel imbalance.
 5. Hubs shall be keyed and setscrewed to shaft for positive attachment.
 6. Construct the wheel backplates of aluminum.
 7. Statically and dynamically balance fan wheel before fan is assembled.
 8. Select entire rotating assembly so first critical speed is at least 30 percent greater than fan design speed and at least 20 percent greater than maximum AMCA class speed.
- J. Fan Drive:
1. Direct drive, arrangement 4 in accordance with AMCA 99 for single-width, single-inlet fans.
 2. Adjust wheel width and diameter to match motor speed while providing performance scheduled.

3. Fasten fan wheel directly to motor shaft using a key and setscrew as previously specified.
 4. Construct motor base and pedestal of aluminum or powder-coated carbon-steel plate.
 5. Fan Speed Limitation: Fan speed at design conditions indicated shall not exceed speed on motor nameplate for direct-drive applications. Do not select fans to operate at motor speeds greater than motor nameplate.
- K. Protective Screens: Factory furnish and install protective screens on fan inlet and discharge.
1. Expanded metal or welded wire welded to a painted carbon-steel frame.
 2. Screens shall comply with OSHA requirements.
 3. Screens shall be constructed of painted carbon steel.
 4. Fasten screens to fan frame for easy removal by maintenance personnel.
- L. Welding:
1. Use AWS- or ASME-certified welders to weld materials required by application.
 2. Where indicated on Drawings, welds shall be continuous full-penetration welds.
- M. Hardware: Hex-head, high-strength 300 series stainless steel.
- N. Nameplates:
1. Construct nameplates and rotation arrows of aluminum or 300 series stainless steel.
 2. Securely fasten nameplate and rotation arrow to fan housing using pins or sheet metal screws.
 3. Locate nameplates in a highly visible location on motor side of fan.
 4. Engrave the following information on nameplate:
 - a. Manufacturer, address, phone number, and website address.
 - b. Manufacturer model number.
 - c. Serial number.
 - d. Manufacturing date.
 - e. Fan size.
 - f. Fan schedule equipment designation (may be listed on a separate nameplate if there is insufficient space).
 - g. Design airflow.
 - h. Design static pressure.
 - i. Design fan speed.
 - j. AMCA fan class.
- O. Air-Handling Unit Factory Assembly:
1. Internal Access: Include each fan with internal access from downstream and upstream sides as indicated on Drawings.
 2. Removal and Replacement: Each fan shall be independently removable and replaceable through a removable access panel installed in air-handling unit casing.
 3. Fan Supports:
 - a. Construct a freestanding and self-supporting structural framework to support each fan individually from and independent of adjacent fans.
 - b. Construct frame work from aluminum, galvanized steel, or stainless steel.

2.8 FAN MOTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Baldor Electric Company.

2. Emerson Electric Company.
 3. GE.
 4. Siemens Industry, Inc., Building Technologies Division.
 5. Toshiba Corporation.
 6. US Motors; a NIDEC Corporation brand.
- B. Source Limitations: Obtain motors from single source from single manufacturer.
- C. Standard: Comply with NEMA MG 1 unless more stringent requirements are indicated.
- D. Description: NEMA MG 1, Design B, as required to comply with capacity and torque characteristics; medium-induction motor.
1. Performance:
 - a. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.
 - b. Efficiency: NEMA Premium Efficiency rating complying with NEMA MG 1.
 - c. Motor Horsepower: Minimum size as indicated on Drawings. Motor shall operate fan under all conditions indicated without exceeding motor nameplate and without use of motor service factor.
 - d. Inverter-Duty Rating: Comply with minimum requirements of Class F or Class H insulation, suitable for "inverter-duty" or "drive-duty" applications in accordance with NEMA MG 1. Motor operation through a variable-frequency controller shall not adversely affect the motor performance, operation, useful life, and warranty.
 - e. Service Factor: 1.15.
 - f. Temperature Rise: Match insulation rating.
- E. Enclosure Type: ODP or TEFC.
- F. Shaft Grounding System:
 1. Shaft grounding system to protect bearings from induced voltage.
 2. Shaft grounding system shall have low drag (less than 0.05 percent of motor horsepower), and shall operate for a minimum of three years without periodic maintenance or adjustments.
 3. Mounting: External or internal to motor enclosure.
- G. Frame:
 1. Frames with integrally cast feet unless other requirements of driven equipment require a different arrangement.
 2. Frame, front and back end brackets, and front and back end bearing intercaps constructed of cast iron, ASTM A48/A48M, Class 25 or better.
- H. Rotor:
 1. Fabricate rotor frame from die-cast aluminum, copper, or associated alloys.
 2. Key rotors to motor shaft.
 3. Rotating assembly shall be dynamically balanced to within limits defined in NEMA MG 1.
 4. Motors shall have the entire rotating assembly between bearing inner caps coated with a corrosion-resistant coating.

- I. Stator:
 - 1. Copper windings shall be spike resistant to withstand 1600 peak V.
 - 2. Entire wound and insulated stator coated with a coating to protect against moisture and corrosion.
- J. Shaft:
 - 1. Solid shaft fabricated of Type 304 stainless steel, accurately turned, ground and polished, and inspected for accuracy.
 - 2. End of shaft with drilled hole for use in field measurements.
- K. Bearings:
 - 1. Grease-lubricated ball or roller bearings.
 - 2. ABMA 11 L-10 motor bearing life of 100,000 hours.
 - 3. Bearing Lubrication:
 - a. Factory lubricate motor bearings using a premium moisture-resistant polyurea thickened grease with rust inhibitors suitable for extreme operating temperatures encountered.
 - b. Coordinate special requirements that may impact lubrication and include appropriate lubrication.
 - 4. Grease Fittings:
 - a. Equip each bearing housing with an easily accessible grease inlet.
 - b. Fit grease inlets with a grease fitting and protective fitting cap.
 - c. Equip inlets with an automatic grease relief fitting to prevent excessive greasing.
 - d. Equip each bearing housing with grease drain and threaded plug.
- L. Conduit Box:
 - 1. Material same as frame.
 - 2. For motor frames 365T and below, furnish conduit boxes sized with internal volumes in accordance with NEMA MG 1.
 - 3. For motor frames larger than 365T, furnish conduit boxes one size larger than NEMA MG 1.
 - 4. Coordinate the location and mounting of conduit box with driven equipment manufacturer.
 - 5. Factory mount conduit box on motor.
- M. Grounding: NRTL-listed clamp-type grounding lug mounted in conduit box.
- N. Motor Leads:
 - 1. Non-wicking type, Class F temperature rating or better, and permanently numbered over entire length for identification.
 - 2. Lead terminals shall be manufacturer's standard.
- O. Condensate Drains:
 - 1. Motor with drain holes at the lowest point for drainage of condensate.
 - 2. Each drain hole with a threaded removable plug.
- P. TEFC Motor Fans: Corrosion-resistant construction, non-sparking, metallic or non-metallic, bi-directional, and keyed to shaft.
 - 1. Motor Fan Cover: Same material as frame.

- Q. Hardware: Hex-head, high-strength, zinc-plated carbon steel or stainless steel.
- R. Lifting Eyebolts: Eyebolt threaded into frame receptacle and design to prevent moisture and other foreign material from entering motor cavity when eyebolt is removed.
- S. Nameplates:
1. Construct nameplates of aluminum or stainless steel and attach to motor frame with aluminum, stainless steel, or brass drive pins.
 2. Engrave or stamp data on the nameplate.
 3. At a minimum, include nameplate data in accordance with NEMA MG 1. Also include ABMA bearing designation for the drive and opposite end bearing.
- T. Paint: Successfully pass 500 -hour salt spray test for corrosion in accordance with ASTM B117.
- U. Fan Array power wiring: multiple fan motors controlled by one Variable Frequency Drive (VFD)
1. Each fan in the fan array shall be individually wired to an exterior unit mounted NEMA 1 power distribution panel (PDP) for connection to a single VFD sized for the total connected horsepower for all fan motors contained in the fan array. PDP shall include individual fan manual motor protectors, alarm relay, motor overload and individual disconnecting means to disable power to each individual fan in the fan array without disrupting AHU operation for the remaining fans in the fan array. All fans shall be controlled as one single fan. Refer to Section 26 2923 for Variable Frequency Motor Controllers. Manual motor protectors shall meet the following requirements:
 - a. Description: UL 508 Type E self-protected combination manual motor controller installed in an enclosure with a pad-lockable, door-mounted handle mechanism. Door-mounted handle shall have clearly labeled ON, OFF, and TRIP positions. Disconnect switch shall be suitable for motor loads.
 - b. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Schneider Electric, Inc.
 - 2) Eaton Corporation
 - 3) Siemens Energy & Automation, Inc.
 - 4) ABB, Control Products.
 - 5) Rockwell Automation, Inc.: Allen-Bradley brand
 - 6) General Electric Company; GE Consumer & Industrial
 - c. Tripping Elements:
 - 1) Adjustable, inverse time-delay thermal overcurrent release for Class 10 overload protection.
 - 2) Fixed, instantaneous release for short-circuit protection.
 - d. Short Circuit Rating: 50kA minimum @ 480V. Short circuit rating must be provided by the manual motor protector assembly and shall not rely on upstream overcurrent protective devices to provide a minimum short circuit rating.
 - e. Operating Temperature: -4 degrees F to 140 degrees F with ambient temperature compensation
 - f. Accessories:
 - 1) Line side insulating barrier as required for UL 508 Type E listing.
 - 2) Short-circuit trip indication as required for UL 508 Type E listing, to differentiate between thermal and short-circuit trips.

- 3) (1) NO auxiliary contact, open when the disconnect switch is in the OFF or TRIP position.
 2. Provide copper wires, bus bars, and fittings throughout, including internal wire of the control transformer. Identify power supply terminals with permanent markers. The maximum temperature of terminals shall not exceed 167°F (75°C) when the equipment is tested in accordance with its rating. All wiring shall be run in plated EMT rigid conduit. Mount a permanent nameplate on the unit to display the manufacturer, serial number and model number, date of manufacture, horsepower, current rating and voltage.
 3. Electrical components, devices, and materials shall be sized in accordance with NEC requirements for 40 degrees C operating conditions.
 4. Liquid tight flexible metallic conduit (LFMC) shall be used across section splits to facilitate unit installation. If internal to the air plenum, flexible metallic conduit or liquid tight type shall be used per NEC..
 5. All conduit connections to boxes and fittings shall be supported not more than 12 inches from connection point. All conduit bends shall be supported not more than 12 inches from each change in direction.
 6. Exposed conduits shall be securely clamped and supported with pipe hangers or galvanized one-hole pipe straps fastened to structure with bolts, screws, and anchors. The spacing of supports for horizontal runs of ¾" conduit or larger shall be not more than 8 feet. The spacing of supports for vertical runs of ¾", and 1 ¼" conduits shall be not more than 7 feet. The spacing of supports for vertical runs of 1 ½" or larger conduits shall be not more than 7 feet.
 7. All unit wiring for external connections shall be terminated on the left hand side of the outgoing terminal blocks.
 8. When multiple vertical rows of terminal boards are located in the same terminal box, a minimum of four inches clear space shall be provided between adjacent vertical rows.
 9. Disconnect switches:
 - a. Disconnect switches shall be heavy duty type, single throw, non-fusible.
 - b. Disconnect switches shall be NEMA3R for outdoor use.
 - c. The operating mechanism on the disconnect switches shall be quick-make, quick-break, and shall not be capable of being restrained by the operating handle during the opening or closing operation.
 - d. Dual interlocks shall interlock the switch box cover when the switch contacts are closed and the switch mechanism is in the "on" position. An interlock release shall be provided to defeat the interlocking mechanism and to permit opening the box cover when the switch contacts are closed, using an external hand tool.
 - e. Switch handles shall be designed for padlocking in the "off" position. All current-carrying metal parts of the switch shall be enclosed.
 10. Provide a disconnect switch for each fan motor; locate switch between the PDP and the fan motor.
 - a. Locate each fan motor disconnect switch within sight of the fan motor that it controls.
- V. Fan Array power wiring: provide a dedicated Variable Frequency Drive (VFD) for each fan motor
1. Refer to Section 26 2923 for Variable Frequency Motor Controllers.
 2. Provide a dedicated factory furnished and installed unit-mounted disconnect switch for each fan motor.
 - a. Locate switch between the VFD and the fan motor.
 - b. Hardwire interlock the operation of the VFD with the position of the associated fan motor disconnect switch.

- c. Locate each fan motor disconnect switch within sight of the fan motor that it controls.
3. Provide copper wires, bus bars, and fittings throughout, including internal wire of the control transformer. Identify power supply terminals with permanent markers. The maximum temperature of terminals shall not exceed 167°F (75°C) when the equipment is tested in accordance with its rating. All wiring shall be run in plated EMT rigid conduit. Mount a permanent nameplate on the unit to display the manufacturer, serial number and model number, date of manufacture, horsepower, current rating and voltage.
4. Electrical components, devices, and materials shall be sized in accordance with NEC requirements for 40 degrees C operating conditions.
5. Liquid tight flexible metallic conduit (LFMC) shall be used across section splits to facilitate unit installation. If internal to the air plenum, flexible metallic conduit or liquid tight type shall be used per NEC..
6. All conduit connections to boxes and fittings shall be supported not more than 12 inches from connection point. All conduit bends shall be supported not more than 12 inches from each change in direction.
7. Exposed conduits shall be securely clamped and supported with pipe hangers or galvanized one-hole pipe straps fastened to structure with bolts, screws, and anchors. The spacing of supports for horizontal runs of ¾" conduit or larger shall be not more than 8 feet. The spacing of supports for vertical runs of ¾", and 1 ¼" conduits shall be not more than 7 feet. The spacing of supports for vertical runs of 1 ½" or larger conduits shall be not more than 7 feet.
8. All unit wiring for external connections shall be terminated on the left hand side of the outgoing terminal blocks.
9. When multiple vertical rows of terminal boards are located in the same terminal box, a minimum of four inches clear space shall be provided between adjacent vertical rows.
10. Disconnect switches:
 - a. Disconnect switches shall be heavy duty type, single throw, non-fusible.
 - b. Disconnect switches shall be NEMA3R for outdoor use.
 - c. The operating mechanism on the disconnect switches shall be quick-make, quick-break, and shall not be capable of being restrained by the operating handle during the opening or closing operation.
 - d. Dual interlocks shall interlock the switch box cover when the switch contacts are closed and the switch mechanism is in the "on" position. An interlock release shall be provided to defeat the interlocking mechanism and to permit opening the box cover when the switch contacts are closed, using an external hand tool.
 - e. Switch handles shall be designed for padlocking in the "off" position. All current-carrying metal parts of the switch shall be enclosed.

2.9 VIBRATION ISOLATION

A. General:

1. Provide fans inside air-handling units with base and vibration isolation indicated on Drawings.

B. Air-Handling Unit Factory Assembly:

1. Use precompression-type height-saving brackets with isolators having 2-1/2-inch (65-mm) deflection or greater, to limit exposed bolt length.
2. Install spring isolators plumb and adjust isolators that are not plumb under operating conditions to make plumb.
3. Adjust isolators to prevent stress transfer to equipment.

4. Verify that installed isolators and mounting systems permit equipment motion in all directions.
5. Restraint fans with isolated thrust resistors to limit displacement to 1/4 inch (6 mm). Design for maximum lateral thrust the fan can develop.
6. Adjust or include additional resilient restraints to flexibly limit fan lateral motion to 1/4 inch (6 mm) during startup and operation of equipment.
7. Anchor restraints to fixed supports having a stiffness greater than the thrust encountered.
8. Include at least 2-inch (50-mm) operating clearance between fan bases and walking surface of air-handling unit floor. Before startup, clean out foreign matter between bases and equipment to prevent short circuit.
9. Flexible Connections:
 - a. Install flexible connections at connections to fans.
 - b. Install flexible connections in accordance with SMACNA standards and manufacturer's written instructions.
 - c. Make fabric joints on the flat run, not the corners, with overlap to provide an area sufficient to make a positive seal.
 - d. Apply adhesive between the fabric layers.
 - e. Attach connections using screws or bolts.
 - f. Reinforce fabric if required to keep fabric from collapsing and impacting airflow into fan.

2.10 HYDRONIC COILS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Aerofin.
 2. Coilmaster Corporation.
 3. Modine Commercial and Industrial Solutions.
 4. Super Radiator Coils.
- B. Sourcing Option: In lieu of sourcing hydronic coils from a specialty coil manufacturer, air-handling unit manufacturer has option to furnish in-house hydronic coils that achieve equal or better performance while complying with other requirements indicated.
- C. General: Provide air-handling units with hydronic coils where indicated on Drawings.
- D. Description: Plate fin coils constructed of staggered tubes mechanically expanded into continuous collars that are die formed into plate fins.
- E. Design and Performance:
 1. Capacities, face area, and number of rows indicated on Drawings are minimum acceptable.
 2. Air pressure drop, water pressure drop, fin spacing, and face velocity indicated on Drawings are the maximum acceptable.
 3. Coils shall be counterflow design, air to fluid. Fluid supply shall enter air leaving side of coil and exit air entering side.
 4. Design coils to be drainable.
 - a. Coils shall have all circuits drainable when coils are installed in horizontal position and level.
 - b. Coil supply and return header shall be furnished with a drain connection at lowest point on header.

5. Design coils to be self-venting.
 - a. Supply connection near bottom of supply header.
 - b. Return connection near top of return header.
 - c. Furnish coil return and supply header with a vent connection at highest point on header.
 6. Coils supply and return piping connections on same end of coil.
 7. Coils shall be rated for system operating pressures and temperatures encountered by installation, but not less than 300 psig (2069 kPa).
 8. Cooling coils shall have no moisture carryover at design conditions. Install moisture eliminators on discharge face of coil if it is necessary to eliminate moisture carryover.
- F. Casing and Tube Sheets:
1. Depth: Extend coil casing and tube sheets a minimum of 1/2 inch (13 mm) beyond face of fins on both entering and leaving sides.
 2. Casing and Tube Sheet Materials:
 - a. Cooling Coils: Stainless steel, ASTM A240/A240M or ASTM A480/A480M, Type 316L, No. 2D finish.
 - b. Heating Coils:
 - 1) Stainless steel, ASTM A240/A240M or ASTM A480/A480M, Type 316L, No. 2D finish.
 3. Top and Bottom Casings:
 - a. Flange face minimum of 1-1/2 inches (68 mm); double flange edge for rigidity and ease of removal with secondary flange face minimum of 1/2 inch (13 mm).
 - b. Thickness:
 - 1) Coils with Fin Length of up to 72 Inches (1800 mm): Minimum of 12 gauge (2.8 mm) thick.
 - 2) Coils with Fin Length Exceeding 72 Inches (1800 mm): Minimum of 12 gauge (2.8 mm) thick.
 4. End Tube Sheets:
 - a. Tube sheet holes rolled to prevent chaffing of tubes during thermal expansion and contraction.
 - b. Flange face minimum of 1-1/2 inches (68 mm).
 - c. Thickness: Minimum of 12 gauge (2.8 mm) thick.
 5. Intermediate Tube Sheets:
 - a. Tube sheet holes rolled to prevent chaffing of tubes during thermal expansion and contraction.
 - b. Space intermediate tube sheets a maximum of 48 inches (1200 mm) o.c. and locate to provide equal spacing between tube sheet across coil tube length.
 - c. Flange face minimum of 1/2 inch (13 mm).
 - d. Thickness: Minimum of 16 gauge (1.6 mm) thick.
 6. Holes: Include number, size, and location of holes in casing and end tube sheets required for coil installation.
- G. Fins:
1. Materials:
 - a. Aluminum: 0.0060 inch (0.15 mm) thick.
 2. Collars: Full collars for accurate fin spacing and maximum tube contact while leaving no surface of tube exposed.
 3. Fin Configuration: Flat face fins without ripples.
- H. Headers:

1. Construct header of seamless copper, ASTM B75/B75M drawn temper of diameter and wall thickness based on coil size, flow rate, design pressure, design temperature, and circuiting.
 2. Tube-to-Header Connections: Tube-to-header holes shall intrude inward so landed surface area is three times the core tube thickness, to provide enhanced header to tube joint integrity. Tubes shall evenly extend within the ID of the header no more than 0.12 inch (3 mm).
 3. Header Top and Bottom Caps: End caps shall be die-formed and installed on the ID of header such that the landed surface area is three times the header wall thickness.
 4. Drains: Include low point of supply and return header with a NPS 1/2 (DN 13) drain connection. Extend copper or red brass pipe through air-handling unit casing and terminate end with male national pipe thread (MNPT). Pipe shall be threaded on both ends to facilitate easy field removal and replacement.
 5. Vents: Include high point of supply and return header with a NPS 1/2 (DN 13) vent connection. Extend copper or red brass pipe through air-handling unit casing and terminate end with MNPT. Pipe shall be threaded on both ends to facilitate easy field removal and replacement.
 6. Supply and Return Connections:
 - a. Terminate ends with MNPT.
 - b. Connections to header shall be either copper tube with brazed ASME B16.18 threaded male adapters or red brass pipe with machine-threaded MNPT connections. Pipe shall extend through air-handling unit casing and be threaded on both ends to facilitate easy field removal and replacement.
 - c. Connections NPS 2-1/2 (DN 65) and larger shall have a bronze ASME 16.24 threaded flanges attached to threaded connections to provide for a flanged field connection. Select flange class, Class 150 or Class 300, for system pressure and temperature encountered.
 7. Protect openings of supply, return, vent, and drain connections with a threaded cap to prevent entry of dirt into the coil.
- I. Tubes:
1. Material: Copper, ASTM B75/B75M annealed temper or ASTM B280 drawn temper; .
 2. Tube Nominal Diameter: 1/2 or 5/8 inch (13 or 16 mm) before expanding, selected to provide performance indicated.
 3. Tube Nominal Wall Thickness: As required by performance, minimum of 0.035 inch (0.9 mm) thick.
- J. Tube Return Bends: 180-degree bends brazed to tubes; material, wall thickness, and nominal diameter to match tubes.
1. Tube Return Bend Nominal Wall Thickness: As required by performance, minimum of 0.035 inch (0.9 mm) thick.
- K. Brazing: High-temperature brazing alloy with not less than 5 percent silver when brazing like non-ferrous materials together and more than 30 percent silver when brazing ferrous to non-ferrous materials.
- L. Hardware: Use hex-head bolts, nuts, and washers constructed of Type 316 stainless steel.
- M. Nameplate: Aluminum or stainless steel nameplate with brass or stainless steel chain for each coil, with the following data engraved or embossed:
1. Manufacturer name, address, telephone number, and website address.

2. Manufacturer model number.
3. Serial number.
4. Manufacturing date.
5. Coil identification (indicated on Drawings).
6. Coil fin length.
7. Coil fin height.
8. Coil weight with fluid/without fluid.
9. Coil casing material and thickness.
10. Coil fin material and thickness.
11. Coil tube material and thickness.
12. Coil header material and thickness.

N. Cleaning: Residual manufacturing oils and solid contaminants shall be removed internally and externally by completely submersing the coil in an environmentally acceptable degreasing solution that is chemically compatible with the coil material.

O. Air-Handling Unit Factory Assembly:

1. Coil Connections: Extend each coil connection through casing access panel and terminate connections, approximately 4 inches (100 mm) beyond exterior face of access panel, and seal each penetration as indicated. Casing access panels shall be removed and reinstalled with coils installed inside air-handling units.
2. Internal Access: Include each coil with internal access from downstream and upstream sides as indicated on Drawings.
3. Removal and Replacement: Each coil shall be independently removable and replaceable through a removable access panel installed in air-handling unit casing.
4. Supports for Coils:
 - a. Construct a freestanding and self-supporting structural framework to support each coil individually from and independent of adjacent coils.
 - b. Construct framework for cooling coils, from aluminum or stainless steel structural shapes.
 - c. Construct frame work for heating coils from aluminum or stainless steel structural shapes.

2.11 DRAIN PANS

A. General:

1. Include a drain pan for each cooling and heating coil and at other locations indicated.
2. Continuously weld drain pan seams, joints, and mitered corners to make the assembled drain pan watertight.
3. Drain pans shall be located under the entire coil and provide full coil coverage including coil return bends and headers.
4. Slope drain pans in multiple directions toward low point drain connection at a uniform slope of at least 1 percent from high point to low point.
5. Include stainless steel blank-offs to prevent air from bypassing around coil.

B. Bottom Drain Pans:

1. Mounting Location, Above Floor: Bottom drain pan shall be installed above air-handling unit floor walking surface. Do not recess drain pan into unit base.
2. Grating: Install removable stainless steel grating on top of drain pan.
3. Double-Wall Construction: Double-wall sheet with space between walls filled with 1-inch (25-mm) insulation.

4. Material: Type 316L stainless steel ASTM A240/A240M or ASTM A480/A480M, a minimum of 16 gauge (1.6 mm) thick.
5. Minimum Depth: 1.5 inches (38 mm).
6. Extend drain pan beyond air leaving face of coil casing at least 12 inches (150 mm).
 - a. Where moisture eliminators are required to prevent moisture carryover, extend drain pan beyond leaving face of moisture eliminator in lieu of the leaving face of coil.
7. Drain Pan Connection:
 - a. Stainless steel threaded half-coupling welded to lowest point of drain pan.
 - b. Location: Both ends.
 - c. Minimum Nominal Connection Size: NPS 1 (DN 25).
8. Drain Pipe:
 - a. Air-handling unit manufacturer to connect full size drain pipe to each drain pan connection. Option to use one of following pipe materials:
 - 1) Stainless steel pipe with threaded MNPT ends.
 - b. Extend drain pipe and terminate 3 inches (75 mm) beyond exterior face of casing.

2.12 DIRECT-STEAM-INJECTION PANEL DISTRIBUTION MANIFOLD HUMIDIFIERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Armstrong International, Inc.
 2. DriSteem.
 3. Nortec Industries Inc.
- B. Source Limitations: Obtain humidifiers from single source from single manufacturer.
- C. Description: Prefabricated, direct-steam panel distribution manifold specially designed for steam dispersion in a short distance.
 1. Horizontal or vertical header with multiple **[vertical]** **[or]** **[horizontal]**, steam-jacketed tubes.
 2. Nozzles/metered orifices in conjunction with nonsteam-jacketed manifolds or punched orifices/no nozzles in conjunction with steam-jacketed manifolds spaced evenly along manifold tubes and providing dry and uniform steam distribution.
- D. Design and Performance:
 1. Absorption distance within 12 inches (300 mm) .
 2. Air Pressure Drop: Less than 0.1 inch wg (25 Pa) at design velocity.
 3. Suitable for pressurized steam applications.
- E. Headers and Distribution Tubes:
 1. Material: Stainless steel, Type 316.
 2. Insulation: Insulated, minimum R-0.5.
- F. Steam Separator: External separator, or separator/baffles integral to header, to provide condensate-free steam to the distribution tubes.
 1. Material: Stainless steel, Type 316.
- G. Steam Trap:
 1. Material: Stainless steel, Type 316.
 2. Type: float and thermostatic.

3. Capacity: Sized for a minimum of 3 times the maximum rated condensate flow of humidifier at 1/2-psig (3.4-kPa) differential pressure.

H. Air-Handling Unit Factory Installation:

1. Air-handling unit manufacturer shall furnish and install humidifiers with the size and capacities indicated on Drawings.
2. Extend humidifier piping through the air-handling unit casing and terminate the connections approximately 4 inches (100 mm) beyond the exterior face.
3. Drain Pans: Install condensate drain pans to collect and drain water to exterior of air-handling unit casing.
4. Provide each humidifier with access for inspection, service, and replacement.
5. Each humidifier shall be removable for replacement through a removable access panel in the air-handling unit casing or an access door.
6. Include a freestanding and self-supporting structural stainless steel framework to support each humidifier.

2.13 CARTRIDGE FILTERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AAF International.
2. Camfil Farr.
3. Flanders Corporation.
4. Koch Filter Corporation.

B. Source Limitations: Obtain filters from single source from single manufacturer.

C. Description: Factory-fabricated, dry, extended-surface, disposable, air filters with media formed in mini-pleats and arranged in a V-shape pattern.

D. Performance:

1. Filtration Efficiency, ASHRAE 52.2 MERV Rating: 14 .
2. Energy Cost Index: Five star rating.
3. Initial Air Pressure Drop: With face velocity of 500 fpm (2.5 m/s), clean filter pressure drop shall not exceed the following:
 - a. MERV 14 and MERV 15A: 0.27 inch wg (68 Pa).
4. Manufacturer-Recommended Final Air Pressure Drop: 1.5 inches wg (375 Pa).
5. Pressure Differential without Failure: 10 inches wg (2500 Pa).
6. Temperature Rating: 175 deg F (79 deg C).

E. Certification:

1. AHRI: Tolerances in accordance with AHRI 850 (I-P) and AHRI 851 (SI).
2. ASHRAE: Tested and rated in accordance with ASHRAE 52.2.
3. UL: UL 900 listed.

F. Construction:

1. Media: Microfine glass media formed into mini-pleats and arranged in V-shape patterns.
2. Media Frame: Plastic or corrosion-resistant metal.
3. Adhesive: Fire-retardant bonding adhesive where bonding media to frame.

2.14 PLEATED PANEL FILTERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AAF International.
 2. Camfil Farr.
 3. Flanders Corporation.
 4. Koch Filter Corporation.
- B. Source Limitations: Obtain filters from single source from single manufacturer.
- C. Description: Factory-fabricated, self-supported, extended-surface, pleated, panel-type, disposable air filters.
- D. Performance:
1. Filtration Efficiency, ASHRAE 52.2 MERV Rating: 9.
 2. Energy Cost Index: Five star rating.
 3. Initial Air Pressure Drop: With face velocity of 500 fpm (2.5 m/s), clean filter pressure drop shall not exceed the following:
 - a. MERV 9 and MERV 9A:
 - 1) Depth 4 Inches (100 mm): 0.27 inch wg (68 Pa).
 4. Manufacturer-Recommended Final Air Pressure Drop: 1.0 inch wg (250 Pa).
 5. Pressure Differential without Failure: 2 inches wg (500 Pa).
 6. Temperature Rating: 200 deg F (93 deg C).
- E. Certification:
1. AHRI: Tolerances in accordance with AHRI 850 (I-P) and AHRI 851 (SI).
 2. ASHRAE: Tested and rated in accordance with ASHRAE 52.2.
 3. UL: UL 900 listed.
- F. Construction:
1. Media: Cotton and synthetic blend of fibers arranged in a series of pleats attached to and supported by a corrosion-resistant welded-wire grid. Coat media with an antimicrobial agent.
 2. Filter Media Casing: High wet strength (28-point) beverage board that is bonded around the periphery to eliminate air bypass.
 - a. Diagonal support members across upstream and downstream filter face constructed of same material as casing shall ensure pleat spacing and stability.
 3. Adhesive: Fire-retardant bonding adhesive where bonding media to casing.

2.15 ASHRAE-RATED FILTER HOLDING FRAMES

- A. Filter Holding Frames for ASHRAE-Rated Filters:
1. Fabricate filter holding frames with mitered corners and reinforce frame to maintain a durable, rugged, true square shape.
 2. Construct frames of galvanized steel. Use stainless steel frames in applications exposed to corrosive airstreams.
 3. For applications with pre-filter and final filters sharing the same filter holding frame, frames shall be suitable for supporting and holding both pre-filter and final filters in frame with both filters serviceable from upstream (entering air) side.

4. Frame Depth: At least 2.75 inches (70 mm).
5. Gaskets: Continuous, suitable for same operating temperature as filters.
6. Filter Clips: Each filter holding frame with spring clip fasteners at each corner. Spring clips shall allow filters to be removed and replaced without use of tools.
7. Frames shall be industry-standard size to provide interchangeability of filters from other manufacturers.

B. Air-Handling Unit Factory Installation:

1. Air-handling unit manufacturer shall furnish filters and provide filter holding frames, retaining clips, and filter support structures.
2. Furnish filter quantity, size, type, and performance indicated on Drawings.
3. Install filter frames in a flat vertical position for horizontal airflow.
4. Install holding frames in accordance with manufacturer's written instructions and to prevent passage of unfiltered air. Include additional gaskets as necessary.
5. Secure individual holding frames together to build a multiple filter bank.
6. Construct aluminum support structure to hold frames and filters.
 - a. Design support structure for maximum system operating pressures encountered equal to fan shutoff pressure.
 - b. Design and fabricate support structure to limit deflection across filter bank to 1/360 of the span when subjected to a 200-lb (890-N) lateral force applied at any point on the filter holding frame assembly.

2.16 FILTER GAUGES

- A. Provide a gauge to indicate pressure differential between entering and leaving side of each filter bank. Panel filter bank separate from cartridge filter bank.
 1. Where multiple filters share a common frame, include a separate gauge for each filter bank.
 2. Include a metal spacer constructed of same material as filter frame for one of the filters installed in filter bank to accommodate pressure differential measure across both upstream and downstream filters.
- B. Gauge shall have a nominal 4-inch- (100-mm-) diameter face.
- C. Select range of gauge to be approximately three times the dirty filter pressure drop.
- D. Provide each gauge with vent valves to allow for re-zeroing the gauge without removing tubing connections.
- E. Include static pressure sensors on entering and leaving side of each filter bank.
- F. Air-Handling Unit Factory Assembly:
 1. Mount each filter gauge on exterior surface of unit casing near associated filter sections.
 2. Mount center of gauges 60 inches (1500 mm) above bottom of air-handling unit structural base.
 3. Connect static pressure sensors to filter gauges using aluminum copper or stainless steel tubing and compression type fittings.
 4. Support tubing at intervals not greater than 60 inches (1500 mm) o.c.

2.17 AUTOMATIC DAMPERS

- A. General: Provide air-handling units with automatic dampers where indicated on Drawings.
1. Unless otherwise indicated, use parallel-blade configuration for two-position control, for equipment isolation service, and when mixing two airstreams. For other applications, use opposed-blade configuration.
 2. Factory assemble multiple damper sections to provide a single damper assembly of size required by application.
- B. Rectangular Dampers with Aluminum Blades:
1. Source Limitations: Obtain dampers from single source from single manufacturer.
 2. Performance:
 - a. Leakage: AMCA 511, Class 1A. Leakage shall not exceed 3 cfm/sq. ft. (15.2 L/s per sq. m) against 1-inch wg (250-Pa) differential static pressure.
 - b. Pressure Drop: 0.05 inch wg (12.5 Pa) at 1500 fpm (7.6 m/s) across a 24-by-24-inch (600-by-600-mm) damper when tested in accordance with AMCA 500-D, figure 5.3.
 - c. Velocity: Up to [4000 fpm (20 m/s)] [6000 fpm (30 m/s)].
 - d. Temperature: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
 - e. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length.
 - f. Damper shall have AMCA seal for both air leakage and air performance.
 3. Construction:
 - a. Frame:
 - 1) Material: ASTM B211, Alloy 6063 T5 extruded-aluminum profiles, 0.07 inch (1.8 mm) thick.
 - 2) Hat-shaped channel with integral flange(s). Flange mating face shall be a minimum of 1 inch (25 mm).
 - 3) Width not less than 5 inches (125 mm).
 - b. Blades:
 - 1) Hollow, airfoil, extruded aluminum.
 - 2) Parallel- or opposed-blade configuration as required by application.
 - 3) Material: ASTM B211, Alloy 6063 T5 aluminum, 0.07 inch (1.8 mm) thick.
 - 4) Width not to exceed 6 inches (150 mm).
 - 5) Length as required by close-off pressure, not to exceed 48 inches (1200 mm).
 - c. Seals:
 - 1) Blades: Replaceable, mechanically attached extruded silicone, vinyl, or plastic composite.
 - 2) Jambs: Stainless steel, compression type; or replaceable, mechanically attached extruded silicone.
 - d. Axles: 0.5-inch- (13-mm-) diameter, stainless steel, mechanically attached to blades.
 - e. Bearings:
 - 1) Molded synthetic or stainless steel sleeve mounted in frame.
 - 2) Where blade axles are installed in vertical position, include thrust bearings.
 - f. Linkage:
 - 1) Concealed in frame.
 - 2) Constructed of aluminum and stainless steel.
 - 3) Hardware: Stainless steel.
 - g. Additional Corrosion Protection for Corrosive Environments:
 - 1) Include anodized finish for aluminum surfaces in contact with airstream. Anodized finish shall be a minimum of 0.0007 inch (0.018 mm) thick.

- 2) Axles, damper linkage, and hardware shall be constructed of Type 316L grade stainless steel.

C. Damper Actuators:

1. General:
 - a. Actuators shall operate related damper(s) with sufficient reserve power to provide smooth modulating action or two-position action and proper speed of response at velocity and pressure conditions to which damper is subjected.
 - b. Actuators shall produce sufficient power and torque to close off against the maximum system pressures encountered. Actuators shall be sized to close off against the fan shutoff pressure as a minimum requirement.
 - c. Total damper area operated by an actuator shall not exceed 80 percent of manufacturer's maximum area rating.
 - d. Include one actuator for each damper assembly where possible. Multiple actuators required to drive a single damper assembly shall operate in unison.
 - e. Avoid use of excessively oversized actuators, which could overdrive and cause linkage failure when the damper blade has reached either its full open or closed position.
 - f. Use jackshafts and shaft couplings in lieu of blade-to-blade linkages when driving axially aligned damper sections.
 - g. Include mounting hardware and linkages for connecting actuator to damper.
 - h. Select actuators to fail in desired position in the event of a power failure.
 - i. Actuator Fail Positions: See Drawings.
 - 1) Outdoor Air: Last position.
 - 2) Supply Air: Open.
2. Type: Motor operated, with or without gears, electric and electronic.
3. Voltage:
 - a. 24 V.
 - b. Actuator shall deliver torque required for continuous uniform movement of controlled device from limit to limit when operated at rated voltage.
 - c. Actuator shall function properly within a range of 85 to 120 percent of nameplate voltage.
4. Construction:
 - a. Less Than 100 W: Fiber or reinforced nylon gears with steel shaft, copper alloy or nylon bearings, and pressed steel enclosures.
 - b. 100 up to 400 W: Gears ground steel, oil immersed, shaft-hardened steel running in bronze, copper alloy, or ball bearings. Operator and gear trains shall be totally enclosed in dustproof cast-iron, cast-steel, or cast-aluminum housing.
 - c. Greater Than 400 W: Totally enclosed reversible induction motors with auxiliary hand crank and permanently lubricated bearings.
5. Field Adjustment:
 - a. Spring return actuators shall be easily switchable from fail open to fail closed in the field without replacement.
 - b. Provide gear-type actuators with an external manual adjustment mechanism to allow manual positioning of the damper when actuator is not powered.
6. Two-Position Actuators: Single direction, spring return, or reversing type.
7. Modulating Actuators:
 - a. Capable of stopping at all points across full range, and starting in either direction from any point in range.
 - b. Control Input Signal:

- 1) Proportional: Actuator drives proportional to input signal and modulates throughout its angle of rotation. Suitable for or 2- to 10-V dc and 4- to 20-mA signals.
- 2) Pulse-Width Modulation (PWM): Actuator drives to a specified position in accordance with a pulse duration (length) of signal from a dry-contact closure, triac sink, or source controller.
- 3) Programmable Multifunction:
 - a) Control input, position feedback, and running time shall be factory or field programmable.
 - b) Diagnostic feedback of hunting or oscillation, mechanical overload, mechanical travel, and mechanical load limit.
 - c) Service data, including at a minimum, number of hours powered, and number of hours in motion.
8. Position Feedback:
 - a. Equip modulating actuators with a position feedback through current or voltage signal for remote monitoring.
 - b. Include a position indicator and graduated scale on each actuator indicating open and closed travel limits.
9. Fail-Safe:
 - a. Where indicated, provide actuator to fail to an end position.
 - b. Internal spring return mechanism to drive-controlled device to an end position (open or close) on loss of power.
 - c. Batteries, capacitors, and other non-mechanical forms of fail-safe operation are acceptable only where uniquely indicated.
10. Integral Overload Protection:
 - a. Provide against overload throughout the entire operating range in both directions.
 - b. Electronic overload, digital rotation sensing circuitry, mechanical end switches, or magnetic clutches are acceptable methods of protection.
11. Damper Attachment:
 - a. Unless otherwise required for damper interface, provide actuator designed to be directly coupled to damper shaft without need for connecting linkages.
 - b. Attach actuator to damper drive shaft in a way that ensures maximum transfer of power and torque without slippage.
 - c. Bolt and set screw method of attachment is acceptable only if included with at least two points of attachment.
12. Temperature and Humidity:
 - a. Temperature: Suitable for operating temperature range encountered by application with minimum operating temperature range of minus 20 to plus 120 deg F (minus 29 to plus 49 deg C).
 - b. Humidity: Suitable for humidity range encountered by application; minimum operating range shall be from 5 to 95 percent relative humidity, noncondensing.
13. Enclosure:
 - a. Suitable for ambient conditions encountered by application.
 - b. Provide actuator enclosure with a heater and controller where required by application.
 - c. NEMA 250, Type 2 for all applications except .
 - d. NEMA 250, Type 4 or Type 4X for applications.
14. Stroke Time: Select operating speed to be compatible with equipment and system operation.
 - a. Operate damper from fully closed to fully open within 15 seconds.
 - b. Operate damper from fully open to fully closed within 15 seconds.

- c. Move damper to failed position within 5 seconds.
- d. Actuators operating in smoke-control systems shall comply with governing code and NFPA requirements.
- 15. Sound:
 - a. Spring Return: 62 dBA.
 - b. Non-Spring Return: 45 dBA.

2.18 ANTIMICROBIAL ULTRAVIOLET (UV) LAMP SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. American Ultraviolet.
 - 2. Steril-Aire, Inc.
 - 3. UV Resources.
 - 4. .
- B. Source Limitations: Obtain lamp systems from single source from single manufacturer.
- C. Description: UV-C lamp system consisting of power supply, wiring, lamp(s), plug(s), and holder(s) used for ultraviolet germicidal irradiation (UVGI) of cooling coil and condensate drain pan.
 - 1. Factory assembled and engineered by a qualified design professional.
- D. Certification: NRTL listed and labeled in accordance with UL 153, UL 1598, and UL 1995; UL Category Code ABQK; HVAC accessories; air-duct mounted.
- E. Performance:
 - 1. Operating Conditions: Suitable for operation in extreme conditions of the airstream encountered.
 - a. Relative humidity range not less than 5 to 100 percent.
 - b. Temperature range not less than 34 to 158 deg F (1 to 70 deg C).
 - c. Velocity range not less than 0 to 600 fpm (0 to 3 m/s).
 - 2. Irradiation Intensity: Install sufficient quantity of UV-C lamps to provide an average irradiation intensity of 500 microwatts/sq. cm over coil face and exposed surfaces of drain pan.
 - 3. Lamp Life: Minimum of 9000 hours.
 - 4. Light Output Degradation: Reduction in light output shall not exceed 15 percent of initial lamp output over the rated lamp life.
- F. Construction:
 - 1. Lamps:
 - a. Type: High output, hot cathode; non-ozone producing.
 - b. Output: UV-C energy, primarily at the 254-nm wavelength with a 360-degree energy distribution.
 - c. Protective Sleeve: Hermetically sealed to provide protection against lamp breakage and to ensure that lamp contents from a broken lamp are contained.
 - d. Labeling: Lamp wattage and model number visibly printed on all lamps.
 - e. Mercury Content: Less than 8 Mg of mercury in each lamp.
 - f. Lamp Sourcing: Commercially sourced from more than one manufacturer for future replacement. Proprietary lamps available from only one manufacturer are unacceptable.

2. Lamp Holders:
 - a. UV- and moisture-resistant materials designed to connect the lamp to the plug and ensure a watertight connection.
 - b. Adjustable positioning.
 3. Wiring Loom: UV-C-resistant jacket materials with internal aluminum/Mylar shield.
 - a. Conduit: Loom covered with NRTL-listed flexible metal conduit, aluminum, or stainless steel.
 4. Power Supply: NRTL listed, single phase, 120 or 277 V ac as indicated, with a programmed rapid start.
 - a. Power Factor: High power factor, Class P, Sound Rated A, Type 1 Outdoor, and with inherent thermal protection and without polychlorinated biphenyl.
 - b. Wiring Harness: Plug and play.
 - c. Electrical Connection: Single electrical connection with service disconnect.
 5. Enclosures: NEMA 250, Type 1 constructed of painted carbon steel.
- G. Air-Handling Unit Factory Assembly:
1. Install UV-C lamp systems in accordance with manufacturer's written instructions.
 2. Location: Install UV-C lamp system array immediately downstream of cooling coil bottom drain pan.
 3. UV-C Lamp System Support Assembly: 300 series grade stainless steel framework rigidly attached to air-handling unit casing and adequately braced to provide ridge support of UV-C lamp systems that will not move or damage when leaned on or bumped into by operators.
 4. Service Access: Lamps shall be easily replaceable from inside the air-handling unit.
 - a. Install access door(s) with window to access UV light. Treat each window and test to confirm UV emitted through the window is below the threshold limits of NIOSH and ACGIH.
 - b. If adequate space is unavailable inside air-handling unit, install UV-C lamp systems on a slide out rail to allow lamp replacement from one exterior side of air-handling unit.
 5. Factory wire UV-C lamp systems internally and terminate at a disconnecting switch on the exterior of the air-handling unit casing.
 - a. Switch to include a lock-out/tag-out feature.
 - b. In addition to disconnecting switch, provide each access door accessible to UV-C lamp systems with a position limit switch wired into UV-C lamp systems power circuit to de-energize power to UV-C lamp systems when door is opened.
 6. Install a caution nameplate at each UV-C lamp systems disconnecting switch that reads: "DANGER, UV LIGHTS - Turn off before entering."
 7. Protection from UV Damage: Materials in direct or indirect (reflected) contact with UV shall be tested and certified as UV tolerant. Any material not certified shall be completely shielded from UV using a certified UV-tolerant material such as metal. UV tolerance shall be capable of performing intended duty for a minimum of 20 years.
 8. Shipping: Remove UV-C lamps after factory testing; package and ship UV-C lamps in protective containers for field installation.
 - a. Label exterior of enclosures with detailed description of container contents, including air-handling unit designation.
 - b. Ship UV-C lamps for each air-handling unit in separate containers.
- H. UV-C Lamp System Irradiance Monitoring:
1. Sourcing: Furnished by UV-C lamp system manufacturer with UV-C lamp systems.

2. General: UVGI monitoring consisting of sensor(s) and controller to measure and locally display UV output irradiance in absolute output (microwatts/sq. cm) and user-defined percentage of relative output.
 3. Measurement Range: Suitable for highest measured irradiance encountered by application, but not less than 20,000 microwatts/sq. cm.
 4. NIST traceable calibration.
 5. Remote Monitoring Signal: 4- to 20-mA output signal for remote monitoring.
- I. UV-C Lamp System Status Monitoring:
1. Sourcing: Furnished by UV-C lamp system manufacturer with UV-C lamp systems.
 2. Monitors operating status of UV-C lamps by measuring change in electrical current.
 3. On/off status of lamps displayed by LED lights on face of local display unit.
 4. Remote Monitoring Signal: On/off status relays for remote monitoring.
- 2.19 AIR-HANDLING UNIT FACTORY DRAIN PIPING AND PIPING INSULATION
- A. General:
1. Air-handling unit manufacturer to factory install piping inside air-handling units.
 2. If more than one material is listed, material selection is by air-handling unit manufacturer.
- B. Aluminum Piping:
1. Pipe: Aluminum ASTM B241/B241M, Grade 1061, Temper T6, seamless longitudinal joints with beveled or plain ends; and wall thickness as indicated under applications.
 2. Fittings: Cast aluminum, ASTM B26/B26M, Grade 356, Temper T6, ASME B16.1 Class 150; threaded ends.
 3. Flanges: Cast aluminum, ASTM B26/B26M, Grade 356, Temper T6, ASME B16.1, Class 150 including bolts, nuts, washers, and gaskets of the following end connections and facings:
 - a. Threaded end connections for threaded joints, welding-neck with butt-joint for welded joints, and blinds for use with flanged joints requiring close-off.
 4. Unions: Cast-aluminum, ASTM B26/B26M, Grade 356, Temper T6, hexagonal-stock body; female NPT threaded ends.
- C. Copper Tubing:
1. Tubing: Drawn temper, ASTM B88, Type L (ASTM B88M, Type B).
 2. Fittings: Wrought-copper and copper-alloy, ASME B16.22, pressure fittings.
 3. Unions: Cast-copper-alloy, MSS SP-123, hexagonal-stock body; female NPT threaded ends
 4. Solder Filler Metals: ASTM B32, lead-free alloys, and water-flushable flux in accordance with ASTM B813.
- D. Drain Pan Piping:
1. Schedule 40 aluminum or stainless steel pipe with threaded ends or copper tube with soldered threaded male adapters.
 2. Factory install drain piping for drain pan(s). Install a dedicated drain pipe for each drain pan serving different air-handling unit internal components. Where multiple drain pans serve like components interconnect drain piping to a single drain pipe for field connection.

- a. Where interconnecting cooling coil condensate drain pans from upstream and downstream sides of cooling coil, provide pipe with a water seal trap configured to prevent air bypass.
- b. Terminate pipe with a threaded pipe cap 3 inches (75 mm) beyond exterior face of air-handling unit casing. Threaded pipe cap material to match pipe material.
- c. Drain pipe size to match size of drain pan connection.

2.20 DRAINS

A. Floor Drains:

1. Drain Body: Fabricate floor drain body of NPS 4 (DN 100) or larger aluminum or stainless pipe and weld a plate of same material to the bottom. Option to fabricate an aluminum or stainless steel rectangular box drain at least 4 by 4 inches (100 by 100 mm) of material at least 0.1 inch (3 mm) thick.
2. Drain Connection: Weld a nominal NPS 2 (DN 50) half coupling in side of drain body located within 1 inch (25 mm) from bottom.
3. Drain Cover: Perforated plate, at least 0.1 inch (3 mm) thick, or grating, fabricated from aluminum or stainless steel. Drain cover shall be supported and secured in place by drain body, but not fastened to drain body with fasteners.
4. Fluid Seal: Weld floor drain body to air-handling unit floor for a watertight installation.
5. Mounting: Recess floor drain body into structural base. Top of floor drain to be slightly recessed below air-handling unit finished floor for unobstructed gravity flow from floor into drain.
6. Application: Install floor drains in air-handling unit floors at locations indicated on Drawings.
7. Application: Install floor drains in air-handling unit floors of all sections.
8. Application: Install floor drains in air-handling unit floors of coil and humidifier sections and associated access sections.

2.21 FACTORY ASSEMBLED ELECTRICAL

A. Factory install UV-C and switches, service light fixtures and switches, and receptacles for each air-handling unit.

1. Locate in a convenient and field-accessible location.
2. Installation shall comply with NFPA 70.
3. Wire, Conduit, and Enclosures:
 - a. Minimum Conduit Size: 3/4 inch (20 mm).
 - b. Materials: Stainless steel.
 - c. Supports: Support conduits, boxes, and enclosures using corrosion-resistant fastening hardware constructed of stainless steel.
 - d. Conduit: Locate conduit inside the air-handling unit casing. Conduit installed on exterior of air-handling unit casing is unacceptable.
 - e. Wire:
 - 1) Copper, rated for 600 V, solid wire for size No. 10 AWG and smaller and stranded wire for larger sizes.
 - 2) Minimum Wire Size: No. 12 AWG.
 - 3) Each circuit shall have a ground wire.
 - 4) Install wire in conduit.
 - f. Boxes, Conduit Outlet Bodies, and Enclosures:
 - 1) Located in Airstream: NEMA 250, Type 4 .
 - 2) Located on Exterior of Air-handling Unit Casing: NEMA 250, Type 1.

- g. Seals: Seal pathways to prevent air leakage between air-handling unit exterior and interior, and between internal component sections.
 - h. UV-C Lamp System Applications: Wire all UV-C lamp systems located in the same air tunnel to a single circuit.
 - i. Service Lighting Applications:
 - 1) Provide quantity of 20-A branch circuits required to power service light fixtures.
 - 2) For air-handling units consisting of multiple stacked tiers, provide separate circuits for top and bottom tiers of air-handling units.
 - 3) Factory install a field power junction box for interfacing air-handling power for service lighting with single-point field power wiring connection.
 - j. Receptacle Applications:
 - 1) For air-handling units consisting of multiple stacked tiers, provide separate circuits for top and bottom tiers of air-handling units.
 - 2) Factory wire receptacles to a field power junction box for interfacing air-handling power for receptacles with a single-point field power wiring connection.
- B. Main Disconnect Switches: Factory-install main disconnect switch mounted on air-handling unit casing exterior for interface of factory power wiring with field power wiring.
- 1. Specification Grade; "Heavy Duty Type"; "quick-make," "quick-break" construction.
 - 2. Three pole, fused.
 - 3. 600 V rated.
 - 4. Minimum Short-Circuit Current Rating: As required by electrical power distribution system, but not less than 65,000 A.
 - 5. Enclosure: NEMA 250, Type 1.
 - 6. Operating handle shall be of box-mounted type that directly drives switch mechanism.
 - 7. Disconnect switch shall use a flange-operated visible blade that is close coupled to a vertical-lift-type handle that achieves a positive visible indication of disconnect with cover open or closed.
 - 8. Disconnect switch shall have a defeatable, front-accessible, mechanical interlock to prevent opening of cover when switch is in "ON" position, and to prevent turning switch "ON" when the door is open.
 - 9. Include a solid neutral as required by authorities having jurisdiction.
 - 10. Disconnect switch shall have a ground lug for ground wire termination.
 - 11. Operating handle shall be lockable in open position.
 - 12. Horsepower rated.
 - 13. Feed through or double lugged.
- C. Field Power Junction Box: Factory-install junction box with internal wire terminal block mounted on air-handling unit casing exterior for interface of factory power wiring with field power wiring.
- D. Service Light Fixtures:
- 1. Fluorescent Luminaires:
 - a. Suitable for wet locations and operation in cold- and hot-temperature extremes encountered; dust and moisture resistant.
 - b. High-impact, UV-stabilized fiberglass-reinforced polyester housing, high-impact acrylic lens.
 - c. Two, cool white, T 8HO lamps, and an electronic ballast.
 - 2. LED Luminaires:

- a. Suitable for wet locations and operation in cold- and hot-temperature extremes encountered; dust and moisture resistant.
 - b. High-impact, UV-stabilized fiberglass housing and acrylic lens.
 - c. Light Color: 5000 K.
 - d. Light Output: 4000 lumens.
 - e. Driver: 1 percent dimming.
 3. Application: Provide service light fixtures where indicated on Drawings.
 4. Application: Provide one service light fixture in each accessible section of air-handling units.
 5. Application: Provide one service light fixture in fan, coil filter sections of air-handling units.
- E. Toggle Switches for Service Light Fixtures:
1. Single-Pole Switches, 120/277 V, 20 A: Comply with UL 20 and FS W-S-896.
 2. Two-Pole Switches, 120/277 V, 20 A: Comply with UL 20 and FS W-S-896.
 3. Three-Way Switches, 120/277 V, 20 A: Comply with UL 20 and FS W-S-896.
 4. Four-Way Switches, 120/277 V, 20 A: Comply with UL 20 and FS W-S-896.
 5. Lighted Single-Pole Switches, 120/277 V, 20 A: Comply with NEMA WD 1, UL 20, and FS W-S-896.
 - a. Description: Handle illuminated when switch is on.
 6. Toggle Switch Box and Cover: Mount toggle switch in a cast-aluminum outlet box with cast-aluminum cover.
 7. Application: Factory install service light switches at locations indicated on Drawings.
 8. Application: Factory install a single service light switch to switch all service light fixtures from a single location.
 9. Application:
 - a. Factory install a service light switch for each service light fixture or group of service light fixtures accessible from a single access door adjacent to the access door.
 - b. Factory install switching configuration (single, three way, or four way) required to operate a single service light fixture or group of service light fixtures from any access door that opens to respective service light fixtures.
 10. Switches with Lighted Handles Applications: Lighted handle feature may be omitted where on/off status of internal lights can be viewed through an access door window.
- F. Receptacles:
1. Isolated-Ground Duplex Receptacles, 125 V, 20 A:
 - a. Description: Straight blade; equipment grounding contacts shall be connected only to green grounding screw terminal of the device and with inherent electrical isolation from mounting strap. Isolation shall be integral to receptacle construction and not dependent on removable parts. Two pole, three wire, and self-grounding.
 - b. Configuration: NEMA WD 6, Configuration 5-20R.
 - c. Standards: Comply with UL 498 and FS W-C-596.
 2. Duplex GFCI Receptacles, 125 V, 20 A:
 - a. Description: Integral GFCI with "Test" and "Reset" buttons and LED indicator light. Two pole, three wire, and self-grounding.
 - b. Configuration: NEMA WD 6, Configuration 5-20R.
 - c. Type: Non-feed through.
 - d. Standards: Comply with UL 498, UL 943 Class A, and FS W-C-596.
 3. Receptacle Box and Cover: Mount receptacle in a cast-aluminum outlet box with cast-aluminum cover.

4. Applications: Factory install a receptacle in a convenient and field-accessible location on air-handling unit exterior of casing near access doors accessing fans.

G. Power Supply to Fan Motors: As indicated on Drawings.

H. Power Supply to Fan Motors: Factory install a disconnect switch for each fan motor.

1. Locate in a convenient and field-accessible location on unit exterior.
2. Installation shall comply with NFPA 70.
3. Wire, Conduit, and Enclosures:
 - a. Minimum Conduit Size: 3/4 inch (20 mm).
 - b. Materials: Metal, corrosion resistant and constructed of stainless steel.
 - c. Motor Termination: Flexible conduit, NRTL listed, not to exceed 36 inches (900 mm) long.
 - d. Supports: Support conduits, boxes, and enclosures using corrosion-resistant fastening hardware constructed of stainless steel.
 - e. Wire:
 - 1) Copper, rated for 600 V, solid wire for size No. 10 AWG and smaller and stranded wire for larger sizes.
 - 2) Minimum Wire Size: No. 12 AWG.
 - 3) Each circuit shall have a ground wire.
 - 4) Install wire in conduit.
 - f. Boxes, Conduit Outlet Boxes, and Enclosures:
 - 1) Located on Exterior of Air-Handling Unit Casing: NEMA 250, Type 1.

I. Disconnect Switches:

1. Specification Grade; "Heavy Duty Type"; "quick-make," "quick-break" construction.
2. Three pole, fused.
3. 600 V rated.
4. Minimum Short-Circuit Current Rating: As required by electrical power distribution system, but not less than 65,000 A.
5. Enclosure: NEMA 250, Type 1.
6. Operating handle shall be of box-mounted type that directly drives switch mechanism.
7. Disconnect switch shall use a flange-operated visible blade that is close coupled to a vertical-lift-type handle that achieves a positive visible indication of disconnect with cover open or closed.
8. Disconnect switch shall have a defeatable, front-accessible, mechanical interlock to prevent opening of cover when switch is in "ON" position, and to prevent turning switch "ON" when the door is open.
9. Include a solid neutral as required by authorities having jurisdiction.
10. Disconnect switch shall have a ground lug for ground wire termination.
11. Operating handle shall be lockable in open position.
12. Horsepower rated.
13. Feed through or double lugged.

2.22 FACTORY-ASSEMBLED CONTROLS

A. General:

1. Air-handling unit manufacturer shall furnish and factory install control instruments, control power circuit, control transformers, power supplies, wiring, tubing, raceways, and control panels.

2. Provide for a single-point field connection to 277-V electrical power for all factory-installed controls. Terminate power connection with a toggle switch mounted in control panel.
 3. Control panel shall serve as field tie-in point for all electric damper actuators, and control instruments located within air-handling unit. Controls for control dampers, control valves, and instruments installed in ductwork and piping are not included as part of air-handling unit factory-installed controls.
 4. Control instruments shall be installed in accordance with manufacturer's written instructions.
 5. Control panel shall house flow, moisture, pressure and temperature transmitters, transformers, dc voltage power supplies, and wiring terminal strip.
 6. Carbon dioxide transmitters shall be mounted on air-handling unit casing exterior with sensor port exposed to the airstream.
 7. Factory install the following control instruments:
 - a. Flow station and flow transmitter for each fan.
 - b. Pressure sensors (inlet and discharge) and one combination pressure differential transmitter, switch, and controller for each filter bank installed in the air-handling unit.
 - c. Pressure sensor and combination pressure differential transmitter, switch, and controller at the inlet of each fan.
 - d. Pressure sensor and combination pressure differential transmitter, switch, and controller at the discharge of each fan.
 - e. Carbon dioxide sensor/transmitters at locations indicated on Drawings.
 - f. Moisture and temperature sensors and transmitters at locations indicated on Drawings.
 - g. Temperature switches at locations indicated on Drawings.
 - h. Control instruments indicated on Drawings.
- B. Wire and Cable:
1. Single Conductor Control Wiring above 24 V:
 - a. Wire size shall be at least No. 16 AWG.
 - b. Conductor shall be 7/24 soft annealed copper stranding with a 2- to 2-1/2-inch (50- to 65-mm) lay.
 - c. Conductor insulation shall be 600 V, Type THWN or Type THHN, 90 deg C in accordance with UL 83.
 - d. Conductor colors shall be black (hot), white (neutral), and green (ground).
 2. Single Twisted Shielded Instrumentation Cable above 24 V:
 - a. Wire size shall be minimum No. 18 AWG.
 - b. Conductors shall be a twisted, 7/24 soft annealed copper stranding with a 2- to 2-1/2-inch (50- to 65-mm) lay.
 - c. Conductor insulation shall have a Type THHN/THWN or Type TFN rating.
 - d. Shielding shall be 100 percent 0.35/0.5-mil aluminum/mylar tape, helically applied with 25 percent overlap, and aluminum side in with a No. 18 AWG-7/26 tinned copper drain wire.
 - e. Outer jacket insulation shall have a 600-V, 90 deg C rating and shall be Type TC cable.
 - f. For twisted pair, conductor colors shall be black and white. For twisted triad, conductor colors shall be black, red, and white.
 3. Single Twisted Shielded Instrumentation Cable 24 V and Lower:
 - a. Wire size shall be minimum No. 18 AWG.

- b. Conductors shall be a twisted, 7/24 soft annealed copper stranding with a 2- to 2-1/2-inch- (50- to 65-mm) lay.
 - c. Conductor insulation shall have a nominal 15-mil thickness, constructed from flame-retardant PVC.
 - d. Shielding shall be 100 percent 1.35-mil aluminum/polymer tape, helically applied with 25 percent overlap, and aluminum side in with a No. 20-22 AWG tinned copper drain wire.
 - e. Outer jacket insulation shall have a 300-V, 105 deg C rating and shall be Type PLTC cable.
 - f. For twisted pair, conductor colors shall be black and white. For twisted triad, conductor colors shall be black, red, and white.
4. Wire and Cable Installation:
- a. Comply with manufacturer's written instructions and NFPA 70.
 - b. Grounding shall be in accordance with IEEE C2. Ground wire shall be copper. Demonstrate ground resistance.
 - c. Wiring and cables shall be installed in conduit. Exposed wire and cable are unacceptable.
 - d. Wire and cables may be grouped in a common raceway, except do not group wires and cables from different voltages.
 - e. Install control wiring in a separate conduit from power wiring.
 - f. Wiring shall be continuous from terminal to terminal without splices.
 - g. Do not install low-voltage wire and cable closer than [12 inches (300 mm)] <Insert distance> from line voltage electrical power wire and cables. Provide an installation free of EMI.
 - h. Use insulated spade lugs for wiring connection to screw terminals.
 - i. Use shielded cable to transmitters.
 - j. Terminate wiring and cables within a control panel, within instrument housing, or in a junction box. Clamp the cable over the jacket, in the junction box. Individual conductors in the stripped section of cable shall be slack between clamping point and terminal block.
 - k. Terminate wire and cable in control panel with terminal blocks.
 - l. Identify each wire and cable on each end and at each terminal with a number-coded identification tag. Each wire and cable conductor shall have a unique tag.
 - m. Perform continuity and meager testing on wiring and cable.
- C. Pitot Tube Airflow Stations:
1. Fan Inlet Airflow Sensor (Piezometer Ring):
 - a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) ebm-papst Inc.; Instrumented Inlet Ring.
 - 2) Greenheck Fan Corporation; Sure-Aire.
 - 3) Twin City Fan & Blower; Piezometer Ring.
 - b. Source Limitations: Obtain sensors from single source from single manufacturer.
 - c. Provide fans with airflow measurement integral to fan inlet cones for continuously measurement of air volume flow rate.
 - d. Fan inlet airflow sensor shall contain multiple pressure sensor points strategically placed along the circumference of the inlet cone and internally connected to an averaging ring manifold located behind the inlet cone.
 - e. Sensor points shall neither protrude beyond the surface of the inlet cone nor be adversely affected by particle contamination present in the airstream.

- f. Sensor shall produce steady, non-pulsating signals to achieve accuracy within 5 percent of actual airflow.
 - g. Sensor shall be non-intrusive and not impact fan performance.
 - h. Product shall be a standard offering of fan manufacturer and include published literature with supporting test data to validate sensor performance.
- D. Flow Transmitters for Pitot Tube Sensors:
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Air Monitor Corporation; Veltron II.
 - 2. Source Limitations: Obtain sensors from single source from single manufacturer.
 - 3. Receives total and static pressure signals from a flow element, amplify, extract the square root, and scale the signal to produce a 4- to 20-mA dc output signal linear to airflow.
 - 4. Housed in NEMA 250, Type 1 enclosure.
 - 5. Assembly constructed so that shock, vibration, and pressures surges of up to 1 psig (6.9 kPa) will neither harm transmitter nor affect its accuracy.
 - 6. Provide transmitter with an automatic zeroing circuit capable of automatically readjusting transmitter zero at predetermined time intervals. Automatic zeroing circuit shall re-zero transmitter to within 0.1 percent of true zero.
 - 7. Performance:
 - a. Range: At least 20 percent below minimum airflow and 20 percent greater than design airflow.
 - b. Calibrated Span: Field adjustable, minus 40 percent of the range.
 - c. Accuracy: Within 0.10 percent of natural span.
 - d. Repeatability: Within 0.15 percent of calibrated span.
 - e. Linearity: Within 0.2 percent of calibrated span.
 - f. Hysteresis and Deadband (Combined): Less than 0.2 percent of calibrated span.
 - 8. Equip transmitter with an integral digital LED or LCD for continuous indication of airflow.
 - 9. Install in control panel.
- E. Control Transformers:
 - 1. Size each transformer for the total connected load, plus an additional 25 percent of the connected load.
 - 2. Each transformer shall be at least 100 VA.
 - 3. Provide transformer with both primary and secondary fuses.
- F. 25-V dc Power Supply:
 - 1. Plug-in style suitable for mating with a standard eight-pin octal socket.
 - 2. Enclose circuitry within a housing.
 - 3. Include line and load regulation to ensure a stable output. To protect both power supply and load, include power supply with an automatic current limiting circuit.
 - 4. Performance:
 - a. Output voltage nominally 25 V dc within 5 percent.
 - b. Output current up to 100 mA.
 - c. Input voltage nominally 120 V ac, 60 Hz.
 - d. Load regulation within 0.5 percent from 0- to 100-mA load.
 - e. Line regulation within 0.5 percent at a 100-mA load for a 10 percent line change.
 - f. Stability within 0.1 percent of rated volts for 24 hours after a 20-minute warmup.
- G. Instrument Identification:

1. Engraved tag bearing instrument identification.
 - a. Each tag identifying an instrument shall have a unique identification that does not match identification of a similar device.
 - b. Tag field instruments identified by equipment being controlled or monitored, followed by point identification used on I/O schematics.
 - c. Example: DDC-AHU-01.01; PDIT1.
 2. Letter size shall be minimum 1/4 inch (6 mm) high.
 3. Letter type shall be sans serif gothic bold style.
 4. Lettering and background color scheme shall be white letters on black background.
 5. Tag shall be engraved phenolic constructed of three layers of pressure rigid laminate. Top and bottom layers are color-coded, contrasting white center is exposed by engraving through outer layer. Engrave both sides. Material shall be stain proof, heat resistant, non-conductive, or non-corrosive.
 6. Tag shall be fastened to equipment/instrument with drive pins or attached with a stainless steel chain.
 7. Instruments furnished with identification tags provided by original manufacturer do not require an additional tag.
- H. Checkout Procedures:
1. Check instruments for proper location and accessibility.
 2. Check instruments for proper installation for direction of flow, elevation, orientation, and other applicable considerations.
 3. Damper Check-out: Verify that proper blade alignment, either parallel or opposed, has been provided.
- I. Calibration and Adjustment:
1. Calibrate every instrument.
 2. For each analog instrument, make a three-point test of calibration for both linearity and accuracy.
 3. Equipment and procedures used for calibration shall meet requirements of instrument manufacturer's written instructions. Test equipment used in calibration of instruments shall have an accuracy at least double that of instrument being calibrated.
 4. Calibrate each instrument in accordance with the accuracy outlined in instruction manual supplied for instrument by manufacturer.
 5. Control System Inputs and Outputs:
 - a. Check analog inputs using a precision voltage or current source at zero, 50, and 100 percent of span.
 - b. Check analog outputs using a milliamper meter at zero, 50, and 100 percent output.
 - c. Check digital inputs using a jumper wire.
 - d. Check digital outputs using an ohmmeter to test for contact making or breaking.
 - e. Check resistance temperature inputs at zero, 50, and 100 percent of span using a precision-resistant source.
 6. Flow: Set differential pressure flow transmitters for zero and 100 percent values with three-point calibration accomplished at 100, 50, and 90 percent of span.
 7. Gas: Calibrate gas transmitters at zero, 50, and 100 percent of span.
 8. Humidity: Calibrate relative humidity transmitters at zero, 50, and 100 percent of span.
 9. Pressure: Calibrate pressure transmitters at zero, 50, and 100 percent of span.
 10. Temperature: Calibrate resistance temperature transmitters at zero, 50, and 100 percent of span using a precision-resistant source.

11. Dampers: Stroke and adjust control dampers following the recommended procedure from manufacturer, such that damper is 100 percent open and closed.
12. Replace out-of-tolerance instruments failing the test.
13. Provide diagnostic and test instruments for calibration and adjustment.

2.23 HARDWARE

A. Screws:

1. For Galvanized-Steel Materials: Self-tapping, hex-head, 300 series stainless steel screws with a neoprene gasket encapsulated by a 300 series stainless steel washer.
2. For Aluminum and Stainless Steel Materials: Self-tapping, hex-head, 300 series stainless steel screws with a neoprene gasket encapsulated by a 300 series stainless steel washer.
3. Provide protective covers on exposed screws to prevent personnel injury.

B. Bolts, Nuts, and Washers:

1. For Joining Galvanized and Painted Carbon-Steel Materials: Hex-head, high-strength, 300 series stainless steel.
2. For Joining Aluminum and Stainless Steel Materials: Hex-head, high-strength, 300 series stainless steel.
3. Use washers and lock washers at each bolted connection.
4. Select bolt size and spacing sufficient for load and application.

2.24 WELDING

A. Welding Filler Metals: Comply with AWS welding codes for welding materials appropriate for thickness and chemical analysis of material being welded.

1. Use welding materials with corrosion properties equal to material being welded.

B. Use welders that are certified to weld at least twice the thickness of the material to be welded. Certification shall be within six months of work being performed.

C. Welds shall be continuous, full-penetration welds unless otherwise indicated. Intermittent welds, stitch welds, and tack welds are permitted only in specific applications indicated.

D. Use welders and welding procedures complying with the following:

1. Piping Systems: Section IX of the ASME Boiler and Pressure Vessel Code and Section V of ASME B31.1.
2. Structural Aluminum: AWS D1.2/D1.2M.
3. Structural Carbon Steel: AWS D1.1/D1.1M.
4. Structural Stainless Steel: AWS D1.6/D1.6M.
5. Sheetmetal: AWS D9.1/D9.1M.

2.25 CLEANLINESS REQUIREMENTS

A. General:

1. Provide equipment that has been manufactured, shipped, stored, and installed maintaining highest degree of cleanliness possible.
2. Owner Cleanliness Inspection: Air-handling unit(s) cleanliness is subject to Owner cleanliness inspection and must pass a white glove test before packaging for shipment.

B. During Manufacturing:

1. Clean materials to be free of mill grease, oxidation, dirt, dust, and other impurities before manufacturing and assembly.
2. Protect casing materials from contamination during manufacturing and assembly.
3. Use sealing materials that do not outgas.
4. Provide OEM components and equipment from their respective manufacturers free of grease, oxidation, and dirt. Store OEM components and equipment indoors. Cover and protect OEM components and equipment to maintain cleanliness. Follow OEM instructions for equipment storage.

C. After Manufacturing:

1. Before shipment, after unit is completely assembled, clean unit inside and out.
 - a. Vacuum entire inside to remove dirt, dust, and debris using HEPA-filtered vacuum equipment.
 - b. Purge hard to reach surfaces with dry, oil-free, compressed or bottled nitrogen.
 - c. Wipe down all surfaces, inside and out, with a residue-free cleaning agent.
2. Protect unit to maintain cleanliness.

D. Shipping:

1. Protect interior and exterior of air-handling unit from exposure to weather dirt, dust, and debris during shipment and rigging.
2. Cover openings with puncture-resistant durable coverings to ensure that cleanliness is maintained inside unit while providing an air- and watertight seal.

E. On-Site Storage:

1. If air-handling unit is to be stored before installation, Installer shall work closely with air-handling unit manufacturer for air-handling unit manufacturer to provide adequate protection at the factory to ensure that cleanliness for both unit interior and unit exterior is maintained. This protection shall remain in place until unit startup is performed.
2. For extended periods of storage, provide a means to rotate fan and motor assemblies on a periodic basis (as recommended by manufacturer) without compromising unit cleanliness.

2.26 ACCESSORIES

A. Tool Kit:

1. Manufacturer shall assemble a tool kit specially designed for use in servicing air-handling units furnished.
2. Include only special tools required to service air-handling unit components not readily available for purchase by Owner service personnel in performing routine maintenance.
3. Place tools in a lockable case with hinged cover.
4. Mark case cover with large and permanent text to indicate special purpose of tool kit, such as "Air-Handling Unit Tool Kit." Text size shall be at least 1 inch (25 mm) high.
5. Provide a list of each tool furnished and permanently attach the list to underside of case cover. Text size shall be at least 1 inch (25 mm) high.

2.27 SOURCE QUALITY CONTROL

A. AHRI Compliance:

1. AHRI 260 (I-P): Air-handling unit sound ratings shall be in accordance with AHRI 260 (I-P), "Sound Rating of Ducted Air Moving and Conditioning Equipment."

2. AHRI 261 (SI): Air-handling unit sound ratings shall be in accordance with AHRI 261 (SI), "Sound Rating of Ducted Air Moving and Conditioning Equipment."
 3. AHRI 410: Air-handling unit coils shall be rated in accordance with AHRI 410 and shall be listed by AHRI and labeled in accordance with AHRI.
- B. AMCA Compliance:
1. AMCA 201: Air-handling unit manufacturer shall evaluate fan's performance within the air-handling unit in accordance with AMCA 201, "Fans and Systems" and account for conditions within the air-handling unit that could be detrimental to fan's performance by adjusting the fan performance indicated on Drawings.
 2. AMCA 205 Certification: Air-handling unit fan's fan efficiency grade (FEG) shall be rated in accordance with AMCA 205, "Energy Efficiency Classifications for Fans" and shall bear the AMCA-certified FEG seal.
 3. AMCA 210 Certification: Air-handling unit fan's air performance shall be rated in accordance with AMCA 210, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating" and shall bear the AMCA-certified air ratings seal.
 4. AMCA 300: Air-handling unit fan's sound performance shall be rated in accordance with AMCA 300, "Reverberant Room Method for Sound Testing of Fans."
 5. AMCA 301 Certification: Air-handling unit fan's sound performance shall be rated in accordance with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data" and shall bear the AMCA-certified sound ratings seal.
 6. AMCA 500-D: Air-handling unit damper's performance shall be rated in accordance with AMCA 500-D, "Laboratory Methods of Testing Dampers for Rating" and shall bear the AMCA-certified air ratings seal.
- C. NFPA Compliance:
1. NFPA 70: Electrical components, devices, and accessories shall be listed and labeled by a qualified testing agency, and marked for intended location and application.
 2. NFPA 90A: Design, fabrication, and installation of air-handling units and components shall comply with NFPA 90A.
- D. UL Compliance:
1. UL 1598 Certification: Air-handling unit UVGI shall be NRTL listed and labeled in accordance with UL 1598, "Luminaires."
 2. UL 1995 Certification: Where indicated, air-handling unit components shall be NRTL listed and labeled in accordance with UL 1995, "Standard for Safety Heating and Cooling Equipment."
- 2.28 SOURCE QUALITY CONTROL - AIR-HANDLING UNIT FACTORY TESTS
- A. Witness of Testing: Allow Commissioning Agent access to place where air-handling units are being tested for witness testing.
1. Submit written notification at least 30 days in advance of testing.
 2. Schedule testing at mutually agreeable dates and times.
- B. Casing Leakage Test:
1. Perform a leak test for each assembled air-handling unit.
 2. Follow testing procedures in accordance with ASHRAE 111.
 3. Perform leak test before shipping first air-handling unit.

4. Test results shall indicate that units comply with leakage requirements indicated. Make changes to noncompliant air-handling units and retest until units comply with requirements.
 5. Prepare test reports in accordance with ASHRAE 111.
 6. Submit test reports indicating test location, documentation of test equipment used, test procedures, test results, test date and time, and full names of personnel performing tests and witnesses. If multiple tests are required to achieve compliance for a single air-handling unit, report shall include test date and time, test results, and full names of personnel performing tests and witnesses of each test with a detailed description and photographs of interim corrective measures made before each retest.
- C. Functional Run Test:
1. Run test each unit before shipment.
 2. Test and balance fans to comply with vibration requirements indicated.
 3. Energize each electrical device to ensure that it is operational.
 - a. Take meter readings for volts, amperes, and kVAr on each phase leg of each motor.
 - b. Take meter readings for volts, amperes, and kVAr on each single-phase power connection to field power.
 4. Exercise each damper to ensure proper operation.
 5. Exercise each access door to ensure proper fit.
 6. Exercise each valve to ensure proper operation.
 7. Submit a written report for each unit tested. Written report shall include, at a minimum, full name of each person witnessing test, detailed list of each unit component tested, condition observed, and corrective action required. Each line item shall have full name of the person doing the checkout and date and time the checkout was performed.
- D. Fan Vibration Test:
1. Perform a fan vibration test for each assembled air-handling unit.
 2. Energize each fan within the air-handling unit after air-handling unit final assembly and perform a vibration analysis with fan operating at design speed and at all speeds throughout the range from design to minimum speed.
 3. Three vibration measurements shall be taken for each bearing in horizontal, vertical, and axial directions. Vibration measurements shall be recorded and consist of vibration amplitude verses frequency with filter-in.
 4. Fan bearing measurement points shall be marked or scribed on bearings for permanent record.
 5. Test results shall indicate that units comply with vibration requirements indicated. Make changes to noncompliant air-handling units and retest until units comply with requirements.
 6. Submit test reports indicating test location, documentation of test equipment used, test procedures, test results, test date and time, and full names of personnel performing tests and witnesses. If multiple tests are required to achieve compliance for a single air-handling unit, report shall include test date and time, test results, and full names of personnel performing tests and witnesses of each test with a detailed description and photographs of interim corrective measures made before each retest.
- E. Airflow Capacity Performance Test:
1. Perform an airflow capacity performance test for each assembled air-handling unit.
 2. Operating conditions shall be verified by test in accordance with AMCA 210.

3. Test results shall indicate that units comply with design airflow requirements indicated. Make changes to noncompliant air-handling units and retest until units comply with requirements.
4. Submit test reports indicating test location, documentation of test equipment used, test procedures, test results, test date and time, and full names of personnel performing tests and witnesses. If multiple tests are required to achieve compliance for a single air-handling unit, report shall include test date and time, test results, and full names of personnel performing tests and witnesses of each test with a detailed description and photographs of interim corrective measures made before each retest.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine air-handling units before installation. Reject units with physical damage, and air-handling unit components that are wet, moisture damaged, or mold damaged.
- C. Examine roughing-in for the following before installation of air-handling units:
 1. Structural substrate mounting and anchorage to verify actual sizes, types, and locations.
 2. Piping systems to verify actual sizes, types, and locations of connections.
 3. Ductwork and plenums to verify actual sizes, types, and locations of connections.
 4. Electrical services and controls to verify actual sizes, types, and locations of connections.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Equipment Mounting: Install air-handling units at locations indicated on Drawings. Unless, otherwise indicated on Drawings, install air-handling units on concrete equipment bases.
 1. Units Mounted on Concrete Bases:
 - a. Install air-handling units on cast-in-place concrete equipment bases. Coordinate sizes and locations of concrete bases with actual equipment provided. Comply with requirements for equipment bases and foundations specified in Section 03 3000 "Cast-in-Place Concrete."
 - b. Level air-handling unit bases using aluminum or stainless steel shims compatible with air-handling unit base material.
 - c. Fill voids between air-handling unit bases and concrete bases using high-strength non-shrink grout.
 - d. Continuously seal between concrete bases and perimeter of air-handling unit bases with nonhardening sealant.
- B. Equipment Clearances and Access:
 1. Arrange installation of air-handling units to provide access space around air-handling units for service and maintenance and for removal and replacement of internal components.
 2. Provide clearance and access required by governing codes and NFPA 70.
 3. At a minimum, comply with requirements indicated on Drawings and air-handling unit manufacturer's written instructions.

3.3 PROTECTION DURING CONSTRUCTION

- A. Exterior Covers: Cover air-handling units during construction with sealed covers to protect air-handling unit casing and externally mounted components from physical damage, dirt, dust and debris, paint splatter, and any other construction materials.
 - 1. Minor physical damage, as determined by Owner, shall be repaired by air-handling unit factory service personnel to factory-finished condition.
 - 2. Replace air-handling units with damage that in any way compromises the performance indicated.
- B. Internal Access: Keep access doors locked to maximum extent possible and restrict access to only authorized personnel.
 - 1. Open access doors only during periods authorized work inside air-handling units is required.
 - 2. Coordinate and monitor work inside air-handling units on a shift basis. Lock access doors once work is complete or at the end of each shift.
 - 3. Immediately report unauthorized access and any observed damage to Owner.

3.4 DUCT CONNECTIONS

- A. Connect ducts and plenums to air-handling unit connections. Comply with requirements in Section 23 3113 "Metal Ducts."
- B. Connect ducts and plenums to air-handling unit connections with flexible connections. Comply with requirements in Section 23 3300 "Air Duct Accessories."
- C. Provide duct transitions required to make field connections to air-handling units.
- D. Arrange ducts and plenums to provide unobstructed access to inside of air-handling units.

3.5 PIPING CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to air-handling unit, provide unobstructed access to inside of air-handling units for service and maintenance.
- C. Connect piping to air-handling units with flexible connectors.
- D. Drain Pan Piping: Comply with applicable requirements in Section 23 2113 "Hydronic Piping."
 - 1. Make connections to air-handling unit connections with flanges or unions.
 - 2. Extend dedicated drain piping from each air-handling unit connection to nearest equipment or floor drain and arrange piping to maintain clear service aisle paths free of potential tripping hazards.
 - 3. Construct traps near air-handling unit connections to seal airflow from escaping within air-handling unit. Locate traps in a serviceable location that is away from access doors.
 - 4. Install threaded cleanouts at changes in direction.
 - 5. Secure drain piping to structure.

- E. Air-Handling Unit Floor Drains: Do not require installation of permanent drain piping.
- F. Chilled-and Hot-Water Coil Piping: Comply with applicable requirements in Section 23 2113 "Hydronic Piping" and Section 23 2116 "Hydronic Piping Specialties."
 - 1. Comply with requirements indicated on Drawings.
 - 2. Make connections to coils with a flange or union.
 - 3. Connect to each coil inlet with shutoff valve, test plug, pressure gauge and thermometer.
 - 4. Connect to each coil outlet with balancing valve, test plug, pressure gauge and thermometer flow meter and shutoff valve.
 - 5. Connect each coil drain connection with a drain valve, which is full size of drain connection. Connect drain pipe to drain valve with union, and extend drain pipe to terminate over floor drain.
 - 6. Connect each coil vent connection with automatic vent, which is full size of vent connection.
- G. Steam Humidifier Piping: Comply with applicable requirements in Section 23 2213 "Steam and Condensate Heating Piping" and Section 23 2216 "Steam and Condensate Heating Piping Specialties." Install gate valve and inlet strainer at supply connection of steam humidifiers and steam trap assemblies to condensate return connection.

3.6 ELECTRICAL CONNECTIONS

- A. Install field power to each air-handling unit electrical power connection. Coordinate with air-handling unit manufacturer and installers.
- B. Connect wiring in accordance with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Ground equipment in accordance with Section 26 0526 "Grounding and Bonding for Electrical Systems."
- D. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.
- E. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
 - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 26 0553 "Identification for Electrical Systems."
 - 2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.7 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring in accordance with Section 26 0523 "Control-Voltage Electrical Power Cables."
- C. Install nameplate for each control connection, indicating field control panel designation and I/O control designation feeding connection.

3.8 STARTUP SERVICE

- A. Engage an air-handling unit factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks in accordance with manufacturer's written instructions.
 - 2. Verify that shipping, blocking, and bracing are removed.
 - 3. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, controls, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.
 - 4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
 - 5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.
 - 6. Verify that face-and-bypass dampers provide full face flow.
 - 7. Verify that outdoor- and return-air mixing dampers open and close, and maintain minimum outdoor-air setting.
 - 8. Comb coil fins for parallel orientation.
 - 9. Verify that proper thermal-overload protection is installed for electric heaters.
 - 10. Install new, clean filters.
 - 11. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.
- B. Starting procedures for air-handling units include the following:
 - 1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace fan and motor pulleys as required to achieve design conditions.
 - 2. Measure and record motor electrical values for voltage and amperage.
 - 3. Manually operate dampers from fully closed to fully open position and record fan performance.

3.9 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Comply with requirements in Section 23 0593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.
- C. Before turning equipment over to Owner for use, adjust air-handling unit components that require further adjustment for proper operation. Consult air-handling unit manufacturer for instruction.
- D. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.
- E. Seasonal Adjustments: Make seasonal visits during warranty period to inspect and review operation of equipment. Make necessary adjustments for components observed to require adjustments for proper operation. Prepare and submit a report to Owner documenting each visit, observations, and any adjustments made.

3.10 CLEANING

- A. Cleaning Schedule: After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems, and after completing startup service, and immediately before Owner use, clean air-handling units to remove foreign material and construction dirt and dust.
- B. Unit Interior: Clean air-handling units internally to factory clean condition. Remove foreign material and construction debris, dirt, and dust.
 - 1. Vacuum clean with HEPA-filtered vacuum and then wipe down with cleaning solution.
 - 2. Clean casing floors, roofs, wall surfaces, access doors, and panels.
 - 3. Clean all internal components, such as, coils, dampers, filter frames, fans, and motors.
 - 4. Clean light fixtures and control devices.
- C. Unit Exterior: Clean external surfaces of air-handling units to factory clean condition. Remove foreign material and construction debris, dirt, and dust. Vacuum clean with HEPA-filtered vacuum and then wipe down all surfaces with cleaning solution.
- D. Cleaning Materials: Use cleaning materials and products recommended in writing by air-handling unit manufacturer.
- E. Acceptance: Following unit cleaning, submit a written request for review and Owner acceptance. Acceptance for cleaning of air-handling units with absolute filters must pass a white glove test.

3.11 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative.
 - 1. After field piping connections are complete, test hydronic coils and connections for leaks.
 - 2. Charge refrigerant coils with refrigerant and test for leaks.
 - 3. Field-Assembly Supervision: Instruct Installer and supervise field installation of first air-handling unit(s) shipped in multiple pieces for field assembly.
 - 4. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Field Casing Leakage Test:
 - 1. Perform leak testing of air-handling units that include field assembly of multiple sections. Air-handling units that are shipped and installed as a single piece do not require field testing.
 - 2. Leak test one air-handling unit(s) of each unique size and arrangement randomly selected by COTR.
 - 3. Follow procedures complying with ASHRAE 111.

4. Assembled air-handling units shall satisfy leakage criteria indicated. Modify air-handling units that fail to satisfy criteria and retest. For every air-handling unit that fails test, another air-handling unit shall be tested until all air-handling units tested pass leakage criteria on first attempt.
5. Submit a test report for each test indicating test equipment, procedures, results, date and time, and full name of personnel performing tests and witnesses.
6. Test report shall be in accordance with ASHRAE 111.
7. Witness Testing:
 - a. Provide written notification at least 30 business days in advance of testing.
 - b. Testing shall be conducted in presence of testing and balancing agent.
 - c. Other parties such as Architect, Commissioning Agent, and Owner shall be invited to witness testing with attendance being optional.

D. Air-handling unit or components will be considered defective if unit or components do not pass tests and inspections.

E. Prepare test and inspection reports.

3.12 OPERATION DURING CONSTRUCTION

A. Operation of air-handling units for temporary cooling, heating, and ventilation is not allowed without Owner authorization.

1. Submit written request for Owner approval by signature with detailed description of operating procedures to be followed including, but not limited to, the following:
 - a. Description of construction activities while units are operating.
 - b. Operation:
 - 1) Beginning and ending calendar dates.
 - 2) List each day during week.
 - 3) List start and stop time and hours for each day.
 - c. Startup procedures and shut-down procedures.
 - d. Provisions for routine monitoring of unit operation.
 - e. Provisions to prevent and protect against damage to equipment due to adverse operation such as, low temperature, high temperature, over pressure, fire, smoke, electrical over- and undervoltage, and current and electrical fault.
 - f. Provisions and safeguards for filtration to keep inside of units from getting dirty.
 - g. Record keeping.
2. If approved by Owner, units used for temporary cooling, heating, and ventilation during and before interior finish work is complete shall include an unconditional complete unit labor and parts warranty to extend at least two years after the warranty indicated expires.
3. Interior and exterior of air-handling units shall be cleaned to a factory-cleaned condition and clean condition must be accepted by Owner.

B. Filtration during Temporary Use:

1. Protect air-handling system ducts (exhaust air, outdoor air, and return air) with temporary filters installed and supported to prevent filter media from collapse and bypass of unfiltered air. Temporary media shall be installed at each inlet and shall have a published filtration efficiency of MERV 8 in accordance with ASHRAE 52.2.
2. Protect air-handling units with open inlets that are not ducted with temporary filters installed and supported to prevent filter media from collapse and bypass of unfiltered air. Temporary media shall be installed at each inlet and shall have a published filtration efficiency of MERV 8 in accordance with ASHRAE 52.2.

3. Do not operate air-handling units until both temporary and scheduled permanent air-handling unit particulate filters are in place. Temporary filters must be installed upstream of permanent filters while units are operating.
4. Replace temporary and permanent filters used during construction when dirty. After end of temporary use, replace permanent filters with new, clean filters before beginning testing, adjusting, and balancing.

- C. Comply with SMACNA 008, "IAQ Guidelines for Occupied Buildings under Construction," for procedures to protect HVAC system.

3.13 DEMONSTRATION

- A. Engage air-handling unit manufacturer factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.
- B. Training shall include, but not be limited to, procedures and schedules related to performance, safety, startup and shut down, troubleshooting, servicing, preventive maintenance, and how to obtain replacement parts.
 1. Access Doors: Adjustment, gasket removal and replacement, handle removal and replacement, and spare parts.
 2. Access Panels: Removal and replacement, adjustment, gasket removal and replacement, and spare parts.
 3. Coils: Cleaning, combing fins, draining, venting, removal, and replacement.
 4. Controls: Calibration, cleaning, operation, service, removal and replacement, and spare parts.
 5. Damper Assemblies: Cleaning, operation, service, removal and replacement, and spare parts.
 6. Drain Pans: Cleaning, removal, and replacement.
 7. Heat Wheels: Cleaning, operation, service, removal and replacement, and spare parts.
 8. Fan and Motor Assemblies: Cleaning, operation, removal and replacement, service, and spare parts.
 9. Filters: Operation, removal and replacement, frame gasket removal and replacement, clip removal and replacement, and spare parts.
 10. Humidifiers: Cleaning, operation, service, removal and replacement, and spare parts.
 11. UV-C Lamp Systems: Cleaning, operation, service, removal and replacement, and spare parts.
 12. Lights, Receptacles, and Switches: Cleaning, operation, service, removal and replacement, and spare parts.
- C. Instructor:
 1. Instructor shall be factory trained and certified by air-handling unit manufacturer with current training on equipment installed.
 2. Instructor's credentials shall be submitted for review by Owner before scheduling training.
 3. Instructor(s) primary job responsibility shall be Owner training.
 4. Instructor(s) shall have not less than three years of training experience with air-handling unit manufacturer and past training experience on at least three projects of comparable size and complexity.
- D. Schedule and Duration:
 1. Schedule training with Owner at least 20 business days before first training session.

2. Training shall occur before Owner occupancy.
 3. Training shall be held at mutually agreed date and time during normal business hours.
 4. Each training day shall not exceed eight hours of training. Daily training schedule shall allow time for a one -hour lunch period and 15 -minute break after every two hours of training.
 5. Perform not less than eight hours of training.
- E. Location: Owner to provide a suitable on-site location to host classroom training.
- F. Training Attendees: Assume three people.
- G. Training Attendance Records: For record purposes, document training attendees at start of each new training session. Record date, time, brief description of training covered during the session, attendee's name, signature, phone number, and e-mail address. Submit scanned copy of sign-in sheet to Owner for each training session.
- H. Training Format: Individual training modules to include classroom training followed by hands-on field demonstration and training.
- I. Training Materials: Provide training materials in electronic format to each attendee.
1. Include instructional videos showing general operation and maintenance that are coordinated with operation and maintenance manuals.
- J. Training Video Recording: Video record each classroom training session and submit an electronic copy to Owner before requesting Owner acceptance of training.
- K. Written Acceptance: Obtain Owner written acceptance that training is complete and requirements indicated have been satisfied.

END OF SECTION

SECTION 23 8216.11 - HYDRONIC AIR COILS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Hydronic air coils.
 - 2. Integral face-and-bypass hot-water coils.
- B. Related Requirements:
 - 1. Section 23 8216.12 "Steam Air Coils" for air coils using steam as the heating medium.
 - 2. Section 23 8216.13 "Refrigerant Air Coils" for air coils using refrigerants as the medium.
 - 3. Section 23 8216.14 "Electric-Resistance Air Coils" for electric air coils.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each air coil.
 - 2. Include rated capacities, operating characteristics, and pressure drops for each air coil.
- B. Sustainable Design Submittals:
 - 1. Product data showing compliance with ASHRAE 62.1.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, sections, and other details, or BIM model, drawn to scale, showing the items described in this Section and coordinated with all building trades.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air coils to include in operation and maintenance manuals.

1.6 FIELD CONDITIONS

- A. Altitude above Mean Sea Level: <Insert feet (m)>.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. ASHRAE 62.1 Compliance: Comply with applicable requirements in ASHRAE 62.1, Section 5, "Systems and Equipment," and Section 7, "Construction and Startup."

- B. Performance Ratings: Tested and rated in accordance with AHRI 410 and ASHRAE 33.
- C. Minimum Working-Pressure/Temperature Ratings: [200 psig (1380 kPa)/300 deg F (149 deg C)] **<Insert value and temperature>**.
- D. Select cooling coils for no moisture carryover at design conditions. Provide moisture eliminators on discharge face of cooling coil if necessary to eliminate moisture carryover.
- E. Hot-Water Coil Capacities and Characteristics:
1. Coil Face Dimensions:
 - a. Finned Length: **<Insert inches (mm)>**.
 - b. Finned Width: **<Insert inches (mm)>**.
 2. Number of Rows: **<Insert number>**.
 3. Coating: **<Insert manufacturer; product>**.
 4. Serpentine: **[Half] [Full]**.
 5. Integral Face-and-Bypass Coil: **[Yes] [No]**.
 6. Air Side:
 - a. Flow Rate: **<Insert cfm (L/s)>**.
 - b. Finned Area Face Velocity: **<Insert fpm (m/s)>**.
 - c. Static Pressure Drop: **<Insert inches wg (Pa)>**.
 - d. Total Capacity: **<Insert Btu/h (kW)>**.
 - e. Entering Temperature: **<Insert deg F (deg C)>**.
 - f. Leaving Temperature: **<Insert deg F (deg C)>**.
 7. Water Side:
 - a. Flow Rate: **<Insert gpm (L/s)>**.
 - b. Tube Velocity: **<Insert fpm (m/s)>**.
 - c. Glycol Type: **[Ethylene] [Propylene]**.
 - d. Aqueous Glycol Solution Concentration: **[None] <Insert percentage> [by weight] [by volume]**.
 - e. Pressure Drop: **<Insert feet (kPa)>**.
 - f. Entering Temperature: **<Insert deg F (deg C)>**.
 - g. Leaving Temperature: **<Insert deg F (deg C)>**.
- F. Chilled-Water Coil Capacities and Characteristics:
1. Coil Face Dimensions:
 - a. Finned Length: **<Insert inches (mm)>**.
 - b. Finned Width: **<Insert inches (mm)>**.
 2. Number of Rows: **<Insert number>**.
 3. Coating: **<Insert manufacturer; product>**.
 4. Serpentine: **[Half] [Full] [Double]**.
 5. Air Side:
 - a. Flow Rate: **<Insert cfm (L/s)>**.
 - b. Finned Area Face Velocity: **<Insert fpm (m/s)>**.
 - c. Static Pressure Drop: **<Insert inches wg (Pa)>**.
 - d. Total Capacity: **<Insert Btu/h (kW)>**.
 - e. Sensible Capacity: **<Insert Btu/h (kW)>**.
 - f. Entering Dry-Bulb Temperature: **<Insert deg F (deg C)>**.
 - g. Entering Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
 - h. Leaving Dry-Bulb Temperature: **<Insert deg F (deg C)>**.

- i. Leaving Wet-Bulb Temperature: <Insert deg F (deg C)>.
6. Water Side:
 - a. Flow Rate: <Insert gpm (L/s)>.
 - b. Tube Velocity: <Insert fpm (m/s)>.
 - c. Glycol Type: [Ethylene] [Propylene].
 - d. Aqueous Glycol Solution Concentration: [None] <Insert percentage> [by weight] [by volume].
 - e. Pressure Drop: <Insert feet (Pa)>.
 - f. Entering Temperature: <Insert deg F (deg C)>.
 - g. Leaving Temperature: <Insert deg F (deg C)>.

2.2 HYDRONIC AIR COILS

- A. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 1. Aerofin.
 2. Carrier Corporation; a unit of United Technologies Corp.
 3. Coil Company, LLC.
 4. Colmac Coil Manufacturing, Inc.
 5. Greenheck Fan Corporation.
 6. Modine Commercial and Industrial Solutions.
 7. RAE Coils; a division of RAE Corporation.
 8. Super Radiator Coils.
 9. Trane.
 10. USA Coil & Air.
 11. Insert manufacturer's name.
- B. Source Limitations: Obtain hydronic coils from single source from single manufacturer.
- C. Description: Coils constructed of staggered tubes mechanically expanded into continuous collars that are die-formed into the coil fins; self-venting; counterflow design of air to fluid.
- D. Tubes:
 1. Material: Copper aluminum carbon steel 90/10 cupronickel alloy stainless steel Insert material.
 2. Nominal Diameter: Minimum 1/2 inch (13 mm) 5/8 inch (16 mm) Insert nominal diameter before expanding, selected to provide performance indicated.
 3. Nominal Wall Thickness: As required by performance, minimum 0.020 inch (0.508 mm) 0.025 inch (0.635 mm) 0.035 inch (0.889 mm) 0.049 inch (1.245 mm) Insert dimension thick.
 4. Return Bends: 180-degree bends; material[, wall thickness,] and nominal diameter to match tubes.
 5. Fluid Velocity at Design Flow Rate:
 - a. Maximum: 6 fps (1.8 m/s) Insert velocity.
 - b. Minimum: 3 fps (0.9 ms) Insert velocity.
 6. Features: Cleanable Individually drainable.
- E. Fins:
 1. Type: Plate.
 2. Materials:
 - a. Aluminum: 0.0060 inch (0.15 mm) Insert dimension thick.

- b. <Insert fin material and thickness>.
 3. Spacing: Maximum 12 fins per inch (2.1 mm) Insert maximum fin spacing.
 4. Collars: Full collars for accurate fin spacing and maximum tube contact while leaving no surface of tube exposed.
 5. Configuration: Flat-face fins Wave-, corrugated-, or waffle-face fins Fin type as required by performance requirements Insert fin type.
 6. Fin and Tube Joint: Mechanical bond silver brazed.
- F. Headers:
 1. Material: Carbon steel Copper Insert material.
 2. Tube-to-Header Connections: Tube-to-header holes to intrude inward, so landed surface area is 3 times the core tube thickness, to provide enhanced-header-to-tube joint integrity. Evenly extend tubes within the ID of the header no more than 0.12 inch (3 mm).
 3. Header Top and Bottom Caps: End caps to be die-formed and installed on the ID of header, such that the landed surface area is 3 times the header wall thickness.
 4. Drains: Include low point of supply supply and return header with a NPS 1/2 (DN 13) Insert pipe size drain connection.
 5. Vents: Include high point of return supply and return header with a NPS 1/2 (DN 13) Insert pipe size vent connection.
 6. Supply and Return Connections: Copper Carbon steel Red brass pipe, threaded flanged, same end opposite ends of coil.
 7. Protect opening of supply, return, vent, and drain connections with a threaded cap to prevent entry of dirt into coil.
 8. Fluid Velocity at Design Flow Rate: Maximum of 6 fps (1.8 m/s) Insert velocity.
- G. Casings and Tube Sheets:
 1. Depth: Extend coil casing and tube sheets a minimum of 1/2 inch (13 mm) Insert dimension beyond face of fins on both entering and leaving sides.
 2. Materials:
 - a. Stainless steel, Type 304 Insert type, No. 2D finish, ASTM A240/A240M.
- H. Top and Bottom Casings:
 1. Flange face minimum of 1-1/2 inches (68 mm) Insert dimension; double-flange edge for rigidity and ease of removal with secondary flange face minimum of 1/2 inch (13 mm) Insert dimension.
 2. Thickness:
 - a. Coils with Fin Length of Up to 72 Inches (1800 mm) Insert dimension: Minimum of 16 gauge (1.6 mm) 14 gauge (2.0 mm) 12 gauge (2.8 mm) thick.
 - b. Coils with Fin Length Exceeding 72 Inches (1800 mm) Insert dimension: Minimum of 16 gauge (1.6 mm) 14 gauge (2.0 mm) 12 gauge (2.8 mm) thick.
- I. End Tube Sheets:
 1. Tube sheet holes rolled to prevent chaffing of tubes during thermal expansion and contraction.
 2. Flange face minimum of 1-1/2 inches (68 mm) Insert dimension.
 3. Thickness: Minimum of 16 gauge (1.6 mm) 14 gauge (2.0 mm) 12 gauge (2.8 mm) thick.
- J. Intermediate Tube Sheets:
 1. Tube sheet holes rolled to prevent chaffing of tubes during thermal expansion and contraction.

2. Space intermediate tube sheets a maximum of [48 inches (1200 mm)] **<Insert dimension>** o.c. and locate to provide equal spacing between tube sheet across coil tube length.
 3. Flange face minimum of 1/2 inch (13 mm) **Insert dimension**.
 4. Thickness: Minimum of 16 gauge (1.6 mm) **Insert thickness thick**.
- K. Holes: Include number, size, and location of holes in casing and end tube sheets required for coil installation.
- L. Hardware: Use hex-head bolts, nuts, and washers constructed of Type 304 Type 316 stainless steel.
- M. Nameplate: Aluminum or stainless steel nameplate with brass or stainless steel chain for each coil, with the following data engraved or embossed:
1. Manufacturer name, address, telephone number, and website address.
 2. Manufacturer model number.
 3. Serial number.
 4. Manufacturing date.
 5. Coil identification (indicated on Drawings).
 6. Coil fin length.
 7. Coil fin height.
 8. Coil weight with fluid/without fluid.
 9. Coil casing material and thickness.
 10. Coil fin material and thickness.
 11. Coil tube material and thickness.
 12. Coil header material and thickness.
 13. **<Insert requirements>**.
- N. Comply with Section 23 0546 "Coatings for HVAC" for corrosion-resistant coating. See Drawings for coils requiring a corrosion-resistant coating.
- O. Coating: None Corrosion resistant **Insert manufacturer; product name**.
- 2.3 HOT-WATER HEATING COILS WITH INTEGRAL FACE-AND-BYPASS DAMPERS
- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
1. DRS Marlo Coil; part of DRS Technologies, Inc.
 2. Wing, L. J.; A Mestek Company.
 3. **Insert manufacturer's name**.
- B. Source Limitations: Obtain integral face-and-bypass coils from single source from single manufacturer.
- C. Description: Hydronic coil with horizontal vertical tube arrangement[**as indicated on Drawings**] with integral face-and-bypass dampers and controls installed to control modulating dampers, to achieve discharge air temperature set point. Design includes alternating arrangement of active coil segments and dampers.
- D. Performance:

1. Each coil capable of maintaining constant discharge air temperature, regardless of variations in entering-air temperature with constant water flow through coil.
 2. Portioning of air across and around heating element to result in uniform temperature within 5 deg F (3 deg C) of average temperature when measured anywhere across a vertical plane located [24 inches (600 mm)] [36 inches (900 mm)] downstream of leaving face of coil.
- E. Casing: Galvanized steel stainless steel, minimum of 16 gauge (1.6 mm) thick.
- F. Fins: Rectangular shape, constructed of minimum 0.010-inch- (0.25-mm-) Insert dimension thick aluminum, with spacing of not closer than 12 fins per inch (2.1 mm) Insert fin spacing.
- G. Headers: Carbon steel copper, selected by manufacturer for flow, pressure, and temperature encountered; drain connections at low points, vent connections at high points, and supply and return connections located on discharge face of coil.
1. Insulation: Insulate headers with mineral-fiber insulation covered by a metal jacket.
 2. Supply and Return Connections:
 - a. Terminate ends with MNPT.
 - b. Connections NPS 2-1/2 (DN 65) Insert pipe size and larger shall have thread-on flanges. Select flange class, Class 150 or Class 300, for system pressure and temperature encountered.
- H. Tubes:
1. Materials: Copper 90/10 cupronickel carbon steel.
 2. Nominal Diameter: 5/8 inch (16 mm).
 3. Nominal Wall Thickness: As required by performance, minimum of 0.035 inch (0.9 mm) 0.049 inch (1.2 mm) thick.
- I. Dampers: Clamshell design arranged to modulate airflow across or around individual heating elements.
1. Material: Galvanized steel stainless steel, minimum of 16 gauge (1.6 mm) thick.
 2. Actuator: Face or side mounted; electric motor for proportional control, failing in last position.
- J. Brazing: High-temperature brazing alloy with not less than 5 percent silver when brazing like non-ferrous materials together; high-temperature brazing alloy with more than 30 percent silver when brazing ferrous to non-ferrous materials.
- K. Hardware: Use hex-head bolts, nuts, and washers constructed of zinc-plated carbon steel stainless steel.
- L. Nameplate: Aluminum or stainless steel nameplate with brass or stainless steel chain for each coil, with the following data engraved or embossed:
1. Manufacturer name, address, telephone number, and website address.
 2. Manufacturer model number.
 3. Serial number.
 4. Manufacturing date.
 5. Coil identification (indicated on Drawings).
 6. <Insert requirements>.

M. Comply with Section 23 0546 "Coatings for HVAC" for corrosion-resistant coating. See Drawings for coils requiring a corrosion-resistant coating.

N. Coating: None Corrosion resistant Insert manufacturer; product name.

2.4 MATERIALS

A. Aluminum: ASTM B209 (ASTM B209M).

B. Copper Tube: ASTM B75/ASTM 75M annealed temper or ASTM B280 drawn temper.

C. Copper Sheet: ASTM B152.

D. 90/10 Cupronickel Alloy: ASTM B122/ASTM B122M.

E. Steel:

1. Pipe Connections: ASTM A53/A53M.

F. Corrosion-Resistant Coating: Where indicated on Drawings, coat coils with a corrosion-resistant coating capable of withstanding a [3000] <Insert time>-hour salt-spray test in accordance with ASTM B117.

1. Standards:

a. ASTM B117 for salt spray.

b. ASTM D2794 for minimum impact resistance of 100 in. lb (11.3 N m).

c. ASTM D3359 for cross-hatch adhesion of 5B.

2. Application: [Immersion] [Spray].

3. Thickness: [1 mil (0.025 mm)] <Insert value>.

4. Gloss: Minimum gloss of 60 on a 60-degree meter.

2.5 SOURCE QUALITY CONTROL

A. Hydronic Coils: Factory tested with air while coil is completely submerged underwater to design pressure indicated, but not less than [300-psig (2070-kPa)] <Insert pressure> internal pressure.

B. Coils to display a tag with inspector's identification as proof of testing.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine ducts, plenums, and casings to receive air coils for compliance with requirements for installation tolerances and other conditions affecting coil performance.

B. Examine roughing-in for piping systems to verify actual locations of piping connections before coil installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install coils level and plumb.
- B. Install coils in metal ducts and casings constructed in accordance with SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."
- C. Install [**galvanized-steel**] [**stainless steel**] drain pan under each cooling coil.
 - 1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1.
 - 2. Construct drain pans to extend beyond coil length and width and to connect to condensate trap and drainage.
 - 3. Extend drain pan upstream and downstream from coil face.
 - 4. Extend drain pan under coil headers and exposed supply piping.
- D. Install moisture eliminators for cooling coils. Extend drain pan under moisture eliminator.
- E. Straighten bent fins on air coils.
- F. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

3.3 PIPING CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to coils to allow service and maintenance.
- C. Connect water piping with unions and shutoff valves to allow coils to be disconnected without draining piping. Control valves are specified in Section 23 0923.11 "Control Valves," and other piping specialties are specified in Section 23 2116 "Hydronic Piping Specialties."

END OF SECTION

SECTION 23 8219 - FAN COIL UNITS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Ductless fan coil units.
 - 2. Ducted fan coil units.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
- B. Sustainable Design Submittals:
 - 1. Product Data: For ventilation equipment, indicating compliance with ASHRAE 62.1, Section 5 - "Systems and Equipment."
 - 2. Ventilation: Product Data for ventilation equipment, indicating compliance with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings:
 - 1. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Include diagrams for power, signal, and control wiring.
- D. Samples for Initial Selection: For units with factory-applied color finishes.
- E. Samples for Verification: For each type of fan coil unit indicated.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - 1. Suspended ceiling components.
 - 2. Structural members to which fan coil units will be attached.
 - 3. Method of attaching hangers to building structure.
 - 4. Size and location of initial access modules for acoustical tile.
 - 5. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Sprinklers.
 - c. Access panels.
 - d. .
 - 6. Perimeter moldings.
- B. Field quality-control reports.
- C. Sample Warranty: For special warranty.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fan coil units to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Section 01 7823 "Operation and Maintenance Data," include the following:
 - a. Maintenance schedules and repair part lists for motors, coils, integral controls, and filters.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fan Coil Unit Filters: Furnish two spare filters for each filter installed.
 - 2. Fan Belts: Furnish one spare fan belts for each unit installed.

1.6 QUALITY ASSURANCE

- A. Comply with NFPA 70.
- B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.7 COORDINATION

- A. Coordinate layout and installation of fan coil units and suspension system components with other construction that penetrates or is supported by ceilings, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.
- B. Coordinate size and location of wall sleeves for outdoor-air intake.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of condensing units that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Compressor failure.
 - b. Condenser coil leak.
 - 2. Warranty Period: Five years from date of Substantial Completion.
 - 3. Warranty Period (Compressor Only): Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- B. Factory-packaged and -tested units rated according to AHRI 440, ASHRAE 33, and UL 1995.

2.2 DUCTLESS FAN COIL UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Carrier Global Corporation.
 2. Daikin Applied.
 3. ENVIRO-TEC; brand of Johnson Controls International plc, Building Solutions North America.
 4. Titus; brand of Johnson Controls International plc, Global Products.
 5. Trane Inc.
 6. YORK; brand of Johnson Controls International plc, Building Solutions North America.
- B. Coil Section Insulation:
1. 1/2-inch- (13-mm-) thick, coated glass fiber complying with ASTM C1071 and attached with adhesive complying with ASTM C916.
 2. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E84 by a qualified testing agency.
 3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- C. Drain Pans: Main and Auxiliary Stainless steel. Fabricate pans and drain connections to comply with ASHRAE 62.1. Drain pans shall be removable.
- D. Chassis: Galvanized steel where exposed to moisture, with baked-enamel finish and removable access panel. Floor-mounting units shall have leveling screws.
- E. Filters: Minimum arrestance and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2 and all addendums.
1. MERV Rating: 6 Insert number when tested according to ASHRAE 52.2.
 2. Pleated Cotton-Polyester Media: 90 percent arrestance and MERV 7.
- F. Hydronic Coils: Copper tube with corrosion-resistant coating, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm), rated for a minimum working pressure of 200 psig (1378 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain valve.
- G. Corrosion-Resistant Coating: Coat coils with a corrosion-resistant coating capable of withstanding a 3,000 -hour salt-spray test according to ASTM B117.
1. Standards:
 - a. ASTM B117 for salt spray.
 - b. ASTM D2794 for minimum impact resistance of 100 in-lb (11.3 N-m).
 - c. ASTM D3359 for cross hatch adhesion of 5B.
 2. Application: Immersion.
 3. Thickness: 1 mil.
 4. Gloss: Minimum gloss of 50 gloss units on a single angle 60 degree meter.
- H. Fan and Motor Board: Removable.

1. Fan: Forward curved, double width, centrifugal; directly connected to motor. Thermoplastic or painted-steel wheels, and aluminum, painted-steel, or galvanized-steel fan scrolls.
 2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Section 23 0500 "Common Work Results for HVAC."
 3. Wiring Termination: Connect motor to chassis wiring with plug connection.
- I. Factory, Hydronic Piping Package: ASTM B88, Type L (ASTM B88M, Type B) ASTM B88, Type M (ASTM B88M Type C) copper tube with wrought-copper fittings and brazed joints. Label piping to indicate service, inlet, and outlet.
1. Two-way, modulating control valve for chilled-water coil.
 2. Two-way, modulating control valve for hot-water heating coil.
 3. Hose Kits: Minimum 400-psig (2758-kPa) working pressure and operating temperatures from 33 to 211 deg F (0.5 to 99 deg C). Tag hose kits to equipment designations.
 - a. Length: 24 inches (600 mm) Insert dimension.
 - b. Minimum Diameter: Equal to fan coil unit connection size.
 4. Two-Piece Ball Valves: Bronze body with full-port, chrome-plated bronze ball; PTFE or TFE seats; and 600-psig (4140-kPa) minimum CWP rating and blowout-proof stem.
 5. Calibrated-Orifice Balancing Valves: Bronze body, ball type; 125-psig (860-kPa) working pressure, 250 deg F (121 deg C) maximum operating temperature; with calibrated orifice or venturi, connections for portable differential pressure meter with integral seals, threaded ends, and a memory stop to retain set position.
 6. Automatic Flow-Control Valve: Brass or ferrous-metal body; 300-psig (2070-kPa) working pressure at 250 deg F (121 deg C); with removable, corrosion-resistant, tamperproof, self-cleaning piston spring; factory set to maintain constant indicated flow with plus or minus 10 percent over differential pressure range of 2 to 80 psig (13.8 to 552 kPa).
 7. Y-Pattern Hydronic Strainers: Cast-iron body (ASTM A126, Class B); 125-psig (860-kPa) working pressure; with threaded connections, bolted cover, perforated stainless-steel basket, and bottom drain connection. Include minimum NPS 3/4 (DN 15) hose-end, full-port, ball-type blowdown valve in drain connection.
 8. Wrought-Copper Unions: ASME B16.22.
- J. Control devices and operational sequences are specified in Section 23 0923 "Direct Digital Control (DDC) System for HVAC" and Section 23 0993.11 "Sequence of Operations for HVAC DDC."
- K. Basic Unit Controls:
1. Control voltage transformer.
- L. Interface with DDC System for HVAC Requirements:
1. Interface relay for scheduled operation.
 2. Interface relay to provide indication of fault at the central workstation.
 3. Provide BACnet interface for central DDC system for HVAC workstation for the following functions:
 - a. Adjust set points.
 - b. Fan coil unit start, stop, and operating status.
 - c. Data inquiry, including supply- and room-air temperature and humidity.
 - d. Occupied and unoccupied schedules.
- M. Electrical Connection: Factory wire motors and controls for a single electrical connection.

2.3 DUCTED FAN COIL UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Carrier Global Corporation.
 2. Daikin Applied.
 3. Titus; brand of Johnson Controls International plc, Global Products.
 4. Trane Inc.
 5. YORK; brand of Johnson Controls International plc, Building Solutions North America.
- B. Fan Coil Unit Configurations: Row split.
1. Number of Cooling Coils: One with two-pipe system.
- C. Coil Section Insulation:
1. 1/2-inch- (13-mm-) thick, coated glass fiber complying with ASTM C1071 and attached with adhesive complying with ASTM C916.
 2. Insulate coil section according to Section 23 0716 "HVAC Equipment Insulation."
 3. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E84 by a qualified testing agency.
 4. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- D. Drain Pans: Stainless steel. Fabricate pans and drain connections to comply with ASHRAE 62.1.
- E. Chassis: Galvanized steel where exposed to moisture, with baked-enamel finish and removable access panel. Floor-mounting units shall have leveling screws.
- F. Cabinets: Steel with baked-enamel finish in manufacturer's standard paint color.
1. Supply-Air Plenum: Sheet metal plenum finished and insulated to match the chassis with mill-finish, aluminum, double-deflection grille.
- G. Filters: Minimum arrestance and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2 and all addendums.
- H. MERV Rating: 6 when tested according to ASHRAE 52.2.
1. Pleated Cotton-Polyester Media: 90 percent arrestance and MERV 7.
- I. Hydronic Coils: Copper tube with corrosion-resistant coating, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm), rated for a minimum working pressure of 200 psig (1378 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain.
- J. Corrosion-Resistant Coating: Coat coils and fan guards with a corrosion-resistant coating capable of withstanding a [3,000] <Insert time>-hour salt-spray test according to ASTM B117.
1. Standards:
 - a. ASTM B117 for salt spray.
 - b. ASTM D2794 for minimum impact resistance of 100 in-lb (11.3 N-m)
 - c. ASTM D3359 for cross hatch adhesion of 5B.

2. Application: Immersion.
 3. Thickness: 1 mil.
 4. Gloss: Minimum gloss of 50 gloss units on a single angle 60 degree meter.
- K. Direct-Driven Fans: Double width, forward curved, centrifugal; with permanently lubricated, multispeed motor resiliently mounted in the fan inlet. Aluminum or painted-steel wheels, and painted-steel or galvanized-steel fan scrolls.
1. Motors: Comply with requirements in Section 23 0500 "Common Work Results for HVAC."
- L. Belt-Driven Fans: Double width, forward curved, centrifugal; with permanently lubricated, single-speed motor installed on an adjustable fan base resiliently mounted in the cabinet. Aluminum or painted-steel wheels, and painted-steel or galvanized-steel fan scrolls.
1. Motors: Comply with requirements in Section 23 0500 "Common Work Results for HVAC."
- M. Factory, Hydronic Piping Package: ASTM B88, Type L (ASTM B88M, Type B) copper tube with wrought-copper fittings and brazed joints. Label piping to indicate service, inlet, and outlet.
1. Two-way, modulating control valve for chilled-water coil.
 2. Two-way, modulating control valve for heating coil.
 3. Hose Kits: Minimum 400-psig (2758-kPa) working pressure and operating temperatures from 33 to 211 deg F (0.5 to 99 deg C). Tag hose kits to equipment designations.
 - a. Length: 24 inches (600 mm).
 - b. Minimum Diameter: Equal to fan coil unit connection size.
 4. Two-Piece Ball Valves: Bronze body with full-port, chrome-plated bronze ball; PTFE or TFE seats; and 600-psig (4140-kPa) minimum CWP rating and blowout-proof stem.
 5. Calibrated-Orifice Balancing Valves: Bronze body, ball type; 125-psig (860-kPa) working pressure, 250 deg F (121 deg C) maximum operating temperature; with calibrated orifice or venturi, connections for portable differential pressure meter with integral seals, threaded ends, and a memory stop to retain set position.
 6. Automatic Flow-Control Valve: Brass or ferrous-metal body; 300-psig (2070-kPa) working pressure at 250 deg F (121 deg C); with removable, corrosion-resistant, tamperproof, self-cleaning piston spring; factory set to maintain constant indicated flow with plus or minus 10 percent over differential pressure range of 2 to 80 psig (13.8 to 552 kPa).
 7. Y-Pattern Hydronic Strainers: Cast-iron body (ASTM A126, Class B); 125-psig (860-kPa) working pressure; with threaded connections, bolted cover, perforated stainless-steel basket, and bottom drain connection. Include minimum NPS 3/4 (DN 15) hose-end, full-port, ball-type blowdown valve in drain connection.
 8. Wrought-Copper Unions: ASME B16.22.
- N. Remote condensing units are specified in Section 23 6200 "Packaged Compressor and Condenser Units."
- O. Control devices and operational sequence are specified in Section 23 0548 "Vibration and Seismic Controls for HVAC Piping and Equipment."
- P. Basic Unit Controls:
1. Control voltage transformer.
- Q. Interface with DDC System for HVAC Requirements:
1. Interface relay for scheduled operation.

2. Interface relay to provide indication of fault at the central workstation.
3. Provide BACnet interface for central DDC system for HVAC workstation for the following functions:
 - a. Adjust set points.
 - b. Fan coil unit start, stop, and operating status.
 - c. Data inquiry, including supply- and room-air temperature and humidity.
 - d. Occupied and unoccupied schedules.

R. Electrical Connection: Factory wire motors and controls for a single electrical connection.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, to receive fan coil units for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping and electrical connections to verify actual locations before fan coil unit installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF FAN COIL UNITS

- A. Install fan coil units level and plumb.
- B. Install fan coil units to comply with NFPA 90A.
- C. Suspend fan coil units from structure with elastomeric hangers. Vibration isolators are specified in Section 23 0548 "Vibration and Seismic Controls for HVAC Piping and Equipment."
- D. Verify locations of thermostats, humidistats, and other exposed control sensors with Drawings and room details before installation. Install devices 48 inches (1220 mm) above finished floor.
- E. Install new filters in each fan coil unit within two weeks after Substantial Completion.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Specific connection requirements are as follows:
 1. Install piping adjacent to machine to allow service and maintenance.
 2. Connect piping to fan coil unit factory hydronic piping package. Install piping package if shipped loose.
 3. Connect condensate drain to indirect waste.
 - a. Install condensate trap of adequate depth to seal against fan pressure. Install cleanouts in piping at changes of direction.
- B. Connect supply-air and return-air ducts to fan coil units with flexible duct connectors specified in Section 23 3300 "Air Duct Accessories." Comply with safety requirements in UL 1995 for duct connections.

- C. Ground equipment according to Section 26 0526 "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections:
 - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
 - 3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Adjust initial temperature and humidity set points.

3.6 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain fan coil units.

END OF SECTION

SECTION 23 8233 - CONVECTORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes convectors.

PART 2 - PRODUCTS

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive convectors for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for connections to verify actual locations before installation of convector.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install convectors level and plumb.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in [Section 23 2113 "Hydronic Piping" and Section 23 2116 "Hydronic Piping Specialties."] [Section 23 2213 "Steam and Condensate Heating Piping" and Section 23 2216 "Steam and Condensate Heating Piping Specialties."] Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect hot-water convectors and components to piping according to Section 23 2113 "Hydronic Piping" and Section 23 2116 "Hydronic Piping Specialties."
 - 1. Install shutoff valves on inlet and outlet, and balancing valve on outlet.
- C. Connect steam convectors and components to piping according to Section 23 2213 "Steam and Condensate Heating Piping" and Section 23 2216 "Steam and Condensate Heating Piping Specialties."
 - 1. Install shutoff valve on inlet; install strainer, steam trap, and shutoff valve on outlet.
- D. Install control valves as required by Section 23 0923.11 "Control Valves."
- E. Install piping adjacent to convectors to allow service and maintenance.

FOR REFERENCE ONLY

SECTION 23 8239.16 - PROPELLER UNIT HEATERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Propeller unit heaters with hot-water, steam, or electric-resistance heating coils.

1.2 DEFINITIONS

- A. CWP: Cold working pressure.
- B. PTFE: Polytetrafluoroethylene plastic.
- C. TFE: Tetrafluoroethylene plastic.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
- B. Sustainable Design Submittals:
 - 1. Product Data: For ventilation equipment, indicating compliance with ASHRAE 62.1, Section 5 - "Systems and Equipment."
 - 2. Ventilation: Product Data for ventilation equipment, indicating compliance with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings:
 - 1. Include plans, elevations, sections, and details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include location and size of each field connection.
 - 4. Include details of anchorages and attachments to structure and to supported equipment.
 - 5. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.
 - 6. Indicate location and arrangement of piping valves and specialties.
 - 7. Indicate location and arrangement of integral controls.
 - 8. Wiring Diagrams: Power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Suspended ceiling components.
 - 2. Structural members to which propeller unit heaters will be attached.
 - 3. Method of attaching hangers to building structure.
 - 4. Size and location of initial access modules for acoustical tile.
 - 5. Items penetrating finished ceiling, including the following:

- a. Lighting fixtures.
- b. Air outlets and inlets.
- c. Speakers.
- d. Sprinklers.
- e. Access panels.

B. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For propeller unit heaters to include in emergency, operation, and maintenance manuals.

PART 2 - PRODUCTS

2.1 PROPELLER UNIT HEATERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- 1. Airtherm; a Mestek company.
 - 2. CCI Thermal Technologies, Inc.
 - 3. Engineered Air.
 - 4. Rosemex Products.
 - 5. Trane.
- B. Heaters: Assembly including casing, coil, fan, and motor in horizontal discharge configuration with adjustable discharge louvers.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with UL 2021.
- E. Comply with UL 823.

2.2 PERFORMANCE REQUIREMENTS

- A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

2.3 HOUSINGS

- A. Finish: Manufacturer's standard baked enamel applied to factory-assembled and -tested propeller unit heaters before shipping.
- B. Airstream Surfaces: Surfaces in contact with the airstream comply with requirements in ASHRAE 62.1.

- C. Discharge Louver: Adjustable fin diffuser for horizontal units and conical diffuser for vertical units.

2.4 COILS

- A. General Coil Requirements: Test and rate hot-water propeller unit-heater coils in accordance with ASHRAE 33.
- B. Hot-Water Coil:
 - 1. Fluid : 30% Propylene Glycol.
 - 2. Copper tube, minimum 0.025-inch (0.635-mm) wall thickness, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm) and rated for a minimum working pressure of 200 psig (1380 kPa) and a maximum entering-water temperature of 325 deg F (163 deg C), with manual air vent. Test for leaks to 350 psig (2413 kPa) underwater.

2.5 FAN AND MOTOR

- A. Fan: Propeller type with aluminum wheel directly mounted on motor shaft in the fan venturi.
- B. Motor: Permanently lubricated, multispeed. Comply with requirements in Section 23 0500 "Common Work Results for HVAC."

2.6 CONTROLS

- A. Control Devices:
 - 1. Wall-mounted, variable fan-speed switch.
 - 2. Wall-mounted thermostat.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive propeller unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping and electrical connections to verify actual locations before unit-heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF PROPELLER UNIT HEATERS

- A. Install propeller unit heaters to comply with NFPA 90A.
- B. Install propeller unit heaters level and plumb.
- C. Suspend propeller unit heaters from structure with all-thread hanger rods and elastomeric hangers. Hanger rods and attachments to structure are specified in Section 23 0529 "Hangers and Supports for HVAC Piping and Equipment." Vibration hangers are specified in Section 23 0548.13 "Vibration Controls for HVAC."

- D. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.
- E. Locate all controls, valves, vents and access accessories outside animal enclosure.

3.3 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties. Piping installation requirements are specified in the following Sections:
 - 1. Section 23 2113 "Hydronic Piping."
 - 2. Section 23 2116 "Hydronic Piping Specialties."
- B. Install piping adjacent to machine to allow service and maintenance.
- C. Connect piping to propeller unit heater's factory, hot-water piping package. Install the piping package if shipped loose.
- D. Comply with safety requirements in UL 1995.
- E. Unless otherwise indicated, install union and gate or ball valve on supply-water connection and union and calibrated balancing valve on return-water connection of propeller unit heater. Hydronic specialties are specified in Section 23 2113 "Hydronic Piping" and Section 23 2116 "Hydronic Piping Specialties."
- F. Unless otherwise indicated, install union and gate or ball valve on steam-supply connection and union, strainer, steam trap, and gate or ball valve on condensate-return connection of propeller unit heater. Steam specialties are specified in Section 23 2216 "Steam and Condensate Piping Specialties."
- G. Ground equipment in accordance with Section 26 0526 "Grounding and Bonding for Electrical Systems."
- H. Connect wiring in accordance with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
 - 3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
- B. Units will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Adjust initial temperature set points.
- B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain propeller unit heaters.

END OF SECTION

FOR REFERENCE ONLY

SECTION 23 8316 - RADIANT-HEATING HYDRONIC PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes radiant-heating piping, including pipes, fittings, and piping specialties.

1.2 DEFINITIONS

- A. CWP: Cold working pressure.
- B. PEX: Crosslinked polyethylene.
- C. PEX/AL/PEX: Crosslinked polyethylene/aluminum/crosslinked polyethylene.
- D. PTFE: Polytetrafluoroethylene plastic.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data for piping, fittings, manifolds, specialties, and controls; include pressure and temperature ratings, oxygen-barrier performance, fire-performance characteristics, and water-flow and pressure-drop characteristics.
- B. Shop Drawings: Show piping layout and details drawn to scale, including valves, manifolds, controls, and support assemblies, and their attachments to building structure.
 - 1. Shop Drawing Scale: 1/4 inch = 1 foot (1:50).

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Suspended ceiling components.
 - 2. Structural members to which radiant-heating piping will be attached.
 - 3. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. <Insert item>.
 - 4. Perimeter moldings.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For radiant-heating piping valves and equipment to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 PEX PIPE AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. IPEX Inc.
 - 2. Slant/Fin Corporation.
 - 3. Uponor.
 - 4. Viega.
 - 5. Watts Radiant, inc.; a Watts Water Technologies company.
 - 6. Zurn Industries, LLC; Zurn Pex, Inc.
- B. Pipe Material: PEX plastic according to ASTM F 876.
- C. Oxygen Barrier: Limit oxygen diffusion through the tube to maximum 0.10 mg per cu. m/day at 104 deg F (40 deg C) according to DIN 4726.
- D. Fittings: ASTM F 1807, metal insert and copper crimp rings.
- E. Pressure/Temperature Rating: Minimum 100 psig (690 kPa) and 180 deg F (82 deg C).

2.2 PEX/AL/PEX PIPE AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. IPEX Inc.
 - 2. Uponor.
 - 3. Viega.
- B. Pipe Material: PEX plastic bonded to the inside and outside of a welded aluminum tube according to ASTM F 1281.
- C. Oxygen Barrier: Limit oxygen diffusion through the pipe to maximum 0.10 mg per cu. m/day at 104 deg F (40 deg C) according to DIN 4726.
- D. Fittings: ASTM F 1974, metal insert fittings with split ring and compression nut (compression joint) or metal insert fittings with copper crimp rings (crimp joint).
- E. Flame-Spread and Smoke-Developed Indices: 25 and 50 or less, respectively, tested according to ASTM E 84.
- F. Pressure/Temperature Rating: Minimum 100 psig (690 kPa) and 210 deg F (99 deg C).

2.3 DISTRIBUTION MANIFOLDS

- A. Manifold: Minimum NPS 1 (DN 25), stainless steel.
- B. Main Shutoff Valves:
 - 1. Factory installed on supply and return connections.

2. Three-piece body.
 3. Body: Brass or bronze.
 4. Ball: Chrome-plated bronze.
 5. Seals: PTFE.
 6. CWP Rating: 150 psig (1035 kPa).
 7. Maximum Operating Temperature: 225 deg F (107 deg C).
- C. Manual Air Vents:
1. Body: Bronze.
 2. Internal Parts: Nonferrous.
 3. Operator: Key furnished with valve, or screwdriver bit.
 4. Inlet Connection: NPS 1/2 (DN 15).
 5. Discharge Connection: NPS 1/8 (DN 6).
 6. CWP Rating: 150 psig (1035 kPa).
 7. Maximum Operating Temperature: 225 deg F (107 deg C).
- D. Balancing Valves:
1. Body: Plastic or bronze, ball or plug, or globe cartridge type.
 2. Ball or Plug: Brass or stainless steel.
 3. Globe Cartridge and Washer: Brass with EPDM composition washer.
 4. Seat: PTFE.
 5. Visual Flow Indicator: Flowmeter with visible indication in a clear plastic cap at top of valve.
 6. Differential Pressure Gage Connections: Integral seals for portable meter to measure loss across calibrated orifice.
 7. Handle Style: Lever or knob, with memory stop to retain set position if used for shutoff.
 8. CWP Rating: Minimum 125 psig (860 kPa).
 9. Maximum Operating Temperature: 250 deg F (121 deg C).
- E. Zone Control Valves:
1. Body: Plastic or bronze, ball or plug, or globe cartridge type.
 2. Ball or Plug: Brass or stainless steel.
 3. Globe Cartridge and Washer: Brass with EPDM composition washer.
 4. Seat: PTFE.
 5. Actuator: Replaceable electric motor.
 6. CWP Rating: Minimum 125 psig (860 kPa).
 7. Maximum Operating Temperature: 250 deg F (121 deg C).
- F. Thermometers:
1. Mount on supply and return connections.
 2. Case: Dry type, metal or plastic, 2-inch (50-mm) diameter.
 3. Element: Bourdon tube or other type of pressure element.
 4. Movement: Mechanical, connecting element and pointer.
 5. Dial: Satin-faced, nonreflective aluminum with permanently etched scale markings.
 6. Pointer: Black metal.
 7. Window: Plastic.
 8. Connector: Rigid, back type.
 9. Thermal System: Liquid- or mercury-filled bulb in copper-plated steel, aluminum, or brass stem.
 10. Accuracy: Plus or minus 1 percent of range or plus or minus 1 scale division to maximum of 1.5 percent of range.

- G. Mounting Brackets: Copper, or plastic- or copper-clad steel, where in contact with manifold.

2.4 PIPING SPECIALTIES

A. Cable Ties:

1. Fungus-inert, self-extinguishing, one-piece, self-locking, Type 6/6 nylon cable ties.
2. Minimum Width: 1/8 inch (3 mm).
3. Tensile Strength: 20 lb (9 kg), minimum.
4. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).

B. Floor Mounting Staples:

1. Steel, with corrosion-resistant coating and smooth finish without sharp edges.
2. Minimum Thickness: 3/32 inch (2.4 mm).
3. Width: Minimum, wider than tubing.

C. Floor Mounting Clamps:

1. Two bolts, steel, with corrosion-resistant coating and smooth finish without sharp edges.
2. Minimum Thickness: 3/32 inch (2.4 mm).
3. Width: Minimum, wider than tubing.

D. Floor Mounting Tracks:

1. Aluminum or plastic channel track with smooth finish and no sharp edges.
2. Minimum Thickness: 1/16 inch (1.6 mm).
3. Slot Width: Snap fit to hold tubing.
4. Slot Spacing: 2-inch (50-mm) intervals.

E. Channeled Subfloor:

1. Plywood, APA-rated subfloor panel, composed of premium, tongue-and-groove, seven-layer, Douglas fir structural subfloor panels.
2. Particleboard manufactured to comply with Federal Housing Authority standards of less than 0.3-ppm formaldehyde.
3. Clad panel with minimum 0.025-inch- (0.635-mm-) thick aluminum recessed in the grooves sized to maintain contact with radiant piping.

F. Modular Interlocking Blocks:

1. Polypropylene snap-together blocks with grooves to support piping.
2. Galvanized sheet metal or aluminum emission plates.
3. Natural mineralboard cover panel.

G. Heat-Emission Plates:

1. Formed aluminum suitable for radiant-heating piping.
2. Minimum Thickness: 1/16 inch (1.6 mm).
3. Slot Width: Snap fit to maintain pressure fit on tubing.

2.5 CONTROLS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Danfoss Inc.
2. Honeywell International Inc.

3. IPEX Inc.
4. Slant/Fin Corporation.
5. tekmar Control Systems, Ltd.
6. Uponor.
7. Viega.
8. Watts Radiant, inc.; a Watts Water Technologies company.
9. Zurn Industries, LLC; Zurn Pex, Inc.

B. Heated-Panel Thermostat:

1. Remote bulb unit with adjustable temperature range from 50 to 90 deg F (10 to 32 deg C).
2. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected pump or zone control valve.
3. Remote bulb on capillary tube, resistance temperature device, or thermistor for directly sensing radiant-panel temperature.
4. Stop pump or close zone control valves if heated-panel thermostat setting is exceeded.
5. Corrosion-resistant, waterproof control enclosure.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and substrates to receive radiant-heating piping for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 1. Ensure that surfaces and pipes in contact with radiant-heating piping are free of burrs and sharp protrusions.
 2. Ensure that surfaces and substrates are level and plumb.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

- A. Install the following types of radiant-heating piping for the applications described:
 1. Piping in Interior Reinforced-Concrete Floors: PEX.
 2. Piping in Level Fill Concrete Floors (Not Reinforced): PEX.

3.3 INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings or coordination drawings.
- B. Install radiant-heating piping continuous from the manifold through the heated panel and back to the manifold without piping joints in heated panels.
- C. Connect radiant piping to manifold in a reverse-return arrangement.
- D. Do not bend pipes in radii smaller than manufacturer's minimum bend radius dimensions.

- E. Install manifolds in accessible locations, or install access panels to provide maintenance access as required in Section 08 3113 "Access Doors and Frames."
- F. See Section 23 2113 "Hydronic Piping" for pipes and connections to hydronic systems and for glycol-solution fill requirements.
- G. Fire- and Smoke-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials according to Section 07 8413 "Penetration Firestopping."
- H. Piping in Interior Reinforced-Concrete Floors:
 - 1. Secure piping in concrete floors by attaching pipes to reinforcement using cable ties.
 - 2. Space cable ties a maximum of 18 inches (457 mm) o.c. and at center of turns or bends.
 - 3. Maintain 2-inch (50-mm) minimum cover.
 - 4. Install a sleeve of 3/8-inch- (9.5-mm-) thick, foam-type insulation or PE pipe around tubing and extending for a minimum of 10 inches (250 mm) on each side of slab joints to protect the tubing passing through expansion or control joints. Anchor sleeve to slab form at control joints to provide maximum clearance for saw cut.
 - 5. Maintain minimum 40-psig (275-kPa) pressure in piping during concrete placement and continue for 24 hours after placement.
- I. Piping in Level Fill Concrete Floors (Not Reinforced):
 - 1. Secure piping in concrete floors by attaching pipes to subfloor using tracks, clamps, or staples.
 - 2. Space tracks, clamps, or staples a maximum of 18 inches (457 mm) o.c. and at center of turns or bends.
 - 3. Maintain 3/4-inch (19-mm) minimum cover.
 - 4. Install a sleeve of 3/8-inch- (9.5-mm-) thick, foam-type insulation or PE pipe around tubing and extending for a minimum of 10 inches (250 mm) on each side of slab joints to protect the tubing passing through expansion or control joints. Anchor sleeve to slab form at control joints to provide maximum clearance for saw cut.
 - 5. Maintain minimum 40-psig (275-kPa) pressure in piping during the concrete pour and continue for 24 hours during curing.
- J. Revise locations and elevations from those indicated as required to suit field conditions and ensure integrity of piping and as approved by Architect.
- K. After system balancing has been completed, mark balancing valves to permanently indicate final position.
- L. Perform the following adjustments before operating the system:
 - 1. Open valves to fully open position.
 - 2. Check operation of automatic valves.
 - 3. Set temperature controls so all zones call for full flow.
 - 4. Purge air from piping.
- M. After concrete or plaster heating panel has cured as recommended by concrete or plaster supplier, operate radiant-heating system as follows:

1. Start system heating at a maximum of 10 deg F (6 deg C) above the ambient radiant-panel temperature and increase 10 deg F (6 deg C) each following day until design temperature is achieved.
2. For freeze protection, operate at a minimum of 60 deg F (16 deg C) supply-water temperature.

3.4 FIELD QUALITY CONTROL

- A. Prepare radiant-heating piping for testing as follows:
 1. Open all isolation valves and close bypass valves.
 2. Open and verify operation of zone control valves.
 3. Flush with clean water and clean strainers.
- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 1. Leak Test: After installation, charge system and test for leaks. Subject piping to hydrostatic test pressure that is not less than 1.5 times the design pressure but not more than 100 psig (690 kPa). Repair leaks and retest until no leaks exist.
 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Radiant-heating piping will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.
- E. Protect hydronic piping system from damage during construction.

END OF SECTION

SECTION 23 8413 - HUMIDIFIERS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following humidifiers:
 - 1. Self-contained.

1.2 DEFINITION

- A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

1.3 COORDINATION

- A. Coordinate location and installation of humidifiers with manifolds in ducts and air-handling units or occupied space. Revise locations and elevations to suit field conditions and to ensure proper humidifier operation.

PART 2 - PRODUCTS

2.1 SELF-CONTAINED HUMIDIFIERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Armstrong International, Inc.
 - 2. DRI-STEEM Humidifier Company.
 - 3. Carel USA, LLC.
 - 4. Carnes Co., Inc.
 - 5. Herrmidifier.
 - 6. Hygromatik; Spirax Sarco, Inc.
 - 7. Neptronic.
 - 8. Nortec Industries Inc.
- B. Electric-Resistance Heater Container: Cleanable, ASTM A 666, Type 316 stainless steel. Comply with UL 499.
- C. Electrode Cylinder: Replaceable plastic assembly with disposable ionic bed inserts. Comply with UL 499.
- D. Manifold: Stainless-steel tube with integral fan to discharge vapor directly into occupied space.
- E. Manifold: ASTM A 666, Type 316 stainless-steel tube extending across entire width of duct or plenum and equipped with mounting brackets on ends.
- F. Cabinet: Sheet metal enclosure for housing heater cylinder, electrical wiring, components, controls, and control panel. Enclosure shall include baked-enamel finish, hinged or removable access door, and threaded outlet in bottom of cabinet for drain piping.

- G. Control Panel:
 - 1. Factory-wired disconnect switch.
 - 2. Liquid-crystal display.
 - 3. Programmable keyboard.
 - 4. Set-point adjustment.
 - 5. Warning signal indicating end of replaceable cylinder[or ionic bed insert] life.
 - 6. Low-voltage, control circuit.
 - 7. Diagnostic, maintenance, alarm, and status features.
 - 8. High-water float to prevent overfilling.
- H. Controls:
 - 1. Microprocessor-based control system for modulating or cycling control, and start/stop and status monitoring for interface to central HVAC instrumentation and controls.
 - 2. Solenoid-fill and automatic drain valves to maintain water level and temper hot drain water.
 - 3. Field-adjustable timer to control drain cycle for flush duration and interval.
 - 4. Controls shall drain tanks if no demand for humidification for more than 72 hours.
 - 5. Float-type level controls.
- I. Accessories:
 - 1. Humidistat: [Wall] [Return-duct]-mounting, solid-state, electronic-sensor controller capable of full modulation or cycling control.
 - 2. Duct-mounting, high-limit humidistat.
 - 3. Airflow switch for preventing humidifier operation without airflow.
 - 4. Condensate cooler.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine ducts, air-handling units, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before humidifier installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install humidifiers with required clearance for service and maintenance. Maintain path, downstream from humidifiers, clear of obstructions as required by ASHRAE 62.1.
- B. Seal humidifier manifold duct or plenum penetrations with flange.
- C. Install humidifier manifolds in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."
- D. Install stainless-steel drain pan under each manifold mounted in duct.

1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1.
2. Connect to condensate trap and drainage piping.
3. Extend drain pan upstream and downstream from manifold a minimum distance recommended by manufacturer but not less than required by ASHRAE 62.1.

E. Equipment Mounting:

1. Comply with requirements for vibration isolation devices specified in Section 23 0548.13 "Vibration Controls for HVAC."

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
 1. Install piping adjacent to humidifiers to allow service and maintenance.
 2. Install shutoff valve, strainer, backflow preventer, and union in humidifier makeup line.
- B. Install electrical devices and piping specialties furnished by manufacturer but not factory mounted.
- C. Ground equipment according to Section 26 0526 "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace malfunctioning units and retest as specified above.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain humidifiers. Refer to Section 01 7900 "Demonstration and Training."

END OF SECTION

SECTION 26 0519 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.1 ACTION SUBMITTALS

- A. Product Schedule: Indicate type, use, location, and termination locations.

1.2 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **testing agency**.
- B. Field quality-control reports.

1.3 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Member company of NETA.
 - 1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.
- B. Standards:
 - 1. Products listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
 - 2. RoHS compliant.
 - 3. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide"

PART 2 - PRODUCTS

2.1 COPPER BUILDING WIRE

- A. Description: Flexible, insulated and uninsulated, drawn copper current-carrying conductor with an overall insulation layer or jacket, or both, rated 600 V or less.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Alpha Wire Company.
 - 2. American Bare Conductor.
 - 3. Belden Inc.
 - 4. Cerro Wire LLC.
 - 5. Encore Wire Corporation.
 - 6. General Cable Technologies Corporation.
 - 7. Okonite Company (The).
 - 8. Service Wire Co.
 - 9. Southwire Company.
 - 10. WESCO.
- C. Conductors: Copper, complying with ASTM B 3 for bare annealed copper and with ASTM B 8 and ASTM B 496 for stranded conductors.
- D. Conductor Insulation:

1. Refer to Part 3 for conductor insulation application. Comply with UL Standard appropriate for cable insulation.

2.2 MINERAL-INSULATED CABLE, TYPE MI

- A. Description: Solid copper conductors encased in compressed metal oxide with an outer metallic sheath, rated 600 V or less.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. nVent Pyrotenax.
- C. Standards:
 1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
 2. UL 2196 for fire resistance.
- D. Conductors: Copper, complying with ASTM B 3 for bare annealed copper.
- E. Insulation: Compressed magnesium oxide, minimum 55 mils for 600 volt power and control cables; minimum 23 mils for 300 volt twisted pair cables.
- F. Sheath: Copper, continuous and seamless, liquid- and gas-tight.

2.3 TRAY CABLE, TYPE TC FOR VFD OUTPUT CIRCUITS

- A. Description: A factory assembly of insulated current-carrying conductors with or without an equipment grounding conductor in a nonmetallic jacket.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Alpha Wire Company
 2. Belden Inc.
 3. Encore Wire Corporation.
 4. General Cable Technologies Corporation.
 5. Okonite Company (The).
 6. Service Wire Co.
 7. Southwire Company.
 8. WESCO.
- C. Standards:
 1. RoHS compliant.
 2. Comply with UL 1277.
 3. Comply with ICEA S-95-658/NEMA WC 70 for Type TC cables used for power distribution.
- D. Conductors: Copper, complying with ASTM B 3 for bare annealed copper and with ASTM B 8 for stranded conductors.
- E. Ground Conductor: Three stranded bare copper ground wires.

- F. Conductor Insulation: Type XHHW-2 or RHW-2. Comply with UL 44.
- G. Shield: Copper tape shield with a minimum of 50% overlap.

2.4 CONNECTORS AND SPLICES

- A. Description: Factory-fabricated connectors, splices, and lugs of size, ampacity rating, material, type, and class for application and service indicated; listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. 3M Electrical Products.
 - 2. AFC Cable Systems; a part of Atkore International.
 - 3. Gardner Bender.
 - 4. Hubbell Power Systems, Inc.
 - 5. Ideal Industries, Inc.
 - 6. ILSCO.
 - 7. NSi Industries LLC.
 - 8. O-Z/Gedney; a brand of Emerson Industrial Automation.
 - 9. Service Wire Co.
 - 10. TE Connectivity Ltd.
 - 11. Thomas & Betts Corporation; A Member of the ABB Group.
- C. Jacketed Cable Connectors: For steel and aluminum jacketed cables, zinc die-cast with set screws, designed to connect conductors specified in this Section.
- D. Lugs: One piece, seamless, designed to terminate conductors specified in this Section.
 - 1. Material: Bronze or matching conductor material.

PART 3 - EXECUTION

3.1 CONDUCTOR MATERIAL APPLICATIONS

- A. Feeders: Copper; solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
- B. Branch Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
- C. VFC Output Circuits Cable: Extra-flexible stranded for all sizes.
- D. Power-Limited Fire Alarm and Control: Solid for No. 12 AWG and smaller.
- E. Isolated Power System Secondary Conductor Type: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
- F. Feeders: Type THHN/THWN-2 or XHHW-2, single conductors in raceway.
- G. Exposed Branch Circuits, Including in Crawlspace: Type THHN/THWN-2, single conductors in raceway .

- H. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN/THWN-2, single conductors in raceway .
- I. Branch Circuits Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN/THWN-2 or XHHW-2, single conductors in raceway .
- J. Branch Circuits Installed below Raised Flooring: Type THHN/THWN-2, single conductors in raceway .
- K. Feeders and Branch Circuits Installed on Rooftops: Type XHHW-2, single conductors in raceway.
- L. Emergency Power System Branch Circuits: Type THHN-2/THWN-2, single conductors in raceway.
- M. Cord Drops and Portable Appliance Connections: Type SO, hard service cord with stainless-steel, wire-mesh, strain relief device at terminations to suit application.
- N. VFD Output Circuits: Type TC-ER cable with tape shield.
- O. Smithsonian Design Standard: The use of Metal Clad (MC) cable for power and lighting branch circuits will be reviewed with SI for specific project requirements. The basis of design will include branch circuits run in Electrical Metallic Tubing (EMT) conduit, with a 1.8m (6ft) maximum whip length from junction box to lighting fixture position. MC cable for overall branch circuit length is not permitted.
- P. Smithsonian Design Standard: Wet Locations: Type XHHW-2, single conductors in raceway.

3.2 INSTALLATION OF CONDUCTORS AND CABLES

- A. Conceal cables in finished walls, ceilings, and floors unless otherwise indicated.
- B. Complete raceway installation between conductor and cable termination points according to Section 26 0533 "Raceways and Boxes for Electrical Systems" prior to pulling conductors and cables.
- C. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
- D. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.
- E. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.
- F. Support cables according to Section 26 0529 "Hangers and Supports for Electrical Systems."
- G. Install cable per manufacturer's recommendations.

3.3 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.
- B. Make splices, terminations, and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.
- C. Wiring at Outlets: Install conductor at each outlet, with at least 6 inches (150 mm).

3.4 IDENTIFICATION

- A. Identify and color-code conductors and cables according to Section 26 0553 "Identification for Electrical Systems."
- B. Identify each spare conductor at each end with identity number and location of other end of conductor, and identify as spare conductor.

3.5 FIRESTOPPING

- A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to Section 07 8413 "Penetration Firestopping."

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Cables will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports to record the following:
 - 1. Procedures used.
 - 2. Results that comply with requirements.
 - 3. Results that do not comply with requirements, and corrective action taken to achieve compliance with requirements.

END OF SECTION

SECTION 26 0523 - CONTROL-VOLTAGE ELECTRICAL POWER CABLES

PART 1 - GENERAL

1.1 DEFINITIONS

- A. EMI: Electromagnetic interference.
- B. Plenum: A space forming part of the air distribution system to which one or more air ducts are connected. An air duct is a passageway, other than a plenum, for transporting air to or from heating, ventilating, or air-conditioning equipment.
- C. RCDD: Registered Communications Distribution Designer.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 PERFORMANCE REQUIREMENTS

- A. Flame Travel and Smoke Density in Plenums: As determined by testing identical products according to NFPA 262 by a qualified testing agency. Identify products for installation in plenums with appropriate markings of applicable testing agency.
 - 1. Flame Travel Distance: 60 inches (1520 mm) or less.
 - 2. Peak Optical Smoke Density: 0.5 or less.
 - 3. Average Optical Smoke Density: 0.15 or less.
- B. Flame Travel and Smoke Density for Riser Cables in Non-Plenum Building Spaces: As determined by testing identical products according to UL 1666.
- C. Flame Travel and Smoke Density for Cables in Non-Riser Applications and Non-Plenum Building Spaces: As determined by testing identical products according to UL 1685.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Test cables on receipt at Project site.

3.2 INSTALLATION OF CONDUCTORS AND CABLES

- A. Comply with NECA 1 and NFPA 70.
- B. General Requirements for Cabling:
 - 1. Comply with TIA-568-C Series of standards.
 - 2. Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems" and Ch. 6, "Optical Fiber Structured Cabling Systems."

3. Terminate all conductors and optical fibers; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
4. Cables may not be spliced.
5. Secure and support cables at intervals not exceeding 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
6. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems" and Ch. 6, "Optical Fiber Structured Cabling Systems." Install lacing bars and distribution spools.
7. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
8. Cold-Weather Installation: Bring cable to room temperature before dereeling. Do not use heat lamps for heating.
9. Pulling Cable: Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems" and Ch. 6, "Optical Fiber Structured Cabling Systems." Monitor cable pull tensions.
10. Support: Do not allow cables to lay on removable ceiling tiles.
11. Secure: Fasten securely in place with hardware specifically designed and installed so as to not damage cables.

3.3 REMOVAL OF CONDUCTORS AND CABLES

- A. Remove abandoned conductors and cables. Abandoned conductors and cables are those installed that are not terminated at equipment and are not identified for future use with a tag.

3.4 GROUNDING

- A. For data communication wiring, comply with ANSI-J-STD-607-A and with BICSI TDMM, "Bonding and Grounding (Earthing)" Chapter.
- B. For low-voltage control wiring and cabling, comply with requirements in Section 26 0526 "Grounding and Bonding for Electrical Systems."

END OF SECTION

SECTION 26 0526 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1.2 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For testing agency and testing agency's field supervisor.
- B. Field quality-control reports.

1.3 CLOSEOUT SUBMITTALS

- A. +Operation and Maintenance Data: For grounding to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Section 01 7823 "Operation and Maintenance Data," include the following:
 - a. Plans showing as-built, dimensioned locations of grounding features specified in "Field Quality Control" Article, including the following:
 - 1) Test wells.
 - 2) Ground rods.
 - 3) Ground rings.
 - 4) Grounding arrangements and connections for separately derived systems.
 - b. Instructions for periodic testing and inspection of grounding features at **test wells, ground rings and grounding connections for separately derived systems** based on **NETA MTS**.
 - 1) Tests shall determine if ground-resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if values do not.
 - 2) Include recommended testing intervals.

1.4 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Certified by NETA.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with UL 467 for grounding and bonding materials and equipment.

2.2 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Burndy; Part of Hubbell Electrical Systems.
 2. ERICO International Corporation.
 3. Galvan Industries, Inc.; Electrical Products Division, LLC.
 4. ILSCO.
 5. O-Z/Gedney; a brand of Emerson Industrial Automation.
 6. Robbins Lightning, Inc.
 7. Siemens Power Transmission & Distribution, Inc.
 8. Thomas & Betts Corporation; A Member of the ABB Group.

2.3 CONDUCTORS

- A. Insulated Conductors: Copper tinned-copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.
- B. Bare Copper Conductors:
1. Solid Conductors: ASTM B 3.
 2. Stranded Conductors: ASTM B 8.
 3. Bonding Conductor: No. 6 AWG, minimum, stranded conductor.
 4. Bonding Jumper: Copper tape, braided conductors terminated with copper ferrules.
- C. Grounding Bus: Predrilled rectangular bars of annealed copper, 1/4 by 4 inches (6.3 by 100 mm) in cross section, with 9/32-inch (7.14-mm) holes spaced 1-1/8 inches (28 mm) apart, unless otherwise indicated or specified. Stand-off insulators for mounting shall comply with UL 891 for use in switchboards, 600 V and shall be Lexan or PVC, impulse tested at 5000 V.
- D. Lead Content: Less than 300 parts per million.

2.4 CONNECTORS

- A. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for applications in which used and for specific types, sizes, and combinations of conductors and other items connected.
- B. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.
- C. Bus-Bar Connectors: Mechanical type, cast silicon bronze, solderless **exothermic**-type wire terminals, and long-barrel, two-bolt connection to ground bus bar.
- D. Beam Clamps: Mechanical type, terminal, ground wire access from four directions, with dual, tin-plated or silicon bronze bolts.
- E. Cable-to-Cable Connectors: Compression type, copper or copper alloy.
- F. Cable Tray Ground Clamp: Mechanical type, zinc-plated malleable iron.

- G. Conduit Hubs: Mechanical type, terminal with threaded hub.
- H. Ground Rod Clamps: Mechanical type, copper or copper alloy.
- I. Ground Rod Clamps: Mechanical type, copper or copper alloy, terminal with hex head bolt.
- J. Signal Reference Grid Clamp: Mechanical type, stamped-steel terminal with hex head screw.
- K. Water Pipe Clamps:
 - 1. Mechanical type, two pieces with **zinc-plated** or **stainless-steel** bolts.
 - a. Material: **Die-cast zinc alloy**.
 - b. Listed for direct burial.
 - 2. U-bolt type with malleable-iron clamp and **copper ground connector**.
- L. Lead Content: Less than 300 parts per million.

2.5 GROUNDING ELECTRODES

- A. Ground Rods: **Copper-clad**; 5/8 by 96 inches (16 by 2400 mm).
- B. Chemical-Enhanced Grounding Electrodes: Copper tube, straight or L-shaped, charged with **nonhazardous electrolytic chemical salts**.
 - 1. Termination: Factory-attached No. 4/0 AWG bare conductor at least 48 inches (1200 mm) long.
 - 2. Backfill Material: Electrode manufacturer's recommended material.
- C. Ground Plates: 1/4 inch (6 mm) thick, hot-dip galvanized.

PART 3 - EXECUTION

3.1 APPLICATIONS

- A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger unless otherwise indicated.
- B. Underground Grounding Conductors: Install bare tinned-copper conductor, **No. 2/0 AWG** minimum.
 - 1. Bury at least 24 inches (600 mm) below grade.
- C. Isolated Grounding Conductors: Green-colored insulation with continuous yellow stripe. On feeders with isolated ground, identify grounding conductor where visible to normal inspection, with alternating bands of green and yellow tape, with at least three bands of green and two bands of yellow.
- D. Grounding Bus:
 - 1. Install bus horizontally, on insulated spacers 2 inches (50 mm) minimum from wall, 6 inches (150 mm) above finished floor unless otherwise indicated.
 - 2. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, and down; connect to horizontal bus.

- E. Conductor Terminations and Connections:
 - 1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
 - 2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.
 - 3. Connections to Ground Rods at Test Wells: Bolted connectors.
 - 4. Connections to Structural Steel: Welded connectors.

3.2 GROUNDING AT THE SERVICE

- A. Equipment grounding conductors and grounding electrode conductors shall be connected to the ground bus. Install a main bonding jumper between the neutral and ground buses.

3.3 GROUNDING SEPARATELY DERIVED SYSTEMS

- A. Ground separately-derived ac power system neutrals, including distribution transformers, to the grounding electrode system **[per NFPA 70][as indicated on Drawings]**.
- B. Generator: Install grounding electrode(s) at the generator location. The electrode shall be connected to the equipment grounding conductor and to the frame of the generator.

3.4 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

- A. Comply with IEEE C2 grounding requirements.
- B. Grounding Manholes and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches (100 mm) will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches (50 mm) above to 6 inches (150 mm) below concrete. Seal floor opening with waterproof, nonshrink grout.
- C. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields according to written instructions by manufacturer of splicing and termination kits.
- D. Pad-Mounted Transformers and Switches: Install two ground rods and ground ring around the pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than No. 2 AWG for ground ring and for taps to equipment grounding terminals. Bury ground ring not less than 6 inches (150 mm) from the foundation.

3.5 EQUIPMENT GROUNDING

- A. Install insulated equipment grounding conductors with all feeders and branch circuits.

- B. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.
- C. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install a separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.
- D. Isolated Grounding Receptacle Circuits: Install an insulated equipment grounding conductor connected to the receptacle grounding terminal. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service unless otherwise indicated.
- E. Isolated Equipment Enclosure Circuits: For designated equipment supplied by a branch circuit or feeder, isolate equipment enclosure from supply circuit raceway with a nonmetallic raceway fitting listed for the purpose. Install fitting where raceway enters enclosure, and install a separate insulated equipment grounding conductor. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service unless otherwise indicated.
- F. Poles Supporting Outdoor Lighting Fixtures: Install grounding electrode and a separate insulated equipment grounding conductor in addition to grounding conductor installed with branch-circuit conductors.
- G. Metallic Fences: Comply with requirements of IEEE C2.
 - 1. Grounding Conductor: Bare[, tinned] copper, not less than [No. 8] <Insert number> AWG.
 - 2. Gates: Shall be bonded to the grounding conductor with a flexible bonding jumper.
 - 3. Barbed Wire: Strands shall be bonded to the grounding conductor.

3.6 FENCE GROUNDING

- A. Fence Grounding: Install at maximum intervals of [1500 feet (450 m)] <Insert a lesser distance if grounding resistance is high> except as follows:
 - 1. Fences within 100 Feet (30 m) of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of [750 feet (225 m)] <Insert a lesser distance if grounding resistance is high>.
 - a. Gates and Other Fence Openings: Ground fence on each side of opening.
 - 1) Bond metal gates to gate posts.
 - 2) Bond across openings, with and without gates, except at openings indicated as intentional fence discontinuities. Use No. 2 AWG wire and bury it at least 18 inches (460 mm) below finished grade.
- B. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a maximum distance of 150 feet (45 m) on each side of crossing.
- C. Fences Enclosing Electrical Power Distribution Equipment: Ground as required by IEEE C2 unless otherwise indicated.

- D. Grounding Method: At each grounding location, drive a grounding rod vertically until the top is 6 inches (150 mm) below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at grounding location.
- E. Bonding Method for Gates: Connect bonding jumper between gate post and gate frame.
- F. Bonding to Lightning-Protection System: If fence terminates at lightning-protected building or structure, ground the fence and bond the fence grounding conductor to lightning-protection down conductor or lightning-protection grounding conductor, complying with NFPA 780.

3.7 INSTALLATION

- A. Grounding Conductors: Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.
- B. Ground Bonding Common with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor, and install in conduit.
- C. Ground Rods: Drive rods until tops are 24 inches (600 mm) below finished floor or final grade unless otherwise indicated.
 - 1. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating if any.
 - 2. Use exothermic welds for all below-grade connections.
 - 3. For grounding electrode system, install at least **three** <Insert number> rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes, and connect to the service grounding electrode conductor.
- D. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Section 26 0543 "Underground Ducts and Raceways for Electrical Systems," and shall be at least 12 inches (300 mm) deep, with cover.
 - 1. Install at least one test well for each service unless otherwise indicated. Install at the ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.
- E. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.
 - 1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
 - 2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
 - 3. Use exothermic-welded connectors for outdoor locations; if a disconnect-type connection is required, use a bolted clamp.
- F. Grounding and Bonding for Piping:

1. Metal Water Service Pipe: Install insulated copper grounding conductors, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes; use a bolted clamp connector or bolt a lug-type connector to a pipe flange by using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
 2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
 3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.
- G. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install bonding jumper to bond across flexible duct connections to achieve continuity.
- H. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 feet (18 m) apart.
- I. Ground Ring: Install a grounding conductor, electrically connected to each building structure ground rod and to **[each steel column] [indicated columns]**, extending around the perimeter of **building**.
1. Install tinned-copper conductor not less than **No. 2/0** AWG for ground ring and for taps to building steel.
 2. Bury ground ring not less than 24 inches (600 mm) from building's foundation.
- J. Concrete-Encased Grounding Electrode (Ufer Ground): Fabricate according to NFPA 70; use a minimum of 20 feet (6 m) of bare copper conductor not smaller than **No. 4** AWG.
1. If concrete foundation is less than 20 feet (6 m) long, coil excess conductor within base of foundation.
 2. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building's grounding grid or to grounding electrode external to concrete.
- K. Concrete-Encased Grounding Electrode (Ufer Ground): Fabricate according to NFPA 70; using electrically conductive coated steel reinforcing bars or rods, at least 20 feet (6.0 m) long. If reinforcing is in multiple pieces, connect together by the usual steel tie wires or exothermic welding to create the required length.
- L. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.
1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
 2. Make connections with clean, bare metal at points of contact.
 3. Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.
 4. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
 5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

3.8 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- D. Perform tests and inspections[**with the assistance of a factory-authorized service representative**].
- E. Tests and Inspections:
 - 1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
 - 2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
 - 3. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal[, **at ground test wells**][, **and at individual ground rods**]. Make tests at ground rods before any conductors are connected.
 - a. Measure ground resistance no fewer than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
 - b. Perform tests by fall-of-potential method according to IEEE 81.
 - 4. Prepare dimensioned Drawings locating each test well, ground rod and ground-rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location, and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.
- F. Grounding system will be considered defective if it does not pass tests and inspections.
- G. Prepare test and inspection reports.
- H. Report measured ground resistances that exceed the following values:
 - 1. Power and Lighting Equipment or System with Capacity of 500 kVA and Less: [10] **<Insert value>** ohms.
 - 2. Power and Lighting Equipment or System with Capacity of 500 to 1000 kVA: [5] **<Insert value>** ohms.
 - 3. Power and Lighting Equipment or System with Capacity More Than 1000 kVA: [3] **<Insert value>** ohms.
 - 4. Power Distribution Units or Panelboards Serving Electronic Equipment: [1] [3] **<Insert value>** ohm(s).
 - 5. Substations and Pad-Mounted Equipment: [5] **<Insert value>** ohms.
 - 6. Manhole Grounds: [10] **<Insert value>** ohms.
 - 7. **<Insert application and maximum ground-resistance value>** ohms.

June 15, 2026

Smithsonian OPDC Project No. 2533105

SmithGroup Project No. 00100084

- I. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Architect promptly and include recommendations to reduce ground resistance.

END OF SECTION

FOR REFERENCE ONLY

SECTION 26 0529 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
 - 1. Steel slotted support systems.
 - 2. Aluminum slotted support systems.
 - 3. Nonmetallic slotted support systems.
 - 4. Conduit and cable support devices.
 - 5. Support for conductors in vertical conduit.
 - 6. Structural steel for fabricated supports and restraints.
 - 7. Mounting, anchoring, and attachment components, including powder-actuated fasteners, mechanical expansion anchors, concrete inserts, clamps, through bolts, toggle bolts, and hanger rods.
 - 8. Fabricated metal equipment support assemblies.
- B. Related Requirements:
 - 1. Section 26 0548.16 "Seismic Controls for Electrical Systems" for products and installation requirements necessary for compliance with seismic criteria.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for the following:
 - a. Slotted support systems, hardware, and accessories.
 - b. Clamps.
 - c. Hangers.
 - d. Sockets.
 - e. Eye nuts.
 - f. Fasteners.
 - g. Anchors.
 - h. Saddles.
 - i. Brackets.
 - j. **<Insert product type>.**
 - 2. Include rated capacities and furnished specialties and accessories.
- B. Shop Drawings: [**Signed and sealed by a qualified professional engineer.**] For fabrication and installation details for electrical hangers and support systems.
 - 1. Hangers. Include product data for components.
 - 2. Slotted support systems.
 - 3. Equipment supports.
 - 4. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
- C. Delegated-Design Submittal: For hangers and supports for electrical systems.
 - 1. Include design calculations and details of hangers.
 - 2. Include design calculations for seismic restraints.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Suspended ceiling components.
 2. Ductwork, piping, fittings, and supports.
 3. Structural members to which hangers and supports will be attached.
 4. Size and location of initial access modules for acoustical tile.
 5. Items penetrating finished ceiling, including the following:
 - a. Luminaires.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. Projectors.
 - g. **<Insert item>**.
- B. Seismic Qualification Data: Certificates, for hangers and supports for electrical equipment and systems, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Welding certificates.

1.4 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to [AWS D1.1/D1.1M] [AWS D1.2/D1.2M].
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M.
 2. AWS D1.2/D1.2M.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 4000 "Quality Requirements," to design hanger and support system.
- B. Seismic Performance: Hangers and supports shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] **<Insert requirement>**.
1. The term "withstand" means "the supported equipment and systems will remain in place without separation of any parts when subjected to the seismic forces specified[**and the supported equipment and systems will be fully operational after the seismic event**]."

2. Component Importance Factor: [1.5] [1.0].
3. <Insert requirements for Component Amplification Factor and Component Response Modification Factor>.

- C. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Flame Rating: Class 1.
 2. Self-extinguishing according to ASTM D 635.

2.2 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

- A. Steel Slotted Support Systems: Preformed steel channels and angles with minimum 13/32-inch- (10-mm-) diameter holes at a maximum of 8 inches (200 mm) o.c. in at least one surface.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Allied Tube & Conduit; a part of Atkore International.
 - b. B-line, an Eaton business.
 - c. ERICO International Corporation.
 - d. Flex-Strut Inc..
 - e. GS Metals Corp.
 - f. G-Strut.
 - g. Haydon Corporation.
 - h. Metal Ties Innovation.
 - i. Thomas & Betts Corporation; A Member of the ABB Group.
 - j. Unistrut; Part of Atkore International.
 - k. Wesanco, Inc.
 - l. Insert manufacturer's name.
2. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
3. Material for Channel, Fittings, and Accessories: Galvanized steel Plain steel Stainless steel, Type 304 Stainless steel, Type 316.
4. Channel Width: Selected for applicable load criteria 1-5/8 inches (41.25 mm) 1-1/4 inches (31.75 mm) 13/16 inches (20.64 mm) Insert dimension.
5. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
6. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
7. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
8. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

- B. Aluminum Slotted Support Systems: Extruded-aluminum channels and angles with minimum 13/32-inch- (10-mm-) diameter holes at a maximum of 8 inches (200 mm) o.c. in at least one surface.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Cooper Industries, Inc..

- b. Flex-Strut Inc..
 - c. Haydon Corporation.
 - d. MKT Metal Manufacturing.
 - e. Thomas & Betts Corporation; A Member of the ABB Group.
 - f. Unistrut; Part of Atkore International.
 - g. Insert manufacturer's name.
2. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
 3. Channel Material: 6063-T5 aluminum alloy.
 4. Fittings and Accessories Material: 5052-H32 aluminum alloy.
 5. Channel Width: Selected for applicable load criteria 1-5/8 inches (41.25 mm) 1-1/4 inches (31.75 mm) 13/16 inches (20.64 mm) Insert dimension.
 6. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
 7. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
 8. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Nonmetallic Slotted Support Systems: Structural-grade, factory-formed, glass-fiber-resin channels and angles with minimum 13/32-inch- (10-mm-) diameter holes at a maximum of 8 inches (200 mm) o.c., in at least one surface.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Allied Tube & Conduit; a part of Atkore International.
 - b. B-line, an Eaton business.
 - c. Fabco Plastics Wholesale Limited.
 - d. G-Strut.
 - e. Haydon Corporation.
 - f. Seasafe, Inc.; AMICO, a Gibraltar Industries Company.
 - g. **<Insert manufacturer's name>.**
 2. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
 3. Channel Width: Selected for applicable load criteria 1-5/8 inches (41.25 mm) 1-1/4 inches (31.75 mm) 13/16 inches (20.64 mm) Insert dimension.
 4. Fittings and Accessories: Products provided by channel and angle manufacturer and designed for use with those items.
 5. Fitting and Accessory Materials: Same as those for channels and angles, except metal items may be stainless steel.
 6. Rated Strength: Selected to suit applicable load criteria.
 7. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- D. Conduit and Cable Support Devices: Steel Steel and malleable-iron Stainless-steel Glass-fiber-resin hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.

- E. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for nonarmored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be made of malleable iron.
- F. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M steel plates, shapes, and bars; black and galvanized.
- G. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
 - 1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
 - a. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) Hilti, Inc..
 - 2) ITW Ramset/Red Head; Illinois Tool Works, Inc..
 - 3) MKT Fastening, LLC.
 - 4) Simpson Strong-Tie Co., Inc..
 - 5) Insert manufacturer's name.
 - 2. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated stainless steel, for use in hardened portland cement concrete, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
 - a. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) B-line, an Eaton business.
 - 2) Empire Tool and Manufacturing Co., Inc..
 - 3) Hilti, Inc..
 - 4) ITW Ramset/Red Head; Illinois Tool Works, Inc..
 - 5) MKT Fastening, LLC.
 - 6) Insert manufacturer's name.
 - 3. Concrete Inserts: Steel or malleable-iron, slotted support system units are similar to MSS Type 18 units and comply with MFMA-4 or MSS SP-58.
 - 4. Clamps for Attachment to Steel Structural Elements: MSS SP-58 units are suitable for attached structural element.
 - 5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.
 - 6. Toggle Bolts: All Stainless-steel springhead type.
 - 7. Hanger Rods: Threaded steel.

2.3 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

- A. Description: Welded or bolted structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.

- B. Materials: Comply with requirements in Section 05 5000 "Metal Fabrications" for steel shapes and plates.

PART 3 - EXECUTION

3.1 APPLICATION

- A. Comply with the following standards for application and installation requirements of hangers and supports, except where requirements on Drawings or in this Section are stricter:
1. NECA 1.
 2. NECA 101
 3. NECA 102.
 4. NECA 105.
 5. NECA 111.
- B. Comply with requirements in Section 07 8413 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.
- C. Comply with requirements for raceways and boxes specified in Section 26 0533 "Raceways and Boxes for Electrical Systems."
- D. Maximum Support Spacing and Minimum Hanger Rod Size for Raceways: Space supports for EMT, IMC, and RMC as **[required by] [scheduled in NECA 1, where its Table 1 lists maximum spacings that are less than those stated in] NFPA 70**. Minimum rod size shall be 1/4 inch (6 mm) in diameter.
- E. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted **[or other]** support system, sized so capacity can be increased by at least **[25] <Insert number>** percent in future without exceeding specified design load limits.
1. Secure raceways and cables to these supports with **[two-bolt conduit clamps] [single-bolt conduit clamps] [single-bolt conduit clamps using spring friction action for retention in support channel]**.
- F. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch (38-mm) and smaller raceways serving branch circuits and communication systems above suspended ceilings, and for fastening raceways to trapeze supports.

3.2 SUPPORT INSTALLATION

- A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this article.
- B. Raceway Support Methods: In addition to methods described in NECA 1, **[EMT] [IMC] [and] [RMC]** may be supported by openings through structure members, according to NFPA 70.
- C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb (90 kg).

- D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
1. To Wood: Fasten with lag screws or through bolts.
 2. To New Concrete: Bolt to concrete inserts.
 3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
 4. To Existing Concrete: Expansion anchor fasteners.
 5. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches (100 mm) thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches (100 mm) thick.
 6. To Steel: [**Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts**] [**Beam clamps (MSS SP-58, Type 19, 21, 23, 25, or 27), complying with MSS SP-69**] [**Spring-tension clamps**].
 7. To Light Steel: Sheet metal screws.
 8. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate[**by means that comply with seismic-restraint strength and anchorage requirements**].
- E. Drill holes for expansion anchors in concrete at locations and to depths that avoid the need for reinforcing bars.

3.3 INSTALLATION OF FABRICATED METAL SUPPORTS

- A. Comply with installation requirements in Section 05 5000 "Metal Fabrications" for site-fabricated metal supports.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
- C. Field Welding: Comply with AWS D1.1/D1.1M.

3.4 CONCRETE BASES

- A. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.
- B. Use [3000-psi (20.7-MPa)] **<Insert value>**, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in [**Section 03 3000 "Cast-in-Place Concrete."**] [**Section 03 3053 "Miscellaneous Cast-in-Place Concrete."**]
- C. Anchor equipment to concrete base as follows:
 1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 2. Install anchor bolts to elevations required for proper attachment to supported equipment.
 3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.5 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 - 1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils (0.05 mm).
- B. Touchup: Comply with requirements in [Section 09 9113 "Exterior Painting"] [Section 09 9123 "Interior Painting"] [and] [Section 09 9600 "High-Performance Coatings"] <Insert painting Sections> for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

END OF SECTION

FOR REFERENCE ONLY

SECTION 26 0533 - RACEWAYS AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Metal conduits and fittings.
 - 2. Nonmetallic conduits and fittings.
 - 3. Metal wireways and auxiliary gutters.
 - 4. Surface raceways.
 - 5. Boxes, enclosures, and cabinets.
 - 6. Handholes and boxes for exterior underground cabling.

1.2 ACTION SUBMITTALS

- A. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.
- B. Sustainable Design Submittals:
 - 1. Product Data: For solvents and adhesives, indicating VOC content.
 - 2. Laboratory Test Reports: For solvents and adhesives, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings: For custom enclosures and cabinets. Include plans, elevations, sections, and attachment details.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For professional engineer.
- B. Seismic Qualification Data: Certificates, for enclosures, cabinets, and conduit racks and their mounting provisions, including those for internal components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
 - 4. Detailed description of conduit support devices and interconnections on which the certification is based and their installation requirements.
- C. Source quality-control reports.

PART 2 - PRODUCTS

2.1 METAL CONDUITS AND FITTINGS

- A. Metal Conduit:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFC Cable Systems; a part of Atkore International.
 - b. Allied Tube & Conduit; a part of Atkore International.
 - c. Anamet Electrical, Inc.
 - d. Calconduit.
 - e. Electri-Flex Company.
 - f. FSR Inc.
 - g. O-Z/Gedney; a brand of Emerson Industrial Automation.
 - h. Republic Conduit.
 - i. Southwire Company.
 - j. Thomas & Betts Corporation; A Member of the ABB Group.
 - k. Topaz Electric; a division of Topaz Lighting Corp.
 - l. Western Tube and Conduit Corporation.
 - m. Wheatland Tube Company.
2. Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
3. GRC: Comply with ANSI C80.1 and UL 6.
4. IMC: Comply with ANSI C80.6 and UL 1242.
5. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit IMC.
 - a. Comply with NEMA RN 1.
 - b. Coating Thickness: 0.040 inch (1 mm), minimum.
6. EMT: Comply with ANSI C80.3 and UL 797.
7. FMC: Comply with UL 1; zinc-coated steel.
8. LFMC: Flexible steel conduit with PVC jacket and complying with UL 360.

B. Metal Fittings:

1. Manufacturers: As specified above.
2. Comply with NEMA FB 1 and UL 514B.
3. Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
4. Fittings, General: Listed and labeled for type of conduit, location, and use.
5. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 1203 and NFPA 70.
6. Fittings for EMT:
 - a. Material: Steel.
 - b. Type: Setscrew or compression.
7. Expansion Fittings: PVC or steel to match conduit type, complying with UL 651, rated for environmental conditions where installed, and including flexible external bonding jumper.
8. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch (1 mm), with overlapping sleeves protecting threaded joints.

- C. Joint Compound for IMC, GRC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

2.2 NONMETALLIC CONDUITS AND FITTINGS

A. Nonmetallic Conduit:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFC Cable Systems; a part of Atkore International.
 - b. Anamet Electrical, Inc.
 - c. Arnco Corporation.
 - d. CANTEX INC.
 - e. CertainTeed Corporation.
 - f. Electri-Flex Company.
 - g. Kraloy.
 - h. RACO; Hubbell.
 - i. Thomas & Betts Corporation; A Member of the ABB Group.
 - j. Topaz Electric; a division of Topaz Lighting Corp.
2. Listing and Labeling: Nonmetallic conduit shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
3. ENT: Comply with NEMA TC 13 and UL 1653.
4. RNC: Type EPC-40-PVC, complying with NEMA TC 2 and UL 651 unless otherwise indicated.
5. LFNC: Comply with UL 1660.
6. Rigid HDPE: Comply with UL 651A.
7. Continuous HDPE: Comply with UL 651A.
8. RTRC: Comply with UL 2515A and NEMA TC 14.

B. Nonmetallic Fittings:

1. Manufacturers: As specified above.
2. Fittings, General: Listed and labeled for type of conduit, location, and use.
3. Fittings for ENT and RNC: Comply with NEMA TC 3; match to conduit or tubing type and material.
 - a. Fittings for LFNC: Comply with UL 514B.
4. Solvents and Adhesives: As recommended by conduit manufacturer.
5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.3 METAL WIREWAYS AND AUXILIARY GUTTERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. B-line, an Eaton business.
 2. Hoffman; a brand of Pentair Equipment Protection.
 3. MonoSystems, Inc.
 4. Square D.
- B. Description: Sheet metal, complying with UL 870 and NEMA 250, Type 1 unless otherwise indicated, and sized according to NFPA 70.
1. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- C. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
- D. Wireway Covers: Screw-cover type unless otherwise indicated.
- E. Finish: Manufacturer's standard enamel finish.

2.4 SURFACE RACEWAYS

- A. Listing and Labeling: Surface raceways and tele-power poles shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Surface Metal Raceways: Galvanized steel with snap-on covers complying with UL 5. Manufacturer's standard enamel finish in color selected by Architect Prime coated, ready for field painting.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hubbell Incorporated; Wiring Device-Kellems.
 - b. MonoSystems, Inc.
 - c. Panduit Corp.
 - d. Wiremold / Legrand.

2.5 BOXES, ENCLOSURES, AND CABINETS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Adalet.
 - 2. Crouse-Hinds, an Eaton business.
 - 3. EGS/Appleton Electric.
 - 4. Erickson Electrical Equipment Company.
 - 5. FSR Inc.
 - 6. Hoffman; a brand of Pentair Equipment Protection.
 - 7. Hubbell Incorporated.
 - 8. Hubbell Incorporated; Wiring Device-Kellems.
 - 9. Kraloy.
 - 10. O-Z/Gedney; a brand of Emerson Industrial Automation.
 - 11. RACO; Hubbell.
 - 12. Spring City Electrical Manufacturing Company.
 - 13. Thomas & Betts Corporation; A Member of the ABB Group.
 - 14. Topaz Electric; a division of Topaz Lighting Corp.
 - 15. Wiremold / Legrand.
- B. General Requirements for Boxes, Enclosures, and Cabinets: Boxes, enclosures, and cabinets installed in wet locations shall be listed for use in wet locations.
- C. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.

- D. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, ferrous alloy, Type FD, with gasketed cover.
- E. Metal Floor Boxes:
 - 1. Material: Cast metal or sheet metal.
 - 2. Type: Fully adjustable Semi-adjustable.
 - 3. Shape: Rectangular.
 - 4. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- F. Luminaire Outlet Boxes: Nonadjustable, designed for attachment of luminaire weighing 50 lb (23 kg). Outlet boxes designed for attachment of luminaires weighing more than 50 lb (23 kg) shall be listed and marked for the maximum allowable weight.
- G. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
- H. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, galvanized, cast iron with gasketed cover.
- I. Box extensions used to accommodate new building finishes shall be of same material as recessed box.
- J. Device Box Dimensions: 4 inches square by 2-1/8 inches deep (100 mm square by 60 mm deep).
- K. Gangable boxes are allowed.
- L. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, Type 1 with continuous-hinge cover with flush latch unless otherwise indicated.
 - 1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
 - 2. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.
- M. Cabinets:
 - 1. NEMA 250, Type 1 galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
 - 2. Hinged door in front cover with flush latch and concealed hinge.
 - 3. Key latch to match panelboards.
 - 4. Metal barriers to separate wiring of different systems and voltage.
 - 5. Accessory feet where required for freestanding equipment.
 - 6. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.6 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

- A. General Requirements for Handholes and Boxes:
 - 1. Boxes and handholes for use in underground systems shall be designed and identified as defined in NFPA 70, for intended location and application.
 - 2. Boxes installed in wet areas shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- B. Polymer-Concrete Handholes and Boxes with Polymer-Concrete Cover: Molded of sand and aggregate, bound together with polymer resin, and reinforced with steel, fiberglass, or a combination of the two.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armorcast Products Company.
 - b. NewBasis.
 - c. Oldcastle Enclosure Solutions.
 - d. Oldcastle Precast, Inc.
 - e. Quazite: Hubbell Power Systems, Inc.
 2. Standard: Comply with SCTE 77.
 3. Configuration: Designed for flush burial with integral closed bottom unless otherwise indicated.
 4. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
 5. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
 6. Cover Legend: Molded lettering, "ELECTRIC." Insert legend.
 7. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
 8. Handholes 12 Inches Wide by 24 Inches Long (300 mm Wide by 600 mm Long) and Larger: Have inserts for cable racks and pulling-in irons installed before concrete is poured.
- C. Fiberglass Handholes and Boxes: Molded of fiberglass-reinforced polyester resin, with frame and covers of polymer concrete reinforced concrete cast iron hot-dip galvanized-steel diamond plate fiberglass.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armorcast Products Company.
 - b. NewBasis.
 - c. Nordic Fiberglass, Inc.
 - d. Oldcastle Enclosure Solutions.
 - e. Oldcastle Enclosure Solutions.
 - f. Oldcastle Precast, Inc.
 - g. Quazite: Hubbell Power Systems, Inc.
 2. Standard: Comply with SCTE 77.
 3. Color of Frame and Cover: Gray Green.
 4. Configuration: Designed for flush burial with integral closed bottom unless otherwise indicated.
 5. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
 6. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
 7. Cover Legend: Molded lettering, "ELECTRIC." Insert legend.
 8. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
 9. Handholes 12 Inches Wide by 24 Inches Long (300 mm Wide by 600 mm Long) and Larger: Have inserts for cable racks and pulling-in irons installed before concrete is poured.

2.7 SOURCE QUALITY CONTROL FOR UNDERGROUND ENCLOSURES

- A. Handhole and Pull-Box Prototype Test: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.
 - 1. Tests of materials shall be performed by an independent testing agency.
 - 2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
 - 3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012 and traceable to NIST standards.

PART 3 - EXECUTION

3.1 RACEWAY APPLICATION

- A. Outdoors: Apply raceway products as specified below unless otherwise indicated:
 - 1. Exposed Conduit: GRC.
 - 2. Concealed Conduit, Aboveground: GRC.
 - 3. Underground Conduit: RNC, Type EPC-40-PVC direct buried or concrete encased as indicated.
 - 4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
 - 5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.
- B. Indoors: Apply raceway products as specified below unless otherwise indicated:
 - 1. Exposed, Not Subject to Physical Damage: EMT.
 - 2. Exposed and Subject to Physical Damage: GRC. Raceway locations include the following:
 - a. Loading dock.
 - b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
 - c. Mechanical rooms.
 - d. Gymnasiums.
 - e. **<Insert designations of applicable spaces or locations>.**
 - 3. Concealed in Ceilings and Interior Walls and Partitions: EMT.
 - 4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
 - 5. Damp or Wet Locations: GRC.
 - 6. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4 stainless steel in institutional and commercial kitchens and damp or wet locations.
- C. Minimum Raceway Size: 3/4-inch (21-mm) trade size.
- D. Raceway Fittings: Compatible with raceways and suitable for use and location.
 - 1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
 - 2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.

3. EMT: Use setscrew or compression, steel fittings. Comply with NEMA FB 2.10.
 4. Flexible Conduit: Use only fittings listed for use with flexible conduit. Comply with NEMA FB 2.20.
- E. Install nonferrous conduit or tubing for circuits operating above 60 Hz. Where aluminum raceways are installed for such circuits and pass through concrete, install in nonmetallic sleeve.
- F. Install surface raceways only where indicated on Drawings.

3.2 INSTALLATION

- A. Comply with requirements in Section 26 0529 "Hangers and Supports for Electrical Systems" for hangers and supports.
- B. Comply with NECA 1 and NECA 101 for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum conduits. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies and number of floors.
- C. Do not install raceways or electrical items on any "explosion-relief" walls or rotating equipment.
- D. Do not fasten conduits onto the bottom side of a metal deck roof.
- E. Keep raceways at least 6 inches (150 mm) away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.
- F. Complete raceway installation before starting conductor installation.
- G. Arrange stub-ups so curved portions of bends are not visible above finished slab.
- H. Make bends in raceway using large-radius preformed ells. Field bending shall be according to NFPA 70 minimum radii requirements. Use only equipment specifically designed for material and size involved.
- I. Conceal conduit within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.
- J. Support conduit within 12 inches (300 mm) of enclosures to which attached.
- K. Raceways Embedded in Slabs:
1. Run conduit larger than 1-inch (27-mm) trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure raceways to reinforcement at maximum 10-foot (3-m) intervals.
 2. Arrange raceways to cross building expansion joints at right angles with expansion fittings.
 3. Arrange raceways to keep a minimum of [1 inch (25 mm)] [2 inches (50 mm)] **<Insert dimension>** of concrete cover in all directions.
 4. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.

- L. Stub-Ups to Above Recessed Ceilings:
 - 1. Use EMT, IMC, or RMC for raceways.
 - 2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.
- M. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.
- N. Coat field-cut threads on PVC-coated raceway with a corrosion-preventing conductive compound prior to assembly.
- O. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors including conductors smaller than No. 4 AWG.
- P. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install bushings on conduits up to 1-1/4-inch (35mm) trade size and insulated throat metal bushings on 1-1/2-inch (41-mm) trade size and larger conduits terminated with locknuts. Install insulated throat metal grounding bushings on service conduits.
- Q. Install raceways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus 1/4 turn more.
- R. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to assure a continuous ground path.
- S. Cut conduit perpendicular to the length. For conduits 2-inch (53-mm) trade size and larger, use roll cutter or a guide to make cut straight and perpendicular to the length.
- T. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb (90-kg) tensile strength. Leave at least 12 inches (300 mm) of slack at each end of pull wire. Cap underground raceways designated as spare above grade alongside raceways in use.
 - 1. Install surface raceway with a minimum 2-inch (50-mm) radius control at bend points.
 - 2. Secure surface raceway with screws or other anchor-type devices at intervals not exceeding 48 inches (1200 mm) and with no less than two supports per straight raceway section. Support surface raceway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.
- U. Install raceway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings according to NFPA 70.
- V. Install devices to seal raceway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all raceways at the following points:
 - 1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
 - 2. Where an underground service raceway enters a building or structure.

3. Conduit extending from interior to exterior of building.
 4. Conduit extending into pressurized duct and equipment.
 5. Conduit extending into pressurized zones that are automatically controlled to maintain different pressure set points.
 6. Where otherwise required by NFPA 70.
- W. Comply with manufacturer's written instructions for solvent welding RNC and fittings.
- X. Expansion-Joint Fittings:
1. Install in each run of aboveground RMC and EMT conduit that is located where environmental temperature change may exceed 100 deg F (55 deg C) and that has straight-run length that exceeds 100 feet (30 m).
 2. Install expansion fittings at all locations where conduits cross building or structure expansion joints.
 3. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.
- Y. Flexible Conduit Connections: Comply with NEMA RV 3. Use a maximum of 72 inches (1830 mm) of flexible conduit for recessed and semirecessed luminaires, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.
1. Use LFMC in damp or wet locations subject to severe physical damage.
 2. Use LFMC in damp or wet locations not subject to severe physical damage.
- Z. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to center of box unless otherwise indicated.
- AA. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surfaces to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.
- BB. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.
- CC. Locate boxes so that cover or plate will not span different building finishes.
- DD. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.
- EE. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.
- FF. Set metal floor boxes level and flush with finished floor surface.
- 3.3 INSTALLATION OF UNDERGROUND CONDUIT
- A. Direct-Buried Conduit:
1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Section 31 2000 "Earth Moving" for pipe less than 6 inches (150 mm) in nominal diameter.

2. Install backfill as specified in Section 31 2000 "Earth Moving."
3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches (300 mm) of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Section 31 2000 "Earth Moving."
4. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through floor.
 - a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches (75 mm) of concrete for a minimum of 12 inches (300 mm) on each side of the coupling.
 - b. For stub-ups at equipment mounted on outdoor concrete bases and where conduits penetrate building foundations, extend steel conduit horizontally a minimum of 60 inches (1500 mm) from edge of foundation or equipment base. Install insulated grounding bushings on terminations at equipment.
5. Underground Warning Tape: Comply with requirements in Section 26 0553 "Identification for Electrical Systems."

3.4 INSTALLATION OF UNDERGROUND HANDHOLES AND BOXES

- A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting conduits to minimize bends and deflections required for proper entrances.
- B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch (12.5-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.
- C. Elevation: In paved areas, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch (25 mm) above finished grade.
- D. Install handholes with bottom below frost line, **<Insert depth of frost line below grade at Project site>** below grade.
- E. Field-cut openings for conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

3.5 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 26 0544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.6 FIRESTOPPING

- A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 07 8413 "Penetration Firestopping."

3.7 PROTECTION

- A. Protect coatings, finishes, and cabinets from damage and deterioration.
 - 1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
 - 2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION

FOR REFERENCE ONLY

SECTION 26 0536 - CABLE TRAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Wire-mesh cable tray.
 - 2. Cable tray accessories.
 - 3. Warning signs.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For each type of cable tray.
 - 1. Show fabrication and installation details of cable trays, including plans, elevations, and sections of components and attachments to other construction elements. Designate components and accessories, including clamps, brackets, hanger rods, splice-plate connectors, expansion-joint assemblies, straight lengths, and fittings.
 - 2. Cable tray layout, showing cable tray route to scale, with relationship between the tray and adjacent structural, electrical, and mechanical elements. Include the following:
 - a. Vertical and horizontal offsets and transitions.
 - b. Clearances for access above and to sides of cable trays.
 - c. Vertical elevation of cable trays above the floor or bottom of ceiling structure.
 - d. Load calculations to show dead and live loads as not exceeding manufacturer's rating for tray and its support elements.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans and sections, drawn to scale, and coordinated with each other, using input from installers of the items involved:
- B. Field quality-control reports.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 4000 "Quality Requirements," to design cable tray supports and seismic bracing.
- B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes in cable tray installed outdoors.
 - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.2 GENERAL REQUIREMENTS FOR CABLE TRAY

- A. Cable Trays and Accessories: Identified as defined in NFPA 70 and marked for intended location, application, and grounding.
- B. Sizes and Configurations: See the Cable Tray Schedule on Drawings for specific requirements for types, materials, sizes, and configurations.
- C. Structural Performance: See articles on individual cable tray types for specific values for the following parameters:
 - 1. Uniform Load Distribution: Capable of supporting a uniformly distributed load on the indicated support span when supported as a simple span and tested according to NEMA VE 1.
 - 2. Concentrated Load: A load applied at midpoint of span and centerline of tray.
 - 3. Load and Safety Factors: Applicable to both side rails and rung capacities.

2.3 WIRE-MESH CABLE TRAY

- A. Description: Galvanized-steel wire mesh, complying with NEMA VE 1.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Cooper Industries; Cooper B-Line; GS Metals Corp.
 - 2. MP Husky USA Cable Tray & Cable Bus.
- C. Capacities and Characteristics:
 - 1. Width: 6 inches (150 mm) unless otherwise indicated on Drawings.
 - 2. Minimum Usable Load Depth: 4 inches (100 mm).
 - 3. Straight Section Lengths: 10 feet (3.0 m), except where shorter lengths are required to facilitate tray assembly.
 - 4. Structural Performance: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a 200-lb (90-kg) concentrated load, when tested according to NEMA VE 1.
 - 5. Class Designation: Comply with NEMA VE 1, Class 20A.
 - 6. Splicing Assemblies: Bolted type using serrated flange locknuts.
 - 7. Splice-Plate Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
- D. Materials and Finishes:
 - 1. Steel:
 - a. Straight Sections and Fittings: Steel complies with the minimum mechanical properties of ASTM A 1011/A 1011M, SS, Grade 33
ASTM A 1008/A 1008M, Grade 33, Type 2.
 - b. Steel Tray Splice Plates: ASTM A 1011/A 1011M, HSLAS, Grade 50, Class 1.
 - c. Fasteners: Steel complies with the minimum mechanical properties of ASTM A 510/A 510M, Grade 1008.
 - d. Finish: Hot-dipped galvanized after fabrication, complying with ASTM A123/A123 M, Class B2.
 - 1) Hardware: Galvanized, ASTM B 633 Chromium-zinc plated,
ASTM F 1136 Stainless steel, Type 316.

- e. Finish: Hot-dipped galvanized after fabrication, complying with ASTM A 653/A 653M, G90 (Z275).
 - 1) Hardware: Galvanized, ASTM B 633 Chromium-zinc plated, ASTM F 1136.

2.4 CABLE TRAY ACCESSORIES

- A. Fittings: Tees, crosses, risers, elbows, and other fittings as indicated, of same materials and finishes as cable tray.
- B. Barrier Strips: Same materials and finishes as for cable tray.
- C. Cable tray supports and connectors, including bonding jumpers, as recommended by cable tray manufacturer.

2.5 WARNING SIGNS

- A. Lettering: 1-1/2-inch- (40-mm-) high, black letters on yellow background, with legend "WARNING! NOT TO BE USED AS WALKWAY, LADDER, OR SUPPORT FOR LADDERS OR PERSONNEL."
- B. Comply with Section 26 0553 "Identification for Electrical Systems."

PART 3 - EXECUTION

3.1 CABLE TRAY INSTALLATION

- A. Install cable tray and support systems according to NEMA VE 2.
- B. Install cable tray as a complete system, including fasteners, hold-down clips, support systems, barrier strips, adjustable horizontal and vertical splice plates, elbows, reducers, tees, crosses, cable dropouts, adapters, covers, and bonding.
- C. Install cable tray, so that the tray is accessible for cable installation and all splices are accessible for inspection and adjustment.
- D. Remove burrs and sharp edges from cable trays.
- E. Fasten cable tray supports to building structure.
- F. Design fasteners and supports to carry cable tray, cables, and a concentrated load of 200 lb (90 kg). Comply with requirements in Section 26 0529 "Hangers and Supports for Electrical Systems."
- G. Place supports, so that spans do not exceed maximum spans on schedules, and provide clearances shown on Drawings. Install intermediate supports when cable weight exceeds the load-carrying capacity of tray rungs.
- H. Construct supports from channel members, threaded rods, and other appurtenances furnished by cable tray manufacturer. Arrange supports in trapeze or wall-bracket form as required by application.

- I. Do not install more than one cable tray splice between supports.
- J. Make changes in direction and elevation using manufacturer's recommended fittings.
- K. Make cable tray connections using manufacturer's recommended fittings.
- L. Seal penetrations through fire and smoke barriers. Comply with requirements in Section 07 8413 "Penetration Firestopping."
- M. Install capped metal sleeves for future cables through firestop-sealed cable tray penetrations of fire and smoke barriers.
- N. Install cable trays with enough workspace to permit access for installing cables.
- O. Install barriers to separate cables of different systems, such as power, communications, and data processing, or of different insulation levels, such as 600, 5000, and 15 000 V.
- P. Install permanent covers, if used, after installing cable.
- Q. Clamp covers on cable trays installed outdoors with heavy-duty clamps.
- R. Install warning signs in visible locations on or near cable trays after cable tray installation.

3.2 CABLE TRAY GROUNDING

- A. Ground cable trays according to NFPA 70 unless additional grounding is specified. Comply with requirements in Section 26 0526 "Grounding and Bonding for Electrical Systems."
- B. Cable trays with electrical power conductors shall be bonded together with splice plates listed for grounding purposes or with listed bonding jumpers.
- C. Cable trays with single-conductor power conductors shall be bonded together with a grounding conductor run in the tray along with the power conductors and bonded to the tray at 72-inch (1800-mm) intervals. The grounding conductor shall be sized according to NFPA 70, Article 250.122, "Size of Equipment Grounding Conductors," and Article 392, "Cable Trays."
- D. When using epoxy- or powder-coat painted cable trays as a grounding conductor, completely remove coating at all splice contact points or ground connector attachment. After completing splice-to-grounding-bolt attachment, repair the coated surfaces with coating materials recommended by cable tray manufacturer.
- E. Bond cable trays to power source for cables contained within with bonding conductors sized according to NFPA 70, Article 250.122, "Size of Equipment Grounding Conductors."
- F. In existing construction, remove inactive or dead cables from cable trays.

3.3 CONNECTIONS

- A. Remove paint from all connection points before making connections. Repair paint after the connections are completed.

- B. Connect raceways to cable trays according to requirements in NEMA VE 2 and NEMA FG 1.

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 1. After installing cable trays and after electrical circuitry has been energized, survey for compliance with requirements.
 2. Visually inspect cable insulation for damage. Correct sharp corners, protuberances in cable trays, vibrations, and thermal expansion and contraction conditions, which may cause or have caused damage.
 3. Verify that the number, size, and voltage of cables in cable trays do not exceed that permitted by NFPA 70. Verify that communications or data-processing circuits are separated from power circuits by barriers or are installed in separate cable trays.
 4. Verify that there are no intruding items, such as pipes, hangers, or other equipment, in the cable tray.
 5. Remove dust deposits, industrial process materials, trash of any description, and any blockage of tray ventilation.
 6. Visually inspect each cable tray joint and each ground connection for mechanical continuity. Check bolted connections between sections for corrosion. Clean and retorquer in suspect areas.
 7. Check for improperly sized or installed bonding jumpers.
 8. Check for missing, incorrect, or damaged bolts, bolt heads, or nuts. When found, replace with specified hardware.
 9. Perform visual and mechanical checks for adequacy of cable tray grounding; verify that all takeoff raceways are bonded to cable trays. Test entire cable tray system for continuity. Maximum allowable resistance is 1 ohm.
- B. Prepare test and inspection reports.

3.5 PROTECTION

- A. Protect installed cable trays and cables.
 1. Install temporary protection for cables in open trays to safeguard exposed cables against falling objects or debris during construction. Temporary protection for cables and cable tray can be constructed of wood or metal materials and shall remain in place until the risk of damage is over.
 2. Repair damage to galvanized finishes with zinc-rich paint recommended by cable tray manufacturer.
 3. Repair damage to paint finishes with matching touchup coating recommended by cable tray manufacturer.

END OF SECTION

SECTION 26 0543 - UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal conduits and fittings, including GRC and PVC-coated steel conduit.
2. Rigid nonmetallic duct.
3. Flexible nonmetallic duct.
4. Duct accessories.
5. Precast concrete handholes.
6. Polymer concrete handholes and boxes with polymer concrete cover.
7. Precast manholes.
8. Utility structure accessories.

1.2 DEFINITIONS

- A. Direct Buried: Duct or a duct bank that is buried in the ground, without any additional casing materials such as concrete.
- B. Duct: A single duct or multiple ducts. Duct may be either installed singly or as component of a duct bank.
- C. Duct Bank:
1. Two or more ducts installed in parallel, with or without additional casing materials.
 2. Multiple duct banks.
- D. GRC: Galvanized rigid (steel) conduit.
- E. Trafficways: Locations where vehicular or pedestrian traffic is a normal course of events.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include duct-bank materials, including spacers and miscellaneous components.
 2. Include duct, conduits, and their accessories, including elbows, end bells, bends, fittings, and solvent cement.
 3. Include accessories for manholes, handholes, boxes, and other utility structures.
 4. Include underground-line warning tape.
- B. Shop Drawings:
1. Precast or Factory-Fabricated Underground Utility Structures:
 - a. Include plans, elevations, sections, details, attachments to other work, and accessories.
 - b. Include duct entry provisions, including locations and duct sizes.
 - c. Include reinforcement details.
 - d. Include frame and cover design and manhole chimneys.

- e. Include ladder or step details.
 - f. Include grounding details.
 - g. Include dimensioned locations of cable rack inserts, pulling-in and lifting irons, and sumps.
 - h. Include joint details.
- 2. Factory-Fabricated Handholes and Boxes Other Than Precast Concrete:
 - a. Include dimensioned plans, sections, and elevations, and fabrication and installation details.
 - b. Include duct entry provisions, including locations and duct sizes.
 - c. Include cover design.
 - d. Include grounding details.
 - e. Include dimensioned locations of cable rack inserts, and pulling-in and lifting irons.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For professional engineer and testing agency responsible for testing nonconcrete handholes and boxes.
- B. Product Certificates: For concrete and steel used in precast concrete manholes and handholes, as required by ASTM C 858.
- C. Source quality-control reports.
- D. Field quality-control reports.

1.5 MAINTENANCE MATERIALS SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
- B. Furnish cable-support stanchions, arms, insulators, and associated fasteners in quantities equal to 5 percent of quantity of each item installed.

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

1.7 FIELD CONDITIONS

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions, and then only after arranging to provide temporary electrical service according to requirements indicated:
 - 1. Notify Construction Manager and Owner no fewer than five days in advance of proposed interruption of electrical service.
 - 2. Do not proceed with interruption of electrical service without Construction Manager's and Owner's written permission.
- B. Ground Water: Assume ground-water level is at grade level unless a lower water table is noted on Drawings.

PART 2 - PRODUCTS

2.1 METAL CONDUIT AND FITTINGS

- A. GRC: Comply with ANSI C80.1 and UL 6.
- B. Coated Steel Conduit: PVC-coated GRC IMC.
 - 1. Comply with NEMA RN 1.
 - 2. Coating Thickness: 0.040 inch (1 mm), minimum.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. AFC Cable Systems; a part of Atkore International.
 - 2. Allied Tube & Conduit; a part of Atkore International.
 - 3. Anamet Electrical, Inc.
 - 4. Calconduit.
 - 5. Electri-Flex Company.
 - 6. FSR Inc.
 - 7. Korkap.
 - 8. Opti-Com Manufacturing Network, Inc (OMNI).
 - 9. O-Z/Gedney; a brand of Emerson Industrial Automation.
 - 10. Perma-Cote.
 - 11. Picoma Industries, Inc.
 - 12. Plasti-Bond.
 - 13. Republic Conduit.
 - 14. Southwire Company.
 - 15. Thomas & Betts Corporation; A Member of the ABB Group.
 - 16. Topaz Electric; a division of Topaz Lighting Corp.
 - 17. Western Tube and Conduit Corporation.
 - 18. Wheatland Tube Company.
- D. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.

2.2 RIGID NONMETALLIC DUCT

- A. Underground Plastic Utilities Duct: Type EPC-80-PVC and Type EPC-40-PVC RNC, complying with NEMA TC 2 and UL 651, with matching fittings complying with NEMA TC 3 by same manufacturer as duct.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. ARNCO Corp.
 - 2. Beck Manufacturing.
 - 3. CANTEX INC.
 - 4. CertainTeed Corporation.
 - 5. Condux International, Inc.
 - 6. Crown Line Plastics.
 - 7. ElecSys, Inc.
 - 8. Electri-Flex Company.
 - 9. Endot Industries Inc.

10. IPEX USA LLC.
11. Lamson & Sessions.
12. Manhattan/CDT.
13. National Pipe & Plastics.
14. Opti-Com Manufacturing Network, Inc (OMNI).
15. Spiraduct/AFC Cable Systems, Inc.

C. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.

D. Solvents and Adhesives: As recommended by conduit manufacturer.

1. VOC Content:[510] <Insert value> g/L or less for PVC conduit and fittings.

2.3 DUCT ACCESSORIES

A. Duct Spacers: Factory-fabricated, rigid, PVC interlocking spacers; sized for type and size of duct with which used, and selected to provide minimum duct spacing indicated while supporting duct during concreting or backfilling.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Allied Tube & Conduit; a part of Atkore International.
 - b. CANTEX INC.
 - c. Carlon; a brand of Thomas & Betts Corporation.
 - d. IPEX USA LLC.
 - e. PenCell Plastics.
 - f. Underground Devices, Inc.

B. Underground-Line Warning Tape: Comply with requirements for underground-line warning tape specified in Section 26 0553 "Identification for Electrical Systems."

C. Concrete Warning Planks: Nominal 12 by 24 by 3 inches (300 by 600 by 75 mm) in size, manufactured from 6000-psi (41-MPa) concrete.

1. Color: Red dye added to concrete during batching.
2. Mark each plank with "ELECTRIC" in 2-inch- (50-mm-) high, 3/8-inch- (10-mm-) deep letters.

2.4 PRECAST CONCRETE HANDHOLES AND BOXES

A. Description: Factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of handhole or box.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Christy Concrete Products.
2. Elmhurst-Chicago Stone Co.
3. Oldcastle Precast, Inc.
4. Rinker Group, Ltd.
5. Riverton Concrete Products.

6. Utility Concrete Products, LLC.
 7. Utility Vault Co.
 8. Wausau Tile Inc.
- C. Comply with ASTM C 858 for design and manufacturing processes.
- D. Frame and Cover: Weatherproof steel frame, with hinged steel access door assembly with tamper-resistant, captive, cover-securing bolts.
1. Cover Hinges: Concealed, with hold-open ratchet assembly.
 2. Cover Handle: Recessed.
- E. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
- F. Cover Legend: Molded lettering, "ELECTRIC." as indicated for each service. Insert legend.
- G. Configuration: Units shall be designed for flush burial and have open closed integral closed bottom unless otherwise indicated.
- H. Knockout Panels: Precast openings in walls, arranged to match dimensions and elevations of approaching duct, plus an additional 12 inches (300 mm) vertically and horizontally to accommodate alignment variations.
1. Center window location.
 2. Knockout panels shall be located no less than 6 inches (150 mm) from interior surfaces of walls, floors, or frames and covers of handholes, but close enough to corners to facilitate racking of cables on walls.
 3. Knockout panel opening shall have cast-in-place, welded-wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct.
 4. Knockout panels shall be framed with at least two additional No. 3 steel reinforcing bars in concrete around each opening.
 5. Knockout panels shall be 1-1/2 to 2 inches (38 to 50 mm) thick.
- I. Duct Entrances in Handhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
1. Type and size shall match fittings to duct to be terminated.
 2. Fittings shall align with elevations of approaching duct and be located near interior corners of handholes to facilitate racking of cable.
- J. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.
- 2.5 POLYMER CONCRETE HANDHOLES AND BOXES WITH POLYMER CONCRETE COVER
- A. Description: Molded of sand and aggregate, bound together with a polymer resin, and reinforced with steel or fiberglass or a combination of the two.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Armorcast Products Company.
 2. NewBasis.
 3. Oldcastle Enclosure Solutions.

4. Quazite: Hubbell Power Systems, Inc.
- C. Standard: Comply with SCTE 77. Comply with tier requirements in "Underground Enclosure Application" Article.
- D. Color: Gray Green.
- E. Configuration: Units shall be designed for flush burial and have open closed integral closed bottom unless otherwise indicated.
- F. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.
- G. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
- H. Cover Legend: Molded lettering, "ELECTRIC." as indicated for each service. Insert legend.
- I. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.
- J. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering duct for secure, fixed installation in enclosure wall.
- K. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have factory-installed inserts for cable racks and pulling-in irons.

2.6 PRECAST MANHOLES

- A. Description: One-piece units and units with interlocking mating sections, complete with accessories, hardware, and features.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- C.
 1. Carder Concrete Products.
 2. Christy Concrete Products.
 3. Elmhurst-Chicago Stone Co.
 4. Oldcastle Precast, Inc.
 5. Rinker Group, Ltd.
 6. Riverton Concrete Products.
 7. Utility Concrete Products, LLC.
 8. Utility Vault Co.
 9. Wausau Tile Inc.
- D. Comply with ASTM C 858.
- E. Structural Design Loading: Comply with requirements in "Underground Enclosure Application" Article.

- F. Knockout Panels: Precast openings in walls, arranged to match dimensions and elevations of approaching duct, plus an additional 12 inches (300 mm) vertically and horizontally to accommodate alignment variations.
1. Center window location.
 2. Knockout panels shall be located no less than 6 inches (150 mm) from interior surfaces of walls, floors, or roofs of manholes, but close enough to corners to facilitate racking of cables on walls.
 3. Knockout panel opening shall have cast-in-place, welded-wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct.
 4. Knockout panel shall be framed with at least two additional No. 3 steel reinforcing bars in concrete around each opening.
 5. Knockout panels shall be 1-1/2 to 2 inches (38 to 50 mm) thick.
- G. Duct Entrances in Manhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
1. Type and size shall match fittings to duct to be terminated.
 2. Fittings shall align with elevations of approaching duct and be located near interior corners of manholes to facilitate racking of cable.
- H. Ground Rod Sleeve: Provide a 3-inch (75-mm) PVC sleeve in manhole floors 2 inches (50 mm) from the wall adjacent to, but not underneath, the duct entering the structure.
- I. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.

2.7 UTILITY STRUCTURE ACCESSORIES

- A. Accessories for Utility Structures: Utility equipment and accessory items used for utility structure access and utility support, listed and labeled for intended use and application.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Bilco Company (The).
 2. Campbell Foundry Company.
 3. Carder Concrete Products.
 4. Christy Concrete Products.
 5. EJ.
 6. Elmhurst-Chicago Stone Co.
 7. McKinley Iron Works, Inc.
 8. Neenah Foundry Company.
 9. NewBasis.
 10. Oldcastle Precast, Inc.
 11. Osburn Associates, Inc.
 12. Pennsylvania Insert Corporation.
 13. Quazite: Hubbell Power Systems, Inc.
 14. Rinker Group, Ltd.
 15. Riverton Concrete Products.
 16. Underground Devices, Inc.
 17. Utility Concrete Products, LLC.
 18. Utility Vault Co.

19. Wausau Tile Inc.
- C. Manhole Frames, Covers, and Chimney Components: Comply with structural design loading specified for manhole.
1. Frame and Cover: Weatherproof, gray cast iron complying with ASTM A 48/A 48M, Class 30B cast aluminum with milled cover-to-frame bearing surfaces; diameter, 26 inches (660 mm) 29 inches (725 mm).
 - a. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
 - b. Special Covers: Recess in face of cover designed to accept finish material in paved areas.
 2. Cover Legend: Cast in. Selected to suit system.
 - a. Legend: "ELECTRIC-LV" for duct systems with power wires and cables for systems operating at 600 V and less.
 3. Manhole Chimney Components: Precast concrete rings with dimensions matched to those of roof opening.
 - a. Mortar for Chimney Ring and Frame and Cover Joints: Comply with ASTM C 270, Type M, except for quantities less than 2.0 cu. ft. (60 L) where packaged mix complying with ASTM C 387, Type M, may be used.
 - b. Seal joints watertight using preformed plastic or rubber complying with ASTM C 990. Install sealing material according to sealant manufacturers' written instructions.
- D. Manhole Sump Frame and Grate: ASTM A 48/A 48M, Class 30B, gray cast iron.
- E. Pulling Eyes in Concrete Walls: Eyebolt with reinforcing-bar fastening insert, 2-inch- (50-mm-) diameter eye, and 1-by-4-inch (25-by-100-mm) bolt.
1. Working Load Embedded in 6-Inch (150-mm), 4000-psi (27.6-MPa) Concrete: 13,000-lbf (58-kN) minimum tension.
- F. Pulling-in and Lifting Irons in Concrete Floors: 7/8-inch- (22-mm-) diameter, hot-dip galvanized, bent steel rod; stress relieved after forming; and fastened to reinforcing rod. Exposed triangular opening.
1. Ultimate Yield Strength: 40,000-lbf (180-kN) shear and 60,000-lbf (270-kN) tension.
- G. Bolting Inserts for Concrete Utility Structure Cable Racks and Other Attachments: Flared, threaded inserts of noncorrosive, chemical-resistant, nonconductive thermoplastic material; 1/2-inch (13-mm) ID by 2-3/4 inches (69 mm) deep, flared to 1-1/4 inches (31 mm) minimum at base.
1. Tested Ultimate Pullout Strength: 12,000 lbf (53 kN) minimum.
- H. Ground Rod Sleeve: 3-inch (75-mm) PVC sleeve in manhole floors 2 inches (50 mm) from the wall adjacent to, but not underneath, the ducts routed from the facility.
- I. Expansion Anchors for Installation after Concrete Is Cast: Zinc-plated, carbon-steel-wedge type with stainless-steel expander clip with 1/2-inch (13-mm) bolt, 5300-lbf (24-kN) rated pullout strength, and minimum 6800-lbf (30-kN) rated shear strength.
- J. Cable Rack Assembly: Steel, hot-rolled hot-dip galvanized, except insulators.

1. Stanchions: T-section or channel with provisions to connect to other sections or channels to form a continuous unit; 1-1/2 inches (38 mm) in width by nominal 24 inches (600 mm) long; punched with 14 hook holes on 1-1/2-inch (38-mm) centers for cable-arm attachment.
 2. Arms: 1-1/2 inches (38 mm) wide, lengths ranging from 3 inches (75 mm) with 450-lb (204-kg) minimum capacity to 18 inches (450 mm) with 250-lb (114-kg) minimum capacity. Arms shall have slots along full length for cable ties and be arranged for secure mounting in horizontal position at any vertical location on stanchions.
- K. Duct-Sealing Compound: Nonhardening, safe for contact with human skin, not deleterious to cable insulation, and workable at temperatures as low as 35 deg F (2 deg C). Capable of withstanding temperature of 300 deg F (150 deg C) without slump and adhering to clean surfaces of plastic ducts, metallic conduit, conduit and duct coatings, concrete, masonry, lead, cable sheaths, cable jackets, insulation materials, and common metals.
- L. Fixed Manhole Ladders: Arranged for attachment to roof or wall and floor of manhole. Ladder and mounting brackets and braces shall be fabricated from nonconductive, structural-grade, fiberglass-reinforced resin hot-dip galvanized steel.
- M. Cover Hooks: Heavy duty, designed for lifts 60 lbf (270 N) and greater Light duty, designed for lifts less than 60 lbf (270 N). Two Insert number required.

2.8 SOURCE QUALITY CONTROL

- A. Test and inspect precast concrete utility structures according to ASTM C 1037.
- B. Nonconcrete Handhole and Pull-Box Prototype Test: Test prototypes of manholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.
1. Strength tests of complete boxes and covers shall be by an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
 2. Testing machine pressure gages shall have current calibration certification, complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Coordinate layout and installation of duct, duct bank, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field. Notify Architect if there is a conflict between areas of excavation and existing structures or archaeological sites to remain.
- B. Coordinate elevations of duct and duct-bank entrances into manholes, handholes, and boxes with final locations and profiles of duct and duct banks, as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations as required to suit field conditions and to ensure that duct and duct bank will drain to manholes and handholes, and as approved by Architect.

- C. Clear and grub vegetation to be removed, and protect vegetation to remain according to Section 31 1000 "Site Clearing." Remove and stockpile topsoil for reapplication according to Section 31 1000 "Site Clearing."

3.2 UNDERGROUND DUCT APPLICATION

- A. Duct for Electrical Cables More Than 600 V: Type EPC-80-PVC RNC, concrete-encased unless otherwise indicated.
- B. Duct for Electrical Feeders 600 V and Less: Type EPC-80-PVC RNC, concrete-encased unless otherwise indicated.
- C. Duct for Electrical Branch Circuits: Type EPC-80-PVC RNC, direct-buried unless otherwise indicated.
- D. Underground Ducts Crossing Paved Paths Walks and Driveways: Type EPC-40 PVC RNC, encased in reinforced concrete.
- E. Stub-ups: Concrete-encased PVC-coated GRC.

3.3 EARTHWORK

- A. Excavation and Backfill: Comply with Section 31 2000 "Earth Moving," but do not use heavy-duty, hydraulic-operated, compaction equipment.
- B. Restore surface features at areas disturbed by excavation, and re-establish original grades unless otherwise indicated. Replace removed sod immediately after backfilling is completed.
- C. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Section 32 9200 "Turf and Grasses" and Section 32 9300 "Plants."
- D. Cut and patch existing pavement in the path of underground duct, duct bank, and underground structures according to "Cutting and Patching" Article in Section 01 7300 "Execution."

3.4 DUCT AND DUCT-BANK INSTALLATION

- A. Install duct, spacers, and accessories into the duct-bank configuration shown. Duct installation requirements in this Section also apply to duct bank.
- B. Install duct according to NEMA TCB 2.
- C. Slope: Pitch duct a minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope duct from a high point between two manholes, to drain in both directions.
- D. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 48 inches (1200 mm) , both horizontally and vertically, at other locations unless otherwise indicated.

- E. Joints: Use solvent-cemented joints in duct and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent duct do not lie in same plane.
- F. Installation Adjacent to High-Temperature Steam Lines: Where duct is installed parallel to underground steam lines, perform calculations showing the duct will not be subject to environmental temperatures above 40 deg C. Where environmental temperatures are calculated to rise above 40 deg C, and anywhere the duct crosses above an underground steam line, install insulation blankets listed for direct burial to isolate the duct bank from the steam line.
- G. Terminator Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use manufactured, cast-in-place duct terminators, with entrances into structure spaced approximately 6 inches (150 mm) o.c. for 4-inch (100-mm) duct, and vary proportionately for other duct sizes.
1. Begin change from regular spacing to terminator spacing 10 feet (3 m) from the terminator, without reducing duct line slope and without forming a trap in the line.
 2. Expansion and Deflection Fittings: Install an expansion and deflection fitting in each duct in the area of disturbed earth adjacent to manhole or handhole. Install an expansion fitting near the center of all straight line duct with calculated expansion of more than 3/4 inch (19 mm).
- H. Building Wall Penetrations: Make a transition from underground duct to GRC at least 10 feet (3 m) outside the building wall, without reducing duct line slope away from the building and without forming a trap in the line. Use fittings manufactured for RNC-to-GRC transition. Install GRC penetrations of building walls as specified in Section 26 0544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."
- I. Sealing: Provide temporary closure at terminations of duct with pulled cables. Seal spare duct at terminations. Use sealing compound and plugs to withstand at least 15-psig (1.03-MPa) hydrostatic pressure.
- J. Pulling Cord: Install 200-lbf- (1000-N-) test nylon cord in empty ducts.
- K. Concrete-Encased Ducts and Duct Bank:
1. Excavate trench bottom to provide firm and uniform support for duct. Prepare trench bottoms as specified in Section 31 2000 "Earth Moving" for pipes less than 6 inches (150 mm) in nominal diameter.
 2. Width: Excavate trench 12 inches (300 mm) wider than duct on each side.
 3. Depth: Install so top of duct envelope is at least 24 inches (600 mm) below finished grade in areas not subject to deliberate traffic, and at least 30 inches (750 mm) below finished grade in deliberate traffic paths for vehicles unless otherwise indicated.
 4. Support duct on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.

5. **Spacer Installation:** Place spacers close enough to prevent sagging and deforming of duct, with not less than four spacers per 20 feet (6 m) of duct. Place spacers within 24 inches (600 mm) of duct ends. Stagger spacers approximately 6 inches (150 mm) between tiers. Secure spacers to earth and to duct to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
 6. **Elbows:** Use manufactured duct elbows for stub-ups, at building entrances, and at changes of direction in duct unless otherwise indicated. Extend encasement throughout length of elbow.
 7. **Reinforcement:** Reinforce concrete-encased duct where crossing disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
 8. **Forms:** Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
 9. **Concrete Cover:** Install a minimum of 3 inches (75 mm) of concrete cover between edge of duct to exterior envelope wall, 2 inches (50 mm) between duct of like services, and 4 inches (100 mm) between power and communications ducts.
 10. **Concreting Sequence:** Pour each run of envelope between manholes or other terminations in one continuous operation.
 - a. Start at one end and finish at the other, allowing for expansion and contraction of duct as its temperature changes during and after the pour. Use expansion fittings installed according to manufacturer's written instructions, or use other specific measures to prevent expansion-contraction damage.
 - b. If more than one pour is necessary, terminate each pour in a vertical plane and install 3/4-inch (15-mm) reinforcing-rod dowels extending a minimum of 18 inches (450 mm) into concrete on both sides of joint near corners of envelope.
 11. **Pouring Concrete:** Comply with requirements in "Concrete Placement" Article in Section 03 3000 "Cast-in-Place Concrete." Place concrete carefully during pours to prevent voids under and between duct and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Allow concrete to flow around duct and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-installation application.
- L. **Direct-Buried Duct and Duct Bank:**
1. Excavate trench bottom to provide firm and uniform support for duct. Comply with requirements in Section 31 2000 "Earth Moving" for preparation of trench bottoms for pipes less than 6 inches (150 mm) in nominal diameter.
 2. **Width:** Excavate trench 12 inches (300 mm) wider than duct on each side.
 3. **Width:** Excavate trench 3 inches (75 mm) wider than duct on each side.
 4. **Depth:** Install top of duct at least 36 inches (900 mm) below finished grade unless otherwise indicated.
 5. Set elevation of bottom of duct bank below frost line.
 6. Support ducts on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.

7. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than four spacers per 20 feet (6 m) of duct. Place spacers within 24 inches (600 mm) of duct ends. Stagger spacers approximately 6 inches (150 mm) between tiers. Secure spacers to earth and to ducts to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
 8. Elbows: Install manufactured duct elbows for stub-ups, at building entrances, and at changes of direction in duct direction unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
 9. After installing first tier of duct, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand place backfill to 4 inches (100 mm) over duct and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction. Comply with requirements in Section 31 2000 "Earth Moving" for installation of backfill materials.
 - a. Place minimum 3 inches (75 mm) of sand as a bed for duct. Place sand to a minimum of 6 inches (150 mm) above top level of duct.
 - b. Place minimum 6 inches (150 mm) of engineered fill above concrete encasement of duct.
 - M. Underground-Line Warning Tape: Bury conducting underground line specified in Section 26 0553 "Identification for Electrical Systems" no less than 12 inches (300 mm) above all concrete-encased duct and duct banks and approximately 12 inches (300 mm) below grade. Align tape parallel to and within 3 inches (75 mm) of centerline of duct bank. Provide an additional warning tape for each 12-inch (300-mm) increment of duct-bank width over a nominal 18 inches (450 mm). Space additional tapes 12 inches (300 mm) apart, horizontally.
- 3.5 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND BOXES
- A. Cast-in-Place Manhole Installation:
 1. Finish interior surfaces with a smooth-troweled finish.
 2. Knockouts for Future Duct Connections: Form and pour concrete knockout panels 1-1/2 to 2 inches (38 to 50 mm) thick, arranged as indicated.
 3. Comply with requirements in Section 03 3000 "Cast-in-Place Concrete" for cast-in-place concrete, formwork, and reinforcement.
 - B. Precast Concrete Handhole and Manhole Installation:
 1. Comply with ASTM C 891 unless otherwise indicated.
 2. Install units level and plumb and with orientation and depth coordinated with connecting duct, to minimize bends and deflections required for proper entrances.
 3. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1-inch (25-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.

- C. Elevations:
1. Manhole Roof: Install with rooftop at least 15 inches (375 mm) below finished grade.
 2. Manhole Frame: In paved areas and trafficways, set frames flush with finished grade. Set other manhole frames 1 inch (25 mm) above finished grade.
 3. Install handholes with bottom below frost line, below grade.
 4. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.
 5. Where indicated, cast handhole cover frame integrally with handhole structure.
- D. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.
- E. Manhole Access: Circular opening in manhole roof; sized to match cover size.
1. Manholes with Fixed Ladders: Offset access opening from manhole centerlines to align with ladder.
 2. Install chimney, constructed of precast concrete collars and rings, to support cast-iron frame to connect cover with manhole roof opening. Provide moisture-tight masonry joints and waterproof grouting for frame to chimney.
- F. Waterproofing: Apply waterproofing to exterior surfaces of manholes and handholes after concrete has cured at least three days. Waterproofing materials and installation are specified in Section 07 1353 "Elastomeric Sheet Waterproofing." or Section 07 1354 "Thermoplastic Sheet Waterproofing." After duct has been connected and grouted, and before backfilling, waterproof joints and connections, and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days.
- G. Dampproofing: Apply dampproofing to exterior surfaces of manholes and handholes after concrete has cured at least three days. Dampproofing materials and installation are specified in Section 07 1113 "Bituminous Dampproofing." After ducts are connected and grouted, and before backfilling, dampproof joints and connections, and touch up abrasions and scars. Dampproof exterior of manhole chimneys after mortar has cured at least three days.
- H. Hardware: Install removable hardware, including pulling eyes, cable stanchions, and cable arms, as required for installation and support of cables and conductors and as indicated.
- I. Fixed Manhole Ladders: Arrange to provide for safe entry with maximum clearance from cables and other items in manholes.
- J. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8 inches (97 mm) for manholes and 2 inches (50 mm) for handholes, for anchor bolts installed in the field. Use a minimum of two anchors for each cable stanchion.
- 3.6 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE
- A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting duct, to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of duct, and seal joint between box and extension as recommended by manufacturer.

- B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch (12.5-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.
- C. Elevation: In paved areas and trafficways, set cover flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.
- D. Install handholes and boxes with bottom below frost line, below grade.
- E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in enclosure.
- F. Field cut openings for duct according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.
- G. For enclosures installed in asphalt paving and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour a concrete ring encircling, and in contact with, enclosure and with top surface screeded to top of box cover frame. Bottom of ring shall rest on compacted earth.
 - 1. Concrete: 3000 psi (20 kPa), 28-day strength, complying with Section 03 3000 "Cast-in-Place Concrete," with a troweled finish.
 - 2. Dimensions: 10 inches wide by 12 inches deep (250 mm wide by 300 mm deep).

3.7 GROUNDING

- A. Ground underground ducts and utility structures according to Section 26 0526 "Grounding and Bonding for Electrical Systems."

3.8 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 - 1. Demonstrate capability and compliance with requirements on completion of installation of underground duct, duct bank, and utility structures.
 - 2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide a minimum 12-inch- (300-mm-) long mandrel equal to duct size minus 1/4 inch (6 mm). If obstructions are indicated, remove obstructions and retest.
 - 3. Test manhole and handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 26 0526 "Grounding and Bonding for Electrical Systems."
- B. Correct deficiencies and retest as specified above to demonstrate compliance.

3.9 CLEANING

- A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of duct until duct cleaner indicates that duct is clear of dirt and debris. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.

June 15, 2026

Smithsonian OPDC Project No. 2533105

SmithGroup Project No. 00100084

- B. Clean internal surfaces of manholes, including sump.
 - 1. Remove foreign material.

END OF SECTION

FOR REFERENCE ONLY

SECTION 26 0544 - SLEEVES AND SLEEVE SEALS FOR ELECTRICAL RACEWAYS AND CABLING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Sleeves for raceway and cable penetration of non-fire-rated construction walls and floors.
 - 2. Sleeve-seal systems.
 - 3. Sleeve-seal fittings.
 - 4. Grout.
 - 5. Silicone sealants.
- B. Related Requirements:
 - 1. Section 07 8413 "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Wall Sleeves:
 - 1. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, plain ends.
 - 2. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
- B. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies: Galvanized-steel sheet; 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.
- C. Sleeves for Rectangular Openings:
 - 1. Material: Galvanized sheet steel.
 - 2. Minimum Metal Thickness:
 - a. For sleeve cross-section rectangle perimeter less than 50 inches (1270 mm) and with no side larger than 16 inches (400 mm), thickness shall be 0.052 inch (1.3 mm).
 - b. For sleeve cross-section rectangle perimeter 50 inches (1270 mm) or more and one or more sides larger than 16 inches (400 mm), thickness shall be 0.138 inch (3.5 mm).

2.2 SLEEVE-SEAL SYSTEMS

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.

1. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
2. Basis-of-Design Product: Subject to compliance with requirements, provide [product indicated on Drawings] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. CALPICO, Inc.
 - c. Metraflex Company (The).
 - d. Pipeline Seal and Insulator, Inc.
 - e. Proco Products, Inc.
 - f. Insert manufacturer's name.
3. Sealing Elements: EPDM Nitrile (Buna N) rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
4. Pressure Plates: Carbon steel Plastic Stainless steel.
5. Connecting Bolts and Nuts: [**Carbon steel, with corrosion-resistant coating,**]
[**Stainless steel**] of length required to secure pressure plates to sealing elements.

2.3 SLEEVE-SEAL FITTINGS

- A. Description: Manufactured plastic, sleeve-type, waterstop assembly made for embedding in concrete slab or wall. Unit shall have plastic or rubber waterstop collar with center opening to match piping OD.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
2. Basis-of-Design Product: Subject to compliance with requirements, provide [product indicated on Drawings] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. Presealed Systems.
 - b. Insert manufacturer's name.

2.4 GROUT

- A. Description: Nonshrink; recommended for interior and exterior sealing openings in non-fire-rated walls or floors.
- B. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

2.5 SILICONE SEALANTS

- A. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below.

1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces that are not fire rated.
 2. Sealant shall have VOC content of <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

- A. Comply with NECA 1.
- B. Comply with NEMA VE 2 for cable tray and cable penetrations.
- C. Sleeves for Conduits Penetrating Above-Grade Non-Fire-Rated Concrete and Masonry-Unit Floors and Walls:
 1. Interior Penetrations of Non-Fire-Rated Walls and Floors:
 - a. Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 07 9200 "Joint Sealants."
 - b. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect material while curing.
 2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
 3. Size pipe sleeves to provide [1/4-inch (6.4-mm)] <Insert dimension> annular clear space between sleeve and raceway or cable unless sleeve seal is to be installed[**or unless seismic criteria require different clearance**].
 4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.
 5. Install sleeves for floor penetrations. Extend sleeves installed in floors [2 inches (50 mm)] <Insert dimension> above finished floor level. Install sleeves during erection of floors.
- D. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies:
 1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
 2. Seal space outside of sleeves with approved joint compound for gypsum board assemblies.
- E. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- F. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel cast-iron pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.

- G. Underground, Exterior-Wall and Floor Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between raceway or cable and sleeve for installing sleeve-seal system.

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at raceway entries into building.
- B. Install type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.3 SLEEVE-SEAL-FITTING INSTALLATION

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.
- D. Using grout, seal the space around outside of sleeve-seal fittings.

END OF SECTION

SECTION 26 0553 - IDENTIFICATION FOR ELECTRICAL SYSTEMS**PART 1 - GENERAL****1.1 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for electrical identification products.
- B. Samples: For each type of label and sign to illustrate composition, size, colors, lettering style, mounting provisions, and graphic features of identification products.
- C. Identification Schedule: For each piece of electrical equipment and electrical system components to be an index of nomenclature for electrical equipment and system components used in identification signs and labels. Use same designations indicated on Drawings.

PART 2 - PRODUCTS**2.1 PERFORMANCE REQUIREMENTS**

- A. Comply with ASME A13.1[**and IEEE C2**].
- B. Comply with NFPA 70.
- C. Comply with 29 CFR 1910.144 and 29 CFR 1910.145.
- D. Comply with ANSI Z535.4 for safety signs and labels.
- E. Comply with **NFPA 70E and Section 26 0573.19 "Arc-Flash Hazard Analysis"** requirements for arc-flash warning labels.
- F. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.
- G. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: 120 deg F (67 deg C), **ambient**; 180 deg F (100 deg C), **material surfaces**.

2.2 COLOR AND LEGEND REQUIREMENTS

- A. Raceways and Cables Carrying Circuits at 600 V or Less:
 - 1. **Black letters on an orange field.**
 - 2. Legend: Indicate voltage **and system or service type**.
- B. Color-Coding for Phase- and Voltage-Level Identification, 600 V or Less: Use colors listed below for ungrounded conductors.
 - 1. Color shall be factory applied or field applied for sizes larger than No. 8 AWG if authorities having jurisdiction permit.

2. Colors for 208/120-V Circuits:
 - a. Phase A: Black.
 - b. Phase B: Red.
 - c. Phase C: Blue.
 3. Colors for 240-V Circuits:
 - a. Phase A: Black.
 - b. Phase B: Red.
 4. Colors for 480/277-V Circuits:
 - a. Phase A: Brown.
 - b. Phase B: Orange.
 - c. Phase C: Yellow.
 5. Color for Neutral:
 - a. 208/120-V or 120/240-V Circuits: **White**.
 - b. 480/277-V Circuits: Grey.
 6. Color for Equipment Grounds: **Green**.
 7. Colors for Isolated Grounds: Green with two or more yellow stripes.
- C. Raceways and Cables Carrying Circuits at More Than 600 V:
1. Black letters on an orange field.
 2. Legend: "DANGER - CONCEALED HIGH VOLTAGE WIRING."
- D. Warning Label Colors:
1. Identify system voltage with black letters on an orange background.
- E. Warning labels and signs shall include, but are not limited to, the following legends:
1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
 2. **<Insert names and wording of warning signs or labels (for example, arc flash, multiple services and voltages, and others>.**
- F. Equipment Identification Labels:
1. Black letters on a white field.
 2. **<Insert specific requirements for equipment to be labeled, such as transformers, panelboards, etc.>**
- 2.3 MANUFACTURERS
- A. Subject to compliance with requirements, provide products by the following:
1. Brady Corporation.
 2. Carlton Industries, LP.
 3. Champion America.
 4. emedco.
 5. Hellermann Tyton
 6. Ideal Industries, Inc.
 7. LEM Products Inc.
 8. Marking Services, Inc.
 9. Panduit Corp.
 10. Seton Identification Products.

2.4 LABELS

- A. Vinyl Wraparound Labels: Preprinted, flexible labels laminated with a clear, weather- and chemical-resistant coating and matching wraparound clear adhesive tape for securing label ends.
- B. Snap-around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeves, with diameters sized to suit diameters and that stay in place by gripping action.
- C. Self-Adhesive Wraparound Labels: Preprinted Write-on, 3-mil- (0.08-mm-) thick, polyester vinyl flexible label with acrylic pressure-sensitive adhesive.
 - 1. Self-Lamination: Clear; UV-, weather- and chemical-resistant; self-laminating, protective shield over the legend. Labels sized such that the clear shield overlaps the entire printed legend.
 - 2. Marker for Labels: Permanent, waterproof, black ink marker recommended by tag manufacturer.
- D. Self-Adhesive Labels: Polyester Vinyl, thermal, transfer-printed, 3-mil- (0.08-mm-) thick, multicolor, weather- and UV-resistant, pressure-sensitive adhesive labels, configured for intended use and location.
 - 1. Minimum Nominal Size:
 - a. 1-1/2 by 6 inches (37 by 150 mm) for raceway and conductors.
 - b. 3-1/2 by 5 inches (76 by 127 mm) for equipment.
 - c. As required by authorities having jurisdiction.

2.5 BANDS AND TUBES

- A. Snap-around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeves, 2 inches (50 mm) long, with diameters sized to suit diameters and that stay in place by gripping action.
- B. Heat-Shrink Preprinted Tubes: Flame-retardant polyolefin tubes with machine-printed identification labels, sized to suit diameter and shrunk to fit firmly. Full shrink recovery occurs at a maximum of 200 deg F (93 deg C). Comply with UL 224.

2.6 TAPES AND STENCILS

- A. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.
- B. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; not less than 3 mils (0.08 mm) thick by 1 to 2 inches (25 to 50 mm) wide; compounded for outdoor use.
- C. Floor Marking Tape: 2-inch- (50-mm-) wide, 5-mil (0.125-mm) pressure-sensitive vinyl tape, with black and white yellow and black stripes and clear vinyl overlay.
- D. Underground-Line Warning Tape:
 - 1. Tape:
 - a. Recommended by manufacturer for the method of installation and suitable to identify and locate underground electrical [**and communications**] utility lines.

- b. Printing on tape shall be permanent and shall not be damaged by burial operations.
- c. Tape material and ink shall be chemically inert and not subject to degradation when exposed to acids, alkalis, and other destructive substances commonly found in soils.
- 2. Color and Printing:
 - a. Comply with ANSI Z535.1, ANSI Z535.2, ANSI Z535.3, ANSI Z535.4, and ANSI Z535.5.
 - b. Inscriptions for Red-Colored Tapes: "ELECTRIC LINE, HIGH VOLTAGE" <Insert inscription>.
 - c. Inscriptions for Orange-Colored Tapes: "TELEPHONE CABLE, CATV CABLE, COMMUNICATIONS CABLE, OPTICAL FIBER CABLE" <Insert inscription>.
- 3. Tag: [Type I] <Insert drawing designation>:
 - a. Pigmented polyolefin, bright colored, [**continuous-printed on one side with the inscription of the utility,**] compounded for direct-burial service.
 - b. Width: 3 inches (75 mm).
 - c. Thickness: 4 mils (0.1 mm).
 - d. Weight: 18.5 lb/1000 sq. ft. (9.0 kg/100 sq. m).
 - e. Tensile according to ASTM D 882: 30 lbf (133.4 N) and 2500 psi (17.2 MPa).
- 4. Tag: [Type II] <Insert drawing designation>:
 - a. Multilayer laminate, consisting of high-density polyethylene scrim coated with pigmented polyolefin; bright colored, [**continuous-printed on one side with the inscription of the utility,**] compounded for direct-burial service.
 - b. Width: 3 inches (75 mm).
 - c. Thickness: 12 mils (0.3 mm).
 - d. Weight: 36.1 lb/1000 sq. ft. (17.6 kg/100 sq. m).
 - e. Tensile according to ASTM D 882: 400 lbf (1780 N) and 11,500 psi (79.2 MPa).
- 5. Tag: Type ID Insert drawing designation:
 - a. Detectable three-layer laminate, consisting of a printed pigmented polyolefin film, a solid aluminum-foil core, and a clear protective film that allows inspection of the continuity of the conductive core; bright colored, [**continuous-printed on one side with the inscription of the utility,**] compounded for direct-burial service.
 - b. Width: 3 inches (75 mm).
 - c. Overall Thickness: 5 mils (0.125 mm).
 - d. Foil Core Thickness: 0.35 mil (0.00889 mm).
 - e. Weight: 28 lb/1000 sq. ft. (13.7 kg/100 sq. m).
 - f. Tensile according to ASTM D 882: 70 lbf (311.3 N) and 4600 psi (31.7 MPa).
- 6. Tag: Type IID Insert drawing designation:
 - a. Reinforced, detectable three-layer laminate, consisting of a printed pigmented woven scrim, a solid aluminum-foil core, and a clear protective film that allows inspection of the continuity of the conductive core; bright-colored, [**continuous-printed on one side with the inscription of the utility,**] compounded for direct-burial service.
 - b. Width: 3 inches (75 mm).
 - c. Overall Thickness: 8 mils (0.2 mm).
 - d. Foil Core Thickness: 0.35 mil (0.00889 mm).
 - e. Weight: 34 lb/1000 sq. ft. (16.6 kg/100 sq. m).
 - f. Tensile according to ASTM D 882: 300 lbf (1334 N) and 12,500 psi (86.1 MPa).

- E. Stenciled Legend: In nonfading, waterproof, black Insert color ink or paint. Minimum letter height shall be 1 inch (25 mm).

2.7 TAGS

- A. Metal Tags: Brass or aluminum, 2 by 2 by 0.05 inch (50 by 50 by 1.3 mm), with stamped legend, punched for use with self-locking cable tie fastener.
- B. Nonmetallic Preprinted Tags: Polyethylene tags, 0.015 inch (0.38 mm) 0.023 inch (0.58 mm) thick, color-coded for phase and voltage level, with factory screened printed permanent designations; punched for use with self-locking cable tie fastener.
 - 1. Marker for Tags: Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

2.8 SIGNS

- A. Baked-Enamel Signs:
 - 1. Preprinted aluminum signs, **[high-intensity reflective,]**punched or drilled for fasteners, with colors, legend, and size required for application.
 - 2. 1/4-inch (6.4-mm) grommets in corners for mounting.
 - 3. Nominal Size: 7 by 10 inches (180 by 250 mm).
- B. Metal-Backed Butyrate Signs:
 - 1. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs, with 0.0396-inch (1-mm) galvanized-steel backing, punched and drilled for fasteners, and with colors, legend, and size required for application.
 - 2. 1/4-inch (6.4-mm) grommets in corners for mounting.
 - 3. Nominal Size: 10 by 14 inches (250 by 360 mm).
- C. Laminated Acrylic or Melamine Plastic Signs:
 - 1. Engraved legend.
 - 2. Thickness:
 - a. For signs up to 20 sq. in. (129 sq. cm), minimum 1/16 inch (1.6 mm) thick.
 - b. For signs larger than 20 sq. in. (129 sq. cm), 1/8 inch (3.2 mm) thick.
 - c. Engraved legend with **[black letters on white face] [white letters on a dark gray background] <Insert colors>**.
 - d. **[Punched or drilled for mechanical fasteners with 1/4-inch (6.4-mm) grommets in corners for mounting] [Self-adhesive]**.
 - e. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.9 CABLE TIES

- A. General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.
 - 1. Minimum Width: 3/16 inch (5 mm).
 - 2. Tensile Strength at 73 Deg F (23 Deg C) according to ASTM D 638: 12,000 psi (82.7 MPa).
 - 3. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
 - 4. Color: Black, except where used for color-coding.

- B. Plenum-Rated Cable Ties: Self-extinguishing, UV stabilized, one piece, and self-locking.
 - 1. Minimum Width: 3/16 inch (5 mm).
 - 2. Tensile Strength at 73 Deg F (23 Deg C) according to ASTM D 638: 7000 psi (48.2 MPa).
 - 3. UL 94 Flame Rating: 94V-0.
 - 4. Temperature Range: Minus 50 to plus 284 deg F (Minus 46 to plus 140 deg C).
 - 5. Color: Black.

2.10 MISCELLANEOUS IDENTIFICATION PRODUCTS

- A. Paint: Comply with requirements in painting Sections for paint materials and application requirements. Retain paint system applicable for surface material and location (exterior or interior).
- B. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Self-Adhesive Identification Products: Before applying electrical identification products, clean substrates of substances that could impair bond, using materials and methods recommended by manufacturer of identification product.

3.2 INSTALLATION

- A. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.
- B. Install identifying devices before installing acoustical ceilings and similar concealment.
- C. Verify identity of each item before installing identification products.
- D. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and operation and maintenance manual.
- E. Apply identification devices to surfaces that require finish after completing finish work.
- F. Install signs with approved legend to facilitate proper identification, operation, and maintenance of electrical systems and connected items.
- G. System Identification for Raceways and Cables under 600 V: Identification shall completely encircle cable or conduit. Place identification of two-color markings in contact, side by side.
 - 1. Secure tight to surface of conductor, cable, or raceway.
- H. System Identification for Raceways and Cables over 600 V: Identification shall completely encircle cable or conduit. Place adjacent identification of two-color markings in contact, side by side.

1. Secure tight to surface of conductor, cable, or raceway.
- I. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, and signal connections.
- J. Emergency Operating Instruction Signs: Install instruction signs with white legend on a red background with minimum 3/8-inch- (10-mm-) high letters for emergency instructions at equipment used for **power transfer, load shedding, etc..**
- K. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from the floor.
- L. Accessible Fittings for Raceways: Identify the covers of each junction and pull box of the following systems with the wiring system legend and system voltage. System legends shall be as follows:
 1. "EMERGENCY POWER."
 2. "POWER."
 3. "UPS."
- M. Vinyl Wraparound Labels:
 1. Secure tight to surface of raceway or cable at a location with high visibility and accessibility.
 2. Attach labels that are not self-adhesive type with clear vinyl tape, with adhesive appropriate to the location and substrate.
- N. Snap-around Labels: Secure tight to surface at a location with high visibility and accessibility.
- O. Self-Adhesive Wraparound Labels: Secure tight to surface at a location with high visibility and accessibility.
- P. Self-Adhesive Labels:
 1. On each item, install unique designation label that is consistent with wiring diagrams, schedules, and operation and maintenance manual.
 2. Unless otherwise indicated, provide a single line of text with 1/2-inch- (13-mm-) high letters on 1-1/2-inch- (38-mm-) high label; where two lines of text are required, use labels 2 inches (50 mm) high.
- Q. Snap-around Color-Coding Bands: Secure tight to surface at a location with high visibility and accessibility.
- R. Heat-Shrink, Preprinted Tubes: Secure tight to surface at a location with high visibility and accessibility.
- S. Marker Tapes: Secure tight to surface at a location with high visibility and accessibility.
- T. Self-Adhesive Vinyl Tape: Secure tight to surface at a location with high visibility and accessibility.
 1. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for a minimum distance of 6 inches (150 mm) where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding.

- U. Floor Marking Tape: Apply stripes to finished surfaces following manufacturer's written instructions.
- V. Underground Line Warning Tape:
 1. During backfilling of trenches, install continuous underground-line warning tape directly above cable or raceway at 6 to 8 inches (150 to 200 mm) below finished grade. Use multiple tapes where width of multiple lines installed in a common trench [**or concrete envelope**] exceeds 16 inches (400 mm) overall.
 2. Limit use of underground-line warning tape to direct-buried cables.
 3. Install underground-line warning tape for direct-buried cables and cables in raceways.
- W. Tags:
 1. Place in a location with high visibility and accessibility.
 2. Secure using **general-purpose** or **plenum-rated** cable ties.
- X. Signs:
 1. Attach signs that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.
 2. Unless otherwise indicated, provide a single line of text with 1/2-inch- (13-mm-) high letters on minimum 1-1/2-inch- (38-mm-) high sign; where two lines of text are required, use signs minimum 2 inches (50 mm) high.
- Y. Cable Ties: General purpose, for attaching tags, except as listed below:
 1. Outdoors: UV-stabilized nylon.
 2. In Spaces Handling Environmental Air: Plenum rated.

3.3 IDENTIFICATION SCHEDULE

- A. Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment. Install access doors or panels to provide view of identifying devices.
- B. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.
- C. Concealed Raceways, Duct Banks, More Than 600 V, within Buildings: Tape and stencil. Stencil legend "DANGER - CONCEALED HIGH-VOLTAGE WIRING" with 3-inch- (75-mm-) high, black letters on 20-inch (500-mm) centers.
 1. Locate identification at changes in direction, at penetrations of walls and floors, and at 30-foot (10-m) maximum intervals.
- D. Accessible Raceways, Armored and Metal-Clad Cables, More Than 600 V: Vinyl wraparound labels Snap-around labels Self-adhesive labels.
 1. Locate identification at changes in direction, at penetrations of walls and floors, at 50-foot (15-m) maximum intervals in straight runs, and at 25-foot (7.6-m) maximum intervals in congested areas.
- E. Accessible Raceways and Metal-Clad Cables, 600 V or Less, for Service, Feeder, and Branch Circuits, More Than [30] <Insert number> A and [120] <Insert number> V to Ground: Identify with self-adhesive [**raceway labels**] [**vinyl tape applied in bands**].

1. Locate identification at changes in direction, at penetrations of walls and floors, at 50-foot (15-m) maximum intervals in straight runs, and at 25-foot (7.6-m) maximum intervals in congested areas.
- F. Accessible Fittings for Raceways and Cables within Buildings: Identify the covers of each junction and pull box of the following systems with self-adhesive labels containing the wiring system legend and system voltage. System legends shall be as follows:
1. "EMERGENCY POWER."
 2. "POWER."
 3. "UPS."
- G. Power-Circuit Conductor Identification, 600 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use **snap-around color-coding bands** or **self-adhesive vinyl tape** to identify the phase.
1. Locate identification at changes in direction, at penetrations of walls and floors, at 50-foot (15-m) maximum intervals in straight runs, and at 25-foot (7.6-m) maximum intervals in congested areas.
- H. Power-Circuit Conductor Identification, More Than 600 V: For conductors in vaults, pull and junction boxes, manholes, and handholes, use **nonmetallic preprinted tags colored and marked to indicate phase, and a separate tag with the circuit designation**.
- I. Control-Circuit Conductor Identification: For conductors and cables in pull and junction boxes, manholes, and handholes, use **self-adhesive labels** with the conductor or cable designation, origin, and destination.
- J. Control-Circuit Conductor Termination Identification: For identification at terminations, provide **self-adhesive labels** with the conductor designation.
- K. Conductors to Be Extended in the Future: Attach **marker tape** to conductors and list source.
- L. Locations of Underground Lines: Underground-line warning tape for power, lighting, communication, and control wiring and optical-fiber cable.
- M. Concealed Raceways and Duct Banks, More Than 600 V, within Buildings: Apply floor marking tape to the following finished surfaces:
1. Floor surface directly above conduits running beneath and within 12 inches (300 mm) of a floor that is in contact with earth or is framed above unexcavated space.
 2. Wall surfaces directly external to raceways concealed within wall.
 3. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in the building, or concealed above suspended ceilings.
- N. Workspace Indication: Apply floor marking tape and stencil to finished surfaces. Show working clearances in the direction of access to live parts. Workspace shall comply with NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.
- O. Instructional Signs: Self-adhesive labels, including the color code for grounded and ungrounded conductors.

- P. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: **Baked-enamel warning signs** or Metal-backed, butyrate warning signs.
1. Apply to exterior of door, cover, or other access.
 2. For equipment with multiple power or control sources, apply to door or cover of equipment, including, but not limited to, the following:
 - a. Power-transfer switches.
 - b. Controls with external control power connections.
- Q. Arc Flash Warning Labeling: Self-adhesive labels.
- R. Operating Instruction Signs: **Baked-enamel warning signs**, [Metal-backed, butyrate warning signs or **Laminated acrylic or melamine plastic signs**.
- S. Emergency Operating Instruction Signs: **Baked-enamel warning signs**, **Metal-backed, butyrate warning signs**, [Laminated acrylic or melamine plastic signs with white legend on a red background with minimum 3/8-inch- (10-mm-) high letters for emergency instructions at equipment used for **power transfer, load shedding**, etc..
- T. Equipment Identification Labels:
1. Indoor Equipment: Laminated acrylic or melamine plastic sign Self-adhesive sign.
 2. Outdoor Equipment: **Laminated acrylic or melamine sign**.
 3. Equipment to Be Labeled:
 - a. Panelboards: Typewritten directory of circuits in the location provided by panelboard manufacturer. Panelboard identification shall be in the form of an engraved, laminated acrylic or melamine label.
 - b. Enclosures and electrical cabinets.
 - c. Access doors and panels for concealed electrical items.
 - d. Switchgear.
 - e. Switchboards.
 - f. Transformers: Label that includes tag designation indicated on Drawings for the transformer, feeder, and panelboards or equipment supplied by the secondary.
 - g. Substations.
 - h. Emergency system boxes and enclosures.
 - i. Motor-control centers.
 - j. Enclosed switches.
 - k. Enclosed circuit breakers.
 - l. Enclosed controllers.
 - m. Variable-speed controllers.
 - n. Push-button stations.
 - o. Power-transfer equipment.
 - p. Contactors.
 - q. Remote-controlled switches, dimmer modules, and control devices.
 - r. Battery-inverter units.
 - s. Battery racks.
 - t. Power-generating units.
 - u. Monitoring and control equipment.
 - v. UPS equipment.
 4. Include the following information on equipment labels:
 - a. Equipment Identification per the Drawings
 - b. Source of power: (e.g., "Fed From PP-1A")

- c. What is fed (e.g., "Feeds EF-3")

END OF SECTION

FOR REFERENCE ONLY

SECTION 26 0573 – POWER SYSTEM STUDIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes a computer-based, fault-current study to determine the minimum interrupting capacity of circuit protective devices, overcurrent protective device settings for selective tripping, and the arc-flash hazard distance and the incident energy to which personnel could be exposed during work on or near electrical equipment.

1.2 ACTION SUBMITTALS

- A. Submit study reports indicated in this section prior to receiving final approval of the distribution equipment submittals, including but not limited to panelboards, transformers, switchboards, switchgear, substations, transfer switches, generators, motor controllers, and disconnect switches. If formal completion of studies will cause delay in equipment manufacturing, provide preliminary submittal of sufficient study data to ensure that the selection of devices and associated characteristics is satisfactory.
- B. Submit the following in digital form:
 - 1. Power system study input data, including completed computer program input data sheets.
 - 2. Power system study and equipment evaluation report; signed, dated, and sealed by a qualified professional engineer.
 - a. Revised single-line diagram, reflecting field investigation results and results of power system studies.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Power System Study Specialist.
- B. Product Certificates: For power system study software, certifying compliance with IEEE 399.

1.4 QUALITY ASSURANCE

- A. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are unacceptable.
- B. Short-Circuit Study Software Developer Qualifications: An entity that owns and markets computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.
 - 1. The computer program shall be developed under the charge of a licensed professional engineer who holds IEEE Computer Society's Certified Software Development Professional certification.
- C. Power System Study Specialist Qualifications: Professional engineer in charge of performing the study and documenting recommendations, licensed in the state where Project is located. All elements of the study shall be performed under the direct supervision and control of this professional engineer.

- D. Field Adjusting Agency Qualifications: An independent agency, with the experience and capability to adjust overcurrent devices and to conduct the testing indicated, that is a member company of the International Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

PART 2 - PRODUCTS

2.1 COMPUTER SOFTWARE

- A. Software Developers: Subject to compliance with requirements, perform studies utilizing software by one of the following:
 - 1. ESA Inc., EasyPower
 - 2. SKM Systems Analysis, Inc.
 - 3. ETAP.
- B. Comply with IEEE 399 and IEEE 551.
- C. Analytical features of fault-current-study computer software program shall have the capability to calculate mandatory features as listed in IEEE 399.

2.2 SHORT-CIRCUIT STUDY REPORT CONTENTS

- A. Executive summary.
- B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of the computer printout.
- C. One-line diagram, showing the following:
 - 1. Protective device designations and ampere ratings.
 - 2. Cable size and lengths.
 - 3. Transformer kilovolt ampere (kVA) and voltage ratings.
 - 4. Motor and generator designations and kVA ratings.
 - 5. Switchgear, switchboard, motor-control center, and panelboard designations.
- D. Comments and recommendations for system improvements, where needed.
- E. Protective Device Evaluation:
 - 1. Evaluate equipment and protective devices and compare to short-circuit ratings.
 - 2. Tabulations of circuit breaker, fuse, and other protective device ratings versus calculated short-circuit duties.
 - 3. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
 - 4. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in the standards to 1/2-cycle symmetrical fault current.
- F. Short-Circuit Study Input Data: As described in "Power System Data" Article in the Evaluations.
- G. Short-Circuit Study Output:

1. Low-Voltage Fault Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
 - a. Voltage.
 - b. Calculated fault-current magnitude and angle.
 - c. Fault-point X/R ratio.
 - d. Equivalent impedance.
2. Momentary Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
 - a. Voltage.
 - b. Calculated symmetrical fault-current magnitude and angle.
 - c. Fault-point X/R ratio.
 - d. Calculated asymmetrical fault currents:
 - 1) Based on fault-point X/R ratio.
 - 2) Based on calculated symmetrical value multiplied by 1.6.
 - 3) Based on calculated symmetrical value multiplied by 2.7.
3. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
 - a. Voltage.
 - b. Calculated symmetrical fault-current magnitude and angle.
 - c. Fault-point X/R ratio.
 - d. No AC Decrement (NACD) ratio.
 - e. Equivalent impedance.
 - f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
 - g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.

2.3 PROTECTIVE DEVICE COORDINATION STUDY REPORT CONTENTS

- A. Executive summary.
- B. Study descriptions, purpose, basis and scope. Include case descriptions, definition of terms and guide for interpretation of the computer printout.
- C. One-line diagram, showing the following:
 1. Protective device designations and ampere ratings.
 2. Cable size and lengths.
 3. Transformer kilovolt ampere (kVA) and voltage ratings.
 4. Motor and generator designations and kVA ratings.
 5. Switchgear, switchboard, motor-control center, and panelboard designations.
- D. Study Input Data: As described in "Power System Data" Article.
- E. Protective Device Coordination Study:
 1. Report recommended settings of protective devices, ready to be applied in the field. Use manufacturer's data sheets for recording the recommended setting of overcurrent protective devices when available.
 - a. Phase and Ground Relays:
 - 1) Device tag.
 - 2) Relay current transformer ratio and tap, time dial, and instantaneous pickup value.
 - 3) Recommendations on improved relaying systems, if applicable.

- b. Circuit Breakers:
 - 1) Adjustable pickups and time delays (long time, short time, ground).
 - 2) Adjustable time-current characteristic.
 - 3) Adjustable instantaneous pickup.
 - 4) Recommendations on improved trip systems, if applicable.
 - c. Fuses: Show current rating, voltage, and class.
 - F. Time-Current Coordination Curves: Determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:
 - 1. Device tag and title, one-line diagram with legend identifying the portion of the system covered.
 - 2. Terminate device characteristic curves at a point reflecting maximum symmetrical or asymmetrical fault current to which the device is exposed.
 - 3. Identify the device associated with each curve by manufacturer type, function, and, if applicable, tap, time delay, and instantaneous settings recommended.
 - 4. Plot the following listed characteristic curves, as applicable:
 - a. Power utility's overcurrent protective device.
 - b. Low-voltage fuses including manufacturer's minimum melt, total clearing, tolerance, and damage bands.
 - c. Low-voltage equipment circuit-breaker trip devices, including manufacturer's tolerance bands.
 - d. Transformer full-load current, magnetizing inrush current.
 - e. Ground-fault protective devices.
 - f. The largest feeder circuit breaker in each motor-control center and panelboard.
 - 5. Provide adequate time margins between device characteristics such that selective operation is achieved.
 - 6. Comments and recommendations for system improvements.

2.4 ARC-FLASH STUDY REPORT CONTENT

- A. Executive summary.
- B. Study descriptions, purpose, basis and scope.
- C. One-line diagram, showing the following:
 - 1. Protective device designations and ampere ratings.
 - 2. Cable size and lengths.
 - 3. Transformer kilovolt ampere (kVA) and voltage ratings.
 - 4. Motor and generator designations and kVA ratings.
 - 5. Switchgear, switchboard, motor-control center and panelboard designations.
- D. Study Input Data: As described in "Power System Data" Article.
- E. Arc-Flash Study Output:
 - 1. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
 - a. Voltage.
 - b. Calculated symmetrical fault-current magnitude and angle.

- c. Fault-point X/R ratio.
 - d. No AC Decrement (NACD) ratio.
 - e. Equivalent impedance.
 - f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
 - g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.
- F. Incident Energy and Flash Protection Boundary Calculations:
- 1. Arcing fault magnitude.
 - 2. Protective device clearing time.
 - 3. Duration of arc.
 - 4. Arc-flash boundary.
 - 5. Working distance.
 - 6. Incident energy.
 - 7. Hazard risk category.
 - 8. Recommendations for arc-flash energy reduction.
 - 9. Fault study input data, case descriptions, and fault-current calculations including a definition of terms and guide for interpretation of the computer printout.

PART 3 - EXECUTION

3.1 POWER SYSTEM DATA

- A. Obtain all data necessary for the conduct of the study.
- 1. Verify completeness of data supplied on the one-line diagram. Call any discrepancies to the attention of Architect.
 - 2. For equipment provided that is Work of this Project, use characteristics submitted under the provisions of action submittals and information submittals for this Project.
- B. Electrical Survey Data: Gather and tabulate the following input data to support the power system study:
- 1. Product Data for Project's overcurrent protective devices involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
 - 2. Obtain electrical power utility impedance at the service.
 - 3. Power sources and ties.
 - 4. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
 - 5. For generators, include voltage rating, power rating (kW/kVA), and alternator sub-transient reactance values.
 - 6. For reactors, provide manufacturer and model designation, voltage rating, and impedance.
 - 7. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip, SCCR, current rating, and breaker settings.
 - 8. Busway manufacturer and model designation, current rating, impedance, lengths, and conductor material.
 - 9. Motor horsepower and NEMA MG 1 code letter designation.
 - 10. Cable sizes, lengths, number, conductor material and conduit material (magnetic or nonmagnetic).

3.2 SHORT-CIRCUIT STUDY

- A. Perform study following the general study procedures contained in IEEE 399.
- B. Calculate short-circuit currents according to IEEE 551.
- C. The extent of the electrical power system to be studied is indicated on Drawings.
- D. Begin short-circuit current analysis at the service, extending down to the system overcurrent protective devices as follows:
 - 1. To normal system low-voltage load buses where fault current is 10 kA or less, or as required to satisfy coordination study and arc-flash study requirements.
- E. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study all cases of system-switching configurations and alternate operations that could result in maximum fault conditions.
- F. The calculations shall include the ac fault-current decay from induction motors. The calculations shall also account for the fault-current dc decrement, to address the asymmetrical requirements of the interrupting equipment.
 - 1. For grounded systems, provide a bolted line-to-ground fault-current study for areas as defined for the three-phase bolted fault short-circuit study.
- G. Calculate short-circuit momentary and interrupting duties for a three-phase bolted fault at each of the following:
 - 1. Electric utility's supply termination point.
 - 2. Generators.
 - 3. Incoming switchgear.
 - 4. Low-voltage switchgear.
 - 5. Motor-control centers.
 - 6. Control panels.
 - 7. Automatic transfer switches.
 - 8. Power distribution panelboards.
 - 9. Branch circuit panelboards.
 - 10. Disconnect switches.
 - 11. **<Insert significant locations in the system>.**
- H. Equipment short-circuit ratings and protective device interrupting ratings shall be selected based on the results of the fault current study.

3.3 PROTECTIVE DEVICE COORDINATION STUDY

- A. Perform study following the general study procedures contained in IEEE 399.
- B. Comply with IEEE 242 for calculating short-circuit currents and determining coordination time intervals.

- C. Evaluate overcurrent protective devices serving transformers and verify that the devices will not open upon energization of the transformer. Where device rating and/or type must be changed to avoid opening upon energization, notify the Contractor and Architect and record recommended device changes in the report.
- D. Evaluate overcurrent protective device coordination against project selective coordination criteria. Where the system devices and/or configuration cannot achieve the required selective coordination criteria, evaluate alternate overcurrent device selections that will meet the criteria and record recommendations in the report.

3.4 ARC-FLASH HAZARD ANALYSIS

- A. Comply with NFPA 70E and its Annex D for hazard analysis study.
- B. Calculate maximum and minimum contributions of fault-current size.
 - 1. The minimum calculation shall assume that the utility contribution is at a minimum and shall assume no motor load.
 - 2. The maximum calculation shall assume a maximum contribution from the utility and shall assume motors to be operating under full-load conditions.
- C. Calculate the arc-flash protection boundary and incident energy at locations in the electrical distribution system where personnel could perform work on energized parts.
- D. Safe working distances shall be specified for calculated fault locations based on the calculated arc-flash boundary, considering incident energy of 1.2 cal/sq.cm.
- E. Incident energy calculations shall consider the accumulation of energy over time when performing arc-flash calculations on buses with multiple sources. Iterative calculations shall take into account the changing current contributions, as the sources are interrupted or decremented with time. Fault contribution from motors shall be decremented as follows:
 - 1. Fault contribution from induction motors should not be considered beyond three to five cycles.
- F. Arc-flash computation shall include both line and load side of a circuit breaker as follows:
 - 1. When the circuit breaker is in a separate enclosure.
 - 2. When the line terminals of the circuit breaker are separate from the work location.
- G. Base arc-flash calculations on actual overcurrent protective device clearing time. Cap maximum clearing time at two seconds based on IEEE 1584, Section B.1.2.
- H. Labels: Print and install labels for each modeled piece of electrical equipment. Provide green bordered labels for PPE category 0 & 1, yellow bordered labels for PPE category 2 & 3, and red bordered labels for PPE category 4 & dangerous. Labels shall have flash protection and shock protection and shall include:
 - 1. Flash Hazard in inches
 - 2. Arc Flash rating in cal/sq. cm
 - 3. Flash protection boundary in inches
 - 4. Glove class
 - 5. PPE clothing category
 - 6. Shock hazard in volts

7. Limited Approach distance in inches
8. Restricted Approach distance in inches
9. Prohibited Approach distance in inches
10. Bus Designation
11. Upstream overcurrent protection designation
 - a. Where applicable: Indication if values are based on “maintenance mode” on or off. Where temporary settings are utilized in the upstream overcurrent protection device for arc energy reduction purposes, provide two separate labels for each condition.
12. Oversize print of Warning or Danger

3.5 ADJUSTING

- A. Make minor modifications to equipment as required to accomplish compliance with short-circuit study.
- B. Set field-adjustable overcurrent protective devices to the recommended settings based on results from the power systems studies.

3.6 DEMONSTRATION

- A. Train Owner's operating and maintenance personnel in the use of study results.

END OF SECTION

SECTION 26 0800 - COMMISSIONING OF ELECTRICAL SYSTEMS**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes Cx process requirements for the following electrical components, systems, assemblies, and equipment:
1. Electrical equipment connected to Normal power systems, including the following:
 - a. Motor-control centers.
 - b. Transformers.
 - c. **[Primary] [and] [secondary]** service electrical systems.
 - d. **[Distribution] [and] [branch-circuit]** panelboards.
 - e. Lightning protection systems.
 - f. Grounding systems.
 2. Electrical equipment connected to Essential power systems that provide an alternative source of power in the absence of power from the Normal power system, including the following:
 - a. Motor-control centers.
 - b. **[Primary] [and] [secondary]** service electrical systems.
 - c. **[Distribution] [and] [branch-circuit]** panelboards.
 - d. Lighting protection systems.
 - e. Grounding systems.
 - f. Generators.
 - g. UPS.
 3. Controls and instrumentation, including the following:
 - a. Equipment monitoring systems.
 - b. Energy monitoring and control systems.
 - c. Electrical metering and metering system.
 - d. Demand response systems.
 - e. Lighting control systems.
 - f. Security systems.
 - g. Fire-alarm systems.
 - h. **<Insert systems>**.
 4. Systems testing and verification, including **[Normal] [and] [Essential]** power systems[, **and transitions from Normal to Essential power systems and back**].
 5. **<Insert electrical systems>**.
- B. Related Requirements:
1. Section 01 9113 "General Commissioning Requirements" for general Cx process requirements and CxA responsibilities.

1.2 DEFINITIONS

- A. BoD: Basis-of-Design Document, as defined in Section 01 9113 "General Commissioning Requirements."
- B. Cx: Commissioning, as defined in Section 01 9113 "General Commissioning Requirements."

- C. CxA: Commissioning Authority, as defined in Section 01 9113 "General Commissioning Requirements."
- D. Essential Power Systems: A power system that a facility transitions to in the absence of Normal power. This power includes all systems classified as "standby" or "emergency," including "legally required."
- E. Low Voltage: 600 V and below.
- F. Medium Voltage: 601 V and above.
- G. Normal Power Systems: A power system that provides primary power to a facility.
- H. OPR: Owner's Project Requirements, as defined in Section 01 9113 "General Commissioning Requirements."
- I. "Systems," "Assemblies," "Subsystems," "Equipment," and "Components": Where these terms are used together or separately, they shall mean "as-built" systems, assemblies, subsystems, equipment, and components.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[BAS]** **[and]** **[electrical]** testing technician.
- B. Construction Checklists: Draft construction checklists will be created by CxA for Contractor review.
- C. Construction Checklists: Include the following and comply with requirements in Section 01 9113 "General Commissioning Requirements" for construction checklists:
 - 1. Instrumentation and control for electrical systems.
 - 2. Instrumentation and control for lighting control systems.
 - 3. Low-voltage power cables.
 - 4. Control voltage power cables.
 - 5. Electrical feeders and branch circuits.
 - 6. Liquid-filled transformers.
 - 7. Dry-type transformers.
 - 8. Instrument transformers.
 - 9. Switchgear and switchboard assemblies rated 1200 A or greater.
 - 10. Metal-enclosed bus duct.
 - 11. Busway.
 - 12. Motor-control centers.
 - 13. Low-voltage motor starters.
 - 14. Low-voltage air circuit breakers.
 - 15. Low-voltage insulated case circuit breakers.
 - 16. Low-voltage network protectors.
 - 17. Low-voltage air switches.
 - 18. Low-voltage surge protective devices.
 - 19. Medium-voltage power cables.
 - 20. Medium-voltage circuit breakers.
 - 21. Medium-voltage motor starters.

22. Medium-voltage air circuit breakers.
23. Medium-voltage vacuum circuit breakers.
24. Medium-voltage SF6 (sulfur hexafluoride) circuit breakers.
25. Medium-voltage air switches.
26. Medium-voltage surge protective devices.
27. Protective relays.
28. Metering devices.
29. Molded-case circuit breakers.
30. Low-voltage power circuit breakers.
31. Grounding systems.
32. Ground-fault protection systems.
33. Panelboards.
34. Receptacles and devices.
35. Engine generators.
36. Automatic transfer switches.
37. Variable-frequency drives.
38. AC synchronous motors and generators.
39. AC induction motors and generators.
40. DC motors and generators.
41. Battery systems.
42. Battery chargers.
43. Flooded lead-acid batteries.
44. Flooded lead-calcium batteries.
45. VRLA batteries.
46. UPS systems.
47. Power factor correction equipment, including capacitors, dry-type reactors (both shunt and current-limiting), and liquid-filled reactors (both shunt and current-limiting).
48. Lighting.
49. Vehicle charging equipment.
50. <Insert equipment>.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For electrical systems and components to include in operation and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Electrical Testing Technician Qualifications: Technicians to perform electrical Construction Checklist verification tests, Construction Checklist verification test demonstrations, Cx tests, and Cx test demonstrations shall have the following minimum qualifications:
 1. Journey level or equivalent skill level. Vocational school four-year-program graduate or an Associate's degree in electrical systems, or similar field. Degree may be offset by three years' experience as an apprentice or a journey-level electrician. Generally, required knowledge includes electrical and HVAC&R concepts, building operations, and application and use of tools and instrumentation to measure performance of electrical equipment, assemblies, and systems.
 2. Minimum [**three years'**] <Insert time> experience installing, servicing, and operating systems manufactured by approved manufacturer.

- B. Testing Equipment and Instrumentation Quality and Calibration: For test equipment and instrumentation required to perform electrical Cx work, perform the following:
1. Submit test equipment and instrumentation list. For each equipment or instrument, identify the following:
 - a. Equipment/instrument identification number.
 - b. Planned Cx application or use.
 - c. Manufacturer, make, model, and serial number.
 - d. Calibration history, including certificates from agencies that calibrate the equipment and instrumentation.
 2. Test equipment and instrumentation shall meet the following criteria:
 - a. Capable of testing and measuring performance within the specified acceptance criteria.
 - b. Be calibrated at manufacturer's recommended intervals with current calibration tags permanently affixed to the instrument being used.
 - c. Be maintained in good repair and operating condition throughout duration of use on Project.
 - d. Be recalibrated/repared if dropped or damaged in any way since last calibrated.
- C. Proprietary Test Instrumentation and Tools:
1. Equipment Manufacturer's Proprietary Instrumentation and Tools: For installed equipment included in the Cx process, test instrumentation and tools manufactured or prescribed by equipment manufacturer to service, calibrate, adjust, repair, or otherwise work on its equipment or required as a condition of equipment warranty, perform the following:
 - a. Submit proprietary instrumentation and tools list. For each instrument or tool, identify the following:
 - 1) Instrument or tool identification number.
 - 2) Equipment schedule designation of equipment for which the instrument or tool is required.
 - 3) Manufacturer, make, model, and serial number.
 - 4) Calibration history, including certificates from agencies that calibrate the instrument or tool, where appropriate.
 - b. Include a separate list of proprietary test instrumentation and tools in operation and maintenance manuals.
 - c. Electrical proprietary test instrumentation and tools become property of Owner at the time of Substantial Completion.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 CONSTRUCTION CHECKLISTS

- A. Prepare detailed construction checklists for electrical systems, subsystems, equipment, and components. Complete and submit construction checklists.

3.2 CONSTRUCTION CHECKLIST REVIEW

- A. Review and provide written comments on draft construction checklists. CxA will create required draft construction checklists and provide them to Contractor.
- B. Return draft Construction Checklist review comments within [10] <Insert number> days of receipt.
- C. When review comments have been resolved, CxA will provide final construction checklists, marked "Approved for Use, (date)."
- D. Use only construction checklists, marked "Approved for Use, (date)."

3.3 GENERAL TESTING REQUIREMENTS

- A. Certify that electrical systems, subsystems, and equipment have been installed, calibrated, and started and that they are operating according to the Contract Documents and approved Shop Drawings and submittals.
- B. Certify that electrical instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents and approved Shop Drawings and submittals, and that pretest set points have been recorded.
- C. Set systems, subsystems, and equipment into operating mode to be tested according to approved test procedures (for example, normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- D. Measure capacities and effectiveness of systems, assemblies, subsystems, equipment, and components, including operational and control functions to verify compliance with acceptance criteria.
- E. Test systems, assemblies, subsystems, equipment, and components operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and response according to acceptance criteria.
- F. Construction Checklists: Prepare and submit detailed construction checklists for electrical systems, subsystems, equipment, and components.
 - 1. Contributors to development of construction checklists shall include, but are not limited to, the following:
 - a. Electrical systems and equipment installers.
 - b. Electrical instrumentation and controls installers.
- G. Perform tests using design conditions, whenever possible.
 - 1. Simulated conditions may, with approval of Architect, be imposed using an artificial load when it is impractical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by CxA, and document simulated conditions and methods of simulation. After tests, return configurations and settings to normal operating conditions.
 - 2. Cx test procedures may direct that set points be altered when simulating conditions is impractical.

3. Cx test procedures may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are impractical.
- H. If tests cannot be completed because of a deficiency outside the scope of the electrical system, document the deficiency and report it to Owner. After deficiencies are resolved, reschedule tests.
- I. If seasonal testing is specified, complete appropriate initial performance tests and documentation and schedule seasonal tests.
- J. Coordinate schedule with, and perform Cx activities at the direction of the CxA.
- K. Comply with Construction Checklist requirements, including material verification, installation checks, startup, and performance tests requirements specified in Sections specifying electrical systems and equipment.
- L. Provide technicians, instrumentation, tools, and equipment to complete and document the following:
 1. Performance tests.
 2. Demonstration of a sample of performance tests.
 3. Cx tests.
 4. Cx test demonstrations.

3.4 Cx TESTS FOR ELECTRICAL SYSTEMS

- A. Verification of Normal Power System Operation:
 1. Prerequisites: Acceptance of results for construction checklists for Division 26 electrical components associated with Normal power system.
 2. Equipment and Systems to Be Tested: Division 26 electrical equipment.
 3. Test Purpose: Verify operation of Normal power system.
 4. Test Conditions: Energize components of Normal power system, one at a time.
 5. Acceptance Criteria: Proper operation of Normal power system over a [24] [48] <Insert number>-hour period.
- B. Verification of Essential Power System Operation:
 1. Prerequisites:
 - a. Acceptance of results for construction checklists for Division 26 electrical components associated with Essential power system.
 - b. Completion of "Verification of Normal Power System Operation" tests.
 2. Equipment and Systems to Be Tested: Division 26 electrical equipment.
 3. Test Purpose: Verify operation of Essential power system.
 4. Test Conditions:
 - a. Energize components of Normal power system.
 - b. Simulate a failure of Normal power system.
 5. Acceptance Criteria: Transfer of power from Normal to Essential power system within OPR.
- C. Verification of Control and Instrumentation:
 1. Prerequisites: Acceptance of results for construction checklists.
 - a. Section 26 0913 "Electrical Power Monitoring and Control."
 - b. Section 26 0926 "Lighting Control Panelboards."

- c. Section 26 0936 "Modular Dimming Controls."
 - d. Section 26 0943.16 "Addressable-Luminaire Lighting Controls."
 - e. Section 26 0943.23 "Relay-Based Lighting Controls."
 - f. Section 26 2713 "Electricity Metering."
 - g. Section 26 3533 "Power Factor Correction Equipment."
- D. Test Purpose: Verify operation of control and monitoring systems for Normal and Essential power systems.
- E. Test Conditions:
 - 1. Energize components of Normal power system.
 - 2. Test operation of equipment.
- F. Acceptance Criteria: Operation of equipment according to OPR.

END OF SECTION

FOR REFERENCE ONLY

SECTION 26 0913 - ELECTRICAL POWER MONITORING AND CONTROL

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes equipment and systems used to monitor and control electrical consumption:
 - 1. Multifunction meters.
 - 2. Electrical power monitoring system software.
 - 3. Electrical power monitoring and control software.
 - 4. Network configuration software.
 - 5. Monitoring and control of power distribution equipment.
 - 6. System operator interfaces.
 - 7. Desktop workstations.
 - 8. Portable workstations.
 - 9. Raceways and boxes.
 - 10. Wires and cables.
 - 11. Identification.
- B. Related Requirements:
 - 1. Section 23 0923.13 "Energy Meters" for electricity meters for HVAC equipment.
 - 2. Section 26 2713 "Electricity Metering" for equipment to meter electricity consumption and demand for tenant submetering.

1.2 DEFINITIONS

- A. Active Power: The average power consumed by a unit. Also known as "real power."
- B. Analog: A continuously varying signal value, such as current, flow, pressure, or temperature.
- C. Apparent (Phasor) Power: " $S = VI$ " where "S" is the apparent power, "V" is the rms value of the voltage, and "I" is the rms value of the current.
- D. Firmware: Software (programs or data) that has been written onto read-only memory (ROM). Firmware is a combination of software and hardware. Storage media with ROMs that have data or programs recorded on them are firmware.
- E. KY Pulse: A method of measuring consumption of electricity that is based on a relay operating like a SPST switch.
- F. KYZ Pulse: A method of measuring consumption of electricity based on a relay operating like a SPDT switch.
- G. LAN: Local area network.
- H. L-G: Line to ground.
- I. L-L: Line to line.
- J. L-N: Line to neutral.

- K. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or remote-control, signaling and power-limited circuits.
- L. Modbus TCP/IP: An open protocol for exchange of process data.
- M. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.
- N. N-G: Neutral to ground.
- O. Power Factor: The ratio of active power to apparent power, sometimes expressed in percentage.
- P. rms: Root-mean-square value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.
- Q. TCP/IP: Transport control protocol/Internet.
- R. UPS: Uninterruptible power supply; used both in singular and plural context.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for power monitoring and control.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Sustainable Design Submittals:
 - 1. Product Data: Indicating that computers used by the system are certified by ENERGY STAR.
- C. Shop Drawings: For power monitoring and control equipment.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include details of equipment assemblies. Indicate dimensions, method of field assembly, components, and location and size of each field connection.
 - a. Attach copies of approved Product Data submittals for products (such as switchboards, switchgear, and motor-control centers) that describe the following:
 - 1) Location of the meters and gateways, and routing of the connecting wiring.
 - 2) Details of power monitoring and control features to illustrate coordination among related equipment and power monitoring and control.
 - 3. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.
 - 4. Network naming and numbering scheme.
 - 5. Include diagrams for power, signal, and control wiring. Coordinate nomenclature and presentation with a block diagram.
 - 6. Specifications for workstations.

7. UPS sizing calculations for workstation.
8. Surge Suppressors: Data for each device used and where applied.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
- B. Design Data:
 1. Manufacturer's system installation and setup guides, with data forms to plan and record options and setup decisions.
 - a. Project Record Drawings of as-built versions of submittal Shop Drawings provided in electronic PDF format on compact disk or portable storage device with a USB interface.
 - b. Testing and commissioning reports and checklists of completed final versions of reports, checklists, and trend logs.
 - c. As-built versions of submittal Product Data.
 - d. Names, addresses, e-mail addresses, and 24-hour telephone numbers of Installer and service representatives for the system and products.
 - e. Operator's manual with procedures for operating control systems including logging on and off, handling alarms, producing point reports, trending data, overriding computer control, and changing set points and variables.
 - f. Programming manuals with description of programming language and syntax, of statements for algorithms and calculations used, of point database creation and modification, of program creation and modification, and of editor use.
 - g. Engineering, installation, and maintenance manuals that explain how to do the following:
 - 1) Design and install new points, panels, and other hardware.
 - 2) Perform preventive maintenance and calibration.
 - 3) Debug hardware problems.
 - 4) Repair or replace hardware.
 - h. Documentation of all programs created using custom programming language including set points, tuning parameters, and object database.
 - i. Backup copy of graphic files, programs, and database on compact disk or portable storage device with a USB interface.
 - j. Complete original-issue documentation, installation, and maintenance information for furnished third-party hardware including computer equipment and sensors.
 - k. Complete original-issue copies of furnished software, including operating systems, custom programming language, workstation software, and graphics software on compact disk or portable storage device with a USB interface.
 - l. Recommended preventive maintenance procedures for system components, including schedule of tasks such as inspection, cleaning, and calibration; time between tasks; and task descriptions.
 - m. Owner training materials.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For power monitoring and control units to include in operation and maintenance manuals.
- B. Software and Firmware Operational Documentation:
 1. Software operating and upgrade manuals.

2. Software licenses.
3. Software service agreement.
4. PC installation and operating documentation, manuals, and software for the PC and all installed peripherals. Provide separately for each PC.
5. Hard copies of manufacturer's specification sheets, operating specifications, design guides, user's guides for software and hardware, and PDF files on compact disk or portable storage device with a USB interface of the hard-copy submittal.
6. Program Software Backup: On compact disk or portable storage device with a USB interface, complete with data files.
7. Device address list.
8. Printout of software application and graphic screens.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Addressable Relays: One for every 10 installed. Furnish at least one of each type.
 2. Data Line Surge Suppressors: One for every 10 of each type installed. Furnish at least one of each type.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

1.8 COORDINATION

- A. Coordinate features of distribution equipment and power monitoring and control components to form an integrated interconnection of compatible components.
 1. Match components and interconnections for optimum performance of specified functions.
- B. Coordinate Work of this Section with those in Sections specifying distribution components that are monitored or controlled by power monitoring and control equipment.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Microprocessor-based monitoring and control of electrical power distribution system(s) that includes the following:
 1. Electrical meters that monitor, control, and connect to the data transmission network.
 2. LAN: High-speed, multi-access, open, nonproprietary, industry-standard communication protocols.
 3. Include PC-based workstation with web access, with its operating system and application software, connected to data transmission network.
- B. The electrical power monitoring and control system shall be Internet based.
 1. System software shall be based on server thin-client architecture, designed around open standards of internet technology.

2. Intent of thin-client architecture is to provide operators complete access to power monitoring and control system via an Internet browser. No special software other than an Internet browser shall be required to access graphics, point displays, and trends; to configure trends, points, and controllers; and to edit programming.
 3. Internet access shall be password protected.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. UL Compliance: Listed and labeled as complying with UL 61010-1.

2.2 PERFORMANCE REQUIREMENTS

- A. Surge Protection: For external wiring of each conductor entry connection to components to protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads.
1. Minimum Protection for Power Lines 120 V and More: Auxiliary panel suppressors complying with requirements in Section 26 4313 "Surge Protection for Low-Voltage Electrical Power Circuits."
 2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Lines: Comply with requirements as recommended by manufacturer for type of line being protected.
- B. Addressable Devices: All transmitters and receivers shall communicate unique device identification and status reports to monitoring and control clients.
- C. Interface with DDC System for HVAC: Provide factory-installed hardware and software to enable the DDC system for HVAC to monitor, display, and record data for use in processing reports.
1. Hardwired Monitoring Points: Electrical power demand (kilowatts), electrical power consumption (kilowatt-hours), **power factor** <Insert monitoring point>.
 2. **[ASHRAE 135 (BACnet)] [LonTalk] [Modbus] [Industry-accepted, open-protocol]** <Insert type of interface> communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely monitor meter information from a DDC system for HVAC workstation. Control features and monitoring points displayed locally at metering panel shall be available through the DDC system for HVAC.
- D. Backup Power Source:
1. Electrical power distribution equipment served by a backup power source for controls shall have associated power monitoring and control system products that monitor and control such systems and equipment also served from a backup power source.

2.3 MULTIFUNCTION ENERGY METERS <Insert drawing designation>

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Eaton.
 2. General Electric Company.
 3. Schneider Electric USA, Inc.

- B. Multifunction Energy Meter: Separately mounted, modular, permanently installed, solid-state, digital I/O instrument for power and energy metering and monitoring; complying with UL 61010-1.
1. Capable of metering 4-wire Y, 3-wire Y, 3-wire delta, and single-phase power systems.
 2. Equipped with security lock to protect revenue related metering from unauthorized and accidental changes.
- C. Environment: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
1. Indoor installation in spaces that have environmental controls to maintain ambient conditions of minus 4 deg to 158 deg F (minus 20 to plus 70 deg C) dry bulb and 5 to 95 percent relative humidity, noncondensing.
 2. Comply with IEC 60529 degree of protection code of IP65 for the front of the meter, and code of IP30 for the body.
- D. Overvoltage: Comply with UL 61010-1 overvoltage withstand rating for CAT III.
- E. Accuracy:
1. Comply with ANSI C12.20, Class 0.5.
 2. Neutral Current Measurement: Not more than 0.65 percent.
 3. Power Factor: 1.0 percent.
 4. Frequency: 0.1 percent.
 5. THD: 1.0 percent.
 6. Waveform Sampling: 64 per cycle.
- F. Data Link:
1. RS-485 Modbus, RTU protocol, [2] [4]-wire connection to host devices with a compatible port.
- G. Meter Physical Characteristics:
1. Display: Backlit LCD with antiglare and scratch-resistant lens.
 2. Display of Metered Values:
 - a. One screen to show at least three user-selected values displayed at the same time. Selections available to display shall include the following:
 - 1) All meters.
 - 2) Measurements.
 - 3) THD.
 - 4) Energy.
 - 5) Demand.
 - 6) Minimum and maximum values.
 - 7) Power demand.
- H. Sampling Rate: Continuously sample and record voltage and current at a rate not less than 64 Insert number samples per cycle, simultaneously on all voltage and current channels of the meter.
- I. Meters:
1. Instantaneous, rms:
 - a. Current: Each phase, neutral and three-phase average.

- b. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
 - c. Active Power (kW): Each phase and three-phase total.
 - d. Reactive Power (kVAR): Each phase and three-phase total.
 - e. Apparent Power (kVA): Each phase and three-phase total.
 - f. Power Factor: Each phase and three-phase total.
 - 2. Energy:
 - a. Active Energy (kWh): Three-phase total.
 - 3. Demand, Derived from Instantaneous rms Meters:
 - a. Current: Present and maximum.
 - b. Active: Present and maximum.
 - c. Reactive: Present and maximum.
 - d. Apparent: Present and maximum.
 - 4. Power Quality Measurements:
 - a. THD: Current and voltage from measurements simultaneously from the same cycle, as can be calculated from the specified sampling rate.
- J. I/O: Two optically isolated digital outputs for KY pulsing or control. Output signal characteristics shall be 150 mA at 200 V.
- 1. KY Pulse: Generate standard KY pulses for a user-defined increment of metered active energy as follows:
 - a. User-defined pulse output, associated with kWh.
 - b. User-defined pulse output, associated with kVARh.
- K. Capacities and Characteristics:
- 1. Power Supply: 120-V ac, 60 Hz.
 - 2. Circuit Connections:
 - a. Voltage: Measurement autoranging, 60- to 400-V ac L-N. Connect directly to low-voltage (600 V and less) without using voltage transformers. Meter impedance shall be 2-megohm L-L or greater. Overload Tolerance: 1500-V ac, rms, continuously.
 - b. Current: Connect to instrument grade current transformer with a metering range of 5 mA to 6 A. Overcurrent tolerance of the instrument shall be 10 A continuous, 50 A for 10 seconds once per hour, and 120 A for one second per hour.
 - c. Frequency: 45 to 65 Hz.
 - d. Time: Input from a GPS receiver to synchronize the internal clock of the instrument and to time-synchronize this instrument with the network to a deviation of not greater than 1 ms.
- 2.4 PC OPERATING SYSTEM SOFTWARE
- A. Description: System software shall monitor, analyze, display, control, and save all the parameters and features available at the connected meter.
 - B. Software: Configured to run on a portable laptop computer, a single PC, or a tablet computer, with capability for accessing a single meter at a time, at the location of the meter. System is not connected to LAN.
 - C. Minimum Requirements:
 - 1. Real-time multitasking and multiuser [32-] [or] [64-]bit operating system that allows execution of multiple real-time programs and custom program development.

2. Operating system shall be capable of operating Microsoft Windows applications.
3. Scheduling software shall schedule centrally based time and event, temporary, and exception day programs.

2.5 NETWORKED PC OPERATING SYSTEM SOFTWARE

- A. Description: System software shall monitor, analyze, display, control, and save parameters and features available at each of the connected meters.
- B. Software: Configured to run on a single PC, with capability for accessing multiple devices simultaneously. Software shall include interactive graphics client and shall be web enabled.
- C. System Software Minimum Requirements:
 1. Real-time multitasking and multiuser [32-] [or] [64-]bit operating system that allows concurrent multiple workstations operating and concurrent execution of multiple real-time programs and custom program development.
 2. Operating system shall be capable of operating Microsoft Windows applications.
 3. Database management software shall manage all data on an integrated and non-redundant basis. Additions and deletions to database shall be without detriment to existing data. Include cross linkages so no data required by a program can be deleted by an operator until that data have been deleted from respective programs.
 4. Scheduling software shall schedule centrally based time and event, temporary, and exception day programs.
- D. Operator Interface Software:
 1. Minimize operator training through use of English language prorating and English language point identification.
 2. Minimize use of a typewriter-style keyboard through use of a pointing device, touchscreen, or mouse.
 3. Operator sign-off shall be a manual operation or, if no keyboard or mouse activity takes place, an automatic sign-off.
 4. Automatic sign-off period shall be programmable from 1 to 60 minutes in 1-minute increments on a per operator basis.
 5. Record operator sign-on and sign-off activity.
 6. Security Access:
 - a. Operator access to electrical monitoring and control system shall be under password control.
 - b. An alphanumeric password shall be user assignable to each operator.
 - c. Software shall have at least five access levels.
 - 1) View - View information. No change privileges allowed.
 - 2) User - Same as View, but is able to initiate control functions.
 - 3) Controller - Same as User, but is able to initiate communications.
 - 4) Operator - Same as Controller, but is able to modify configurations.
 - 5) Supervisor - Same as Operator, but is able to administer security privileges.
 - d. Each menu item shall be assigned an access level so that a one-for-one correspondence between operator-assigned access level(s) and menu-item access level(s) is required to gain access to menu item.
 - e. Display menu items to operator with those menu items capable of access highlighted. Menu and operator access level assignments shall be online programmable and under password control.

E. Graphic Interface Software:

1. Include a full interactive graphical selection means of accessing and displaying system data to operator.
2. Descriptors for graphics, points, alarms, and such shall be modified through workstation under password control.
3. Display operator accessed data on the monitor.
4. Help Features: On-line context-sensitive help utility to facilitate operator training and understanding.

2.6 POWER MONITORING AND CONTROL SOFTWARE

A. Data Storage and Data Sharing:

1. Query and download logs of interval data stored on metering devices.
2. Query and download logs of alarm and event data stored on metering devices.
3. Query and download logs of waveform capture data stored on metering devices.
4. Query and download logs of interval data generated by the software and calculated by the meters.
5. Query and download logs of alarm and event data generated by the software and calculated by the meters.
6. Automatically re-arm the waveform recorders, on upload of information.
7. Provide a facility to archive, trim, and back up the database on demand, or on a schedule.
8. Provide a facility to view historical data from archived databases.
9. Support user changes to the database.
 - a. Support on-line changes while the data storage/retrieval application is running.
 - b. Suffer no interruption to its operation while changes are being made.
 - c. Require no restart once the configuration has been performed.

B. Project-Specific Graphics: Graphics documentation including, but not limited to, the following:

1. Site plan showing each building, and additional site elements, which are being controlled or monitored by the electrical power monitoring and control system.
2. Plan for each building floor, showing the following:
 - a. Locations and identification of all monitored and controlled electrical equipment.
 - b. **<Insert requirements>.**
3. Control schematic for each device that is controlled by the meters of this Section, including a graphic system schematic representation[, **similar to that indicated on Drawings,**] with device identification.
4. Graphic display for each piece of equipment connected to the electrical monitoring and control system through a data link.
5. Electrical power monitoring and control system network riser diagram that shows schematic layout for entire system including meters, **[gateways] [and] [other network devices]**.

2.7 NETWORK CONFIGURATION SOFTWARE

A. Network Management Graphical Interface Features:

1. Add and remove devices in the power monitoring and control network.
2. Application for naming devices based on a user-defined naming scheme.
3. Add and remove I/O servers in the power monitoring and control network.
4. Edit communication properties for devices including timeouts and delays.
5. Display mandatory fields when adding a new device.

6. Allow to manually connect and disconnect serial, Ethernet, modem, and Ethernet gateway sites.
 7. Enable and disable devices and sites in the power monitoring and control network without interruption to other devices or sites.
 8. Pool modem resources so that the software uses any available modem.
 9. Monitor the following diagnostics:
 - a. Communication request/response and error rates, and timeouts.
 - b. Log acquisition services.
- B. Database Maintenance Features:
1. Backup, archive, and trim data, event, and waveform logs.
 - a. Record start and end date for operation.
 - b. Allow copying data to another database.
 - c. Be capable of selecting any or all of the logs specified for the meters that are Work of this Section.
 - 1) Data logs.
 - 2) Event logs.
 - 3) Waveform logs.
- C. Web Reporter: Allow viewing historical data in preformatted report templates via a web browser.
1. Features:
 - a. User-configurable report generator to trigger on event, based on a schedule, or manual initiation.
 - b. Format reports in HTML, PDF, TIF, Excel, XML, or user-selected printer, or network folder.
 - c. Distribution of reports via email.
 2. Report on power and demand profiles.
 3. Power quality report with CBEMA evaluation.
 4. EN 50160 compliance report.
 5. 100-ms PQ report.
 6. Energy over Period Report:
 - a. User-defined rollup interval by day, week, month, or year.
 - b. Compare daily energy to the following:
 - 1) Previous day.
 - 2) Same day, previous week.
 - 3) Same day, previous month.
 - 4) User-defined specific day.
 - c. Compare weekly energy to the following:
 - 1) Previous week.
 - 2) Same week from previous month.
 - 3) Same week from previous year.
 - 4) User-defined specific week.
 - d. Compare monthly energy to the following:
 - 1) Previous month.
 - 2) Same month from previous year.
 - 3) User-defined specific month.
 - e. Compare annual energy to the following:
 - 1) Previous year.
 - 2) User-defined specific year.

7. Energy by daily period report for the user-defined periods. Aggregate consumption of the periods by the day, week, and year.
8. Tabular Report: Show values for multiple measurements and measurements from multiple devices in tabular format.
9. Trend Report:
 - a. Show values for multiple measurements and measurements from multiple devices in any of the following graphical formats:
 - 1) Line chart.
 - 2) Pie graph.
 - 3) Bar chart.
 - 4) Column chart.
 - 5) Smooth line chart.
 - 6) Stacked column chart.
 - 7) Stacked bar chart.
10. Alarm and Event History: User formatted, based on the meters and priority; and with user-defined alarm and event reports.
11. System Configuration Report:
 - a. Device name.
 - b. Device type.
 - c. Device address.
 - d. Connection status.
 - e. Device protocol.
 - f. Device description.
12. Each default report shall include the following:
 - a. Summary aggregation of data from the selected devices.
 - b. Individual device information.
 - c. Raw data.
13. The reporting tool shall provide a graphical interface to create and manage multiple Time of Use schedules:
 - a. Tariffs including energy cost rates per kWh, kVARh, and kVAh, and demand charges per kW, kVAR, and kVA.
 - b. Off-peak and on-peak times.

2.8 MONITORING AND CONTROL OF POWER DISTRIBUTION EQUIPMENT

- A. Power Distribution Equipment: Web-enabled, direct connected to the LAN or intranet.
- B. Instrument Transformers: Comply with IEEE C57.13.
 1. Potential Transformers: Secondary voltage rating of 120 V and NEMA C12.11 accuracy class of 0.3 with burdens of W, X, and Y.
 2. Current Transformers: Burden and accuracy class suitable for connected relays, meters, and instruments.
- C. Ethernet Connectivity:
 1. A multipoint, RS-485 Modbus serial communications network shall be included within the equipment to interconnect breaker trip units, protective relays, drives, and metering devices equipped with communications.
 2. Serial communications network shall be wired to an Ethernet server in the incoming section of the equipment. Hardware and cabling required for the connection to the network shall be included within the power distribution equipment.

3. Serial communications devices within the equipment shall be factory addressed and tested to verify reliable communications to the equipment's Ethernet Server.

D. Ethernet Gateways:

1. User configurable; complying with UL 60950-1, and IEEE 802.3, Class 3 PoE.
2. Include provisions to set initial Ethernet parameters via a local operator interface, or standard (RJ-45) Ethernet port, that is accessible from the front of the equipment. Initial setup shall be limited to basic Ethernet addressing parameters, as assigned by Owner.
3. Common Gateway Features:
 - a. User configurable, with secure password-protected login process.
 - b. Include communications diagnostic information for serial and Ethernet ports as well as internal health status and memory management information through embedded HTML web pages for viewing using a standard web browser.
 - c. Include embedded HTML pages providing real-time information from devices connected to the Ethernet gateway's RS-485 port(s) through a standard web browser.
 - d. Allow firmware upgrades through the communications port.
4. Include a "Quick-Start" guide with the equipment to describe the commissioning process for setting the equipment's Ethernet network address and for ensuring trouble-free data access from any PC on the network, using a standard web browser.
5. Implement a common user interface ("look and feel") across all styles of power equipment.

E. Distribution Equipment Monitoring:

1. Main menu and summary pages, factory configured, to display data for each communicating device within the power equipment lineup.
2. Display Data:
 - a. Circuit summary page to display circuit name, three-phase average rms current, real power (kW), power factor, and breaker status (if applicable).
 - b. Load current summary page to display circuit name, and phase a, b, and c rms current values.
 - c. Demand current summary page to display circuit name, and phase a, b, and c average demand current values.
 - d. Power summary page to display circuit name, present demand power (kW), peak demand power (kW), and recorded time and date.
 - e. Energy summary page to display circuit name, real energy (kWh), reactive energy (kVARh), and time/date of last reset.
 - f. For unit substations equipped with dry-type transformer(s) and microbased temperature controller(s), the circuit summary web page listed above shall be augmented with transformer coil temperatures, phase a, b and c current values, and cooling fan status (on/off).
 - g. For motor-control centers, the circuit summary web page shall be tailored specifically for this application, to display circuit name, three-phase average rms current, thermal capacity (percentage), drive output frequency (in Hertz, where applicable), and contactor status.

2.9 SYSTEM OPERATOR INTERFACES

A. Operator means of system access shall be through the following:

1. Desktop workstation with hardwired connection through LAN port.
2. Portable terminal with hardwired connection through LAN port at each meter.

3. Remote connection using outside of system PC, tablet, or phone using an internet portal.

2.10 DESKTOP WORKSTATIONS

- A. Products: Subject to compliance with requirements, **[provide the following]** **[provide one of the following]** **[available products that may be incorporated into the Work include, but are not limited to, the following]**:
 1. Dell Inc.; Precision T-series.
 2. HP; HP Z Workstation.
 3. Lenovo; ThinkStation P Series.
 4. Insert manufacturer's name; insert product designation.
- B. Performance Requirements:
 1. Performance requirements may dictate equipment exceeding minimum requirements indicated.
 2. Capable of running **[Microsoft Windows]** **<Insert operating system name>**.
 3. ENERGY STAR compliant.
- C. Personal Computer:
 1. Minimum Processor Speed: **<Insert gigahertz>**, **[Core i3]** **[Core i5]** **[Core i7]**.
 2. RAM:
 - a. Capacity: **[2]** **[4]** **[8]** **<Insert value>** **[GB]**.
 - b. Speed and Type: **[1333]** **<Insert value>** **MHz**, **<Insert type>**.
 3. Primary Hard Drive:
 - a. Media: **[Solid state]** **[Rotating disc, nominal rotational speed of 7200 rpm]** **[Hybrid solid-state and rotating disc]**.
 - b. Number of Hard Drives: One Two Insert number.
 - c. Capacity: **<Insert number and measurement unit>**.
 - d. Minimum Average Seek Time: **<Insert number and measurement unit>**.
 - e. Cache Buffer Size: **<Insert number and measurement unit>**.
 - f. **<Insert requirements>**.
 4. Second Hard Drive:
 - a. Media: **[Solid state]** **[Rotating disc, nominal rotational speed of 7200 rpm]** **[Hybrid solid-state and rotating disc]**.
 - b. Capacity: **<Insert number and measurement unit>**.
 - c. Minimum Average Seek Time: **<Insert number and measurement unit>**.
 - d. Cache Buffer Size: **<Insert number and measurement unit>**.
 - e. **<Insert requirements>**.
 5. Optical Drive:
 - a. Type: **<Insert type>**.
 - b. Minimum Average Access Time: **<Insert number>** **ms**.
 - c. Data Transfer Speed: **<Insert number>** **[MB]** **[TB]/s**.
 - d. Reading Formats: Data, audio, recordable, **<Insert other>** and rewritable.
 6. Optical Read and Write Drive:
 - a. Include with at least 2 MB of data buffer.
 - b. Type: **<Insert type>**.
 - c. Minimum Data Buffer Capacity: **<Insert number and measurement unit>**.
 - d. Minimum Average Access Time: **<Insert number>** **ms**.
 - e. Nominal Data Transfer Rates:
 - 1) Reading: **<Insert number>** **[MB]** **[TB]/s**.

- 2) Writing: <Insert number> [MB] [TB]/s.
 - f. Average access time of 150 ms or less.
 - g. MTBF of at least 100,000 power-on hours.
 7. Expansion Slots: Minimum of 4, [32] [64] <Insert number> bit.
 8. Video Card:
 - a. Capable of supporting [one] [two] [three] [four] monitors.
 - b. Resolution: [1920 by 1200] <Insert values> pixels minimum for each monitor.
 - c. RAM: Insert number GB TB.
 - d. Controller Speed: <Insert number> [MHz] [GHz].
 - e. On-Board Memory Speed: <Insert number> [MHz] [GHz].
 - f. On-Board Memory Data Width: <Insert number> bit.
 9. Sound Card:
 - a. At least 128 voice wavetable synthesis.
 - b. Capable of delivering three-dimensional sound effects.
 - c. High-resolution 16-bit stereo digital audio recording and playback with user-selectable sample rates up to 48,000 Hz.
 10. Network Interface Card: Include card with connection, as applicable.
 - a. 10-100-1000 base TX Ethernet with RJ45 connector port.
 - b. 100 base FX Ethernet with SC or ST port.
 11. Wireless Ethernet, 802.11 a/b/g/n.
 12. Optical Modem: Full duplex link for connection to optical fiber cable provided.
 13. I/O Ports:
 - a. Two USB 3.0 ports on front panel, six on back panel, and three internal on motherboard.
 - b. One serial port.
 - c. One parallel port.
 - d. Two PS/2 ports.
 - e. One RJ-45.
 - f. One stereo line-in and line-out on back panel.
 - g. One microphone and headphone connector on front panel.
 - h. One IEEE 1394 on front and back panel with PCI-e card.
 - i. One ESATA port on back panel.
 14. Battery: Life of at least three years to maintain system clock/calendar and ROM, as a minimum.
- D. Keyboard:
1. 101-key enhanced keyboard.
 2. Full upper- and lowercase ASCII keyset, numeric keypad, dedicated cursor control keypad, and 12 programmable function keys.
 3. Wireless operation within up to 72 inches (1800 mm) in front of workstation.
- E. Pointing Device:
1. Either a two- or three-button mouse.
 2. Wireless operation within up to 72 inches (1800 mm) in front of workstation.
- F. Flat Panel Display Monitor:
1. Number of Displays: One Two Insert number.

- a. Display Support: **[Individual tilt adjustable base.] [Desk mounted, adjustable bracket capable of supporting number of monitors specified above with integral power and display cable organization.] [Wall mounted, adjustable bracket capable of supporting number of monitors specified above with integral power and display cable organization.] <Insert description.>**
 2. Color display with <Insert inches (mm)> diagonal viewable area.
 3. Aspect Ratio: **[16 to 9] <Insert value>.**
 4. Resolution: 1920 by 1080 Insert value pixels at 60 Hz with pixel size of 0.277 Insert number mm or smaller.
 5. **[Digital] [or] [analog]** input signal.
 6. Response Time: <Insert number> ms.
 7. Dynamic Contrast Ratio: **[50000 to 1] <Insert ratio>.**
 8. Brightness: **[250 cd/sq. m] <Insert value>.**
 9. ENERGY STAR compliant.
 10. Antiglare display.
 - G. Speakers:
 1. Two, with individual controls for volume, bass, and treble.
 2. Signal to Noise Ratio: At least 65 dB.
 3. Power: At least 4 W per speaker/channel.
 4. Magnetic shielding to prevent distortion on the video monitor.
 - H. I/O Cabling: Include applicable cabling to connect I/O devices.
 - I. Software:
 1. Factory-installed operating system.
- 2.11 PORTABLE WORKSTATIONS
- A. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 1. Dell Inc.; Latitude
 2. Insert manufacturer's name; insert product designation.
 - B. Performance Requirements:
 1. Performance requirements may dictate equipment exceeding minimum requirements indicated.
 2. ENERGY STAR compliant.
 3. Hardware and software shall support local downloading to DDC controllers.
 4. Data transfer rate to DDC controller shall be at network speed.
 - C. Processor:
 1. Minimum Processor Speed: <Insert gigahertz>.
 2. RAM:
 - a. Capacity: Insert value GB TB.
 - b. Speed and Type: <Insert value> MHz, <Insert type>.
 3. Hard Drive:
 - a. Media: **[Solid state] [Rotating disc, nominal rotational speed of 7200 rpm] [Hybrid solid-state and rotating disc].**
 - b. Number of Hard Drives: One Two Insert number.

- c. Capacity: <Insert number and measurement unit>.
 - d. Minimum Average Seek Time: <Insert number and measurement unit>.
 - e. Cache Buffer Size: <Insert number and measurement unit>.
 - f. <Insert requirements>.
- 4. Video Card: <Insert number and measurement unit> of RAM.
- D. Input and Output Ports:
 - 1. Serial port.
 - 2. Shared port for external keyboard or mouse.
 - 3. Four USB 3.0 ports.
 - 4. Ethernet port.
 - 5. HDMI port.
 - 6. IEEE 1394 port.
- E. Battery:
 - 1. Capable of supporting operation of portable workstation for a minimum of [8] <Insert number> hours.
 - 2. Battery life of at least three years.
 - 3. Battery charge time of less than three hours.
 - 4. Spare Batteries: One Two.
- F. Keyboard:
 - 1. 85-key [**backlit**] keyboard.
 - 2. Full upper- and lowercase ASCII keyset.
- G. Integral Pointing Device: Touchpad with two buttons. Gesture enabled.
- H. Display:
 - 1. <Insert inches (mm)> diagonal or larger high-definition WLED color display.
 - 2. Antiglare screen.
 - 3. [1920 by 1080] <Insert value> pixel resolution.
 - 4. Brightness: 300 nits.
- I. Network Interfaces
 - 1. Network Interface Card: Include card with connection, as application.
 - a. 10-100-1000 base TX Ethernet with RJ45 connector port.
 - b. 100 base FX Ethernet with SC or ST port.
 - 2. Wireless:
 - a. Internal with integrated antenna, capable of supporting 802.11 a/b/g/n.
- J. Digital Video Disc Rewrite Recorder (DVD+/-RW):
 - 1. Compatible with DVD disks and data, audio, recordable and rewritable compact disks.
 - 2. Nominal Data Transfer Rates:
 - a. Reading: <Insert number> [MB] [TB]/s.
 - b. Writing: <Insert number> [MB] [TB]/s.
 - 3. 160-ms access time.
- K. Accessories:
 - 1. Nylon carrying case.
 - 2. Docking station.
 - 3. Mobile broadband card.

4. Wireless optical mouse.
5. <Insert value> [GB] [TB] portable hard drive.
6. Light-sensitive web cam and noise-cancelling digital array microphone.
7. Category 6a patch cable. Minimum cable length shall be <Insert length>.
8. HDMI cable. Minimum cable length shall be <Insert length>.

2.12 RACEWAYS AND BOXES

- A. Comply with requirements in Section 26 0533 "Raceways and Boxes for Electrical Systems" for electrical power wiring and NFPA 70 Class 1 remote-control and signaling circuits.
- B. Comply with requirements in Section 27 0528 "Pathways for Communications Systems" for control wiring, RS-232 cable, and NFPA 70 Class 2 remote-control and signaling circuits.

2.13 WIRES AND CABLES

- A. Electrical Power Wiring: Comply with requirements in Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
 1. Copper conductors are Type THHN/THWN-2.
- B. Control Wiring: Comply with requirements in Section 26 0523 "Control-Voltage Electrical Power Cables."
 1. Optical-Fiber Cable: Multimode, 50/125-micrometer OM3, six-fiber, nonconductive, tight-buffer, optical-fiber cable, with aqua jacket.
 2. Balanced Twisted Pair Cable: 100-ohm, four-pair Category 5e Category 6.
 3. Workstation Outlets: Four-port-connector assemblies mounted in single or multigang faceplate. Coordinate color and labels with Section 26 2726 "Wiring Devices."
 4. RS-485 Cable: Paired, one pair two pairs, twisted, No. 22 AWG, stranded (7x30) tinned-copper conductors.
 5. Low-Voltage Control Cable: Multiple conductor, color-coded, No. 20 AWG copper, minimum.
 - a. Sheath: PVC; except in plenum-type spaces, use sheath listed for plenums.
 - b. Ordinary Switching Circuits: Three conductors unless otherwise indicated.
 - c. Switching Circuits with Pilot Lights or Locator Feature: Five conductors unless otherwise indicated.
- C. RS-232 Cable:
 1. PVC-Jacketed, RS-232 Cable: Paired, two pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, polypropylene insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage; PVC jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
 - a. Type CM.
 - b. Flame Resistance: UL 1581, vertical tray.
 2. Plenum-Type, RS-232 Cable: Paired, two pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, plastic insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage; plastic jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
 - a. Type CMP.
 - b. Flame Resistance: NFPA 262, flame test.

2.14 SURGE PROTECTION DEVICES

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following]** **[provide products by one of the following]** **[available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **[product indicated on Drawings]** **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. ABB France.
 2. Advanced Protection Technologies Inc. (APT).
 3. ALLTEC.
 4. Eaton.
 5. Emerson Electric Co.
 6. GE Zenith Controls.
 7. LEA International.
 8. Leviton Manufacturing Co., Inc.
 9. Mersen USA.
 10. PowerLogics, Inc./PQ Protection.
 11. Schneider Electric USA, Inc.
 12. Siemens Industry, Inc.
 13. Insert manufacturer's name.
- C. SPDs: Comply with UL 1449, Type 1 Type 2.
1. Include LED indicator lights for power and protection status.
 2. Internal thermal protection that disconnects the SPD before damaging internal suppressor components.
 3. Include Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. **[Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.]**
- D. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase shall not be less than 100 kA Insert value. The peak surge current rating shall be the arithmetic sum of the ratings of the individual metal-oxide varistors in a given mode.
- E. Comply with UL 1283.
- F. Protection modes and UL 1449 SPD for grounded wye circuits with 480Y/277 V 208Y/120 V, three-phase, four-wire circuits shall not exceed the following:
1. L-N: 1200 V for 480Y/277 V 700 V for 208Y/120 V.
 2. L-G: 1200 V for 480Y/277 V 700 V for 208Y/120 V.
 3. N-G: 1200 V for 480Y/277 V 700 V for 208Y/120 V.
 4. L-L: 2000 V for 480Y/277 V 1200 V for 208Y/120 V.
- G. Protection modes and UL 1449 SPD for 240/120-V, single-phase, three-wire circuits shall not exceed the following:
1. L-N: 700 V.
 2. L-G: 700 V.
 3. N-G: 700 V.

- 4. L-L: 1200 V.
- H. SCCR: Equal or exceed 100 200 Insert value kA.
- I. Nominal Rating: 20 10 kA.
- J. Indoor Enclosures: NEMA 250, Type 1.
- K. Outdoor Enclosures: NEMA 250, Type 3R Type 4 Type 4X.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine pathway elements intended for cables. Check raceways, cable trays, and other elements for compliance with space allocations, installation tolerances, hazards to cable installation, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 POWER MONITORING AND CONTROL SYSTEM INSTALLATION

- A. Comply with NECA 1.
- B. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters. Conceal raceway and cables except in unfinished spaces.
- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
- D. Wiring and Cabling Installation:
 - 1. Comply with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power wiring.
 - 2. Comply with Section 26 0523 "Control-Voltage Electrical Power Cables" for control wiring.
- E. Raceways Installation:
 - 1. Comply with Section 26 0533 "Raceways and Boxes for Electrical Systems" for electrical power wiring and NFPA 70 Class 1 remote-control and signaling circuits.
 - 2. Comply with Section 27 0528 "Pathways for Communications Systems" for control wiring, RS-232 cable, and NFPA 70 Class 2 remote-control and signaling circuits.
- F. Identification Installation:
 - 1. Comply with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power wiring.
 - 2. Comply with Section 27 1513 "Communications Copper Horizontal Cabling" for identification products and cable management system requirements for twisted pair cable, RS-485 cable, low-voltage control cable, and RS-232 cable.

3. Comply with Section 27 1523 "Communications Optical Fiber Horizontal Cabling" for identification products and cable management system requirements for optical-fiber cable.

3.3 WORKSTATION INSTALLATION

- A. Desktop Workstations Installation:
 1. Install workstation(s) at location(s) directed by Owner.
 2. Install multiple-receptacle power strip with cord for use in connecting multiple workstation components to a single, duplex electrical power receptacle.
 3. Install software on workstation(s) and verify that software functions properly.
 4. Develop Project-specific graphics, trends, reports, logs, and historical database.
 5. Power workstation through a UPS unit. Locate UPS adjacent to workstation.
- B. Portable Workstations Installation:
 1. Turn over portable workstations to Owner at Substantial Completion.
 2. Install software on workstation(s) and verify that software functions properly.
- C. Graphics Application:
 1. Use system schematics indicated as starting point to create graphics.
 2. Develop Project-specific library of symbols for representing system equipment and products.
 3. Incorporate digital images of Project-completed installation into graphics where beneficial to enhance effect.
 4. Submit sketch of graphic layout with description of all text for each graphic for Owner's[and Architect's] review before creating graphic using graphics software.
 5. Seek Owner input in graphics development once using graphics software.
 6. Final editing shall be done on-site with Owner's review and feedback.
 7. Refine graphics as necessary for Owner acceptance.
 8. On receiving Owner acceptance, print a hard copy to include in operation and maintenance manual. Prepare a scanned copy PDF file of each graphic and include with softcopy of the system operation and maintenance manual.

3.4 NETWORK NAMING AND NUMBERING

- A. Coordinate with Owner and provide unique naming and addressing for networks and devices.

3.5 GROUNDING

- A. For data communication wiring, comply with NECA/BICSI 568.
- B. For low-voltage control wiring and cabling, comply with requirements in Section 26 0526 "Grounding and Bonding for Electrical Systems."

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage]** **[Engage]** a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 2. Visually inspect balanced twisted pair cabling and optical-fiber cable jacket materials for UL or third-party certification markings. Inspect cabling terminations to confirm color-coding for pin assignments, and inspect cabling connections to confirm compliance with TIA-568-C.1.
 3. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
 4. Test balanced twisted pair cabling for direct-current loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination, but not after cross-connection.
 - a. Test instruments shall meet or exceed applicable requirements in TIA-568-C.2. Perform tests with a tester that complies with performance requirements in its "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in its "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
 - b. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.
 5. Optical-Fiber Cable Tests:
 - a. Test instruments shall meet or exceed applicable requirements in TIA-568-C.0. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
 - b. Link End-to-End Attenuation Tests:
 - 1) Multimode Link Measurements: Test at 850 or 1300 nm in one direction according to IEC 61280-4-1.
 - 2) Attenuation test results for links shall be less than **[2.0 dB] [that calculated according to equation in TIA-568-C.0]**.
 - c. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.
 6. Power Monitoring and Control System Tests.
 - a. Test Analog Signals:
 - 1) Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
 - 2) Check analog current signals using a precision current meter at zero, 50, and 100 percent.
 - 3) Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistant source.
 - b. Test Digital Signals:
 - 1) Check digital signals using a jumper wire.
 - 2) Check digital signals using an ohmmeter to test for contact making or breaking.
 - c. I/O Control Loop Tests:
 - 1) Test every I/O point to verify that safety and operating control set points are as indicated and as required to operate controlled system safely and at optimum performance.

- 2) Test every I/O point throughout its full operating range.
- 3) Test every control loop to verify that operation is stable and accurate.
- 4) Adjust control loop proportional, integral, and derivative settings to achieve optimum performance while complying with performance requirements indicated. Document testing of each control loop's precision and stability via trend logs.
- 5) Test and adjust every control loop for proper operation according to sequence of operation.
- 6) Test software and hardware interlocks for proper operation.
- 7) Operate each analog point at the following:
 - a) Upper quarter of range.
 - b) Lower quarter of range.
 - c) At midpoint of range.
- 8) Exercise each binary point.
- 9) For every I/O point in the system, read and record each value at workstation, at controller, and at field instrument simultaneously. Value displayed at workstation and at field instrument shall match.
- 10) Prepare and submit a report documenting results for each I/O point in the system, and include in each I/O point a description of corrective measures and adjustments made to achieve desired results.

D. Wiring and cabling will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.7 FINAL REVIEW

- A. Submit written request to Architect **[and]** **[Construction Manager]** when the power monitoring and control system is ready for final review. Written request shall state the following:
1. The system has been thoroughly inspected for compliance with Contract Documents and found to be in full compliance.
 2. The system has been calibrated, adjusted, and tested and found to comply with requirements of operational stability, accuracy, speed, and other performance requirements indicated.
 3. The system monitoring and control of electrical distribution systems results in operation according to sequences of operation indicated.
 4. The system is complete and ready for final review.
- B. Review by **[Architect]** **[and]** **[Construction Manager]** will be made after receipt of written request. A field report shall be issued to document observations and deficiencies.
- C. Take prompt action to remedy deficiencies indicated in field report and submit a second written request when all deficiencies have been corrected. Repeat process until no deficiencies are reported.
- D. Final review shall include a demonstration to parties participating in final review.

3.8 MAINTENANCE SERVICE

- A. Beginning at Substantial Completion, maintenance service shall include **[three] [six] [nine] [12]** months' full maintenance by manufacturer's authorized service representative. Include **[quarterly] [semiannual] [annual]** preventive maintenance, repair or replacement of defective components, cleaning, and adjusting as required for proper system operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.9 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for **[two] <Insert number>** years.
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within **[two] <Insert number>** years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
1. Upgrade Notice: At least **[30] <Insert number>** days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.10 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain the power monitoring and control system.
- B. Extent of Training:
1. Base extent of training on scope and complexity of power monitoring and control system indicated and training requirements indicated. Provide extent of training required to satisfy requirements indicated even if more than minimum training requirements are indicated.
 2. Inform Owner of anticipated training requirements if more than minimum training requirements are indicated.
 3. Minimum Training Requirements:
 - a. Provide no fewer than **[two] <Insert number>** days of training total.
 - b. Stagger training over multiple training classes to accommodate Owner's requirements. All training shall occur before end of warranty period.
 - c. Total days of training shall be broken into not more than **[two] [three] [four] <Insert number>** separate training classes.
 - d. Each training class shall be no fewer than **[one] [two] [three] <Insert number>** consecutive day(s).
- C. Attendee Training Manuals:
1. Provide each attendee with a color hard copy of all training materials and visual presentations.
 2. Hard-copy materials shall be organized in a three-ring binder with table of contents and individual divider tabs marked for each logical grouping of subject matter. Organize material to provide space for attendees to take handwritten notes within training manuals.
 3. In addition to hard-copy materials included in training manual, provide each binder with a sleeve or pocket that includes a DVD or flash drive with PDF copy of all hard-copy materials.

- D. Instructor Requirements:
1. One or multiple qualified instructors, as required, to provide training.
 2. Instructors shall have no fewer than **[five]** <Insert number> years of providing instructional training on no fewer than **[five]** <Insert number> past projects with similar electrical monitoring and control system scope and complexity.
- E. Training Outline: Submit training outline for Owner review at least 10 business days before scheduling training. Outline shall include a detailed agenda for each training day that is broken down into each training session that day, training objectives for each training session, and synopses for each lesson planned.
- F. On-Site Training:
1. Owner will provide conditioned classroom or workspace with ample desks or tables, chairs, power, and data connectivity for instructor and each attendee.
 2. Instructor shall provide training materials, projector, and other audiovisual equipment used in training.
 3. Provide as much of training located on-site as deemed feasible and practical by Owner.
 4. On-site training shall include regular walk-through tours, as required, to observe each unique product type installed with hands-on review of operation, calibration, and service requirements.
 5. The workstation provided with the system shall be used in training. If workstation is not indicated, provide a temporary workstation to convey training content.
- G. Off-Site Training:
1. Provide conditioned training rooms and workspace with ample tables, chairs, power, and data connectivity for each attendee.
 2. Provide capability to remotely access to Project monitoring and control system for use in training.
 3. Provide a workstation for use by each attendee.
- 3.11 At Completion of Training:
- A. Staff familiar with the system installed are capable of demonstrating operation of the system during final review.
- B. Demonstration shall include, but not be limited to, the following:
1. Accuracy and calibration of 10 I/O points randomly selected by reviewers. If review finds that some I/O points are not properly calibrated and not satisfying performance requirements indicated, additional I/O points may be selected by reviewers until total I/O points being reviewed that satisfy requirements equals quantity indicated.
 2. Reporting of alarm conditions for randomly selected alarms, including different classes of alarms, to ensure that alarms are properly received by operators and workstations.
 3. Trends, summaries, logs, and reports set-up for Project.
 4. Software's ability to communicate with controllers, workstations, and uploading and downloading of control programs.
 5. Software's ability to edit control programs off-line.
 6. Data entry to show Project-specific customizing capability including parameter changes.
 7. Step through penetration tree, display all graphics, demonstrate dynamic update, and direct access to graphics.
 8. Execution of digital and analog commands in graphic mode.

9. Spreadsheet and curve plot software and its integration with database.
10. Online user guide and help functions.
11. For Each Meter:
 - a. Memory: Programmed data, parameters, trend, and alarm history collected during normal operation is not lost during power failure.
 - b. Operator Interface: Ability to connect directly to each meter with a portable workstation.
 - c. Wiring Labels: Match control drawings.
 - d. Network Communication: Ability to locate a meter on the network. Communication architecture matches Shop Drawings.
 - e. Nameplates and Tags: Accurate and permanently attached to control panel doors, instrument, actuators, and devices.
12. For Each Workstation:
 - a. I/O point lists agree with naming conventions.
 - b. Graphics are complete.
 - c. UPS unit, if applicable, operates.

END OF SECTION

FOR REFERENCE ONLY

SECTION 26 0923 - LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.1 ACTION SUBMITALLS

- A. Product Data: For each type of product.
- B. Shop Drawings:
 - 1. Show installation details for the following:
 - a. Occupancy sensors.
 - b. Vacancy sensors.
 - 2. Interconnection diagrams showing field-installed wiring, all devices and equipment shown on reflected ceiling plans, drawn to scale.
 - 3. Include diagrams for power, signal, and control wiring.

1.2 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plan(s) and elevations, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Suspended ceiling components.
 - 2. Structural members to which equipment will be attached.
 - 3. Items penetrating finished ceiling, including the following:
 - a. Luminaires.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. Control modules.
- B. Field quality-control reports.
- C. Sample Warranty: For manufacturer's warranties.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each type of lighting control device to include in operation and maintenance manuals.
- B. Software and Firmware Operational Documentation:
 - 1. Software operating and upgrade manuals.
 - 2. Program Software Backup: [On USB media] [On manufacturer's website]. Provide names, versions, and website addresses for locations of installed software.
 - 3. Device address list.
 - 4. Printout of software application and graphic screens.

1.4 WARRANTY

- A. Manufacturer's Warranty: Manufacturer and Installer agree to repair or replace lighting control devices that fail(s) in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Faulty operation of lighting control software.
 - b. Faulty operation of lighting control devices.
2. Warranty Period: Two year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Provide products compatible with system specified in Section 26 0943 "Network Lighting Controls".

2.2 ELECTRONIC TIME SWITCHES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Cooper Industries, Inc.
 2. Intermatic, Inc.
 3. Invensys Controls.
 4. Leviton Manufacturing Co., Inc.
 5. NSi Industries LLC.
 6. TE Connectivity Ltd.
- B. Electronic Time Switches: Solid state, programmable, with alphanumeric display; complying with UL 917.
 1. Listed and labeled as defined in NFPA 70 and marked for intended location and application.
 2. Contact Configuration: SPST DPST DPDT.
 3. Contact Rating: 30-A inductive or resistive, 240-V ac 20-A ballast load, 120-/240-V ac Insert rating.
 4. Programs: Eight on-off set points on a 24-hour schedule[**and an annual holiday schedule that overrides the weekly operation on holidays**].
 5. Circuitry: Allow connection of a photoelectric relay as substitute for on-off function of a program[**on selected channels**].
 6. Astronomic Time: All Selected channels.
 7. Automatic daylight savings time changeover.
 8. Battery Backup: Not less than seven days reserve, to maintain schedules and time clock.

2.3 ELECTROMECHANICAL DIAL-TIME SWITCHES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Cooper Industries, Inc.
 2. Intermatic, Inc.
 3. Invensys Controls.
 4. Leviton Manufacturing Co., Inc.
 5. NSi Industries LLC.
 6. TE Connectivity Ltd.
- B. Electromechanical-Dial Time Switches: Comply with UL 917.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Contact Configuration: SPST DPST SPDT DPDT Insert configuration.
3. Contact Rating: 30-A inductive or resistive, 240-V ac 20-A ballast load, 120-/240-V ac.
4. Circuitry: Allows connection of a photoelectric relay as a substitute for the on-off function of a program.
5. Astronomic time dial.
6. Eight-Day Program: Uniquely programmable for each weekday and holidays.
7. Skip-a-day mode.
8. Wound-spring reserve carryover mechanism to keep time during power failures, minimum of [16] <Insert number> hours.

2.4 OUTDOOR PHOTOELECTRIC SWITCHES, SOLID STATE, FLEXIBLE MOUNTING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Cooper Industries, Inc.
 2. Intermatic, Inc.
 3. Leviton Manufacturing Co., Inc.
 4. NSi Industries LLC.
 5. TE Connectivity Ltd.
- B. Description: Solid state, with SPST DPST Insert configuration dry contacts rated for 1000 W incandescent or 1800 VA inductive Insert value, to operate connected relay, contactor coils, or microprocessor input; complying with UL 773A, and compatible with ballasts and LED lamps.
 1. Listed and labeled as defined in NFPA 70, by a agency NRTL, and marked for intended location and application.
 2. Light-Level Monitoring Range: 1.5 to 10 fc (16.14 to 108 lux), with an adjustment for turn-on and turn-off levels within that range[, and a directional lens in front of the photocell to prevent fixed light sources from causing turn-off].
 3. Time Delay: Fifteen-second minimum, to prevent false operation.
 4. Surge Protection: Metal-oxide varistor.
 5. Mounting: Twist lock complies with ANSI C136.10, with base-and-stem mounting or stem-and-swivel mounting accessories as required to direct sensor to the north sky exposure[from same source and manufacturer as switch].
 6. Failure Mode: Luminaire stays ON.

2.5 OUTDOOR PHOTOELECTRIC SWITCHES, SOLID STATE, LUMINAIRE-MOUNTED

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Cooper Industries, Inc.
 2. Intermatic, Inc.
 3. Leviton Manufacturing Co., Inc.
 4. NSi Industries LLC.
 5. TE Connectivity Ltd.
- B. Description: Solid state, with SPST DPST dry contacts rated for 1000 W incandescent or 1800 VA inductive, to operate connected load, complying with UL 773, and compatible with CFL and LED lamps.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Light-Level Monitoring Range: 1.5 to 10 fc (16.14 to 108 lux), with an adjustment for turn-on and turn-off levels within that range.
3. Time Delay: Thirty-second minimum, to prevent false operation.
4. Lightning Arrester: Air-gap type.
5. Mounting: Twist lock complying with ANSI C136.10, with base[**from same source and manufacturer as switch**].
6. Failure Mode: Luminaire stays ON.

2.6 OUTDOOR PHOTOELECTRIC SWITCHES, LOW VOLTAGE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Cooper Industries, Inc.
 2. Intermatic, Inc.
 3. Leviton Manufacturing Co., Inc.
 4. NSi Industries LLC.
 5. TE Connectivity Ltd.
- B. Description: Solid state; one set of NO dry contacts rated for 24 V dc at 1 A 24 V ac at 1 A, to operate connected load, complying with UL 773, and compatible with luminaire power pack lighting control panelboard.
 1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Light-Level Monitoring Range: 1.5 to 10 fc (16.14 to 108 lux), with an adjustment for turn-on and turn-off levels within that range.
 3. Time Delay: Thirty-second minimum, to prevent false operation.
 4. Mounting: 1/2-inch (13-mm) threaded male conduit.
 5. Failure Mode: Luminaire stays ON.
 6. Power Pack: Dry contacts rated for 20-A Insert value ballast or LED load at 120- and 277-V ac, for 13-A Insert value tungsten at 120-V ac, and for 1 hp Insert value at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
 - a. LED status lights to indicate load status.
 - b. Plenum rated.
 7. Power Pack: Digital controller capable of accepting three four Insert number RJ45 inputs with one two outputs rated for 20-A Insert value incandescent or LED load at 120- and 277-V ac, for 16-A Insert value ballast LED at 120- and 277-V ac, and for 1 hp Insert value at 120-V ac. Sensor has 24-V dc, Class 2 power source, as defined by NFPA 70.
 - a. With integral current monitoring.
 - b. Compatible with digital addressable lighting interface.
 - c. Plenum rated.

2.7 DAYLIGHT-HARVESTING SWITCHING CONTROLS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Cooper Industries, Inc.
 2. Eaton.
 3. Hubbell Building Automation, Inc.
 4. Leviton Manufacturing Co., Inc.

5. Lithonia Lighting; Acuity Brands Lighting, Inc.
6. NSi Industries LLC.
7. Sensor Switch, Inc.
8. TE Connectivity Ltd.
9. WattStopper; a Legrand? Group brand.

B. Description: System operates indoor lighting.

C. Sequence of Operation: As daylight increases, the lights are turned off at a predetermined level. As daylight decreases, the lights are turned on at a predetermined level.

1. Lighting control set point is based on two lighting conditions:
 - a. When no daylight is present.
 - b. When significant daylight is present (target level).
 - c. System programming is done with two hand-held, remote-control tools.

D. Ceiling-Mounted Switching Controls: Solid-state, light-level sensor unit, with [integrated] power pack, that detects changes in indoor lighting levels that are perceived by the eye.

E. Electrical Components, Devices, and Accessories:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F (0 to 49 deg C).
3. Sensor Output: Digital signal compatible with power pack.
4. Sensor type: Open loop Closed loop.
5. Zone: Single Multi.
6. Power Pack: Dry contacts rated for 20-A Insert value ballast or LED load at 120- and 277-V ac, for 13-A Insert value tungsten at 120-V ac, and for 1 hp Insert value at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
 - a. LED status lights to indicate load status.
 - b. Plenum rated.
7. General Space Sensors Light-Level Monitoring Range: 10 to 200 fc (108 to 2152 lux), with an adjustment for turn-on and turn-off levels within that range.
8. Atrium Space Sensors Light-Level Monitoring Range: 100 to 1000 fc (1080 to 10 800 lux), with an adjustment for turn-on and turn-off levels within that range.
9. Skylight Sensors Light-Level Monitoring Range: 1000 to 10,000 fc (10 800 to 108 000 lux), with an adjustment for turn-on and turn-off levels within that range.
10. Time Delay: Adjustable from 5 to 300 seconds to prevent cycling.
11. Set-Point Adjustment: Equip with deadband adjustment of 25, 50, and 75 percent above the "on" set point, or provide with separate adjustable "on" and "off" set points.
12. Test Mode: User selectable, overriding programmed time delay to allow settings check.
13. Control Load Status: User selectable to confirm that load wiring is correct.
14. Indicator: Two digital displays to indicate the beginning of on-off cycles.

2.8 DAYLIGHT-HARVESTING DIMMING CONTROLS, ANALOG

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cooper Industries, Inc.
2. Deep Roof Lighting.
3. Hubbell Building Automation, Inc.
4. Leviton Manufacturing Co., Inc.

5. Lithonia Lighting; Acuity Brands Lighting, Inc.
 6. WattStopper; a Legrand? Group brand.
- B. Description: Sensing daylight and electrical lighting levels, the system adjusts the indoor electrical lighting levels. As daylight increases, the lights are dimmed.
1. Lighting control set point is based on two lighting conditions:
 - a. When no daylight is present (target level).
 - b. When significant daylight is present.
 2. System programming is done with two hand-held, remote-control tools.
 - a. Initial setup tool.
 - b. Tool for occupants to adjust the target levels by increasing the set point up to 25 percent, or by minimizing the electric lighting level.
- C. Ceiling-Mounted Dimming Controls: Solid-state, light-level sensor unit, with integrated separate power pack mounted on luminaire, to detect changes in indoor lighting levels that are perceived by the eye.
- D. Electrical Components, Devices, and Accessories:
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Sensor Output: 0- to 10-V dc to operate luminaires. Sensor is powered by controller unit.
 3. Light-Level Sensor Set-Point Adjustment Range: 20 to 60 fc (120 to 640 lux).
- E. Power Pack: Dry contacts rated for 20-A Insert value ballast or LED load at 120- and 277-V ac, for 13-A Insert value tungsten at 120-V ac, and for 1 hp Insert value at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
1. LED status lights to indicate load status.
 2. Plenum rated.
- 2.9 DAYLIGHT-HARVESTING DIMMING CONTROLS, DIGITAL
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Cooper Industries, Inc.
 2. Deep Roof Lighting.
 3. Hubbell Building Automation, Inc.
 4. Leviton Manufacturing Co., Inc.
 5. Lithonia Lighting; Acuity Brands Lighting, Inc.
 6. WattStopper; a Legrand? Group brand.
- B. Description: Sensing daylight and electrical lighting levels, the system adjusts the indoor electrical lighting levels. As daylight increases, lights are dimmed.
1. Lighting control set point is based on the following two lighting conditions:
 - a. When no daylight is present (target level).
 - b. When significant daylight is present.
 2. System programming is done with two hand-held, remote-control tools.
 - a. Initial setup tool.
 - b. Tool for occupants to adjust the target levels by increasing the set point up to 25 percent, or by minimizing the electric lighting level.

- C. Ceiling-Mounted Dimming Controls: Solid-state, light-level sensor unit, with integrated separate power pack mounted on luminaire, to detect changes in indoor lighting levels that are perceived by the eye.
- D. Electrical Components, Devices, and Accessories:
 - 1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - 2. Sensor Output: 0- to 10-V dc to operate luminaires. Sensor is powered by controller unit.
 - 3. Light-Level Sensor Set-Point Adjustment Range: 20 to 60 fc (120 to 640 lux).
- E. Power Pack: Digital controller capable of accepting three four Insert number RJ45 inputs with one two output(s) rated for 20-A Insert value incandescent [**or**] [**LED**] load at 120- and 277-V ac, for 13-A 16-A Insert value at 120- and 277-V ac, and for 1 hp Insert value at 120-V ac. Sensor has 24-V dc Class 2 power source, as defined by NFPA 70.
 - 1. With integral current monitoring.
 - 2. Compatible with digital addressable lighting interface.
 - 3. Plenum rated.

2.10 INDOOR OCCUPANCY AND VACANCY SENSORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Bryant Electric.
 - 2. Cooper Industries, Inc.
 - 3. Hubbell Building Automation, Inc.
 - 4. Intermatic, Inc.
 - 5. Leviton Manufacturing Co., Inc.
 - 6. Lithonia Lighting; Acuity Brands Lighting, Inc.
 - 7. Lutron Electronics Co., Inc.
 - 8. NSi Industries LLC.
 - 9. Philips Lighting Controls.
 - 10. RAB Lighting.
 - 11. Sensor Switch, Inc.
 - 12. Square D.
 - 13. WattStopper; a Legrand? Group brand.
- B. General Requirements for Sensors:
 - 1. Wall Ceiling-mounted, solid-state indoor occupancy and vacancy sensors.
 - 2. Passive infrared Ultrasonic Dual technology.
 - 3. Integrated Separate power pack.
 - 4. Hardwired Wireless connection to switch and BAS ; and BAS and lighting control system.
 - 5. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - 6. Operation:
 - a. Occupancy Sensor: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
 - 7. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A Sensor is powered from the power pack Wireless.

8. Power: Line voltage Integral photovoltaic collector.
 9. Power Pack: Dry contacts rated for 20-A ballast or LED load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
 10. Mounting:
 - a. Sensor: Suitable for mounting in any position on a standard outlet box.
 - b. Relay: Externally mounted through a 1/2-inch (13-mm) knockout in a standard electrical enclosure.
 - c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
 11. Indicator: Digital display, to show when motion is detected during testing and normal operation of sensor.
 12. Bypass Switch: Override the "on" function in case of sensor failure.
 13. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc (21.5 to 2152 lux); turn lights off when selected lighting level is present.
- C. PIR Type: Wall Ceiling mounted; detect occupants in coverage area by their heat and movement.
1. Detector Sensitivity: Detect occurrences of 6-inch- (150-mm-) minimum movement of any portion of a human body that presents a target of not less than 36 sq. in. (232 sq. cm).
 2. Detection Coverage (Room, Ceiling Mounted): Detect occupancy anywhere in a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
- D. Ultrasonic Type: Wall Ceiling mounted; detect occupants in coverage area through pattern changes of reflected ultrasonic energy.
1. Detector Sensitivity: Detect a person of average size and weight moving not less than 12 inches (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inches/s (305 mm/s).
 2. Detection Coverage (Small Room): Detect occupancy anywhere within a circular area of 600 sq. ft. (56 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
 3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
 4. Detection Coverage (Large Room): Detect occupancy anywhere within a circular area of 2000 sq. ft. (186 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
 5. Detection Coverage (Corridor): Detect occupancy anywhere within 90 feet (27.4 m) when mounted on a 10-foot- (3-m-) high ceiling in a corridor not wider than 14 feet (4.3 m).
 6. Detection Coverage (Room, Wall Mounted): Detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of 1000 square feet (110 square meters) 2000 square feet (220 square meters) 3000 square feet (330 square meters) when mounted 84 inches (2100 mm) above finished floor.
- E. Dual-Technology Type: Wall Ceiling mounted; detect occupants in coverage area using PIR and ultrasonic detection methods. The particular technology or combination of technologies that control on-off functions is selectable in the field by operating controls on unit.
1. Sensitivity Adjustment: Separate for each sensing technology.
 2. Detector Sensitivity: Detect occurrences of 6-inch- (150-mm-) minimum movement of any portion of a human body that presents a target of not less than 36 sq. in. (232 sq. cm), and detect a person of average size and weight moving not less than 12 inches (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inches/s (305 mm/s).
 3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.

4. Detection Coverage (Room, Wall Mounted): Detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of 1000 square feet (110 square meters) 2000 square feet (220 square meters) 3000 square feet (330 square meters) when mounted 48 inches (1200 mm) above finished floor.

2.11 SWITCHBOX-MOUNTED OCCUPANCY SENSORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Bryant Electric.
 2. Cooper Industries, Inc.
 3. Hubbell Building Automation, Inc.
 4. Intermatic, Inc.
 5. Leviton Manufacturing Co., Inc.
 6. Lithonia Lighting; Acuity Brands Lighting, Inc.
 7. Lutron Electronics Co., Inc.
 8. NSi Industries LLC.
 9. Philips Lighting Controls.
 10. RAB Lighting.
 11. Sensor Switch, Inc.
 12. Square D.
 13. WattStopper.
- B. General Requirements for Sensors: Automatic-wall-switch occupancy sensor with manual on-off switch, suitable for mounting in a single gang switchbox, with provisions for connection to BAS using hardwired connection using wireless connection.
 1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application[, and shall comply with California Title 24].
 2. Occupancy Sensor Operation: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn lights off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
 3. Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F (0 to 49 deg C).
 4. Switch Rating: Not less than 800-VA ballast or LED load at 120 V, 1200-VA ballast or LED load at 277 V, and 800-W incandescent.
- C. Wall-Switch Sensor Tag OS:
 1. Standard Range: 180-degree field of view, field adjustable from 180 to 40 degrees; with a minimum coverage area of 900 sq. ft. (84 sq. m) 2100 sq. ft (196 sq. m).
 2. Sensing Technology: PIR Dual technology - PIR and ultrasonic.
 3. Switch Type: SP. SP, dual circuit. SP, manual "on," automatic "off." SP, field-selectable automatic "on," or manual "on," automatic "off."
 4. Capable of controlling load in three-way application.
 5. Voltage: Match the circuit voltage 120 V 277 V Dual voltage - 120 and 277 V.
 6. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from 10 to 150 fc (108 to 1600 lux). The switch prevents the lights from turning on when the light level is higher than the set point of the sensor.
 7. Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
 8. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false "off" switching.
 9. Color: White Black Insert color.
 10. Faceplate: Color matched to switch.

- D. Wall-Switch Sensor Tag OSD:
 - 1. Same as type OS except with 0-10V dimming capability.

2.12 DIGITAL TIMER LIGHT SWITCH

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Cooper Industries, Inc.
 - 2. Intermatic, Inc.
 - 3. Invensys Controls.
 - 4. Leviton Manufacturing Co., Inc.
 - 5. NSi Industries LLC.
 - 6. TE Connectivity Ltd.
- B. Description: Combination digital timer and conventional switch lighting control unit. Switchbox-mounted, backlit LCD display, with selectable time interval in 10 20 minute increments.
 - 1. Rated 960 W at 120 V ac for tungsten lighting, 10 A at 120 V ac or 10 A at 277 V ac for fluorescent or LED lighting, and 1/4 hp at 120 V ac.
 - 2. Standards: Comply with UL 20.
 - 3. Integral relay for connection to BAS.
 - 4. Voltage: Match the circuit voltage 120 V 277 V Dual voltage - 120 and 277 V.
 - 5. Color: White Black Insert color.
 - 6. Faceplate: Color matched to switch.

2.13 HIGH-BAY OCCUPANCY SENSORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Hubbell Building Automation, Inc.
- B. Description: Solid-state unit. The unit is designed to operate with the lamp and ballasts indicated.
 - 1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - 2. Operation: Turn lights on when coverage area is occupied, and to half-power when unoccupied; with a time delay for turning lights to half-power that is adjustable over a minimum range of 1 to 16 minutes.
 - 3. Continuous Lamp Monitoring: When lamps are dimmed continuously for 24 hours, automatically turn lamps on to full power for 15 minutes for every 24 hours of continuous dimming.
 - 4. Power: Line voltage.
 - 5. Operating Ambient Conditions: 32 to 149 deg F (0 to 65 deg C).
 - 6. Mounting: Threaded pipe.
 - 7. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
 - 8. Detector Technology: PIR.
 - 9. Power and dimming control from the luminaire ballast that has been modified to include the dimming capacitor[**and MyzerPORT option**].

- C. Detector Coverage: User selectable by interchangeable PIR lenses, suitable for mounting heights from 12 to 50 feet (3.7 to 15.2 m).
- D. Accessories: Obtain manufacturer's installation and maintenance kit with laser alignment tool for sensor positioning and power port connectors.

2.14 EXTREME-TEMPERATURE OCCUPANCY SENSORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Cooper Industries, Inc.
 - 2. Sensor Switch, Inc.
- B. Description: Ceiling-mounted, solid-state, extreme-temperature occupancy sensors with a separate power pack.
 - 1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended application in damp locations.
 - 2. Operation: Turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 30 minutes.
 - 3. Operating Ambient Conditions: From minus 40 to plus 125 deg F (minus 40 to plus 52 deg C).
 - 4. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor is powered from the power pack.
 - 5. Power Pack: Dry contacts rated for 20-A ballast or LED load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
 - 6. Mounting:
 - a. Sensor: Suitable for mounting in any position on a standard outlet box.
 - b. Relay: Externally mounted through a 1/2-inch (13-mm) knockout in a standard electrical enclosure.
 - c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind cover.
 - 7. Bypass Switch: Override the "on" function in case of sensor failure.
 - 8. Automatic Light-Level Sensor: Adjustable from 2 to 10 fc (21.5 to 108 lux); keep lighting off when selected lighting level is present.
- C. Detector Technology: PIR. Ceiling mounted; detect occupants in coverage area by their heat and movement.
 - 1. Detector Sensitivity: Detect occurrences of 6-inch- (150-mm-) minimum movement of any portion of a human body that presents a target of not less than 36 sq. in. (232 sq. cm).
 - 2. Detection Coverage (Room): Detect occupancy anywhere in a circular area of 1500 sq. ft. (139 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
 - 3. Detection Coverage (High Bay): Detect occupancy within 25 feet (7.6 m) when mounted on a 25-foot- (7.6-m-) high ceiling.

2.15 OUTDOOR MOTION SENSORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Bryant Electric.
 - 2. Cooper Industries, Inc.

3. Hubbell Building Automation, Inc.
4. Leviton Manufacturing Co., Inc.
5. Lithonia Lighting; Acuity Brands Lighting, Inc.
6. NSi Industries LLC.
7. RAB Lighting.
8. Sensor Switch, Inc.
9. WattStopper; a Legrand? Group brand.

B. Description: Solid-state outdoor motion sensors.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application[, and shall comply with California Title 24].
2. **[PIR] [Dual-technology (PIR and ultrasonic)]** type, weatherproof. Detect occurrences of 6-inch- (150-mm-) minimum movement of any portion of a human body that presents a target of not less than 36 sq. in. (232 sq. cm). Comply with UL 773A.
3. Switch Rating:
 - a. Luminaire-Mounted Sensor: 1000-W incandescent, 500-VA fluorescent/LED Insert rating.
 - b. Separately Mounted Sensor: Dry contacts rated for 20-A ballast or LED load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
4. Switch Type: SP. SP, dual circuit. SP, manual "on," automatic "off." SP, field-selectable automatic "on," or manual "on," automatic "off." With bypass switch to override the "on" function in case of sensor failure.
5. Voltage: Match the circuit voltage 120-V 277-V Dual voltage, 120- and 277-V type.
6. Detector Coverage:
 - a. Standard Range: 210-degree field of view, with a minimum coverage area of 900 sq. ft. (84 sq. m).
 - b. Long Range: 180-degree field of view and 110-foot (34-m) detection range.
7. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from 10 to 150 fc (108 to 1600 lux). The switch prevents the lights from turning on when the light level is higher than the set point of the sensor.
8. Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
9. Concealed, "off" time-delay selector at 30 seconds and 5, 10, and 20 minutes.
10. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and help eliminate false "off" switching.
11. Operating Ambient Conditions: Suitable for operation in ambient temperatures ranging from minus 40 to plus 130 deg F (minus 40 to plus 54 deg C), rated as "raintight" according to UL 773A.

2.16 LIGHTING CONTACTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Allen-Bradley/Rockwell Automation.
 2. ASCO: a brand of Vertiv.
 3. Eaton.
 4. General Electric Company.
 5. Square D.
- B. Description: Electrically operated and mechanically electrically held, combination-type lighting contactors with fusible switch nonfused disconnect, complying with NEMA ICS 2 and UL 508.

1. Current Rating for Switching: Listing or rating consistent with type of load served, including tungsten filament, inductive, and high-inrush ballast (ballast with 15 percent or less THD of normal load current).
 2. Fault Current Withstand Rating: Equal to or exceeding the available fault current at the point of installation.
 3. Enclosure: Comply with NEMA 250.
 4. Provide with control and pilot devices as **[indicated on Drawings]** **[scheduled]**, matching the NEMA type specified for the enclosure.
- C. Interface with DDC System for HVAC: Provide hardware interface to enable the DDC system for HVAC to monitor and control lighting contactors.
1. Monitoring: On-off status, **<Insert monitoring point>**.
 2. Control: On-off operation, **<Insert control point>**.
- 2.17 EMERGENCY LIGHTING CONTROL RELAY
- A. Description: Emergency lighting control relay which bypasses all local dimming/switching controls upon loss of normal power.
1. Voltage: 120V or 277V as required to match circuit voltage.
 2. Dimming: Capable of acceptance 0-10V dimming signal and passing through the signal during normal operation. Relay shall bring the connected light fixtures to full brightness upon loss of normal power.
 3. Current rating: 16A, minimum.
 4. Compatible Load Types: LED.
 5. Status Indicators: LED type, with individual indicators for Normal Power, Test, and Emergency Power.
 6. Test Switch: Visible momentary contact switch.
 7. UL 924 Listed.
- 2.18 BRANCH CIRCUIT EMERGENCY LIGHTING TRANSFER SWITCH
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Bodine.
 2. Hubbell.
 3. ETC.
- B. Description: Emergency lighting transfer device which automatically transfers to an emergency power source upon loss of power and overrides all local dimming/switching controls.
1. Voltage: 120V or 277V.
 2. Current Rating: 16A, minimum.
 3. Compatible Load Types: Incandescent, halogen, magnetic ballasts, electronic ballasts, LED drivers.
 4. Status Indicators: LED type, with individual indicators for Normal Power, Test, and Emergency Power.
 5. Test Switch: Visible momentary contact switch.
 6. UL 1008 Listed.

2.19 MINI EMERGENCY LIGHTING INVERTER

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Bodine or approved equal.
- B. Description: Emergency lighting inverter with ratings under 1000VA which instantly provides power to the load for 90 minutes upon loss of power.
 - 1. Voltage 120V or 277V
 - 2. Maximum Power Load: 100VA, 250VA, or 400VA as indicated on Drawings. Where ratings are not indicated on Drawings, provide inverter with a rating equal to the connected load plus 20% spare capacity.
 - 3. 0-10VDC dimming output. 250VA unit dimming output shall be automatically controlled in emergency mode as required to prevent overload. 100VA unit shall have DIP switches to allow field adjustment of emergency mode dimming level.
 - 4. Output Waveform: Sinusoidal.
 - 5. Compatible Load Types: Incandescent, halogen, magnetic ballasts, electronic ballasts, LED drivers.
 - 6. Batteries: Sealed lead-calcium.
 - 7. In-rush Current: Shall be capable of withstanding in-rush current of LED drivers in light fixtures indicated to be connected to the inverter.
 - 8. Status Indicators: LED type.
 - 9. Test Switch: Visible momentary contact switch.

2.20 CONDUCTORS AND CABLES

- A. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Classes 2 and 3 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 18 No. 22 No. 24 AWG. Comply with requirements in Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 14 No. 16 No. 18 AWG. Comply with requirements in Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine lighting control devices before installation. Reject lighting control devices that are wet, moisture damaged, or mold damaged.
- B. Examine walls and ceilings for suitable conditions where lighting control devices will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SENSOR INSTALLATION

- A. Comply with NECA 1.
- B. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems, and partition assemblies.
- C. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's written instructions.

3.3 CONTACTOR INSTALLATION

- A. Comply with NECA 1.
- B. Mount electrically held lighting contactors with elastomeric isolator pads to eliminate structure-borne vibration unless contactors are installed in an enclosure with factory-installed vibration isolators.

3.4 WIRING INSTALLATION

- A. Comply with NECA 1.
- B. Wiring Method: Comply with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size is 1/2 inch (13 mm).
- C. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.
- D. Size conductors according to lighting control device manufacturer's written instructions unless otherwise indicated.
- E. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.5 IDENTIFICATION

- A. Identify components and power and control wiring according to Section 26 0553 "Identification for Electrical Systems."
 - 1. Identify controlled circuits in lighting contactors.
 - 2. Identify circuits or luminaires controlled by photoelectric and occupancy sensors at each sensor.
- B. Label time switches and contactors with a unique designation.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to evaluate lighting control devices and perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Operational Test: After installing time switches and sensors, and after electrical circuitry has been energized, start units to confirm proper unit operation.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Lighting control devices will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.7 ADJUSTING

- A. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting lighting control devices to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.
 - 1. For occupancy and motion sensors, verify operation at outer limits of detector range. Set time delay to suit Owner's operations.
 - 2. For daylighting controls, adjust set points and deadband controls to suit Owner's operations.
 - 3. Align high-bay occupancy sensors using manufacturer's laser aiming tool.

3.8 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for two years.
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
 - 1. Upgrade Notice: At least 30 days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.9 DEMONSTRATION

- A. Coordinate demonstration of products specified in this Section with demonstration requirements for low-voltage, programmable lighting control systems specified in other sections.
- B. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain lighting control devices.

END OF SECTION

SECTION 26 0936 - MODULAR DIMMING CONTROLS**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes wall-box, multiscene, modular dimming controls.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Detail assemblies of standard components, custom assembled for specific application on Project. Indicate dimensions, weights, arrangement of components, and clearance and access requirements.
 - 1. Include elevation views of front panels of control and indicating devices and control stations.
 - 2. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
- B. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

1.5 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of wall-box multiscene dimming controls that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Cost to repair or replace any parts for **[two]** <Insert number> years from date of Substantial Completion.
 - 2. Extended Warranty Period: Cost of replacement parts (materials only, f.o.b. the nearest shipping point to Project site), for **[eight]** <Insert number> years, that failed in service due to transient voltage surges.

PART 2 - PRODUCTS**2.1 MANUFACTURERS**

- A. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide [product indicated on Drawings] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - 1. Eaton Lighting Solutions

2. Leviton Manufacturing Co., Inc.
3. Lightolier; a Philips group brand.
4. Lithonia Lighting; Acuity Brands Lighting, Inc
5. Lutron Electronics Co., Inc.
6. Philips Lighting Controls.
7. Insert manufacturer's name.

2.2 SYSTEM DESCRIPTION

- A. Compatibility:
 1. Dimming control components shall be compatible with luminaires luminaires and ballasts luminaires, ballasts, and transformers.
 2. Dimming control devices shall be compatible with lighting control system components specified in Section 26 0943.16 "Addressable-Luminaire Lighting Controls" and Section 26 0943.23 "Relay-Based Lighting Controls," and in Section 26 0923 "Lighting Control Devices."
- B. Dimmers and Dimmer Modules: Comply with UL 508.
 1. Audible Noise and RFI Suppression: Solid-state dimmers shall operate smoothly over their operating ranges without audible lamp or dimmer noise or RFI. Modules shall include integral or external filters to suppress audible noise and RFI.
 2. Dimmer or Dimmer-Module Rating: Not less than 125 percent of connected load unless otherwise indicated.
- C. Capacities: Unit shall be rated for [2400 W at 240-V ac and 2000 W at 120-V ac] <Insert value> for up to [100] <Insert number> devices or zones.
- D. Surge Protection: Withstand supply power surges without impairment to performance.
 1. Panels: 6000 V, 3000 A, complying with IEEE C62.41.1 and IEEE C62.41.2.
 2. Other System Devices: 6000 V, 3000 A, complying with IEEE C62.41.1 and IEEE C62.41.2.
- E. Off Control Position: User-selected off position of any control point shall disconnect the load from line supply.
- F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 WALL-BOX MULTISCENE DIMMING CONTROLS

- A. Description: Factory-fabricated equipment providing manual dimming consisting of a wall-box-mounted master controller[**and indicated number of wall-box zone stations**]. Controls and dimmers shall be integrated for mounting in multigang wall box under a single wall plate. Each zone shall be adjustable to indicated number of scenes, which shall reside in the memory of zone controller.
- B. Dimmers: Each zone shall be configurable to control the following loads:
 1. Fluorescent lamps with [**electronic**] [**magnetic**] ballasts.
 2. LED lamps.
 3. Incandescent lamps.
 4. Low-voltage lamps, derived with [**magnetic**] [**electronic**] transformers.

5. Non-dim, on-off switching only.
 6. **<Insert special lighting equipment>.**
- C. Dimmers: Regulate voltages to maintain a constant light level, with no visible flicker, when the source voltage varies plus or minus 2 percent of rms voltage.
- D. Memory:
1. Retain preset scenes and fade rates through momentary (up to 3-second) power interruptions.
 2. Retain preset scenes through power failures for at least **[seven]** **<Insert number>** days.
- E. Device Plates: Style, material, and color **[shall comply with Section 26 2726 "Wiring Devices."]** **<Insert description.>** Master-control cover plate shall be one piece.
- F. Master controller shall include the following:
1. Cover-mounted switches, including master off, all bright, and selectors for each scene.
 2. Cover-mounted LED indicator lights, one associated with each scene switch, and one for the master off switch.
 3. Concealed switches and indicators for specified function.
 4. A raise/lower switch for each zone for temporary adjustments of the zone without altering scene values stored in memory.
 5. Fade time indicated by digital display for current scene while fading.
 6. Cover-mounted infrared receiver.
- G. Infrared Transmitters: Wireless remote control for recalling **[each]** **[four]** **<Insert number>** of the presets. Operate up to 50 feet (15 m) within line of sight of the master controller.
- 2.4 CONDUCTORS AND CABLES
- A. Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Class 2 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 18 No. 22 No. 24 AWG. Comply with requirements in Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with NECA 1.
- B. Wiring Method: Comply with requirements in Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size shall be 1/2 inch (13 mm).
- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.

- D. Size conductors according to lighting control device manufacturer's written instructions unless otherwise indicated.
- E. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.2 IDENTIFICATION

- A. Comply with requirements for identification specified in Section 26 0553 "Identification for Electrical Systems."
- B. Label each dimmer module with a unique designation.
- C. Label each scene control button with approved scene description.

3.3 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Continuity tests of circuits.
 - 2. Operational Test: Set and operate controls to demonstrate their functions and capabilities in a methodical sequence that cues and reproduces actual operating functions.
 - a. Include testing of modular dimming control equipment under conditions that simulate actual operational conditions. Record control settings, operations, cues, and functional observations.
- B. Dimming control components will be considered defective if they do not pass tests and inspections.
- C. Test Labeling: After satisfactory completion of tests and inspections, apply a label to tested components indicating test results, date, and responsible agency and representative.
- D. Reports: Written reports of tests and observations. Record defective materials and workmanship and unsatisfactory test results. Record repairs and adjustments.

3.4 DEMONSTRATION

- A. [Engage a factory-authorized service representative to train] [Train] Owner's maintenance personnel to adjust, operate, and maintain modular dimming controls.[**Laptop portable computer shall be used in training.**]

END OF SECTION

SECTION 26 0943 - NETWORK LIGHTING CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes manually operated lighting controls with relays electrically operated circuit breakers and control module.
- B. Section includes manually operated, PC-based, digital lighting controls with external signal source, relays , electrically operated circuit breakers, and control module.
- C. Section includes individually addressable lighting control devices communicating with data-entry and -retrieval devices using DALI protocol.
- D. Related Requirements:
 - 1. Section 26 0923 "Lighting Control Devices" for time clocks, photoelectric sensors, occupancy sensors, and multipole contactors.
 - 2. Section 26 0933 "Central Dimming Controls" or Section 26 0936 "Modular Dimming Controls" for dimming control components.

1.2 DEFINITIONS

- A. BAS: Building automation system.
- B. DALI: Digital addressable lighting interface.
- C. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling and power-limited circuits.
- D. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.
- E. PC: Personal computer; sometimes plural as "PCs."
- F. Power Line Carrier: Use of radio-frequency energy to transmit information over transmission lines whose primary purpose is the transmission of power.
- G. RS-485: A serial network protocol, similar to RS-232, complying with TIA-485-A.
- H. UTP: Unshielded twisted pair.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, DALI network materials, manual switches and plates, and conductors and cables.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Outline Drawings: Indicate dimensions, weights, arrangement of components, and clearance and access requirements.
3. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.
4. Wiring Diagrams: For power, signal, and control wiring. Coordinate nomenclature and presentation with a block diagram.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in other Sections.
 1. Show interconnecting signal and control wiring and interfacing devices that prove compatibility of inputs and outputs.
 2. For networked controls, list network protocols and provide statements from manufacturers that input and output devices meet interoperability requirements of the network protocol.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For lighting controls to include in emergency, operation, and maintenance manuals.
- B. Software and Firmware Operational Documentation:
 1. Software operating and upgrade manuals.
 2. Program Software Backup: On a magnetic media or compact disc, complete with data files.
 3. Device address list.
 4. Printout of software application and graphic screens.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Electrically Held Relays: Equal to < **Insert number** > percent of amount installed[**for each size indicated**], but no fewer than < **Insert number** > relays.
 2. Electrically Operated, Molded-Case Circuit Breakers: Equal to < **Insert number** > percent of amount installed[**for each size indicated**], but no fewer than < **Insert number** > circuit breakers.

1.7 QUALITY ASSURANCE

- A. Source Limitations: Obtain lighting control module and power distribution components through one source from a single manufacturer.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with 47 CFR, Subparts A and B, for Class A digital devices.
- D. Comply with protocol described in IEC 60929, Annex E, for DALI lighting control devices, wiring, and computer hardware and software.
- E. Comply with NFPA 70.

1.8 COORDINATION

- A. Coordinate lighting control components to form an integrated interconnection of compatible components.
 - 1. Match components and interconnections for optimum performance of lighting control functions.
 - 2. Coordinate lighting controls with BAS HVAC controls. Design display graphics showing building areas controlled; include the status of lighting controls in each area.
 - 3. Coordinate lighting controls with that in Sections specifying distribution components that are monitored or controlled by power monitoring and control equipment.
- B. Coordinate lighting control components specified in this Section with components specified in Section 26 2416 "Panelboards."

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of lighting controls that fail in materials or workmanship or from transient voltage surges within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Failure of software input/output to execute switching or dimming commands.
 - b. Failure of modular relays to operate under manual or software commands.
 - c. Damage of electronic components due to transient voltage surges.
 - d. **<Insert type of failure>.**
 - 2. Warranty Period: [**Two**] **<Insert number>** years from date of Substantial Completion.
 - 3. Extended Warranty Period Failure Due to Transient Voltage Surges: [**Eight**] **<Insert number>** years.
 - 4. Extended Warranty Period for Electrically Held Relays: [**10**] **<Insert number>** years from date of Substantial Completion.

1.10 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning with Substantial Completion, provide software support for [**two**] **<Insert number>** years.
- B. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within [**two**] **<Insert number>** years from date of Substantial Completion. Upgrading software shall include operating system. Upgrade shall include new or revised licenses for use of the software.

1. Provide 30 days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, [**provide products by one of the following**] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide [**product indicated on Drawings**] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 1. Acuity Brands Lighting, Inc.; Lithonia Lighting brand.
 2. Intelligent Lighting Controls.
 3. Leviton Mfg. Company Inc.
 4. Lighting Control & Design, Inc.
 5. Lightolier Controls; a division of Genlyte Group, LLC.
 6. Lutron Electronics Co., Inc.
 7. Musco Lighting.
 8. NexLight; part of the Northport Engineering Group.
 9. Square D; a brand of Schneider Electric.
 10. Starfield Controls, Inc.
 11. Touch-Plate Technologies.
 12. Triatek, Inc.
 13. Watt Stopper/Legrand.
 14. <Insert manufacturer's name>.

2.2 SYSTEM REQUIREMENTS

- A. Expandability: System shall be capable of increasing the number of control functions in the future by 25 percent of current capacity; to include equipment ratings, housing capacities, spare relays, terminals, number of conductors in control cables, and control software.
- B. Performance Requirements: Manual switch operation sends a signal to network-system control module that processes the signal according to its programming and routes an open or close command to one or more relays electrically operated circuit breakers in the power-supply circuits to groups of lighting fixtures or other loads.
- C. Performance Requirements: Manual switches, an internal timing and control unit, and external sensors or other control signal sources send a signal to a PC-based network-system control module that processes the signal according to its programming and routes an open or close command to one or more relays electrically operated circuit breakers in the power-supply circuits, or routes variable commands to one or more dimmers, for groups of lighting fixtures or other loads.

- D. Performance Requirements: Individually addressable devices (such as electronic ballasts, dimmers, and manual switches) are operated from digital signals received through a DALI-compliant bus, from data-entry and -retrieval devices (such as PCs, personal digital assistants (PDAs), hand-held infrared programming devices, wired Ethernet hubs, wireless IEEE 802.11 hubs[, and] <Insert other digital communications device>). Devices also report status to data-entry and -retrieval devices through the bus.
- E. BAS Interface: Provide hardware and software to enable the BAS to monitor, control, display, and record data for use in processing reports.
 - 1. Hardwired Points:
 - a. Monitoring: On-off status, < Insert monitoring point>.
 - b. Control: On-off operation, < Insert control point>.
 - 2. communication interface with the BAS shall enable the BAS operator to remotely control and monitor lighting from a BAS operator workstation. Control features and monitoring points displayed locally at lighting panel shall be available through the BAS.

2.3 CONTROL MODULE

- A. Control Module Description: Comply with UL 916 (CSA C22.2, No. 205); microprocessor-based, solid-state, 365-day timing and control unit. Output circuits shall be switched on or off by internally programmed time signals or by program-controlled analog or digital signals from external sources. Output circuits shall be pilot-duty relays compatible with power switching devices. An integral keypad shall provide local programming and control capability. A key-locked cover and a programmed security access code shall protect keypad use. An integral alphanumeric LCD or LED shall display menu-assisted programming and control.
- B. Control Module Description: Comply with UL 916 (CSA C22.2, No. 205); microprocessor-based, solid-state, 365-day timing and control unit. Unit shall be networked for control of indicated number of output circuits. Output circuits shall be switched on or off by internally programmed time signals or by program-controlled analog or digital signals from external sources. Output circuits shall be pilot-duty relays compatible with power switching devices, all located in other enclosures. An integral keypad shall provide local programming and control capability. A key-locked cover and a programmed security access code shall protect keypad use. An integral alphanumeric LCD shall display manual-control and programming steps. Modules and their associated control panels shall include the following features:
 - 1. Multichannel output with <Insert number> channels.
 - 2. Multiple inputs and multichannel output arranged for <Insert number> channels.
 - 3. Multiple inputs for indicated occupancy sensors and hand-held programming device.
- C. Control Module Description: Comply with UL 916 (CSA C22.2, No. 205); microprocessor-based, solid-state, 365-day timing and control unit. Control units shall be networked and capable of receiving inputs from indicated sensors and hand-held programmer. Output circuits shall be pilot-duty relays compatible with power switching devices. Output circuits shall include digital circuits arranged to transmit control commands to remote preset dimmers. Modules and their associated control panels shall include the following features:
 - 1. Multichannel output with <Insert number> channels.
 - 2. Multiple inputs and multichannel output arranged for <Insert number> channels.

3. Multiple inputs for occupancy sensors, daylight sensors, and dimming systems with associated daylight sensors.
- D. Control Module Description: Panelboard mounted; comply with UL 916 (CSA C22.2, No. 205); microprocessor based, solid-state, 365-day timing and control unit. Control units shall be networked and capable of receiving inputs from sensors and other sources. Panelboard shall use low-voltage-controlled, electrically operated, molded-case branch circuit breakers as prime power-circuit switching devices. Circuit breakers and a limited number of digital or analog, low-voltage control-circuit outputs shall be individually controlled by control module. Line-voltage components and wiring shall be separated from low-voltage components and wiring by barriers. Control module shall be locally programmable. Panelboard shall also comply with Section 26 2416 "Panelboards."
- E. Control Module Description: Comply with UL 508 (CAN/CSA C22.2, No. 14); microprocessor-based, networked, control unit; mounted in preassembled, modular relay panel. Low-voltage-controlled, latching-type, single-pole lighting circuit relays shall be prime output circuit devices. Where indicated, a limited number of digital or analog, low-voltage control-circuit outputs shall be supported by control unit and circuit boards associated with relays. Control units shall be capable of receiving inputs from sensors and other sources. Line-voltage components and wiring shall be separated from low-voltage components and wiring by barriers. Control module shall be locally programmable.
- F. Control Module Description: Programmable, PC-based unit with [**17-inch color video monitor**] [**15-inch color LCD**] and keyboard for graphic display and programming of system status and to override breaker status; and to display status of local override controls and diagnostic information. If the control module is applied to emergency lighting units, control unit shall indicate failure of normal power and that the lighting units are, or are not, powered by the alternate power source.
1. Display: Single graphic display for programming lighting control panelboards.
 2. Display: Separate graphic displays for programming each lighting control panelboard.
 3. Interoperability: Control module shall be configured to connect with other control systems using RS-485 network to enable remote workstations to use control module functions.
 4. Interoperability: Lighting control shall be configured to allow individual users to turn lighting on and off with DALI-compliant, digital-communication devices. Software shall be written for Windows operating system, with the full suite of DALI commands and device parameter settings.
 5. System Memory: Nonvolatile. System shall reboot program and reset time automatically without errors after power outages up to 90 days' duration.
 6. Software: Lighting control software shall be capable of linking switch inputs to relay outputs, retrieving links, viewing relay output status, controlling relay outputs, simulating switch inputs, setting device addresses, and assigning switch input and relay output modes.
 7. Automatic Time Adjustment: System shall automatically adjust for leap year and daylight saving time and shall provide weekly routine and annual holiday scheduling.
 8. Astronomic Control: Automatic adjustment of dawn and dusk switching.

9. Demand Control: Demand shall be monitored through pulses from a remote meter and shall be controlled by programmed switching of loads. System capability shall include sliding window averaging and programming of load priorities and characteristics. Minimum of two different time-of-day demand schedules shall execute load-management control actions by switching output circuits or by transmitting other types of load-control signals.
10. Confirmation: Each relay or contactor device operated by system shall have auxiliary contacts that provide a confirmation signal to the system of on or off status of device. On or off status confirmation for each electrically operated circuit breaker shall be provided by an auxiliary contact or by a sensing device at load terminal.
 - a. Software shall interpret status signals, provide for their display, and initiate failure signals.
11. Remote Communication Capability: Allow programming, data-gathering interrogation, status display, and controlled command override from a PC at a remote location over DALI networks. System shall include modem, communications and control software, and remote computer compatibility verification for this purpose.
12. Telephone Override Capability: Override programmed lighting shutdown commands by telephoning computer and entering a voice-menu-guided, override touch-tone code specific to zone being controlled.
13. Local Override Capability: Manual, low-voltage control devices shall override programmed shutdown of lighting and shall override other programmed control for intervals that may be duration programmed.
14. Automatic Control of Local Override: Automatic control shall switch lighting off if lighting has been switched on by local override. **Comply with provisions in California Code of Regulations, Title 24, Part 6.**
15. Automatic battery backup shall provide power to maintain program and system clock operation for 90 days' minimum duration when power is off.
16. Programmed time signals shall change preset scenes and dimmer settings.
17. Daylight Balancing Dimming Control: Control module shall interpret variable analog signal from photoelectric sensor and shall route dimming signals to dimming fluorescent ballast control circuits. Signal shall control dimming of fixture so illumination level remains constant as daylight contribution varies.
18. Daylight Compensating Switch Control: Control module shall interpret a preset threshold illumination-level signal from a photoelectric relay and shall activate relays controlling power to selected groups of lighting fixtures to turn them on and off to maintain adjustable minimum illumination level as daylight contribution varies.
19. Energy Conservation: Bilevel control of special ballasts or dimming circuits to comply with local energy codes.
20. Flick Warning: Programmable momentary turnoff of lights shall warn that programmed shutoff will occur after a preset interval. Warning shall be repeated after a second preset interval before end of programmed override period.
21. Diagnostics: When system operates improperly, software shall initiate factory-programmed diagnosis of failure and display messages identifying problem and possible causes.
22. Additional Programming: In addition to system programming by the PC, individual control modules shall be networked and programmable using data-entry and -retrieval (such as PCs, personal digital assistants (PDAs), hand-held infrared programming devices, wired Ethernet hubs, wireless IEEE 802.11 hubs[, and] **<Insert other digital communications device>**).

2.4 POWER DISTRIBUTION COMPONENTS

- A. Modular Relay Panel: Comply with UL 508 (CAN/CSA C22.2, No. 14) and UL 916 (CSA C22.2, No. 205); factory assembled with modular single-pole relays, power supplies, and accessory components required for specified performance.
 1. Cabinet: Steel with hinged, locking door.
 - a. Barriers separate low-voltage and line-voltage components.
 - b. Directory: Mounted on back of door. Identifies each relay as to load groups controlled and each programmed pilot device if any.
 - c. Control Power Supply: Transformer and full-wave rectifier with filtered dc output.
 2. Single-Pole Relays: Mechanically held unless otherwise indicated; split-coil, momentary-pulsed type.
 - a. Low-Voltage Leads: Plug connector to the connector strip in cabinet and pilot light power where indicated.
 - b. Rated Capacity (Mounted in Relay Panel): 20 A, 125-V ac for tungsten filaments; 20 A, 277-V ac for ballasts.
 - c. Endurance: 50,000 cycles at rated capacity.
 - d. Mounting: Provision for easy removal and installation in relay cabinet.
- B. Electrically Operated, Molded-Case Circuit-Breaker Panelboard: Comply with NEMA PB 1 and UL 50 (CAN/CSA C22.2, No. 94), UL 67 (CSA C22.2, No. 29), UL 489 (CAN/CSA C22.2, No. 65), and UL 916 (CSA C22.2, No. 205).
 1. Cabinets: In addition to requirements specified below, comply with Section 26 2416 "Panelboards."
 2. Electrically Operated, Molded-Case Circuit Breakers: Bolt-on type.
 - a. Switching Endurance Ratings: Certified by manufacturer or by a nationally recognized testing laboratory (NRTL) for at least 20,000 open and close operations under rated load at 0.8 power factor.
 - b. Minimum 30,000 open and close operations with load equal to circuit-breaker trip rating and consisting of 100 percent tungsten filament load.
 - c. Minimum 30,000 open and close operations with load equal to circuit-breaker trip rating and consisting of 100 percent fluorescent ballasts rated for 10 percent total harmonic distortion.
 - d. Listed and labeled as complying with UL SWD, HCAR, and HID ratings by an NRTL acceptable to authorities having jurisdiction.
- C. Line-Voltage Surge Suppression: Factory installed as an integral part of 120- and 277-V ac, solid-state control panels.

2.5 DALI NETWORK MATERIALS

- A. Network Power Supply and Router: Interface device connecting TCP/IP control networks to DALI-compliant network.
 1. DALI-Compliant Network Power Rating: [**One full-rated network for**] [**Two full-rated networks, each capable of**] powering up to 64 addressable devices for each network; suitable for use with NFPA 70, Class 1 and Class 2 control circuits; and 16 V dc, 250 mA.
 2. Primary Power: 120 or 277 V, field selectable; 12 VA.
 3. 10basT Ethernet port.

4. LED indicator lights for Ethernet status (link, send, and receive), power-on, and DALI network failure.

B. Lighting Control Software:

1. Five-tier hierarchical architecture; high-speed, parallel query; and distributed-logic processing scalable from single rooms to full campuses.
2. Automatic backup for all settings and parameters.
3. TCP/IP network protocol.
4. Interactive with other building management systems at TCP/IP level.
5. At least three security levels.
6. Support the full suite of DALI commands and device parameter settings.
7. Scheduling modules to provide building-wide scene scheduling.
8. Billing modules to track energy use for multiple tenants and able to produce monthly billing statements.
9. Support load shedding, peak shaving, sweeps with local override, and other energy-conservation measures.
10. Able to report individual device status, including inoperative lamps, ballast failure detection, and dimmer position.

2.6 MANUAL ANALOG SWITCHES AND PLATES

- A. Push-Button Switches: Modular, momentary-contact, low-voltage type.
 1. Match color specified in Section 26 2726 "Wiring Devices."
 2. Integral green **[LED]** **[neon]** pilot light to indicate when circuit is on.
 3. Internal white **[LED]** **[neon]** locator light to illuminate when circuit is off.
- B. Manual, Maintained Contact, Full- or Low-Voltage Switch: Comply with Section 26 2726 "Wiring Devices."
- C. Wall-Box Dimmers: Comply with Section 26 2726 "Wiring Devices."
- D. Wall Plates: Single and multigang plates as specified in Section 26 2726 "Wiring Devices."
- E. Legend: Engraved or permanently silk-screened on wall plate where indicated. Use designations indicated on Drawings.

2.7 FIELD-MOUNTED DIGITAL CONTROLS AND PLATES

- A. Connection Type: RS-485 protocol, category 5 5e UTP cable, using RJ45 connectors. Power shall be from the control unit.
- B. Pushbutton Switches: Modular, solid-state, programmable, digital, momentary contact, designed to connect to a microprocessor based control unit as a manual control source.
 1. Mounting: Standard single-gang recessed switchbox, using device plates specified in Section 26 2726 "Wiring Devices."
 2. Multi-Gang Mounting: One to six pushbuttons per gang.

2.8 CONDUCTORS AND CABLES

- A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG, complying with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

- B. Classes 2 and 3 Control Cables: Stranded copper, complying with UL 83, multiconductor cable with copper conductors not smaller than No. [18] [22] [24] AWG, complying with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Class 1 Control Cables: Stranded copper, complying with UL 83, multiconductor cable with copper conductors not smaller than No. [14] [16] [18] AWG, complying with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Structured Network Digital and Multiplexed Signal Cables: UTP cable with copper conductors, complying with TIA/EIA-568-B.2, Category [5e] [6] for horizontal copper cable and with Section 27 1500 "Communications Horizontal Cabling."
- E. RS-485 Cables:
 - 1. Standard Cable: NFPA 70, Type CM[or CMG].
 - a. Paired, 2 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors.
 - b. PVC insulation.
 - c. Unshielded.
 - d. PVC jacket.
 - e. Flame Resistance: Comply with UL 1581.
 - 2. Plenum-Rated Cable: NFPA 70, Type CMP.
 - a. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
 - b. Fluorinated ethylene propylene insulation.
 - c. Unshielded.
 - d. Fluorinated ethylene propylene jacket.
 - e. Flame Resistance: NFPA 262, Flame Test.

PART 3 - EXECUTION

3.1 WIRING INSTALLATION

- A. Comply with NECA 1.
- B. Wiring Method: Install wiring in raceways [**except where installed in accessible ceilings**] [**except where installed in accessible ceilings and gypsum board partitions**]. Minimum conduit size shall be 1/2 inch (13 mm).
 - 1. For power wiring comply with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
 - 2. For digital data transmission and low-voltage (operating at less than 50 V) remote control and signaling cables, comply with Section 26 0523 "Control-Voltage Electrical Power Cables."
- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Separate power-limited and non-power-limited conductors according to conductor manufacturer's written instructions.
- D. Install field-mounting transient voltage suppressors for lighting control devices in Category A locations that do not have integral line-voltage surge protection.
- E. Size conductors according to lighting control device manufacturer's written instructions unless otherwise indicated.

- F. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in terminal cabinets, equipment enclosures, and in junction, pull, and outlet boxes.
- G. Identify components and power and control wiring according to Section 26 0553 "Identification for Electrical Systems."

3.2 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Tests and Inspections:
 - 1. Test for circuit continuity.
 - 2. Verify that the control module features are operational.
 - 3. Check operation of local override controls.
 - 4. Test system diagnostics by simulating improper operation of several components selected by Architect.
- E. Lighting controls will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.3 SOFTWARE INSTALLATION

- A. Install and program software with initial settings of adjustable values. Make backup copies of software and user-supplied values. Provide current licenses for software.

3.4 ADJUSTING

- A. Occupancy Adjustments: When requested within [12] <Insert number> months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [two] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.5 DEMONSTRATION

- A. [Engage a factory-authorized service representative to train] [Train] Owner's maintenance personnel to adjust, operate, and maintain lighting controls[and software training for PC-based control systems]. See Section 01 7900 "Demonstration and Training."

END OF SECTION

SECTION 26 2213 - LOW-VOLTAGE DISTRIBUTION TRANSFORMERS**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes distribution, dry-type transformers with a nominal primary and secondary rating of 600 V and less, with capacities up to 1500 kVA.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type and size of transformer.
 - 2. Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer.
- B. Shop Drawings:
 - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.
 - 3. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For testing agency.
- B. Source quality-control reports.
- C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For transformers to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Accredited by NETA.
 - 1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Inspection: On receipt, inspect for and note any shipping damage to packaging and transformer.
 - 1. If manufacturer packaging is removed for inspection, and transformer will be stored after inspection, re-package transformer using original or new packaging materials that provide protection equivalent to manufacturer's packaging.
- B. Storage: Store in a warm, dry, and temperature-stable location in original shipping packaging.

- C. Temporary Heating: Apply temporary heat according to manufacturer's written instructions within the enclosure of each ventilated-type unit, throughout periods during which equipment is not energized and when transformer is not in a space that is continuously under normal control of temperature and humidity.
- D. Handling: Follow manufacturer's instructions for lifting and transporting transformers.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Dongan Electric Manufacturing Company.
 - 2. Eaton.
 - 3. ABB.
 - 4. Hammond Power Solutions Inc.
 - 5. MGM Transformer Company.
 - 6. Siemens Power Transmission & Distribution, Inc.
 - 7. Sola/Hevi-Duty; a brand of Emerson Electric Co.
 - 8. Square D; by Schneider Electric.
- B. Source Limitations: Obtain each transformer type from single source from single manufacturer.

2.2 GENERAL TRANSFORMER REQUIREMENTS

- A. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.
- B. Comply with NFPA 70.
 - 1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
- C. Transformers Rated 15 kVA and Larger:
 - 1. Comply with 10 CFR 431 (DOE 2016) efficiency levels.
 - 2. Marked as compliant with DOE 2016 efficiency levels by an NRTL.
- D. Shipping Restraints: Paint or otherwise color-code bolts, wedges, blocks, and other restraints that are to be removed after installation and before energizing. Use fluorescent colors that are easily identifiable inside the transformer enclosure.

2.3 DISTRIBUTION TRANSFORMERS

- A. Comply with NFPA 70, and list and label as complying with UL 1561.
- B. Provide transformers that are constructed to withstand seismic forces specified in Section 26 0548.16 "Seismic Controls for Electrical Systems."
- C. Cores: Electrical grade, non-aging silicon steel with high permeability and low hysteresis losses.
 - 1. One leg per phase.

2. Core volume shall allow efficient transformer operation at 10 percent above the nominal tap voltage.
 3. Grounded to enclosure.
- D. Coils: Continuous windings without splices except for taps.
1. Coil Material: Copper.
 2. Internal Coil Connections: Brazed or pressure type.
 3. Terminal Connections: Welded.
- E. Encapsulation: Transformers smaller than 30 kVA shall have core and coils completely resin encapsulated.
- F. Enclosure: Ventilated.
1. NEMA 250, Type 2 : Core and coil shall be encapsulated within resin compound using a vacuum-pressure impregnation process to seal out moisture and air.
 2. KVA Ratings: Based on convection cooling only and not relying on auxiliary fans.
 3. Wiring Compartment: Sized for conduit entry and wiring installation.
- G. Taps for Transformers 7.5 to 24 kVA: One 5 percent tap above and one 5 percent tap below normal full capacity.
- H. Taps for Transformers 25 kVA and Larger: Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity.
- I. Insulation Class, Smaller Than 30 kVA: 180 deg C, UL-component-recognized insulation system with a maximum of 115 deg C rise above 40 deg C ambient temperature.
- J. Insulation Class, 30 kVA and Larger: 220 deg C, UL-component-recognized insulation system with a maximum of 115 deg C rise above 40 deg C ambient temperature.
- K. Grounding: Provide ground-bar kit or a ground bar installed on the inside of the transformer enclosure.
- L. K-Factor Rating: Transformers indicated to be K-factor rated shall comply with UL 1561 requirements for nonsinusoidal load current-handling capability to the degree defined by designated K-factor.
1. Unit shall not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor, without exceeding the indicated insulation class in a 40 deg C maximum ambient and a 24-hour average ambient of 30 deg C.
 2. Indicate value of K-factor on transformer nameplate.
 3. Unit shall comply with requirements of DOE 2016 efficiency levels when tested according to NEMA TP 2 with a K-factor equal to one.
- M. Neutral: Rated 200 percent of full load current for K-factor-rated transformers.
- N. Wall Brackets: Manufacturer's standard brackets.
- O. Low-Sound-Level Requirements: Maximum sound levels when factory tested according to IEEE C57.12.91, as follows:
1. 9.00 kVA and Less: 40 dBA.
 2. 9.01 to 30.00 kVA: 45 dBA.

3. 30.01 to 50.00 kVA: 45 dBA for K-factors of 1, 4, and 9.
4. 50.01 to 150.00 kVA: 50 dBA for K-factors of 1, 4, and 9.
5. 150.01 to 300.00 kVA: 55 dBA for K-factors of 1, 4, and 9.
6. 300.01 to 500.00 kVA: 60 dBA for K-factors of 1, 4, and 9.
7. 500.01 to 700.00: 62 dBA for K-factors of 1, 4, and 9.
8. 700.01 to 1000.00: 64 dBA for K-factors of 1, 4, and 9.
9. 1000.01 to 1500.00 kVA: .

2.4 IDENTIFICATION

- A. Nameplates: Engraved, laminated-acrylic or melamine plastic signs for each distribution transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Section 26 0553 "Identification for Electrical Systems."
- B. Nameplates: Self-adhesive label for each distribution transformer. Self-adhesive labels are specified in Section 26 0553 "Identification for Electrical Systems."

2.5 SOURCE QUALITY CONTROL

- A. Test and inspect transformers according to IEEE C57.12.01 and IEEE C57.12.91.
 1. Resistance measurements of all windings at rated voltage connections and at all tap connections.
 2. Ratio tests at rated voltage connections and at all tap connections.
 3. Phase relation and polarity tests at rated voltage connections.
 4. No load losses, and excitation current and rated voltage at rated voltage connections.
 5. Impedance and load losses at rated current and rated frequency at rated voltage connections.
 6. Applied and induced tensile tests.
 7. Regulation and efficiency at rated load and voltage.
 8. Insulation-Resistance Tests:
 - a. High-voltage to ground.
 - b. Low-voltage to ground.
 - c. High-voltage to low-voltage.
 9. Temperature tests.
- B. Factory Sound-Level Tests: Conduct prototype sound-level tests on production-line products.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.
- B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's written instructions.
- C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

- D. Verify that ground connections are in place and requirements in Section 26 0526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.
- E. Environment: Enclosures shall be rated for the environment in which they are located. Covers for NEMA 250, Type 4X enclosures shall not cause accessibility problems.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install wall-mounted transformers level and plumb with wall brackets fabricated by transformer manufacturer.
 - 1. Coordinate installation of wall-mounted and structure-hanging supports with actual transformer provided.
 - 2. Brace wall-mounted transformers as specified in Section 26 0548.16 "Seismic Controls for Electrical Systems."
- B. Install transformers level and plumb on a concrete base with vibration-dampening supports. Locate transformers away from corners and not parallel to adjacent wall surface.
- C. Construct concrete bases according to Division 03 and anchor floor-mounted transformers according to manufacturer's written instructions and requirements in Section 26 0529 "Hangers and Supports for Electrical Systems."
 - 1. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.
- D. Secure transformer to concrete base according to manufacturer's written instructions.
- E. Secure covers to enclosure and tighten all bolts to manufacturer-recommended torques to reduce noise generation.
- F. Remove shipping bolts, blocking, and wedges.

3.3 CONNECTIONS

- A. Ground equipment according to Section 26 0526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.
- D. Provide flexible connections at all conduit and conductor terminations and supports to eliminate sound and vibration transmission to the building structure.

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- D. Perform tests and inspections with the assistance of a factory-authorized service representative.
- E. Small (Up to 167-kVA Single-Phase or 500-kVA Three-Phase) Dry-Type Transformer Field Tests:
 - 1. Visual and Mechanical Inspection:
 - a. Inspect physical and mechanical condition.
 - b. Inspect anchorage, alignment, and grounding.
 - c. Verify that resilient mounts are free and that any shipping brackets have been removed.
 - d. Verify the unit is clean.
 - e. Perform specific inspections and mechanical tests recommended by manufacturer.
 - f. Verify that as-left tap connections are as specified.
 - g. Verify the presence of surge arresters and that their ratings are as specified.
 - 2. Electrical Tests:
 - a. Measure resistance at each winding, tap, and bolted connection.
 - b. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage according to manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index: the value of the index shall not be less than 1.0.
 - c. Perform turns-ratio tests at all tap positions. Test results shall not deviate by more than one-half percent from either the adjacent coils or the calculated ratio. If test fails, replace the transformer.
 - d. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.
- F. Large (Larger Than 167-kVA Single Phase or 500-kVA Three Phase) Dry-Type Transformer Field Tests:
 - 1. Visual and Mechanical Inspection:
 - a. Inspect physical and mechanical condition.
 - b. Inspect anchorage, alignment, and grounding.
 - c. Verify that resilient mounts are free and that any shipping brackets have been removed.
 - d. Verify the unit is clean.
 - e. Perform specific inspections and mechanical tests recommended by manufacturer.
 - f. Verify that as-left tap connections are as specified.
 - g. Verify the presence of surge arresters and that their ratings are as specified.
 - 2. Electrical Tests:
 - a. Measure resistance at each winding, tap, and bolted connection.

- b. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage according to manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index: the value of the index shall not be less than 1.0.
- c. Perform power-factor or dissipation-factor tests on all windings.
- d. Perform turns-ratio tests at all tap positions. Test results shall not deviate by more than one-half percent from either the adjacent coils or the calculated ratio. If test fails, replace the transformer.
- e. Perform an excitation-current test on each phase.
- f. Perform an applied voltage test on all high- and low-voltage windings to ground. See IEEE C57.12.91, Sections 10.2 and 10.9.
- g. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

G. Remove and replace units that do not pass tests or inspections and retest as specified above.

H. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.5 ADJUSTING

A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 5 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.

B. Output Settings Report: Prepare a written report recording output voltages and tap settings.

3.6 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

END OF SECTION

SECTION 26 2416 - PANELBOARDS**PART 1 - GENERAL****1.1 ACTION SUBMITTALS**

- A. Product Data: For each type of panelboard.
 - 1. Include materials, switching and overcurrent protective devices, SPDs, accessories, and components indicated.
 - 2. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
- B. Shop Drawings: For each panelboard and related equipment.
 - 1. Include dimensioned plans, elevations, sections, and details.
 - 2. Show tabulations of installed devices with nameplates, conductor termination sizes, equipment features, and ratings.
 - 3. Detail enclosure types including mounting and anchorage, environmental protection, knockouts, corner treatments, covers and doors, gaskets, hinges, and locks.
 - 4. Detail bus configuration, current, and voltage ratings.
 - 5. Short-circuit current rating of panelboards and overcurrent protective devices.
 - 6. Include evidence of NRTL listing for series rating of installed devices.
 - 7. Include evidence of NRTL listing for SPD as installed in panelboard.
 - 8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
 - 9. Include wiring diagrams for power, signal, and control wiring.
 - 10. Key interlock scheme drawing and sequence of operations.
 - 11. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Include selectable ranges for each type of overcurrent protective device. Include an Internet link for electronic access to downloadable PDF of the coordination curves.

1.2 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For testing agency.
- B. Panelboard Schedules: For installation in panelboards.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For panelboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 01 7823 "Operation and Maintenance Data," include the following:
 - 1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
 - 2. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Keys: Two spares for each type of panelboard cabinet lock.
2. Circuit Breakers Including GFCI and GFEP Types: Equal to 1 percent of quantity installed for each size and type, but no fewer than two of each size and type
Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
3. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: ISO 9001 or 9002 certified.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Remove loose packing and flammable materials from inside panelboards; storage in a dry space with adequate heating to prevent condensation.
- B. Handle and prepare panelboards for installation according to NEMA PB 1.

1.7 FIELD CONDITIONS

- A. Environmental Limitations:
 1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
 2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
 - a. Ambient Temperature: Not exceeding 23 deg F (minus 5 deg C) to plus 104 deg F (plus 40 deg C).
 - b. Altitude: Not exceeding 6600 feet (2000 m).

PART 2 - PRODUCTS

2.1 PANELBOARDS GENERAL REQUIREMENTS

- A. Related Requirements
 1. 260913 "Electrical Power Monitoring And Control".
 2. 264313 "Surge Protection For Low-Voltage Electrical Power Circuits".
- B. Product selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NEMA PB 1.
- E. Comply with NFPA 70.

- F. Enclosures: Surface-mounted, as indicated, dead-front cabinets.
1. Rated for environmental conditions at installed location.
 - a. Indoor Dry and Clean Locations: NEMA 250, Type 1.
 - b. Kitchen and Wash-Down Areas: NEMA 250, Type 4X, stainless steel
 - c. Other Wet or Damp Indoor Locations: NEMA 250, Type 4X.
 - d. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 5.
 2. Height: 84 inches (2.13 m) maximum.
 3. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover. Trims shall cover all live parts and shall have no exposed hardware.
 4. Gutter Extension and Barrier: Same gage and finish as panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections.
 5. Finishes:
 - a. Panels and Trim: Steel, factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
 - b. Back Boxes: Galvanized steel.
- G. Phase, Neutral, and Ground Buses:
1. Material: Hard-drawn copper, 98 percent conductivity.
 - a. Bus shall be fully rated the entire length.
 2. Interiors shall be factory assembled into a unit. Replacing switching and protective devices shall not disturb adjacent units or require removing the main bus connectors.
 3. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.
 4. Full-Sized Neutral: Equipped with full-capacity bonding strap for service entrance applications. Mount electrically isolated from enclosure. Do not mount neutral bus in gutter.
- H. Conductor Connectors: Suitable for use with conductor material and sizes.
1. Material: Same as buses.
 2. Terminations shall allow use of 75 deg C rated conductors without derating.
 3. Size: Lugs suitable for indicated conductor sizes, with additional gutter space, if required, for larger conductors.
 4. Lugs: Mechanical type, with a lug on the neutral bar for each pole in the panelboard.
- I. Panelboard Short-Circuit Current Rating: Fully rated to interrupt symmetrical short-circuit current available at terminals. Assembly listed by an NRTL for 100 percent interrupting capacity.
1. Panelboards and overcurrent protective devices rated 240 V or less shall have minimum short-circuit ratings as shown on Drawings, but not less than 10,000 A rms symmetrical where supplied from transformers rated less than 75kVA and not less than 22,000 A rms symmetrical where supplied from transformers rated 112.5kVA or greater. Short-Circuit current rating shall be greater than the maximum available fault current as determined in the power system study specified in Section 26 0573 "Power System Studies".
 2. Panelboards and overcurrent protective devices rated above 240 V and less than 600 V shall have minimum short-circuit ratings as shown on Drawings, but not less than 14,000 A rms symmetrical. Short-Circuit current rating shall be greater than the maximum available fault current as determined in the power system study specified in Section 26 0573 "Power System Studies".

2.2 PERFORMANCE REQUIREMENTS

- A. Surge Suppression: Factory installed as an integral part of indicated panelboards, complying with UL 1449 SPD. Provide Type 1 for service entrance equipment; Type 2 for other panelboards as indicated or specified..

2.3 POWER PANELBOARDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Eaton.
 - 2. ABB.
 - 3. SIEMENS Industry, Inc.; Energy Management Division.
 - 4. Square D; by Schneider Electric.
- B. Panelboards: NEMA PB 1, distribution type.
- C. Doors: Secured with vault-type latch with tumbler lock; keyed alike.
 - 1. For doors more than 36 inches (914 mm) high, provide two latches, keyed alike.
- D. Mains: As indicated.
- E. Branch Overcurrent Protective Devices for Circuit-Breaker: Bolt-on circuit breakers or Plug-in circuit breakers where individual positive-locking device requires mechanical release for removal or fused switches as indicated.

2.4 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Eaton.
 - 2. ABB.
 - 3. SIEMENS Industry, Inc.; Energy Management Division.
 - 4. Square D; by Schneider Electric.
- B. Panelboards: NEMA PB 1, lighting and appliance branch-circuit type.
- C. Mains: As indicated.
- D. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.
- E. Doors: Concealed hinges; secured with flush latch with tumbler lock; keyed alike.
- F. Doors: Door-in-door construction with concealed hinges; secured with multipoint latch with tumbler lock; keyed alike. Outer door shall permit full access to the panel interior. Inner door shall permit access to breaker operating handles and labeling, but current carrying terminals and bus shall remain concealed.

2.5 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

- A. Manufacturers: Subject to compliance with requirements, [provide products by one of the following]
1. Eaton.
 2. ABB.
 3. SIEMENS Industry, Inc.; Energy Management Division.
 4. Square D; by Schneider Electric.
- B. MCCB: Comply with UL 489, with interrupting capacity to meet available fault currents.
1. Thermal-Magnetic Circuit Breakers:
 - a. Inverse time-current element for low-level overloads.
 - b. Instantaneous magnetic trip element for short circuits.
 - c. Adjustable magnetic trip setting for circuit-breaker frame sizes 100 A and larger.
 2. Electronic Trip Circuit Breakers:
 - a. RMS sensing.
 - b. Field-replaceable rating plug or electronic trip.
 - c. Digital display of settings, trip targets, and indicated metering displays.
 - d. Multi-button keypad to access programmable functions and monitored data.
 - e. Ten-event, trip-history log. Each trip event shall be recorded with type, phase, and magnitude of fault that caused the trip.
 - f. Integral test jack for connection to portable test set or laptop computer.
 - g. Field-Adjustable Settings:
 - 1) For all circuit breakers with frame sizes equal to or greater than 150A or where specifically indicated on Drawings with "I" subscript on a circuit breaker:
 - a) Instantaneous trip.
 - 2) For all circuit breakers with frame sizes equal to or greater than 150A or where specifically indicated on Drawings with "L" subscript on a circuit breaker:
 - a) Long-time pickup level.
 - b) Long-time time adjustment.
 - 3) For all circuit breakers with frame sizes equal to or greater than 150A or where specifically indicated on Drawings with "S" subscript on a circuit breaker:
 - a) Short-time pickup levels.
 - b) Short-time time adjustment.
 - 4) Where indicated on Drawings with "G" subscript on a circuit breaker or where required by NEC for circuit breakers with frame sizes rated 1000A and greater on 480V and 480Y/277V circuits:
 - a) Ground-fault pickup level, time delay, and I squared T response.
 3. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
 4. GFCI Circuit Breakers: Single- and double-pole configurations with Class A ground-fault protection (6-mA trip).
 5. GFEP Circuit Breakers: Class B ground-fault protection (30-mA trip).
 6. Subfeed Circuit Breakers: Vertically mounted.
 7. MCCB Features and Accessories:
 - a. Standard frame sizes, trip ratings, and number of poles.
 - b. Breaker handle indicates tripped status.

- c. UL listed for reverse connection without restrictive line or load ratings.
- d. Lugs: Mechanical style, suitable for number, size, trip ratings, and conductor materials.
- e. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and HID lighting circuits.
- f. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
- g. Communication Capability: Circuit-breaker-mounted communication module with functions and features compatible with power monitoring and control system specified in Section 26 0913 "Electrical Power Monitoring and Control."
- h. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.
- i. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage with field-adjustable 0.1- to 0.6-second time delay.
- j. Rating Plugs: Three-pole breakers with ampere ratings greater than 150 amperes shall have interchangeable rating plugs or electronic adjustable trip units.
- k. Auxiliary Contacts: One, SPDT switch with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts and "b" contacts operate in reverse of circuit-breaker contacts.
- l. Multipole units enclosed in a single housing with a single handle or factory assembled to operate as a single unit.
- m. Handle Padlocking Device: Fixed attachment, for locking circuit-breaker handle in off position.
- n. Handle Clamp: Loose attachment, for holding circuit-breaker handle in on position. Provide one for each branch circuit overcurrent device serving fire alarm equipment. Handle clamps installed for fire alarm overcurrent devices shall have a red finish.

2.6 IDENTIFICATION

- A. Panelboard Label: Manufacturer's name and trademark, voltage, amperage, number of phases, and number of poles shall be located on the interior of the panelboard door.
- B. Breaker Labels: Faceplate shall list current rating, UL and IEC certification standards, and AIC rating.
- C. Circuit Directory: Computer-generated circuit directory mounted inside panelboard door with transparent plastic protective cover.
 - 1. Circuit directory shall identify specific purpose with detail sufficient to distinguish it from all other circuits.

2.7 ACCESSORY COMPONENTS AND FEATURES

- A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.
- B. Portable Test Set: For testing functions of solid-state trip devices without removing from panelboard. Include relay and meter test plugs suitable for testing panelboard meters and switchboard class relays.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify actual conditions with field measurements prior to ordering panelboards to verify that equipment fits in allocated space in, and comply with, minimum required clearances specified in NFPA 70.
- B. Receive, inspect, handle, and store panelboards according to NEMA PB 1.1.
- C. Examine panelboards before installation. Reject panelboards that are damaged, rusted, or have been subjected to water saturation.
- D. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Comply with NECA 1.
- C. Install panelboards and accessories according to NECA 407.
- D. Equipment Mounting:
 - 1. Install power panelboards on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases in Division 3.
 - 2. Attach panelboard to the vertical finished or structural surface behind the panelboard.
- E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.
- F. Mount panelboard cabinet plumb and rigid without distortion of box.
- G. Mount surface-mounted panelboards to steel slotted supports 5/8 inch (16 mm) in depth. Orient steel slotted supports vertically.
- H. Install overcurrent protective devices and controllers not already factory installed.
 - 1. Set field-adjustable, circuit-breaker trip ranges.
 - 2. Tighten bolted connections and circuit breaker connections using calibrated torque wrench or torque screwdriver per manufacturer's written instructions.

- I. Make grounding connections and bond neutral for services and separately derived systems to ground. Make connections to grounding electrodes, separate grounds for isolated ground bars, and connections to separate ground bars.
- J. Install filler plates in unused spaces.
- K. Install handle clamps on all branch circuit overcurrent devices serving fire alarm equipment.

3.3 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; install warning signs complying with requirements in Section 26 0553 "Identification for Electrical Systems."
- B. Create a directory to indicate installed circuit loads; incorporate Owner's final room designations. Obtain approval before installing. Handwritten directories are not acceptable. Install directory inside panelboard door.
- C. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Section 26 0553 "Identification for Electrical Systems."
- D. Device Nameplates: Label each branch circuit device in power panelboards with a nameplate complying with requirements for identification specified in Section 26 0553 "Identification for Electrical Systems."
- E. Install warning signs complying with requirements in Section 26 0553 "Identification for Electrical Systems" identifying source of remote circuit.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Acceptance Testing Preparation:
 - 1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- C. Tests and Inspections:
 - 1. Perform each visual and mechanical inspection and electrical test for low-voltage air circuit breakers and low-voltage surge arrestors stated in NETA ATS, Paragraph 7.6 Circuit Breakers and Paragraph 7.19.1 Surge Arrestors, Low-Voltage. Do not perform optional tests. Certify compliance with test parameters.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
- D. Panelboards will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results, with comparisons of the two scans. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.5 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.
- B. Set field-adjustable circuit-breaker trip ranges per Coordination Study.

3.6 PROTECTION

- A. Temporary Heating: Prior to energizing panelboards, apply temporary heat to maintain temperature according to manufacturer's written instructions.

END OF SECTION

FOR REFERENCE ONLY

SECTION 26 2726 - WIRING DEVICES

PART 1 - GENERAL

1.1 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: List of legends and description of materials and process used for premarking wall plates.

1.2 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For wiring devices to include in all manufacturers' packing-label warnings and instruction manuals that include labeling conditions.

PART 2 - PRODUCTS

2.1 GENERAL WIRING-DEVICE REQUIREMENTS

- A. Wiring Devices, Components, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
- B. Comply with NFPA 70.
- C. RoHS compliant.
- D. Comply with NEMA WD 1 and NEMA WD 6.
- E. Devices indicated as "tamper-resistant" shall have integral shutters that operate only when both prongs of a plug are inserted in the receptacle.
- F. Devices indicated as "weather-proof" or "weather-resistant" shall have the following:
 - 1. Spring-loaded, gasketed, "weather-proof-in-use" cover.
 - 2. Marking: Listed and labeled as complying with NFPA 70, "Receptacles in Damp or Wet Locations" Article.
- G. Switches indicated as Key-switch shall have factory-supplied key in lieu of switch handle.
- H. Devices indicated or specified as anti-microbial shall have contact surfaces treated with a factory-applied coating that kills 99.9 percent of certain common bacteria within two hours when regularly and properly cleaned.
- I. Devices indicated or specified as decorator style shall have a rectangular face opening.
- J. Devices for Owner-Furnished Equipment:
 - 1. Receptacles: Match plug configurations.
 - 2. Cord and Plug Sets: Match equipment requirements.
- K. Device Color:

1. Wiring Devices Connected to Normal Power System: [Almond] [Black] [Brown] [Gray] [Ivory] [White] [As selected by Architect] unless otherwise indicated or required by NFPA 70 or device listing.
2. Wiring Devices Connected to Emergency Electrical System: Red.

L. Source Limitations: Obtain each type of wiring device and associated wall plate from single source from single manufacturer.

2.2 STANDARD RECEPTACLES, 125 V, 20 A

A. Duplex Receptacles, 125 V, 20 A:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton (Arrow Hart).
 - b. Hubbell Incorporated; Wiring Device-Kellems.
 - c. Leviton Manufacturing Co., Inc.
 - d. Pass & Seymour/Legrand (Pass & Seymour).
2. Description: Two pole, three wire, and self-grounding.
3. Configuration: Heavy-duty, NEMA 5-20R
4. Standards: Comply with UL 498 and FS W-C-596.

2.3 USB RECEPTACLES

A. USB Charging Receptacles:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton (Arrow Hart).
 - b. Hubbell Incorporated; Wiring Device-Kellems.
 - c. Leviton Manufacturing Co., Inc.
 - d. Pass & Seymour/Legrand (Pass & Seymour).
2. Description:
 - a. Receptacle: Duplex 20A, 125V receptacle, configuration 5-20R, with tamper-resistant shutters.
 - b. USB Ports: One USB Type A and one USB Type C port with total available charging current of 3.1A or greater at 5 VDC.
3. Standards: Comply with UL 498, UL 1310 and USB 3.0 devices.

2.4 GFCI RECEPTACLES, 125 V, 20 A

A. Duplex GFCI Receptacles, 125 V, 20 A:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton (Arrow Hart).
 - b. Hubbell Incorporated; Wiring Device-Kellems.
 - c. Leviton Manufacturing Co., Inc.
 - d. Pass & Seymour/Legrand (Pass & Seymour).
2. Description: Integral GFCI with "Test" and "Reset" buttons and LED indicator light. Two pole, three wire, and self-grounding.
3. Configuration: NEMA WD 6, Configuration 5-20R.
4. Type: Non-feed through.
5. Standards: Comply with UL 498, UL 943 Class A, and FS W-C-596.

2.5 CONTROLLED RECEPTACLES, 125 V, 20 A

- A. Duplex Controlled Receptacle, 125 V, 20 A:
 - 1. Description: Receptacle marked with the controlled receptacle symbol as required by NFPA 70 article 406.
 - 2. Configuration: Heavy-duty, NEMA WD 6, Configuration 5-20R.
 - 3. Receptacle Type: Standard, USB, GFCI, tamper-resistant, hospital-grade, or any combination thereof as required to meet the requirements of this Section pertaining to where specific receptacle types are required, or as specifically indicated on Drawings.
 - 4. Switching Configuration: Half-controlled or full controlled as indicated on Drawings.

2.6 TWIST-LOCKING RECEPTACLES

- A. Single Convenience Receptacles, amperage, voltage, and NEMA configuration as indicated on the Drawings: Comply with NEMA WD 1 and UL 498.
 - 1. Products: Subject to compliance with the requirements, provide products by one of the following manufacturers:
 - a. Cooper
 - b. Hubbell
 - c. Leviton
 - d. Pass & Seymour

2.7 PENDANT CORD-CONNECTOR DEVICES

- A. Description: Matching, locking-type plug and receptacle body connector, heavy-duty grade.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Eaton (Arrow Hart).
 - 2. Hubbell Premise Wiring.
 - 3. Leviton Manufacturing Co., Inc.
 - 4. Pass & Seymour/Legrand (Pass & Seymour).
- C. Configuration: NEMA WD 6, Configurations L5-20P and L5-20R.
- D. Body: Nylon, with screw-open, cable-gripping jaws and provision for attaching external cable grip.
- E. External Cable Grip: Woven wire-mesh type made of high-strength, galvanized-steel wire strand, matched to cable diameter, and with attachment provision designed for corresponding connector.
- F. Standards: Comply with FS W-C-596.

2.8 TOGGLE SWITCHES, 120/277 V, 20 A

- A. Snap Switches, 120/277 V, 20 A :
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton (Arrow Hart).

- b. Hubbell Incorporated; Wiring Device-Kellems.
 - c. Leviton Manufacturing Co., Inc.
 - d. Pass & Seymour/Legrand (Pass & Seymour).
 - 2. Standards: Comply with UL 20 and FS W-S-896.
- B. Pilot-Light, Snap Switches: 120/277 V, 20 A:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton (Arrow Hart).
 - b. Hubbell Incorporated; Wiring Device-Kellems.
 - c. Leviton Manufacturing Co., Inc.
 - d. Pass & Seymour/Legrand (Pass & Seymour).
 - 2. Description: Illuminated when switch is **[on]** **[off]**.
 - 3. Standards: Comply with UL 20 and FS W-S-896.

2.9 WALL PLATES

- A. Single Source: Obtain wall plates from same manufacturer of wiring devices.
- B. Single and combination types shall match corresponding wiring devices.
- 1. Plate-Securing Screws: Metal with head color to match plate finish.
 - 2. Material for Finished Spaces: Steel with white baked enamel, suitable for field painting Smooth, high-impact thermoplastic, color as selected by Architect 0.035-inch- (1-mm-) thick, satin-finished, Type 302 stainless steel 0.04-inch- (1-mm-) thick, brushed brass with factory polymer finish 0.05-inch- (1.2-mm-) thick, anodized aluminum 0.04-inch- (1-mm-) thick steel with chrome-plated finish.
 - 3. Material for Unfinished Spaces: Galvanized steel Smooth, high-impact thermoplastic.
 - 4. Material for Damp Locations: Thermoplastic Cast aluminum with spring-loaded lift cover, and listed and labeled for use in wet and damp locations.
- C. Wet-Location, Weatherproof Cover Plates: NEMA 250, complying with Type 3R, weather-resistant, die-cast aluminum thermoplastic with lockable cover.

2.10 SURFACE RACEWAYS

- A. Description: Two-piece, aluminum construction multioutlet assembly with brushed natural or satin anodized natural finish with devices, junction fittings, and other matching accessories as required for a complete system and per UL 5.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- 1. Hubbell Incorporated; Wiring Device-Kellems.
 - 2. Wiremold / Legrand.
 - 3. MonoSystems, Inc.
- C. General:
- 1. Components shall be products from single manufacturer designed for use as a complete, matching assembly of raceways and receptacles.
 - 2. Provide continuous one-piece cover plates, minimum four feet long.
 - 3. Provide GFCI receptacles for sections of multioutlet assemblies that are indicated within 6'-0" of the edge of a sink.

4. Wiring: Minimum no. 12 AWG solid, Type THHN copper. Provide larger conductor sizes where receptacles with ampacities greater than 20-amperes are indicated.
- D. Surface Raceway Type SR-1
1. Multioutlet assembly with prewired, 20-ampere, 125-volt, 2-pole, 3-wire duplex receptacles on [9] [12] [18]-inch centers, alternately connected to [one] [two] [three] 20-ampere circuits, 120-volt circuits with ground.
 2. Receptacle Finish: Grey
- E. Surface Raceway Type SR-2
1. Two-compartment multioutlet assembly with full length divider.
 - a. Section 1: Prewired, 20-ampere, 125-volt, 2-pole, 3-wire duplex receptacles on [9] [12] [18]-inch centers, alternately connected to [one] [two] [three] 20-ampere circuits, 120-volt circuits with ground.
 - b. Section 2: Rectangular single gang openings on [9] [12] [18] [24]-inch centers for use by communications cabling contractor to install the facility standard data faceplate in the surface raceway.
 2. Receptacle Finish: Grey
- F. Surface Raceway Type SR-3
1. Three-compartment multioutlet assembly with full length dividers.
 - a. Section 1: Prewired, 20-ampere, 125-volt, 2-pole, 3-wire duplex receptacles on [9] [12] [18]-inch centers, alternately connected to [one] [two] [three] 20-ampere circuits, 120-volt circuits with ground.
 - b. Section 2: Same as section 1, except emergency power receptacles.
 - c. Section 3: Rectangular single gang openings on [9] [12] [18] [24]-inch centers for use by communications cabling contractor to install the facility standard data faceplate in the surface raceway.
 2. Receptacle Finish:
 - a. Normal Power: Grey
 - b. Emergency Power: Red

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with NECA 1, including mounting heights listed in that standard, unless otherwise indicated.
- B. Coordination with Other Trades:
1. Protect installed devices and their boxes. Do not place wall finish materials over device boxes, and do not cut holes for boxes with routers that are guided by riding against outside of boxes.
 2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.
 3. Install device boxes in brick or block walls so that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.
 4. Install wiring devices after all wall preparation, including painting, is complete.

- C. Conductors:
1. Do not strip insulation from conductors until right before they are spliced or terminated on devices.
 2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.
 3. The length of free conductors at outlets for devices shall comply with NFPA 70, Article 300, without pigtails.
 4. Existing Conductors:
 - a. Cut back and pigtail, or replace all damaged conductors.
 - b. Straighten conductors that remain and remove corrosion and foreign matter.
 - c. Pigtailing existing conductors is permitted, provided the outlet box is large enough.
- D. Device Installation:
1. Replace devices that have been in temporary use during construction and that were installed before building finishing operations were complete.
 2. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
 3. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.
 4. Connect devices to branch circuits using pigtails that are not less than 6 inches (152 mm) in length.
 5. When there is a choice, use side wiring with binding-head screw terminals. Wrap solid conductor tightly clockwise, two-thirds to three-fourths of the way around terminal screw.
 6. Use a torque screwdriver when a torque is recommended or required by manufacturer.
 7. When conductors larger than No. 12 AWG are installed on 15- or 20-A circuits, splice No. 12 AWG pigtails for device connections.
 8. Tighten unused terminal screws on the device.
 9. When mounting into metal boxes, remove the fiber or plastic washers used to hold device-mounting screws in yokes, allowing metal-to-metal contact.
- E. Receptacle Type:
1. Install GFCI receptacles for all receptacles supplied by single-phase branch circuits rated 150V or less to ground in the following spaces/locations:
 - a. Bathrooms.
 - b. Kitchens or similar areas with a sink and permanent provisions for either food preparation or cooking.
 - c. Buffet serving areas with permanent provisions for food serving, beverage serving, or cooking.
 - d. Where the receptacle is installed within 6 feet of the edge of a sink.
 - e. Outdoors.
 - f. Indoor damp and wet locations.
 - g. Locker rooms with associated showering facilities.
 - h. Garages, accessory buildings, service bays, and similar areas.
 - i. Laundry areas.
 2. Install GFCI receptacles at the following equipment supplied by single-phase branch circuits rated 150V or less to ground and 60 amperes:
 - a. Automotive vacuum machines
 - b. Drinking water coolers and bottle fill stations
 - c. High-pressure spray washing machines

- d. Tire inflation machines
 - e. Vending machines
 - f. Sump pumps
 - g. Dishwashers
 - h. Electric Ranges
 - i. Wall-mounted ovens
 - j. Counter-mounted cooking units
 - k. Clothes dryers
 - l. Microwave ovens
3. Where GFCI receptacles cannot be installed in a readily accessible location or are not available in the receptacle configuration required to serve a specific load, provide equivalent ground fault circuit interrupter protection by installing a GFCI type circuit breaker as the branch circuit overcurrent protective device for the load.
4. Install tamper-resistant versions of the specified receptacles for all 20A, 125V and 250V nonlocking-type receptacles in the following areas:
- a. All spaces in educational facilities.
 - b. Business offices, corridors, waiting rooms, and similar spaces in clinics, medical and dental offices, and outpatient healthcare facilities.
 - c. Dormitory units.
 - d. Gymnasiums.
 - e. Auditoriums.
 - f. All spaces in assisted living facilities.
- F. Device Plates: Do not use oversized or extra-deep plates. Repair wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.
- G. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical and with grounding terminal of receptacles on top. Group adjacent switches under single, multigang wall plates.
- H. Adjust locations of floor service outlets and service poles to suit arrangement of partitions and furnishings.
- 3.2 IDENTIFICATION
- A. Comply with Section 26 0553 "Identification for Electrical Systems."
- B. Identify each wiring device with panelboard identification and circuit number. In spaces where low voltage lighting control wall stations are utilized, identify panelboard and circuit number of the lights controlled by the low voltage device. In spaces with multiple lighting circuits, provide multiple labels to indicate each lighting branch circuit serving the space. Use hot, stamped, or engraved machine printing with black-filled lettering on front face of plate, and durable wire markers or tags inside outlet boxes.
- 3.3 FIELD QUALITY CONTROL
- A. Test Instruments: Use instruments that comply with UL 1436.
- B. Test Instrument for Receptacles: Digital wiring analyzer with digital readout or illuminated digital-display indicators of measurement.

- C. Perform the following tests and inspections:
 - 1. In healthcare facilities, prepare reports that comply with NFPA 99.
 - 2. Test Instruments: Use instruments that comply with UL 1436.
 - 3. Test Instrument for Receptacles: Digital wiring analyzer with digital readout or illuminated digital-display indicators of measurement.
- D. Tests for Receptacles:
 - 1. Line Voltage: Acceptable range is 105 to 132 V.
 - 2. Percent Voltage Drop under 15-A Load: A value of 6 percent or higher is unacceptable.
 - 3. Ground Impedance: Values of up to 2 ohms are acceptable.
 - 4. GFCI Trip: Test for tripping values specified in UL 1436 and UL 943.
 - 5. Using the test plug, verify that the device and its outlet box are securely mounted.
 - 6. Tests shall be diagnostic, indicating damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault-current path, defective devices, or similar problems. Correct circuit conditions, remove malfunctioning units and replace with new ones, and retest as specified above.
- E. Wiring device will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

END OF SECTION

SECTION 26 2813 - FUSES**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
 - 1. Cartridge fuses rated 600 V ac and less for use in the following:
 - a. Control circuits.
 - b. Panelboards.
 - c. Enclosed controllers.
 - d. Enclosed switches.
 - 2. Spare-fuse cabinets.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for spare-fuse cabinets. Include the following for each fuse type indicated:
 - 1. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.
 - a. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.
 - b. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.
 - 2. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
 - 3. Current-limitation curves for fuses with current-limiting characteristics.
 - 4. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse. Submit in electronic format suitable for use in coordination software and in PDF format.
 - 5. Coordination charts and tables and related data.
 - 6. Fuse sizes for elevator feeders and elevator disconnect switches.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fuses to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 01 7700 "Closeout Procedures," or Section 01 7823 "Operation and Maintenance Data," include the following:
 - 1. Ambient temperature adjustment information.
 - 2. Current-limitation curves for fuses with current-limiting characteristics.
 - 3. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse used on the Project. Submit in electronic format suitable for use in coordination software and in PDF format.
 - 4. Coordination charts and tables and related data.

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.

1.5 FIELD CONDITIONS

- A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F (5 deg C) or more than 100 deg F (38 deg C), apply manufacturer's ambient temperature adjustment factors to fuse ratings.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Bussmann, an Eaton business.
 2. Edison; a brand of Bussmann by Eaton.
 3. Littelfuse, Inc.
 4. Mersen USA.
- B. Source Limitations: Obtain fuses, for use within a specific product or circuit, from single source from single manufacturer.

2.2 CARTRIDGE FUSES

- A. Characteristics: NEMA FU 1, current-limiting, nonrenewable cartridge fuses with voltage ratings consistent with circuit voltages.
 1. Type RK-1: 250 and 600-V, zero- to 600-A rating, 200 kAIC, time delay.
 2. Type RK-5: 250 and -V, zero- to 600-A rating, 200 kAIC, time delay.
 3. Type CC: 600-V, zero- to 30-A rating, 200 kAIC, fast acting .
 4. Type CD: 600-V, 31- to 60-A rating, 200 kAIC, fast acting .
 5. Type J: 600-V, zero- to 600-A rating, 200 kAIC, time delay.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with NEMA FU 1 for cartridge fuses.
- D. Comply with NFPA 70.
- E. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size and with system short-circuit current levels.

2.3 SPARE-FUSE CABINET

- A. Characteristics: Wall-mounted steel unit with full-length, recessed piano-hinged door and key-coded cam lock and pull.
 1. Size: Adequate for storage of spare fuses specified with 15 percent spare capacity minimum.
 2. Finish: Gray, baked enamel.
 3. Identification: "SPARE FUSES" in 1-1/2-inch- (38-mm-) high letters on exterior of door.

4. Fuse Pullers: For each size of fuse, where applicable and available, from fuse manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.
- B. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.
- C. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.
- D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FUSE APPLICATIONS

- A. Cartridge Fuses:
 1. Provide fuses from the same manufacturer to insure retention of selective protective device coordination.
 2. Fuses rated 600 amperes and less: UL Class RK1 unless otherwise indicated or specified, current-limiting, time-delay, per UL 198E, with an interrupting rating of 100,000 amperes rms.
 - a. Provide UL Class RK5 fuses current-limiting, time-delay, per UL 198E, with an interrupting rating of 100,000 amperes rms, as follows:
 - 1) Motor starters size 3 and smaller.
 - 2) Panelboard main fuses where the amperage ratio between the main fuse to the largest feeder fuse is at least 2:1.

3.3 INSTALLATION

- A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.
- B. Install spare-fuse cabinet(s) in location shown on the Drawings or as indicated in the field by Architect.

3.4 IDENTIFICATION

- A. Install labels complying with requirements for identification specified in Section 26 0553 "Identification for Electrical Systems" and indicating fuse replacement information inside of door of each fused switch and adjacent to each fuse block, socket, and holder.

END OF SECTION

SECTION 26 2816 - ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 - GENERAL

1.1 ACTION SUBMITTALS

- A. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include nameplate ratings, dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.
 - 1. Include time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device.
- B. Shop Drawings: For enclosed switches and circuit breakers.
 - 1. Include plans, elevations, sections, details, and attachments to other work.
 - 2. Include wiring diagrams for power, signal, and control wiring.

1.2 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified testing agency.
- B. Field quality-control reports.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

1.4 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Accredited by NETA.
 - 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

- A. Source Limitations: Obtain enclosed switches and circuit breakers, overcurrent protective devices, components, and accessories, within same product category, from single manufacturer.
- B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed switches and circuit breakers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum dimensions.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
- D. Comply with NFPA 70.

2.2 FUSIBLE AND NONFUSIBLE SWITCHES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Eaton.
 - 2. ABB.
 - 3. Siemens Industry, Inc.
 - 4. Square D; by Schneider Electric.
- B. Type HD, Heavy Duty:
 - 1. Single throw.
 - 2. Three pole, unless otherwise indicated.
 - 3. 240 or 600-V ac.
 - 4. Ampacity as indicated or scheduled.
 - 5. UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate specified or indicated fuses.
 - 6. Lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.
- C. Accessories:
 - 1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
 - 2. Early Break Auxiliary Contacts: 1 set of normally open contacts that has an early break feature which breaks the contacts prior to the disconnect switch being fully placed in the OFF position.
 - 3. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
 - 4. Arc-Energy Reduction Relay: For switches rated 1200A, provide internally mounted device compliant with NFPA 70 article 240.67 requirements, with external display containing pushbutton and visual indicator for maintenance mode.
 - 5. Hookstick Handle: Allows use of a hookstick to operate the handle.
 - 6. Lugs: Mechanical type, suitable for number, size, and conductor material.

2.3 ENCLOSURES

- A. Enclosed Switches and Circuit Breakers: UL 489, NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at installed location.
- B. Enclosure Finish: The enclosure shall be gray baked enamel paint, electrodeposited on cleaned, phosphatized steel (NEMA 250 Type 1); [gray baked enamel paint, electrodeposited on cleaned, phosphatized galvanized steel (NEMA 250 Types 3R, 12); [a brush finish on Type 304 stainless steel (NEMA 250 Type 4-4X stainless steel); copper-free cast aluminum alloy (NEMA 250 Types 7, 9).
- C. Conduit Entry: NEMA 250 Types 4, 4X, and 12 enclosures shall contain no knockouts. NEMA 250 Types 7 and 9 enclosures shall be provided with threaded conduit openings in both endwalls.

- D. Operating Mechanism: The circuit-breaker operating handle shall be [directly operable through the front cover of the enclosure (NEMA 250 Type 1); directly operable through the dead front trim of the enclosure (NEMA 250 Type 3R); externally operable with the operating mechanism being an integral part of the cover (NEMA 250 Types 7, 9). The cover interlock mechanism shall have an externally operated override. The override shall not permanently disable the interlock mechanism, which shall return to the locked position once the override is released. The tool used to override the cover interlock mechanism shall not be required to enter the enclosure in order to override the interlock.
- E. Enclosures designated as NEMA 250 Type 4, 4X stainless steel, 12, or 12K shall have a dual cover interlock mechanism to prevent unintentional opening of the enclosure cover when the circuit breaker is ON and to prevent turning the circuit breaker ON when the enclosure cover is open.
- F. NEMA 250 Type 7/9 enclosures shall be furnished with a breather and drain kit to allow their use in outdoor and wet location applications.

PART 3 - EXECUTION

3.1 ENCLOSURE ENVIRONMENTAL RATING APPLICATIONS

- A. Enclosed Switches and Circuit Breakers: Provide enclosures at installed locations with the following environmental ratings.
 - 1. Indoor, Dry and Clean Locations: NEMA 250, Type 1.
 - 2. Outdoor Locations: NEMA 250, Type 3R.
 - 3. Kitchen and Wash-Down Areas: NEMA 250, Type 4X , stainless steel .
 - 4. Other Wet or Damp, Indoor Locations: NEMA 250, Type 4 .
 - 5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 12.

3.2 INSTALLATION

- A. Coordinate layout and installation of switches, circuit breakers, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Install individual wall-mounted switches and circuit breakers with tops at uniform height unless otherwise indicated.
- C. Temporary Lifting Provisions: Remove temporary lifting of eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- D. Install fuses in fusible devices.
- E. Comply with NFPA 70 and NECA 1.
- F. Where motor disconnect switches are installed downstream of a variable frequency drive (VFD), provide 2#12 AWG conductors from the disconnect switch to the VFD. Terminate wiring in disconnect switch at early break auxiliary contacts and coordinate programming and terminating of conductors at VFD with VFD installer.

3.3 IDENTIFICATION

- A. Comply with requirements in Section 26 0553 "Identification for Electrical Systems."
 - 1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
 - 2. Label each enclosure with engraved metal or laminated-plastic nameplate.

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
- C. Tests and Inspections for Switches:
 - 1. Visual and Mechanical Inspection:
 - a. Inspect physical and mechanical condition.
 - b. Inspect anchorage, alignment, grounding, and clearances.
 - c. Verify that the unit is clean.
 - d. Verify blade alignment, blade penetration, travel stops, and mechanical operation.
 - e. Verify that fuse sizes and types match the Specifications and Drawings.
 - f. Verify that each fuse has adequate mechanical support and contact integrity.
 - g. Inspect bolted electrical connections for high resistance using one of the two following methods:
 - 1) Use a low-resistance ohmmeter.
 - a) Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.
 - 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS Table 100.12.
 - a) Bolt-torque levels shall be in accordance with manufacturer's published data. In the absence of manufacturer's published data, use NETA ATS Table 100.12.
 - h. Verify that operation and sequencing of interlocking systems is as described in the Specifications and shown on the Drawings.
 - i. Verify correct phase barrier installation.
 - j. Verify lubrication of moving current-carrying parts and moving and sliding surfaces.
 - 2. Electrical Tests:
 - a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter. Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.
 - b. Measure contact resistance across each switchblade fuseholder. Drop values shall not exceed the high level of the manufacturer's published data. If manufacturer's published data are not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.

- c. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, use Table 100.1 from the NETA ATS. Investigate values of insulation resistance less than those published in Table 100.1 or as recommended in manufacturer's published data.
 - d. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.
 - e. Perform ground fault test according to NETA ATS 7.14 "Ground Fault Protection Systems, Low-Voltage."
- D. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.
 - 1. Test procedures used.
 - 2. Include identification of each enclosed switch and circuit breaker tested and describe test results.
 - 3. List deficiencies detected, remedial action taken, and observations after remedial action.

END OF SECTION

SECTION 26 2913.03 - MANUAL AND MAGNETIC MOTOR CONTROLLERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes low voltage manual and magnetic motor controllers.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For each type of magnetic controller.
 - 1. Include plans, elevations, sections, and mounting details.
 - 2. Indicate dimensions, weights, required clearances, and location and size of each field connection.
 - 3. Wire Termination Diagrams and Schedules: Include diagrams for signal, and control wiring. Identify terminals and wiring designations and color-codes to facilitate installation, operation, and maintenance. Indicate recommended types, wire sizes, and circuiting arrangements for field-installed wiring, and show circuit protection features. Differentiate between manufacturer-installed and field-installed wiring.
 - 4. Include features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
- C. Product Schedule: List the following for each enclosed controller:
 - 1. Each installed magnetic controller type.
 - 2. NRTL listing.
 - 3. Factory-installed accessories.
 - 4. Nameplate legends.
 - 5. SCCR of integrated unit.
 - 6. For each combination magnetic controller include features, characteristics, ratings, and factory setting of the SCPD and OCPD.
 - a. Listing document proving Type 2 coordination.
 - 7. For each series-rated combination state the listed integrated short-circuit current (withstand) rating of SCPD and OCPDs by an NRTL acceptable to authorities having jurisdiction.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For testing agency.
- B. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For magnetic controllers to include in operation and maintenance manuals.
 - 1. In addition to items specified in Section 01 7823 "Operation and Maintenance Data," include the following:

- a. Routine maintenance requirements for magnetic controllers and installed components.
- b. Manufacturer's written instructions for testing and adjusting circuit breaker and MCP trip settings.
- c. Manufacturer's written instructions for setting field-adjustable overload relays.
- d. Load-Current and Overload-Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.
- e. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor-running overload protection suit actual motors to be protected.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
 2. Control Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
 3. Indicating Lights: Two of each type and color installed.
 4. Auxiliary Contacts: Furnish one spare(s) for each size and type of magnetic controller installed.
 5. Power Contacts: Furnish three spares for each size and type of magnetic contactor installed.

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Accredited by NETA.
 1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- B. If stored in areas subject to weather, cover controllers to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; install temporary electric heating, with at least [50 W] <insert number>per controller.

1.8 FIELD CONDITIONS

- A. Ambient Environment Ratings: Rate equipment for continuous operation under the following conditions unless otherwise indicated:
 1. Ambient Temperature: Not less than 23 deg F (minus 5 deg C) and not exceeding 104 deg F (40 deg C).
 2. Altitude: Not exceeding 6600 feet (2010 m) for electromagnetic and manual devices.
 3. The effect of solar radiation is not significant.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
- B. UL Compliance: Fabricate and label magnetic motor controllers to comply with UL 508 and UL 60947-4-1.
- C. NEMA Compliance: Fabricate motor controllers to comply with ICS 2.

2.2 MANUAL MOTOR CONTROLLERS

- A. Motor-Starting Switches (MSS): "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off or on.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton.
 - b. General Electric Company.
 - c. Rockwell Automation, Inc.
 - d. Siemens Industry, Inc.
 - e. Square D; by Schneider Electric.
 - 2. Standard: Comply with NEMA ICS 2, general purpose, Class A.
 - 3. Configuration: Nonreversing.
 - 4. Surface mounting.
 - 5. Red pilot light.

2.3 COMBINATION FULL-VOLTAGE MAGNETIC MOTOR CONTROLLER

- A. Description: Factory-assembled, combination full-voltage magnetic motor controller consisting of the controller described in this article, indicated disconnecting means, SCPD and OCPD, in a single enclosure.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Eaton.
 - 2. General Electric Company.
 - 3. Siemens Industry, Inc.
 - 4. Square D; by Schneider Electric.
- C. Standard: Comply with NEMA ICS 2, general purpose, Class A.
- D. Configuration: Nonreversing.
- E. Contactor Coils: Pressure-encapsulated type with coil transient suppressors when indicated.
 - 1. Operating Voltage: Manufacturer's standard, unless indicated.
- F. Control Power:

1. For on-board control power, obtain from line circuit or from integral CPT. The CPT shall have capacity to operate integral devices and remotely located pilot, indicating, and control devices.
 - a. Spare CPT Capacity as Indicated on Drawings: 50 VA.
 - G. Overload Relays:
 1. Thermal Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. Class 20 tripping characteristic.
 - c. Heaters in each phase shall be matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
 - d. Ambient compensated.
 - e. Automatic resetting.
 - H. Fusible Disconnecting Means:
 1. NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate indicated fuses.
 2. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
 - I. Nonfusible Disconnecting Means:
 1. NEMA KS 1, heavy-duty, horsepower-rated, nonfusible switch.
 2. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
- 2.4 ENCLOSURES
- A. Comply with NEMA 250, type designations as indicated on Drawings, complying with environmental conditions at installed location.
 - B. The construction of the enclosures shall comply with NEMA ICS 6.
 - C. Controllers in hazardous (classified) locations shall comply with UL 1203.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and space conditions for compliance with requirements for motor controllers, their relationship with the motors, and other conditions affecting performance of the Work.

3.2 INSTALLATION

- A. Provide combination magnetic motor controllers where indicated on Drawings and for all three-phase motor/pump loads which are not indicated to have another method of control such as a VFD, ECM controller, or a packaged controller.
- B. Mount motor controllers within sight of the motor they control. Where motor controllers are mounted remotely from the motor such that the motor cannot be seen and/or is greater than 50' away, provide an additional local disconnecting means at the motor.
- C. Comply with NECA 1.

- D. Wall-Mounted Controllers: Install magnetic controllers on walls with tops at uniform height indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not at walls, provide freestanding racks complying with Section 26 0529 "Hangers and Supports for Electrical Systems" unless otherwise indicated.
- E. Comply with requirements for seismic control devices specified in Section 26 0548.16 "Seismic Controls for Electrical Systems."
- F. Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and NFPA 70.
- G. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
- H. Setting of Overload Relays: Select and set overloads on the basis of full-load current rating as shown on motor nameplate. Adjust setting value for special motors as required by NFPA 70 for motors that are high-torque, high-efficiency, and so on.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
- D. Tests and Inspections:
 - 1. Comply with the provisions of NFPA 70B, "Testing and Test Methods" Chapter.
 - 2. Visual and Mechanical Inspection:
 - a. Compare equipment nameplate data with drawings and specifications.
 - b. Inspect physical and mechanical condition.
 - c. Inspect anchorage, alignment, and grounding.
 - d. Verify the unit is clean.
 - e. Inspect contactors:
 - 1) Verify mechanical operation.
 - 2) Verify contact gap, wipe, alignment, and pressure are according to manufacturer's published data.
 - f. Motor-Running Protection:
 - 1) Verify overload element rating is correct for its application.
 - 2) If motor-running protection is provided by fuses, verify correct fuse rating.
 - g. Inspect bolted electrical connections for high resistance using one of the two following methods:
 - 1) Use a low-resistance ohmmeter. Compare bolted connection resistance values with values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.

- 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method according to manufacturer's published data or NETA ATS Table 100.12. Bolt-torque levels shall be according to manufacturer's published data. In the absence of manufacturer's published data, use NETA ATS Table 100.12.
- h. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
3. Electrical Tests:
 - a. For the contactor and circuit breaker, perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole. Insulation-resistance values shall be according to manufacturer's published data or NETA ATS Table 100.1. In the absence of manufacturer's published data, use Table 100.5. Values of insulation resistance less than those of this table or manufacturer's recommendations shall be investigated and corrected.
 - b. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.
 - c. Test motor protection devices according to manufacturer's published data.
 - d. Test circuit breakers as follows:
 - 1) Operate the circuit breaker to ensure smooth operation.
 - 2) For adjustable circuit breakers, adjust protective device settings according to the coordination study. Comply with coordination study recommendations.
 - e. Perform operational tests by initiating control devices.
4. Infrared Inspection: Perform the survey during periods of maximum possible loading. Remove all necessary covers prior to the inspection.
 - a. Comply with the recommendations of NFPA 70B, "Testing and Test Methods" Chapter, "Infrared Inspection" Article.
 - b. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of the electrical power connections of each motor controller.
 - c. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each motor controller 11 months after date of Substantial Completion.
 - d. Report of Infrared Inspection: Prepare a certified report that identifies the testing technician and equipment used, and lists the following results:
 - 1) Description of equipment to be tested.
 - 2) Discrepancies.
 - 3) Temperature difference between the area of concern and the reference area.
 - 4) Probable cause of temperature difference.
 - 5) Areas inspected. Identify inaccessible and unobservable areas and equipment.
 - 6) Load conditions at time of inspection.
 - 7) Photographs and thermograms of the deficient area.
 - 8) Recommended action.
 - e. Equipment: Inspect distribution systems with imaging equipment capable of detecting a minimum temperature difference of 1 degree C at 30 degrees C. The equipment shall detect emitted radiation and convert detected radiation to a visual signal.
 - f. Act on inspection results and recommended action, and considering the recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.

- E. Motor controller will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

3.4 SYSTEM FUNCTION TESTS

- A. System function tests shall prove the correct interaction of sensing, processing, and action devices. Perform system function tests after field quality control tests have been completed and all components have passed specified tests.
 - 1. Develop test parameters and perform tests for the purpose of evaluating performance of integral components and their functioning as a complete unit within design requirements and manufacturer's published data.
 - 2. Verify the correct operation of interlock safety devices for fail-safe functions in addition to design function.
 - 3. Verify the correct operation of sensing devices, alarms, and indicating devices.
- B. Motor controller will be considered defective if it does not pass the system function tests and inspections.
- C. Prepare test and inspection reports.

3.5 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain switchgear.

END OF SECTION

SECTION 26 2923 - VARIABLE-FREQUENCY MOTOR CONTROLLERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes separately enclosed, preassembled, combination VFCs, rated 600 V and less, for speed control of three-phase, squirrel-cage induction motors.

1.2 DEFINITIONS

- A. CE: Conformance Europeene (European Compliance).
- B. CPT: Control power transformer.
- C. DDC: Direct digital control.
- D. EMI: Electromagnetic interference.
- E. LED: Light-emitting diode.
- F. NC: Normally closed.
- G. NO: Normally open.
- H. OCPD: Overcurrent protective device.
- I. PID: Control action, proportional plus integral plus derivative.
- J. RFI: Radio-frequency interference.
- K. VFC: Variable-frequency motor controller.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type and rating of VFC indicated.
 - 1. Include dimensions and finishes for VFCs.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For each VFC indicated.
 - 1. Include mounting and attachment details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Required working clearances and required area above and around VFCs.
 - 2. Show VFC layout and relationships between electrical components and adjacent structural and mechanical elements.
 - 3. Show support locations, type of support, and weight on each support.
 - 4. Indicate field measurements.
- B. Qualification Data: For testing agency.
- C. Product Certificates: For each VFC from manufacturer.
- D. Harmonic Analysis Report: Provide Project-specific calculations and manufacturer's statement of compliance with IEEE 519.
- E. Source quality-control reports.
- F. Field quality-control reports.
- G. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For VFCs to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Section 01 7823 "Operation and Maintenance Data," include the following:
 - a. Manufacturer's written instructions for testing and adjusting thermal-magnetic circuit breaker and motor-circuit protector trip settings.
 - b. Manufacturer's written instructions for setting field-adjustable overload relays.
 - c. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
 - d. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
 - e. Load-Current and Overload-Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate, full-load currents.
 - f. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor-running overload protection suit actual motors to be protected.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.

2. Control Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
3. Indicating Lights: Two of each type and color installed.
4. Auxiliary Contacts: Furnish one spare(s) for each size and type of magnetic controller installed.
5. Power Contacts: Furnish three spares for each size and type of magnetic contactor installed.

1.7 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Accredited by NETA.
 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. If stored in space that is not permanently enclosed and air conditioned, remove loose packing and flammable materials from inside controllers and install temporary electric heating, with at least 250 W per controller.
- B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for VFCs, including clearances between VFCs, and adjacent surfaces and other items.

1.9 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace VFCs that fail in materials or workmanship within specified warranty period.
 1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. ABB Low Voltage HVAC Drives. (Basis-of-Design)
 2. Cerus Industrial, Inc.
 3. Danfoss Inc.
 4. Eaton.
 5. Emerson Industrial Automation.
 6. General Electric Company.
 7. Rockwell Automation, Inc.
 8. Schneider Electric USA, Inc.
 9. SIEMENS Industry, Inc.; Energy Management Division.
 10. Yaskawa Electric America, Inc.

2.2 SYSTEM DESCRIPTION

- A. General Requirements for VFCs:
 1. VFCs and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2. Comply with NEMA ICS 7, NEMA ICS 61800-2, and UL 61800-5-1.
- B. Application: variable torque .
- C. VFC Description: Variable-frequency motor controller, consisting of power converter that employs pulse-width-modulated inverter, factory built and tested in an enclosure, with integral disconnecting means and overcurrent and overload protection; listed and labeled by an NRTL as a complete unit; arranged to provide self-protection, protection, and variable-speed control of one or more three-phase induction motors by adjusting output voltage and frequency.
 1. Units suitable for operation of inverter-duty motors as defined by NEMA MG 1, Section IV, Part 31, "Definite-Purpose Inverter-Fed Polyphase Motors."
 2. Listed and labeled for integrated short-circuit current (withstand) rating by an NRTL acceptable to authorities having jurisdiction.
- D. Design and Rating: Match load type, such as fans, blowers, and pumps; and type of connection used between motor and load such as direct or through a power-transmission connection.
- E. Output Rating: Three phase; 10 to 60 Hz, with voltage proportional to frequency throughout voltage range; maximum voltage equals input voltage.
- F. Unit Operating Requirements:
 1. Input AC Voltage Tolerance: Plus 10 and minus 15 percent of VFC input voltage rating.
 2. Input AC Voltage Unbalance: Not exceeding 3 5 percent.
 3. Input Frequency Tolerance: Plus or minus 3 percent of VFC frequency rating.
 4. Minimum Efficiency: 96 97 Insert number percent at 60 Hz, full load.
 5. Minimum Displacement Primary-Side Power Factor: 96 98 Insert number percent under any load or speed condition.
 6. Minimum Short-Circuit Current (Withstand) Rating: 65 Insert value kA.
 7. Ambient Temperature Rating: Not less than 32 deg F (0 deg C) and not exceeding 104 deg F (40 deg C).
 8. Humidity Rating: Less than 95 percent (noncondensing).
 9. Altitude Rating: Not exceeding 3300 feet (1000 m).
 10. Vibration Withstand: Comply with NEMA ICS 61800-2.
 11. Overload Capability: 1.1 times the base load current for 60 seconds; minimum of 1.8 times the base load current for three seconds.
 12. Starting Torque: Minimum 100 percent of rated torque from 3 to 60 Hz.
 13. Speed Regulation: Plus or minus 5 percent.
 14. Output Carrier Frequency: Selectable; 0.5 to insert number kHz.
 15. Stop Modes: Programmable; includes fast, free-wheel, and dc injection braking.
- G. Inverter Logic: Microprocessor based, 32 bit, isolated from all power circuits.
- H. Isolated Control Interface: Allows VFCs to follow remote-control signal over a minimum 40:1 speed range.
 1. Signal: Electrical.
- I. Internal Adjustability Capabilities:
 1. Minimum Speed: 5 to 25 percent of maximum rpm.
 2. Maximum Speed: 80 to 100 percent of maximum rpm.
 3. Acceleration: 0.1 to 999.9 seconds.
 4. Deceleration: 0.1 to 999.9 seconds.

5. Current Limit: 30 to minimum of 150 percent of maximum rating.
- J. Self-Protection and Reliability Features:
 1. Surge Suppression: Factory installed as an integral part of the VFC, complying with UL 1449 SPD, Type 1 or Type 2.
 2. Loss of Input Signal Protection: Selectable response strategy, including speed default to a percent of the most recent speed, a preset speed, or stop; with alarm.
 3. Under- and overvoltage trips.
 4. Inverter overcurrent trips.
 5. VFC and Motor-Overload/Overtemperature Protection: Microprocessor-based thermal protection system for monitoring VFCs and motor thermal characteristics, and for providing VFC overtemperature and motor-overload alarm and trip; settings selectable via the keypad.
 6. Critical frequency rejection, with three selectable, adjustable deadbands.
 7. Instantaneous line-to-line and line-to-ground overcurrent trips.
 8. Loss-of-phase protection.
 9. Reverse-phase protection.
 10. Short-circuit protection.
 11. Motor-overtemperature fault.
- K. Automatic Reset/Restart: Attempt three restarts after drive fault or on return of power after an interruption and before shutting down for manual reset or fault correction; adjustable delay time between restart attempts.
- L. Bidirectional Autospeed Search: Capable of starting VFC into rotating loads spinning in either direction and returning motor to set speed in proper direction, without causing damage to drive, motor, or load.
- M. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.
- N. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.
- O. Integral Input Disconnecting Means and OCPD: UL 489, thermal-magnetic circuit breaker with pad-lockable, door-mounted handle mechanism.
 1. Disconnect Rating: Not less than 115 percent of VFC input current rating.
 2. Auxiliary Contacts: NO or NC, arranged to activate before switch blades open.
 3. Auxiliary contacts "a" and "b" arranged to activate with circuit-breaker handle.
 4. NO alarm contact that operates only when circuit breaker has tripped.

2.3 CONTROLS AND INDICATION

- A. Status Lights: Door-mounted LED indicators displaying the following conditions:
 1. Power on.
 2. Run.
 3. Overvoltage.
 4. Line fault.
 5. Overcurrent.
 6. External fault.

- B. Panel-Mounted Operator Station: Manufacturer's standard front-accessible, sealed keypad and plain-English-language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.
1. Keypad: In addition to required programming and control keys, include keys for HAND, OFF, and AUTO modes.
 2. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: View only; view and operate; and view, operate, and service.
 - a. Control Authority: Supports at least four conditions: Off, local manual control at VFC, local automatic control at VFC, and automatic control through a remote source.
- C. Historical Logging Information and Displays:
1. Real-time clock with current time and date.
 2. Running log of total power versus time.
 3. Total run time.
 4. Fault log, maintaining last four faults with time and date stamp for each.
- D. Indicating Devices: Digital display and additional readout devices as required, mounted flush in VFC door and connected to display VFC parameters including, but not limited to:
1. Output frequency (Hz).
 2. Motor speed (rpm).
 3. Motor status (running, stop, fault).
 4. Motor current (amperes).
 5. Motor torque (percent).
 6. Fault or alarming status (code).
 7. PID feedback signal (percent).
 8. DC-link voltage (V dc).
 9. Set point frequency (Hz).
 10. Motor output voltage (V ac).
- E. Control Signal Interfaces:
1. Electric Input Signal Interface:
 - a. A minimum of two Insert number programmable analog inputs: 0- to 10-V dc or 4- to 20-mA dc.
 - b. A minimum of six multifunction programmable digital inputs.
 2. Remote Signal Inputs: Capability to accept any of the following speed-setting input signals from the DDC system for HVAC or other control systems:
 - a. 0- to 10-V dc.
 - b. 4- to 20-mA dc.
 - c. Potentiometer using up/down digital inputs.
 - d. Fixed frequencies using digital inputs.
 3. Output Signal Interface: A minimum of one two programmable analog output signal(s) (0- to 10-V dc or 4- to 20-mA dc), which can be configured for any of the following:
 - a. Output frequency (Hz).
 - b. Output current (load).
 - c. DC-link voltage (V dc).
 - d. Motor torque (percent).
 - e. Motor speed (rpm).
 - f. Set point frequency (Hz).

4. Remote Indication Interface: A minimum of two Insert number programmable dry-circuit relay outputs (120-V ac, 1 A) for remote indication of the following:
 - a. Motor running.
 - b. Set point speed reached.
 - c. Fault and warning indication (overtemperature or overcurrent).
 - d. PID high- or low-speed limits reached.
- F. Interface with DDC System for HVAC: Factory-installed hardware and software shall interface with DDC system for HVAC to monitor, control, display, and record data for use in processing reports. VFC settings shall be retained within VFC's nonvolatile memory.
 1. Hardwired Points:
 - a. Monitoring: On-off status, Insert monitoring point.
 - b. Control: On-off operation, Insert control point.
 2. Communication Interface: Comply with ASHRAE 135 Insert type of interface. Communication shall interface with DDC system for HVAC to remotely control and monitor lighting from a DDC system for HVAC operator workstation. Control features and monitoring points displayed locally at lighting panel shall be available through the DDC system for HVAC.

2.4 LINE CONDITIONING AND FILTERING

- A. Input Line Conditioning: Based on the manufacturer's harmonic analysis study and report, provide input filtering, as required, to limit total demand (harmonic current) distortion and total harmonic voltage demand at the defined point of common coupling to meet IEEE 519 recommendations.
- B. EMI/RFI Filtering: CE marked; certify compliance with IEC 61800-3 for .

2.5 OPTIONAL FEATURES

- A. Damper control circuit with end-of-travel feedback capability.
- B. Sleep Function: Senses a minimal deviation of a feedback signal and stops the motor. On an increase in speed-command signal deviation, VFC resumes normal operation.
- C. Motor Preheat Function: Preheats motor when idle to prevent moisture accumulation in the motor.
- D. Firefighter's Override (Smoke Purge) Input: On a remote contact closure from the firefighter's control station smoke-control fan controller Insert location, this password-protected input:
 1. Overrides all other local and external inputs (analog/digital, serial communication, and all keypad commands).
 2. Forces VFC to operate motor, without any other run or speed command, at a field-adjustable, preset speed.
 3. Causes display of override mode on the VFC display.
 4. Reset VFC to normal operation on removal of override signal manually.
- E. Remote Indicating Circuit Terminals: Mode selection, controller status, and controller fault.
- F. Remote digital operator kit.

- G. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting a printer and a notebook computer.

2.6 ENCLOSURES

- A. VFC Enclosures: NEMA 250, to comply with environmental conditions at installed location.
 - 1. Dry and Clean Indoor Locations: Type 1.
 - 2. Kitchen Wash-Down Areas: Type 4X, stainless steel Insert material.
 - 3. Other Wet or Damp Indoor Locations: Type 4.
 - 4. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12.
- B. Plenum Rating: UL 1995; NRTL certification label on enclosure, clearly identifying VFC as "Plenum Rated."

2.7 ACCESSORIES

- A. General Requirements for Control-Circuit and Pilot Devices: NEMA ICS 5; factory installed in VFC enclosure cover unless otherwise indicated.
 - 1. Push Buttons: Covered Lockable Shielded Unguarded.
 - 2. Pilot Lights: Push to test.
 - 3. Selector Switches: Rotary Insert description type.
 - 4. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.
- B. [NC] [NO] [Reversible NC/NO] bypass contactor auxiliary contact(s).
- C. Control Relays: Auxiliary and adjustable pneumatic solid-state time-delay relays.
- D. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections. Provide adjustable undervoltage, overvoltage, and time-delay settings.
 - 1. Current Transformers: Continuous current rating, basic impulse insulating level (BIL) rating, burden, and accuracy class suitable for connected circuitry. Comply with IEEE C57.13.
- E. Supplemental Digital Meters:
 - 1. Elapsed-time meter.
 - 2. Kilowatt meter.
 - 3. Kilowatt-hour meter.
- F. Breather and drain assemblies, to maintain interior pressure and release condensation in NEMA 250, Type 12 enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.
- G. Space heaters, with NC auxiliary contacts, to mitigate condensation in NEMA 250, Type 12 enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

- H. Cooling Fan and Exhaust System: For NEMA 250, Type 1 Type 12 Insert enclosure type; UL 508 component recognized: Supply fan, with composite stainless-steel Insert material intake and exhaust grills and filters; 120 Insert number-V ac; obtained from integral CPT Insert source of control power.
- I. Spare control-wiring terminal blocks; unwired.

2.8 SOURCE QUALITY CONTROL

- A. Testing: Test and inspect VFCs according to requirements in NEMA ICS 61800-2 Insert standard.
 - 1. Test each VFC while connected to its specified motor.
 - 2. Verification of Performance: Rate VFCs according to operation of functions and features specified.
- B. VFCs will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, surfaces, and substrates to receive VFCs, with Installer present, for compliance with requirements for installation tolerances, and other conditions affecting performance of the Work.
- B. Examine VFC before installation. Reject VFCs that are wet, moisture damaged, or mold damaged.
- C. Examine roughing-in for conduit systems to verify actual locations of conduit connections before VFC installation.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Wall-Mounting Controllers: Install with tops at uniform height and with disconnect operating handles not higher than 79 inches (2000 mm) above finished floor, unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Section 26 0529 "Hangers and Supports for Electrical Systems."
- B. Floor-Mounting Controllers: Install VFCs on 4-inch (100-mm) nominal thickness concrete base. Comply with requirements for concrete base specified in Section 03 3000 "Cast-in-Place Concrete." or Section 03 3053 "Miscellaneous Cast-in-Place Concrete."

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Roof-Mounting Controllers: Install VFC on roofs with tops at uniform height and with disconnect operating handles not higher than 79 inches (2000 mm) above finished roof surface unless otherwise indicated, and by bolting units to curbs or mounting on freestanding, lightweight, structural-steel channels bolted to curbs. Seal roof penetrations after raceways are installed.
1. Curbs and roof penetrations are specified in Section 07 7200 "Roof Accessories."
 2. Structural-steel channels are specified in Section 26 0529 "Hangers and Supports for Electrical Systems."
- D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- E. Install fuses in each fusible-switch VFC.
- F. Install fuses in control circuits if not factory installed. Comply with requirements in Section 26 2813 "Fuses."
- G. Install heaters in thermal-overload relays. Select heaters based on actual nameplate full-load amperes after motors are installed.
- H. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.
- I. Comply with NECA 1.
- 3.3 CONTROL WIRING INSTALLATION
- A. Install wiring between VFCs and remote devices and facility's central-control system. Comply with requirements in Section 26 0523 "Control-Voltage Electrical Power Cables."
- B. Bundle, train, and support wiring in enclosures.
- C. Connect selector switches and other automatic-control devices where applicable.
1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switches are in manual-control position.
 2. Connect selector switches with control circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor-overload protectors.
- 3.4 IDENTIFICATION
- A. Identify VFCs, components, and control wiring. Comply with requirements for identification specified in Section 26 0553 "Identification for Electrical Systems."

1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
 2. Label each VFC with engraved nameplate.
 3. Label each enclosure-mounted control and pilot device.
- B. Operating Instructions: Frame printed operating instructions for VFCs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of VFC units.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections with the assistance of a factory-authorized service representative.
- D. Acceptance Testing Preparation:
1. Test insulation resistance for each VFC element, bus, component, connecting supply, feeder, and control circuit.
 2. Test continuity of each circuit.
- E. Tests and Inspections:
1. Inspect VFC, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.
 2. Test insulation resistance for each VFC element, component, connecting motor supply, feeder, and control circuits.
 3. Test continuity of each circuit.
 4. Verify that voltages at VFC locations are within 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify Architect and Construction Manager before starting the motor(s).
 5. Test each motor for proper phase rotation.
 6. Perform tests according to the Inspection and Test Procedures for Adjustable Speed Drives stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 8. Perform the following infrared (thermographic) scan tests and inspections, and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each VFC. Remove front panels so joints and connections are accessible to portable scanner.
 - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each VFC 11 months after date of Substantial Completion.
 - c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 9. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

- F. VFCs will be considered defective if they do not pass tests and inspections.
- G. Prepare test and inspection reports, including a certified report that identifies the VFC and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

3.6 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.

3.7 ADJUSTING

- A. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.
- B. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.
- C. Adjust the trip settings of instantaneous-only circuit breakers and thermal-magnetic circuit breakers with adjustable, instantaneous trip elements. Initially adjust to 6 times the motor nameplate full-load amperes and attempt to start motors several times, allowing for motor cool-down between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed 8 times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify Architect and Construction Manager before increasing settings.
- D. Set the taps on reduced-voltage autotransformer controllers.
- E. Set field-adjustable circuit-breaker trip ranges as specified in Section 26 0573 "Coordination Studies."
- F. Set field-adjustable pressure switches.

3.8 PROTECTION

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until controllers are ready to be energized and placed into service.
- B. Replace VFCs whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, reprogram, and maintain VFCs.

END OF SECTION

SECTION 26 3213 - ENGINE GENERATORS**PART 1 - GENERAL****1.1 SUMMARY**

- A. This Section includes packaged engine-generator sets for [**emergency**] [**and**] [**standby**] power supply with the features as specified and indicated.
- B. Related Sections include the following:
 - 1. Division 26 Section "Transfer Switches" for transfer switches including sensors and relays to initiate automatic-starting and -stopping signals for engine-generator sets.

1.2 DEFINITIONS

- A. Operational Bandwidth: The total variation from the lowest to highest value of a parameter over the range of conditions indicated, expressed as a percentage of the nominal value of the parameter.

1.3 SUBMITTALS

- A. Product Data: For each type of packaged engine generator indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. In addition, include the following:
 - 1. Thermal damage curve for generator.
 - 2. Time-current characteristic curves for generator protective device.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Dimensioned outline plan and elevation drawings of engine-generator set and other components specified.
 - 2. Design Calculations: Signed and sealed by a qualified professional engineer. Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
 - 3. Vibration Isolation Base Details: Signed and sealed by a qualified professional engineer. Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include base weights.
 - 4. Wiring Diagrams: Power, signal, and control wiring.
- C. Compliance Statement
 - 1. Submit a document which states whether the proposed product(s) either comply or deviate from the Specification requirements. This includes all Part 1, Part 2, and Part 3 specification items. Specification requirements not noted as deviations will be assumed as complying.
 - 2. Provide the statement in an itemized, columnar format as follows:
 - a. Column 1 - Reference to the specification item, organized in the same sequential order as in the Specification.
 - b. Column 2 - Explanation for noted deviations.
- D. Qualification Data: For .

- E. Operation and Maintenance Data: For packaged engine generators to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - 1. List of tools and replacement items recommended to be stored at Project for ready access. Include part and drawing numbers, current unit prices, and source of supply.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
 - 1. Maintenance Proximity: Not more than [**200 miles (321 km)**] <Insert number of miles (km)> from Installer's place of business to Project site.
 - 2. Engineering Responsibility: Preparation of data for vibration isolators and seismic restraints of engine skid mounts, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.
- B. Manufacturer Qualifications: A qualified manufacturer. Maintain, within 200 miles (321 km) of Project site, a service center capable of providing training, parts, and emergency maintenance repairs.
- C. Source Limitations: Obtain packaged generator sets and auxiliary components through one source from a single manufacturer.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with ASME B15.1.
- F. Comply with NFPA 37.
- G. Comply with NFPA 70.
- H. Comply with NFPA 99.
- I. Comply with NFPA 110 requirements for Level 1 emergency power supply system.
- J. Comply with UL 2200.
- K. Engine Exhaust Emissions: Comply with applicable state and local government requirements.
- L. Noise Emission: Comply with applicable state and local government requirements for maximum noise level at adjacent property boundaries due to sound emitted by generator set including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation.

1.5 PROJECT CONDITIONS

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
 - 1. Notify Construction Manager and Owner no fewer than two days in advance of proposed interruption of electrical service.
 - 2. Do not proceed with interruption of electrical service without Construction Manager's and Owner's written permission.
- B. Environmental Conditions: Engine-generator system shall withstand the following environmental conditions without mechanical or electrical damage or degradation of performance capability:
 - 1. Ambient Temperature: 5 to 40 deg C.
 - 2. Relative Humidity: 0 to 95 percent.
 - 3. Altitude: Sea level to 1000 feet (300 m).

1.6 COORDINATION

- A. Coordinate size and location of concrete bases for package engine generators. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.7 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of packaged engine generators and associated auxiliary components that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: < **Insert number** > years from date of Substantial Completion.

1.8 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Date of Acceptance, provide 12 months' full maintenance by skilled employees of manufacturer's designated service organization. Include quarterly exercising to check for proper starting, load transfer, and running under load. Include routine preventive maintenance as recommended by manufacturer and adjusting as required for proper operation. Provide parts and supplies same as those used in the manufacture and installation of original equipment.

1.9 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fuses: One for every 10 of each type and rating, but no fewer than one of each.
 - 2. Indicator Lamps: Two for every six of each type used, but no fewer than two of each.
 - 3. Filters: One set each of lubricating oil, fuel, and combustion-air filters.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Caterpillar; Engine Div.
 2. Generac Power Systems, Inc.
 3. Onan/Cummins Power Generation; Industrial Business Group.
 4. MTU Onsite Energy Corporation.

2.2 ENGINE-GENERATOR SET

- A. Factory-assembled and -tested, engine-generator set.
- B. Mounting Frame: Maintain alignment of mounted components without depending on concrete foundation; and have lifting attachments.
1. Rigging Diagram: Inscribed on metal plate permanently attached to mounting frame to indicate location and lifting capacity of each lifting attachment and generator-set center of gravity.
- C. Capacities and Characteristics:
1. Power Output Ratings: Continuous electrical output power rating for standby operation of not less than 200 kW, at 80 percent lagging power factor, 480/277 -volt, three phase, 4-wire, 60 hertz. In addition, provide power required for generator accessories including battery charger and radiator.
 2. Provide generator with a minimum motor starting capability of 1250 SkVA and capable of sustaining a minimum of 90 percent of rated no-load voltage with the specified kVA load at near zero power factor applied to the generator.
 3. Nameplates: For each major system component to identify manufacturer's name and address, and model and serial number of component.
- D. Generator-Set Performance:
1. Steady-State Voltage Operational Bandwidth: 3 percent of rated output voltage from no load to full load.
 2. Transient Voltage Performance: Not more than 20 percent variation for 50 percent step-load increase or decrease. Voltage shall recover and remain within the steady-state operating band within three seconds.
 3. Steady-State Frequency Operational Bandwidth: 0.5 percent of rated frequency from no load to full load.
 4. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.
 5. Transient Frequency Performance: Less than 5 percent variation for 50 percent step-load increase or decrease. Frequency shall recover and remain within the steady-state operating band within five seconds.
 6. Output Waveform: At no load, harmonic content measured line to line or line to neutral shall not exceed 5 percent total and 3 percent for single harmonics. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.

7. Sustained Short-Circuit Current: For a 3-phase, bolted short circuit at system output terminals, system shall supply a minimum of 250 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to generator system components.
8. Start Time: Comply with NFPA 110, Type 10, system requirements.

2.3 ENGINE

- A. Fuel: Natural gas with automatic LP-gas standby Natural gas.
- B. Rated Engine Speed: 1800 rpm.
- C. Maximum Piston Speed for Four-Cycle Engines: 2250 fpm .
- D. Lubrication System: The following items are mounted on engine or skid:
 1. Filter and Strainer: Rated to remove 90 percent of particles 5 micrometers and smaller while passing full flow.
 2. Thermostatic Control Valve: Control flow in system to maintain optimum oil temperature. Unit shall be capable of full flow and is designed to be fail-safe.
 3. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances.
- E. Engine Fuel System:
 1. Dual Natural Gas :
 - a. Carburetor.
 - b. Secondary Gas Regulators: One for each fuel type.
 - c. Fuel-Shutoff Solenoid Valves: One for each fuel source.
 - d. Flexible Fuel Connectors: One for each fuel source.
- F. Coolant Jacket Heater: Electric-immersion type, factory installed in coolant jacket system. Comply with NFPA 110 requirements for Level 1 equipment for heater capacity.

Generator Size	Heater Voltage
0-400 kW	120 or 208 single phase
400-800 kW	208 or 480 single phase
Above 800 kW	480 single phase

 1. Suitable for operation on 208 -volt, single phase, 60 hertz power.
- G. Governor: Adjustable isochronous, with speed sensing.
- H. Cooling System: Closed loop, liquid cooled, with radiator factory mounted on engine-generator-set mounting frame and integral engine-driven coolant pump.
 1. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
 2. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
 3. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.

4. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, ultraviolet-, and abrasion-resistant fabric.
 - a. Rating: 50-psig maximum working pressure with coolant at 180 deg F, and noncollapsible under vacuum.
 - b. End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.

- I. Cooling System: Closed loop, liquid cooled, with remote radiator and integral engine-driven coolant pump.
 1. Configuration: [**Vertical**] [**Horizontal**] air discharge.
 2. Radiator Core Tubes: [**Aluminum**] [**Nonferrous-metal construction other than aluminum**].
 3. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
 4. Fan: Driven by [**multiple belts from engine shaft**] [**totally enclosed electric motor with sealed bearings**].
 5. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
 6. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.

- J. Muffler/Silencer: Critical type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.
 1. Minimum sound attenuation of 25 dB at 500 Hz.
 2. Sound level measured at a distance of 10 feet from exhaust discharge after installation is complete shall be 85 dBA or less.

- K. Air-Intake Filter: Heavy-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator.

- L. Starting System: 24-V electric, with negative ground.
 1. Components: Sized so they will not be damaged during a full engine-cranking cycle with ambient temperature at maximum specified in Part 1 "Project Conditions" Article.
 2. Cranking Motor: Heavy-duty unit that automatically engages and releases from engine flywheel without binding.
 3. Cranking Cycle: As required by NFPA 110 for system level specified.
 4. Battery: Lead-acid adequate capacity within ambient temperature range specified in Part 1 "Project Conditions" Article to provide specified cranking cycle at least [**twice**] [**three times**] without recharging.
 5. Battery Cable: Size as recommended by engine manufacturer for cable length as required. Include required interconnecting conductors and connection accessories.
 6. Battery Compartment: Factory fabricated of metal with acid-resistant finish and thermal insulation. Thermostatically controlled heater shall be arranged to maintain battery above 10 deg C regardless of external ambient temperature within range specified in Part 1 "Project Conditions" Article. Include accessories required to support and fasten batteries in place.
 7. Battery-Charging Alternator: Factory mounted on engine with solid-state voltage regulation and 35-A minimum continuous rating.

8. Battery Charger: Current-limiting, automatic-equalizing and float-charging type. Unit shall comply with UL 1236 and include the following features:
 - a. Operation: Equalizing-charging rate of 10 A shall be initiated automatically after battery has lost charge until an adjustable equalizing voltage is achieved at battery terminals. Unit shall then be automatically switched to a lower float-charging mode and shall continue to operate in that mode until battery is discharged again.
 - b. Automatic Temperature Compensation: Adjust float and equalize voltages for variations in ambient temperature from minus 40 deg C to plus 60 deg C to prevent overcharging at high temperatures and undercharging at low temperatures.
 - c. Automatic Voltage Regulation: Maintain constant output voltage regardless of input voltage variations up to plus or minus 10 percent.
 - d. Ammeter and Voltmeter: Flush mounted in door. Meters shall indicate charging rates.
 - e. Safety Functions: Sense abnormally low battery voltage and close contacts providing low battery voltage indication on control and monitoring panel. Sense high battery voltage and loss of ac input or dc output of battery charger. Either condition shall close contacts that provide a battery-charger malfunction indication at system control and monitoring panel.
 - f. Enclosure and Mounting: NEMA 250, Type 1, wall-mounted cabinet.

2.4 CONTROL AND MONITORING

- A. Automatic Starting System Sequence of Operation: When mode-selector switch on the control and monitoring panel is in the automatic position, remote-control contacts in one or more separate automatic transfer switches initiate starting and stopping of generator set. When mode-selector switch is switched to the on position, generator set starts. The off position of same switch initiates generator-set shutdown. When generator set is running, specified system or equipment failures or derangements automatically shut down generator set and initiate alarms. Operation of a remote emergency-stop switch also shuts down generator set.
 1. Engine start circuits from emergency and fire pump transfer switches shall be monitored for broken, shorted, or disconnected wires as required by NFPA 70 articles 695 and 700. Loss of start circuit wiring shall start the generator. Provide all control wiring and hardware required to provide engine start circuit integrity monitoring as required by the referenced code articles.
- B. Configuration: Operating and safety indications, protective devices, basic system controls, and engine gages shall be grouped in a common control and monitoring panel mounted on the generator set. Mounting method shall isolate the control panel from generator-set vibration.
- C. Configuration: Operating and safety indications, protective devices, basic system controls, and engine gages shall be grouped in a common wall-mounted control and monitoring panel.
- D. Configuration: Operating and safety indications, protective devices, basic system controls, engine gages, instrument transformers, generator disconnect switch or circuit breaker, and other indicated components shall be grouped in a combination control and power panel. Control and monitoring section of panel shall be isolated from power sections by steel barriers. Panel features shall include the following:
 1. Wall-Mounting Cabinet Construction: Rigid, self-supporting steel unit complying with NEMA ICS 6. Power bus shall be copper. Bus, bus supports, control wiring, and temperature rise shall comply with UL 891.

2. Switchboard Construction: Freestanding unit complying with Division 26 Section "Switchboards."
 3. Switchgear Construction: Freestanding unit complying with Division 26 Section "Low-Voltage Switchgear."
 4. Current and Potential Transformers: Instrument accuracy class.
- E. Indicating and Protective Devices and Controls: As required by NFPA 110 for Level 1 system, and the following:
1. AC voltmeter.
 2. AC ammeter.
 3. AC frequency meter.
 4. DC voltmeter (alternator battery charging).
 5. Engine-coolant temperature gage.
 6. Engine lubricating-oil pressure gage.
 7. Running-time meter.
 8. Ammeter-voltmeter, phase-selector switch(es).
 9. Generator-voltage adjusting rheostat.
- F. Supporting Items: Include sensors, transducers, terminals, relays, and other devices and include wiring required to support specified items. Locate sensors and other supporting items on engine or generator, unless otherwise indicated.
- G. Connection to Data Link: A separate terminal block, factory wired to Form C dry contacts, for each alarm and status indication is reserved for connections for data-link transmission of indications to remote data terminals. Data system connections to terminals are covered in Division 26 Section "Electrical Power Monitoring and Control."
- H. Common Remote Audible Alarm: Comply with NFPA 110 requirements for Level 1 systems. Include necessary contacts and terminals in control and monitoring panel.
1. Overcrank shutdown.
 2. Coolant low-temperature alarm.
 3. Control switch not in auto position.
 4. Battery-charger malfunction alarm.
 5. Battery low-voltage alarm.
- I. Common Remote Audible Alarm: Signal the occurrence of any events listed below without differentiating between event types. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset.
- J. Remote Emergency-Stop Switch: Flush; wall mounted, unless otherwise indicated; and labeled. Push button shall be protected from accidental operation.

2.5 GENERATOR OVERCURRENT AND FAULT PROTECTION

- A. Generator Circuit Breaker: Molded-case, true RMS sensing electronic-trip type; 100 percent rated; complying with UL 489.
1. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.
 2. Trip Settings: Selected to coordinate with generator thermal damage curve.
 3. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.
 4. Mounting: Adjacent to or integrated with control and monitoring panel.

5. Main circuit breaker UL-listed as service-entrance equipment.
 - B. Generator Protector: Microprocessor-based unit shall continuously monitor current level in each phase of generator output, integrate generator heating effect over time, and predict when thermal damage of alternator will occur. When signaled by generator protector or other generator-set protective devices, a shunt-trip device in the generator disconnect switch shall open the switch to disconnect the generator from load circuits. Protector shall perform the following functions:
 1. Initiates a generator overload alarm when generator has operated at an overload equivalent to 110 percent of full-rated load for 60 seconds. Indication for this alarm is integrated with other generator-set malfunction alarms.
 2. Under single or three-phase fault conditions, regulates generator to 300 percent of rated full-load current for up to 10 seconds.
 3. As overcurrent heating effect on the generator approaches the thermal damage point of the unit, protector switches the excitation system off, opens the generator disconnect device, and shuts down the generator set.
 4. Senses clearing of a fault by other overcurrent devices and controls recovery of rated voltage to avoid overshoot.
 - C. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground-fault. Integrate ground-fault alarm indication with other generator-set alarm indications.
- 2.6 GENERATOR, EXCITER, AND VOLTAGE REGULATOR
- A. Comply with NEMA MG 1.
 - B. Drive: Generator shaft shall be directly connected to engine shaft. Exciter shall be rotated integrally with generator rotor.
 - C. Electrical Insulation: Class H or Class F.
 - D. Stator-Winding Leads: Brought out to terminal box to permit future reconnection for other voltages if required.
 - E. Construction shall prevent mechanical, electrical, and thermal damage due to vibration, overspeed up to 125 percent of rating, and heat during operation at 110 percent of rated capacity.
 - F. Enclosure: Dripproof.
 - G. Instrument Transformers: Mounted within generator enclosure.
 - H. Voltage Regulator: Solid-state type, separate from exciter, providing performance as specified.
 1. Adjusting rheostat on control and monitoring panel shall provide plus or minus 5 percent adjustment of output-voltage operating band.
 - I. Strip Heater: Thermostatically controlled unit arranged to maintain stator windings above dew point.

2.7 LOAD BANK

- A. Description: Permanent, outdoor, weatherproof, remote-controlled, forced-air-cooled, resistive unit capable of providing a balanced 3-phase, delta-connected load to generator set at 100 percent rated-system capacity, at 80 percent power factor, lagging. Unit may be composed of separate resistive and reactive load banks controlled by a common control panel. Unit shall be capable of selective control of load in 25 percent steps and with minimum step changes of approximately 5 and 10 percent available.
1. Unit shall be mounted on top of generator outdoor weather enclosure.
- B. Resistive Load Elements: Corrosion-resistant chromium alloy with ceramic and steel supports. Elements shall be double insulated and designed for repetitive on-off cycling. Elements shall be mounted in removable aluminized-steel heater cases.
- C. Reactive Load Elements: Epoxy-encapsulated reactor coils.
- D. Load-Bank Heat Dissipation: Integral fan with totally enclosed motor shall provide uniform cooling airflow through load elements. Airflow and coil operating current shall be such that, at maximum load, with ambient temperature at the upper end of specified range, load-bank elements operate at not more than 50 percent of maximum continuous temperature rating of resistance elements.
- E. Load Element Switching: Remote-controlled contactors switch groups of load elements. Contactor coils are rated 120 V. Contactors shall be located in a separate NEMA 250, Type 3R enclosure within load-bank enclosure, accessible from exterior through hinged doors with tumbler locks.
- F. Contactor Enclosures: Heated by thermostatically controlled strip heaters to prevent condensation.
- G. Load-Bank Enclosures: NEMA 250, Type 3R, complying with NEMA ICS 6. Louvers at cooling-air intake and discharge openings shall prevent entry of rain and snow. Openings for airflow shall be screened with 1/2-inch-square, galvanized-steel mesh. Reactive load bank shall include automatic shutters at air intake and discharge.
- H. Protective Devices: Power input circuits to load banks shall be fused, and fuses shall be selected to coordinate with generator circuit breaker. Fuse blocks shall be located in contactor enclosure. Cooling airflow and overtemperature sensors shall automatically shut down and lock out load bank until manually reset. Safety interlocks on access panels and doors shall disconnect load power, control, and heater circuits. Fan motor shall be separately protected by overload and short-circuit devices. Short-circuit devices shall be noninterchangeable fuses with 200,000-A interrupting capacity.
- I. Remote-Control Panel: Separate from load bank in NEMA 250, Type 1 enclosure with a control power switch and pilot light, and switches controlling groups of load elements.
- J. Control Sequence: Control panel may be preset for adjustable single-step loading of generator during automatic exercising.

2.8 OUTDOOR GENERATOR-SET ENCLOSURE

- A. Description: Prefabricated or preengineered walk-in enclosure with the following features:
1. Provide enclosure which maintains a minimum interior ambient temperature of 40 degrees F per NFPA 110.
 2. Construction: Galvanized-steel, metal-clad, integral structural-steel-framed building erected on concrete foundation.
 3. Structural Design and Anchorage: Comply with ASCE 7 for wind loads.
 4. Space Heater: Thermostatically controlled and sized to prevent condensation.
 5. Louvers: Equipped with bird screen and filter arranged to permit air circulation when engine is not running while excluding exterior dust, birds, and rodents.
 6. Hinged Doors: With padlocking provisions.
 7. Ventilation: Louvers equipped with bird screen and filter arranged to permit air circulation while excluding exterior dust, birds, and rodents.
 8. Thermal Insulation: Manufacturer's standard materials and thickness selected in coordination with space heater to maintain winter interior temperature within operating limits required by engine-generator-set components and NFPA 110.
 9. Muffler Location: [Within] [External to] enclosure.
- B. Engine Cooling Airflow through Enclosure: Maintain temperature rise of system components within required limits when unit operates at 110 percent of rated load for 2 hours with ambient temperature at top of range specified in system service conditions.
1. Louvers: Fixed-engine, cooling-air inlet and discharge. Storm-proof and drainable louvers prevent entry of rain and snow.
 2. Automatic Dampers: At engine cooling-air inlet and discharge. Dampers shall be closed to reduce enclosure heat loss in cold weather when unit is not operating.
- C. Interior Lights with Switch: Factory-wired, vaporproof-type fixtures within housing; arranged to illuminate controls and accessible interior. Arrange for external electrical connection.
1. AC lighting system and connection point for operation when remote source is available.
 2. DC lighting system for operation when remote source and generator are both unavailable.
- D. Convenience Outlets: Factory wired, GFCI. Arrange for external electrical connection.
- E. Load Center: Provide a 208Y/120V, 3 Phase, 4 Wire, 100A MCB (main circuit breaker) type panelboard within the enclosure for power service to generator accessories including but not limited to: battery charger, jacket water heaters, lights, receptacles, enclosure heater, and motorized dampers. Generator accessories shall be factory wired to the panelboard. All internal wiring shall be type THHN/THWN-2 in EMT in accordance with all governing codes. If load center is located near the air intake louver and will be subject to moisture from rain or snow, provide a NEMA 3R enclosure.

2.9 VIBRATION ISOLATION DEVICES

- A. Elastomeric Isolator Pads: Oil- and water-resistant elastomer or natural rubber, arranged in single or multiple layers, molded with a nonslip pattern and galvanized-steel baseplates of sufficient stiffness for uniform loading over pad area, and factory cut to sizes that match requirements of supported equipment.
1. Material: [**Standard neoprene**] [**Natural rubber**] [**Bridge-bearing neoprene**, complying with AASHTO M 251].

2. Durometer Rating: [30] [40] [45] [50] [60] [65] [70] <Insert number>.
3. Number of Layers: [One] [Two] [Three] [Four] <Insert number>.

- B. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic restraint.
 1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to wind loads or if weight is removed; factory-drilled baseplate bonded to 1/4-inch- thick, elastomeric isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
 2. Outside Spring Diameter: Not less than 80 percent of compressed height of the spring at rated load.
 3. Minimum Additional Travel: 50 percent of required deflection at rated load.
 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

2.10 FINISHES

- A. Indoor and Outdoor Enclosures and Components: Manufacturer's standard finish over corrosion-resistant pretreatment and compatible primer. Outdoor enclosure finish color shall be selected by Architect.

2.11 SOURCE QUALITY CONTROL

- A. Prototype Testing: Factory test engine-generator set using same engine model, constructed of identical or equivalent components and equipped with identical or equivalent accessories.
 1. Tests: Comply with NFPA 110, Level 1 Energy Converters and with IEEE 115.
- B. Project-Specific Equipment Tests: Before shipment, factory test engine-generator set and other system components and accessories manufactured specifically for this Project. Perform tests at rated load and power factor. Include the following tests:
 1. Test components and accessories furnished with installed unit that are not identical to those on tested prototype to demonstrate compatibility and reliability.
 2. Full load run.
 3. Maximum power.
 4. Voltage regulation.
 5. Transient and steady-state governing.
 6. Single-step load pickup.
 7. Safety shutdown.
 8. Provide 14 days' advance notice of tests and opportunity for observation of tests by Owner's representative.
 9. Report factory test results within 10 days of completion of test.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, equipment bases, and conditions, with Installer present, for compliance with requirements for installation and other conditions affecting packaged engine-generator performance.

- B. Examine roughing-in of piping systems and electrical connections. Verify actual locations of connections before packaged engine-generator installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with packaged engine-generator manufacturers' written installation and alignment instructions and with NFPA 110.
- B. Install packaged engine generator to provide access, without removing connections or accessories, for periodic maintenance.
- C. Install packaged engine generator with vibration isolation devices as specified having a minimum deflection of 1 inch. Insert static deflection on 4-inch- high concrete base. Secure sets to anchor bolts installed in concrete bases. Concrete base construction is specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- D. Install Schedule 40, black steel piping with welded joints for cooling water piping between engine-generator set and . Piping materials and installation requirements are specified in Division 23 Section "Hydronic Piping."
- E. Install Schedule 40, black steel piping with welded joints and connect to engine muffler. Install thimble at wall. Piping shall be same diameter as muffler outlet. Flexible connectors and steel piping materials and installation requirements are specified in Division 23 Section "Hydronic Piping."
 - 1. Install condensate drain piping to muffler drain outlet full size of drain connection with a shutoff valve, stainless-steel flexible connector, and Schedule 40, black steel pipe with welded joints. Flexible connectors and piping materials and installation requirements are specified in Division 23 Section "Hydronic Piping."
- F. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in Division 23 Sections. Drawings indicate general arrangement of piping and specialties.
- B. Connect fuel, cooling-system, and exhaust-system piping adjacent to packaged engine generator to allow service and maintenance.
- C. Connect cooling-system water piping to engine-generator set and with flexible connectors.
- D. Connect engine exhaust pipe to engine with flexible connector.
- E. Connect fuel piping to engines with a gate valve and union and flexible connector.
 - 1. Natural-gas piping, valves, and specialties for gas distribution are specified in Division 23 Section "Facility Natural-Gas Piping."

2. LP-gas piping, valves, and specialties for gas piping are specified in Division 23 Section "Facility Liquefied-Petroleum Gas Piping."
- F. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- G. Connect power wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- H. Provide engine start wiring from generator controller to transfer switches. Engine start wiring shall be type and size as recommended by manufacturer. Where manufacturer does not have a specific recommendation, provide #12 AWG THHN/THWN-2 conductors.
 1. Route engine start wiring in separate raceways and entirely independent from all wiring
 2. Coordinate engine start signal wiring installation with transfer switch manufacturer and installer. For emergency and fire pump transfer switches, ensure proper connection and operation of the engine start circuit integrity monitoring required by NFPA 70 articles 695 and 700.
- I. Provide power and communications wiring for remote generator annunciator (derangement) panel. Provide wiring type and size as recommended by manufacturer.
 1. Where generator annunciator panel location is not specifically indicated on Drawings, coordinate exact location with Owner prior to installation.
 - 2.
 - 3.

3.4 IDENTIFICATION

- A. Identify system components according to Division 23 Section "Identification for HVAC Piping and Equipment" and Division 26 Section "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and prepare test reports.
- B. Tests and Inspections:
 1. Perform tests recommended by manufacturer and each electrical test and visual and mechanical inspection[**(except those indicated to be optional)**] for "AC Generators and for Emergency Systems" specified in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 2. NFPA 110 Acceptance Tests: Perform tests required by NFPA 110 that are additional to those specified here including, but not limited to, single-step full-load pickup test.
 3. Battery Tests: Equalize charging of battery cells according to manufacturer's written instructions. Record individual cell voltages.
 - a. Measure charging voltage and voltages between available battery terminals for full-charging and float-charging conditions. Check electrolyte level and specific gravity under both conditions.
 - b. Test for contact integrity of all connectors. Perform an integrity load test and a capacity load test for the battery.
 - c. Verify acceptance of charge for each element of the battery after discharge.
 - d. Verify that measurements are within manufacturer's specifications.

4. Battery-Charger Tests: Verify specified rates of charge for both equalizing and float-charging conditions.
 5. System Integrity Tests: Methodically verify proper installation, connection, and integrity of each element of engine-generator system before and during system operation. Check for air, exhaust, and fluid leaks.
 6. Exhaust-System Back-Pressure Test: Use a manometer with a scale exceeding 40-inch wg. Connect to exhaust line close to engine exhaust manifold. Verify that back pressure at full-rated load is within manufacturer's written allowable limits for the engine.
 7. Exhaust Emissions Test: Comply with applicable government test criteria.
 8. Voltage and Frequency Transient Stability Tests: Use recording oscilloscope to measure voltage and frequency transients for 50 and 100 percent step-load increases and decreases, and verify that performance is as specified.
 9. Harmonic-Content Tests: Measure harmonic content of output voltage under 25 percent and at 100 percent of rated linear load. Verify that harmonic content is within specified limits.
 10. Noise Level Tests: Measure A-weighted level of noise emanating from generator-set installation, including engine exhaust and cooling-air intake and discharge, at **[four]** **<Insert number> locations [on the property line] <Insert location for measurement>**, and compare measured levels with required values.
- C. Coordinate tests with tests for transfer switches and run them concurrently.
- D. Test instruments shall have been calibrated within the last 12 months, traceable to standards of NIST, and adequate for making positive observation of test results. Make calibration records available for examination on request.
- E. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
- F. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
- G. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- H. Remove and replace malfunctioning units and retest and reinspect as specified above.
- I. Retest: Correct deficiencies identified by tests and observations and retest until specified requirements are met.
- J. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation resistances, time delays, and other values and observations. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- 3.6 DEMONSTRATION
- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain packaged engine generators. Refer to Division 01 Section "Demonstration and Training."

SmithGroup Project No. 00100084

END OF SECTION

FOR REFERENCE ONLY

SECTION 26 3600 - TRANSFER SWITCHES**PART 1 - GENERAL****1.1 ACTION SUBMITTALS**

- A. Coordination of Submittals: Include preliminary power system studies with submittal or submit to Architect prior to submittal. Refer to Section 26 0573 "Power System Studies" for additional requirements. Transfer switches submitted prior to preliminary power system studies will be returned without review.
- B. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for transfer switches.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and accessories.
- C. Shop Drawings:
 - 1. Include plans, elevations, sections, details showing minimum clearances, conductor entry provisions, gutter space, and installed features and devices.
 - 2. Include material lists for each switch specified.
 - 3. Single-Line Diagram: Show connections between transfer switch, bypass/isolation switch, power sources, and load; and show interlocking provisions for each combined transfer switch and bypass/isolation switch.
 - 4. Riser Diagram: Show interconnection wiring between transfer switches, bypass/isolation switches, annunciators, and control panels.

1.2 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For manufacturer-authorized service representative.
- B. Field quality-control reports.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Section 01 7823 "Operation and Maintenance Data," include the following:
 - a. Features and operating sequences, both automatic and manual.
 - b. List of all factory settings of relays; provide relay-setting and calibration instructions, including software, where applicable.

1.4 QUALITY ASSURANCE

- A. Testing Agency Qualifications:
 - 1. Member company of NETA.
 - a. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

1.5 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of transfer switch or transfer switch components that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: 18 months from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with NEMA ICS 1.
- C. Comply with NFPA 99.
- D. Comply with NFPA 110.
- E. Comply with UL 1008 unless requirements of these Specifications are stricter.
- F. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.
- G. Tested Fault-Current Closing and Short-Circuit Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.
 - 1. Short-time withstand capability for 3 cycles.
- H. Repetitive Accuracy of Solid-State Controls: All settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.
- I. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.62. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.
- J. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism. Switches for emergency or standby purposes shall be mechanically and electrically interlocked in both directions to prevent simultaneous connection to both power sources unless closed transition.
- K. Neutral Switching: Where four-pole switches are indicated, provide neutral pole switched simultaneously with phase poles.
- L. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall have communication capability matched with remote device.

- M. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, by color-code or by numbered or lettered wire and cable with printed markers at terminations. Color-coding and wire and cable markers are specified in Section 26 0553 "Identification for Electrical Systems."
 - 1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.
 - 2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated.
 - 3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.
 - 4. Accessible via front access.
- N. Enclosures: General-purpose NEMA 250, Type 1, complying with NEMA ICS 6 and UL 508, unless otherwise indicated.

2.2 CONTACTOR-TYPE AUTOMATIC TRANSFER SWITCHES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Caterpillar, Inc.; Electric Power Division.
 - 2. Cummins Power Generation.
 - 3. Eaton.
 - 4. ASCO Power Technologies.
 - 5. Generac Power Systems, Inc.
 - 6. Russelectric, Inc.
 - 7. ABB.
- B. Comply with Level 1 equipment according to NFPA 110.
- C. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.
 - 1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are unacceptable.
 - 2. Switch Action: Double throw; mechanically held in both directions.
 - 3. Contacts: Silver composition or silver alloy for load-current switching. Contactor-style automatic transfer-switch units, rated 600 A and higher, shall have separate arcing contacts.
 - 4. Conductor Connectors: Suitable for use with conductor material and sizes.
 - 5. Material: Hard-drawn copper, 98 percent conductivity.
 - 6. Main and Neutral Lugs: Mechanical type.
 - 7. Ground Lugs and Bus-Configured Terminators: Compression Mechanical type.
 - 8. Connectors shall be marked for conductor size and type according to UL 1008.
- D. Automatic Open-Transition Transfer Switches: Interlocked to prevent the load from being closed on both sources at the same time.
 - 1. Sources shall be mechanically and electrically interlocked to prevent closing both sources on the load at the same time.
- E. Manual Switch Operation: Under load, with door closed and with either or both sources energized. Transfer time is same as for electrical operation. Control circuit automatically disconnects from electrical operator during manual operation.

- F. Signal-Before-Transfer Contacts: A set of normally open/normally closed dry contacts operates in advance of retransfer to normal source. Interval shall be adjustable from 1 to 30 seconds.
- G. Digital Communication Interface: Matched to capability of remote annunciator or annunciator and control panel.
- H. Automatic Transfer-Switch Controller Features:
 - 1. Controller operates through a period of loss of control power.
 - 2. Undervoltage Sensing for Each Phase of Normal [**and Alternate**] Source: Sense low phase-to-ground voltage on each phase. Pickup voltage shall be adjustable from 85 to 100 percent of nominal, and dropout voltage shall be adjustable from 75 to 98 percent of pickup value. Factory set for pickup at 90 percent and dropout at 85 percent.
 - 3. Voltage/Frequency Lockout Relay: Prevent premature transfer to generator. Pickup voltage shall be adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency shall be adjustable from 90 to 100 percent of nominal. Factory set for pickup at 95 percent.
 - 4. Time Delay for Retransfer to Normal Source: Adjustable from zero to 30 minutes, and factory set for 10 minutes. Override shall automatically defeat delay on loss of voltage or sustained undervoltage of emergency source, provided normal supply has been restored.
 - 5. Test Switch: Simulate normal-source failure.
 - 6. Switch-Position Pilot Lights: Indicate source to which load is connected.
 - 7. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and emergency-source sensing circuits.
 - a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
 - b. Emergency Power Supervision: Red light with nameplate engraved "Emergency Source Available."
 - 8. Unassigned Auxiliary Contacts: Two normally open, single-pole, double-throw contacts for each switch position, rated 10 A at 240-V ac.
 - 9. Transfer Override Switch: Overrides automatic retransfer control so transfer switch will remain connected to emergency power source regardless of condition of normal source. Pilot light indicates override status.
 - 10. Engine Starting Contacts: One isolated and normally closed, and one isolated and normally open, rated 10 A at 32-V dc minimum.
 - 11. Engine Shutdown Contacts: Time delay adjustable from zero to five minutes, and factory set for five minutes. Contacts shall initiate shutdown at remote engine-generator controls after retransfer of load to normal source.
 - 12. Engine-Generator Exerciser: Solid-state, programmable-time switch starts engine generator and transfers load to it from normal source for a preset time, then retransfers and shuts down engine after a preset cool-down period. Initiates exercise cycle at preset intervals adjustable from 7 to 30 days. Running periods shall be adjustable from 10 to 30 minutes. Factory settings shall be for 7-day exercise cycle, 20-minute running period, and 5-minute cool-down period. Exerciser features include the following:
 - a. Exerciser Transfer Selector Switch: Permits selection of exercise with and without load transfer.
 - b. Push-button programming control with digital display of settings.
 - c. Integral battery operation of time switch when normal control power is unavailable.
- I. Large-Motor-Load Power Transfer:

1. Programmed Neutral Switch Position: Switch operator with programmed neutral position arranged to provide a midpoint between the two working switch positions, with an intentional, time-controlled pause at midpoint during transfer. Adjustable pause from 0.5 to 30 seconds minimum, and factory set for 0.5 second unless otherwise indicated. Time delay occurs for both transfer directions. Disable pause unless both sources are live.

2.3 TRANSFER SWITCH ACCESSORIES

A. Bypass/Isolation Switches:

1. Source Limitations: Same manufacturer as transfer switch in which installed.
2. Comply with requirements for Level 1 equipment according to NFPA 110.
3. Description: Manual type, arranged to select and connect either source of power directly to load, isolating transfer switch from load and from both power sources. Include the following features for each combined automatic transfer switch and bypass/isolation switch:
 - a. Means to lock bypass/isolation switch in the position that isolates transfer switch with an arrangement that permits complete electrical testing of transfer switch while isolated. Interlocks shall prevent transfer-switch operation, except for testing or maintenance, while automatic transfer switch is isolated.
 - b. Provide means to make power available to transfer-switch control circuit for testing and maintenance purposes.
 - c. Drawout Arrangement for Transfer Switch: Provide physical separation from live parts and accessibility for testing and maintenance operations. Transfer switch and bypass/isolation switch shall be in isolated compartments.
 - d. Transition: Provide closed-transition operation when transferring from main transfer switch to bypass/isolation switch on the same power source.
 - e. Bypass/Isolation Switch Current, Voltage, Closing, and Short-Circuit Withstand Ratings: Equal to or greater than those of associated automatic transfer switch, and with same phase arrangement and number of poles.
 - f. Contact temperatures of bypass/isolation switches shall not exceed those of automatic transfer switch contacts when they are carrying rated load.
 - g. Manual Control: Constructed so load bypass and transfer-switch isolation can be performed by one person in no more than two operations in 15 seconds or less. Operating handles shall be externally operated.
 - h. Legend: Manufacturer's standard legend for control labels and instruction signs shall describe operating instructions.
 - i. Maintainability: Fabricate to allow convenient removal of major components from front without removing other parts or main power conductors.
4. Interconnection of Bypass/Isolation Switches with Automatic Transfer Switches: Factory-installed copper bus bars; plated at connection points and braced for the indicated available short-circuit current.

B. Remote Annunciator and Control System:

1. Source Limitations: Same manufacturer as transfer switch in which installed.
2. Include the following functions for indicated transfer switches:
 - a. Indication of sources available, as defined by actual pickup and dropout settings of transfer-switch controls.
 - b. Indication of switch position.
 - c. Indication of switch in test mode.
 - d. Indication of failure of digital communication link.
 - e. Key-switch or user-code access to control functions of panel.

- f. Control of switch-test initiation.
 - g. Control of switch operation in either direction.
 - h. Control of time-delay bypass for transfer to normal source.
 - 3. Malfunction of annunciator, annunciation and control panel, or communication link shall not affect functions of automatic transfer switch. In the event of failure of communication link, automatic transfer switch automatically shall revert to standalone, self-contained operation. Automatic transfer-switch sensing, controlling, or operating function shall not depend on remote panel for proper operation.
 - 4. Remote Annunciation and Control Panel: Solid-state components. Include the following features:
 - a. Controls and indicating lights grouped together for each transfer switch.
 - b. Label each indicating light control group. Indicate transfer switch it controls, location of switch, and load it serves.
 - c. Digital Communication Capability: Matched to that of transfer switches supervised.
 - d. Mounting: Flush, modular, steel cabinet unless otherwise indicated.
- C. Digital Power Meter
- 1. Mounting: Flush in front door of transfer switch
 - 2. Display: Digital LCD
 - 3. Metered Parameters:
 - a. LL/LN Voltage
 - b. A,B,C, N Currents
 - c. Power (kW, kVA, kVAR)
 - d. Power Factor
 - e. Frequency
 - f. kW Demand
 - g. Accumulated Energy (kWh, kVAh, kVARh)
 - h. Total Harmonic Distortion (THD)
 - i. Min/max historical values
 - 4. Accuracy:
 - a. Current, Voltage, Power, Frequency: 1.0%
 - b. Energy, Power Factor, Demand: 1.0%
 - 5. Displaying of each of the metered quantities shall be accomplished through the use of menu scroll buttons.
 - 6. Reset of stored historical values and accumulated values shall be performed through the local access display. All reset functions shall have a means for protection against unauthorized/accidental changes.
 - 7. Provide current transformers as required to provide specified metering functions and accuracy.

2.4 SOURCE QUALITY CONTROL

- A. Factory Tests: Test and inspect components, assembled switches, and associated equipment according to UL 1008. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.
- B. Prepare test and inspection reports.

1. For each of the tests required by UL 1008, performed on representative devices, for emergency and legally required systems. Include results of test for the following conditions:
 - a. Overvoltage.
 - b. Undervoltage.
 - c. Loss of supply voltage.
 - d. Reduction of supply voltage.
 - e. Alternative supply voltage or frequency is at minimum acceptable values.
 - f. Temperature rise.
 - g. Dielectric voltage-withstand; before and after short-circuit test.
 - h. Overload.
 - i. Contact opening.
 - j. Endurance.
 - k. Short circuit.
 - l. Short-time current capability.
 - m. Receptacle withstand capability.
 - n. Insulating base and supports damage.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Floor-Mounting Switch: Anchor to floor by bolting.
 1. Install transfer switches on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 03 3000 "Cast-in-Place Concrete."
 2. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases.
 3. Provide workspace and clearances required by NFPA 70.
- B. Annunciator and Control Panel Mounting: Flush in wall unless otherwise indicated.
- C. Identify components according to Section 26 0553 "Identification for Electrical Systems."
- D. Set field-adjustable intervals and delays, relays, and engine exerciser clock.
 - 1.

3.2 CONNECTIONS

- A. Wiring to Remote Components: Match type and number of cables and conductors to generator sets, motor controls, control, and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to Owner if necessary to accommodate required wiring.
- B. Wiring Method: Install cables in raceways and cable trays except within electrical enclosures. Conceal raceway and cables except in unfinished spaces.
 1. Comply with requirements for raceways and boxes specified in Section 26 0533 "Raceways and Boxes for Electrical Systems."
- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.

- D. Ground equipment according to Section 26 0526 "Grounding and Bonding for Electrical Systems."
- E. Connect wiring according to Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
- F. Connect twisted pair cable according to Section 26 0513 "Low-Voltage Electrical Power Conductors and Cables."
- G. Connect twisted pair cable according to manufacturer's installation instructions.
- H. Route and brace conductors according to manufacturer's written instructions and Section 26 0529 "Hangers and Supports for Electrical Systems." Do not obscure manufacturer's markings and labels.
- I. Final connections to equipment shall be made with liquidtight, flexible metallic conduit no more than 18 inches (457 mm) in length.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. After installing equipment, test for compliance with requirements according to NETA ATS.
 - 2. Visual and Mechanical Inspection:
 - a. Compare equipment nameplate data with Drawings and Specifications.
 - b. Inspect physical and mechanical condition.
 - c. Inspect anchorage, alignment, grounding, and required clearances.
 - d. Verify that the unit is clean.
 - e. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
 - f. Verify that manual transfer warnings are attached and visible.
 - g. Verify tightness of all control connections.
 - h. Inspect bolted electrical connections for high resistance using one of the following methods, or both:
 - 1) Use of low-resistance ohmmeter.
 - 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method according to manufacturer's published data.
 - i. Perform manual transfer operation.
 - j. Verify positive mechanical interlocking between normal and alternate sources.
 - k. Perform visual and mechanical inspection of surge arresters.
 - l. Inspect control power transformers.
 - 1) Inspect for physical damage, cracked insulation, broken leads, tightness of connections, defective wiring, and overall general condition.

- 2) Verify that primary and secondary fuse or circuit-breaker ratings match Drawings.
 - 3) Verify correct functioning of drawout disconnecting contacts, grounding contacts, and interlocks.
3. Electrical Tests:
 - a. Perform insulation-resistance tests on all control wiring with respect to ground.
 - b. Perform a contact/pole-resistance test. Compare measured values with manufacturer's acceptable values.
 - c. Verify settings and operation of control devices.
 - d. Calibrate and set all relays and timers.
 - e. Verify phase rotation, phasing, and synchronized operation.
 - f. Perform automatic transfer tests.
 - g. Verify correct operation and timing of the following functions:
 - 1) Normal source voltage-sensing and frequency-sensing relays.
 - 2) Engine start sequence.
 - 3) Time delay on transfer.
 - 4) Alternative source voltage-sensing and frequency-sensing relays.
 - 5) Automatic transfer operation.
 - 6) Interlocks and limit switch function.
 - 7) Time delay and retransfer on normal power restoration.
 - 8) Engine cool-down and shutdown feature.
4. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
 - a. Check for electrical continuity of circuits and for short circuits.
 - b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
 - c. Verify that manual transfer warnings are properly placed.
 - d. Perform manual transfer operation.
5. After energizing circuits, perform each electrical test for transfer switches stated in NETA ATS and demonstrate interlocking sequence and operational function for each switch at least three times.
 - a. Simulate power failures of normal source to automatic transfer switches and retransfer from emergency source with normal source available.
 - b. Simulate loss of phase-to-ground voltage for each phase of normal source.
 - c. Verify time-delay settings.
 - d. Verify pickup and dropout voltages by data readout or inspection of control settings.
 - e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
 - f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for one pole deviating by more than 50 percent from other poles.
 - g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.
6. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.
 - a. Verify grounding connections and locations and ratings of sensors.

- D. Coordinate tests with tests of generator and run them concurrently.
- E. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- F. Transfer switches will be considered defective if they do not pass tests and inspections.
- G. Remove and replace malfunctioning units and retest as specified above.
- H. Prepare test and inspection reports.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain transfer switches and related equipment.
- B. Training shall include testing ground-fault protective devices and instructions to determine when the ground-fault system shall be retested. Include instructions on where ground-fault sensors are located and how to avoid negating the ground-fault protection scheme during testing and circuit modifications.
- C. Coordinate this training with that for generator equipment.

END OF SECTION

SECTION 26 3650 - GENERATOR DOCKING STATIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes generator docking stations (also referred to as quick-connect panels) rated 600V and less.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for transfer switches
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and accessories.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, details showing minimum clearances, conductor entry provisions, gutter space, and installed features and devices.
 - 2. Include material lists for each switch specified.
 - 3. Single-Line Diagram: Show connections between permanent generator, load bank, temporary generator, automatic transfer switch. Show interlocking provisions as specified.
 - 4. Riser Diagram: Show interconnection wiring between docking station, remote transfer switches, power sources, power distribution equipment, remote start contacts, remote alarm and control panels.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For manufacturer-authorized service representative
- B. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operations and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with NFPA 70.
- C. Comply with NFPA 110.

1.6 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.7 WARRANTY

- A. The equipment installed under this contract shall be left in proper working order.
- B. New materials and equipment shall be guaranteed against defects in composition, design or workmanship. Guarantee certificates shall be furnished.

PART 2 - PRODUCTS

2.1 GENERATOR DOCKING STATION

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Trystar
 - 2. Power Temp Systems
 - 3. ASCO
 - 4. Eaton
 - 5. ESL Power Systems

2.2 GENERAL REQUIREMENTS

- A. Docking station shall include 16 Series Camlok Panel Mounts for use as connection to Portable Generator and/or Temporary Load Bank as indicated on Drawings.
- B. Entire package must be listed to ETL or UL 1008 Standards. UL listing of individual components is not acceptable.
- C. Enclosures:
 - 1. NEMA 3R aluminum enclosure.
 - a. Pad-lockable front door shall include a hinged access plate at the bottom for entry of cables from portable generator or portable load bank. NEMA integrity shall be maintained with access plate open for cable entry.
 - b. Front and side through a front access panel shall be accessible for maintenance.
 - c. Top, side, and bottom through a front access panel shall be accessible for permanent cabling.
 - 2. Finishes:
 - a. Paint after fabrication. Powder coated manufacturer's standard grey.
- D. Phase, Neutral, and Ground Buses:
 - 1. Material: Tin-plated or Silver-plated Copper
 - 2. Equipment Ground Bus: bonded to box.
 - 3. Ground Bus: 50% of phase size.
 - 4. Neutral Bus: Neutral bus rated 100 percent of phase bus.

- E. Temporary generator connectors shall be Camlok style mounted on gland plate.
1. Camlok shall be color coded according to system voltage
 - a. A phase: Black (208/120V) or Brown (480/277V)
 - b. B phase: Red (208/120V) or Orange (480/277V)
 - c. C phase: Blue (208/120V) or Yellow (480/277V)
 - d. N Neutral: White
 - e. G Ground: Green
- F. Temporary load bank connectors shall be Camlok style mounted on gland plate.
1. Camlok shall be color coded according to system voltage
 - a. A phase: Black (208/120V) or Brown (480/277V)
 - b. B phase: Red (208/120V) or Orange (480/277V)
 - c. C phase: Blue (208/120V) or Yellow (480/277V)
 - d. G Ground: Green
- G. Temporary connectors shall include protective flip lids to prevent accidental contact.
- H. Permanent connectors shall be broad range set-screw type, located behind an aluminum barrier.
- I. Short Circuit & Withstand Rating
1. 65kAIC minimum, unless otherwise indicated on drawings.
- J. Voltage:
- K. 480/277V Current Rating:
1. As indicated on Drawings
- L. Phase Rotation Monitor Device:
1. Phase monitoring relay to be Siemens 3U4512-1AR20 or equal.
- M. Circuit Breakers:
1. UL 489 Listed
 2. Circuit breakers shall be removable for service and maintenance
 3. Circuit breakers rated 1200A or greater shall contain a maintenance mode switch which complies with NFPA 70 Article 240 arc energy reduction requirements. The maintenance mode switch shall temporarily modify the trip settings of the circuit breaker to reduce the available arc energy downstream of the circuit breaker.
 4. Circuit breakers for load bank connectors shall have a shunt trip coil, and shall be wired to trip the circuit breaker when a start signal is received from the transfer switch.
- N. Additional accessories shall be included in submittal drawings as follows:
1. Two-wire auto-start
 2. Battery charger receptacle, NEMA 5-20R, GFCI
 3. Block heater receptacle
 4. Extra-depth for bottom conduit entry.
 5. Kirk key door interlock
 6. Strip heater and thermostat
 7. Surge protection device
 8. Load dump receptacle
 9. Utility light.

10. Alarm contacts to indicate that the permanent emergency source is disconnected from the emergency system. Contacts shall change state when the generator feed circuit breaker is in the open position.

2.3 ALARM PANEL

- A. Description: Annunciator/alarm panel to indicate that the permanent emergency source is disconnected from the emergency system
- B. Features:
 1. Enclosure: Steel, flush or surface mountable
 2. Indicating Light: Red LED
 3. Buzzer
 4. Silence Button
 5. Operating Voltage: 120VAC

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elements and surfaces to receive Generator Docking Station for compliance with installation tolerances and other conditions affecting performance of the Work.

3.2 INSTALLATION

- A. Surface, Flush or Base Mounted: Determined by Application
 1. Concrete bases: 4 inches high above finished grade, reinforced, with chamfered edges. Extend base no more than 4 inches in all directions beyond the maximum dimensions of the enclosure. Construct concrete bases according to Division 26 Section "Hangers and Supports for Electrical Systems." Install anchor bolts to elevations required for proper attachment to Generator Docking Station.
- B. Power Wiring: Make connections to power distribution system as indicated on Drawings. Install wiring as required by Section 26 0519: "Low Voltage Power Conductors and Cables."
- C. Control Wiring: Install wiring as required by Section 26 0519: "Low Voltage Power Conductors and Cables."
 1. Start Circuit: Provide 2-wire start circuit wiring to the emergency system transfer switch(es) for installations where the generator docking station is connected to the emergency power system. Terminate 2-wire start circuit wiring at a terminal block inside generator docking station and label "Generator Start Circuit."
 2. Alarm Panel: Provide wiring from the docking station to the alarm panel. Where the alarm panel requires an external power source, provide a dedicated 120V circuit from a spare circuit breaker in the nearest panelboard.

3.3 FIELD QUALITY CONTROL

- A. Tests and Inspections to include the following:
 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

- B. Prepare test and inspection reports, including a certified report that identifies Generator Docking Station and that describes test and inspection results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

END OF SECTION

FOR REFERENCE ONLY

SECTION 26 4113 - LIGHTNING PROTECTION FOR STRUCTURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes lightning protection system for ordinary structures.
- B. Section includes lightning protection system for the following:
 - 1. Ordinary structures.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings:
 - 1. Include layouts of the lightning protection system, with details of the components to be used in the installation.
 - 2. Include raceway locations needed for the installation of conductors.
 - 3. Details of air terminals, ground rods, ground rings, conductor supports, splices, and terminations, including concealment requirements.
 - 4. Include roof attachment details, coordinated with roof installation.
 - 5. Calculations required by NFPA 780 for bonding of metal bodies.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Lightning protection system Shop Drawings, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Lightning protection cabling attachments to roofing systems and accessories.
 - 2. Lightning protection strike termination device attachment to roofing systems, coordinated with the roofing system manufacturer.
 - 3. Lightning protection system components penetrating roofing and moisture protection systems and system components, coordinated with the roofing system manufacturer.
- B. Qualification Data: For Installer.
- C. Product Certificates: For each type of roof adhesive for attaching the roof-mounted air terminal assemblies, approved by the roofing-material manufacturer.
- D. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For lightning protection system to include in maintenance manuals.
 - 1. In addition to items specified in Section 01 7823 "Operation and Maintenance Data," include the following:
 - a. Dimensioned site plan showing dimensioned route of the ground loop conductor and the ground rod locations. Comply with requirements of Section 01 7839 "Project Record Documents."

- b. A system testing and inspection record, listing the results of inspections and ground resistance tests, as recommended by NFPA 780, Annex D.

- B. Completion Certificate:
 - 1. UL Master Label Certificate.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: UL-listed installer, category OWAY.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Advanced Lightning Technology, Ltd.
 - 2. East Coast Lightning Equipment Inc.
 - 3. ERICO International Corporation.
 - 4. Harger Lightning & Grounding.
 - 5. Heary Bros. Lightning Protection Co. Inc.
 - 6. Hicks Lightning Protection.
 - 7. Independent Protection Co.
 - 8. National Lightning Protection.
 - 9. Preferred Lightning Protection.
 - 10. Robbins Lightning, Inc.
 - 11. Insert manufacturer's name.

2.2 PERFORMANCE REQUIREMENTS

- A. UL Lightning Protection Standard: Comply with UL 96A requirements for Class I buildings.
- B. Lightning Protection Components, Devices, and Accessories: Listed and labeled by a qualified testing agency as complying with UL 96, and marked for intended location and application.

2.3 MATERIALS

- A. Air Terminals:
 - 1. Copper unless otherwise indicated.
 - 2. 3/8-inch (10-mm) diameter by 12 inches (305 mm) long.
 - 3. Rounded tip.
 - 4. Threaded base support.
- B. Air Terminal Bracing:
 - 1. Copper.
 - 2. 1/4-inch (6-mm) diameter rod.
- C. Class II Main Conductors:
 - 1. Stranded Copper: 115,000 circular mils in diameter.
- D. Secondary Conductors:

1. Stranded Copper: 26,240 circular mils in diameter.
- E. Ground Loop Conductor: Tinned copper.
- F. Ground Rods:
 1. Material: Solid copper .
 2. Diameter: 5/8 inch (16 mm) .
 3. Rods shall be not less than 120 inches (3050 mm) long.
- G. Conductor Splices and Connectors: Compression fittings that are installed with hydraulically operated tools, or exothermic welds, approved for use with the class type.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install lightning protection components and systems according to UL 96A.
- B. Install conductors with direct paths from air terminals to ground connections. Avoid bends less than 90 degrees and 8 inches (203 mm) in radius and narrow loops.
- C. Conceal conductors within normal view from exterior locations at grade within 200 feet (60 m) of building. Comply with requirements for concealed installations in UL 96A.
 1. Roof penetrations required for down conductors and connections to structural-steel framework shall be made using listed through-roof fitting and connector assemblies with solid rods and appropriate roof flashings. Use materials approved by the roofing manufacturer for the purpose. Conform to the methods and materials required at roofing penetrations of the lightning protection components to ensure compatibility with the roofing specifications and warranty.
 2. Install conduit where necessary to comply with conductor concealment requirements.
 3. Air Terminals on Single-Ply Membrane Roofing: Comply with adhesive manufacturer's written instructions.
- D. Ground Ring Electrode: The conductor shall be not less than the main-size lightning conductor.

3.2 CONNECTIONS

- A. Aboveground concealed connections, and connections in earth or concrete, shall be done by exothermic welds or by high-compression fittings listed for the purpose.
- B. Aboveground exposed connections shall be done using the following types of connectors, listed and labeled for the purpose: exothermic weld .
- C. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance, except where routed through short lengths of conduit.
 1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
 2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.

3.3 CORROSION PROTECTION

- A. Do not combine materials that can form an electrolytic couple that will accelerate corrosion in the presence of moisture unless moisture is permanently excluded from junction of such materials.
- B. Use conductors with protective coatings where conditions would cause deterioration or corrosion of conductors.

3.4 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
 - 1. Perform inspections as required to obtain a UL Master Label for system.
- B. Prepare test and inspection reports and certificates.

END OF SECTION

FOR REFERENCE ONLY

SECTION 26 4313 - SURGE PROTECTION FOR LOW-VOLTAGE ELECTRICAL POWER CIRCUITS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes field-mounted SPDs for low-voltage (120 to 600 V) power distribution and control equipment.
- B. Related Requirements:
 - 1. Section 26 2416 "Panelboards" for factory-installed SPDs.

1.2 DEFINITIONS

- A. Inominal: Nominal discharge current.
- B. MCOV: Maximum continuous operating voltage.
- C. Mode(s), also Modes of Protection: The pair of electrical connections where the VPR applies.
- D. MOV: Metal-oxide varistor; an electronic component with a significant non-ohmic current-voltage characteristic.
- E. OCPD: Overcurrent protective device.
- F. SCCR: Short-circuit current rating.
- G. SPD: Surge protective device.
- H. VPR: Voltage protection rating.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 2. Copy of UL Category Code VZCA certification, as a minimum, listing the tested values for VPRs, Inominal ratings, MCOVs, type designations, OCPD requirements, model numbers, system voltages, and modes of protection.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For SPDs to include in maintenance manuals.

1.6 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to replace or replace SPDs that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. ABB.
 - 2. Eaton Corporation.
 - 3. LEA International; Protection Technology Group.
 - 4. Leviton Manufacturing Co., Inc.
 - 5. PowerLogics, Inc.
 - 6. Schneider Electric Industries SAS.
 - 7. Siemens Industry, Inc.
 - 8. Raycap, Inc.

2.2 GENERAL SPD REQUIREMENTS

- A. SPD with Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with NFPA 70.
- C. Comply with UL 1449.
- D. MCOV of the SPD shall be at least 115 percent of the nominal system voltage.

2.3 PANEL SUPPRESSORS

- A. SPDs: Comply with UL 1449, Type 2.
 - 1. Include LED indicator lights for power and protection status.
 - 2. Internal thermal protection that disconnects the SPD before damaging internal suppressor components.
 - 3. Include Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.
- B. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase shall not be less than 100 kA. The peak surge current rating shall be the arithmetic sum of the ratings of the individual MOVs in a given mode.
- C. Comply with UL 1283.

- D. Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V and 208Y/120 V, three-phase, four-wire circuits shall not exceed the following:
1. Line to Neutral: 1200 V for 480Y/277 V, 700 V for 208Y/120 V.
 2. Line to Ground: 1200 V for 480Y/277 V, 700 V for 208Y/120 V.
 3. Neutral to Ground: 1200 V for 480Y/277 V, 700 V for 208Y/120 V.
 4. Line to Line: 2000 V for 480Y/277 V, 1200 V for 208Y/120 V

E. SCCR: Equal or exceed 100 kA.

F. Inominal Rating: 20 kA 10 kA.

2.4 ENCLOSURES

A. Indoor Enclosures: NEMA 250, Type 1.

B. Outdoor Enclosures: NEMA 250, Type 3R.

2.5 CONDUCTORS AND CABLES

A. Power Wiring: Same size as SPD leads, complying with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

B. Class 2 Control Cables: Multiconductor cable with copper conductors not smaller than No. 18 AWG, complying with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than No. 14 AWG, complying with Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with NECA 1.

B. Install an OCPD or disconnect as required to comply with the UL listing of the SPD.

C. Install SPDs with conductors between suppressor and points of attachment as short and straight as possible, and adjust circuit-breaker positions to achieve shortest and straightest leads. Do not splice and extend SPD leads unless specifically permitted by manufacturer. Do not exceed manufacturer's recommended lead length. Do not bond neutral and ground.

D. Use crimped connectors and splices only. Wire nuts are unacceptable.

E. Wiring:

1. Power Wiring: Comply with wiring methods in Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."
2. Controls: Comply with wiring methods in Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

3.2 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative.
 - 1. Compare equipment nameplate data for compliance with Drawings and Specifications.
 - 2. Inspect anchorage, alignment, grounding, and clearances.
 - 3. Verify that electrical wiring installation complies with manufacturer's written installation requirements.
- B. An SPD will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.3 STARTUP SERVICE

- A. Complete startup checks according to manufacturer's written instructions.
- B. Do not perform insulation-resistance tests of the distribution wiring equipment with SPDs installed. Disconnect SPDs before conducting insulation-resistance tests, and reconnect them immediately after the testing is over.
- C. Energize SPDs after power system has been energized, stabilized, and tested.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate and maintain SPDs.

END OF SECTION

SECTION 26 5100 - INTERIOR LIGHTING

PART 1 - GENERAL

1.1 DEFINITIONS

- A. BF: Ballast factor.
- B. CCT: Correlated color temperature.
- C. CRI: Color-rendering index.
- D. LED: Light-emitting diode.
- E. LER: Luminaire efficacy rating.
- F. Lumen: Measured output of lamp and luminaire, or both.
- G. Luminaire: Complete lighting fixture, including ballast housing if provided.
- H. L70: Point in time where light fixture lumen output is 70% of initial light output.
- I. McAdams Ellipses: Color consistency of LED's from chip to chip.

1.2 SUBMITTALS

- A. Refer to Sections 012500 "Substitution Procedures" and 013300 "Submittal Procedures."
- B. Product Data: For each type of lighting fixture, arranged in order of fixture designation as listed on the fixture schedule. Include data on features, accessories, finishes, and the following:
 - 1. Physical description of lighting fixture including dimensions.
 - 2. Emergency lighting units including battery and charger.
 - 3. Ballast, including BF.
 - 4. Energy-efficiency data.
 - 5. Lamp data: rated life, lumen output, CCT, CRI and wattage.
 - 6. Sound Performance Data: For air-handling lighting fixtures. Indicate sound power level and sound transmission class in test reports certified according to standards specified in Division 23 Section "Diffusers, Registers, and Grilles."
 - 7. Life, output (lumens, CCT, and CRI), and energy-efficiency data for lamps.
- C. Photometric Data Submittals
 - 1. Photometric data and adjustment factors based on laboratory tests, complying with IESNA Lighting Measurements Testing & Calculation Guides, for the following lighting fixture types. The adjustment factors shall be for lamps, ballasts, and accessories identical to those indicated for the lighting fixture as applied in this Project.
 - a. Testing Agency Certified Data: For indicated fixtures, photometric data shall be certified by a qualified independent testing agency. Photometric data for remaining fixtures shall be certified by manufacturer.

- b. Manufacturer Certified Data: Photometric data shall be certified by a manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products.
 - 2. Include the following in the photometric report:
 - a. List the measured candela values of the photometric distribution in at least three planes, except in the case of an axially symmetrical lighting fixture. Candela curves, lux (footcandle) and lumen tables, and iso-lux (iso-footcandle) contours are not acceptable.
 - b. List the type of lamps, ballasts, and lighting control devices, such as lenses and louvers, used with the tested lighting fixture.
- D. Shop Drawings: For nonstandard or custom lighting fixtures as indicated on the fixture schedule. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Wiring Diagrams: For power, signal, and control wiring.
- E. Samples: Production run samples for each lighting fixture in the Interior Lighting Fixture Schedule indicated for sample. Each Sample shall include the following:
 - 1. Lamps and 120-volt ballasts, installed.
 - 2. Minimum 6-foot cords and NEMA configured, grounded, straight blade plug for 120-volt operation plugs.
 - 3. Pendant support system.
- F. Installation instructions.
- G. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Lighting fixtures.
 - 2. Suspended ceiling components.
 - 3. Partitions and millwork that penetrate the ceiling or extends to within 12 inches (305 mm) of the plane of the luminaires.
 - 4. Ceiling-mounted projectors.
 - 5. Structural members to which suspension systems for lighting fixtures will be attached.
 - 6. Other items in finished ceiling including the following:
 - a. Air outlets and inlets.
 - b. Speakers.
 - c. Sprinklers.
 - d. Smoke and fire detectors.
 - e. Occupancy sensors.
 - f. Access panels.
 - 7. Perimeter moldings.
- H. Qualification Data: For qualified agencies providing photometric data for lighting fixtures.
- I. Product Certificates: Compatibility for each type of ballast for bi-level and dimmer-controlled lamps and fixtures as specified, from manufacturer.

- J. Operation and Maintenance Data: For lighting equipment and fixtures to include in emergency, operation, and maintenance manuals.
 - 1. Provide a list of all lamp types used on Project; use ANSI and manufacturers' codes.

- K. Warranty: Sample of special warranty.

1.3 QUALITY ASSURANCE

- A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.
- B. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910, complying with the IESNA Lighting Measurements Testing & Calculation Guides.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NFPA 70.
- E. Provide fixtures U.L. listed and labeled for the application.
- F. FM Global Compliance: Lighting fixtures for hazardous locations shall be listed and labeled for indicated class and division of hazard by FM Global.
- G. Mockups: Provide interior lighting fixtures for room or module mockups, complete with power and control connections.
 - 1. Obtain Architect's approval of fixtures for mockups before starting installations.
 - 2. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 - 3. Approved fixtures in mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.4 COORDINATION

- A. Coordinate layout and installation of lighting fixtures and suspension system with other construction that penetrates ceilings or is supported by them, including HVAC equipment, fire-suppression system, and partition assemblies.

1.5 WARRANTY

- A. Special Warranty for Emergency Lighting Batteries: Manufacturer's standard form in which manufacturer of battery-powered emergency lighting unit agrees to repair or replace components of rechargeable batteries that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Emergency Lighting Unit Batteries: [10] **<Insert number>** years from date of Substantial Completion. Full warranty shall apply for first year, and prorated warranty for the remaining nine years.

- B. Special Warranty for LED Lighting Fixtures: Manufacturer's standard form in which manufacturer of lighting fixture agrees to repair or replace components, including driver/power supplies and thermal management, that fail in materials or workmanship within five years date of substantial completion.

1.6 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Lamps: **[10 for every 100] <Insert quantity>** of each type and rating installed. Furnish at least one of each type.
 2. Plastic Diffusers and Lenses: **[One for every 100] <Insert quantity>** of each type and rating installed. Furnish at least one of each type.
 3. Emergency battery pack: One for every **[20] [50] <Insert number>** emergency lighting unit.
 4. LED Drivers: **[One for every 100] <Insert quantity>** of each type and rating installed. Furnish at least one of each type.
 5. Globes and Guards: **[One for every 20] <Insert quantity>** of each type and rating installed. Furnish at least one of each type.

1.7 ALLOWANCES

- A. Extra Fixtures
1. Provide an additional **[5] [10] [...]** exit signs, Type **["X1"] [...]** above what is indicated on the drawings. Include for each of the extra units, installation of 75 feet of conduit and wire, and connection to the emergency system.
 2. Install devices at locations to be determined by the Architect.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Products: Subject to compliance with requirements, **[provide product by manufacturers indicated on Drawings and specified.]**

2.2 GENERAL REQUIREMENTS FOR LIGHTING FIXTURES AND COMPONENTS

- A. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.
- B. Incandescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5A.
- C. Fluorescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5 and NEMA LE 5A as applicable.
- D. LED Fixtures: Minimum rated lifetime of L70 at 50,000 hours based on IES LM-79 testing; passive thermal management only unless otherwise indicated.
- E. Metal Parts: Free of burrs and sharp corners and edges.

- F. Sheet Metal Components: Steel unless otherwise indicated. Form and support to prevent warping and sagging.
- G. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit re-lamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during re-lamping and when secured in operating position.
- H. Diffusers and Globes:
 - 1. Acrylic Lighting Diffusers: 100 percent virgin acrylic plastic. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
 - a. Lens Thickness: At least [**0.125 inch (3.175 mm)**] <Insert dimension> minimum unless otherwise indicated.
 - b. Distribution: [**Pattern 12**] [**Pattern 19**] [**Pattern 20**] [as indicated]
 - c. UV stabilized.
 - 2. Glass: Annealed crystal glass unless otherwise indicated.
- I. Factory-Applied Labels: Comply with UL 1598. Include recommended lamps and ballasts. Labels shall be located where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.
 - 1. Label shall include the following lamp and ballast characteristics:
 - a. "USE ONLY" and include specific lamp type.
 - b. Lamp diameter code (T-4, T-5, T-8, T-12, etc.), tube configuration (twin, quad, triple, etc.), base type, and nominal wattage for fluorescent and compact fluorescent luminaires.
 - c. Lamp type, wattage, bulb type (ED17, BD56, etc.) and coating (clear or coated) for HID luminaires.
 - d. Start type (preheat, rapid start, instant start, etc.) for fluorescent and compact fluorescent luminaires.
 - e. ANSI ballast type (M98, M57, etc.) for HID luminaires.
- J. Electromagnetic-Interference Filters: Factory installed to suppress conducted electromagnetic interference as required by MIL-STD-461E. Fabricate lighting fixtures with one filter on each ballast indicated to require a filter.

2.3 BALLASTS FOR LINEAR FLUORESCENT LAMPS

- A. General Requirements for Electronic Ballasts:
 - 1. Comply with UL 935 and with ANSI C82.11.
 - 2. Designed for type and quantity of lamps served.
 - 3. Ballasts shall be designed for full light output unless another BF, dimmer, or bi-level control is indicated.
 - 4. Starting type: [**programmed rapid-start**] [**rapid-start**] [**instant-start**] unless otherwise indicated.
 - 5. Sound Rating: Class A.
 - 6. Total Harmonic Distortion Rating: Less than [**10**] [**20**] percent.
 - 7. Transient Voltage Protection: IEEE C62.41.1 and IEEE C62.41.2, Category A or better.
 - 8. Operating Frequency: [**42**] <Insert value> kHz or higher.
 - 9. Lamp Current Crest Factor: 1.7 or less.
 - 10. BF: 0.92 for T8 lamps, 1.0 for T5 lamps, and 0.88 for T4 lamps, or higher.

11. Power Factor: 0.95 lagging or higher.
 12. Parallel Lamp Circuits: Multiple lamp ballasts shall comply with ANSI C82.11 and shall be connected to maintain full light output on surviving lamps if one or more lamps fail.
- B. Luminaires controlled by occupancy sensors shall have programmed-start ballasts.
- C. Electronic Programmed-Start Ballasts for T5, T5HO and T8 Lamps: Comply with ANSI C82.11 and the following:
1. Lamp end-of-life detection and shutdown circuit for T4 and T5 diameter lamps.
 2. Automatic lamp starting after lamp replacement.
- D. Electromagnetic Ballasts: Comply with ANSI C82.1; energy saving, high-power factor, Class P, and having automatic-reset thermal protection.
1. Ballast Manufacturer Certification: Indicated by label.
- E. Single Ballasts for Multiple Lighting Fixtures: Factory wired with ballast arrangements and bundled extension wiring to suit final installation conditions without modification or rewiring in the field.
- F. Ballasts for Low-Temperature Environments:
1. Temperatures 0 Deg F (Minus 17 Deg C) and Higher: [**Electronic**] [or] [**electromagnetic**] type rated for 0 deg F (minus 17 deg C) starting and operating temperature with indicated lamp types.
 2. Temperatures Minus 20 Deg F (Minus 29 Deg C) and Higher: Electromagnetic type designed for use with indicated lamp types.
- G. Ballasts for Residential Applications: Fixtures designated as "Residential" may use low-power-factor electronic ballasts having a Class B sound rating and total harmonic distortion of approximately 30 percent.
- H. Ballasts for Low Electromagnetic-Interference Environments: Comply with 47 CFR 18, Ch. 1, Subpart C, for limitations on electromagnetic and radio-frequency interference for consumer equipment.
- I. Ballasts for Dimmer-Controlled Lighting Fixtures: Electronic type.
1. Dimming Range: 100 to [5] <Insert number> percent of rated lamp lumens.
 2. Ballast Input Watts: Can be reduced to [20] <Insert number> percent of normal.
 3. Compatibility: Certified by manufacturer for use with specific dimming control system and lamp type indicated.
 4. Control: Coordinate wiring from ballast to control device to ensure that the ballast, controller, and connecting wiring are compatible.
- 2.4 LED MODULES/BOARDS
- A. Minimum rated lifetime of L70 at 50,000 hours based on IES LM-80 testing; 4-step McAdams Ellipse maximum color consistency unless otherwise indicated; 80 CRI minimum unless otherwise indicated.

2.5 EXIT SIGNS

- A. General Requirements for Exit Signs: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.
- B. Internally Lighted Signs:
 - 1. Lamps for AC Operation: LEDs, 50,000 hours minimum rated lamp life.
- C. Self-Powered Exit Signs (Battery Type): Integral automatic charger in a self-contained power pack.
 - a. Battery: Sealed, maintenance-free, nickel-cadmium type.
 - b. Charger: Fully automatic, solid-state type with sealed transfer relay.
 - c. Operation: Relay automatically energizes lamp from battery when circuit voltage drops to 80 percent of nominal voltage or below. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
 - d. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
 - e. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
 - f. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.
 - g. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and a flashing red LED.
- 2. Master/Remote Sign Configurations:
 - a. Master Unit: Comply with requirements above for self-powered exit signs, and provide additional capacity in [LED power supply] [ballast] [battery] for power connection to remote unit.
 - b. Remote Unit: Comply with requirements above for self-powered exit signs, except omit power supply, battery, and test features. Arrange to receive full power requirements from master unit. Connect for testing concurrently with master unit as a unified system.
- D. Self-Luminous Signs: Powered by tritium gas, with universal bracket for flush-ceiling, wall, or end mounting. Signs shall be guaranteed by manufacturer to maintain the minimum brightness requirements in UL 924 for [10] [15] [20] years.
- E. Self-Luminous Signs: Using strontium oxide aluminate compound to store ambient light and release the stored energy when the light is removed. Provide with universal bracket for flush-ceiling, wall, or end mounting.

2.6 EMERGENCY LIGHTING UNITS

- A. General Requirements for Emergency Lighting Units: Self-contained units complying with UL 924.
 - 1. Battery: Sealed, maintenance-free, lead-acid type.
 - 2. Charger: Fully automatic, solid-state type with sealed transfer relay.

3. Operation: Relay automatically turns lamp on when power-supply circuit voltage drops to 80 percent of nominal voltage or below. Lamp automatically disconnects from battery when voltage approaches deep-discharge level. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
4. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
5. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
6. Wire Guard: Heavy-chrome-plated wire guard protects lamp heads or fixtures.
7. Integral Time-Delay Relay: Holds unit on for fixed interval of [15] <Insert period> minutes when power is restored after an outage.
8. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.
9. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and a flashing red LED.

2.7 FLUORESCENT LAMPS

- A. Products subject to compliance with requirements provide lamps from one of the following manufacturers:
 1. GE Company, GE Lighting
 2. OSRAM Sylvania Inc.
 3. Philips Lighting
- B. T8 rapid-start lamps, rated 32 W maximum, nominal length of 48 inches (1220 mm), 2800 initial lumens (minimum), CRI [75][85] (minimum), color temperature [3500] <Insert value> K, and average rated life 20,000 hours unless otherwise indicated.
- C. T8 rapid-start lamps, rated 17 W maximum, nominal length of 24 inches (610 mm), 1300 initial lumens (minimum), CRI [75][85] 75 (minimum), color temperature [3500] <Insert value> K, and average rated life of 20,000 hours unless otherwise indicated.
- D. T5 rapid-start lamps, rated 28 W maximum, nominal length of 45.2 inches (1150 mm), 2900 initial lumens (minimum), CRI 85 (minimum), color temperature [3500] <Insert value> K, and average rated life of 20,000 hours unless otherwise indicated.
- E. T5HO rapid-start, high-output lamps, rated 54 W maximum, nominal length of 45.2 inches (1150 mm), 5000 initial lumens (minimum), CRI 85 (minimum), color temperature [3500] <Insert value> K, and average rated life of 20,000 hours unless otherwise indicated.

2.8 LIGHTING FIXTURE SUPPORT COMPONENTS

- A. Comply with Division 26 Section "Hangers and Supports for Electrical Systems" for channel- and angle-iron supports and nonmetallic channel and angle supports.
- B. Single-Stem Hangers: 1/2-inch (13-mm) steel tubing with swivel ball fittings and ceiling canopy. Finish same as fixture.

- C. Twin-Stem Hangers: Two, 1/2-inch (13-mm) steel tubes with single canopy designed to mount a single fixture. Finish same as fixture.
- D. Wires: ASTM A 641/A 641M, Class 3, soft temper, zinc-coated steel, 12 gage (2.68 mm).
- E. Wires for Humid Spaces: ASTM A 580/A 580M, Composition 302 or 304, annealed stainless steel, 12 gage (2.68 mm).
- F. Rod Hangers: 3/16-inch (5-mm) minimum diameter, cadmium-plated, threaded steel rod.
- G. Hook Hangers: Integrated assembly matched to fixture and line voltage and equipped with threaded attachment, cord, and locking-type plug.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General
 1. Install lighting systems in accordance with NECA/IESNA 500, 501 and 502.
 2. Assemble and install lighting fixtures in a manner to insure a straight and true installation without dents, warps, and other irregularities.
 3. Where lighting fixtures are specified or indicated for installation in continuous rows, install fixtures in a continuous end-to-end manner without gaps between fixture segments, and with vertical and horizontal variations, along the length of the continuous installation, no greater than 6 mm (1/4 inch).
 4. Coordinate the lighting system installation with relevant trades so as to eliminate installation interferences, such as with hangers, mechanical ducts, sprinklers, piping and steel structure.
 5. Install lighting fixtures in a common area space so that the orientation of the lens and louver door latches and hinges are in the same direction.
 6. Provide plaster frames for recessed fixtures installed in other than suspended grid ceiling systems.
- B. Lighting fixtures:
 1. Set level, plumb, and square with ceilings and walls unless otherwise indicated.
 2. Install lamps in each luminaire.
- C. Temporary Lighting: If it is necessary, and approved by Architect, to use permanent luminaires for temporary lighting, install and energize the minimum number of luminaires necessary. When construction is sufficiently complete, remove the temporary luminaires, disassemble, clean thoroughly, install new lamps, and reinstall.
- D. Remote Mounting of Ballasts: Distance between the ballast and fixture shall not exceed that recommended by ballast manufacturer. Verify, with ballast manufacturers, maximum distance between ballast and luminaire.
- E. Lay-in Ceiling Lighting Fixtures Supports: Use grid as a support element.

1. Install ceiling support system rods or wires for each fixture [, **independent of the ceiling suspension devices**,]. Locate not more than 6 inches (150 mm) from lighting fixture corners. Do not use steel roof decking for light fixture supports; provide additional steel to building structure to provide a suitable support for light fixture support wires.
2. Support Clips: Fasten to lighting fixtures and to ceiling grid members at or near each fixture corner with clips that are UL listed for the application.
3. Fixtures of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support fixtures independently with at least two 3/4-inch (20-mm) metal channels spanning and secured to ceiling tees.
4. Install at least one independent support rod or wire from structure to a tab on lighting fixture. Wire or rod shall have breaking strength of the weight of fixture at a safety factor of 3.

F. Suspended Lighting Fixture Support:

1. Pendants and Rods: Where longer than 48 inches (1200 mm), brace to limit swinging.
2. Stem-Mounted, Single-Unit Fixtures: Suspend with twin-stem hangers.
3. Continuous Rows: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of fixture chassis, including one at each end.
4. Do not use grid as support for pendant luminaires. Connect support wires or rods to building structure. Do not use steel roof decking for light fixture supports; provide additional steel to building structure to provide a suitable support for light fixture support wires.
5. Install suspended lighting fixtures at mounting heights specified or indicated, plus or minus 6 mm (1/4-inch).

G. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.2 IDENTIFICATION

- A. Install labels with panel and circuit numbers on concealed junction and outlet boxes. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

3.3 FIELD QUALITY CONTROL

- A. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery and retransfer to normal.
- B. Verify that self-luminous exit signs are installed according to their listing and the requirements in NFPA 101.
- C. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

3.4 CLEANING

- A. Clean interior surfaces of lighting fixtures of dirt and construction debris upon completion of installation. Clean fingerprints, smudges, and other marks from lenses, louvers, and reflecting surfaces. Leave free of visible marks.

3.5 STARTUP SERVICE

- A. Burn-in all lamps that require specific aging period to operate properly, prior to occupancy by Owner. Burn-in fluorescent and compact fluorescent lamps intended to be dimmed, for at least 100 hours at full voltage.

3.6 ADJUSTING

- A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting aimable luminaires to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose. Some of this work may be required after dark.
 - 1. Adjust the lamp socket position in downlight lighting fixtures per the manufacturer's recommendations for the specified lamp type and voltage. Optimize the lighting output of the lighting fixture by properly locating the light center within the reflector.
 - 2. Upon final completion of the installation of the lighting fixtures and any associated lighting control systems, notify the Architect in writing to arrange for the final adjustment and aiming of lighting equipment requiring aiming and adjustment.
 - 3. Adjust aimable luminaires in the presence of Architect and Lighting Designer.

END OF SECTION

SECTION 26 5600 - EXTERIOR LIGHTING**PART 1 - GENERAL****1.1 STRUCTURAL ANALYSIS CRITERIA FOR POLE SELECTION**

- A. Dead Load: Weight of luminaire and its horizontal and vertical supports, lowering devices, and supporting structure, applied as stated in AASHTO LTS-4-M.
- B. Live Load: Single load of 500 lbf (2224 N), distributed as stated in AASHTO LTS-4-M.
- C. Ice Load: Load of 3 lbf/sq. ft. (145 Pa), applied as stated in AASHTO LTS-4-M Ice Load Map.
- D. Wind Load: Pressure of wind on pole and luminaire and banners and banner arms, calculated and applied as stated in AASHTO LTS-4-M.
 - 1. Basic wind speed for calculating wind load for poles exceeding 49.2 feet (15 m) in height is [100 mph (45 m/s)] [90 mph (40 m/s)] **<Insert value from AASHTO LTS-4-M>**.
 - a. Wind Importance Factor: **[1.0] <Insert value from Table 3-2>**.
 - b. Minimum Design Life: **[50 years] <Insert value from Table 3-3>**.
 - c. Velocity Conversion Factors: **[1.0] <Insert value from Table 3-2>**.
 - 2. Basic wind speed for calculating wind load for poles 50 feet (15 m) high or less is [100 mph (45 m/s)] [90 mph (40 m/s)] **<Insert value from AASHTO LTS-4-M for this Project>**.
 - a. Wind Importance Factor: **[1.0] <Insert value from Table 3-2>**.
 - b. Minimum Design Life: **[25 years] <Insert value from Table 3-3>**.
 - c. Velocity Conversion Factors: **[1.0] <Insert value from Table 3-2>**.

1.2 ACTION SUBMITTALS

- A. Product Data: For each luminaire, pole, and support component, arranged in order of lighting unit designation. Include data on features, accessories, and finishes.
 - 1. Lamps, including life, output (lumens, CCT, and CRI) and energy-efficiency data.
 - 2. Photometric data and adjustment factors based on laboratory tests, complying with **[IES LM-79][IES LM-80]**
 - a. Manufacturer's Certified Data: Photometric data certified by manufacturer's laboratory with a current accreditation under the NVLAP for Energy Efficiency Lighting Products.
 - b. Testing Agency Certified Data: For indicated luminaires, photometric data certified by a qualified independent testing agency. Photometric data for remaining luminaires shall be certified by manufacturer.
 - 3. Wiring diagrams for power, control, and signal wiring.
 - 4. Photoelectric relays.
 - 5. Means of attaching luminaires to supports and indication that the attachment is suitable for components involved.
- B. Shop Drawings:
 - 1. For nonstandard or custom luminaires.
 - a. Include plans, elevations, sections, and mounting and attachment details.

- b. Include details of luminaire assemblies. Include dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - c. Include diagrams for power, signal, and control wiring.
- 2. Anchor-bolt templates keyed to specific poles and certified by manufacturer.

1.3 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Glass, Acrylic, and Plastic Lenses, Covers, and Other Optical Parts: One for every 100 of each type and rating installed. Furnish at least one of each type.
 - 2. Diffusers and Lenses: One for every 100 of each type and rating installed. Furnish at least one of each type.
 - 3. Globes and Guards: One for every 20 of each type and rating installed. Furnish at least one of each type.

1.4 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with NFPA 70.
- C. Provide luminaires from a single manufacturer for each luminaire type.
- D. Each luminaire type shall be binned within a three-step MacAdam Ellipse to ensure color consistency among luminaires.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Protect finishes of exposed surfaces by applying a strippable, temporary protective cover prior to shipping.

1.6 FIELD CONDITIONS

- A. Verify existing and proposed utility structures prior to the start of work associated with luminaire installation.
- B. Mark locations of exterior luminaires for approval by Architect prior to the start of the luminaire installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Products: Subject to compliance with requirements, provide product indicated on Drawings.

2.2 GENERAL REQUIREMENTS FOR LUMINAIRES

- A. Luminaires shall comply with UL 1598 and be listed and labeled for installation in wet locations by an NRTL acceptable to authorities having jurisdiction.
- B. Lateral Light Distribution Patterns: Comply with IESNA RP-8 for parameters of lateral light distribution patterns indicated for luminaires.
- C. Metal Parts: Free of burrs and sharp corners and edges.
- D. Sheet Metal Components: Corrosion-resistant aluminum unless otherwise indicated. Form and support to prevent warping and sagging.
- E. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use. Provide filter/breather for enclosed luminaires.
- F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position. Doors shall be removable for cleaning or replacing lenses. Designed to disconnect ballast when door opens.
- G. Exposed Hardware Material: Stainless steel.
- H. Internal driver.
- I. Lamps dimmable from 100 percent to 0 percent of maximum light output.
- J. L70 lamp life of 50,000 hours.
- K. Plastic Parts: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
- L. Light Shields: Metal baffles, factory installed and field adjustable, arranged to block light distribution to indicated portion of normally illuminated area or field.
- M. Reflecting surfaces shall have minimum reflectance as follows unless otherwise indicated:
 - 1. White Surfaces: 85 percent.
 - 2. Specular Surfaces: 83 percent.
 - 3. Diffusing Specular Surfaces: 75 percent.
- N. Lenses and Refractors Gaskets: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses and refractors in luminaire doors.
- O. Luminaire Finish: Manufacturer's standard paint applied to factory-assembled and -tested luminaire before shipping. Where indicated, match finish process and color of pole or support materials.
- P. Factory-Applied Finish for Steel Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
 2. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.
 - a. Color: As selected by Architect from manufacturer's standard catalog of colors or as indicated on Drawings.
- Q. Factory-Applied Finish for Aluminum Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
 2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
 3. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
 4. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
 - a. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black]**.
- 2.3 LUMINAIRE-MOUNTED PHOTOELECTRIC RELAYS
- A. Comply with UL 773 or UL 773A.
 - B. Contact Relays: Factory mounted, single throw, designed to fail in the on position, and factory set to turn light unit on at 1.5 to 3 fc (16 to 32 lx) and off at 4.5 to 10 fc (48 to 108 lx) with 15-second minimum time delay. **[Relay shall have directional lens in front of photocell to prevent artificial light sources from causing false turnoff.]**
 1. Relay with locking-type receptacle shall comply with ANSI C136.10.
 2. Adjustable window slide for adjusting on-off set points.
- 2.4 GENERAL REQUIREMENTS FOR POLES AND SUPPORT COMPONENTS
- A. Structural Characteristics: Comply with AASHTO LTS-4-M.
 1. Wind-Load Strength of Poles: Adequate at indicated heights above grade without failure, permanent deflection, or whipping in steady winds of speed indicated in "Structural Analysis Criteria for Pole Selection" Article.
 2. Strength Analysis: For each pole, multiply the actual equivalent projected area of luminaires and brackets by a factor of **[1.1] <Insert number>** to obtain the equivalent projected area to be used in pole selection strength analysis.
 - B. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless-steel fasteners and mounting bolts unless otherwise indicated.

- C. Mountings, Fasteners, and Appurtenances: Corrosion-resistant items compatible with support components.
 - 1. Materials: Shall not cause galvanic action at contact points.
 - 2. Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.
 - 3. Anchor-Bolt Template: Plywood or steel.
- D. Handhole: Oval-shaped, with minimum clear opening of 2-1/2 by 5 inches (65 by 130 mm), with cover secured by stainless-steel captive screws. [**Provide on all, except wood poles.**]
- E. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Concrete, reinforcement, and formwork are specified in Section 03 3000 "Cast-in-Place Concrete."
- F. Power-Installed Screw Foundations: Factory fabricated by pole manufacturer, with structural steel complying with ASTM A 36/A 36M and hot-dip galvanized according to ASTM A 123/A 123M; and with top-plate and mounting bolts to match pole base flange and strength required to support pole, luminaire, and accessories.
- G. Breakaway Supports: Frangible breakaway supports, tested by an independent testing agency acceptable to authorities having jurisdiction, according to AASHTO LTS-4-M.

2.5 STEEL POLES

- A. Poles: Comply with ASTM A 500, Grade B, carbon steel with a minimum yield of 46,000 psig (317 MPa); one-piece construction up to 40 feet (12 m) in height with access handhole in pole wall.
 - 1. Shape: [**Round, tapered**] [**Round, straight**] [**Square, tapered**] [**Square, straight**].
 - 2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- B. Steel Mast Arms: [**Single-arm**] [**Truss**] [**Davit**] type, continuously welded to pole attachment plate. Material and finish same as pole.
- C. Brackets for Luminaires: Detachable, cantilever, without underbrace.
 - 1. Adapter fitting welded to pole, allowing the bracket to be bolted to the pole mounted adapter, then bolted together with [**stainless**] [**galvanized**]-steel bolts.
 - 2. Cross Section: Tapered oval, with straight tubular end section to accommodate luminaire.
 - 3. Match pole material and finish.
- D. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.
- E. Steps: Fixed steel, with nonslip treads, positioned for 15-inch (381-mm) vertical spacing, alternating on opposite sides of pole; first step at elevation 10 feet (3 m) above finished grade.
- F. Grounding and Bonding Lugs: Welded 1/2-inch (13-mm) threaded lug, complying with requirements in Section 26 0526 "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.

- G. Cable Support Grip: Wire-mesh type with rotating attachment eye, sized for diameter of cable and rated for a minimum load equal to weight of supported cable times a 5.0 safety factor.
- H. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.
- I. Galvanized Finish: After fabrication, hot-dip galvanize complying with ASTM A 123/A 123M.
- J. Factory-Painted Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or with SSPC-SP 8, "Pickling."
 - 2. Interior Surfaces of Pole: One coat of bituminous paint, or otherwise treat for equal corrosion protection.
 - 3. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.
 - a. Color: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range].**

2.6 ALUMINUM POLES

- A. Poles: Seamless, extruded structural tube complying with ASTM B 429/B 429M, Alloy 6063-T6 with access handhole in pole wall.
- B. Poles: ASTM B 209 (ASTM B 209M), 5052-H34 marine sheet alloy with access handhole in pole wall.
 - 1. Shape: **[Round, tapered] [Round, straight] [Square, tapered] [Square, straight].**
 - 2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- C. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.
- D. Grounding and Bonding Lugs: Welded 1/2-inch (13-mm) threaded lug, complying with requirements in Section 26 0526 "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.
- E. Brackets for Luminaires: Detachable, with pole and adapter fittings of cast aluminum. Adapter fitting welded to pole and bracket, then bolted together with stainless-steel bolts.
 - 1. Tapered oval cross section, with straight tubular end section to accommodate luminaire.
 - 2. Finish: Same as **[pole] [luminaire].**
- F. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.
- G. Aluminum Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
3. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
4. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
5. **<Insert finish>**.
 - a. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [As selected by Architect from manufacturer's full range]**.

2.7 WOOD POLES

- A. Poles: **[Douglas fir] [Southern yellow pine]**, **[machine trimmed by turning]**, complying with ANSI O5.1 and with AWPA C4 for wood species used; and bored, roofed, and galled before treatment.
 1. Mounting Provisions: Embedded.
- B. Preservative Treatment: Pressure treat poles with **[creosote] [pentachlorophenol] [ammoniacal copper arsenate]** according to AWPA C1 and AWPA C4.
- C. Luminaire Brackets: Comply with ANSI C136.13.

2.8 POLE ACCESSORIES

- A. Duplex Receptacle: 120 V, 20 A in a weatherproof assembly complying with Section 26 2726 "Wiring Devices" for ground-fault circuit-interrupter type.
 1. **[Surface mounted] [Recessed]**, [12 inches (300 mm)] **<Insert dimension>** above finished grade.
 2. Nonmetallic polycarbonate plastic or reinforced fiberglass, weatherproof in use, cover, **<Insert color to match pole,>** that when mounted results in NEMA 250, **[Type 3R] [Type 4X]** enclosure.
 3. With cord opening.
 4. With lockable hasp and latch that complies with OSHA lockout and tag-out requirements.
- B. Minimum 1800-W transformer, protected by replaceable fuses, mounted behind access cover.
- C. Base Covers: Manufacturers' standard metal units, arranged to cover pole's mounting bolts and nuts. Finish same as pole.
- D. Transformer Type Base: Same material and color as pole. Coordinate dimensions to suit pole's base flange and accept **[ballast(s)] [indicated accessories]**.
- E. Decorative accessories, supplied by decorative pole manufacturer, include the following:
 1. Banner Arms: **<Insert material>**.
 2. Flag Holders: **<Insert material>**.
 3. Ladder Rests: **<Insert material>**.

PART 3 - EXECUTION

3.1 LUMINAIRE INSTALLATION

- A. Install lamps in each luminaire.
- B. Fasten luminaire to indicated structural supports.
 - 1. Use fastening methods and materials selected to resist seismic forces defined for the application and approved by manufacturer.
- C. Adjust luminaires that require field adjustment or aiming. [**Include adjustment of photoelectric device to prevent false operation of relay by artificial light sources, favoring a north orientation.**]

3.2 POLE INSTALLATION

- A. Alignment: Align pole foundations and poles for optimum directional alignment of luminaires and their mounting provisions on the pole.
- B. Clearances: Maintain the following minimum horizontal distances of poles from surface and underground features unless otherwise indicated on Drawings:
 - 1. Fire Hydrants and Storm Drainage Piping: [60 inches (1520 mm)] **<Insert dimension>**.
 - 2. Water, Gas, Electric, Communication, and Sewer Lines: [10 feet (3 m)] **<Insert dimension>**.
 - 3. Trees: [15 feet (5 m)] **<Insert dimension>** from tree trunk.
- C. Concrete Pole Foundations: Set anchor bolts according to anchor-bolt templates furnished by pole manufacturer. Concrete materials, installation, and finishing requirements are specified in Section 03 3000 "Cast-in-Place Concrete."
- D. Foundation-Mounted Poles: Mount pole with leveling nuts, and tighten top nuts to torque level recommended by pole manufacturer.
 - 1. Use anchor bolts and nuts selected to resist seismic forces defined for the application and approved by manufacturer.
 - 2. Grout void between pole base and foundation. Use nonshrink or expanding concrete grout firmly packed to fill space.
 - 3. Install base covers unless otherwise indicated.
 - 4. Use a short piece of 1/2-inch- (13-mm-) diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.
- E. Embedded Poles with Tamped Earth Backfill: Set poles to depth below finished grade indicated on Drawings, but not less than one-sixth of pole height.
 - 1. Dig holes large enough to permit use of tampers in the full depth of hole.
 - 2. Backfill in 6-inch (150-mm) layers and thoroughly tamp each layer so compaction of backfill is equal to or greater than that of undisturbed earth.
- F. Embedded Poles with Concrete Backfill: Set poles in augered holes to depth below finished grade indicated on Drawings, but not less than one-sixth of pole height.
 - 1. Make holes 6 inches (150 mm) in diameter larger than pole diameter.

2. Fill augered hole around pole with air-entrained concrete having a minimum compressive strength of 3000 psi (20 MPa) at 28 days, and finish in a dome above finished grade.
 3. Use a short piece of 1/2-inch- (13-mm-) diameter pipe to make a drain hole through concrete dome. Arrange to drain condensation from interior of pole.
 4. Cure concrete a minimum of 72 hours before performing work on pole.
- G. Poles and Pole Foundations Set in Concrete Paved Areas: Install poles with minimum of 6-inch- (150-mm-) wide, unpaved gap between the pole or pole foundation and the edge of adjacent concrete slab. Fill unpaved ring with **[pea gravel]** **<Insert material>** to a level 1 inch (25 mm) below top of concrete slab.
- H. Raise and set poles using web fabric slings (not chain or cable).

3.3 BOLLARD LUMINAIRE INSTALLATION

- A. Align units for optimum directional alignment of light distribution.
- B. Install on concrete base with top [4 inches (100 mm)] **<Insert dimension>** above finished grade or surface at bollard location. Cast conduit into base, and shape base to match shape of bollard base. Finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Section 03 3000 "Cast-in-Place Concrete."

3.4 INSTALLATION OF INDIVIDUAL GROUND-MOUNTING LUMINAIRES

- A. Install on concrete base with top [4 inches (100 mm)] **<Insert dimension>** above finished grade or surface at luminaire location. Cast conduit into base, and finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Section 03 3000 "Cast-in-Place Concrete."
- B. Remote Mounting of Drivers/Power Supplies: Do not exceed the manufacturer's recommended maximum distance between the fixture and the driver/power supply.

3.5 CORROSION PREVENTION

- A. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum by insulating fittings or treatment.
- B. Steel Conduits: Comply with Section 26 0533 "Raceways and Boxes for Electrical Systems." In concrete foundations, wrap conduit with 0.010-inch- (0.254-mm-) thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

3.6 GROUNDING

- A. Ground metal poles and support structures according to Section 26 0526 "Grounding and Bonding for Electrical Systems."
1. Install grounding electrode for each pole unless otherwise indicated.
 2. Install grounding conductor pigtail in the base for connecting luminaire to grounding system.
- B. Ground nonmetallic poles and support structures according to Section 26 0526 "Grounding and Bonding for Electrical Systems."

1. Install grounding electrode for each pole.
2. Install grounding conductor and conductor protector.
3. Ground metallic components of pole accessories and foundations.

3.7 ADJUSTING

- A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting aimable luminaires to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose. Some of this work may be required after dark.
 1. Adjust the lamp socket position in downlight lighting fixtures per the manufacturer's recommendations for the specified lamp type and voltage. Optimize the lighting output of the lighting fixture by properly locating the light center within the reflector.
 2. Upon final completion of the installation of the lighting fixtures and any associated lighting control systems, notify the Architect in writing to arrange for the final adjustment and aiming of lighting equipment requiring aiming and adjustment.
 3. Adjust aimable luminaires in the presence of Architect and Lighting Designer.

END OF SECTION

FOR REFERENCE ONLY

SECTION 27 0500 - COMMON WORK RESULTS FOR COMMUNICATIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. Provide all materials and labor for the installation of an inside plant telecommunication system. All materials shall be new, free from defects, of current manufacture, of the quality specified or shown. Each type of material shall be of the same manufacturer throughout the work. This section includes Inside Plant Communications cabling, termination, and administration equipment and installation requirements for the specified Structured Cabling System.
- B. This section specifies the basic requirements for communications installations as indicated or required and includes requirements common to more than one specification section of this division (such as related documents, related sections, definitions, governing requirements, contractor requirements, warranty requirements, submittal requirements/procedures, and project closeout requirements/procedures, as well as other requirements). This section may expand upon and/or supplement the requirements specified in Division 01.
- C. Examine the contract documents in their entirety (including drawings and specification sections in the other divisions) for requirements or work which may affect work under this section, regardless of whether such requirements or work are specifically indicated in this section.

1.2 DEFINITIONS AND ABBREVIATIONS

- A. ANSI – American Northern Standards Institute
- B. AVC - Audiovisual Contractor
- C. AWG – American Wire Gauge
- D. BICSI – Building Industry Consulting Service International
- E. BCT – Bonding Conductor for Telecommunications
- F. CL - Client
- G. EC - Electrical Contractor
- H. EIA – Electronics Industry Alliance
- I. ETL – Intertek Certification Services
- J. GC - General Contractor
- K. IEC – International Electrotechnical Commission
- L. IEEE – Institute of Electrical and Electronic Engineers
- M. IDC – Insulation displacement contact
- N. ISO – International Standards Organization
- O. NECA – National Electrical Contractors Association
- P. NFPA – National Fire Protection Agency
- Q. NRTL – Nationally Recognized Testing Laboratory
- R. STC - Sound Transmission Class

- S. TIA – Telecommunications Industry Association
- T. TC - Telecommunications Contractor
- U. UL – Underwriters Laboratory
- V. Provide: Furnish, install, terminate, label, test and certify a complete operating cabling system.
- W. Contract Documents (CD): Design drawings, specifications, sketches and schedules provided by the Engineer as they directly relate to this scope of work and this project.
- X. Structured Cabling Systems (SCS) wiring is defined as all required equipment and cabling including hardware, termination blocks, cross connect wire or cordage, patch panels, patch cords, telecommunication outlets, work area cords, UTP and fiber cable installed and configured to provide computer data and voice connectivity.
- Y. Network Center/Main Distribution Frame (MDF) Areas: This technology space houses Layer 2/3 network switching gear and other main network distribution equipment and acts as the mid-connection point between the Core/Network and the TR/IDF/access zones for all connections.
- Z. Telecommunications Room (TR)/Intermediate Distribution Frame (IDF): is the location for the termination of backbone cables and for termination of horizontal cables, and for the interconnection of each. The space also hosts access-layer switches and user network connections within each floor.
- AA. Active Equipment: electronic equipment used to develop various WAN, LAN, and voice services, e.g., digital multiplexers, RS-232 controllers, Ethernet hubs, switches, routers, PBX, etc.
- BB. Building Backbone: cabling system consisting of media and termination hardware interconnecting MDFs to IDFs.
- CC. Horizontal: cabling system consisting of media and termination hardware interconnecting the Telecommunication Outlets (TOs) and the TRs.
- DD. Bonding: permanent joining of metallic parts to form an electrically conductive path which will assure electrical continuity and the capacity to conduct safely any current likely to be imposed on it.
- EE. Cable Tray: vertical or horizontal open supports, usually made of aluminum or steel, which are fastened to the building structure. Cables are laid in and fastened to the trays.
- FF. Cabinet: free standing, floor-mounted or wall-mounted modular enclosure designed to house and protect rack-mounted electronic equipment and passive terminations.
- GG. Channel: The end-to-end transmission path between two points at which application specific equipment is connected; encompasses all the elements of the horizontal cabling link, plus the equipment cords in the telecommunications spaces and work area.
- HH. Cross-Connect: equipment used to terminate and tie together communications circuits.
- II. Cross-Connect Jumper: a cluster of twisted-pair conductors without connectors used to establish a circuit by linking two cross-connect termination points.
- JJ. Grounding: a conducting connection to earth, or to some conducting body that serves in place of earth.
- KK. Jack: receptacle used in conjunction with a plug to make electrical contact between communications circuits, e.g., eight-position/eight-contact modular jacks.

- LL. Ladder Cable Tray: A fabricated structure consisting of two longitudinal side rails connected by individual transverse members (rungs).
- MM. LAN: Local area network.
- NN. Link: Horizontal cabling link encompassing all components of the horizontal cabling (TO, patch panels, blocks, jumpers and patch cords that join them in the horizontal cross-connect). It is distinguished from a channel because it does not include the equipment cables/cords at the telecom spaces or work area.
- OO. Media: twisted-pair, and fiber optic cable or cables used to provide signal transmission paths.
- PP. Mounting Frame: rectangular steel framework, which can be equipment rack or wall mounted to support wiring blocks, patch panels, and other communications equipment.
- QQ. Outside Plant (OSP): generally, any and all portions of the cable system that runs outside of an environmentally enclosed structure and/or building with each end terminated at different buildings. This specifically includes inter-building cables, conduits, manholes, hand-holes, and innerduct.
- RR. UTP: Unshielded Twisted Pair.
- SS. FO: Fiber Optic
- TT. Passive Equipment: non-electronic hardware and apparatus, e.g., equipment racks, cable trays, electrical protection, patch panels, wiring blocks, fiber optic shelves, etc.
- UU. Patch Cords: a length of wire or fiber cable with connectors on one or both ends used to join communications circuits at a cross-connect.
- VV. Patch Panel: system of terminal blocks or connectors used with patch cords that facilitate administration of cross-connect fields.
- WW. Pathway: facility for the placement of communications cable. A pathway facility can be composed of several components including conduit, wireway, cable tray, surface raceway, under floor systems, overhead systems, raised floor, ceiling support wires, etc.
- XX. Protectors: electrical protection devices used to limit foreign voltages on metallic communications circuits.
- YY. Raceway: an enclosed channel designed expressly for holding wires or cables; may be of metal or insulating material. The term includes conduit, tubing, wire ways, under floor raceways, overhead raceways and surface raceways; does not include cable tray.
- ZZ. Racks: An open, freestanding, floor-mounted structure, typically made of aluminum or steel, used to mount equipment; usually referred to as an equipment rack.
- AAA. Riser Backbone: The Riser Backbone subsystem links the main cross connect (MDF) in the equipment room to the distribution rooms (TRs).
- BBB. Structured Cabling System (SCS): A SCS is defined as all required cabling including hardware, termination blocks, cross connect wire or cordage, patch panels, patch cords, telecommunication outlets, work area cords, UTP and fiber optic cable installed and configured to provide computer data and voice connectivity from each data or voice device to the network file server or voice network/switch designated as the service point of the local area network.
- CCC. Telecommunication Outlet (TO): Connecting device mounted in a work area used to terminate horizontal cable and interconnect cabling with station equipment.

- DDD. Trough or Ventilated Cable Tray: A fabricated structure consisting of integral or separate longitudinal rails and a bottom having openings sufficient for the passage of air and using 75 percent or less of the plan area of the surface to support cables.
- EEE. Work Area Subsystem: The connection between the telecommunications outlet and the station equipment in the work area is provided by the Work Area Subsystem. It consists of cords, adapters, and other transmission electronics.
- FFF. Wireless Access Point (WAP): Telecom outlet designated for use with wireless network devices. Such outlet shall be mounted above the ceiling.
- GGG. Contractor – The successful bidder engaged to provide the work of this specification.

13. UL 1666 – Standard for Safety of Flame Propagation Height
- E. The current edition of the following guidelines:
 1. TIA-TSB-162 Telecommunications Cabling Guidelines for Wireless Access Points, most recent revision including all addenda and systems bulletins
- F. When a discrepancy arises between the above-mentioned codes, standards or guidelines and the standards contained in this document, it shall be brought to the attention of the Owner immediately for resolution. The more stringent of the two guidelines shall be implemented.
- G. Any violations of applicable standards or codes committed by the Contractor shall be remedied at the Contractor's expense

1.4 SYSTEM DESCRIPTION

- A. Furnish, install, test and place into satisfactory and successful operation all equipment, materials, devices, and necessary appurtenances to provide a complete communications system that is compliant with ANSI/TIA/EIA, NECA/NEIS and ISO/IEC standards as hereinafter specified and/or shown on the Contract Documents. The system is intended to be capable of integrating voice, data, and video signals onto a common media.
 1. The Structured Cabling System shall be tested for 10 Gigabit Ethernet operation for all Category 6A as specified in the most recent edition of IEEE 802.3 and its related amendments.
- B. The work shall include all materials, equipment and apparatus not specifically mentioned herein or noted on the plans, but which are necessary to make a complete working ANSI/TIA/EIA and ISO/IEC compliant SCS.

1.5 SUBMITTALS

- A. Make submittals in accordance with:
 1. Section 00 00 00 – Procurement and Contracting Requirements
 2. Section 01 33 00 – Submittal Procedures.
- B. Action Submittals:
 1. Shop Drawings – RCDD stamped
 - a. Electronic files in CAD format, containing the contract document drawing files will be provided, for use in the preparing of the shop drawings, by the RCDD.
 - b. Submit Overall Floor Plans: floor and site plans showing the locations of devices and cable routing paths with cable types and quantity called out.
 - c. Submit Shop drawings for the entire structured cabling system and grounding and bonding system, identifying such items as PBB, SBB, TBB, rack fills, cabling pathways and pathway fills, ladder and other cable raceways, coordination with other trades, etc.
 - d. Wiring diagrams

- e. Rack Elevation drawings
- 2. Product Data Submittals: Provide submittal information for review before materials are delivered to the job site. Provide product data submittals for all products at the same time.
 - a. Submit a letter stating that the materials will be provided as specified, and specifically listing any items that will not be provided as specified. The letter shall also state that the Contractor has reviewed the specified items and agrees that they are applicable to this project in all respects.
 - b. For those items noted as allowing “or equal,” and which are not being provided as specifically named, submit standard manufacturer's cut sheets or other descriptive information, along with a written description detailing the reason for the substitution.
 - c. Provide standard manufacturer's cut sheets and the operating and maintenance (O&M) instructions at the time of submittal review for each device in the system, regardless of whether it is submitted as specified or as an approved equal. These instructions shall detail how to install and service the equipment and shall include information necessary for rough-in and preparation of the building facilities to receive the materials.
 - d. Catalog cut sheets and data sheets containing physical and dimensional information, performance data, electrical characteristics, materials used in fabrication, and material finish. Clearly indicate on each sheet what is being submitted on.
- 3. Qualification Data
 - a. Submit at least three references for telecommunications cabling jobs already completed, involving both fiber optics and twisted pair cabling, similar in scope to the project described herein. Include, for each customer reference, the following information: Company name, address, phone number, name and email address of contact and type of job completed.
- 4. Provide all applicable portions of the following information for sections listed in paragraph 1.03-C above, in addition to the standard requirements, within 7 days after receiving each reel and/or box of cable:
 - a. Manufacturer's product test data for fiber optic cable components.
 - b. Visually inspect Category 6A UTP. Materials cannot be used before results have been submitted to CM and approved by the Owner or its representative.
 - c. On-reel OTDR testing of all fiber.
- 5. Provide all applicable portions of the following completed test documentation for sections listed in paragraph 1.03-C above, in addition to the standard requirements, within 10 days after completion of the tests for each cable channel or link:
 - a. Test reports shall be submitted in the following manner:
 - 1) To the Owner: One copy on eight and one-half inch by eleven papers providing for quality reproducible printing, and electronic copy in MS Excel format.
 - 2) Submit test report documentation through CM for review by the Engineer for specification conformance and one copy in electronic format.
 - b. Twisted-pair field test documentation
- C. Closeout Submittals

1. Final close out documents including, but not limited to, test results on a CD-ROM or USB drive, in native tester format, project manual that includes manufacturer and contractor warranties, product cut sheets, material submittals, etc. Also, include the following:
 - a. Hard copy documentation of test results for every cable segment and link in 3-ring binder.
 - b. Provide "As-Built" Drawings in same AutoCAD 2018 DWG format.
 - 1) "As-Built" drawings indicating the location of all equipment including but not limited to work area outlets, patch panels, cross connect blocks, on each segment and cable routing outlet and identifiers. Indicate labeling for each piece of equipment.
 - 2) As-Built drawings will contain all installed cabling and materials. Outlets will be numbered with each cable associated with the work area outlet.
 - c. Place a laminated full-size, minimum "C" sized, floor plan of these drawings (coordinate with Owner) on the wall of each communications room, showing area covered, data locations, and cable labeling

1.6 QUALITY ASSURANCE

- A. Manufacturer's Warranty
 1. Contractor shall provide an extended manufacturer's warranty on all copper and fiber links and/or channels.
 2. The Contractor will correct any problems and malfunctions that are warranty-related issues without charge for the entire warranty period.
 3. The warranty period shall commence following the final acceptance of the project by the Owner.
- B. Testing and Inspection of Communications Equipment
 1. Provide tests specified below, when applicable, and as indicated under individual items of material, equipment, and work specified in this Specification.
 - a. Furnish all test equipment and instruments required for the tests.
 - b. Responsible, qualified employees of the contractor in the presence of the Owner or an authorized representative shall perform the cable testing.
 - c. All individuals involved in the testing phase of the project shall not have been involved in the installation phase nor shall have immediate knowledge of the installation task.
 2. End-to-end performance of all parts and channels will be tested.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install equipment frames and cable trays until spaces are enclosed and weather-tight, wet work in spaces is complete and dry, and work above ceilings is complete

1.8 RESPONSIBILITIES AND COORDINATION

- A. The contractor shall provide all materials, qualified labor and services required to ensure a complete and operational system, installed in accordance with the intent of the Contract Documents.

- B. The contractor shall furnish and install all incidental items not actually shown or specified, but which are required by best practices to provide complete functional systems.
- C. The contractor shall coordinate the details of facility equipment and construction for all specification divisions, which affect the work covered under this Division.
- D. The contractor shall coordinate all activities with the overall construction schedule.
- E. The contractor shall develop a bill of materials, perform material management and efficient use of the materials whether they are issued by Owner or purchased by the Contractor.
- F. The contractor shall ensure materials, in excess of, those required to complete the project are kept in their original condition and packaging for restocking.

1.9 DESIGN CRITERIA

- A. Compliance by the contractor with the provisions of this Specification does not relieve him or she from the responsibilities of providing materials and equipment of proper design, mechanically and electrically suited to meet operating requirements at the specified service conditions.
- B. The soliciting Owner seeks a state-of-the-art infrastructure for this new building. The design intends to achieve a technology infrastructure geared towards a complex environment. The design will also employ features applied at similar facilities and draw concepts from the new TIA-942 – Telecommunications Infrastructure Standard for Data Centers. Furthermore, the design will be of high reliability and offer manageable fault-tolerant topology.
- C. The following are incorporated into the design:
 - 1. The intent of the drawings is to restrict the maximum horizontal subsystem cabling length to 295 feet for all horizontal cabling.

1.10 LABELING

- A. Comply with TIA/EIA-606-A, TIA/EIA-606-A, Addendum 1 and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.
- B. Refer to Section 270553 – “Identification for Communications Systems”

PART 2 PRODUCTS

2.1 GENERAL

- A. This Section includes General Requirements for each section in Division 27 and shall be used in conjunction with specifications, other related Divisions, and related Contract Documents to establish the total requirements for the project:
 - 1. Refer to specific sections for Product Part Numbers.
- B. All products must be from the same manufacturer.

2.2 SUBSTITUTION POLICY

- A. Contractor shall assume all costs for removal and replacement of any product installed in substitution of those specified. Such costs shall include but not be limited to labor, materials as well as any penalties, fees or costs incurred for late completion.

PART 3 EXECUTION

3.1 WORKMANSHIP

- A. Manufactured products, materials, equipment, and components shall be provided, conditioned, applied, installed, connected, and tested in accordance with the manufacturer's specifications and printed instructions.
- B. The installation of all system components shall be carried out under the direction of qualified personnel. Appearance shall be considered as important as mechanical and electrical efficiency. Workmanship shall meet or exceed industry standards.
- C. All penetrations shall be sealed as required to maintain fire, smoke, and STC ratings.

3.2 INTENT OF DRAWINGS

- A. The technology drawings show only general locations of equipment, devices, raceways, cable trays, boxes, etc., unless specifically dimensioned.
- B. The contractor shall be responsible for the proper placement and routing of equipment, cable, raceways, cable runway, and related components, according to the Contract Documents and subject to prior review by the Owner and structured cabling engineer.
- C. The contractor shall refer any conflicts within the Contract Documents to the Construction Manager and/or Owner for resolution.

3.3 GROUNDING

- A. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems." for grounding conductors and connectors.
- B. Comply with ANSI/TIA-607 and the National Electrical Code.

3.4 FIRESTOPPING

- A. Comply with requirements in the National Building Code and the National Electrical Code.
- B. Comply with Section 07 84 00 "Penetration Firestopping".

3.5 SERVICE CONTINUITY

- A. Maintain continuity of communications services to all functioning portions of the process or buildings during hours of normal use.
- B. Arrange temporary outages for cutover work with CM. Keep outages to a minimum number and a minimum length of time in order to provide minimum impact.

3.6 LAYOUT AND TOLERANCES

- A. Follow as closely as practicable the schematic design shown on the drawings. Make all necessary measurements in the field to verify exact locations and ensure precise location and fit of specified items in accordance with the drawings. Make no substantial alterations without prior approval of the Owner and the Engineer.

3.7 CABLE TERMINATION AND TEST PLANS

- A. General
1. Provide proof of testing technician(s) certification for operation of the specific units of test equipment, which are proposed for use.
 2. The contractor shall obtain CM approval for each termination and test plan prior to execution of the work.
 3. This Section covers work necessary to furnish communications system testing, including the following:
 - a. Outside Plant (OSP) Cabling Infrastructure (Campus LAN/WAN extension)
 - b. Back-Bone Cabling Infrastructure
 - c. Horizontal Cabling Systems
 4. Inspection Requirements:
 - a. As part of any performance test, inspect cable, material, and equipment for physical damage, continuity, and proper connection.
 - b. Verify identification and labeling at required locations for visibility, condition, legibility, and accuracy.
 5. Test Report Requirements – Each test report shall include the following sections:
 - a. Scope of testing
 - b. List of equipment used in the test with a photocopy of the factory calibration certificate.
 6. List of technicians performing the tests identified in the scope of testing
 7. Summary of test results: Hardcopy and electronic copies of the summary forms are to be delivered at conclusion of the project before final payment will be made.
 8. Individual test data sheets: The individual test data sheets shall be developed and completed by the contractor. Formatted output from cable scanners is typically acceptable provided they contain all of the test parameters including graphs of the information required by this Section.
- B. Cable Termination Plans
1. Submit detailed termination plans for both fiber optic and twisted pair cables, which describe how each system component will be installed and terminated.
- C. Cable Test Plans
1. Submit detailed test plans for both fiber optic and twisted-pair cable channels which include at least the following information:
 - a. Describe the tests to be performed.
 - b. Explain when and how each system component will be tested.
 - c. List the test equipment to be used.
 - d. Itemize how theoretical loss budgets and test parameters will be calculated and listed.

- e. Provide an example of the test reporting documentation for each type of test, which provides a written verification of the results, as required in paragraph 2 below.
2. Provide testing documentation which includes:
 - a. Dates and times of test
 - b. Personnel performing tests
 - c. Initial test results
 - d. Description of discrepancies found or failure, if any
 - e. Corrective action, if any
 - f. Date and person performing corrections
 - g. Retest results, if required
 - h. Include space for Owner's sign-off
 - i. Copy of test equipment calibration certificates
 - j. Intrabuilding (Vertical and Horizontal Subsystem) fiber optic segment post-installation test plan
3. Twisted-Pair Cable Tests: Testing shall be performed using a minimum level IIIe tester, approved by the engineer.
4. Twisted-Pair Test Plans: Provide separate post-installation test schemes for the following activities:
 - a. Backbone Subsystem twisted-pair segment test plan.
 - b. Horizontal Subsystem twisted-pair segment test plan.
5. Fiber-Optic Cable Tests: Testing shall be performed using a level IIIe tester, with approved test-heads approved by the engineer.
6. Fiber-Optic Test Plans: Provide separate post-installation test schemes for the following activities:
 - a. Backbone subsystem fiber-optic segment test plan.
 - b. Horizontal subsystem fiber-optic segment test plan.

3.8 TESTING AND INSPECTION OF COMMUNICATIONS EQUIPMENT

- A. Provide tests specified below, when applicable, and as indicated under individual items of material, equipment, and work specified in this Specification.
 1. Furnish all test equipment and instruments required for the tests.
 2. Responsible, qualified employees of the contractor in the presence of the Owner or an authorized representative shall perform the cable testing.
 3. All individuals involved in the testing phase of the project shall not have been involved in the installation phase nor shall have immediate knowledge of the installation task.

3.9 FINAL TEST AND ADJUST

- A. The contractor shall be responsible for post-installation performance testing of all cabling systems specified elsewhere in this Section of the Contract Documents.
 1. Testing procedures shall permit recording the length of each link, theoretical loss budget, and tested parameters for each pair and fiber, including space for sign-off by CM and Owner.
 2. Any cable links or fiber strands, which fail to meet performance test criteria, shall be re-terminated, re-connectorized, or replaced by the contractor free of charge.

3. Submit final field test documentation in list form, including the CM signature for Owner's approval.
- B. Unshielded Twisted-Pair Cable System Testing
 1. Permanent Link Test Configuration: Perform metered tests on each multi-pair twisted-pair and/or four-pair UTP cable through the wiring block, patch panel, at each end of the cable section and/or telecommunication outlet (T.O.). The permanent link test shall be undertaken as described in ANSI/TIA 568.2-D.
 2. Performance Testing:
 - a. Horizontal Cable System:
 - 1) Use a minimum Level IIIe field test instrument capable of the following swept/stepped frequency voltage measurements in accordance with the performance parameters required by ANSI/TIA 568.2-D
 - 2) Test each horizontal link to verify/determine, wire map, length, attenuation, skew, and near-end-crosstalk (NEXT) as described in ANSI/TIA 568.2-D.
 - b. Test Reports: Include field test results for each cable including cable link length in accordance with ANSI/TIA 568.2-D.
 - c. The test summary shall include:
 - 1) Cable Identification as it appears on cable schedule.
 - 2) Cable identification as it appears on the individual test reports.
 - 3) Cable identification as it is labeled in accordance to the Specifications.
 - 4) Pass/Fail Status.
 - 5) All test parameters shall appear on each test document including graphics and indicating each test parameter result.
 - 6) The individual test data sheet shall include the automated print-out produced by the cable scanning equipment.

3.10 CONSTRUCTION REVIEW

- A. The Engineer and Owner will review and observe installation work to ensure compliance by the contractor with the requirements of the Contract Documents.
- B. The contractor shall inspect, and test completed communications installations to demonstrate specified performance levels including the following:
 1. Furnish all instruments and personnel required for the inspections and tests.
 2. Perform tests in the presence of the Engineer and Owner.
 3. Demonstrate that the system components operate in accordance with the Contract Documents.
- C. Review, observation, assistance, and actions by the Engineer and Owner shall not be construed as undertaking supervisory control of the work or of methods and means employed by the contractor. The Engineer and Owner review and observation activities shall not relieve the contractor from the responsibilities of these Contract Documents.
- D. The fact that the Engineer and Owner does not make early discovery of faulty or omitted work shall not bar the Owner from subsequently rejecting this work and withholding payment until the contractor makes the necessary corrections.
- E. Regardless of when discovery and rejection are made, and regardless of when the contractor is ordered to correct such work, the contractor shall have no claim against

the Engineer or Owner for an increase in the Subcontract price, or for any payment on account of increased cost, damage, or loss.

3.11 PROJECT RECORD DOCUMENTS

- A. Provide detailed project record documentation for sections listed in paragraph 1.03-C above, in addition to the standard requirements, within 30 days after completion of the work.
- B. Maintain separate sets of redlined record drawings for the communications work, which show the exact placement, and identification of as-built system components. These are subject to weekly review by the CM, Owner, or its representative.
- C. Provide communication room record drawings which indicate exact placement for all components; e.g., conduit, wireway, cable tray, backboards, equipment cabinets, equipment racks, and cross-connect equipment, etc.
- D. Provide communication wiring and cabling record drawings and schedules which indicate exact placement, routing, and connection details for all components, e.g., twisted-pair cables, splices, cable cross-connect termination locations, enclosures, telecommunications outlets, and cross-connect jumpers, patch cords, etc.
- E. Provide network schematics when appropriate.
- F. Cable Schedule: Install in a prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish an electronic copy of final comprehensive schedules for Project.
- G. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for TR/IDFs, backbone pathways and cables, entrance pathways and cables.

3.12 CONTRACTOR REQUIREMENTS

- A. General
 - 1. Contractor shall be a current registered installer of the manufacturer cabling and connectivity solution being installed. A copy of the corporate manufacturer certification shall be included with the product submittal package.
 - 2. Contractor shall have at least 5 years documented experience installing and testing structured cabling systems of similar type and size.
 - 3. Contractor shall employ at least one BICSI Registered Communication Distribution Designer (RCDD) to sign-off on all designs offered, including stamping the design with their current BICSI/RCDD stamp.
 - 4. Contractor shall have all necessary permits, licenses, and inspections required for the performance of data, voice, and fiber optic cable installations.
 - 5. At least 30 percent of the technicians installing low-voltage copper and fiber systems on the job shall have a current installation certificate by the manufacturer cabling and connectivity solution being installed.
 - 6. The Contractor shall provide a Project Manager to serve as the single point of contact to manage the installation, speak for the contractor and provide the following functions:
 - a. Initiate and coordinate tasks with the Owner's Project Manager and others as specified by the project schedule.

- b. Provide day-to-day direction and-site supervision of Contractor personnel.
 - c. Ensure conformance with all contract and warranty provisions.
 - d. Acknowledge and remediate findings of the Owner's weekly site project meetings.
 - e. This individual will remain Project Manager for the duration of the project. The contractor may change Project Manager only with the written approval of the Owner.
 - 7. Contractor Project Manager on site shall have completed Deployment training and hold certificates for both copper and fiber.
- B. Other Contractor Responsibilities
 - 1. Confirmation of Pathway and Cable Manager sizing:
 - a. Wherever cabling pathways or managers are installed, it is the Contractor's responsibility to confirm pathway or manager sizing to represent no more than 25% fill upon installation according to manufacturer's fill tables.
 - b. Pathways deemed overfilled upon installation will not be accepted and shall be remedied at Contractor expense.
 - 2. Contractor is responsible for the removal and disposal of all installation and construction debris created in the process of the job.
 - 3. All work areas will be cleaned at the conclusion of the daily work period and no tools or materials shall be left in a manner as to pose a safety hazard.
 - 4. Projects are not considered finished and will not be paid by the Owner until all debris, dust, etc. has been cleaned and removed to the satisfaction of the Owner.
 - 5. Contractor shall remove all abandoned cable per Article 800 of the National Electrical Code and per TIA and BICSI standards, recycling these materials where possible. Removal of orphaned cable is mandatory. Contractors shall consider this when placing bids.
 - 6. Contractor shall abide by all Owner Security Policies pertaining to access and conduct while on the Owner's property.
 - 7. Contractor shall obey all posted speed limits and parking regulations at the Owner's facilities where the work is being performed.
 - 8. Contractor understands that illegally parked vehicles will be towed, and Contractor is responsible for and will assume all costs associated with towing.

3.13 DEFINITION OF ACCEPTANCE

- A. System acceptance shall be defined as that point in time when the following requirements have been fulfilled:
- B. All submittals and documentation have been submitted, reviewed, and approved.
 - 1. The complete system has successfully completed all testing requirements.
- C. All punch list items have been corrected and accepted.

3.14 TERMINATION OF SERVICES

- A. The Owner reserves the right to terminate the Contractor's services if at any time it is determined the Communication Contractor is not fulfilling their responsibilities as defined within this document and all associated project documentation.
- B. Upon termination, the Communications Contractor shall be restricted from the premises and compensated for the percentage of work completed satisfactorily.

June 15, 2026

**Smithsonian Project Code 2533105
SmithGroup Project No. 00100084**

- C. Contractor's appearance and work ethic shall be of a professional manner. Dress shall be appropriate to the work being performed.
- D. Conduct on the Owner's property will be professional in nature.
- E. Any person in the Contractor's employ working on an Owner's project considered by the Owner to be incompetent, disorderly, or for any other reason unsatisfactory or undesirable to IT, such person shall be removed from the Owner's project.

END OF SECTION

FOR REFERENCE ONLY

SECTION 27 0526 - GROUNDING AND BONDING FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.1 SUMMARY

- A. Provide all materials and labor for the installation of a grounding and bonding system for communications infrastructure. This section includes requirements for providing a permanent grounding and bonding infrastructure for communications circuits, raceways, and cable tray.

1.2 DEFINITIONS

- A. "PBB" shall mean Primary Bonding Busbar. There is typically one PBB per building, located in the main telecommunications room. This busbar is directly bonded to the electrical service ground. In previous standards, this was known as the TMGB (Telecommunications Main Grounding Busbar)
- B. "SBB" shall mean Secondary Bonding Busbar. There is typically one SBB per telecommunications room. The SBB is connected both to the PBB and to building structural steel or other permanent metallic systems. In previous standards, this was known as the TGB (Telecommunications Grounding Busbar)
- C. "TBB" shall mean Telecommunications Bonding Backbone. The TBB is a conductor used to connect the PBB to SBBs.
- D. "TBC" Telecommunication Bonding Conductor
- E. "BBC" Backbone Bonding Conductor
- F. For additional definitions, refer to Section 27 05 00 - Common Work Results for Communications

1.3 REFERENCES

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, apply to this Section.
- B. Related Documents and Sections:
 - 1. Section 00 00 00 – Procurement and Contracting Requirements
 - 2. Section 01 00 00 – General Requirements
 - 3. Section 27 05 00 – Common Work Results for Communications

1.4 SYSTEM DESCRIPTION

- A. Furnish, install, and place into satisfactory and successful operation all materials, devices, and necessary appurtenances to provide a complete, permanent Grounding and Bonding infrastructure for communications circuits, raceways, and cable trays as hereinafter specified and/or shown on the Contract Documents. The Grounding and Bonding system shall support an ANSI/TIA and ISO/IEC compliant communications Structured Cabling System (SCS).

- B. The work shall include materials, equipment and apparatus not specifically mentioned herein or noted on the plans, but which are necessary to make a complete working ANSI/TIA and ISO/IEC compliant Grounding and Bonding system.

1.5 SUBMITTALS

- A. Refer to Section 27 00 00 – Communications General

1.6 QUALITY ASSURANCE

- A. Contractor Warranty:
 - 1. Provide a Contractor-endorsed two-year service warranty against defects in materials and workmanship.
 - a. Provide labor attributable to the fulfillment of this warranty at no cost to the Owner.
 - b. The Contractor Warranty period shall commence upon Owner acceptance of the work.
- B. All cable and equipment shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in the contract documents shall be subject to the control and approval of the Owner or Owner Representative. Equipment and materials shall be of the quality and manufacture indicated. The equipment specified is based upon the acceptable manufacturers listed.
- C. Strictly adhere to all Building Industry Consulting Service International (BICSI), Electronic Industries Alliance (EIA) and Telecommunications Industry Association (TIA) recommended installation practices when installing data cabling.

PART 2 PRODUCTS

2.1 GENERAL

- A. Materials shall consist of busbars, supports, bonding conductors and other incidentals and accessories as required.

2.2 MATERIALS

- A. Grounding/Bonding:
 - 1. Primary Bonding Busbar (PBB):
 - a. Large (20" x 4" x 1/4"), Pre-drilled: CPI 40153-020, or equal
 - 2. Rack Bonding Busbar (RBB)
 - a. Horizontal 19" wide rack: CPI 10610-019, or equal
 - 3. Compression Lugs
 - a. Compression lugs, two-hole, slotted (sized accordingly): CPI 40162-XXX, or equal
 - 4. Equipment Bonding Jumper
 - a. Bonding Jumper Kit: CPI 40159-010, or equal
 - 5. Cable Runway Bonding Strap
 - a. Bonding strap kit: CPI 40164-001
 - 6. C-Type Compression Taps
 - a. Compression Taps (sized accordingly): CPI 40163-XXX, or equal

7. Telecommunications Bonding Backbone:
- a. Green insulated copper conductor, minimum size of No. 6 AWG. The TBB shall be sized at 2 kcmil per linear foot of conductor length up to a maximum size of 3/0 AWG. Insulation shall meet fire ratings of its pathway.

Sizing of the TBB	
TBB Length (ft)	TBB Size (AWG)
Less than 13	6
14-20	4
21-26	3
27-33	2
34-41	1
42-52	1/0
53-66	2/0
67-84	3/0
85-105	4/0
106-125	250 kcmil
126-150	300 kcmil
151-175	350 kcmil
176-250	500 kcmil
251-300	600 kcmil
301 or greater	750 kcmil

8. Grounding Conductor: #6 AWG insulated (green in color) copper conductor.
- B. Firestopping material:
1. Conform to both Flame (F) and Temperature (T) ratings as required by local building codes and as tested by nationally accepted test agencies per ASTM E814 or UL 1479 fire test in a configuration that is representative of the actual field conditions.

PART 3 EXECUTION

3.1 GENERAL

- A. The Contractor is solely responsible for the safety of the public and workers in accordance with all applicable rules, regulations, building codes and ordinances.
- B. All work shall comply with applicable safety rules and regulations including OSHA. All work shall comply with the requirements of the National Electrical Safety Code (NEC) and the NEC except where local codes and/or regulations are more stringent, in which case the local codes and/or regulations shall govern.
- C. All work shall comply with the standards, references and codes listed in PART 1 -- REFERENCES above. Where questions arise regarding which standards, references, or codes apply, the more stringent shall prevail.

- D. All work shall comply with the requirements and recommendations of the product manufacturers. Where questions arise regarding which requirements and recommendations apply, the more stringent shall prevail.
- E. Replace and/or repair to original (or better) condition any existing structures, materials, equipment, etc. inadvertently demolished or damaged by the Contractor during the course of construction at no additional cost to the Owner.
- F. Install the grounding and bonding system in a manner ensuring that communications circuits, when installed, are able to fully comply with the ANSI/TIA and other references listed in Part 1 — References, above.
- G. Remove surplus material and debris from the job site and dispose of legally.

3.2 INSTALLATION

- A. The grounding and bonding infrastructure system shall not make use of the building plumbing system, unless required to do so by the NEC.
 - 1. Coordinate the installation of the grounding and bonding system with the electrical power distribution system grounding infrastructure.
- B. Ground/Bonding:
 - 1. PBB: Provide a minimum of one PBB per telecommunications entrance room for each building and as shown on the Contract Documents. Install PBB(s) and directly bond PBB(s) to electrical service ground and to associated TBB(s). Group protector, busbar bonding, and approved building grounding conductors toward one end of the PBB and leave space for equipment grounding conductors on the other end.
 - 2. TBB(s) and Grounding Conductors: Provide TBB(s) and grounding conductors as shown on the Contract Documents and as required to bond all non-current carrying metal telecommunications equipment and materials to the nearest SBB. Use TBB(s) to connect the PBB to each SBB. Route along the shortest and straightest path possible with minimal bends. Bends shall be sweeping. Insulate TBB(s) and conductors from their support. TBB(s) and grounding conductors shall be continuous (without splices).
 - a. Ensure that bonding breaks through paint to bare metallic surface of all painted metallic hardware.
- C. Firestopping
 - 1. Only employees trained/certified by the firestopping manufacturer shall apply firestopping materials.
 - 2. Maintain the fire rating of all penetrated fire barriers. Fire stop and seal all penetrations made during construction.
 - a. Provide firestopping material for through and membrane penetrations of fire-rated barriers.
 - b. Install firestops in strict accordance with manufacturer's detailed installation procedures.
 - c. Install firestops in accordance with fire test reports, fire resistance requirements, acceptable sample installations, manufacturer's recommendations, local fire and building authorities, and applicable codes and standards referenced in PART 1 – REFERENCES. Apply of sealing material in a manner acceptable to the local fire and building authorities.

June 15, 2026

**Smithsonian Project Code 2533105
SmithGroup Project No. 00100084**

- d. For demolition work, apply firestopping to open penetrations in fire rated barriers where cable is removed. Apply firestopping regardless of whether or not the penetrations are used for new cable or left empty after construction is complete.
- e. Firestopping material used to seal open penetrations through which cable passes shall be re-usable/re-enterable.

3.3 LABELING AND ADMINISTRATION

- A. Refer to Section 27 05 53 - Identification for Communications Systems for all Labeling materials and procedures.

END OF SECTION - 27 05 26

FOR REFERENCE ONLY

SECTION 27 0528 - PATHWAYS FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.1 SUMMARY

- A. Provide all materials and labor for the installation of a pathway system for inside plant communications circuits. This section includes requirements for horizontal and building backbone raceways, fittings, and boxes specific to communications circuits (cabling) for voice and data.

1.2 DEFINITIONS

- A. "EMT" shall mean Electrical Metallic Tubing.
- B. "RMC" shall mean Rigid Metal Conduit.
- C. "SMR" shall mean Surface Metal Raceway.
- D. "Raceway" shall mean any enclosed channel for routing wire, cable, or busbars.
- E. "PBB" shall mean Primary Bonding Busbar. There is typically one PBB per building, located in the main telecommunications room. This busbar is directly bonded to the electrical service ground. In previous standards, this was known as the TMGB (Telecommunications Main Grounding Busbar)
- F. "TBB" shall mean Telecommunications Bonding Backbone. The TBB is a conductor used to connect the PBB to SBBs.
- G. "Pull box" shall mean a metallic box with a removable cover, used to facilitate pulling cable through conduit runs longer than 100' or in which there are more than 180 degrees of bends.
- H. "Junction box" shall mean a pull box wherein a feeder conduit transitions to multiple distribution conduits.
- I. For additional Definitions refer to Section 27 05 00 - Common Work Results for Communications

1.3 REFERENCES

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions apply to this Section.
- B. Related Documents and Sections:
 - 1. Section 00 00 00 – Procurement and Contracting Requirements
 - 2. Section 01 00 00 – General Requirements
 - 3. Section 27 05 00 – Common Work Results for Communications

1.4 SYSTEM DESCRIPTION

- A. Furnish, install, and place into satisfactory and successful operation all materials, devices, and necessary appurtenances to provide a complete Raceway system as hereinafter specified and/or shown on the Contract Documents. The Raceway system

shall support an ANSI/TIA and ISO/IEC compliant communications Structured Cabling System (SCS).

- B. The work shall include materials, equipment and apparatus not specifically mentioned herein or noted on the Contract Documents, but which are necessary to make a complete working Raceway system.

1.5 SUBMITTALS

- A. Make submittals in accordance with:
 - 1. Section 00 00 00 - Procurement and Contracting Requirements
 - 2. Section 01 33 00 - Submittal Procedures.
 - 3. Section 27 05 00 - Common Work Results for Communications

1.6 QUALITY ASSURANCE

- A. Contractor Warranty:
 - 1. Provide a Contractor-endorsed one-year service warranty against defects in materials and workmanship.
 - a. Provide labor attributable to the fulfillment of this warranty at no cost to the Owner.
 - b. The Contractor Warranty period shall commence upon Owner acceptance of the work.
- B. Listing and Labeling: Provide raceways and boxes specified in this Section that are listed and labeled.
 - 1. The Terms "Listed" and "Labeled": As defined in NEC, Article 100.
 - 2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" as defined in OSHA Regulation 1910.7.
- C. Comply with NECA's "Standard of Installation."
- D. Comply with NEC.

PART 2 PRODUCTS

2.1 GENERAL

- A. Materials shall consist of conduit, surface metal raceway, outlet boxes, fittings, enclosures, pull boxes, and other raceway incidentals and accessories as required for inside plant communications circuits.

2.2 MATERIALS

- A. Pathways and Cable Supports
 - 1. Installation and materials for the raceway and boxes for the SCS shall be as specified under Division 16 Section — "Raceways and Boxes for Communications Circuits" except where noted below.
 - 2. Innerduct: 1 ¼" Outside Diameter, bright orange in color.
 - 3. Pull Strings: Plastic or nylon with a minimum test rating of 200 lb.
 - 4. Conduit:
 - a. EMT. 1" minimum conduit size. Flexible metal conduit (FMC) is not acceptable.

- 1) Conduit: Galvanized steel tubing meeting ANSI C80.3.
- 2) Couplings: Steel, cast iron, or malleable iron compression type employing a split, corrugated ring and tightening nut, with integral bushings and locknuts. Indent-type and setscrew-type couplings are not permitted.
- b. RMC. 1" minimum conduit size.
 - 1) Conduit: Hot dipped galvanized steel with threaded ends meeting ANSI C80.1.
 - 2) Couplings: Unsplit, NPT threaded steel cylinders with galvanizing equal to the conduit.
 - 3) Nipples: Same as conduit, factory-made up to 8 inches in diameter, no running threads.
5. Sleeves: EMT conduit, with insulated throat bushings for each end
6. Outlet boxes: Minimum 4"x4" size, 2 1/8" minimum depth, with extension rings (if needed) and single gang covers (i.e., mud rings), unless otherwise noted on the Contract Documents. Combined interior depth of outlet box, extension ring and cover shall be a minimum 2-1/2". Stamped steel, deep drawn one piece (without welds or tab connections), galvanized, with knockouts for 1" trade size conduit or connector entrance, meeting NEMA OS 1.
7. Junction Boxes and Pull Boxes: Stamped steel, deep drawn one piece (without welds or tab connections), galvanized, with knockouts for conduit or connector entrance. Boxes 6"x6"x4" or larger may be code gauge fabricated steel continuously welded at seams and painted after fabrication.
 - a. Dry locations: meeting NEMA OS 1.
 - b. Wet locations: NEMA OS 3R.
8. Miscellaneous Fittings:
 - a. Locknuts and conduit bushings: Malleable iron
 - 1) Appleton, Crouse Hinds, OZ Gedney, or equal
 - b. Through wall seals and floor seals shall be:
 - 1) OZ Gedney FS and WS series, or equal.
- B. Firestopping
 1. Firestopping material: Conform to both Flame (F) and Temperature (T) ratings as required by local building codes and as tested by nationally accepted test agencies per ASTM E814 or UL 1479 fire test in a configuration that is representative of the actual field conditions. Acceptable manufactures include:

PART 3 EXECUTION

3.1 GENERAL

- A. Coordination
 1. Coordinate layout and installation of raceways and boxes with other construction elements to ensure adequate headroom, working clearance, and access.
- B. Examine surfaces and spaces to receive raceways, boxes, enclosures, and cabinets for compliance with installation tolerances and other conditions affecting performance of

raceway installation. Do not proceed with installation until unsatisfactory conditions have been corrected.

- C. All wall and floor penetrations shall be sealed to maintain fire and/or STC ratings.

3.2 INSTALLATION

- A. Install raceways, boxes, enclosures, and cabinets as indicated, according to manufacturer's written instructions. Provide a raceway for each location indicated. Do not gang raceway into wireways, pull boxes, junction boxes, etc., without specific approval from the Designer.
- B. Conduit:
1. Install EMT unless other conduit is shown on the Contract Documents or is required by Code.
 2. Install conduit as a complete, continuous system without wires, mechanically secured and electrically connected to metal boxes, fittings and equipment. Blank-off unused openings using factory-made knockout seals.
 3. Run conduit in the most direct route possible, parallel to building lines. Do not route conduit through areas in which flammable material may be stored.
 4. Keep conduit at least 6 inches away from parallel runs of flues and steam or hot-water pipes or other heat sources operating at temperatures above one-hundred degrees Fahrenheit. Install horizontal conduit runs above water piping.
 5. Keep conduit away from sources of electromagnetic interference as follows:
 - a. 5 inches from fluorescent lighting
 - b. 12 inches from conduit and cables used for electrical power distribution
 - c. 48 inches from motors or transformers
 6. Do not exceed 90 meters total length for a given conduit run to be used for distribution cabling (from outlet box to telecommunications room), including intermediate conduits and junction boxes.
 7. Install conduit exposed, except in finished areas or unless shown otherwise on the drawings. Do not install conduit below grade/slab unless specifically shown on the Contract Documents as being installed below grade/slab.
 8. Install exposed conduit in lines parallel or perpendicular to building lines or structural members except where the structure is not level. Follow the surface contours as much as practical. Do not install crossovers or offsets that can be avoided by installing the conduit in a different sequence or a uniform line.
 - a. Run parallel or banked conduits together, on common supports where practical.
 - b. Make bends in parallel or banked runs from same centerline to make bends parallel.
 9. Conduits concealed above ceilings, furred spaces, etc., which are normally inaccessible may be run at angles not parallel to the building lines.
 10. Wherever practical, route conduit with adjacent ductwork or piping and support on common racks. Base required strength of racks, hangers, and anchors on combined weights of conduit and piping.
 11. Where conduits cross building expansion joints, use suitable sliding or offsetting expansion fittings. Unless specifically approved for bonding, use a suitable bonding jumper.
 12. Support conduits as specified in Section 16050 "Basic Electrical Materials and Methods."

- a. Provide anchors, hangers, supports, clamps, etc. to support the conduits from the structures in or on which they are installed. Do not space supports farther apart than five feet.
 - b. Provide sufficient clearance to allow conduit to be added to racks, hangers, etc. in the future.
 - c. Support conduit within three feet of each outlet box, junction box, gutter, panel, fitting, etc.
13. Ream conduits to eliminate sharp edges and terminate with metallic insulated grounded throat bushings. Seal each conduit after installation (until cable is installed) with a removable mechanical-type seal to keep conduits clean, dry and prevent foreign matter from entering conduits.
 14. Install a pull string in each conduit.
 15. For conduits entering through the floor of a telecommunications room, terminate conduits 6" above the finished floor.
 16. Do not install communications conduits in wet, hazardous or corrosive locations.
 17. Where conduit is shown embedded in masonry, embed conduit in the hollow core of the masonry. Horizontal runs in the joint between masonry units are not permitted.
 18. Where conduit is shown embedded in concrete, embed conduit a minimum of two inches from the exterior of the concrete. Do not place conduit in concrete less than 4 inches thick.
 - a. A minimum one-inch trade size conduit shall be used. Conduits sized smaller than one-inch trade size conduit are not permitted embedded in concrete without approval from client.
 - b. Run conduit parallel to main reinforcement.
 - c. Conduit crossovers in concrete are not permitted.
 19. Where conduit exits from grade or concrete, provide a rigid steel elbow and adapter.
 20. Where conduit enters a space through the floor and terminates in that space, terminate the conduit at 6" above the finished floor.
 21. Where conduits terminate at a cable tray, the conduits shall be consistently terminated no more than 8" from the cable tray and have a visually uniform appearance.
 22. Where several circuits follow a common route, stagger pull boxes or fittings.
 23. Where several circuits are shown grouped in one box, individually fireproof each conduit.
 24. Bend and offset metal conduit with standard factory sweeps or conduit fittings. Keep legs of bends in the same plane and straight legs of offsets parallel, unless otherwise indicated.
 - a. Conduit sweeps:
 - 1) Sweeps shall not exceed 90 degrees.
 - 2) Do not exceed 180 degrees for the sum total of conduit sweeps for a section of conduit (between conduit termination points).
 - 3) Sweep radius shall be at least 10 times the internal diameter of the conduit.
 - 4) 90-degree condulets (LB's) and electrical elbows are not acceptable.

- b. Factory-manufactured sweeps are required for bends in conduit larger than 1- $\frac{1}{4}$ " trade size.
- c. For bends in 1 $\frac{1}{4}$ " trade size conduit and larger, field-manufactured bends (using a hydraulic bender with a 1 $\frac{1}{4}$ " boot) are permitted only when factory-manufactured sweeps are not suitable for the conditions. In all other cases, factory-manufactured sweeps are required. "Hickey-bender" use is prohibited.
- 25. Connect conduit to hubless enclosures, cabinets, and boxes with double locknuts and with insulating type bushings. Use grounding type bushings where connecting to concentric or eccentric knockouts. Make conduit connections to enclosures at the nearest practicable point of entry to the enclosure area where the devices are located to which the circuits contained in the conduit will connect.
- 26. Penetrations for raceways:
 - a. Do not bore holes in floor and ceiling joists outside center third of member depth or within two feet of bearing points. Holes shall be 1- $\frac{1}{4}$ " diameter maximum.
 - b. Penetrate finished walls and finished surfaces with a PVC or sheet metal sleeve with an interior diameter (ID) at least 1/4" greater than the outer diameter (OD) of the conduit, set flush with walls, pack with fiberglass, seal with silicone sealant.
 - c. Penetrate poured-in-place walls and free slabs with a cast iron sleeve (or Schedule 40 PVC black pipe sleeve for above-grade only) with retaining ring or washer. Set sleeves flush with forms or edges of slab. Pack around conduit with fiberglass and seal with silicone sealant.
- 27. Raceway terminations and connections:
 - a. Join conduits with fittings designed and approved for the purpose and make joints tight. Do not use set indent-type or screw-type couplings.
 - b. Make threaded connections waterproof and rustproof by applying a watertight, conductive thread compound. Clean threads of cutting oil before applying thread compound.
 - c. Make conduit terminations tight. Use bonding bushings or wedges at connections subject to vibration. Use bonding jumpers where joints cannot be made tight.
 - d. Cut ends of conduit square using a hand saw, power saw or pipe cutter. Ream cut ends to remove burrs and sharp ends. Where conduit threads are cut in the field, cut threads to have same effective length, same thread dimensions and same taper as specified for factory-cut threads.
 - e. Provide double locknuts and insulating bushings at conduit connections to boxes and cabinets. Align raceways to enter squarely and install locknuts with dished part against the box. Use grounding type bushings where connecting to concentric or eccentric knockouts.
 - f. Where conduits are terminated with threaded hubs, screw raceways or fittings tightly into the hub so the end bears against the wire protection shoulder. Where chase nipples are used, align raceways so the coupling is square to the box and tighten the chase nipple, so no threads are exposed.
- 28. Install conduit sealing fittings according to manufacturer's written instructions. Locate fittings at suitable, approved, and accessible locations and fill them with UL-listed sealing compound. For concealed conduits, install each fitting in a flush

steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:

- a. Where conduits pass from warm to cold locations, such as the boundaries of air conditioned or refrigerated spaces and where conduits enter or exit buildings from outdoor areas, including underground ducts or conduit runs.
 - b. Where otherwise required by the NEC.
29. Conduit shall be clean and dry.

C. Sleeves:

1. Provide sleeves where required, sized as noted on the Contract Documents. Where not noted, sleeve sizing shall be determined by the type and quantity of cable to be routed through the sleeve per TIA 569A cable capacity standards, plus an additional 20% for future expansion.
2. Provide roto-hammering or core drilling where required for installation.
3. Seal between sleeve and wall or floor in which the sleeve is installed. Firestop all penetrations to restore wall or floor to pre-penetration fire-rating and/or STC rating.

D. Outlet Boxes:

1. Provide outlet boxes and covers as shown on the Contract Documents and as needed. Verify that the appropriate cover type and depth is provided for each type of wall and finish. Provide extension rings as needed.
2. Coordinate box locations with building surfaces and finishes to avoid bridging wainscots, joints, finish changes, etc.
3. Install boxes in dry locations (not wet, corrosive, or hazardous).
4. Attach boxes securely to building structure with a minimum of two fasteners. Provide attachments to withstand a force of one hundred pounds minimum, applied vertically or horizontally.
5. Install boxes at the following heights to the bottom of the box, except where noted otherwise:
 - a. Wall mounted telephones: 48" above finished floor, attached to wall studs.
 - b. Workstation outlets: 18" above finished floor.
 - c. Place boxes for outlets on cabinets, countertops, shelves, and similar boxes located above countertops two inches above the finished surface or two inches above the back splash. Coordinate and verify size, style, and location with the supplier or installer of these items prior to outlet box installation.
6. Recessed mounted outlet boxes:
 - a. Recess boxes in the wall, floor, and ceiling surfaces in finished areas. Set boxes plumb, level, square and flush with finished building surfaces within one-sixteenth inch for each condition. Set boxes so that box openings in building surfaces are within one-eighth inch of edge of material cut-out and fill tight to box with building materials. Single gang opening shall extend at least to the finished wall surface and extend not more than 1/8 inch beyond the finished wall surface. Provide backing for boxes using structural material to prevent rotation on studs or joists.
 - b. Install floor boxes level and adjust to finished floor surface.
7. Surface-mounted outlet boxes:
 - a. For boxes surface-mounted on finished walls, provide Wiremold outlet box or equivalent. Cut box as necessary to accept conduit.

- b. For boxes surface-mounted on unfinished walls (i.e., electrical rooms, mechanical rooms), provide 4"x4" (minimum) outlet box with single gang cover.

E. Junction Boxes:

1. Provide junction boxes as shown on the Contract Documents and as required.
- a. Where sizing is not shown on the Contract Documents, size junction box length and depth according to the size of the feeder conduit in the following table:

Feeder Conduit Size	Box Length	Box Depth
1"	12"	4"
1-1/4"	12"	4"
1-1/2"	12"	4"
2"	24"	4"
2-1/2"	24"	6"
3"	36"	6"
3-1/2"	48"	6"
4"	60"	6"

- b. Where sizing is not shown on the Contract Documents, size junction box width according to the following formula:

- 1) From the table below, select the width associated with the largest conduit on the distribution side of the box. For each additional distribution conduit, add the "Increase Width" value associated with the size of that distribution conduit to the box width for the largest distribution conduit.
 - (a) For example, if the distribution side of the junction box has one 1-1/4" distribution conduit and three 1" distribution conduits, the total distribution-side width would be 6" + 2" + 2" + 2" = 12".
- 2) Repeat the above process for the feeder side of the junction box. Junction boxes are typically fed by a single conduit, therefore unless the box has more than one feeder conduit, the "Increase Width" part of the formula is unnecessary.
 - (a) For example, if the feeder side of the junction box has two 2" feeder conduits the total feeder-side width would be 8" + 5" = 13".
- 3) The larger of the two width calculations (distribution side vs. feeder side) shall be the width of the junction box to be provided.
 - (a) For example, if the distribution-side width were 10" and the feeder-side width were 13", provide a 13" wide junction box.

F. Pull Boxes:

1. Provide pull boxes as shown on the Contract Documents and as required.
- a. Where sizing is not shown on the Contract Documents, size pull boxes as follows:

Size of Largest Conduit	Box Width	Box Length	Box Depth
1"	4"	12"	4"
1-1/4"	6"	12"	4"
1-1/2"	8"	12"	4"
2"	8"	24"	4"
2-1/2"	10"	24"	6"
3"	12"	36"	6"
3-1/2"	12"	48"	6"
4"	15"	60"	6"

- b. Where a pull box is required with conduits 1" trade size or smaller, an outlet box may be used as a pull box. Where outlet boxes are used as pull boxes, the outlet boxes shall be dedicated for use as a pull box and shall not host cable termination hardware.
 2. A pull box may not be substituted for a 90-degree bend. 90-degree condulets (LB's) are not acceptable.
 3. Install pull boxes in an accessible location, readily accessible both at time of construction and after building occupation. Do not install pull boxes in inaccessible interstitial building space.
 4. Where pull boxes are to be mounted on ceiling structure above ceiling grid, do not mount higher than 4' above grid (mount on wall instead).
 5. Install hinged-cover enclosures and cabinets plumb and supported at each corner.
 6. Install pull boxes so that the access door opens from the side where the cable installer will normally work (typically from the bottom, or floor side, of the box).
 - a. Where a pull box is installed in a ceiling space, provide full access to the junction box door and adequate working room for both the installation personnel and for proper looping of cable during installation.
 - b. Provide a securable access cover (or pull box door if pull box is exposed) in hard lid ceilings.
 7. Install pull boxes such that conduits enter and exit at opposite ends of the box as follows:
- G. Ladder Rack:
1. Install ladder rack per manufacturer's instructions with flat (rung) side up. Provide ladder rack to affix tops of racks to walls, to route cable from walls to racks within telecommunications rooms, and in locations shown in the Contract Documents. Size and installation as shown in the Contract Documents. Cut ends of ladder rack square. Ream cut the ends to remove burrs and sharp edges. Cap cut ends with manufacturer's recommended caps. Mount retaining posts as required. Provide Cable Radius Drops wherever cable is to drop from one section of ladder rack to another lower section of ladder rack or onto racks or cabinets. Provide 90-degree horizontal radius bends for each 90-degree change in direction of ladder rack angle. Provide Cable Retaining Posts for all sides of ladder rack within a telecommunications room not directly adjacent to a wall. Affix posts at 2-foot centers and at corners and/or junctions. Provide Cable Runway Grounding kits

- across ladder rack splices and where ladder racks end at or are connected to racks/cabinets.
2. Sleeves shall be installed at all instances where a ladder rack passes through a partition. Sleeves shall be sized to match the capacity of the ladder rack and shall be sealed to match the fire and/or STC rating of the partition.
- H. Surface Raceway:
1. Provide for all surface mounted stations as shown in the Contract Documents.
 2. Provide surface raceway for all surface mounted telecommunications outlet boxes and as shown on the Contract Documents.
 3. Size surface raceway according to the quantity of cable to be routed through it according to ANSI/TIA 569 cable capacity standards, plus an additional 100% for future expansion. Size fittings/bends to accommodate Category 6A and fiber optic bend radii as specified in ANSI/TIA 569.
 4. Surface raceway shall be routed parallel to and perpendicular to surfaces or exposed structural members and follow surface contours.
 5. Mechanically and electrically continuous surface raceway shall be bonded and grounded to the Telecommunications Grounding system.
 6. Match surface raceway finish as close as possible to the finish of the wall it is to be mounted on but do not paint surface raceway. Surface raceway shall be:
 - a. Installed per Article 352 of the NEC. Surface raceway shall be installed as mechanically and electrically continuous and bonded in accordance with NEC and ANSI/TIA 607-C codes and standards.
 - b. Installed according to ANSI/TIA standards for fiber optic and Category 6A bend radii. Bend points shall have a minimum two-inch radius control.
 - c. Securely supported using screws or other anchor-type devices (tape or glue is not an acceptable support medium) at intervals not exceeding 5 feet and with no less than two supports per straight raceway section. Surface raceway shall be supported in accordance with the manufacturer's installation requirements.
 - d. Completely installed including insulating bushings and inserts where required by manufacturer's installation requirements.
 - e. Installed parallel and perpendicular to surfaces or exposed structural members and following surface contours where possible.
 - f. Close any unused raceway openings.
- I. Backboards: Provide backboards as shown on Contract Documents. Backboards shall be capable of supporting attached equipment and painted with a minimum of two coats (over primer) of fire retardant, non-conductive paint, and one coat of white colored semi-gloss topcoat paint. Mount A-C plywood backboards with the "A" side exposed.
- J. Sleeves: Provide sleeves where required for cable pass-thru through building structures and/or fire rated barriers. Provide roto-hammering or core drilling where required for sleeve installation. Seal (and if a fire rated barrier, firestop) between sleeve and building structure and/or barrier. Size sleeves:
1. As noted in the Contract Documents.
 2. Where not noted, size sleeves a minimum of 2 inches in diameter or by the type and quantity of cable to be routed through the sleeve per ANSI/TIA 569 cable capacity standards plus an additional 100% for future expansion - whichever is greater.

- K. D-Rings: Provide D-Rings as necessary to route exposed cables in telecommunications rooms and on backboards and for raceway for routing cable in non-exposed open access environments, and as shown in the Contract Documents. D-Rings may be affixed to wall/ceiling structures or other supports, but not attached to a ceiling support system. In telecommunications rooms, mount D-Rings at 12-inch intervals and as shown in the Contract Documents. Mount D-rings used for raceway in open access environments at 4-foot intervals unless otherwise specified in the Contract Documents.
 - 1. Size D-Rings as noted in the Contract Documents.
 - 2. Where not noted, size D-Rings according to the type and quantity of cable to be routed through the ring per TIA 569 cable capacity standards, plus an additional 100% for future expansion, but not less than a minimum of 2 inches in diameter.
- L. Ladder Cable Tray: Install cable tray where indicated, in accordance with manufacturer's instructions. Provide sufficient space encompassing cable tray to permit access for installing and maintaining cables. Support cable raceways every 4 feet minimum and at 6 inches from ends. Route pathways a minimum of 6 inches of clearance from fluorescent light fixtures. In areas without suspended ceilings, install cable tray raceways 12 inches below the lowest obstruction unless otherwise directed.
- M. Innerduct: Provide bright orange innerduct as pathway for backbone fiber optic cables (backbone only – not station cables), from backbone fiber patch panels to conduit or plenum entrances, and as shown in the Contract Documents. Innerduct installed in plenum rated environments shall be plenum rated.
- N. Pull Strings: Provide a pull string in existing conduits that are to remain vacant after existing cable is demolished and in existing and new conduits that have new cable installed under this project.

3.3 LABELING AND ADMINISTRATION

- A. Refer to Section 27 05 53 - Identification for Communications Systems for all Labeling materials and procedures.

END OF SECTION - 27 05 28

SECTION 27 0528.10 - PATHWAYS FOR SECURITY SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Section 28 0500.10 Common Work Results for Electronic Security.

1.2 SUMMARY

- A. Section Includes:
 - 1. Metal conduits and fittings.
 - 2. Nonmetallic conduits and fittings.
 - 3. Optical-fiber-cable pathways and fittings.
 - 4. Metal wireways and auxiliary gutters.
 - 5. Nonmetallic wireways and auxiliary gutters.
 - 6. Metallic surface pathways.
 - 7. Nonmetallic surface pathways.
 - 8. Boxes, enclosures, and cabinets.

1.3 DEFINITIONS

- A. ARC: Aluminum rigid conduit.
- B. BICSI: Building Industry Consulting Service International
- C. GRC: Galvanized rigid conduit.
- D. IMC: Intermediate metal conduit.
- E. RTRC: Reinforced thermosetting resin conduit.
- F. TIA: Telecommunications Industry Association

1.4 ACTION SUBMITTALS

- A. Product data for the following:

1. Surface pathways
2. Wireways and fittings.
3. Tele-power poles.
4. Boxes, enclosures, and cabinets.
5. Underground handholes and boxes.

- B. Shop Drawings: For custom enclosures and cabinets and custom underground handholes and boxes. Include plans, elevations, sections, and attachment details.

1.5 INFORMATION SUBMITTALS

- A. Seismic Qualification Data: Provide seismic bracing for all pathway racks, enclosures, cabinets, equipment racks, and their mounting provisions, including those for internal components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which certification is based and their installation requirements.
 4. Detailed description of conduit support devices and interconnections on which certification is based and their installation requirements.

PART 2 - PRODUCTS

2.1 METAL CONDUITS AND FITTINGS

- A. Description: Metal raceway of circular cross section with manufacturer-fabricated fittings.
- B. General Requirements for Metal Conduits and Fittings:
1. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.
 2. Comply with TIA-569-D.
- C. GRC: Comply with ANSI C80.1 and UL 6.
- D. ARC: Comply with ANSI C80.5 and UL 6A.
- E. IMC: Comply with ANSI C80.6 and UL 1242.
- F. PVC-Coated Steel Conduit: PVC-coated GRC or IMC.
1. Comply with NEMA RN 1.

2. Coating Thickness: 0.040 inch (1 mm), minimum.
- G. EMT: Comply with ANSI C80.3 and UL 797.
- H. Fittings for Metal Conduit: Comply with NEMA FB 1 and UL 514B.
 1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 1203 and NFPA 70.
 2. Fittings for EMT:
 - a. Material: Steel.
 - b. Type: compression.
 3. Expansion Fittings: PVC or steel to match conduit type, complying with UL-467, rated for environmental conditions where installed, and including flexible external bonding jumper.
 4. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch (1 mm), with overlapping sleeves protecting threaded joints.
 5. Bushings: Required for all terminating conduit ends.
- I. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

2.2 NONMETALLIC CONDUITS AND FITTINGS

- A. Description: Nonmetallic raceway of circular section with manufacturer-fabricated fittings.
- B. General Requirements for Nonmetallic Conduits and Fittings:
 1. Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
 2. Comply with TIA-569-D.
- C. RNC: Type EPC-40-PVC or Type EPC-80-PVC, complying with NEMA TC 2 and UL 651 unless otherwise indicated.
- D. Rigid HDPE: Comply with UL 651A.
- E. Continuous HDPE: Comply with UL 651A.
- F. RTRC: Comply with UL 2515A and NEMA TC 14.
- G. Fittings: Comply with NEMA TC 3; match to conduit or tubing type and material.
- H. Solvents and Adhesives: As recommended by conduit manufacturer.

2.3 OPTICAL FIBER CABLE RIGID PATHWAYS AND FITTINGS

- A. Description: Comply with UL 2024; flexible-type pathway with a circular cross section, approved for riser installation unless otherwise indicated.
- B. Conduit Innerduct:
- C. Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
- D. Comply with TIA-569-D.

2.4 OPTICAL FIBER CABLE FABRIC PATHWAYS AND FITTINGS

- A. Description: [3 mm] [2"] [3"] [4"] single or multi cell polyester/nylon textile innerduct containing 1250 lb polyester flat woven pull tape, approved for [plenum] [riser] [general-use] [or] [outdoor/detectable] installation unless otherwise indicated.
- B. Manufacturer: MaxCell Group.
- C. Fittings: Compression-type conduit plugs with locking nuts and inflation-type termination bags.

2.5 METAL WIREWAYS AND AUXILIARY GUTTERS

- A. Description: Sheet metal trough of rectangular cross section fabricated to required size and shape, without holes or knockouts, and with hinged or removable covers.
- B. General Requirements for Metal Wireways and Auxiliary Gutters:
 - 1. Comply with UL 870 and NEMA 250, Type 1, Type 3R, Type 4, Type 12, unless otherwise indicated, and sized according to NFPA 70.
 - 2. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
 - 3. Comply with TIA-569-D.
- C. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
- D. Wireway Covers: Hinged type unless otherwise indicated.
- E. Finish: Manufacturer's standard enamel finish.

2.6 NONMETALLIC WIREWAYS AND AUXILIARY GUTTERS

- A. Description: Fiberglass polyester extruded and fabricated to required size and shape, without holes or knockouts. Cover shall be gasketed with oil-resistant gasket material and fastened with captive screws treated for corrosion resistance. Connections shall be flanged and have stainless-steel screws and oil-resistant gaskets.
- B. Description: PVC, extruded and fabricated to required size and shape, and having snap-on cover, mechanically coupled connections, and plastic fasteners.
- C. General Requirements for Nonmetallic Wireways and Auxiliary Gutters:
 - 1. Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
 - 2. Comply with TIA-569-D.
- D. Fittings and Accessories: Couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings shall match and mate with wireways as required for complete system.
- E. Solvents and Adhesives: As recommended by conduit manufacturer.

2.7 SURFACE METAL PATHWAYS

- A. Description: Galvanized steel with snap-on covers, complying with UL 5.
- B. Finish: Manufacturer's standard enamel finish in color selected by Architect. Prime coated, ready for field painting.
- C. Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
- D. Comply with TIA-569-D.

2.8 SURFACE NONMETALLIC PATHWAYS

- A. Description: Two- or three-piece construction, complying with UL 5A, and manufactured of rigid PVC.
- B. Finish: Texture and color selected by Architect.
- C. Product shall comply with UL 94 V-0 requirements for self-extinguishing characteristics.
- D. Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.

- E. Comply with TIA-569-D.

2.9 HOOKS (TELECOMMUNICATIONS USE ONLY)

- A. Description: Prefabricated sheet metal cable supports for telecommunications cable.
- B. Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
- C. Comply with TIA-569-D.
- D. ANSI/TIA Category 6, 6a, 7 compliant (3" bend radius).
- E. Galvanized steel.
- F. [J] [U] shape.

2.10 BOXES, ENCLOSURES, AND CABINETS

- A. Description: Enclosures for communications.
- B. General Requirements for Boxes, Enclosures, and Cabinets:
 - 1. Comply with TIA-569-D.
 - 2. Boxes, enclosures, and cabinets installed in wet locations shall be listed and labeled as defined in NFPA 70, by an NRTL, and marked for use in wet locations.
 - 3. Box extensions used to accommodate new building finishes shall be of same material as recessed box.
 - 4. Device Box Dimensions: 4 inches square by 2-1/8 inches deep (100 mm square by 60 mm deep) and 4 inches by 2-1/8 inches by 2-1/8 inches deep (100 mm by 60 mm by 60 mm deep).
 - 5. Gangable boxes are allowed.
- C. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.
- D. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, ferrous alloy or aluminum, Type FD, with gasketed cover.
- E. Metal Floor Boxes:
 - 1. Material: Cast metal or sheet metal.
 - 2. Type: adjustable.
 - 3. Shape: Rectangular.
 - 4. Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- F. Nonmetallic Floor Boxes: Nonadjustable, rectangular.
 - 1. Nonmetallic floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- G. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
- H. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, cast aluminum with gasketed cover.
- I. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.
- J. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, Type 12, with continuous-hinge cover with flush latch unless otherwise indicated.
 - 1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
 - 2. Nonmetallic Enclosures:
 - a. Material: Fiberglass.
 - 3. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.
- K. Cabinets:
 - 1. NEMA 250, Type per installation location, with removable interior panel and removable front, finished inside and out with manufacturer's standard.
 - 2. Hinged door in front cover with flush latch and concealed hinge.
 - 3. Key latch to match panelboards.
 - 4. Barriers to separate wiring of different systems and voltage.
 - 5. Accessory feet where required for freestanding equipment.
 - 6. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

PART 3 - EXECUTION

3.1 GROUNDING

- A. Comply with requirements in Section 270526.10 "Grounding and Bonding for Security Systems" for grounding conductors and connectors.

3.2 PATHWAY APPLICATION

- A. Indoors: Apply pathway products as specified below unless otherwise indicated:

1. Exposed, Not Subject to Physical Damage: EMT.
 2. Exposed, Not Subject to Severe Physical Damage: EMT.
 3. Exposed and Subject to Severe Physical Damage: IMC. Pathway locations include the following:
 - a. Loading dock.
 - b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
 - c. Mechanical rooms.
 - d. Gymnasiums
 4. Concealed in Ceilings and Interior Walls and Partitions: EMT, and innerduct.
 5. Damp or Wet Locations: IMC.
 6. Pathways for Optical-Fiber and Communications Cable in Spaces Used for Environmental Air: Plenum-type, optical-fiber-cable pathway, Plenum-type, communications-cable pathway, EMT.
 7. Pathways for Optical-Fiber and Communications-Cable Risers in Vertical Shafts: Riser-type, optical-fiber-cable pathway Riser-type, communications-cable pathway, EMT.
 8. Pathways for Concealed General-Purpose Distribution of Optical-Fiber or Communications Cable: General-use, optical-fiber-cable pathway, Riser-type, optical-fiber-cable pathway, Plenum-type, optical-fiber-cable pathway, General-use, communications-cable pathway, Riser-type, communications-cable pathway, Plenum-type, communications-cable pathway, EMT.
 9. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4 nonmetallic units in institutional and commercial kitchens and damp or wet locations.
- B. Minimum Pathway Size: 3/4-inch (21-mm) trade size for copper and aluminum cables, and 1 inch (25 mm) for optical-fiber cables.
- C. Pathway Fittings: Compatible with pathways and suitable for use and location.
1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
 2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealants recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
 3. EMT: Use compression, steel fittings. Comply with NEMA FB 2.10.
- D. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.
- E. Install surface pathways only where indicated on Drawings.
- F. Do not install nonmetallic conduit where ambient temperature exceeds 120 deg F (49 deg C).

3.3 INSTALLATION

- A. Comply with the following standards for installation requirements except where requirements on Drawings or in this Section are stricter:
 - 1. NECA 1.
 - 2. NECA/BICSI 568.
 - 3. TIA-569-D.
 - 4. NECA 101
 - 5. NECA 102.
 - 6. NECA 105.
 - 7. NECA 111.
- B. Comply with NFPA 70 limitations for types of pathways allowed in specific occupancies and number of floors.
- C. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.
- D. Comply with requirements in Section 270544.10 "Sleeves and Sleeve Seals for Security Pathways and Cabling" for sleeves and sleeve seals for communications.
- E. Label all security conduits with blue marking band or blue paint every 10 feet (9000 mm). Paint security junction box covers with paint manufactured by Benjamin Moore #791, Duron 5085A (Americana) or approved equivalent.
- F. Keep pathways at least 6 inches (150 mm) away from parallel runs of flues and steam or hot-water pipes. Install horizontal pathway runs above water and steam piping.
- G. Complete pathway installation before starting conductor installation.
- H. Arrange stub-ups so curved portions of bends are not visible above finished slab.
- I. Install no more than the equivalent of two 90-degree bends in any pathway run. Support within 12 inches (300 mm) of changes in direction. Utilize long radius ells for all optical-fiber cables.
- J. Conceal rigid conduit within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.
- K. Support conduit within 12 inches (300 mm) of enclosures to which attached.
- L. Pathways Embedded in Slabs:
 - 1. Run conduit larger than 1 inch (27-mm) trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure pathways to reinforcement at maximum 10 foot (3 m) intervals.
 - 2. Arrange pathways to cross building expansion joints at right angles with expansion fittings. Comply with requirements for expansion joints specified in this article.

3. Arrange pathways to keep a minimum of 1 inch (25 mm) of concrete cover in all directions.
 4. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.
 5. Change from nonmetallic conduit and fittings to IMC and fittings before rising above floor.
- M. Stub-ups to Above Recessed Ceilings and Conduit Terminations at Cable Trays:
1. Use EMT, IMC, or RMC for pathways.
 2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.
- N. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of pathway and fittings before making up joints. Follow compound manufacturer's written instructions.
- O. Coat field-cut threads on PVC-coated pathway with a corrosion-preventing conductive compound prior to assembly.
- P. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install insulated bushings on conduits terminated with locknuts.
- Q. Install pathways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus one additional quarter-turn.
- R. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure, to assure a continuous ground path.
- S. Cut conduit perpendicular to the length. For conduits of 2 inch (50 mm) trade size and larger, use roll cutter or a guide to ensure cut is straight and perpendicular to the length.
- T. Install pull wires in empty pathways. Use polypropylene or monofilament plastic line with not less than 200 lb (90 kg) tensile strength. Leave at least 12 inches (300 mm) of slack at each end of pull wire. Secure pull wire, so it cannot fall into conduit. Cap pathways designated as spare alongside pathways in use.
- U. Surface Pathways:
1. Install surface pathway for surface telecommunications outlet boxes only where indicated on Drawings (Telecommunications Only).
 2. Install surface pathway with a minimum 2 inch (50-mm) radius control at bend points.
 3. Secure surface pathway with screws or other anchor-type devices at intervals not exceeding 48 inches (1200 mm) and with no less than two supports per straight pathway section. Support surface pathway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.
- V. Pathways for Optical-Fiber and Communications Cable: Install pathways, metal and nonmetallic, rigid and flexible, as follows:

1. ¾ Inch (21 mm) Trade Size and Smaller: Install pathways in maximum lengths of 50 feet (15 m).
2. 1 Inch (25 mm) Trade Size and Larger: Install pathways in maximum lengths of 75 feet (23 m).
3. Install with a maximum of two 90-degree bends or equivalent for each length of pathway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.

W. Fabric Pathways for Optical-Fiber-Cable:

1. Install per manufacturer's recommendations and guidelines.
2. Provide textile innerduct in conduit and wire ways, and place textile innerduct within and under cable trays using continuous, unspliced lengths of textile innerduct between maintenance holes, pull boxes, and/or termination points as indicated on the Drawings.
3. Do not fasten textile innerduct to steam, water, or other piping, ductwork, mechanical equipment, electrical equipment, electrical raceways, or wires.
4. Cable Tray and Runway Installation: Cut incisions every 24 inches (61 cm) into the edge of the textile innerduct and cable wrap to one side of vertical ladder rack or horizontal ladder-type cable tray at each incision.

X. Install pathway-sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed pathways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install pathway-sealing fittings according to NFPA 70.

Y. Install devices to seal pathway interiors at accessible locations. Locate seals, so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all pathways at the following points:

1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
2. Where an underground service pathway enters a building or structure.
3. Where otherwise required by NFPA 70.

Z. Comply with manufacturer's written instructions for solvent welding PVC conduit and fittings.

AA. Expansion-Joint Fittings:

1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed 30 deg F (17 deg C), and that has straight-run length that exceeds 25 feet (7.6 m). Install in each run of aboveground RMC and EMT that is located where environmental temperature change may exceed 100 deg F (55 deg C), and that has straight-run length that exceeds 100 feet (30 m).
2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:

- a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F (70 deg C) temperature change.
 - b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F (86 deg C) temperature change.
 - c. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F (70 deg C) temperature change.
 - d. Attics: 135 deg F (75 deg C) temperature change.
3. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F (0.06 mm per meter of length of straight run per deg C) of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F (0.0115 mm per meter of length of straight run per deg C) of temperature change for metal conduits.
 4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.
 5. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.
- BB. Hooks (Telecommunications Only, Not allowed for Security):
1. Size to allow a minimum of 25 percent future capacity without exceeding design capacity limits.
 2. Shall be supported by dedicated support wires. Do not use ceiling grid support wire or support rods.
 3. Hook spacing shall allow no more than 6 inches (150 mm) of slack. The lowest point of the cables shall be no less than 6 inches (150 mm) adjacent to ceilings, mechanical ductwork and fittings, luminaires, power conduits, power and telecommunications outlets, and other electrical and communications equipment.
 4. Space hooks no more than 5 feet (1.5 m) o.c.
 5. Provide a hook at each change in direction.
- CC. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to center of box unless otherwise indicated.
- DD. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surface to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.
- EE. Horizontally separate boxes mounted on opposite sides of walls, so they are not in the same vertical channel.
- FF. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.
- GG. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.

HH. Set metal floor boxes level and flush with finished floor surface.

II. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.

3.4 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR COMMUNICATIONS PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 270544.10 "Sleeves and Sleeve Seals for Security Pathways and Cabling."

3.5 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping." Do not begin installation work until certificates of conformance or compliance, manufacturer's catalog data, and details for fire stopping of penetrations and joint systems showing compliance with the appropriate UL Design Number are approved by the Office of Safety Health and Environmental Management Fire Protection Engineer.

3.6 PROTECTION

A. Protect coatings, finishes, and cabinets from damage or deterioration.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 270528.10

SECTION 27 0553 - IDENTIFICATION FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.1 SUMMARY

- A. This section provides the minimal requirements for the installation methods for the identification of communication cabling and components.
- B. Any client-specific labeling standards supersede this specification section.

1.2 DEFINITIONS

- A. For additional Definitions refer to Section 27 05 00 - Common Work Results for Communications

1.3 REFERENCES

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, apply to this Section.
- B. Related Documents and Sections:
 - 1. Section 00 00 00 – Procurement and Contracting Requirements
 - 2. Section 01 00 00 – General Requirements
 - 3. Section 27 05 00 – Common Work Results for Communications

1.4 SYSTEM DESCRIPTION

- A. An effective system of identification for communications systems begins with clear, concise, and durable labeling. This system will serve to assist in efficiently establishing connectivity, troubleshooting, reconfiguration, and replacement of components a part of the communications Structured Cabling System (SCS).
- B. The work shall include materials, equipment, and apparatus not specifically mentioned herein or noted on the plans, but are necessary to effectively install the outlined identification on all new and existing Structured Cabling System (SCS) components outlined below.

1.5 SUBMITTALS

- A. Contractor to provide submittal with intended labeling scheme and labeling materials prior to execution of scope.
- B. Refer to Section 27 05 00 – Common Work Results for Communications

1.6 QUALITY ASSURANCE

- A. All cable and equipment shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in the contract documents shall be subject to the control and approval of the Owner or Owner Representative. Equipment and materials shall be of the quality and manufacture indicated. The equipment specified is based upon the acceptable manufacturers listed.

- B. Strictly adhere to all Building Industry Consulting Service International (BICSI), Electronic Industries Alliance (EIA) and Telecommunications Industry Association (TIA) recommended installation practices when installing data cabling.

PART 2 PRODUCTS

2.1 REQUIREMENTS AND HARDWARE

- A. Labels:
 - 1. As recommended in ANSI/TIA 606. Permanent (i.e., not subject to fading or erasure), permanently affixed, and created by a hand-carried label maker or a computer/software-based label making system. Handwritten labels are not acceptable.
 - a. For Station Cable:
 - 1) Brady: Bradymarker Wire Marking Labels WML-511-292 (or approved equal)
 - b. For Backbone Cable:
 - 1) Panduit Marker Tie (or approved equal)
- B. Hand-carried label maker:
 - 1. Brady: ID Pro Plus (or approved equal)

PART 3 EXECUTION

3.1 LABELING AND ADMINISTRATION

- A. General:
 - 1. Labeling and administration shall comply with ANSI/TIA 606 and standard industry practices.
 - 2. Before applying the cable numbering scheme described below, verify that the room numbers shown on the drawings match the actual room numbers that appear on building signage. The room numbering scheme may change between design and construction. All labeling and numbering schemes that incorporate room numbers shall reflect the finished, as-built room numbering, which may be different than the numbering shown in the construction documents.
- B. Racks and Cabinets:
 - 1. Label racks as shown on the Contract Documents. Affix label centered across top cross-member of rack.
- C. Telecommunications Bonding Busbars
 - 1. Label PBB(s) with "PBB-" suffixed with the ID of the telecommunications space which contains the PBB.
 - 2. Label SBB(s) with "SBB-" suffixed with the ID of the telecommunications space which contains the PBB.
- D. Grounding/Bonding Conductors:
 - 1. Label bonding conductors; "WARNING! TELECOMMUNICATIONS BONDING CONDUCTOR. DO NOT REMOVE OR DISCONNECT!"
- E. Backbone Cables:

1. Label Location: Affix labels at each end of the cable, within 6 feet of telecommunications room entrance and again within 12" of termination point.
 2. All fiber links will be labeled with wireclosetroom#-room@[a-z].
- F. Fiber Optic Patch Panels:
1. Fiber optic patch panels shall be labeled on the face of the patch panel with a sequential alpha lettering ("A", "B", "C", etc.) across all patch panels in the telecommunications room. Skip letters "I" and "O" to avoid future misinterpretation of them as the numbers one and zero.
 - a. For example: The first Fiber Optic Patch Panel in the room shall be labeled "Fiber Optic Patch Panel A" and the second shall be labeled "Fiber Optic Patch Panel B." Do not restart the lettering for patch panels in different racks.
 2. Connector panels (bulkheads) in fiber optic patch panels shall be labeled on the face of the fiber termination box with the same identifier as the cable that terminates in the connector panel. See paragraph A above.
- G. Horizontal Cables:
1. Label Location: Affix at each end of the cable.
 2. Station Cables: Label station cables with the same label as the station connector (see STATION CONNECTORS (PORTS) below) that terminates the cable at the station location. Include a clear vinyl adhesive wrapping applied over the label in order to permanently affix the label to the cable. Using transparent tape to affix labels to cables is not acceptable.
 3. Provide labels at each end of each cable within 24" of the patch panel at the telecommunications room end and within 6" of the jack at the work area outlet end.
 4. All copper pairs will be labeled with the wireclosetroom#-room@[a-z].
- H. Copper Horizontal Distribution Patch Panels (Workstation Patch Panels):
1. Patch panels shall be labeled on the face of the patch panel with a sequential alpha lettering ("A", "B", "C", etc.) across all patch panels in the telecommunications room. Skip letters "I" and "O" to avoid future misinterpretation of them as the numbers one and zero.
 - a. Lettering shall start at the topmost panel in the 1st rack designated for cabling.
 - b. Lettering should be placed on the left side of the panel, centered.
 - c. Do not restart the lettering for patch panels in different racks.
 - d. Minimum 1" width adhesive nylon fabric thermal transfer label. Black on white, maximum font size.
 2. Patch Panels should be labeled identifying the associated switch blade. (eg. BLADE 7) or associated switch (e.g. SWITCH #1).
- I. Termination Blocks:
1. General:
 - a. Label termination block ports/pairs sequentially beginning on the first row of each termination block column. Begin with "001" for the first port/pair.
 - b. Label termination strip pairs sequentially (left to right).
 2. For Horizontal Distribution:
 - a. Label station outlets in accordance with TIA-606 using typed or computer printed labels that fit the jack insert and are consistent with the patch panel labeling in the Telecommunications Room. (I.E. The top label on the faceplate of the first outlet from the First Floor A Telecommunications Room will be

01A-001-A, B and the bottom label on the same outlet will be blank. Label jacks as follows:

- 1) First and second character – The floor designator of the Telecommunications Room, 01, B3, LL.
 - 2) Third character – Telecommunications Room Designator, A.
 - 3) The fourth character is a hyphen (-).
 - 4) Fifth, sixth, and seventh character – a three-digit number identifying each outlet, numbered sequentially.
 - 5) The eighth character is a hyphen (-).
 - 6) The ninth (and possibly tenth and eleventh) character(s) – ‘A, B’ or ‘M’ based on the position/type of the port in the outlet.
- b. Label cables and patch panels with designations that are the same as the outlet.
 - c. Outlets shall be numbered on the patch panels sequentially starting with 001. DO NOT skip outlet numbers on the patch panels. If a pre-numbered outlet has been deleted, leave that position blank on the patch panel.
- J. Conduits:
1. Label each conduit end (existing or new) in a clear manner by designating the location of the other end of the conduit (i.e., room name, telecommunications room identifier, pull box identifier, outlet identifier (use the label of the first port of the outlet as the outlet identifier), etc.). Indicate conduit length on the label.
- K. Pull Strings:
1. Label each pull string in a clear manner by designating the location of the other end of the pull string (i.e., room name, telecommunications room name, pull box identifier, outlet identifier (use the label of the first port of the outlet as the outlet identifier), etc.).
- L. Telecommunications Rooms:
1. Affix a permanent label with the telecommunications room number on the wall above the light switch inside each telecommunications room. Where telecommunications room names are required in other labels, use the room number assigned to the telecommunications room and as shown on the room signage as-constructed. Also include the telecommunications identification for the room on the label as indicated in the Construction Documents.
- M. Racks:
1. Label racks in the form of “Floor Of TR, Compass Location, Rack #.” The sequential rack number given within a telecommunications room number left to right while facing the front of the racks. Affix label centered across top cross-member of rack.

END OF SECTION - 27 05 53

SECTION 27 1100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Provide all materials and labor for the installation of telecommunications cabinets, racks, frames, enclosures, cable management, and power hardware. This section includes hardware that supports the specified Structured Cabling System.
- B. Products installed (but not furnished) under this section:
 - 1. Grounding Conductor

1.2 DEFINITIONS

- A. For additional definitions, refer to Section 27 05 00 - Common Work Results for Communications

1.3 REFERENCES

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, apply to this Section.
- B. Related Documents and Sections:
 - 1. Section 00 00 00 – Procurement and Contracting Requirements
 - 2. Section 01 00 00 – General Requirements
 - 3. Section 27 05 00 – Common Work Results for Communications

1.4 SYSTEM DESCRIPTION

- A. Furnish, install, test and place into satisfactory and successful operation all equipment, materials, devices, and necessary appurtenances associated with telecommunications cabinets, racks, frames, enclosures, cable management, and power hardware to support a communications Structured Cabling System (SCS) that is NEC compliant, ANSI/TIA/EIA compliant, and ISO/IEC compliant as shown on the Contract Documents.
- B. The work shall include all materials, equipment, and apparatus not specifically mentioned herein or noted on the plans, but which are necessary to make a complete working ANSI/TIA/EIA and ISO/IEC compliant Structured Cabling System.

1.5 SUBMITTALS

- A. Make submittals in accordance with:
 - 1. Section 00 00 00 - Procurement and Contracting Requirements
 - 2. Section 01 33 00 - Submittal Procedures.
 - 3. Section 27 05 00 - Common Work Results for Communications

1.6 QUALITY ASSURANCE

- A. Contractor Warranty:

1. Provide a Contractor-endorsed one-year service warranty against defects in materials and workmanship.
 - a. Provide labor attributable to the fulfillment of this warranty at no cost to the Owner.
 - b. The Contractor Warranty period shall commence upon Owner acceptance of the work.
- B. Listing and Labeling: Provide racks, fittings and accessories specified in this Section that are listed and labeled.
 1. The Terms "Listed" and "Labeled": As defined in NEC, Article 100.
 2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" as defined in OSHA Regulation 1910.7.
- C. Comply with NECA's "Standard of Installation."
- D. Comply with NEC.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Racks, rack cable distribution hardware, ladder rack, and other rack and distribution components shall be manufactured by a single manufacturer unless stated otherwise in this Specification or in the Contract Documents. Do not intermix equipment and components between different manufacturers.
 1. Rack/Distribution Equipment:

2.2 MATERIALS

- A. CABLE SUPPORTS
 1. Backboards:
 - a. $\frac{3}{4}$ inch A-C grade, fire-retardant plywood backboards, void free, 8 feet high, unless otherwise noted.
 - b. Primer
 - c. White non-conductive paint, 2 coats.
 2. D-Rings:
 - a. Metallic:
 - 1) Large (16 square inch Capacity): CPI 10943
 3. Ladder Rack: Complete with fittings including (but not limited to) splice kits, cable radius drops, radius bends, protective end caps, retaining posts, support brackets, foot kits, vertical wall brackets, wall angles, grounding hardware and other incidental and miscellaneous hardware required for a complete ladder rack system. Ladder rack components shall be manufactured by the selected Rack/Distribution Equipment manufacturer.
 - a. Unless otherwise indicated, all ladder rack and incidental equipment color shall be white.
 - b. Ladder rack:
 - c. Horizontal radius bends:
 - d. Cable Retaining Posts (8 inch-high):
 - e. Radius Drops:

- f. Triangle Support Wall-bracket for Cable runway:
- g. Wall Angle Support bracket for Cable runway:
- h. Vertical Wall Support bracket for Cable runway:
- i. Ladder rack/cable runway Grounding kits:
- j. Ladder rack/cable runway Elevation kits:
- k. Ladder rack/cable runway end kits:
 - 1) End Closing Kit:
 - 2) End Caps:
- l. Other factory-manufactured appurtenances as necessary.
- B. EQUIPMENT RACKS/ENCLOSURES
 - 1. Unless otherwise indicated, equipment racks/enclosures and incidental equipment color shall be white.
 - 2. Unless otherwise indicated, equipment rack/enclosure/wall-mounted brackets and incidental materials and equipment shall be provided by the selected Rack/Distribution Equipment manufacturer. Do not intermix products from different manufacturers.
 - 3. Wall mounted Equipment Cabinets: TIA conforming wall mount, swing out fully enclosed cabinet with 2-pairs of 12-24 tapped sliding rails. Equip all cabinets with listed accessories.
 - a. Accessories: All accessories shall be of the same manufacturer as the selected equipment cabinets and have been manufactured for use within the selected product.
 - 4. Rack and Cabinet Accessories
 - a. Single sided low-profile equipment shelf
 - 5. Grounding kit and #6 AWG (insulated or bare) copper conductor grounded to the nearest PBB or SBB:
 - a. Screws, washers and nuts that are UL rated for use with grounding and bonding and able to break through painted surfaces to the metal substrate.
 - 6. Incidental materials required for proper construction, mounting and securing.
- C. GROUNDING AND BONDING
 - 1. As specified under Division 27 Section 27 05 26 – Grounding and Bonding for Communications Systems.

PART 3 - EXECUTION

3.1 GENERAL

- A. The Contractor is solely responsible for the safety of the public and workers in accordance with all applicable rules, regulations, building codes and ordinances.
- B. All work shall comply with applicable safety rules and regulations including OSHA. All work shall comply with the requirements of the National Electrical Safety Code (NEC) and the NEC except where local codes and/or regulations are more stringent, in which case the local codes and/or regulations shall govern.
- C. All work shall comply with the standards, references and codes listed in PART 1 -- REFERENCES above. Where questions arise regarding which standards, references, or codes apply, the more stringent shall prevail.

- D. All work shall comply with the requirements and recommendations of the product manufacturers. Where questions arise regarding which requirements and recommendations apply, the more stringent shall prevail.
- E. Replace and/or repair to original (or better) condition any existing structures, materials, equipment, etc. inadvertently demolished or damaged by the Contractor during the course of construction at no additional cost to the Owner.
- F. Remove surplus material and debris from the job site and dispose of it legally.

3.2 INSTALLATION

A. CABLE SUPPORTS

- 1. Backboards: Provide backboards as shown on Contract Documents. Backboards shall be capable of supporting attached equipment. Mount A-C plywood backboards with the "A" side exposed.
 - a. Paint backboards with a minimum of two coats (over primer) of non-conductive paint.
 - b. Mask the fire-treatment stamp on each sheet of plywood so that the stamp remains visible after painting.
- 2. D-Rings: Provide D-Rings as necessary to route exposed cables in telecommunications rooms and on backboards and for raceway for routing cable in non-exposed open access environments, and as shown in the Contract Documents. D-Rings may be affixed to wall/ceiling structures or other supports, but not attached to a ceiling support system. In telecommunications rooms, mount D-Rings at 12-inch intervals and as shown in the Contract Documents.
 - a. Size D-Rings as noted in the Contract Documents.
 - b. Where not noted, size D-Rings according to the type and quantity of cable to be routed through the ring per TIA/EIA 569 cable capacity standards, plus an additional 50% for future expansion, but not less than a minimum of 2 inches in diameter.
 - c. D-Rings are not permitted outside of telecommunications rooms unless otherwise indicated in the Contract Documents.
- 3. Ladder Rack: Provide ladder racking, sized and in locations as shown on the Contract Documents, installed per manufacturer's instructions with flat (rung) side up. Install ladder rack affixed to top of equipment racks to serve as equipment rack bracing.
 - a. Cut the ends of ladder rack square. Ream cut ends to remove burrs and sharp edges. Cap cut ends with manufacturer's recommended caps.
 - b. Provide 90-degree horizontal radius bends for each 90-degree change in direction of ladder rack angle.
 - c. Provide cable runway grounding kits across ladder rack splices and where ladder racks are connected to equipment racks/cabinets.
 - d. Provide cable retaining posts at each corner and junction, and wherever needed to manage cabling and innerduct, as follows:
 - 1) The inside of ladder rack (away from wall), where rack is mounted adjacent to a wall.
 - 2) Both sides of ladder rack where rack is not mounted adjacent to a wall.

- e. Where ladder rack is shown vertically mounted on telecommunications room walls, provide wall-mount brackets. A vertical ladder rack shall be routed from within 6-inches above the riser pathway in the floor up to within 6-inches of the riser pathway in the ceiling. Cap cut ends of ladder rails with end caps.

B. EQUIPMENT RACKS/ENCLOSURES

- 1. Provide EIA racks/cabinets and all associated hardware according to locations, elevations, and plan views as shown in the Contract Documents.
- 2. Free-standing Equipment Racks and Cabinets:
 - a. Bolt racks and cabinets to structurally suitable flooring.
 - b. Ensure that designated power outlets are installed in the vertical cable management as designed. The telecommunications installer shall work with the electrician to coordinate the power conduit routing and outlet box locations to be cooperative and compatible with the rack and equipment layout.
 - c. Attach top of rack to overhead ladder racking per manufacturer's recommendations. Use ladder rack elevation kits to span the gap between the top of the racks and the overhead ladder rack.

C. GROUNDING AND BONDING

- 1. Grounding and bonding work shall comply with the Uniform Building Code, Uniform Fire Code, UAC, National Electrical Code, and UL 467, ANSI/TIA/EIA standards and the references listed in PART 1 – REFERENCES above, as well as local codes which may specify additional grounding and/or bonding requirements.
 - a. Provide a minimum of one wall-mountable telecommunications ground busbar per telecommunications room and as shown on the Contract Documents.
 - b. Grounding conductor shall be installed to bond all non-current carrying metal telecommunications equipment and materials to the nearest PBB or SBB (as provided under Division 27 Section — “Grounding and Bonding for Communications Systems”).
 - 1) Ensure that bonding breaks through paint to bare metallic surface of all painted metallic hardware.
 - 2) Provide ladder rack grounding kits to bond each section of ladder rack and bond ladder rack to racks/cabinets where ladder racks are connected.
- 2. Refer to Section 27 05 26 - Grounding and Bonding for Communications Systems for additional requirements.

3.3 LABELING AND ADMINISTRATION

- A. Refer to Section 27 05 53 - Identification for Communications Systems for all Labeling materials and procedures.

END OF SECTION

SECTION 27 1500 - COMMUNICATIONS HORIZONTAL CABLING

PART 1 - GENERAL

1.1 SUMMARY

- A. Provide all materials and labor for the installation of an inside plant telecommunication system. This section includes Inside Plant Communications cabling, termination, and administration equipment, and installation requirements for the specified Structured Cabling System (SCS - See Definition Below).

1.2 DEFINITIONS

- A. For additional Definitions refer to Section 27 05 00 - Common Work Results for Communications

1.3 REFERENCES

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, apply to this Section.
- B. Related Documents and Sections:
 - 1. Section 00 00 00 – Procurement and Contracting Requirements
 - 2. Section 01 00 00 – General Requirements
 - 3. Section 27 05 00 – Common Work Results for Communications

1.4 SYSTEM DESCRIPTION

- A. Furnish, install, test, and place into satisfactory and successful operation all equipment, materials, devices, and necessary appurtenances to provide a complete communications Structured Cabling System (SCS) that is compliant with ANSI/TIA/EIA, NECA/NEIS, and ISO/IEC standards as hereinafter specified and/or shown on the Contract Documents. The system is intended to be capable of integrating voice, data, and video signals onto a common media, and shall be tested for and be capable of 10 Gigabit Ethernet operation as specified in TIA/EIA 568.2-D, ISO/IEC 11801-1:2017, and ISO/IEC 11801-2:2017.
- B. The work shall include all materials, equipment, and apparatus not specifically mentioned herein or noted on the plans, but which are necessary to make a complete working ANSI/TIA/EIA and ISO/IEC compliant SCS.

1.5 SUBMITTALS

- A. Refer to Section 27 00 00 – Communications General

1.6 QUALITY ASSURANCE

- A. Contractor Warranty:
 - 1. Provide a Contractor-endorsed two-year service warranty against defects in materials and workmanship.

- a. Provide labor attributable to the fulfillment of this warranty at no cost to the Owner.
 - b. The Contractor Warranty period shall commence upon Owner acceptance of the work.
- B. All cable and equipment shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in the contract documents shall be subject to the control and approval of the Owner or Owner Representative. Equipment and materials shall be of the quality and manufacture indicated. The equipment specified is based upon the acceptable manufacturers listed.
- C. Strictly adhere to all Building Industry Consulting Service International (BICSI), Electronic Industries Alliance (EIA) and Telecommunications Industry Association (TIA) recommended installation practices when installing data cabling.

1.7 SEQUENCING

- A. Provide coordination with the cabling manufacturers to ensure that manufacturers' inspectors are available to schedule site visits, inspections, and certification of the system. Provide and coordinate any manufacturer-required modifications and have manufacturer re-inspect and certify the system prior to the scheduled use of the system by the Owner.
- B. The Contractor is solely responsible for all costs associated with scheduling the manufacturer inspection, the inspection itself and any manufacturer-required re-inspections, and for any modifications to the installation as required by the manufacturers.

PART 2 - PRODUCTS

2.1 GENERAL

- A. SCS components shall be manufactured by the manufacturers listed below. Components shall not be intermixed between different manufacturers unless the manufacturer of the SCS has listed (in writing) another manufacturer's component as an "Approved Alternative Product" and will warrant the "Approved Alternative Product" as part of the SCS Manufacturer Warranty (see PART 1 - WARRANTY).
 1. Bid only the following SCS Manufacturers, and only bid manufacturers for which the Contractor is certified. The SCS Manufacturers shall be the following.
Substitution is not acceptable:
 - a. Copper Backbone Cabling, Patch Panels and Terminations:
 - 1) Legrand/Ortronics
- B. SCS Cables and Modular Jacks shall be color coded according to their intended use throughout the system. These colors are:

2.2 MATERIALS

- A. PATCH PANELS
 1. Copper Horizontal Distribution Patch Panels (Workstation Patch Panels):
Complete with pre-manufactured cable management for supporting station cable behind the patch panel, and with incidental materials necessary for mounting.

Terminations shall include universally color-coded wiring pattern for both T568A and T568B. Shall exceed the transmission performance requirements for connecting hardware, as specified in TIA/EIA 568.2-D, ISO/IEC 11801-1:2017 and ISO/IEC 11801-2:2017. Copper patch panels shall be manufactured by the selected SCS Manufacturer and be compatible with the selected modular jacks.

B. CONNECTORS

1. Data Copper Connectors (modular jacks): 8-position/8-conductor, insulation displacement connection (IDC), non-keyed, and shall accept modular 8-position/8-conductor plugs, and with a universally color-coded wiring pattern for both T568A and T568B. Shall exceed the transmission performance requirements for connecting hardware, as specified in TIA/EIA 568.2-D, ISO/IEC 11801-1:2017 and ISO/IEC 11801-2:2017:
 - a. Category 6/6A:
 - b. Category 6A:

C. STATIONS

1. Faceplates: Complete with port identification labels and blank inserts/fillers for covering unused connector openings. Coordinate colors with architectural finishes:
 - a. Faceplate Kits for outlets mounted to single gang faceplates on square backboxes.
 - 1) 4-Port:

D. CABLE

1. Cables shall be manufactured by the selected SCS Manufacturer.
2. Cables shall be rated for the environment for which they are being installed.
3. Copper Cable: 4-pair UTP, 23 AWG, NEC/NFPA CMP or CMR rated, with solid copper conductors.

- E. Hook and Loop Cable Managers: Reusable hook and loop (similar to Velcro) style, 5/8" wide, 15-foot- long roll, black.

PART 3 - EXECUTION

3.1 GENERAL

- A. The Contractor is solely responsible for the safety of the public and workers in accordance with all applicable rules, regulations, building codes and ordinances.
- B. All work shall comply with applicable safety rules and regulations including OSHA. All work shall comply with the requirements of the National Electrical Safety Code (NESC) and the NEC except where local codes and/or regulations are more stringent, in which case the local codes and/or regulations shall govern.
- C. All work shall comply with the standards, references and codes listed in PART 1 -- REFERENCES above. Where questions arise regarding which standards, references, or codes apply, the more stringent shall prevail.
- D. All work shall comply with the requirements and recommendations of the product manufacturers. Where questions arise regarding which requirements and recommendations apply, the more stringent shall prevail.
- E. Replace and/or repair to original (or better) condition any existing structures, materials, equipment, etc. inadvertently demolished or damaged by the Contractor during the course of construction at no additional cost to the Owner.

- F. Remove surplus material and debris from the job site and dispose of legally.

3.2 INSTALLATION

A. PATCH PANELS

1. Provide patch panels and horizontal wire management according to locations, elevations, and plan views as shown on the Contract Documents.
 - a. Copper: Size and install rack-mounted patch panels as shown on the Contract Documents. Use patch panels to terminate copper horizontal cables.
 - b. Cable Management Bars:
 - 1) On the rear of the rack, provide cable management bar for each copper patch panel to support cables being terminated on the back of the patch panel.
 - 2) On the front of the rack, provide cable management bar between patch panels for patch cord lacing, as indicated on the rack elevation diagrams.

B. CONNECTORS

1. Copper Connectors (modular jacks):
 - a. Provide Data connectors and install using T568B wiring pattern.
 - b. Punch down cable using only the selected SCS Manufacturer-approved impact tool.
2. Copper Plugs:
 - a. Provide Data plugs only for specifically designated field-connectorized applications and install using T568B wiring pattern.
 - b. Terminate cables using manufacturer-approved tools and methods.

C. STATIONS

1. Faceplates: Provide faceplates for stations in the locations and gang counts shown on the Contract Documents. Faceplates shall completely conceal outlet boxes, reducer plates, etc. Faceplates shall provide a snug and sure fit for connectors – loose connectors are not acceptable. See diagram below for jack ordering and arrangement.
2. Flush-mount connectors in faceplates. For all outlets mount all connectors in 90-degree (straight) orientation (not angled).

D. CABLE

1. Plenum-rated vs. non-plenum-rated cabling: Most horizontal cabling applications at Clemson facilities are designed to permit non-plenum-rated cabling. If a cable is run entirely via conduit and junction boxes or does not pass through a plenum-rated space, then provide non-plenum (CM/CMR, OFNR) rated cable. Otherwise, provide plenum (CMP, OFNP) rated cable. Cabling shall bear plenum or non-plenum markings for the environment in which it is installed.
2. Wet applications: Provide indoor/outdoor, plenum-rated cabling to all outdoor horizontal applications and all applications where the cabling passes through conduit in or under a slab-on-grade floor. Terminate this cabling in the telecommunications room without intermediate splicing or consolidation point. Floor boxes in upper floors (above the slab-on-grade floor) are not considered wet applications.
3. All cabling:

- a. Do not paint cabling. Painted cabling will not be covered by the manufacturer's warranty.
- b. Provide horizontal cable in types, sizes, and quantities as defined by the Symbol Schedule and as shown on the Contract Documents. Install cabling between the station and its associated telecommunications room and patch panel. Provide one cable for each data connector at each station. Unless otherwise specified, provide white-colored cables.
- c. Install cable in compliance with ANSI/TIA/EIA and ISO/IEC 11801 requirements and BICSI TCIM practices.
- d. Adhere to the bending radius and pull strength requirements as detailed in the ANSI/TIA/EIA standards and the manufacturer's installation recommendations during cable handling and installation.
 - 1) Pull all cables simultaneously where more than one cable is being installed in the same raceway.
 - 2) Use pulling compound or lubricant where necessary. Use compounds that will not damage conductor or insulation (Polywater or approved equal).
 - 3) Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips that will not damage media or raceway. Repair or replace conduit bushings that become damaged during cabling installation.
- e. Install cable in a continuous (non-spliced) manner unless otherwise indicated.
- f. Install exposed cable parallel and perpendicular to surfaces on exposed structural members and follow surface contours where possible.
- g. Tie or clamp cabling. Attaching cables to pipes, electrical conduit, mechanical items, existing cables, or the ceiling support system (grids, hanger wires, etc. – with the exception of ceiling support anchors) is not acceptable. Install tie-wraps in conformance with the SCS manufacturer's installation recommendations. Do not over-tighten tie wraps or cause cross-sectional deformation of cabling.
- h. Support cabling through elevation changes greater than 24 inches.
- i. Provide service loops with a minimum length of 10 feet in the telecommunications rooms and 12" in cable tray at point of horizontal conduit termination.
 - 1) For cables that are within distance limitations, route cabling around telecommunications room before terminating, creating a usable service loop. For cables that would not otherwise meet distance limitations, do not route first around the room (do not provide this service loop).
- j. Cable in the telecommunications rooms:
 - 1) Lay cable neatly in upper ladder rack in evenly-sized loose bundles (no more than 24 cables per bundle) and loosely secure cabling to the ladder rack at regular intervals with cable manager straps. Do not use tie-wraps.
 - 2) Route cables to patch panels on racks via ladder rack, across top of rack and then down vertical cable management to patch panel.

4. Copper Cable:
 - a. The following tool shall be used to terminate all horizontal cabling: TE SL series termination kit, TE 1725150-1 or equal Commscope product. The use of any tool that is not provided by the manufacturer and recommended by the manufacturer for this purpose is prohibited.
 - b. Terminate all pairs within a cable. Un-terminated cable pairs are not acceptable.
 - c. For shielded cable, bond both ends of the metallic shield (or metallic strength) member to the nearest SBB (as furnished under Division 27 Section — “Grounding and Bonding for Communications Systems”).
 - d. Route station cable that is exposed (not in conduit) to comply with ANSI/TIA/EIA-569 requirements for avoiding potential EMI sources and as follows:
 - 1) 48 inch separation distance from motors or transformers
 - 2) 12 inch separation distance from conduit and cables used for electrical power distribution
 - 3) 5 inch separation distance from fluorescent lighting. In telecommunications rooms, raise pendant fluorescent light fixtures such that they are at least 12 inches away from copper cabling.
5. Provide hook-and-loop cable managers for managing horizontal cabling in the telecommunications rooms.

3.3 LABELING AND ADMINISTRATION

- A. Refer to Section 27 05 53 - Identification for Communications Systems for labeling requirements

3.4 TESTING

- A. Refer to Section 27 17 00 - Testing of Structured Cabling Systems for all testing requirements

END OF SECTION - 27 15 00

SECTION 27 1500.10 - COMMUNICATIONS HORIZONTAL CABLING FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. UTP cabling.
2. Cable connecting hardware, patch panels, and cross-connects.
3. Telecommunications outlet/connectors.
4. Cabling system identification products.

B. Related Requirements:

1. Section 271300 "Communications Backbone Cabling" for voice and data cabling associated with system panels and devices.
2. Section 280513 "Conductors and Cables for Electronic Safety and Security" for voice and data cabling associated with system panels and devices.

1.2 ADMINISTRATIVE REQUIREMENTS

- A. Coordinate layout and installation of telecommunications cabling with Owner's telecommunications and LAN equipment and service suppliers.
- B. Coordinate telecommunications outlet/connector locations with location of power receptacles at each work area.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. System Labeling Schedules: Electronic copy of labeling schedules that are part of the cabling and asset identification system of the software.
2. Wiring diagrams to show typical wiring schematics, including the following:
 - a. Cross-connects.
 - b. Patch panels.
 - c. Patch cords.
3. Cross-connects and patch panels. Detail mounting assemblies, and show elevations and physical relationship between the installed components.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer, qualified layout technician, installation supervisor, and field inspector.
- B. Source quality-control reports.
- C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance data.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.
 - 1. Layout Responsibility: Preparation of Shop Drawings and Cabling Administration Drawings, Cabling Administration Drawings, and field testing program development] by an RCDD.
 - 2. Installation Supervision: Installation shall be under the direct supervision of Registered Technician, who shall be present at all times when Work of this Section is performed at Project site.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Test cables upon receipt at Project site. Test each pair of UTP cable for open and short circuits.

PART 2 - PRODUCTS

2.1 HORIZONTAL CABLING DESCRIPTION

- A. Horizontal cable and its connecting hardware provide the means of transporting signals between the telecommunications outlet/connector and the horizontal cross-connect located in the communications equipment room. This cabling and its connecting hardware are called a "permanent link," a term that is used in the testing protocols.
 - 1. TIA/EIA-568-B.1 requires that a minimum of two telecommunications outlet/connectors be installed for each work area.
 - 2. Horizontal cabling shall contain no more than one transition point or consolidation point between the horizontal cross-connect and the telecommunications outlet/connector.
 - 3. Bridged taps and splices shall not be installed in the horizontal cabling.

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Horizontal cabling system shall comply with transmission standards in TIA/EIA-568-B.1 when tested according to test procedures of this standard.
- B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: 25 or less.
 - 2. Smoke-Developed Index: 50 or less.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Grounding: Comply with J-STD-607-A.

2.3 BACKBOARDS

- A. Backboards: Plywood, fire-retardant treated, 3/4 by 48 by 96 inches (19 by 1220 by 2440 mm). Comply with requirements in Section 061000 "Rough Carpentry" for plywood backing panels.

2.4 UTP CABLE

- A. Description: 100-ohm, four-pair UTP, formed into 25-pair, binder groups covered with a blue thermoplastic jacket.
 - 1. Comply with ICEA S-90-661 for mechanical properties.
 - 2. Comply with TIA/EIA-568-B.1 for performance specifications.
 - 3. Comply with TIA/EIA-568-B.2, Category 6.
 - 4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444 and NFPA 70 for the following types:
 - a. Multipurpose, Plenum Rated: Type MPP, complying with NFPA 262.

2.5 UTP CABLE HARDWARE

- A. General Requirements for Cable Connecting Hardware: Comply with TIA/EIA-568-B.2, IDC type, with modules designed for punch-down caps or tools. Cables shall be terminated with connecting hardware of same category or higher.
- B. Connecting Blocks: 110-style IDC for Category 6. Provide blocks for the number of cables terminated on the block, plus 25 percent spare. Integral with connector bodies, including plugs and jacks where indicated.
- C. Cross-Connect: Modular array of connecting blocks arranged to terminate building cables and permit interconnection between cables.
 - 1. Number of Terminals per Field: two (2) for each conductor in assigned cables.

- D. Patch Panel: Modular panels housing multiple-numbered jack units with IDC-type connectors at each jack for permanent termination of pair groups of installed cables.
 - 1. Number of Jacks per Field: One for each four-pair UTP cable indicated.
 - 2. Provide biscuit Jacks for Camera and Panel connection locations. Secure Biscuit Jacks to backplane in LSP enclosure.
- E. Jacks and Jack Assemblies: Modular, color-coded, eight-position modular receptacle units with integral IDC-type terminals.
- F. Patch Cords: Factory-made, four-pair cables in 36-inch (900 mm) lengths; terminated with eight-position modular plug at each end.
 - 1. Patch cords shall have bend-relief-compliant boots and color-coded icons to ensure Category 6 performance. Patch cords shall have latch guards to protect against snagging.
 - 2. Patch cords shall have color-coded boots for circuit identification.

2.6 TELECOMMUNICATIONS OUTLET/CONNECTORS

- A. Jacks: 100-ohm, balanced, twisted-pair connector; four-pair, eight-position modular. Comply with TIA/EIA-568-B.1.
 - 1. Biscuit Jacks: Provide biscuit Jacks for Camera and Panel connection locations. Secure Biscuit Jacks to backplane in LSP enclosure.

2.7 GROUNDING

- A. Comply with requirements in Section 270526 "Grounding and Bonding for Communications Systems" for grounding conductors and connectors.
- B. Comply with J-STD-607-A.

2.8 IDENTIFICATION PRODUCTS

- A. Comply with TIA/EIA-606-A and UL 969 for labeling materials, including label stocks, laminating adhesives, and inks used by label printers.
- B. Comply with requirements in Section 260553 "Identification for Electrical Systems."

2.9 SOURCE QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to evaluate cables.
- B. Factory test UTP cables on reels according to TIA/EIA-568-B.1.
- C. Factory test UTP cables according to TIA/EIA-568-B.2.

- D. Cable will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 WIRING METHODS

- A. Install cables in pathways and cable trays except within consoles, cabinets, desks, and counters. Conceal pathways and cables except in unfinished spaces.
 - 1. Install plenum cable in environmental air spaces, including plenum ceilings.
 - 2. Comply with requirements in Section 270528 "Pathways for Communications Systems."
 - 3. Comply with requirements in Section 270536 "Cable Trays for Communications Systems."
- B. Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- C. Wiring within Enclosures:
 - 1. Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.
 - 2. Install lacing bars and distribution spools.
 - 3. Install conductors parallel with or at right angles to sides and back of enclosure.

3.2 INSTALLATION OF CABLES

- A. Comply with NECA 1.
- B. General Requirements for Cabling:
 - 1. Comply with TIA/EIA-568-B.1.
 - 2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."
 - 3. Install 110-style IDC termination hardware unless otherwise indicated.
 - 4. MUTOA shall not be used as a cross-connect point.
 - 5. Consolidation points may be used only for making a direct connection to telecommunications outlet/connectors:
 - a. Do not use consolidation point as a cross-connect point, as a patch connection, or for direct connection to workstation equipment.
 - b. Locate consolidation points for UTP at least 49 feet (15 m) from communications equipment room.
 - 6. Terminate conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
 - 7. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.

8. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
9. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.
10. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
11. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
12. In the communications equipment room, install a 10-foot- (3-m-) long service loop on each end of cable.
13. Pulling Cable: Comply with BICSI ITSM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.

C. UTP Cable Installation:

1. Comply with TIA/EIA-568-B.2.
2. Do not untwist UTP cables more than 1/2 inch (12 mm) from the point of termination to maintain cable geometry.

D. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Suspend UTP cable not in a wireway or pathway a minimum of 8 inches (200 mm) above ceilings by cable supports not more than 60 inches (1524 mm) apart.
3. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

E. Installation of Cable Routed Exposed under Raised Floors:

1. Install plenum-rated cable only.
2. Install cabling after the flooring system has been installed in raised floor areas.
3. Coil cable 6 feet (1800 mm) long not less than 12 inches (300 mm) in diameter below each feed point.

F. Group connecting hardware for cables into separate logical fields.

G. Separation from EMI Sources:

1. Comply with BICSI TDMM and TIA-569-B for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
 - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches (127 mm).
 - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches (300 mm).
 - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches (610 mm).

3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
 - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches (64 mm).
 - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches (150 mm).
 - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches (300 mm).
4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
 - a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
 - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches (76 mm).
 - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches (150 mm).
5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of 48 inches (1200 mm).
6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of 5 inches (127 mm).

3.3 FIRESTOPPING

- A. Comply with requirements in Section 078413 "Penetration Firestopping."
- B. Comply with TIA-569-B, Annex A, "Firestopping."
- C. Comply with BICSI TDMM, "Firestopping Systems" Article.

3.4 GROUNDING

- A. Install grounding according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.
- B. Comply with J-STD-607-A.
- C. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall allowing at least 2-inch (50-mm) clearance behind the grounding bus bar. Connect grounding bus bar with a minimum No. 4 AWG grounding electrode conductor from grounding bus bar to suitable electrical building ground.
- D. Bond metallic equipment to the grounding bus bar, using not smaller than No. 6 AWG equipment grounding conductor.

3.5 IDENTIFICATION

- A. Identify system components, wiring, and cabling complying with TIA/EIA-606-A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
1. Administration Class: 2
 2. Color-code cross-connect fields. Apply colors to voice and data service backboards, connections, covers, and labels.
- B. Comply with requirements in Section 099123 "Interior Painting" for painting backboards. For fire-resistant plywood, do not paint over manufacturer's label.
- C. Paint and label colors for equipment identification shall comply with TIA/EIA-606-A for Class 2 level of administration, including optional identification requirements of this standard.
- D. Cable Schedule: Post in prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish an electronic copy of final comprehensive schedules for Project.
- E. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors. Follow convention of TIA/EIA-606-A. Furnish electronic record of all drawings, in software and format selected by Owner.
- F. Cable and Wire Identification:
1. Label each cable within 4 inches (100 mm) of each termination and tap, where it is accessible in a cabinet or junction or outlet box, and elsewhere as indicated.
 2. Each wire connected to building-mounted devices is not required to be numbered at device if color of wire is consistent with associated wire connected and numbered within panel or cabinet.
 3. Exposed Cables and Cables in Cable Trays and Wire Troughs: Label each cable at intervals not exceeding 15 feet (4.5 m).
 4. Label each terminal strip and screw terminal in each cabinet, rack, or panel.
 - a. Individually number wiring conductors connected to terminal strips, and identify each cable or wiring group being extended from a panel or cabinet to a building-mounted device shall be identified with name and number of particular device as shown.
 - b. Label each unit and field within distribution racks and frames.
 5. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label each connector and each discrete unit of cable-terminating and connecting hardware. Where similar jacks and plugs are used for both voice and data communication cabling, use a different color for jacks and plugs of each service.
 6. Uniquely identify and label work area cables extending from the MUTOA to the work area. These cables may not exceed the length stated on the MUTOA label.

- G. Labels shall be preprinted or computer-printed type with printing area and font color that contrasts with cable jacket color but still complies with requirements in TIA/EIA-606-A.

1. Cables use flexible vinyl or polyester that flex as cables are bent.

3.6 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:

1. Visually inspect UTP jacket materials for NRTL certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments, and inspect cabling connections for compliance with TIA/EIA-568-B.1.
2. Visually confirm Category 6, marking of outlets, cover plates, outlet/connectors, and patch panels.
3. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
4. Test UTP backbone copper cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross-connection.
 - a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-B.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
5. UTP Performance Tests:
 - a. Test for each outlet and MUTOA. Perform the following tests according to TIA/EIA-568-B.1 and TIA/EIA-568-B.2:
 - 1) Wire map.
 - 2) Length (physical vs. electrical, and length requirements).
 - 3) Insertion loss.
 - 4) Near-end crosstalk (NEXT) loss.
 - 5) Power sum near-end crosstalk (PSNEXT) loss.
 - 6) Equal-level far-end crosstalk (ELFEXT).
 - 7) Power sum equal-level far-end crosstalk (PSELFEXT).
 - 8) Return loss.
 - 9) Propagation delay.
 - 10) Delay skew.
6. Final Verification Tests: Perform verification tests for UTP systems after the complete communications cabling and workstation outlet/connectors are installed.
 - a. Voice Tests: These tests assume that dial tone service has been installed. Connect to the network interface device at the demarcation point. Go off-hook and listen and receive a dial tone. If a test number is available, make and receive a local, long distance, and digital subscription line telephone call.

- b. Data Tests: These tests assume the Information Technology Staff has a network installed and is available to assist with testing. Connect to the network interface device at the demarcation point. Log onto the network to ensure proper connection to the network.
- B. Document data for each measurement. Data for submittals shall be printed in a summary report that is formatted similar to Table 10.1 in BICSI TDMM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.
- C. End-to-end cabling will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.7 DEMONSTRATION

- A. Train Owner's maintenance personnel in cable-plant management operations, including changing signal pathways for different workstations, rerouting signals in failed cables, and keeping records of cabling assignments and revisions when extending wiring to establish new workstation outlets.

END OF SECTION 271500

SECTION 27 1700 - TESTING OF STRUCTURED CABLING SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section (27 17 00) includes the minimum requirements for the test certification, identification, and administration of horizontal balanced twisted pair cabling and optical fiber cabling.
- B. The Contractor provides all labor, materials, tools, field-test instruments, and equipment required for the complete testing, identification, and administration of the work called for in the Contract Documents.
- C. In order to conform to the overall project event schedule, the cabling Contractor shall survey the work areas and coordinate cabling testing with other applicable trades.
- D. In addition to the tests detailed in this document, the Contractor shall notify the Owner or the Owner's representative of any additional tests deemed necessary to guarantee a fully functional system. The Contractor shall carry out and record any additional measurement results at no additional charge.

1.2 DEFINITIONS

- A. For additional Definitions refer to Section 27 05 00 - Common Work Results for Communications

1.3 REFERENCES

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, apply to this Section.
- B. Related Documents and Sections:
 - 1. Section 00 00 00 – Procurement and Contracting Requirements
 - 2. Section 01 00 00 – General Requirements
 - 3. Section 27 05 00 – Common Work Results for Communications

1.4 SCOPE

- A. This Section includes the minimum requirements for:
 - 1. Identification, including labels and labeling
 - 2. Administration, including:
 - 3. Test results documentation
 - 4. As-built drawings
- B. The testing of copper cabling, including:
 - 1. Test instruments
 - 2. Test procedures
- C. The testing of fiber optic cabling, including:
 - 1. Test instruments
 - 2. Test procedures
- D. Testing shall be carried out in accordance with this document. The Contractor shall:

1. Test all installed balanced twisted pair cabling permanent links to the applicable performance level.
2. Test the attenuation and polarity of the installed optical fiber cable plant with an Optical Loss Test Set (OLTS)
3. Test the installed condition of the optical fiber cabling system and its components with an Optical Time Domain Reflectometer (OTDR)
4. Verify the condition of the fiber end faces
- E. The Contractor shall document all tests including:
 1. OLTS dual wavelength attenuation measurements
 2. OTDR traces with event tables and OTDR maps – Edit or remove this item as appropriate for the project.
 3. Optical length measurements and pictures of the connector end faces

1.5 OPTICAL FIBER TESTING

- A. Trained technicians who have successfully attended an appropriate training program, which includes testing with an OLTS and an OTDR and have obtained a certificate as proof thereof shall execute the tests. These certificates may have been issued by any of the following organizations or an equivalent organization:
- B. The manufacturer of the connectors and/or the cable
- C. The manufacturer of the test equipment used for the field certification
- D. Training organizations such as Building Industry Consulting Service International (BICSI), the Association of Cabling Professionals™ (ACP), the Cabling Business Institute (CBI)

1.6 OWNER'S PARTICIPATION

- A. The Owner or the Owner's representative shall be invited to witness and/or review field testing.
- B. Five business days before testing commences, the Owner or the Owner's representative shall be notified of the start date of the testing phase.
- C. The Owner or the Owner's representative shall:
 1. Select a random sample of five percent of the installed links
 2. Test these randomly selected links
 3. Store the results in accordance with Part 3 of this document
- D. The Contractor shall compare the results obtained by the Owner to the data provided by the installation Contractor. If more than two percent of the pass/fail determinations in the sample results differ from the data provided by the installation Contractor, the Contractor, under the supervision of the Owner's representative, shall repeat one hundred percent of the testing at no cost to the Owner.

1.7 SUBMITTALS

- A. The Contractor shall submit the following:
 1. The manufacturer's catalog sheets and specifications for the test equipment
 2. A schedule (list) of all links and channels to be tested
 3. Sample test reports
 4. The test equipment serial number

5. A graphic diagram documenting the test procedure, including all connectors, the light source (as applicable,) the origin, and the destination of each cable tested.
- B. TEST RESULTS
 1. Balanced Twisted Pair Links
 - a. Category-5E and Category-6 Balanced Twisted Pair
 - 1) Unless otherwise specified by the Owner or the Owners representative, each Category 5E and Category-6 balanced twisted pair cabling link shall be tested for:
 - 2) Wire Map
 - 3) Length
 - 4) Propagation Delay
 - 5) Delay Skew
 - 6) DC Loop Resistance
 - 7) DC Resistance Unbalance within a pair
 - 8) DC Resistance Unbalance between pairs
 - 9) Insertion Loss
 - 10) Near-End Crosstalk (NEXT)
 - 11) Power Sum Near-End Crosstalk (PS NEXT)
 - 12) Attenuation to Crosstalk Ratio Near-End (ACR-N)
 - 13) Power Sum Attenuation to Crosstalk Ratio Near-End (PS ACR-N)
 - 14) Attenuation to Crosstalk Ratio Far-End (ACR-F)
 - 15) Power Sum Attenuation to Crosstalk Ratio Far-End (PS ACR-F)
 - 16) Return Loss
 - 17) Transverse Conversion Loss (TCL)
 - 18) Equal Level Transverse Conversion Transfer Loss (ELTCTL)
 - b. Category-6A Balanced Twisted Pair
 - 1) Unless otherwise specified by the Owner or the Owners representative, each Category-6A link shall be tested for all of the parameters listed above for Category-5E and Category-6 as well as the following additional parameters:
 - 2) Power Sum Alien Near-End Crosstalk (PS ANEXT)
 - 3) Average Power Sum Alien Near-End Crosstalk (Average PS ANEXT)
 - 4) Power Sum Alien Attenuation to Crosstalk Ratio Far-End (PS AACR-F)
 - 5) Average Power Sum Alien Attenuation to Crosstalk Ratio Far-End (Average PS AACR-F)
 - c. When a Balanced Twisted Pair Permanent Link Fails
 - 1) All installed balanced twisted pair cabling permanent links shall be field-tested and shall pass the test requirements and analysis described in Part 3.
 - 2) Any permanent link that fails these requirements shall be diagnosed and corrected.

- 3) Any corrective action that must take place shall be documented and followed with a new test to prove that the corrected permanent link meets performance requirements.
 - 4) The final and passing result of the tests for all permanent links shall be provided in the test results documentation, in accordance with Part 3.
2. Optical Fiber Links
- a. Test Limits – ANSI/TIA-568.3-D Singlemode (STD) and Multimode (STD)
 - b. Unless otherwise specified by the Owner or the Owners representative, each optical fiber cabling link shall comply with the following test limits:
 - 1) Optical loss testing
 - 2) Multi-mode and single-mode links
 - 3) Link attenuation calculated by the formulas, as specified in ANSI/TIA-568-C.0:
 - (a) $\text{Link Attenuation (dB)} = \text{Cable Attn (dB)} + \text{Connector Attn (dB)} + \text{Splice Attn (dB)}$
 - (b) $\text{Cable Attn (dB)} = \text{Attenuation Coefficient (dB/km)} * \text{Length (Km)}$
 - (c) $\text{Connector Attn (dB)} = \text{number of connector pairs} * \text{connector loss (dB)}$ Maximum allowable connector loss = 0.75 dB
 - (d) $\text{Splice Attn (dB)} = \text{number_of_splices} * \text{splice_loss (dB)}$ Maximum allowable splice_loss = 0.3 dB
 - 4) The values for the Attenuation Coefficient (dB/km) are listed in the table below. Where application limits are more stringent, those shall apply.

type of optical fiber	wavelength (nm)	attenuation coefficient (dB/km)	wavelength (nm)	attenuation coefficient (dB/km)
Multi-mode 62.5/125 μm	850	3.5	1300	1.5
Multi-mode 50/125 μm	850	3.5	1300	1.5
Single-mode (Inside plant)	1310	1.0	1550	1.0
Single-mode (Outside plant)	1310	0.5	1550	0.5

- c. OTDR Testing
 - 1) Reflective events (connections) shall not exceed the following limits. Where application limits are more stringent, those shall apply.
 - (a) dB in optical loss when bi-directionally averaged
 - (b) -35 dB reflectance for multi-mode connections
 - (c) -40 dB reflectance for UPC single-mode connections

- (d) -55 dB reflectance for APC single-mode connections
 - (e) Non-reflective events (splices) shall not exceed 0.3 db
 - d. Magnified End Face Inspection
 - 1) Fiber connections shall be visually inspected for compliance with IEC 61300-3-35 Edition 1.0 for end face quality.
 - 2) Scratched, pitted or dirty connectors shall be diagnosed and corrected.
 - e. When an Optical Fiber Link or Channel Fails
 - 1) All installed optical fiber cabling links and channels shall be field-tested and pass the test requirements and analysis as described in Part 3.
 - 2) Any link or channel that fails these requirements shall be diagnosed and corrected.
 - 3) Any corrective action that must take place shall be documented and followed with a new test to prove that the corrected link or channel meets performance requirements.
 - 4) The final and passing result of the tests for all links and channels shall be provided in the test results documentation, in accordance with Part 3.
- 3. Acceptance of Test Results
 - a. Once the project is fully completed and tested in accordance with the Contract Documents and to the satisfaction of the Owner, the Owner's acceptance of the test results shall be given in writing to the Engineer.

1.8 PROJECT ENVIRONMENTAL REQUIREMENTS

- A. Seismic Safety
 - 1. Observe mechanical and electrical support means for all installed equipment as required by all applicable local building codes for this installation's earthquake risk hazard zone and as recommended by Telcordia Specification GR-63.
 - 2. All equipment racks should to be anchored with suitable anchors that meet safety standards.
 - 3. Overhead devices should be mounted with appropriate safety attachments as required.
 - 4. Where cabinets and racks are secured directly to the building, this should be done in accordance with guidance provided by the Authority Having Jurisdiction (AHJ) or a structural engineer.
 - 5. Equipment and fixtures should have shock and vibration isolation.
- B. Fiber Optic Cable Safety
 - 1. The following warnings shall be posted on the job site:
 - a. WARNING: PERMANENT EYE DAMAGE CAN RESULT FROM LOOKING DIRECTLY INTO A LIGHT BEAM GENERATED BY AN LED OR LASER SOURCE OR INTO THE END OF A CABLE FIBER CONNECTED TO ONE OF THESE SOURCES.
 - b. CAUTION: LIGHT GENERATED BY THESE SOURCES MAY NOT BE VISIBLE YET REMAIN HAZARDOUS TO THE EYE. LOOK FOR WARNING LABELS ON SOURCE DEVICES.
 - 2. Observe all warning signs on equipment and all written safety precautions in the equipment instruction and technical manuals.

3. Always handle cable carefully to avoid personal injury. Care should be taken with individual fibers to prevent injury to the eyes or penetration of the fibers into the skin.
- C. Hazardous Materials Prohibition
 1. The Contractor shall make sure that all materials used in the project are asbestos-free, unless specifically authorized in writing by the Owner.
 2. Applicable products shall comply with the European directives on the Restriction of Hazardous Substances (RoHS; 2002/95/EC) and Waste Electrical and Electronic Equipment (WEEE; 2002/96/EC). – Only include this for facilities in Europe.

1.9 EXISTING CONDITIONS

- A. Verify that all conditions on the project site are acceptable for the Work specified in this Section. Prior to bid opening, notify the Consulting Engineer in writing of any discrepancies, conflicts, or omissions. Otherwise, correct these issues at no additional cost to the Owner.
- B. Continue to monitor the project site. If conditions develop that require a variance from the Specifications or Drawings, then immediately notify the Owner in writing. Otherwise, make recommendations, submit drawings showing how the Work may be installed, and upon approval, proceed with the necessary changes without additional cost to the Owner.

1.10 RECORD DRAWINGS

- A. Keep a complete set of all telecommunications drawings in the job site office for reference of the actual installation of work under this Section.
- B. Use this set of drawings for no other purpose.
- C. Where any material, equipment, or system components are installed differently than what is shown on the Drawings, indicate the differences clearly and neatly using ink or indelible pencil.
- D. Upon completion of the project, submit the record set of Drawings.

PART 2 - PRODUCTS

2.1 GENERAL

A.

2.2 MATERIAL

- A. BALANCED TWISTED-PAIR CABLE TESTERS
 1. The field test instrument shall be manufactured by Fluke Networks.
 2. The field test instrument shall have been calibrated within the last twelve months.
 3. There shall be independent verification that the field test instrument meets the following accuracy requirements:
 - a. For Category 5E, Level IIe accuracy in accordance with ANSI/TIA-1152
 - b. For Category 6, Level III accuracy in accordance with ANSI/TIA-1152
 - c. For Category 6A, Level IIIe accuracy in accordance with ANSI/TIA-1152
 4. Permanent Link Adapters

- a. The RJ45 plug must meet the requirements for NEXT, FEXT, and Return Loss in accordance with ANSI/TIA-568.2-D.
 - b. Twisted pair Category 5e, 6, 6A, 7, or 7A cords are not permitted, as their performance degrades with use and can cause false Return Loss failures.
 5. Results Storage
 - a. The field test instrument shall be capable of storing more than 10,000 results for all measurements found within this section.
 6. Measurement Capabilities for Category 5E and Category 6 Links
 - a. On Category 5E and Category 6 links, the field test instrument shall be capable of testing the following parameters:
 - 1) Wire Map
 - 2) Length
 - 3) Propagation Delay
 - 4) Delay Skew
 - 5) DC Loop Resistance
 - 6) DC Resistance Unbalance within a pair
 - 7) DC Resistance Unbalance between pairs
 - 8) Insertion Loss
 - 9) Near-End Crosstalk (NEXT)
 - 10) Power Sum Near-End Crosstalk (PS NEXT)
 - 11) Attenuation to Crosstalk Ratio Near-End (ACR-N)
 - 12) Power Sum Attenuation to Crosstalk Ratio Near-End (PS ACR-N)
 - 13) Attenuation to Crosstalk Ratio Far-End (ACR-F)
 - 14) Power Sum Attenuation to Crosstalk Ratio Far-End (PS ACR-F)
 - 15) Return Loss
 - 16) Transverse Conversion Loss (TCL)
 - 17) Equal Level Transverse Conversion Transfer Loss (ELTCTL)
 - 18) Time Domain Reflectometer
 - 19) Time Domain Crosstalk Analyzer
 7. Measurement Capabilities for Category 6A
 - a. On Category 6A links, the field test instrument shall be capable of testing all of the parameters listed above for Category 5E and Category 6 links and all of the following parameters:
 - 1) Power Sum Alien Near-End Crosstalk (PS ANEXT)
 - 2) Average Power Sum Alien Near-End Crosstalk (Average PS ANEXT)
 - 3) Power Sum Alien Attenuation to Crosstalk Ratio Far-End (PS AACR-F)
 - 4) Average Power Sum Alien Attenuation to Crosstalk Ratio Far-End (Average PS AACR-F)
- B. PC Software
1. The field test instrument's PC software shall:
 - a. Be Windows® based
 - b. Show when 3 dB and 4 dB rules are applied
 - c. Have re-certification capability where results have "(RC)" added to the end of the Cable IDs

- d. Have a built-in PDF export capability, as no additional third party software is permitted
- e. Have built-in statistical analysis
- C. OPTICAL FIBER CABLE TESTERS
 - 1. The field test instrument shall have been calibrated within the period recommended by the manufacturer, and a copy of the calibration certificate shall be made available.
 - 2. Optical Loss Test Set (OLTS)
 - 3. Multi-Mode Optical Fiber Light Source
 - 4. The multi-mode optical fiber light source shall:
 - a. Provide dual LED light sources with central wavelengths of 850 nm (± 30 nm) and 1300 nm (± 20 nm). VCSEL sources are not permitted per ANSI/TIA-526-14-B.
 - b. Have output power of at least -20 dBm
 - c. Meet the Encircled Flux launch requirements of ANSI/TIA-526-14-B
 - d. Have test reference cords that demonstrate an insertion loss of 0.15 dB when mated against each other
 - e. Be manufactured by Fluke Networks
 - 5. The single-mode optical fiber light source shall:
 - a. Provide dual laser light sources with central wavelengths of 1310 nm (± 20 nm) and 1550 nm (± 20 nm).
 - b. Have output power of at least -10 dBm
 - c. Have test reference cords that demonstrate an insertion loss of 0.25 dB when mated against each other
 - d. Be manufactured by Fluke Networks
 - 6. Power Meter shall:
 - a. Provide test capability at wavelengths of 850 nm, 1300 nm, 1310 nm, and 1550 nm
 - b. Have power measurement uncertainty of ± 0.25 dB
 - c. Store reference power measurements
 - d. Save at least 10,000 results to internal memory
 - e. Have a USB PC interface
 - f. Be manufactured by Fluke Networks
 - 7. Optional Length Measurement
 - a. An OLTS capable of measuring the optical length of the fiber using time-of-flight techniques is preferable.
 - b. For MPO/MTP trunk cables, length shall be calculated using cable jacket length markings.
- D. Optical Time Domain Reflectometer (OTDR)
 - 1. The OTDR shall:
 - a. Have a color LCD display with backlight
 - b. Have rechargeable Li-Ion battery for 8 hours of normal operation
 - c. With battery and module, weigh no more than 4.5 pounds and have a volume of no more than 200 in²
 - d. Have internal non-volatile memory with capacity for storing at least 2,000 OTDR bi-directionally-tested fiber links
 - e. Have a USB port to transfer data to a PC or thumb drive/memory stick
 - f. Be manufactured by Fluke Networks

2. The multi-mode OTDR shall:
 - a. Provide test capability at wavelengths of 850 nm (± 10 nm) and 1300 nm ($+35$ nm / -15 nm)
 - b. Have event dead zones that do not exceed 0.7 m at 850 nm and 1300 nm
 - c. Have attenuation dead zones that do not exceed 2.5 m at 850 nm and 4.5 m at 1300 nm
 - d. Have distance range of at least 9,000 m
 - e. Have a dynamic range of at least 28 dB for 850 nm and 30 dB at 1300 nm
 - f. Allow bi-directional testing without moving the OTDR to the far end
3. The single-mode OTDR shall:
 - a. Provide test capability at wavelengths of 1310 nm (± 25 nm) and 1550 nm (± 30 nm)
 - b. Have event dead zones that do not exceed 0.6 m at 1310 nm and 1550 nm
 - c. Have attenuation dead zones that do not exceed 3.7 m at 1310 nm and 1550 nm
 - d. Have distance range of at least 80 km at 1310 nm and 130 km at 1550 nm
 - e. Have a dynamic range of at least 32 dB for 1310 nm and 30 dB at 1550 nm
 - f. Allow bi-directional testing without moving the OTDR to the far end
- E. Fiber Microscope
 1. The fiber microscope shall:
 - a. Have a field of view of 420 μ m by 320 μ m
 - b. Have camera probe tips that permit inspection through adapters
 - c. Be capable of saving and reporting the end face image to IEC 613003-3-35
 - d. Be manufactured by Fluke Networks
 - e. Preferably be a video camera system
- F. Integrated OLTS, OTDR, and Fiber Microscope
 1. Test equipment that combines an OLTS, an OTDR, and a fiber microscope into one instrument may be used.
 2. Any such system shall be manufactured by Fluke Networks.

2.3 ADMINISTRATION

- A. Administration documentation shall include the test results of each permanent link.
- B. Upon completion of the test of each link, the test result information for that link shall be recorded in the memory of the field test instrument.
- C. The test result records saved in the field test instrument shall be transferred into a Windows®-based database utility that allows for the maintenance, inspection, and archiving of these test records.
- D. For additional information see Section 27 05 53

PART 3 - EXECUTION

3.1 GENERAL

- A. Prior to field-testing, all outlets, cables, patch panels, and associated components shall be fully assembled and labeled. Any testing performed on incomplete systems shall be redone after the systems are fully assembled and labeled.

- B. Cables and equipment that do not pass tests shall be identified and discussed with the Owner and Engineer. Determine the source of the non-compliance and replace or correct the cable or the connection materials, and retest the cable or connection materials at no additional expense to the Owner. Provide new test results to the Owner and Engineer in the same manner as above.
1. In addition to the above, if it is determined that the cable is at fault, remove the damaged cable and replace it with a new cable. Cable “repairs” are not acceptable. The procedure for removing the cable shall be as follows:
 - a. Prior to removal of damaged cable and installation of new cable:
 - 1) Inform the Owner and Engineer of the schedule for the removal and installation.
 - 2) Test cables that occupy the same innerduct or conduit (if not in innerduct) as the damaged cable per paragraph B, above, regardless of whether or not they are new cables installed as part of this project or existing cables installed prior to this project.
 - 3) Provide test results to the Owner and Engineer for approval by the Owner and Engineer.
 - b. Remove the damaged cable and provide new cable.
 - c. After the removal of the damaged cable and installation of the new cable:
 - 1) Test the new cable per the paragraph titled TESTING.
 - 2) Test cables that occupy the same innerduct or conduit as the damaged cable per paragraph B, above, regardless of whether they are new cables installed as part of this project or existing cables installed prior to this project.
 - 3) If any of the cables requiring testing are in use, coordinate with the Owner to schedule an outage opportunity during which the testing can be performed.
 - 4) Provide test results to the Owner and Engineer for approval by the Owner and Engineer.
 - d. If a cable which occupies the same innerduct or conduit as a damaged cable is damaged by the extraction and reinstallation process, replace the cable at no additional expense to the Owner.
 - 1) Damaged cables which are replaced shall be subject to the testing procedures of the paragraph titled TESTING.
- C. Upon completion of the work, a Registered Communications Distribution Designer (RCDD) shall submit as-built Drawings to the Owner or Owner’s representative.
1. Provide test records on a form approved by the Owner and Engineer. Include the test results for each cable in the system. Submit the test results for each cable tested, with identification as discussed under LABELING AND ADMINISTRATION above. Include the cable identifier, outcome of test, indication of errors found, cable length, retest results, and name and signature of technician completing the tests. Provide test results to the Owner and Engineer for review and acceptance within two weeks of Substantial Completion.
 - a. Print test records in Adobe PDF format for each cable directly from the test software and submit in electronic form (in Adobe PDF and native Fluke test

files) on CDROM to the Owner and Engineer for review. Handwritten test results will not be accepted.

- b. Any cabling discovered to have unsatisfactory test results shall be re-terminated or replaced and retested.
- c. After all performance and testing issues have been addressed, resubmit the complete set of corrected test reports to the Owner and Engineer on CDROM.

D. Submit test reports within seven (7) business days of completion of testing.

3.2 SYSTEM ADMINISTRATION

A. Test Results Documentation

1. At the end of each working day, upload the copper cable permanent link test results, except for alien crosstalk testing, to the associated PC software for inspection by the Owner or the Owner's representative.
2. Test results uploaded shall allow for the maintenance, inspection, and archiving of the test records.
3. Prior to the Owner accepting the project:
 - a. Store the database of the complete project, including, if applicable, fiber links, in the format native to the software.
 - b. Deliver the database to the Owner on CD, DVD, or thumb-drive.
 - c. To allow the Owner to inspect and print the test reports, include a working and fully-licensed copy of the software.
4. Circuit IDs reported by the test instrument should match the specified label ID. (See "LABELS" below)
5. Provide the detailed test results documentation data, in an electronic database, for each tested optical fiber and include the following information:
 - a. The identification of the customer site as specified by the end-user
 - b. The name of the test limit selected to execute the stored test results
 - c. The name of the personnel performing the test
 - d. The date and time that the test results were saved in the memory of the tester
 - e. The manufacturer, model, and serial number of the field test instrument
 - f. The version of the test software and the version of the test limit database held in the test instrument
 - g. The fiber identification number
 - h. The length of each optical fiber
 - i. The index of refraction used for length calculation when using a length-capable OLTS
 - j. The backscatter coefficient of the fiber under test when using an OTDR
 - k. The OLTS attenuation link and channel measurements at the appropriate wavelengths and the margin (the difference between the measured attenuation and the test limit value)
 - l. The OTDR link and channel traces, event tables at the appropriate wavelengths, and a map of the link tested
 - m. The length of each optical fiber, as calculated by the OTDR
 - n. The overall pass/fail evaluation of the link-under-test for OLTS and OTDR measurements
 - o. A picture or image of each fiber end-face
 - p. A pass/fail status of the end-face using IEC 61300-3-35 Edition 1.0

B. Testing of Category 5E and Category 6 Permanent Links

1. For each Category 5E and Category 6 balance twisted-pair permanent link, provide the detailed test results documentation data in the associated PC software including:
 2. The overall pass/fail evaluation of the link-under-test
 3. The date and time the test results were saved in the memory of the tester
 4. The identification of the customer site, as specified by the Owner
 5. The name of the test limit selected to execute the stored test results
 6. The name of the personnel performing the test
 7. The version of the test firmware and the version of the test limit database held in the test instrument
 8. The manufacturer, model, and serial number of the field test instrument
 9. The adapters used
 10. The factory calibration date
 11. A pair map
 12. Propagation delay values for all four pairs
 13. Delay skew values for all four pairs
 14. DC resistance values for all four pairs
 15. DC resistance unbalance within a pair values for all four pairs
 16. DC resistance unbalance between pairs values for all four pairs
 17. Insertion loss worst case values for all four pairs
 18. NEXT worst-case margin and worst-case values in both directions
 19. PS NEXT worst-case margin and worst-case values in both directions
 20. ACR-N worst-case margin and worst-case values in both directions
 21. PS ACR-N worst-case margin and worst-case values in both directions
 22. ACR-F worst-case margin and worst-case values in both directions
 23. PS ACR-F worst-case margin and worst-case values in both directions
 24. Return loss worst-case margin and worst-case values in both directions
 25. TCL worst-case margin and worst-case values in both directions
 26. ELTCTL worst-case margin and worst-case values in both directions
 27. Time domain crosstalk data, if the link is marginal or fails
 28. Time domain reflectometer data, if the link is marginal or fails

C. Testing of Category 6A Permanent Links

1. For each Category 6A balance twisted-pair permanent link, provide all of the same detailed test results documentation data required for Category 5E and Category 6 permanent links and also the detailed test results documentation data for alien crosstalk testing, in AxTalk Analyzer, including:
 2. PS ANEXT worst-case margin for all four pairs
 3. Average PS ANEXT worst-case margin
 4. PS AACR-F worst-case margin for all four pairs
 5. Average PS AACR-F worst-case margin

3.3 FIELD QUALITY CONTROL

A. General

1. The Owner reserves the right to be present during any or all of the testing.
2. All cabling not tested in strict accordance with these specifications shall be re-tested at no additional cost to the Owner.

3. 100% of the installed cabling must be tested. All tests must meet the acceptance criteria defined in the media specific sections of this document.
4. Prior to each day's testing, fully charge all test equipment and bring an appropriate alternate power source to the job site.
5. Throughout the testing, have a competent supervisor and supporting technical personnel, acceptable to the Owner, available on site. Changing the supervisor during the testing shall not be acceptable without prior written approval from the Owner.
6. Upon completion of the testing, it shall be the responsibility of the Contractor to perform the necessary adjustments and other controls to ensure proper system operation. The system shall be physically inspected by the Owner to assure that all equipment is installed in a neat and workmanlike manner as called for by the contract documents.
7. Verify the performance parameters of the individual systems, following established professional procedures, in addition to those specified herein. Document all acceptance testing, calibration, and correction procedures described herein, taking care to include the following information:
 - a. The date on which each procedure was performed
 - b. The reason that the procedure was performed
 - c. The type of and a description of the procedure
 - d. The parameters measured and their values, including, as applicable, the values measured prior to calibration or correction
 - e. The parameters associated with calibration or corrective networks, components, or devices
 - f. The names of the personnel conducting the procedure
 - g. The equipment used to conduct the procedure

END OF SECTION - 27 17 00

SECTION 28 0500.10 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

- A. Provide the electronic security system (ESS) in accordance with the drawings, specifications, and referenced publications.
- B. Perform all work, products, systems integration, engineering, and design work required for the project in order to ensure complete and fully operational systems and proper installation of equipment. Provide calculations and analysis to support design and engineering decisions as specified in submittals. Provide and pay all labor, materials, and equipment, sales and gross receipts and other taxes. Secure and pay for plan check fees, permits, other fees, and licenses necessary for the execution of work as applicable for the project. Give required notices; comply with codes, ordinances, regulations, and other legal requirements of public authorities, which bear on the performance of work.
- C. Provide an ESS, installed, programmed, configured, documented, and tested. The security system includes but is not limited to: access control, intrusion detection, duress alarms, video surveillance and assessment, video recording and storage, delayed egress, intercommunication system, fire alarm interface, equipment cabinetry, and uninterruptible power supplies (UPS) interface.
- D. The work includes the procurement and installation of electrical wire and cables, the installation and testing of all system components. Inspection, testing, demonstration, and acceptance of equipment, software, materials, installation, documentation, and workmanship, shall be as specified herein. Provide all associated installation support, including the provision of primary electrical input power circuits.
- E. Provide repair service replacement parts and on-site service during the warranty period. Guarantee all parts and labor for a term of one (1) year, unless dictated otherwise in this specification from the acceptance date of the system as described in specification 280800.10. The Contractor is responsible for all equipment, software, firmware, licensing, shipping, transportation charges, and expenses associated with the service of the system for one (1) year.
- F. Operator training is not required.

1.3 SUMMARY

- A. This specification provides general requirements for the overall electronic security system (ESS) applicable to all projects.

1.4 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. This Specification is the base document for electronic security systems. Use the following specification sections in conjunction to provide a complete and fully integrated security management system.

1. 27 0526.10 – Grounding and Bonding for Security Systems
2. 27 0528.10 – Pathways for Security Systems
3. 27 0536.10 – Cable Trays for Security Systems
4. 27 0544.10 – Sleeves and Sleeve Seals for Security Pathways and Cabling
5. 27 1116.10 – Security Cabinets, Racks, Frames, and Enclosures
6. 27 1300.10 – Security Backbone Cabling
7. 27 1500.10 – Security Horizontal Cabling
8. 28 0500.10 – Common Work Results for Electronic Security
9. 28 0507.10 – Power Sources for Electronic Security
10. 28 0509.10 – Surge Protection for Electronic Security
11. 28 0531.10 – Communications Equipment for Electronic Security
12. 28 0800.10 – Commissioning of Electronic Security
13. 28 1000 – Access Control
14. 28 1515 – Electrified Locking Devices & Accessories
15. 28 2000 – Video
16. 28 3100 – Intrusion Detection
17. 28 3111 – Addressable Fire Alarm System

- C. Requirements of Specification 280800.10 take precedence over Division 01 System Acceptance requirements.

- D. Related Sections include the following:

1. Division 01
2. Division 08
 - a. Coordinate Division 8 and 28 requirements.
3. Division 12
 - a. Coordinate case mounted security sensors and equipment.

4. Division 14
 - a. Elevator Contractor shall coordinate and install equipment in the elevator. The equipment includes the intercoms, cameras, and card readers.
 - b. Terminate signal lines in the elevator machine room for use by the Security Contractor.
 - c. Security Contractor shall coordinate cabling. Use High Flex cables for elevator installations listed for intended purpose.
 - d. The Security Contractor shall provide terminal strips and wire from the security panel, labeling each point and its respective function (input output) for the Elevator Contractor shall provide final termination from elevator panel.
 - e. Provide a transition box for all security related equipment.
5. Division 23
 - a. Coordinate installation of the Light Control Equipment, Radio, and Elevator Status Equipment installed in the Security Monitoring Console. Provide dedicated Liebert Cooling Systems (or approved equivalent) and controls, for each Security Monitoring Control and Equipment room.
6. Division 26
 - a. Provide dedicated Emergency Electrical Power (120 VAC) circuits as required to provide full system functionality.
7. Division 27
 - a. Shared pathways
 - b. Security Cabling
 - c. Grounding and Bonding System

1.6 DEFINITIONS

- A. ARA: Area of Rescue Assistance.
- B. Basket Cable Tray: A fabricated structure consisting of wire mesh bottom and side rails.
- C. BICSI: Building Industry Consulting Service International.
- D. Controller: An intelligent peripheral control unit that uses a computer for controlling its operation. Where this term is presented with an initial capital letter, this definition applies.
- E. CPU: Central processing unit.
- F. Credential: Data assigned to an entity and used to identify that entity.
- G. DGP: Data Gathering Panel.
- H. EMI: Electromagnetic interference.
- I. EMT: Electric Metallic Tubing.
- J. ESS: Electronic Security System.
- K. GFI: Ground fault interrupter.
- L. Identifier: A credential card, keypad personal identification number or code, biometric characteristic, or other unique identification entered as data into the entry-control database for the purpose of identifying an individual. Where this term is presented with an initial capital letter, this definition applies.
- M. I/O: Input/Output.
- N. INC: Intelligent Network Controller
- O. Intrusion Zone (IZ): A space or area for which an intrusion must be detected and uniquely identified, the sensor or group of sensors assigned to perform the detection, and any interface equipment between sensors and communication link to central-station control unit.
- P. LAN: Local area network.

- Q. LCD: Liquid-crystal display.
- R. LED: Light-emitting diode.
- S. LOD: Level of Detail.
- T. LOE: Level of Effort.
- U. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power-limited circuits.
- V. M-JPEG: Motion – Joint Photographic Experts Group.
- W. MPEG: Moving picture experts group.
- X. NEC: National Electrical Code.
- Y. NECA: National Electrical Contractors Association.
- Z. NEMA: National Electrical Manufacturers Association.
- AA. NFPA: National Fire Protection Association.
- BB. NRTL: Nationally Recognized Testing Laboratory.
- CC. Open Cabling: Passing telecommunications cabling through open space (e.g., between the studs of a wall cavity).
- DD. OPS: Office of Protection Services.
- EE. OTDR: Optical Time Domain Reflectometer.
- FF. PACS: Physical Access Control System.
- GG. PIR: Passive infrared.
- HH. PIR Rex: Passive Infrared Request to Exit.
- II. PPSD: Personnel and Physical Security Division (A department within OPS).
- JJ. RCDD: Registered Communications Distribution Designer.
- KK. RF: Radio frequency.
- LL. RFI: Radio-frequency interference.
- MM. RIGID: Rigid conduit is galvanized steel tubing, with a tubing wall that is thick enough to allow it to be threaded.

- NN. RS-232: An TIA/EIA standard for asynchronous serial data communications between terminal devices. This standard defines a 25-pin connector and certain signal characteristics for interfacing computer equipment.
- OO. RS-485: An TIA/EIA standard for multipoint communications.
- PP. SMS: Security Management System – A SMS is a software that incorporates multiple security subsystems (e.g., access control, intrusion detection, closed circuit television, intercom) into a single platform and graphical user interface.
- QQ. Standard Intruder: A person who weighs 100 lb. (45 kg) or more and whose height is 1525 mm (60 in) or more; dressed in standard clothing.
- RR. Standard-Intruder Movement: Any movement, such as walking, running, crawling, rolling, or jumping, of a "standard intruder" in a protected zone.
- SS. TCP/IP: Transport control protocol/Internet protocol incorporated into Microsoft Windows.
- TT. TDMM: Telecommunications Distribution Methods Manual.
- UU. TIA: Telecommunications Industry Association.
- VV. UPS: Uninterruptible Power Supply.
- WW. UTP: Unshielded Twisted Pair.
- XX. VASS: Video Assessment and Surveillance System.
- YY. VPN: Virtual Private Network.
- ZZ. WAN: Wide Area Network.
- AAA. WAV: The digital audio format used in Microsoft Windows.
- BBB. Windows: Operating system by Microsoft Corporation.
- CCC. Workstation: A PC with software that is configured for specific limited security system functions.
- DDD. WYSIWYG: (What You See Is What You Get.) Text and graphics appear on the screen the same as they will print.

1.7 GENERAL ARRANGEMENT OF CONTRACT DOCUMENTS

- A. The Contract Documents supplement to this specification indicates approximate locations of equipment. The installation and/or locations of the equipment and devices shall be

governed by the intent of the design; specification and Contract Documents, with due regard to actual site conditions, recommendations, ambient factors affecting the equipment and operations in the vicinity. The Contract Documents are diagrammatic and do not reveal all offsets, bends, elbows, components, materials, and other specific elements that may be required for proper installation. If any departure from the contract documents is deemed necessary, or in the event of conflicts, the submit details of such departures or conflicts in writing to the owner or owner's representative for his or her comment and/or approval before initiating work.

- B. Anything called for by one of the Contract Documents and not called for by the others shall be of like effect as if required or called by all, except if a provision clearly designed to negate or alter a provision contained in one or more of the other Contract Documents shall have the intended effect. In the event of conflicts among the Contract Documents, the Contract Documents shall take precedence in the following order: the Form of Agreement; the Supplemental General Conditions; the Special Conditions; the Specifications with attachments; and the drawings.

1.8 SUBMITTALS

A. General

1. Comply with the Contract Documents and in accordance with this section. Submittals lacking the breadth or depth of these requirements will be considered incomplete and rejected. Submissions are considered multidisciplinary and require coordination with applicable divisions to provide a complete and comprehensive submission package. Additional general provisions are as follows:
 - a. Schedule submittals to maintain the project schedule. For coordination drawings refer to Division 1 Specification, which outline basic submittal requirements and coordination.
 - b. Identify variations from requirements of Contract Documents and state product and system limitations, which may be detrimental to successful performance of the completed work or system.
 - c. Submit each package at one (1) time for each review and include components from applicable disciplines (e.g., electrical work, architectural finishes, door hardware, etc.) which are required to produce an accurate and detailed depiction of the project.
 - d. Manufacturer's information used for submittal shall have pages with items for approval tagged, items on pages shall be identified, and capacities and performance parameters for review shall be clearly marked through use of an arrow or highlighting. Provide space for COTR and Contractor review stamps.
 - e. Drawings shall be in the project specific version of AutoCAD® or REVIT, drawn accurately, and in accordance with Smithsonian Institution CAD and REVIT Standards. FREEHAND SKETCHES OR COPIED VERSIONS OF

THE CONSTRUCTION DOCUMENTS WILL NOT BE ACCEPTED. If departures from the drawings are subsequently deemed necessary by the Contractor, submit details of such departures and the reasons thereof in writing to the COTR and the PPSD Security Engineer for approval before initiating work.

f. Submittal Format

- 1) Provide one (1) hard-copy of drawings. Make all other submittals as PDF with bookmarks for sections.
- 2) Refer to SI Special Conditions Document for drawing format and content requirements.

B. Pre-Installation Submittal

1. Qualifications

a. Provide Company certifications

- 1) Software House
 - a) Enterprise Partner

b. Include qualifications and manufacturer's certifications for individuals working on the project including but not limited to:

- 1) Software House
 - a) CCURE 800/8000
 - b) CCURE 9000
- 2) American Dynamics
 - a) Victor
 - b) Video Edge
- 3) Cisco
 - a) CCNA
- 4) BICSI
 - a) RCDD

c. Provide project references as outlined in Paragraph 1.11 A "Contractor Qualifications".

2. Product Data

- a. Provide a chart of product data listing the specification section and paragraph number of each product. Annotate if “Provided as Specified” or “Substitution Requested”.
 - b. Product data sheets organized and bookmarked by Specification Division. Annotate deviations from the design documents and the justification for the change.
 - c. Where the words, "or approved equivalent" or like words are used, either furnish the equipment as specified or submit a request for substitution in writing with the make, model, and justification to the COTR and the PPSD Security Engineer for approval.
 - d. If the contractor recommends equipment substitution, the contractor is responsible for complete documentation of the reason for the change including price differential and is financially liable for the design time expended by the security consultant to research the substitution.
3. Shop Drawings
- a. Build upon the design documents to reflect current conditions and approved product data. Annotate deviations from the design documents and the justification for the change.
 - b. Include wiring diagrams to include but not limited to power supplies, card readers, fire alarm connections, elevator interface, and tamper circuits.
 - c. Security door schedule coordinated with Division 8 requirements. Include the following information:
 - 1) Configuration Number
 - 2) Door Number (Derived from Architectural Drawings)
 - 3) Floor Plan Sheet Number
 - 4) Standard Detail Number
 - 5) Door Description (Derived from Loading Sheets)
 - 6) Security Point Number (Derived from Loading Sheets)
 - 7) Door Position or Monitoring Device Type, Make & Model Number
 - 8) Lock Type, Model Number & Power Input/Draw (standby/active)
 - 9) Card Reader Type, Make & Model Number
 - 10) Shunting Device Type, Make & Model Number
 - 11) Sounder Type, Make & Model Number
 - 12) Camera Make & Model Number
 - 13) Misc. devices as required
 - a) Delayed Egress Type, Make & Model Number
 - b) Intercom Make & Model Number
 - c) Electric Transfer Hinge
 - d) Electric Pass-through device
 - 14) Remarks column indicating special notes or door configurations

C. Pre-Programming Submittal

1. IP Addressing Scheme

- a. Provide OPS with the quantity of devices requiring IP addresses. OPS will then provide the IP addressing scheme.

2. Loading Sheets

- a. Provide loading sheets for each DGP, including input and output boards for all field panels associated with the project.
- b. OPS-PPSD will provide blank electronic sheets for contractor use.
- c. Provide a spreadsheet for each DGP. Name the spreadsheet with the DGP number (e.g. "Site Name DGP-01.xls")

D. Pre-Acceptance Testing

1. OPS-PPSD will provide blank testing forms for contractor to reproduce and fill out during testing.

2. Contractor Field Test

- a. Contractor performs the Contractor Field Test (CFT) of all devices utilizing OPS provided forms and submits test results to OPS-PPSD.

3. Performance Verification Test

- a. Based on the OPS-PPSD approval of the Contractor's Field Test, the COTR will schedule the PVT with the Contractor and OPS-PPSD.
- b. OPS-PPSD will witness the Contractor conduct the PVT of all devices utilizing the same form as for the CFT.

E. Closeout Submittals

1. Project Redlines

- a. Neatly maintain an up-to-date set of construction redlines detailing current location and configuration of the project components.
- b. Mark the redline documents with the words 'Master Redlines' on the cover sheet and be maintained by the Contractor in the project office.
- c. Field drawings shall be used for data gathering & field changes. These changes shall be made to the master redline documents daily. Field drawings shall not be considered "master redlines".
- d. Provide access to redline documents anytime during the project for review and inspection by the COTR or authorized OPS representative.
- e. Any project component or assembly that is not installed in strict accordance with the drawings shall be so noted on the drawings.

- f. Submit the Master Redline document to the COTR and PPSD Security Engineer for review and approval of all changes or modifications to the documents prior to producing Record Construction Documents. The COTR shall be given a minimum of a thirty (30) day review period to determine the adequacy of the Master Redlines. If the master redlines are found suitable by the COTR and the PPSD Security Engineer, the COTR will initial and date each sheet and turn the redlines over to the Contractor for Record As-Built development.
2. Record Construction Documents (Record As-Built)
 - a. The submitted as built documents shall be in editable electronic formats and the ownership of the drawings shall be fully relinquished to the owner.

1.9 PROJECT PROCESS DIAGRAM

- A. The ESS Project Process Diagram (below) is provided to identify key consecutive or concurrent tasks and milestones required to ensure the project is completed prior to owner occupancy. Substantial completion means all systems have been fully tested and accepted in writing by OPS. Minor or non-life safety related punch list items may continue through owner occupancy, but shall be resolved within two (2) weeks of official date of occupancy.
- B. The contractor is encouraged to utilize the diagram for the development of project schedules, and coordinating submissions.

1.10 COORDINATION

- A. Coordinate arrangement, mounting, and support of electronic security equipment:
- B. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
- C. To provide for ease of disconnecting the equipment with minimum interference to other installations.
- D. To allow right of way for piping and conduit installed at required heights.
- E. Ensure raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
- F. Coordinate the installation of required supporting discipline devices placement and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- G. Coordinate the locations of access panels and doors for electronic security items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 08 Section "Access Doors and Frames."
- H. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."

1.11 QUALITY ASSURANCE

- A. Contractor Qualifications
 - 1. The Contractor or security sub-contractor shall be a licensed security Contractor with a minimum of five (5) years' experience installing and servicing systems of similar scope and complexity. The Contractor shall be an authorized regional representative of the electronic security systems included in the project scope.
 - 2. Provide four (4) current references from clients with systems of similar scope and complexity which became operational in the past three (3) years. At least three (3) of the references shall be utilizing the same system components, in a similar configuration as the proposed system. The references must include a current point of contact, company or agency name, address, telephone number, complete system description, date of completion, and approximate cost of the project.
 - 3. The owner reserves the option to visit the reference sites, with the site owner's permission and representative, to verify the quality of installation and the references' level of satisfaction with the system.
 - 4. Provide copies of system manufacturer certification for all technicians. Only utilize factory-trained technicians to install, program, and service the electronic security

systems. The Lead Technician shall have a minimum of five (5) continuous years of technical experience in electronic security systems.

5. The Contractor shall have a local service facility located within 60 miles of the project site. The local facility shall include sufficient spare parts inventory to support the service requirements associated with this contract. The COTR and the PPSD Security Engineer reserves the option of visiting the company's facility to verify the service inventory and presence of a local service organization.
6. Refer to Division 27 Specifications for additional requirements for cabling.

B. Electrical Components, Devices, and Accessories

1. Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Material & Workmanship

1. Unless otherwise specifically provided under this contract, all equipment, material and articles to be incorporated in the work shall be new and of the most suitable grade for the purposes intended.
2. References to any equipment, material, article or patented process, by trade name, make or catalog number shall be regarded as establishing a standard of performance and quality, and shall not be construed as limiting competition.
3. When so directed, the Contractor shall submit samples for approval at the Contractor's expense. Equipment, materials, and articles installed or used without the required approval shall be at the Contractor's risk of rejection.
4. Warranties of all work and installed products shall be according to the Contract General Provisions.

1.12 MAINTENANCE & SERVICE

A. General Requirements

1. Provide services required and equipment necessary to maintain the electronic security system in an operational state as specified for a period of one (1) year after formal written acceptance of the system.
2. Provide necessary material required for performing scheduled adjustments or other non-scheduled work. Minimize impacts on facility operations when performing scheduled adjustments or other non-scheduled work. See also General Project Requirements.

B. Description of Work

1. The adjustment and repair of the security system includes the following items: computers, equipment, communications transmission equipment and data transmission media (DTM), local processors, security system sensors, access control equipment, facility interface, signal transmission equipment, intercoms, and video equipment.

C. Personnel:

1. Service personnel shall be certified in the maintenance and repair of the selected type of equipment and qualified to accomplish all work promptly and satisfactorily. Advise the COTR and the PPSD Security Engineer in writing of the name of the designated service representative, and of any change in personnel. Provide the COTR and the PPSD Security Engineer with copies of system manufacturer certification for the designated service representative.

D. Emergency Service

1. The owner shall initiate service calls whenever the system is not functioning properly. Provide the owner with an emergency service center telephone number. Staff the emergency service center 24 hours a day 365 days a year.
2. The Smithsonian Institution has sole authority for determining catastrophic and non-catastrophic system failures.
3. Catastrophic system failures are defined as any system failure that the Owner determines will place the facility(s) at increased risk. For catastrophic system failures, provide same day four (4) hour service response with a defect correction time not to exceed eight (8) hours from notification.
4. For non-catastrophic failures, provide eight (8) hour service response with a defect correction time not to exceed 24 hours from notification.

E. Work Request

1. Separately record each service call request, as received. The record shall include the serial number identifying the component involved, its location, date and time the call was received, specific nature of trouble, names of service personnel assigned to the task, instructions describing the action taken, the amount and nature of the materials used, and the date and time of commencement and completion. Deliver a record of the work performed within five (5) working days after the work was completed.

F. System Modifications

1. Make any recommendations for system modification in writing to the COTR and the PPSD Security Engineer. No system modifications, including operating parameters and control settings, shall be made without prior written approval from the COTR and the PPSD Security Engineer.

1.13 PROJECT ENVIRONMENTAL CONDITIONS

A. Control Station

1. Rated for continuous operation in ambient conditions of 60 to 85 deg F (16 to 30 deg C) and a relative humidity of 20 to 80 percent, non-condensing.

B. Interior, Controlled Environment

1. System components, except central-station control unit, installed in temperature-controlled interior environments shall be rated for continuous operation in ambient conditions of 36 to 122 deg F (2 to 50 deg C) dry bulb and 20 to 90 percent relative humidity, non-condensing. NEMA 250, Type 1 enclosure.

C. Interior, Uncontrolled Environment

1. System components installed in non-temperature-controlled interior environments shall be rated for continuous operation in ambient conditions of 0 to 122 deg F (-18 to 50 deg C) dry bulb and 20 to 90 percent relative humidity, non-condensing. NEMA 250, Type 4x enclosures.

D. Exterior Environment

1. System components installed in locations exposed to weather shall be rated for continuous operation in ambient conditions of -30 to 122 deg F (-34 to 50 deg C) dry bulb and 20 to 90 percent relative humidity, condensing. Rate for continuous operation where exposed to rain as specified in NEMA 250, winds up to 137 km/h (85 mph) and snow cover up to 24 in (610 mm) thick. NEMA 250, Type 4X enclosures.

E. Hazardous Environment

1. System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.

F. Corrosive Environment

1. For system components subjected to corrosive fumes, vapors, and wind-driven salt spray in coastal zones, provide NEMA 250, Type 4X enclosures.

G. Security Environment

1. Use vandal resistant enclosures in high-risk areas where equipment may be subject to damage.

1.14 EQUIPMENT AND MATERIALS

A. General Equipment Requirements

1. Equipment and materials shall be standard, current products of the manufacturer, and be suitable for the systems being installed and the intent of the design.
2. Plastic laminated nameplates shall be installed on all components accessed by - Smithsonian Institution Security Maintenance Personnel. Each nameplate shall identify the component and its location within the security system. The laminated plastic shall be 0.06 in (1.6 mm) thick, black with white lettering center core. Nameplates shall be a minimum of 0.75 in (19 mm) high, with a minimum of 0.13 in (3.3 mm) high-engraved block lettering. Nameplates are to be attached to the component with screws or located as required by security documentation plans and specifications. All console monitors shall be labeled with the monitor number and intended function. Submit planned naming conventions for approval.
3. Any material, device, or equipment damages including dents and marred finishes before or during installation and before acceptance of the completed system, shall be replaced unless repairs can be made that are acceptable to the COTR and the PPSD Security Engineer. Any such replacement or repairs, including repairs to the finish, shall be made at no cost to the Owner.
4. Parts of the project site are finished spaces, including paint, trim, wall covering, floor treatments, lighting, and building mechanical systems. Therefore, perform the work specified herein, such that, at the completion of his work, all finished space is restored to the original condition existing prior to the commencement of work. During the course of performing the work specified herein, if the Contractor encounters any damaged finish in any area where the Contractor's work is to be performed, notify the COTR in writing prior to performing work in that area. Proceed with the work in these areas only after receiving written confirmation that the existing conditions have been documented and authorization has been given to proceed.

1.15 COMPONENT ENCLOSURES

A. Tamper Provisions and Tamper Switches

1. Enclosures with terminal strips or circuit boards require tamper switches.
2. Arrange tamper switches to initiate an alarm signal that will report to the monitoring station when the door or cover is moved.
3. Tamper switches shall be inaccessible until the switch is activated. Be connected to circuits which are under electrical supervision at all times, irrespective of the protection mode in which the circuit is operating. Be spring-loaded and held in the closed position by the door or cover and be wired so they break the circuit when the door cover is disturbed. Tamper circuits shall be adjustable type screw sets and shall be adjusted by the contractor to eliminate nuisance alarms associated with incorrectly mounted tamper device shall annunciate prior to the enclosure door opening (within 1/4 " tolerance).
4. The single gang junction boxes for the portrait alarming and pull boxes with less than 102 square mm will not require tamper switches.
5. All enclosures over 12 sq in (305 sq mm) shall be hinged with an enclosure lock.
6. Control Enclosures: Maintenance/Safety switches on control enclosures, which must be opened to make routing maintenance adjustments to the system and to service the power supplies, shall be push/pull-set automatic reset type.
7. Provide one (1) enclosure tamper switch for each 24 in (609 mm) of enclosure lock side opening evenly spaced.
8. All security screws shall be Torx-Post Security Screws.

1.16 WARRANTY

- A. The Contractor shall, as a condition precedent to the final payment, execute a written guarantee (warranty) to the COTR certifying all contract requirements have been completed according to the final specifications. Contract drawings and the warranty of all materials and equipment furnished under this contract are to remain in satisfactory operating condition (ordinary wear and tear, abuse and causes beyond his control for this work accepted) for one (1) year from the date the Contractor received written notification of final acceptance from the COTR and the PPSD Security Engineer. Repair or replace all defects or damages due to faulty materials or workmanship without delay, to the COTR's satisfaction, and at the Contractor's expense.
- B. When equipment and labor covered by the Contractor's warranty, or by a manufacturer's warranty, have been replaced or restored because of its failure during the warranty period, the warranty period for the replaced or repaired equipment or restored work shall be reinstated for a period equal to the original warranty period, and commencing with the date of completion of the replacement or restoration work. In the event any manufacturer customarily provides a warranty period greater than one (1) year, the Contractor's warranty shall be for the same duration for that component.

PART 2 - PRODUCTS

2.1 THERE ARE NO PRODUCTS IN THIS SPECIFICATION

PART 3 - EXECUTION

3.1 COMMON REQUIREMENTS FOR ELECTRONIC SECURITY INSTALLATION

- A. Comply with NECA 1.
- B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
- C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.
- D. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electronic safety and security equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
- E. Right of Way: Give to piping systems installed at a required slope.

3.2 GENERAL

- A. Install all system components and appurtenances in accordance with the manufacturer's instructions, ANSI C2, and furnish all necessary interconnections, services, and adjustments required for a complete and operable system as specified. Control signals, communications, and data transmission lines grounding shall be installed as necessary to preclude ground loops, noise, and surges from affecting system operation. Equipment, materials, installation, workmanship, inspection, and testing shall be in accordance with manufacturers' recommendations and as modified herein.
- B. Consult the manufacturer's installation manuals for all wiring diagrams, schematics, physical equipment sizes, etc., before beginning system installation. Refer to the Riser/Connection diagram for all schematic system installation/termination/wiring data.
- C. Firmly attach equipment to walls and ceiling/floor assemblies (e.g., sensors shall not be supported solely by suspended ceilings). Fasteners and supports shall be adequate to support the required load.

- D. Current Site Conditions: Visit the site and verify site conditions are in agreement with the design package. Report all changes to the site or conditions that will affect performance of the system to the COTR as part of the Pre-Installation Submittal. Take no corrective action without written permission from the COTR.

3.3 SYSTEM PROGRAMMING

A. General

1. The following Loading Sheet submittals are required:
 - a. Shop Drawings – Pre-Installation Submittal
 - b. Final Construction Document Submittal – Closeout Submittal
2. Loading Sheets
 - a. See the attached loading sheets. Refer to Section 1 regarding loading sheet submissions.
 - b. System Configuration and Data Entry:
 - 1) The contractor is responsible for providing all system configuration and data entry for the SMS and subsystems (e.g., intercom, Inovonics wireless, digital video recorders, network video recorders). All data entry shall be performed to Smithsonian Institution's standards & guidelines. The Contractor is responsible for participating in all meetings with the OPS and the client to compile the information needed for data entry. These meetings shall be established at the beginning of the project and incorporated in to the project schedule as a milestone task. The contractor shall be responsible for all data collection, data entry, and system configuration. The contractor shall collect, enter, & program and/or configure the following components:
 - a) Access control system components
 - b) All intrusion detection system components
 - c) Video surveillance, control and recording systems
 - d) Intercom systems components
 - e) All other security subsystems shown in the contract documents

3. Graphics

- a. Based on as-built drawings developed for the construction project, create all map sets and system icons showing locations of all alarms and field devices.
- b. Produce graphical maps of all alarm points installed under this contract including perimeter and exterior alarm points.
- c. Create and install all graphics needed to make the system operational.
- d. Utilize data from the contract documents, Contractor's field surveys, and all other pertinent information in the Contractor's possession to complete the graphics.
- e. Identify and request from the COTR and the PPSD Security Engineer, any additional data needed to provide a complete graphics package.
- f. Graphics shall have sufficient level of detail for the system operator to assess the alarm.
- g. Supply hard copy, color examples at least 8 x 10 in (203.2 x 254 mm) of each type of graphic to be used for the completed Security system. Deliver the graphics examples to the COTR and the PPSD Security Engineer for review and approval at least 90 calendar days prior to the scheduled date the Contractor requires them.

B. Alarm / Event Identification Format for Monitoring Station

1. Initial Descriptor

- a. The Initial Descriptor is a brief description of the event taking place and shall be no more than 50 characters in length. Contact OPS-PPSD for any Building ID, Area ID or Device / Condition Type not listed below.
- b. Building ID
 - 1) This is a two (2) or four (4) character identification of the building where the event is taking place. This shall follow the standard format as shown in the listing below. Confirm buildings and identifications with the owner.

Building	ID
African Art	AA
Air and Space	AS
American History	AH
American Indian (NY)	IN
American Indian Mall	IM
Anacostia	AN
Ancon (STRI)	AC
Apollo Drive	AD
Arts and Industries	AB
Barro Colorado (STRI)	BC

Building	ID
Hirshhorn	HH
Horticulture Greenhouse	HG
Library (STRI)	LB
Maintenance Shop (STRI)	TP
MSC (Suitland)	MS
NAOS (STRI)	NAOS
National Zoological Park	NZ
Natural History	NH
NMAAHC	AAHC
Patent Office Building	PB

Building	ID	Building	ID
Bocas del Toro (STRI)	BT	Pennsy Drive	SISC
Capital Gallery	CG	Postal Museum	PM
Columbia Warehouse	CW	Quad	SQ
Conference Center (STRI)	CC	Renwick	RW
Cooper Hewitt (NY)	CH	Research Branch (NY)	RB
CRC (Suitland)	CR	Sackler	SK
Culebra (STRI)	CU	SAO Arizona	AZ
Dulles	DL	SAO Hilo HI	HI
Engineering Building (STRI)	EB	SAO Mauna Kea HI	MK
Folk Life Festival	FF	SCBI Front Royal VA	FZ
Freer	FR	SERC	SR
Galeta (STRI)	GA	SI Castle	SB
Gamboa (STRI)	GM	Tivoli Facility (STRI)	TV
Garber (Suitland)	GB	Tupper Facility (STRI)	TP
Herndon	HN	Victor Building	VB

c. Monitor Point Location

- 1) This is the monitor point physical location. There is no separation between the Building ID and the Monitor Point Location.
- 2) Description of iStar:
 - a) The Monitoring Point Location includes a two (2) character descriptor for the iStar Cluster, followed by a colon and then a two (2) character descriptor for the iStar panel followed by a colon then a one (1) character space.
 - b) Next is the one (1) character descriptor for ACM # (1 or 2) 'ACM: #' followed by a one (1) character space.
 - c) Next is the device connection location for where the device terminates using 'I8' for an I-8 module, 'R8' for an R-8 module, 'RDR' for a reader module, followed by a colon. Then a one (1) character number representing which module it is (i.e. the fourth I-8 module), followed by a colon. Last is a one (1) character number representing the input number on the module; the inputs on the ACM board require a two (2) character number.

3) Example of iStar

- a) xx01:01 ACM:1:i06 = iStar Cluster 01, iStar #01, ACM #1, main panel, sixth input
- b) xx01:02 ACM:2 I8:3:i6 = iStar Cluster 01, iStar #02, ACM#2, I-8 module #3, sixth input
- c) xx02:16 ACM:1 R8:2:o4 = iStar Cluster 02, iStar #16, ACM #1, R-8 module #2, fourth output
- d) xx01:15 ACM:1 RDR:4:i2 = iStar Cluster 01, iStar #15, ACM#1, reader module #4, second input

d. Area ID (Type)

- 1) This is a brief description of the location of the alarm / event. There shall be a one (1) character space between the Monitor Point Location and the Area ID. At a minimum level of description, this shall follow the standard format as shown in the listing below. Confirm areas and identifications with the owner.

Description	Area ID
Vault	VAULT
Collection Storage	COLL STORAGE
Archive Areas	ARCHIVE
Collection Archive Areas	COLL ARCHIVE
Collection Processing / Preparation Areas	COLL PREP ROOM
Alcohol Storage Areas	ALCOHOL
Cold Collection Storage Areas	COLD STORAGE
Curatorial Areas	CURATORIAL
Exhibit Gallery (XX To be replaced with Gallery No.)	GALLERY XX
Exhibit Alarms Located in Lobbies or Reception Areas	LOBBY EXHIBIT
Exhibit or Artifact Alarms in "Other" Registrar Areas	MISC EXHIBIT
Registrar Areas	REGISTRAR
Perimeter Door, Glass Break, Motion	PERIMETER
Staff Cafeteria	STAFF CAFE
Public Access Cafeteria	PUBLIC CAFE
Public Staff Separation Door	STAFF DOOR
Museum Shop	MUSEUM SHOP
Museum Shop Storage Areas	MUSEUM SHOP
Cash Processing Areas	CASH ROOM
Automated Teller Machines	ATM
Executive Office Space	EXECUTIVE

Description	Area ID
Support Staff Office Space	STAFF OFFICE
Loading Dock Areas	LOADING DOCK
Security Unit Control Room	UNIT CONTROL
Security Wire Closet	WIRE CLOSET
Computer Center Rooms	COMPUTER
Mechanical Room	MECHANICAL
Electrical Room	ELECTRICAL
Communication Closet	COMM CLOSET
Fabrication Shop	FABRICATION
Support Staff Storage Area	STAFF STORAGE
Warehouse Storage Area	WAREHOUSE
Shipping and Receiving Area	SHIPPING
Security Officer Kiosks / Posts	SECURITY POST
Information Booths	INFO BOOTH
Locker Rooms	LOCKER ROOM
Laboratories	LABORATORIES
Libraries	LIBRARY
Liquor Storage Areas	LIQUOR
Child Care Centers	CHILD CARE
Photo Processing Laboratories	PHOTO LAB
Animal Area for Public Viewing	ANIMAL
Animal Area not for Public Viewing	ANIMAL OFF-
Outside Animal Area	ANIMAL YARD
Marine Animal Area	ANIMAL TANK
Animal/Keeper Area	KEEPER
Keeper (only) Area	KEEPER SPACE

e. Device / Condition Type

- 1) This is a two (2) digit descriptor for the type of device / condition that initiated the alarm / event. There is a one (1) character space between the Area ID and the Device / Condition Type. This follows the standard format as shown in the listing below. Confirm device / condition identifications with the owner.

Type of Device / Condition	ID
Door Contact	DC
Motion Detector	MD
Vibration Detector	VD
Glass Break Detector	GB

Type of Device / Condition	ID
Window Contact	WC
Hazard Alarm	HZ
Case / Display Alarm	CA
Low / Missing Battery	LB

Type of Device / Condition	ID	Type of Device / Condition	ID
Hold Up / Duress Button	HU	Communication Failure	CF
Bill Trap (Last Bill Detector)	BT	Security Fault	SF
Door Held Open	HO	UPS / Power Supply Trouble	PT
Door Forced Open	FO	Restore / Reset	RS
Power Failure	PF	Proximity Alarm	PA
Tamper Alarm	TP	Pressure Mat	PM
Delayed Egress Pre Alarm	DE	HVAC Duct Alarm	DA
Temperature Alarm	TA	Lock Secure	LS
Shock Sensor	SS	Battery Fail	BF
Photo Beam	PB	Tamper Alarm	TP
Request to Exit	REX	Lock	LK
Seismic Alarm	SA	Door Status Monitor	DS
Video Loss	VL		M
Supervision Error	SE	Sounder	SD

f. Examples for the Initial Descriptor:

- 1) National Museum of Natural History monitor point location DGP chain 1 DGP number 2 first I-8 input 4, collection storage motion detector in alarm.
 - a) NH01:02 I8:1:i4 COLL STORAGE MD
- 2) Arts and Industries Building monitor point location DGP chain 3 DGP number 4 main panel input 6, public staff separation door contact.
 - a) AB03:04 M:i6 STAFF DOOR DC

2. Secondary Descriptor

- a. The Secondary Descriptor is 128 characters
- b. This is an in-depth description for the location of the alarm / event taking place. If multiple devices are connected to the same monitor point the number of devices should be indicated.
- c. Examples for the secondary descriptor
 - 1) National Museum of Natural History monitor point location DGP chain 1, DGP number 6, I32 board input 31, collection storage motion detector in alarm.

- a) NH01:06 I32:i31 COLL STORAGE MD: NMNH 5th Fl East Wing Rm. 5210 Motion Detectors (3).
- 2) Arts and Industries Building monitor point location DGP chain 1, DGP number 2 third I-8 board input 5, public staff separation door forced open.
- a) AB01:02 I8:3:i5 STAFF DOOR FO: AIB 1st Fl East Hall Card Access Door Forced Open.

d. Linked Instruction Event

- 1) This is a full instructional description for the processing of the alarm / event and follows the standard format of:
 - a) Repeat 50 character descriptor
 - b) In-depth description of location
 - c) Response instructions
 - d) Logging instructions
 - e) Reset instructions
 - f) Nearest camera location (If multiple views are available list all)
 - g) DGP input is connected to

e. Examples for the linked instructional event

- 1) National Museum of Natural History monitor point location DGP chain 1 DGP number 3, I32 board input 31, collection storage motion detector in alarm.

Step	Display
1	NH01:03 I32:i31 COLL STORAGE MD
2	5th fl east wing Rm. 5210 motion detectors (3)
3	Dispatch officer to investigate and report findings
4	Log officer's name and actions into computer log
5	Device resets automatically when motion has stopped
6	Nearest camera is No. (camera Nos. provides other
7	Device connected to DGP

C. Alarm / Event Mapping Requirements

1. General

- a. All maps associated with alarm / event call-ups shall be a black foreground on a white background.

2. Map Information Screen

- a. The map information screen shall provide access to three different map levels for each event
- b. Building Floor Map
 - 1) This map has the quadrant where the event is taking place line colored blue or the colored event icon in place. Identify this map with the building name and floor at the bottom of the map.
- c. Quadrant Map
 - 1) This is the map called up by the system automatically upon event activation. Identify this map with the building name, floor number, and quadrant at the bottom of the map. This map has the icon representing the event shown upon call up. Clicking on the icon or a map “zoom in” icon at this map level calls up the Area map.
- d. Area Map
 - 1) This map represents the local area of the building where the event is taking place. This map contains all icons associated with this area. These icons are “living”, changing colors as the associated devices change state. Identify this map with the building name, floor number, quadrant, and area name at the bottom of the map.

3. Mapping icons

- a. Mapping icons are “living” changing color as the associated devices change state.
 - 1) Red = alarm / activated state
 - 2) Green = secure / normal state
 - 3) Yellow = masked, shunted, accessed, etc. state
- b. Group and position mapping icons represented on the Area map as follows:
 - 1) Motion detectors providing back up to perimeter door(s) / window(s).
 - a) Place a single icon in a close geographical position to the protected door(s) or window(s), to represent all devices in the zone or group
 - 2) Motion detectors providing back up to public staff separation doors and other internal doors.

- a) Place a single icon in a close geographical position to the protected door.
- 3) Motion detectors providing volumetric protection of a room.
 - a) Place a single icon in the center of the room, to represent all devices in the zone or group
- 4) Glass break detectors protecting perimeter windows
 - a) Place a single icon in a close geographical position to the center of the window or group of windows, to represent all devices in the zone or group
- 5) Door contacts protecting individual perimeter doors or logical groups of perimeter doors.
 - a) Place a single icon in a close geographical position to the center of the door or group of doors, to represent all devices in the zone or group
- 6) Delayed egress pre alarm contacts protecting individual doors or logical groups of doors.
 - a) Place a single icon in a close geographical position to the center of the door or group of doors, to represent all devices in the zone or group.
- 7) Window contacts protecting individual perimeter windows or logical groups of perimeter windows.
 - a) Place a single icon in a close geographical position to the center of the window or group of windows, to represent all devices in the zone or group.

- 8) Card reader events to include door forced open and door held open alarms.
 - a) A single icon shall be the same as the door contact protecting the door.
 - b) Icon descriptor shall identify the appropriate event taking place.
- 9) Tamper alarms protecting panels in security closets.
 - a) Place a single icon in the center of the room, to represent all devices in the zone or group.
- 10) Tamper alarms protecting individual devices or logical groups of devices.
 - a) Place a single icon in close geographical position to the device or group of devices, to represent all devices in the zone or group.
- 11) Exhibit level case/display alarms.
 - a) A single icon shall represent all devices protecting the case/display.
 - b) Place icon directly over the case/display so the case outline is still visible below (around) the icon
 - c) Icon descriptor shall identify the appropriate device in alarm.
- 12) Vibration detectors protecting any physical barrier or point of entry.
 - a) Place a single icon in close geographical position to the physical barrier / point of entry or group of devices, to represent all devices in the zone or group.

D. System Programming

1. General Programming Requirements

- a. Use the following section to identify the anticipated level of effort (LoE) required setup, program, and configuring the ESS.
- b. Provide all setup, configuration, and programming to include data entry for the SMS and subsystems (e.g., video system, intercoms, digital video recorders, intrusion devices, maps and icons, time synchronization, including integration of subsystems to the SMS.

2. Configuration Management of Servers

- a. Provide SI-OPS the security system servers for baseline configuration 90 days before system programming begins.
 - b. Once the security system server is baselined according to SI-OCIO requirements the server will be returned to the security contractor for system programming.
 - c. There are other programming requirements the contractor needs assistance on as follows:
 - 1) OPS has to enter the Levels and Permissions of programming
 - 2) Synchronize system with C-Cure Central
 - 3) Employee card reader data will be automatically entered in the system server
 - 4) OPS will enter Card reader Clearances
3. Level of Effort for Programming
- a. Perform and complete system programming (including all data entry) at an offsite location using the Contractor's own copy of the C*Cure 800/8000 software which must be the same version SI is using.
 - b. Deliver the completed forms (loading sheets) to the COTR and PPSD Security Engineer for review and approval at least 90 calendar days prior to the scheduled date the Contractor requires it.
 - c. Once system programming has been completed, deliver the programmin to the COTR and the PPSD Security engineer on data entry forms (loading sheets) and an approved electronic medium.
 - d. System programming may not be uploaded until the COTR and the PPSD security Engineer provide written approval.
 - e. The Contractor is responsible for backing up the system prior to uploading new programming data.
 - f. Additional programming requirements are provided as follows.
 - 1) Programming for New SMS Server
 - a) Provide all other system related programming.
 - b) Upload personnel information (e.g., ID Cards backgrounds, names, access privileges, personnel photos, access schedules, personnel groupings)
 - c) Coordinate with OPS for device configurations, standards, and groupings. SI shall provide database to support Contractor's data entry tasks.
 - d) Conduct a weekly coordination meeting and work alongside OPS to ensure data uploading is performed without incident of loss of function or data loss.
 - 2) Programming for Existing SMS Servers

- a) Perform all related system programming except for personnel data as noted.
 - b) The contractor is not responsible for uploading personnel information (e.g., ID Cards backgrounds, names, access privileges, access schedules, personnel groupings).
 - c) Conduct a weekly coordination meeting and work alongside OPS to ensure data uploading is performed without incident of loss of function or data loss.
 - d) Perform system programming for SMS servers using the Contractor's own server and software. These servers shall not be connected to existing devices or systems at any time.
- g. Identify any additional data needed to provide a complete and operational system as described in the contract documents and request the information from the COTR and the PPSD Security Engineer.
- h. Programming effort requires a high level of coordination between Contractor and OPS to ensure programming is performed in accordance with SI requirements and programming uploads do not disrupt existing systems functionality.
- 1) Conduct a weekly coordination meeting and work alongside OPS to ensure data uploading is performed without incident of loss of function or data loss.
- i. Ensure data uploading is performed without incident or loss of function or data loss.
- j. The following Level of Effort Chart is provided to communicate the expected level of effort required by contractors on SI ESS projects. Determine actual levels of effort prior to bidding on the project.

SMS Setup & Configuration

Description of Tasks	Develop System Loading Sheets	e.g., program monitoring stations, programming networks, interconnections between CCTV, intercoms, time synchronization
	Coordination	e.g., retrieve IP addresses, naming conventions, standard event descriptions, programming templates, coordinate special system needs
	Initial Set-up Configuration	e.g., Load system Operating System and Application software, general system configurations
	Graphic Maps	e.g., develop naming conventions, develop file folders, confirming accuracy of AutoCAD Floor Plans, convert file into jpeg file then to bitmap.bmp file
	System Programming	e.g., program monitoring stations, programming networks, interconnections between CCTV, intercoms, time synchronization
	Final Checks	e.g., check all system diagnostics (e.g., clients, panels)
	Level of Effort (Typical Tasks)	Load and set-up 4-6 CDs and configure servers (to configure Loading and Configuring software Administrative account, audit log Keystrokes, mouse clicks, multi-screen configuration

Electronic Entry Control Systems

Description of Tasks	Develop System Loading Sheets	e.g., setup of device, door groups & schedules, REX, Locks, link graphics
	Coordination	e.g., confirming device configurations, naming conventions, event description and narratives
	Initial Set-up Configuration	e.g., enter data from loading sheets; configure components, link events, cameras, and graphics
	Graphic Maps	e.g., develop naming conventions, develop file folders, confirming accuracy of AutoCAD Floor Plans, convert file into jpeg file then to bitmap.bmp file
	System Programming	e.g., setup of device, door groups & schedules, REX, Locks, link graphics
	Final Checks	e.g., performing entry testing to confirm correct set-up and configuration
	Level of Effort (Typical Tasks)	e.g., creating a door, door configuration, adding request to exit, door monitors and relays, door timers, door related events (e.g., access, access denied, forced open, held open), linkages, controlled areas, advanced door monitoring, time zones, sequence of operations

Intrusion Detection Systems

Description of Tasks	Develop System Loading Sheets	e.g., enter door groups & schedules, link devices - REX, lock, & graphics
	Coordination	e.g., confirming device configurations, naming conventions, event description and narratives
	Initial Set-up Configuration	e.g., enter data from loading sheets; configure components, link events, cameras, and graphics
	Graphic Maps	e.g., develop naming conventions, develop file folders, confirming accuracy of AutoCAD Floor Plans, convert file into jpeg file then to bitmap.bmp file
	System Programming	e.g., enter door groups & schedules, link devices - REX, lock, & graphics
	Final Checks	e.g., walk test, device position, and masking
	Level of Effort (Typical Tasks)	e.g., setting up monitoring and control points (e.g., motion sensors, glass breaks, vibration sensor, strobes, sounders) creating intrusion zones, creating arm/disarm panel, timed sequences, time zones, icon placements on graphic maps, clearance levels, events (e.g., armed, disarmed, zone violation, device alarm activations), LCD reader messages,

CCTV Systems

Description of Tasks	Develop System Loading Sheets	e.g., programming call-ups recording
	Coordination	e.g., confirming device configurations, naming conventions
	Initial Set-up Configuration	e.g., enter data from loading sheets; camera naming convention, sequences, configure components)
	Graphic Maps	e.g., develop naming conventions, develop file folders, confirming accuracy of AutoCAD Floor Plans, convert file into jpeg file then to bitmap.bmp file
	System Programming	e.g., programming call-ups recording
	Final Checks	e.g., confirm area of coverage, call-up per event generated and recording rates
	Level of Effort (Typical Tasks)	e.g., setting up cameras points, recording ratios (e.g., normal, alarm event) timed recording, linkages, maps placements, call-ups

Intercoms Systems

Description of Tasks	Develop System Loading Sheets	e.g., programming events & call-ups
	Coordination	e.g., confirming device configurations, naming conventions, event description and narratives
	Initial Set-up Configuration	e.g., enter data from loading sheets; configure components, link events, cameras, and graphics
	Graphic Maps	e.g., develop naming conventions, develop file folders, confirming accuracy of AutoCAD Floor Plans, convert file into jpeg file then to bitmap.bmp file
	System Programming	e.g., programming events & call-ups
	Final Checks	e.g., confirm operation, SMS event generation and camera call-up
	Level of Effort (Typical Tasks)	e.g., setup linkages, events for activations, device troubles, land devices on graphic maps

Console Monitoring**Components**

Description of Tasks	Develop System Loading Sheets	N/A
	Coordination	per monitor
	Initial Set-up Configuration	per monitor
	Graphic Maps	e.g., develop naming conventions, develop file folders, confirming accuracy of AutoCAD Floor Plans, convert file into jpeg file then to bitmap.bmp file
	System Programming	N/A
	Final Checks	per monitor
	Level of Effort (Typical Tasks)	N/A

Note: Programming tasks are supported through the contractor's development of the Submittals.

END OF SECTION 280500.10

SECTION 28 0507.10 - POWER SOURCES FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Section 280500.10 Common Work Results for Electronic Security.

1.2 SYSTEM DESCRIPTION

- A. The power sources support the electronic security systems (ESS).
- B. Electrical Power
 - 1. Provide an automatic transfer switch for switching between primary and generator power.
- C. Uninterruptible Power Supply (UPS)
 - 1. The switch from primary power to generator shall generate an AC Fail alarm on the Physical Access Control System (PACS).
 - 2. Provide an interface (dry contact closure) between the PACS and the UPS system so the UPS trouble signals and main power fail appear on the PACS operator terminal as alarms.
 - 3. UPS for security equipment shall have the capacity to provide one (1) hour of service.
 - 4. All UPS for security equipment must have 20% extra capacity for future expansion.
 - 5. Dedicated UPS units shall not be floor mounted unless in the UCR. All other UPS units shall be rack mounted.
- D. Power Supplies
 - 1. The switch from primary power to generator shall generate an AC Fail alarm on the PACS.
 - 2. Detect and report on the PACS failure of any battery as a fault condition.
 - 3. Size battery backed-up power supplies for eight (8) hours of operation at actual connected load.
 - 4. All power supplies for security equipment must have 20% extra capacity for future expansion.

1.3 SUMMARY

- A. This Section includes the following:
 - 1. PACS Power Supplies
 - 2. UPS

1.4 REFER TO 280500.10 FOR ALL OTHER PART I REQUIREMENTS

PART 2 - PRODUCTS

2.1 ISTAR ENCLOSURE / POWER SUPPLY

A. Acceptable Manufacturers

1. Life Safety Power

B. Life Safety Power Flex FPO150/250-2D82M8NL4E8S/T16-B, Pre-wired 16 Door Access Dual Voltage Enclosure / Power Supply

C. Minimum Features and Specifications

1. Input Power

- a. Input 120 VAC 50 Hz 452 Watts
- b. Overload and short circuit protection
- c. Over temperature protection
- d. Polarized AC power supply disconnect

2. Output Power

- a. FPO150: 12V/12A 150 Watts
- b. FPO250: 24V/10A 250 Watts
- c. Outputs: Continuous (DC1) Resettable (DC2)
- d. 16 managed control outputs, fused at 3A each
- e. 16 auxiliary outputs, fused at 3A each
- f. 120 mV output voltage ripple
- g. System Efficiency: 87%
- h. System BTU Rating: 175 BTU/Hr

3. Battery Charging

- a. Independent built-in 2A charger for sealed lead acid or gel type batteries
- b. Microprocessor dual rate charging of 12 or 24 V battery sets
- c. Charges up to 80Ah battery sets within UL limit
- d. Automatic switchover to standby battery when AC fails
- e. Zero voltage drop when switched over to battery backup

4. Supervision

- a. AC Fail (form "C" contacts)
- b. System Fault (form "C" contacts) may be triggered by low/no battery, short to earth ground, power supply failure or blown fuse

5. Visual Indicators
 - a. AC input, DC1 and DC2 output
 - b. System fault
 - c. AC fault
 - d. Short to earth ground
 - e. Reverse battery polarity
 - f. Fire Alarm Input activated
 - g. D8: DC outputs
 - h. M8: DC inputs, outputs and fault
6. Regulatory Compliance (LSP equipment)
 - a. UL294, UL603, UL1076
 - b. ULC S318, ULC S319, CSA C22.2 #107.1, CSA C22.2 #60950
 - c. FCC Part 15, Subpart B / CSFM Approved
7. Physical Dimensions Enclosure: (H x W x D) 36 x 30 x 4.5 in (91 x 76 x 11.5 cm)
8. Connect tamper and power outputs to the unsupervised inputs on the associated DGP.
9. Annunciate the following conditions on the security management system: cabinet tamper, AC power fail, and low battery.

2.2 UNINTERRUPTIBLE POWER SUPPLY

- A. Acceptable Manufacturers
 1. APC
- B. APC Smart UPS SMT2200RM2UC or approved equivalent
- C. Minimum Features and Specifications
 1. Automatic voltage regulation and surge protection
 2. Two (2) rack units high
 3. 1920 W / 1920 VA
 4. Surge energy rating or 459 Joules
 5. Maximum depth is 18 in (46 cm)
- D. Additional Required Options / Parts
 1. UPS Network Management Card with Environmental Monitoring AP9631 or approved equivalent
 - a. Enables secure monitoring and control of an individual UPS via Web browser, CLI, or SNMP

2.3 UPS, SERVER

A. Acceptable Manufacturers

1. APC

B. APC Smart UPS SMX3000RMLV2U or approved equivalent

C. Minimum Features and Specifications

1. Automatic voltage regulation and surge protection
2. 2,700 W / 2,880 VA
3. Total of four (4) rack units high (UPS and Battery Pack)
4. Surge energy rating of 540 Joules
5. Maximum depth is 26 in (66 cm)

D. Additional Required Options / Parts

1. UPS Network Management Card with Environmental Monitoring AP9631 or approved equivalent
 - a. Enables secure monitoring and control of an individual UPS via Web browser, CLI, or SNMP
2. Battery Pack SMX120RMBP2U or approved equivalent

PART 3 - EXECUTION

3.1 GROUNDING

- A. Comply with requirements in Section 270526.10 "Grounding and Bonding for Security Systems" for grounding conductors and connectors.

3.2 REFER TO 280500.10 FOR ALL OTHER PART III REQUIREMENTS

END OF SECTION 280507.10

SECTION 28 0509.10 - SURGE PROTECTION FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Section 280500.10 Common Work Results for Electronic Security.

1.2 SYSTEM DESCRIPTION

- A. This specification is for surge protection for electronic security systems (ESS).
- B. Transient Voltage Surge Suppression:
 - 1. Protect cables and conductors extending beyond building façade, except fiber optic cables, which serve as communication, control, or signal lines against Transient Voltage surges and have Transient Voltage Surge Suppression (TVSS) protection.
 - 2. The TVSS device shall be UL listed in accordance with Standard TIA 497B.
 - 3. Lighting and surge suppression shall be a multi-strike variety and include a fault indicator.
 - 4. Provide protection at the field device and on each wire line circuit at the first accessible location within the building but not more than 50 ft (15 m) of the building cable entrance.
 - 5. Fuses shall not be used for surge protection.
 - 6. Test the inputs and outputs in both normal mode and common mode to verify there is no interference.
 - 7. General Performance Requirements.
 - a. A 10-microsecond rise time by 1000 microsecond pulse width waveform with a peak voltage of 1500 volts and a peak current of 60 amperes.
 - b. An 8-microsecond rise time by 20-microsecond pulse width waveform with a peak voltage of 1000 volts and a peak current of 500 amperes.

1.3 SUMMARY

- A. This Section includes the following:
 - 1. TVSS

1.4 REFER TO 280500.10 FOR ALL OTHER PART I REQUIREMENTS

PART 2 - PRODUCTS

2.1 TVSS, POWER

- A. Acceptable Manufacturers
 - 1. Ditek
 - 2. Approved Equivalent
- B. Ditek DTK-4LVLPCR or approved equivalent
- C. Minimum Features and Specifications
 - 1. Suitable for surface mounting or DIN rail (DTK_DRK required) within the enclosure/rack
 - 2. Protects power (12V / 24V), data and LED circuits
 - 3. Connection Method #22 - #16 AWG screw terminals
 - 4. Single ground point for all protected circuits
 - 5. Operating Temperature: -40 to 158 deg F (-40 to 70 deg C)

2.2 TVSS, ETHERNET POE

- A. Ditek DTK-MRJPOES or approved equivalent
- B. Minimum Features and Specifications
 - 1. Suitable for surface mounting or DIN rail (DTK_DRK required) within the enclosure/rack
 - 2. Protects power, video and data PoE circuits
 - 3. RJ45 connection with external grounding screw
 - 4. Operating Temperature: -40 to 158 deg F (-40 to 70 deg C)

PART 3 - EXECUTION

3.1 GROUNDING

- A. Comply with requirements in Section 270526.10 "Grounding and Bonding for Security Systems" for grounding conductors and connectors.

June 15, 2026

Smithsonian OPDC Project No. 2533105

SmithGroup Project No. 00100084

3.2 REFER TO 280500.10 FOR ALL OTHER PART III REQUIREMENTS

END OF SECTION 280509.10

FOR REFERENCE ONLY

SECTION 28 0531.10 - COMMUNICATIONS EQUIPMENT FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Section 280500.10 Common Work Results for Electronic Security.

1.2 SYSTEM DESCRIPTION

- A. This specification is for the communications equipment directly supporting the electronic security systems (ESS).

1.3 SUMMARY

- A. This Section includes the following:
 - 1. Network Switches
 - 2. Fiber Switches
 - 3. Fiber Modules

1.4 REFER TO 280500.10 FOR ALL OTHER PART I REQUIREMENTS

PART 2 - PRODUCTS

2.1 NETWORK SWITCH – 48 PORT

- A. Acceptable Manufacturers
 - 1. Cisco
- B. Cisco Catalyst 3850 Series WS-C3850-48P-E with C3850-NM-2-10G or approved equivalent
- C. Minimum Features and Specifications
 - 1. Forty-eight (48) 10/100/1000 PoE ports
 - 2. Two (2) 10 Gigabit Ethernet SFP+/ Gigabit Ethernet SFP ports
 - 3. Four (4) SFP+ modules rated for 400M over MM OM4 cable
 - 4. Redundant power supplies

5. Switching capacity of 176 Gbps
6. Eight (8) GB of DRAM
7. Eight (8) GB Flash
8. MTBF of 241,050 hours
9. EIGRP routing
10. Universal k9 image
11. 24/7/365 hardware and software support from OEM with 4-hour onsite parts.

D. Additional Required Options / Parts

1. C3850-NM-2-10G
2. Four (4) Cisco SFP-10G-SR (Two for access switch and two for core)
3. Two (2) Cisco PWR-C1-715WAC power supplies
4. Provide StackWise connection of network and fiber switches in the same rack or cabinet
5. Enable StackPower in stacks of network and fiber switches in redundant mode
 - a. In redundant mode, when the total power budget of the stack is calculated, the wattage of the largest power supply is not included. That power is held in reserve and used to maintain power to switches and attached devices when one power supply fails, enabling the network to operate without interruption. Following the failure of one power supply, the StackPower mode becomes power sharing.

2.2 NETWORK SWITCH – 24 PORT

A. Acceptable Manufacturers

1. Cisco

B. Cisco Catalyst 3850 Series WS-C3850-24P-S with C3850-NM-2-10G or approved equivalent

C. Minimum Features and Specifications

1. Twenty-four (24) 10/100/1000 copper PoE ports
2. Two (2) 10 Gigabit Ethernet SFP+ / Gigabit Ethernet SFP ports
3. Four (4) SFP+ modules rated for 400M over MM OM4 cable
4. Redundant power supplies
5. Switching capacity of 92 Gbps
6. Four (4) GB of DRAM
7. Two (2) GB Flash
8. MTBF of 269,450 hours
9. EIGRP routing
10. Universal k9 image
11. 24/7/365 hardware and software support from OEM with 4-hour onsite parts.

D. Additional Required Options / Parts

1. C3850-NM-2-10G
2. Four (4) Cisco SFP-10G-SR (Two for access switch and two for core)
3. Two (2) Cisco PWR-C1-715WAC power Supplies

4. Provide StackWise connection of network and fiber switches in the same rack or cabinet
5. Enable StackPower in stacks of network and fiber switches in redundant mode.
 - a. In redundant mode, when the total power budget of the stack is calculated, the wattage of the largest power supply is not included. That power is held in reserve and used to maintain power to switches and attached devices when one power supply fails, enabling the network to operate without interruption. Following the failure of one power supply, the StackPower mode becomes power sharing.

FOR REFERENCE ONLY

2.3 FIBER SWITCH

A. Acceptable Manufacturers

1. Cisco

B. Cisco Catalyst 3850 Series WS-C3850-48XS-E or approved equivalent

C. Minimum Features and Specifications

1. Forty-eight (48) SFP+ ports
2. Furnish with (2) PWR-C1 750WAC power supplies
3. Switching capacity of 1280 Gbps
4. Eight (8) GB of DRAM
5. Eight (8) GB Flash
6. MTBF of 286,900 hours
7. EIGRP routing
8. Universal k9 image
9. 24/7/365 hardware and software support from OEM with 4-hour onsite parts.

D. Additional Required Options / Parts

1. Four (4) Cisco SFP-10G-SR (For connection between core switches)
2. Two (2) Cisco PWR-C1 750WAC power supplies

PART 3 - EXECUTION

3.1 GROUNDING

- A. Comply with requirements in Section 270526.10 "Grounding and Bonding for Security Systems" for grounding conductors and connectors.

3.2 IP ADDRESSING

- A. Refer to 280500.10 Submittals for requirements.

3.3 REFER TO 280500.10 FOR ALL OTHER PART III REQUIREMENTS

END OF SECTION 280531.10

FOR REFERENCE ONLY

SECTION 28 0800.10 - COMMISSIONING OF ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Section 280500.10 Common Work Results for Electronic Security.

1.2 SYSTEM DESCRIPTION

- A. This specification is for the commissioning of electronic security systems (ESS).

1.3 SUMMARY

- A. This Section includes the following:
 - 1. Commissioning of the Electronic Security Systems

1.4 REFER TO 280500.10 FOR ALL OTHER PART 1 REQUIREMENTS

PART 2 - PRODUCTS

2.1 THERE ARE NO PRODUCTS IN THIS SPECIFICATION

PART 3 - EXECUTION

3.1 PERFORMANCE REQUIREMENTS

- A. General
 - 1. Refer to Project Process Diagram (PPD) in 280500.10. Utilize the PPD to develop effective and timely project schedules and submissions to ensure project is substantially complete prior to occupancy.

3.2 CONTRACTOR'S FIELD TESTING

- A. Perform the Contractor Field Test (CFT) of all devices utilizing OPS provided forms.
- B. Submit test results, including journal logs from CCURE, to COTR and OPS-PPSD.

3.3 PERFORMANCE VERIFICATION TEST (PVT)

- A. Based on the OPS-PPSD approval of the Contractor's Field Test, the COTR will schedule the PVT with the Contractor and OPS-PPSD.

Request from OPS whether this project requires a full PVT or Partial PVT and select the appropriate paragraph below.

- B. OPS-PPSD will witness the Contractor conduct the PVT of all devices utilizing the same form as for the CFT.
- C. OPS-PPSD reserves the right to stop and abort testing as soon as 10 technical deficiencies are found requiring correction.
 - 1. If the acceptance test is aborted, the re-test will commence from the beginning with a retest of components previously tested and accepted.
 - 2. The Contractor is responsible for all time, travel, and lodging expenses incurred for personnel required to be present for resumption of the PVT.
- D. The PVT also includes a physical inspection of the installation quality and workmanship.
- E. Submit test results, including journal logs from CCURE, to COTR and OPS-PPSD.

3.4 REFER TO 280500.10 FOR ALL OTHER PART III REQUIREMENTS

END OF SECTION 280800.10

SECTION 28 1000 - ACCESS CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Section 280500.10 Common Work Results for Electronic Security.

1.2 SYSTEM DESCRIPTION

- A. The physical access control system (PACS) is an enterprise class system with intrusion detection inherent to the PACS controllers. The PACS is the central system for the entire electronic security system. Integrate all other systems (intrusion detection, intercommunications, and video) with the PACS so the PACS provides a single unified control and management platform.
- B. This is an extension of the Owner's existing Software House C•CURE 800/8000 system.

1.3 SUMMARY

- A. This Section includes the following:
 - 1. PACS Panels
 - 2. Reader Module
 - 3. Card readers

1.4 REFER TO 280500.10 FOR ALL OTHER PART I REQUIREMENTS

PART 2 - PRODUCTS

2.1 PACS SOFTWARE

- A. Software Licensing

Confirm PACS licensing with OPS.

- 1. The existing Software House PACS license will support this project.

***** [OR] *****

- 2. Upgrade existing site license to Software House PACS license [10][20][30][40].

B. Software Integrations

1. Video Assessment and Surveillance System (VASS) functionality
 - a. Control of cameras through the PACS and graphic maps
 - b. Associate cameras with access control and alarm events
2. Intercom functionality
 - a. Control of intercoms through the PACS and graphic maps
 - b. Associate cameras with intercom calls

2.2 ISTAR ULTRA SE

A. Acceptable Manufacturers

1. Software House

B. Software House iSTAR Ultra SE

C. Minimum Features and specifications

1. Furnish with both ACMs
2. FIPS 140-2 Complaint
3. Install GCM and ACMs in Life Safety Power enclosure
4. Provide Life Safety Power power supply as specified in 280507.10 – Power Sources for Electronic Security

2.3 ISTAR EX-4

A. Acceptable Manufacturers

1. Software House

B. Software House iSTAR ex 4-door controller

C. Minimum Features and specifications

1. Work with C•CURE 800/8000 and C•CURE 9000
2. Onboard FIPS 140-2 validated AES encryption
3. FIPS 197-validated 256-bit encryption
4. Built-in UPS with 17 Ahr SLA battery providing full operational backup for four hours, with a 24 hour recharge time
5. 16 supervised inputs
6. 4 Form C relays
7. UL294 and UL1076

2.4 READER MODULE

- A. Acceptable Manufacturers
 - 1. Software House
- B. Software House RM-4E or approved equivalent
- C. Minimum Features and specifications
 - 1. RM-DCM-2 UL Listed tamper protected enclosure
 - 2. RM-4E module

2.5 CARD READER, STANDARD

- A. Acceptable Manufacturers
 - 1. Identiv
 - 2. Software House
 - 3. Approved Equivalent

FOR REFERENCE ONLY

B. The following readers are tested and acceptable

1. Identiv 8110ABPOOOO-TS449 Standard (Pigtail)
2. Identiv 8110ABTOOOO-TS449 Standard (Terminal Plug)
3. SWH-4130 Standard Reader (Terminal Plug)

C. Minimum Features and specifications

1. Works with C•CURE 800/8000 and C•CURE 9000
2. Read within 3 inches
3. Standard firmware that allows field programming no matter the model
4. Single-gang mounting
5. Black
6. Environmental
 - a. IP65 Pigtail models
 - b. IP55 Terminal models
 - c. Temperature range: -31 to 149 deg F (-35 to 66 deg C)
7. Terminal strip is preferred
8. Low Frequency Card Compatibility (125 kHz)
 - a. Indala
9. High Frequency Card Compatibility (13.56 MHz)
 - a. PIV
 - b. PIV-I
 - c. Mi-Fare Classic
 - d. DESFire EV1
 - e. PLAID
 - f. ISO 15693
 - g. ISO 14443 A/B

2.6 CARD READER, MULLION

A. Acceptable Manufacturers

1. Software House
2. Identiv
3. Approved Equivalent

B. The following readers are tested and acceptable

1. Identiv 8010ABTOOOO-TS449 Mullion (Terminal Plug)
2. Identiv 8010ABPOOOO-TS449 Mullion (Pigtail)

C. Minimum Features and specifications

1. Works with C•CURE 800/8000 and C•CURE 9000
2. Read within 3 inches
3. Standard firmware that allows field programming no matter the model
4. Dimensions: 4.6 x 1.7 x 1.1 in (118 x 43 x 28 mm)
5. Black
6. Environmental
 - a. IP65 Pigtail models
 - b. IP55 Terminal models
 - c. Temperature range: -31 to 149 deg F (-35 to 66 deg C)
7. Terminal strip is preferred
8. Low Frequency Card Compatibility (125 kHz)
 - a. Indala
9. High Frequency Card Compatibility (13.56 MHz)
 - a. PIV
 - b. PIV-I
 - c. Mi-Fare Classic
 - d. DESFire EV1
 - e. PLAID
 - f. ISO 15693
 - g. ISO 14443A/B

2.7 CARD READER, KEYPAD

A. Acceptable Manufacturers

1. Software House
2. Identiv
3. Approved Equivalent

B. The following readers are tested and acceptable

1. SWH-4230 Standard Reader with Keypad (Terminal Plug)
2. Identiv 821 OABTOOOO-TS449 Standard with keypad (Terminal Plug)

C. Minimum Features and specifications

1. Works with C•CURE 800/8000 and C•CURE 9000
2. Read within 3 inches
3. Standard firmware that allows field programming no matter the model
4. Single-gang mounting
5. Black
6. Environmental
 - a. IP65 Pigtail models
 - b. IP55 Terminal models
 - c. Temperature range: -31 to 149 deg F (-35 to 66 deg C)
7. Terminal strip is preferred
8. Low Frequency Card Compatibility (125 kHz)
 - a. Indala
9. High Frequency Card Compatibility (13.56 MHz)
 - a. PIV
 - b. PIV-I
 - c. Mi-Fare Classic
 - d. DESFire EV1
 - e. PLAID
 - f. ISO 15693
 - g. ISO 14443A/B

2.8 CARD READER, ARM/DISARM

A. Acceptable Manufacturers

1. Software House
2. Approved Equivalent

B. The following readers are tested and acceptable

1. SWH RM2L-4000-P126 Reader with LCD display and keypad

C. Minimum Features and specifications

1. Works with C•CURE 800/8000 and C•CURE 9000
2. Read within 3 inches
3. Standard firmware that allows field programming no matter the model
4. Black
5. Environmental
 - a. Temperature range: -31 to 149 deg F (-35 to 66 deg C)
6. Low Frequency Card Compatibility (125 kHz)
 - a. Indala
7. High Frequency Card Compatibility (13.56 MHz)
 - a. PIV
 - b. PIV-I
 - c. Mi-Fare Classic
 - d. DESFire EV1
 - e. PLAID
 - f. ISO 15693
 - g. ISO 14443A/B

Add additional project specific products as required using the format below.

2.9 AUTOMATIC ROOF HATCH OPENER

A. Acceptable Manufacturers

1. SafePro
2. Approved Equivalent

B. SafePro HandsFree Power Hatch Lift

C. Minimum Features and Specifications

1. OSHA compliant
2. Hands-free open / close / lock / unlock
3. Retrofit to any size hatch
4. Restrict unauthorized rooftop access
5. Track approved users and access duration
6. Integrate with existing security system for remote release

2.10 [TBD]

A. Acceptable Manufacturers

1. [TBD]
- B. [TBD] [TBD] or approved equivalent
- C. Minimum Features and specifications
 1. [TBD]

PART 3 - EXECUTION

3.1 GROUNDING

- A. Comply with requirements in Section 270526.10 "Grounding and Bonding for Security Systems" for grounding conductors and connectors.

3.2 GENERAL

- A. Install all system components and appurtenances in accordance with the manufacturers' instructions, ANSI C2, and furnish all necessary interconnections, services, and adjustments required for a complete and operable system as specified. Install control signals, communications, and data transmission lines grounding as necessary to preclude ground loops, noise, and surges from affecting system operation. Equipment, materials, installation, workmanship, inspection, and testing shall be in accordance with manufacturers' recommendations and as modified herein.
- B. Consult the manufacturers' installation manuals for all wiring diagrams, schematics, physical equipment sizes, etc., before beginning system installation. Refer to the Riser/Connection diagram for schematic system installation/termination/wiring data.
- C. Attach equipment to walls and ceiling/floor assemblies and held firmly in place (e.g., sensors shall not be supported solely by suspended ceilings). Fasteners and supports shall be adequate to support the required load.

3.3 PREPARATION

- A. Comply with recommendations in SIA CP-01.
- B. Comply with EIA/TIA-606, "Administration Standard for the Telecommunications Infrastructure of Commercial Buildings."

3.4 CURRENT SITE CONDITIONS

- A. Visit the site and verify site conditions are in agreement with the design package. Report changes to the site or conditions which will affect performance of the system to the COTR and PPSPD-Security System Engineer in a report. The Contractor shall not take any corrective action without written permission from the COTR.

3.5 EXAMINATION

- A. Examine pathway elements intended for cables. Check raceways, cable trays, and other elements for compliance with space allocations, installation tolerances, hazards to cable installation, and other conditions affecting installation.
- B. Examine roughing-in for LAN and control cable conduit systems to PCs, Controllers, card readers, and other cable-connected devices to verify actual locations of conduit and back boxes before device installation.
- C. Proceed with installation only after correcting unsatisfactory conditions.

3.6 ELEVATOR TRANSITION BOX

- A. Provide a 12 x 12 in (305 x 305 mm) NEMA 4 enclosure in the Elevator Equipment Room. This is a transition point between Division 14 cabling and Division 28 cabling.

3.7 REFER TO 280500.10 FOR ALL OTHER PART III REQUIREMENTS

END OF SECTION 281000

SECTION 28 1515 - ELECTRIFIED LOCKING DEVICES AND ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Section 280500.10 Common Work Results for Electronic Security.

1.2 SYSTEM DESCRIPTION

- A. This specification is electrified locking devices and accessories in support of the FACS directly supporting the electronic security systems (ESS). All locking and access control must comply with NFPA 101. Coordinate with Division 08 requirements.

1.3 SUMMARY

- A. This Section includes the following:
 - 1. Passive Infrared Request to Exit (PIR Rex)
 - 2. Sounders
 - 3. Delayed Egress Locks
 - 4. Electrified Locks
 - 5. Electric Strikes
 - 6. Electric Hinges (by Division 08)
 - 7. Electronic Pass-through Hinges (by Division 08)

1.4 REFER TO 280500.10 FOR ALL OTHER PART I REQUIREMENTS

PART 2 - PRODUCTS

2.1 PIR REQUEST TO EXIT

- A. Acceptable Manufacturers
 - 1. Bosch Security Systems
- B. Bosch DS-160 or DS-161 or approved equivalent.
- C. Minimum Features and Specifications

D. Request To Exit Detectors:

1. Passive infrared sensor designed for wall or ceiling mounting 7.5 to 15 ft (2.1 to 4.6 m)
2. Provide two (2) form "C" (SPDT) relays rated one (1) Amp. @ 30 VDC for DC resistive loads
3. The detectors relays shall be user adjustable with a latch time from 0.5-64 seconds. The detector shall also include a selectable relay reset mode to follow the timer or absence of motion.
4. Adjustable detection pattern plus or minus fourteen (± 14) degrees
5. Operate on 12 VDC with approximately 39 mA continuous current draw
6. Measure approximately 1.8 x 6.75 x 1.75 in (45 x 171 x 44 mm)

2.2 LOCAL SOUNDER

A. Acceptable Manufacturers

1. Mallory

B. Mallory SC 616N and SC 616CP or approved equivalent.

C. Minimum Features and Specifications

1. Local alarms shall be provided for all perimeter doors and card access controlled doors. All card access controlled doors receive local sounders. The local perimeter door alarms shall be a steady tone (SC 616N) while the card access controlled doors shall have a chime tone (SC 616CP).
2. The local sounder shall be a solid state sounding device with no moving parts. The sounder shall operate on 6-16 VDC at less than 16mA draw and produce a 2900 Hz signal at approximately 80-95 dB dependent upon input power. Sounders shall be powered by the auxiliary power supply. The power circuits supplying power to local sounders shall have an individual fuse for each positive leg between the main power supply output and individual distribution circuit. The fuse shall be rated at 50% of the rating of the fuse protecting the power supply output. The sounder shall be plate mounted to a recessed mounted junction box above and immediately adjacent the protected opening. Where the door is controlled by a card reader, the local sounder may be located on the reader module junction box providing the box is located immediately adjacent the protected opening and not obscured by ceiling tiles. The sounder shall be located on the secure side of the protected opening. The sounding device shall be activated and reset via the security management system. Each sounder shall be controlled by an individual relay at the DGP or at field relay modules. Reset or silencing of the sounder shall be via the control room operator terminals.

2.3 DELAYED EGRESS DEVICE

A. Acceptable Manufacturers

1. SDC
2. Approved Equivalent

- B. SDC-101KDE-NA Series or approved equivalent
- C. Minimum Features and Specifications
 - 1. 15 or 30 seconds exit delay
 - 2. 1 or 2 seconds nuisance delay
 - 3. Digital countdown display
 - 4. Field selectable voice notification or tone
 - 5. Wall mount controller with keyswitch control and reset (cylinder provided by SI OPS)
- D. Additional Required Options / Parts
 - 1. SDC-1571V Series electromagnetic lock with activation sensor or approved equivalent
 - a. 1200 lbs. (544 kg) holding force
 - b. 250/125 mA at 12/24 VDC
 - c. Request to Exit output via micro-switch in push bar

2.4 ELECTRIFIED MORTISE LOCKSET WITH INTEGRATED REX

- A. Acceptable Manufacturers
 - 1. Sargent
 - 2. Schlage
 - 3. Yale
- B. Sargent Ecoflex 8200 or approved equivalent.
- C. Minimum Features and Specifications
 - 1. ANSI/BHMA certified extra heavy duty, lever type mortise lock conforming to ANSI/BHMA 156.13 Series 1000, Grade 1 requirements and ANSI A117.1 accessibility guidelines. All functions manufactured in a single sized case formed from a minimum 12 gauge steel.
 - 2. Lockset is field-adjustable for handing without opening the lock body with a beveled armored front that is 0.125 in (3.175 mm) minimum thickness and utilizes a one-piece 3/4" anti-friction stainless steel latchbolt. To insure proper alignment, all trim, shall be thru-bolted and fully interchangeable between rose and escutcheon designs.
 - 3. Lock is UL listed and labeled for use on up to 3 hour fire rated openings.
 - 4. Locking and unlocking of the lever handle by electronic operation contained completely within the body of the mortise lock.
 - 5. Field configurable Fail Safe /Fail Secure by means of an external DIP switch setting.
 - 6. Operationally voltage-insensitive 12 to 24 VDC.
 - 7. Energy Performance: Maximum standby current required for functional operation not to exceed 50 mA at 24 VDC limiting potential inductive kickback or the need for external diodes.
 - 8. Valid egress signaled by activation of the Request-to-Exit (RX) micro switch integral to the inside lever of the lockset on the unsecure side of the door capable of shunting external alarms.

9. Compatible with Schlage lever handles
10. 2 year limited warranty on electrified locks

2.5 ELECTRIC STRIKE

A. Acceptable Manufacturers

1. HES

B. HES 1006 series or approved equivalent.

C. Minimum Features and Specifications

1. UL 10C fire-rated, 3 hour single door (fail secure only)
2. UL 10C fire-rated, 1-1/2 hour double door (fail secure only)
3. ANSI A250.13-2003 windstorm listed
4. UL 1034 burglary-resistant listed and suitable for outdoor use
5. ANSI/BHMA A156.31, Grade 1
6. NFPA-252 fire door conformant
7. ASTM-E152 fire door conformant
8. Capable of use on metal and wood frames
9. Dual voltage 12 or 24VDC continuous duty
10. 0.45 Amps @ 12VDC* continuous duty
11. 0.25 Amps @ 24VDC* continuous duty
12. Stainless steel construction
13. Tamper resistant
14. Static strength 3070 lbs. (1,393 kg) (fail secure)
15. Dynamic strength 350 ft-lbs. (475 N m) (fail secure)
16. Endurance 1,000,000 cycles
17. Fail secure (standard)
18. Non-handed
19. Internally mounted solenoid
20. Accommodates up to 1 in (25.4 mm) deadbolt
21. Plug-in connector
22. Full keeper shims for horizontal adjustment
23. Trim enhancer
24. Five year limited warranty

2.6 ELECTRIC STRIKE, PANIC HARDWARE

A. Acceptable Manufacturers

1. HES

B. HES 9400 series or approved equivalent.

C. Minimum Features and Specifications

1. ANSI/BHMA A156.31, Grade 1
2. Capable of use on metal and wood frames
3. Dual voltage 12 or 24VDC continuous duty
4. 0.45 Amps @ 12VDC* continuous duty
5. 0.25 Amps @ 24VDC* continuous duty
6. Completely surface mounted
7. Stainless steel construction
8. Tamper resistant
9. Static strength 1,500 lbs. (680 kg)
10. Dynamic strength 70 ft-lbs. (95 N m)
11. Endurance 500,000 cycles
12. Included 0.125 in (3.175 mm) spacer plate
13. Field selectable fail safe/fail secure
14. Horizontal adjustment
15. Non-handed
16. Internally mounted solenoid
17. Accommodates up to 0.5 in (12.7 mm) Pullman latch
18. Five year limited warranty

PART 3 - EXECUTION

3.1 GROUNDING

- A. Comply with requirements in Section 270526.10 "Grounding and Bonding for Security Systems" for grounding conductors and connectors.

3.2 GENERAL

- A. Coordinate with Division 8 requirements, finishes, and keyways.
- B. OPS Lock Shop will rekey project provided cores. Coordinate with the OPS Lock Shop to purchase correct cylinder/cores.
- C. Only Software House certified integrators may terminate cabling on PACS equipment.

3.3 REFER TO 280500.10 AND 281000 FOR ALL OTHER PART III REQUIREMENTS

END OF SECTION 280515

SECTION 28 1523 - INTERCOM ENTRY SYSTEMS

PART 1 - GENERAL

1.1 SYSTEM DESCRIPTION

- A. This is an extension of the Owner's existing Vingtor-Stentofon system.

Select one of the following paragraphs.

- B. The existing system head-end in Police Department has expansion capacity to accommodate the new intercoms. The Contractor is responsible for licenses.

***** [OR] *****

- ~~C. Provide a new intercom server as listed in 280513.10 Servers, Workstations, and Storage for Electronic Security with all associated licenses.~~

1.2 SUMMARY

- A. This Section includes the following:

1. Intercom
2. Video Intercom
3. Elevator Intercom

1.3 REFER TO 280500.10 FOR ALL OTHER PART I REQUIREMENTS

PART 2 - PRODUCTS

2.1 INTERCOM

- A. Acceptable Manufacturers

1. Vingtor-Stentofon

- B. Vingtor-Stentofon TCIS-3 with adapter plate or approved equivalent.

- C. Minimum Features and Specifications

1. IP 65 rated
2. Black Thermoplastic front plate with single button
3. Noise cancelling – suppression of musical noise
4. Noise cancelling - suppression of static noise
5. Noise cancelling - suppression of rapidly changing noise

6. Scream Alarm
7. PoE 802.3af, Class 0 (0.44W to 12.95W)
8. Operating temperature range -13 to 158 deg F (-25 to 70 deg C)

2.2 VIDEO INTERCOM

A. Acceptable Manufacturers

1. Vingtor-Stentofon

B. Vingtor-Stentofon TCIV-3 with adapter plate or approved equivalent.

C. Minimum Features and Specifications

1. Integral HD video camera (720p) at 25 frames per second
2. IP 65 rated
3. Black Thermoplastic front plate with single button
4. Noise cancelling – suppression of musical noise
5. Noise cancelling - suppression of static noise
6. Noise cancelling - suppression of rapidly changing noise
7. Scream Alarm
8. PoE 802.3af, Class 0 (0.44W to 12.95W)
9. Operating temperature range -13 to 158 deg F (-25 to 70 deg C)

2.3 VIDEO INTERCOM MASTER

A. Acceptable Manufacturers

1. Vingtor-Stentofon

B. Vingtor-Stentofon 1408001635 with adapter plate or approved equivalent.

C. Minimum Features and Specifications

1. Designed to deliver Critical communication over IP
2. Call queue according to priority and time of call, 256 priority levels
3. Ten (10) DAKS provide single-touch access to stations, group calls, audio monitoring, public address zones, radio channels and telephone lines
4. Comes with handset for private conversations
5. Superb audio quality-high bandwidth codec, active noise cancellation, acoustic echo cancellation, and high output power amplifier
6. 3.5" LCD touchscreen display with the capability of displaying pictures from an IP video camera
7. Remote software upgrade, configuration and monitoring
8. Audio: 1.5 W speaker output @ 8 ohm
9. Display: 3.5" TFT with touchscreen panel, LED backlight (white)
10. Ethernet: 1 x RJ45 10/100 Mbps with PoE
11. Operational Voltage: Power over Ethernet 802.3af, Class 0

12. Environmental Conditions: -4 to 131 deg F (-20 to 55 deg C)

2.4 ELEVATOR KIT

A. Acceptable Manufacturers

1. Vingtor-Stentofon

B. Vingtor-Stentofon IP Substation Kit 1008090200 or approved equivalent.

C. Minimum Features and specifications

1. Dimensions (HxWxD) 4.33 x 2.83 x 0.79 in (110 x 72 x 20 mm)
2. Call buttons Connection for 3 NO contacts
3. Mounting Inside custom made stations
4. Temperature -58 to 131 deg F (-50 to 55 deg C)
5. Relative humidity 0% - 95%
6. Power over Ethernet, IEEE 802.3 a-f, Class 0, Local power 19 – 27 VDC, Idle 4W, max. 8W
7. Connectors 2 x RJ45 (Ethernet) 10/100 Mbps, Pluggable screw terminals (audio and IO)
8. Remote control, Max. switching capacity,
9. LAN protocols
 - a. Power over Ethernet (IEEE 802.3 a-f)
 - b. VLAN (IEEE 802.1pq)*
 - c. Network Access Control (IEEE 802.1x)*
 - d. STP (IEEE 802.1d)
 - e. RSTP (IEEE 802.1d-2004)
10. Audio technology
 - a. Wideband 200 Hz - 7 kHz (G.722)
 - b. Telephony 3.4kHz (G.711, Acoustic echo cancellation, Open duplex, Adaptive jitter filter, 1.5 Watt audio output, 8 ohm loudspeaker impedance, External audio output (0 dB, 600 ohm)
11. Management and operation
 - a. HTTPS (Web configuration)
 - b. DHCP and static IP
 - c. Remote automatic software upgrade
 - d. Centralized monitoring
 - e. Status LED
12. Dual port managed data switch supporting VLAN and network access control
13. Compliance CE and FCC Part 15

D. Additional Required Options / Parts

1. Mounting and Assembly Kit 1008091000 including gaskets, two inch loudspeaker, loudspeaker housing and mounting block for call LED and microphone

Add additional project specific products as required using the format below.

2.5 ~~— [TBD]~~

~~A. Acceptable Manufacturers~~

~~1. [TBD]~~

~~B. [TBD] [TBD] or approved equivalent~~

~~C. Minimum Features and specifications~~

2.6 ~~— [TBD]~~

PART 3 - EXECUTION

3.1 GROUNDING

- A. Comply with requirements in Section 270526.10 "Grounding and Bonding for Security Systems" for grounding conductors and connectors.

3.2 INTERCOMMUNICATION SYSTEMS

A. Installation

1. Install all system components including Owner furnished equipment, and appurtenances in accordance with the manufacturer's instructions, ANSI C2 and as shown including all necessary connectors, terminators, interconnections, services, and adjustments required for a complete and operable duress communications system.

B. Tamper Resistant Substations

1. Locate substations where shown on the drawings. Provide recessed back boxes in which the substation operating mechanisms shall be mounted. Mount substation with the call button centerline no higher than 42 in (1100 mm) above the finished floor.

Retain the following paragraph if the project has elevator intercoms.

3.3 ELEVATOR TRANSITION BOX

- A. Provide a 12 x 12 in (305 x 305 mm) NEMA 4 enclosure in the Elevator Equipment Room. This is a transition point between Division 14 cabling and Division 28 cabling.

3.4 REFER TO 280500.10 FOR ALL OTHER PART III REQUIREMENTS

END OF SECTION 281523

SECTION 28 2000 - VIDEO

PART 1 - GENERAL

1.1 SYSTEM DESCRIPTION

- A. The Video Assessment and Surveillance System (VASS) is an enterprise class system. Integrate with the PACS so the PACS provides a single unified control and management platform. Link video to events and alarms on all other systems (intrusion detection, intercommunications, and PACS) with the PACS.
- B. This is an extension of the Owner's existing American Dynamics Victor system.
- C. The existing system head-end in NMNH has expansion capacity to accommodate the new cameras. The Contractor is responsible for licenses.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Cameras
 - 2. Network Video Recorder
 - 3. Wall Mounted Equipment Rack Enclosure

1.3 REFER TO 280500.10 FOR ALL OTHER PART I REQUIREMENTS

PART 2 - PRODUCTS

2.1 MULTI-LENS DOME CAMERA

- A. Acceptable Manufacturers
 - 1. Axis
 - 2. HanWha
 - 3. Approved Equivalent
- B. AXIS 3748 PLE or approved equal. Where cameras are discontinued, submit manufacturer recommended replacement for approval.
- C. Mounts
 - 1. Wall Mounted Conditions
 - a. Axis Pendant Kit TP3107
 - b. Axis Pendant Adaptor Hanging Mount T91B50
 - c. Axis TM3101 modified to mount Hanging Mount
 - 2. Ceiling Mount Conditions
 - a. Recessed Ceiling Mount

2.2 FIXED DOME CAMERA, 8MP

- A. Acceptable Manufacturers
 - 1. AXIS
 - 2. HanWha
 - 3. Approved Equivalent
- B. AXIS P3268-PVE or approved equivalent. Where cameras are discontinued, submit manufacturer recommended replacement for approval.
- C. Minimum Features and specifications
- D. Mounts
 - 1. AXIS TP3005-E Wall Mount
 - 2. AXIS TP3201-E Recessed Mount
 - 3. AXIS TP3103-E Pendant Kit

2.3 DIGITAL VIDEO RECORDER

- A. Acceptable Manufacturers
 - 1. American Dynamics
 - 2. No Other Equivalent

- B. American Dynamics ADVER96R5DK VideoEdge Rack Mounted Network Video Recorder, RAID 5, Dual PSU, 96TB
- C. Where product is discontinued, submit manufacturer recommended replacement for approval.

2.4 WALL MOUNTED EQUIPMENT ENCLOSURE

- A. Acceptable Manufacturers
 - 1. Mid-Atlantic DWR -24-32
 - 2. Approved Equivalent

PART 3 - EXECUTION

3.1 GROUNDING

- A. Comply with requirements in Section 270526.10 "Grounding and Bonding for Security Systems" for grounding conductors and connectors.

3.2 GENERAL

- A. Install all system components and appurtenances in accordance with the manufacturer's instructions, ANSI C2, and furnish all necessary interconnections, services, and adjustments required for a complete and operable system as specified. Control signals, communications, and data transmission lines grounding shall be installed as necessary to preclude ground loops, noise, and surges from affecting system operation. Equipment, materials, installation, workmanship, inspection, and testing shall be in accordance with manufacturers' recommendations and as modified herein.
- B. Consult the manufacturer's installation manuals for all wiring diagrams, schematics, physical equipment sizes, etc., before beginning system installation. Refer to the Riser/Connection diagram for all schematic system installation/termination/wiring data.
- C. Attach equipment to walls and ceiling/floor assemblies and be held firmly in place (e.g., sensors shall not be supported solely by suspended ceilings). Fasteners and supports shall be adequate to support the required load.
- D. Current Site Conditions: Visit the site and verify site conditions are in agreement with the design package. Report all changes to the site or conditions that will affect performance of the system to the Owner. Do not take any corrective action without written permission from the Owner.
- E. Cameras
 - 1. Install cameras with the proper focal length lens as indicated for each zone
 - 2. Set cameras with fixed iris lenses to the proper f-stop to give full video level

3. Aim camera to give field of view as needed to cover the alarm zone / intended field of view
 4. Aim fixed mount cameras installed outdoors facing the rising or setting sun sufficiently below the horizon to preclude the camera looking directly at the sun
 5. Focus the lens to give a sharp picture over the entire field of view.
 6. Use a fine focus target for final focus adjustments.
- F. Camera Pole and Mounts: The Contractor shall install the camera mount as specified by the manufacturer and as shown; provide mounting hardware sized appropriately to secure the mount, camera and housing with maximum wind and ice loading encountered at the site; provide a foundation for each camera pole as specified and shown; provide a ground rod for each camera pole of correct length as dictated by soil conductivity and connect the camera pole to the ground rod; provide electrical and signal transmission cabling to the mount location; connect signal lines and AC power to mount interfaces; connect pole wiring harness to camera.

3.3 CLEANING

- A. Clean installed items using methods and materials recommended in writing by manufacturer.
- B. Clean video surveillance system components, including camera-housing windows, lenses, and monitor screens.

3.4 REFER TO 280500.10 FOR ALL OTHER PART III REQUIREMENTS

END OF SECTION 282000

SECTION 28 3100 - INTRUSION DETECTION

PART 1 - GENERAL

1.1 SYSTEM DESCRIPTION

- A. The Intrusion Detection System is an inherent part of the PACS system. Link alarms to video system for event driven camera call-up and recording.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Door contacts
 - 2. Glass breaks
 - 3. Motion sensors

1.3 REFER TO 280500.10 FOR ALL OTHER PART I REQUIREMENTS

PART 2 - PRODUCTS

2.1 ~~CARD READER, ARM/DISARM~~

A. ~~Refer to 281000 Access Control for specifications~~

2.2 ~~360 DEGREE DUAL TECH MOTION SENSOR~~

A. ~~Acceptable Manufacturers~~

1. ~~Bosch~~
2. ~~Approved Equivalent~~

B. ~~Bosch DS9370 and DS9371 or approved equivalent.~~

C. ~~Minimum Features and Specifications~~

1. ~~Up to 25 ft (7.6 m) mounting height~~
2. ~~360 degrees x 70 ft (20 m) diameter pattern~~
3. ~~Fully adjustable optical arrays for coverage customization~~
4. ~~Rated for use in difficult environment to reduce false alarms from background disturbances such as air movement and hanging signs.~~
5. ~~Combination of passive infrared (PIR) detection, microwave detection, and advanced signal processing technology.~~
6. ~~Built in tamper switch~~
7. ~~Operating Temperature: 40 to 120 deg F (40 to 49 deg C)~~
8. ~~Dimensions: 3.5 x 7 in (8.9 x 17.8 cm)~~
9. ~~Voltage: 9 to 15 VDC~~
10. ~~UL Listed~~

2.3 ~~DIRECTIONAL DUAL TECH MOTION SENSOR~~

A. ~~Acceptable Manufacturers~~

1. ~~Bosch~~
2. ~~Approved Equivalent~~

B. ~~Bosch ISC CDL1 WA15G or approved equivalent~~

C. ~~Minimum Features and specifications~~

1. ~~Combination of passive infrared (PIR) detection, microwave detection, and advanced signal processing technology.~~
2. ~~Active infrared ant masking~~
3. ~~Microwave noise adaptive processing~~
4. ~~Mounting height: 7.5 x 9 ft (2.3 x 2.75 m)~~
5. ~~Coverage Pattern: 50 x 50 ft (15 x 15 m)~~
6. ~~Built in tamper switch~~

- 7. — Operating Temperature: 32 to 120 deg F (0 to 49 deg C)
- 8. — Dimensions: 4.7 x 2.75 x 2.2 in (12 x 7 x 5.5 cm)
- 9. — Voltage: 9 to 15 VDC
- 10. — UL Listed

2.4 — CURTAIN PIR MOTION SENSOR

A. — Acceptable Manufacturers

- 1. — Honeywell
- 2. — Approved Equivalent

B. — Honeywell IS216T-CUR or approved equivalent

C. — Minimum Features and specifications

- 1. — Dual element passive infrared
- 2. — Mounting height: 5 x 8.8 ft (1.5 x 2.7 m)
- 3. — 32 ft (10 m) in vertical mount position
- 4. — Operating temperature: 14 to 131 deg F (-10 to 55 deg C)
- 5. — Dimensions: 3.4 x 2.4 x 1.5 in (8.6 x 6 x 3.8 cm)
- 6. — Supply Voltage: 8.5 to 15.4 VDC (12 VDC nominal)

2.5 — LONG-RANGE DUAL TECH MOTION SENSOR

A. — Acceptable Manufacturers

- 1. — Honeywell
- 2. — Approved Equivalent

B. — Honeywell [DT900 / DT901] [DT906 / DT907] or approved equivalent

C. — Minimum Features and specifications

- 1. — Combination of passive infrared (PIR) detection, microwave detection, and advanced signal processing technology.
- 2. — Mounting height: 2 to 3.7 m (6 to 12 ft)
- 3. — Coverage Pattern:
 - a. — [DT900/901: 50 x 40 ft (15 x 12 m), and 90 x 70 ft (27 x 21 m)]
 - b. — [DT906/907: 120 x 10 ft (37 x 3 m), and 200 x 15 ft (61 x 5 m)]
- 4. — Built in housing tamper switch
- 5. — [[DT900] [DT906]: Anti masking using active infrared look-down lens]
- 6. — [[DT900] [DT906]: Detector mount tamper switches (2)]
- 7. — Operating Temperature: 32 to 120 deg F (0 to 49 deg C)
- 8. — Dimensions: 8 x 6.5 x 6 in (20 x 17 x 15 cm)
- 9. — Voltage: 10 VDC to 15 VDC, 12 VDC nominal
- 10. — UL Listed

2.6 ~~LONG RANGE PIR~~

A. ~~Acceptable Manufacturers~~

- ~~1. Bosch~~
- ~~2. Approved Equivalent~~

B. ~~Bosch DS778 Long Range PIR Detector or approved equivalent~~

C. ~~Minimum Features and specifications~~

- ~~1. Mounting height: 6.5 x 8.5 ft (2 x 2.6 m)~~
- ~~2. Coverage: 200 x 15 ft (60 x 4.5 m)~~
- ~~3. Built in tamper switch~~
- ~~4. Operating Temperature: 40 to 120 deg F (-40 to 49 deg C)~~
- ~~5. Dimensions: 5.75 x 3.75 x 2.5 in (14.6 x 9.5 x 6.35 cm)~~
- ~~6. Voltage: 6 to 15 VDC~~
- ~~7. UL Listed~~

2.7 ~~GLASS BREAK DETECTOR, ACOUSTIC~~

A. ~~Acceptable Manufacturers~~

- ~~1. Honeywell~~
- ~~2. Approved Equivalent~~

B. ~~Honeywell FG 730 or approved equivalent~~

C. ~~Minimum Features and specifications~~

- ~~1. Analysis of both impact and shattering frequencies~~
- ~~2. Signal verification~~
- ~~3. Coverage: 30 ft (90 m); minimum glass size: 11 x 11 in (27.9 x 27.9 cm)~~
- ~~4. Operating temperature: 32 to 120 deg F (0 to 49 deg C)~~
- ~~5. Supply Voltage: 10 to 14VDC (12 VDC nominal)~~
- ~~6. Mounting locations: Ceiling, opposite wall, adjoining wall, same wall as glass~~

2.8 ~~DOOR POSITION SWITCH; RECESSED~~

A. ~~Acceptable Manufacturers~~

- ~~1. Magnasphere~~
- ~~2. Approved Equivalent~~

B. ~~Magnasphere MSS-20 Series, MSS-26 Series for Normally Closed Loop or approved equivalent~~

C. ~~Minimum Features and Specifications~~

- ~~1. UL 634 Listed~~

2. Recessed
3. Magnetic tamper
4. 0.75 in (19 mm) or 1 in (25.4 mm) diameter
5. Capable of operating with a 0.5 in (13 mm) gap
6. Screw Terminals or 12 in (305 mm) wire leads, #22 AWG, solid

2.9 DOOR POSITION SWITCH; SURFACE

A. Acceptable Manufacturers

1. Magnasphere
2. Approved Equivalent

B. Magnasphere MSS-30XS Series or approved equivalent

C. Minimum Features and Specifications

1. UL 634 Listed
2. Surface mounted
3. Magnetic tamper
4. Size: 2 x 0.5 x 1 in (51 x 12.7 x 25.4 mm).
5. Capable of operating with a 0.3 in (7.6 mm) gap
6. Armored cable lead 24 in (61 mm)
7. Only for use on hatches where a standard recessed contact cannot be used

2.10 DOOR POSITION SWITCH; OVERHEAD

A. Acceptable Manufacturers

1. Magnasphere
2. Approved Equivalent

B. Magnasphere MSS-105S or approved equivalent

C. Minimum Features and Specifications

1. UL 634 listed
2. Surface Mounted with overhead door bracket
3. Capable of operating with a 0.5 inch gap
4. Magnetic tamper
5. 5 ft (1.5 m) leads

2.11 DOOR POSITION SWITCH, UL LEVEL 1, SURFACE

A. Acceptable Manufacturers

1. Magnasphere
2. Approved Equivalent

B. Magnasphere HS-L1.5 Series or approved equivalent

C. Minimum Features and Specifications

1. UL 634, Level 1 high security (both in-swing and out-swing doors)
2. Surface mounted
3. External and internal magnetic tamper
4. Size: 4.25 x 1 x 1 in (108 x 25.4 x 25.4 mm).
5. Capable of operating with a 0.25 in (6.35 mm) gap
6. Wire leads, #22 AWG, solid, in 18 in (457 mm) armored cable
7. Housing: Aluminum case, silver-gray anodized
8. Dual alarm contacts – Use for both IDS and ACS (two closed loop or one closed loop / one open loop)
9. NO adjustment required for installation
10. NO brackets needed for most out-swing door installations
11. Integrated removal / pry tamper (no back plates)

2.12 DOOR POSITION SWITCH; HIGH SECURITY, RECESSED

A. Acceptable Manufacturers

1. Magnasphere
2. Approved Equivalent

B. Magnasphere HSS-L2C or HSS-L2C-A or approved equivalent

C. Minimum Features and Specifications

1. UL 634 Level 2 High Security Listed
2. Recessed
3. Integrated Removal Tamper Circuit and hardware, to actuate on removal of switch from mounting surface
4. Used with, or contain embedded End of Line (EOL) resistors compatible with Software House control panels
6. Rated for both indoor and outdoor use
7. Qualify as an Intrinsically Safe - Simple Apparatus.
8. Installable in either a 1 in (25.4 mm) diameter hole or standard ANSI door cutout
9. Capable of operating with a 0.0625 in (1.5875 mm) gap
10. Wire leads, #22 AWG, solid, 12 in (305 mm) length
11. Brass magnet housing, ABS switch housing

2.13 DOOR POSITION SWITCH; HIGH SECURITY SURFACE

A. Acceptable Manufacturers

1. Magnasphere
2. Approved Equivalent

B. Magnasphere HSS-L2S Series or approved equivalent

C. Minimum Features and Specifications

1. UL 634, Level 2 listed
2. Surface mounted
3. Integrated Removal Tamper Circuit and hardware, to actuate on removal of
4. switch from mounting surface
5. Used with, or contain embedded End of Line (EOL) resistors compatible with Software House control panels
6. Rated for both indoor and outdoor use
7. Qualify as an Intrinsically Safe - Simple Apparatus.
8. Size: 4.25 x 1.5 x 1 in (108 x 38 x 25.4 mm).
9. Capable of operating with a 0.125 in (3.18 mm) gap
10. Wire leads, #22 AWG, solid, in 36 in (91.4 cm) armored cable
11. Housing: Aluminum case, silver-gray anodized

D. Additional Required Options / Parts

1. HSS Roll-up Door Bracket Kit for use on overhead doors

2.14 — VIBRATION DETECTOR~~A. — Acceptable Manufacturers~~

- ~~1. — Bosch~~
- ~~2. — Approved Equivalent~~

~~B. — Bosch ISN SM 80, or approved equivalent.~~~~C. — Minimum Features and Specifications~~

- ~~1. — 5 m operating radius on concrete~~
- ~~2. — Dimensions: 3.5 x 3.5 x .86 in (8.9 x 8.9 x 2.2 cm)~~
- ~~3. — Operating temperature: 40 to 158 deg F (40 to 70 deg C)~~
- ~~4. — Supply Voltage: 8 to 16 VDC (12 VDC nominal)~~

2.15 — VIBRATION DETECTOR, SOLID STATE~~A. — Acceptable Manufacturers~~

- ~~1. — George Risk Industries, Inc.~~
- ~~2. — Approved Equivalent~~

~~B. — GRI Shockgard 2 SG 2 or approved equivalent.~~~~C. — Minimum Features and Specifications~~

- ~~1. — 12 in (30.5 cm) operating radius on steel~~
- ~~2. — Dimensions: .91 x .98 x 3.4 in (2.3 x 2.5 x 8.6 cm)~~
- ~~3. — Operating temperature: 4 to 140 deg F (- 20 to 60 deg C)~~

4. ~~Supply Voltage: 9 to 15 VDC, Regulated~~

2.16 ~~WIRELESS RECEIVER~~

A. ~~Acceptable Manufacturers~~

1. ~~Inovonics~~
2. ~~Approved Equivalent~~

B. ~~Inovonics EN7283 Serial or approved equivalent~~

C. ~~Minimum Features and Specifications~~

1. ~~Operating Frequency: 900MHz~~
2. ~~Dimensions: 6.3 x 3.5 x 1.0 in (16 x 8.9 x 2.5 cm)~~
3. ~~Housing Material: ABS plastic~~
4. ~~Power: 12 VDC from the security power supply with minimum eight (8) hours of back-up battery~~

2.17 ~~WIRELESS REPEATER~~

A. ~~Acceptable Manufacturers~~

1. ~~Inovonics~~
2. ~~Approved Equivalent~~

B. ~~Inovonics EN5040T or approved equivalent~~

C. ~~Minimum Features and Specifications~~

1. ~~Operating Frequency: 900MHz~~
2. ~~Dimensions: 6.3 x 3.5 x 1.0 in (16 x 8.9 x 2.5 cm)~~
3. ~~Housing Material: ABS plastic~~
4. ~~Power: 12-16.5 VAC or VDC via manufacturer's transformer~~
5. ~~Battery Capacity: 2450mAh @ 3.7V~~
6. ~~Back up battery life: Up to 24 hours (varies with repeater use)~~

2.18 ~~WIRELESS TRANSMITTER~~

A. ~~Acceptable Manufacturers~~

1. ~~Inovonics~~
2. ~~Approved Equivalent~~

B. ~~Inovonics EN1210 or approved equivalent~~

C. ~~Minimum Features and Specifications~~

1. ~~Fully Supervised with case tamper~~
2. ~~Operating Frequency: 900MHz~~
3. ~~Dimensions: 3.5 x 1.7 x 0.9 in (8.9 x 4.3 x 2.3 cm)~~
4. ~~Housing Material: ABS plastic~~
5. ~~Battery Life: 4-5 years~~

2.19 ~~RECESSED ROLLER PLUNGER~~

A. ~~Acceptable Manufacturers~~

1. ~~GE Interlogix~~
2. ~~Approved Equivalent~~

B. ~~GE Interlogix 3008 or approved equivalent~~

C. ~~Minimum Features and Specifications~~

1. ~~Recessed magnetic contact~~
2. ~~Housing: .75 in (1.9 cm) diameter, .75 in (1.9 cm) depth~~
3. ~~Flame retardant ABS~~
4. ~~Roller travel: .25 in (.63 cm)~~
5. ~~Activation: .0625 in (.16 cm), minimum~~

2.20 ~~ELECTRONIC SHOCK SENSOR~~

A. ~~Acceptable Manufacturers~~

1. ~~George Risk Industries (GR2)~~
2. ~~Approved Equivalent~~

B. ~~GRI SG 2 or approved equivalent~~

C. ~~Minimum Features and Specifications~~

1. ~~On-board tamper switch~~
2. ~~Solid state piezo electric sensor~~
3. ~~Housing: .5 in (1.3 cm) diameter~~
4. ~~Flame retardant ABS~~
5. ~~No processor unit required~~
6. ~~Size: 3.4 x 0.9 x 1.0 in (8.6 x 2.3 x 2.5 cm)~~

PART 3 - EXECUTION

3.1 GROUNDING

- A. Comply with requirements in Section 270526.10 "Grounding and Bonding for Security Systems" for grounding conductors and connectors.

3.2 SYSTEM INTEGRATION

- A. Integrate intrusion detection system with the following systems and equipment:
 - 1. Electronic door hardware – locking/unlocking, request-to-exit
 - 2. Elevators – none
 - 3. Network lighting controls – none
 - 4. Intercommunications and program systems – none
 - 5. Public address and mass notification systems – none
 - 6. Access control – door contacts and IDS zones
 - 7. Fire-alarm system – none
 - 8. Perimeter security system – none
 - 9. Video surveillance – video call-up of appropriate camera(s) for each alarm activation

3.3 SYSTEM INSTALLATION

- A. Comply with UL 681 and NFPA 731.

3.4 GENERAL

- A. Supervision
 - 1. Configure system components to continuously monitor for normal, alarm, line supervision, tamper, and trouble conditions. Indicate deviations from normal conditions at any location in system. Indication includes identification of device or circuit in which deviation has occurred and whether deviation is an alarm or malfunction.
 - 2. Trouble Condition Signal: Indicates the system is not fully functional (e.g. sensor battery failure, open or shorted/grounded transmission line conductors, or device cover removed).

3.5 REFER TO 280500.10 FOR ALL OTHER PART III REQUIREMENTS

END OF SECTION 283100

SECTION 28 3111 - DIGITAL, ADDRESSABLE FIRE-ALARM SYSTEM**PART 1 - GENERAL****1.1 SUMMARY**

- A. This work includes designing and providing a new, completely supervised, multiplexed, addressable, intelligent, analog fire alarm system (devices, components and wiring) as described herein and on the contract drawings for the Project.
1. Include all wiring, raceways, pull boxes, terminal cabinets, outlet and mounting boxes, control equipment, alarm, and supervisory signal initiating devices, alarm notification appliances, software and programming, acceptance testing and all other accessories and miscellaneous items required for a complete operating system even though each item is not specifically mentioned or described. Provide equipment with components identical to and bearing the labeling of those approved for intended use by independent testing laboratory.
- B. Section Includes:
1. Fire-alarm control unit.
 2. Manual fire-alarm boxes.
 3. System smoke detectors.
 4. Notification appliances.
 5. Firefighters' smoke-control station.
 6. Remote annunciator.
 7. Addressable interface device.
 8. Digital alarm communicator transmitter.
 9. Notification appliance circuit power extender panel (NAC).
 10. Network communications.
- C. Related Requirements:
1. Section 01 3573 "Delegated Design Requirements and Procedures" for definitions, submittal procedures, responsibilities, and scheduling requirements associated with delegated design assignment indicated in this Section.
 2. Division 07 Section "Penetration Firestopping • • " for fire stopping requirements not in this Section.
 3. Provisions of Division 26 Sections "Common Work Results for Electrical • • " and "Raceways and Boxes for Electrical Systems • • " apply to this Section.
 4. Section 28 0513 "Conductors and Cables for Electronic Safety and Security" for cables and conductors for fire-alarm systems.

1.2 DEFINITIONS

- A. EMT: Electrical Metallic Tubing.
- B. FACP: Fire Alarm Control Panel.
- C. HLI: High Level Interface.
- D. NICET: National Institute for Certification in Engineering Technologies.
- E. PC: Personal computer.

- F. VESDA: Very Early Smoke-Detection Apparatus.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product, including furnished options and accessories.
1. Include construction details, material descriptions, dimensions, profiles, and finishes.
 2. Include rated capacities, operating characteristics, and electrical characteristics.
- B. Shop Drawings: For fire-alarm system.
1. Comply with recommendations and requirements in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.
 2. Include plans, elevations, sections, details, and attachments to other work.
 3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and locations. Indicate conductor sizes, indicate termination locations and requirements, and distinguish between factory and field wiring.
 4. Detail assembly and support requirements.
 5. Include voltage drop calculations for notification-appliance circuits.
 6. Include battery-size calculations.
 7. Include input/output matrix.
 8. Include statement from manufacturer that all equipment and components have been tested as a system and meet all requirements in this Specification and in NFPA 72.
 9. Include performance parameters and installation details for each detector.
 10. Verify that each duct detector is listed for complete range of air velocity, temperature, and humidity possible when air-handling system is operating.
 11. Provide program report showing that air-sampling detector pipe layout balances pneumatically within the airflow range of the air-sampling detector.
 12. Include plans, sections, and elevations of heating, ventilating, and air-conditioning ducts, drawn to scale; coordinate location of duct smoke detectors and access to them.
 - a. Show critical dimensions that relate to placement and support of sampling tubes, detector housing, and remote status and alarm indicators.
 - b. Show field wiring and equipment required for HVAC unit shutdown on alarm and override by firefighters' control system.
 - c. Locate detectors according to manufacturer's written recommendations.
 13. Include voice/alarm signaling-service equipment rack or console layout, grounding schematic, amplifier power calculation, and single-line connection diagram.
 14. Include floor plans to indicate final outlet locations showing address of each addressable device. Show size and route of cable and conduits and point-to-point wiring diagrams.
- C. General Submittal Requirements:
1. Submittals shall be approved by authorities having jurisdiction prior to submitting them to Architect.
 2. Shop Drawings shall be prepared by persons with the following qualifications:
 - a. Trained and certified by manufacturer in fire-alarm system design.
 - b. NICET-certified, fire-alarm technician; Level III minimum.
 - c. Licensed or certified by authorities having jurisdiction.
- D. Delegated-Design Submittal: Refer to Section 01 3573 "Delegated Design Requirements and Procedures" for delegated design submittal procedures and requirements.

1. Provide delegated design submittal for notification appliances and smoke and heat detectors, in addition to submittals listed above, indicate compliance with performance requirements and design criteria.
 - a. Drawings showing the location of each notification appliance and smoke and heat detector, ratings of each, and installation details as needed to comply with listing conditions of the device.
 - b. Design Calculations: Calculate requirements for selecting the spacing and sensitivity of detection, complying with NFPA 72. Calculate spacing and intensities for strobe signals and sound-pressure levels for audible appliances.
 - c. Indicate audible appliances required to produce square wave signal per NFPA 72.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Seismic Qualification Certificates: For fire-alarm control unit, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Field quality-control reports.
- D. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fire-alarm systems and components to include in emergency, operation, and maintenance manuals.
 1. In addition to items specified in Section 01 7823 "Operation and Maintenance Data," include the following and deliver copies to authorities having jurisdiction:
 - a. Comply with the "Records" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
 - b. Provide "Fire Alarm and Emergency Communications System Record of Completion Documents" according to the "Completion Documents" Article in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.
 - c. Complete wiring diagrams showing connections between all devices and equipment. Each conductor shall be numbered at every junction point with indication of origination and termination points.
 - d. Riser diagram.
 - e. Device addresses.
 - f. Record copy of site-specific software.
 - g. Provide "Inspection and Testing Form" according to the "Inspection, Testing and Maintenance" chapter in NFPA 72, and include the following:
 - 1) Equipment tested.
 - 2) Frequency of testing of installed components.
 - 3) Frequency of inspection of installed components.
 - 4) Requirements and recommendations related to results of maintenance.

- 5) Manufacturer's user training manuals.
- h. Manufacturer's required maintenance related to system warranty requirements.
- i. Abbreviated operating instructions for mounting at fire-alarm control unit and each annunciator unit.

B. Software and Firmware Operational Documentation:

- 1. Software operating and upgrade manuals.
- 2. Program Software Backup: On magnetic media or compact disk, complete with data files.
- 3. Device address list.
- 4. Printout of software application and graphic screens.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

- 1. Lamps for Remote Indicating Lamp Units: Quantity equal to 10 percent of amount installed, but no fewer than one unit.
- 2. Lamps for Strobe Units: Quantity equal to 10 percent of amount installed, but no fewer than one unit.
- 3. Smoke Detectors: Quantity equal to 10 percent of amount of each type installed, but no fewer than one unit of each type.
- 4. Detector Bases: Quantity equal to two percent of amount of each type installed, but no fewer than one unit of each type.
- 5. Keys and Tools: One extra set for access to locked or tamperproofed components.
- 6. Visual Notification Appliances: One of each type installed.
- 7. Fuses: Two of each type installed in the system. Provide in a box or cabinet with compartments marked with fuse types and sizes.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Personnel shall be trained and certified by manufacturer for installation of units required for this Project.
- B. Installer Qualifications: Installation shall be by personnel certified by NICET as minimum fire-alarm Level III technician.
- C. NFPA Certification: Obtain certification according to NFPA 72 by an NRTL (nationally recognized testing laboratory).
- D. NFPA Certification: Obtain certification according to NFPA 72 by a UL-listed alarm company.
- E. NFPA Certification: Obtain certification according to NFPA 72 in the form of a placard by an FM Global-approved alarm company.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace fire-alarm system equipment and components that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Extent: All equipment and components not covered in the Maintenance Service Agreement.
 - 2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Source Limitations for Fire-Alarm System and Components: Components shall be compatible with, and operate as an extension of existing <Insert Manufacturer's name> system. Provide system manufacturer's certification that all components provided have been tested as, and will operate as a system.
- B. Noncoded, UL-certified [**FM Global-placarded**] addressable system, with multiplexed signal transmission and [**voice**][**horn**]/strobe evacuation.
- C. Automatic sensitivity control of certain smoke detectors.
- D. All components provided shall be listed for use with the selected system.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 SYSTEMS OPERATIONAL DESCRIPTION

- A. Fire-alarm signal initiation shall be by one or more of the following devices and systems:
 - 1. Manual stations.
 - 2. Smoke detectors.
 - 3. Automatic sprinkler system water flow.
- B. Fire-alarm signal shall initiate the following actions:
 - 1. Continuously operate alarm notification appliances.
 - 2. Identify alarm and specific initiating device at fire-alarm control unit, connected network control panels, off-premises network control panels, and remote annunciators.
 - 3. Transmit an alarm signal to the remote alarm receiving station.
 - 4. Unlock electric door locks in designated egress paths.
 - 5. Release fire and smoke doors held open by magnetic door holders.
 - 6. Activate voice/alarm communication system.
 - 7. Switch heating, ventilating, and air-conditioning equipment controls to fire-alarm mode.
 - 8. Activate smoke-control system (smoke management) at firefighters' smoke-control system panel.
 - 9. Close smoke dampers in air ducts of designated air-conditioning duct systems.
 - 10. Activate emergency lighting control.
 - 11. Activate emergency shutoffs for gas and fuel supplies.
 - 12. Record events in the system memory.
- C. Supervisory signal initiation shall be by one or more of the following devices and actions:
 - 1. Valve supervisory switch.
 - 2. Independent fire-detection and -suppression systems.
 - 3. User disabling of zones or individual devices.
 - 4. Loss of communication with any panel on the network.
- D. System trouble signal initiation shall be by one or more of the following devices and actions:
 - 1. Open circuits, shorts, and grounds in designated circuits.

2. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.
3. Loss of communication with any addressable sensor, input module, relay, control module, remote annunciator, printer interface, or Ethernet module.
4. Loss of primary power at fire-alarm control unit.
5. Ground or a single break in internal circuits of fire-alarm control unit.
6. Abnormal ac voltage at fire-alarm control unit.
7. Break in standby battery circuitry.
8. Failure of battery charging.
9. Abnormal position of any switch at fire-alarm control unit or annunciator.

E. System Supervisory Signal Actions:

1. Initiate notification appliances.
2. Identify specific device initiating the event at fire-alarm control unit, connected network control panels, off-premises network control panels, and remote annunciators.
3. Record the event on system printer.
4. After a time delay of 200 seconds, transmit a trouble or supervisory signal to the remote alarm receiving station.
5. Transmit system status to building management system.
6. Display system status on graphic annunciator.

2.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a registered design professional, as defined in Section 01 3573 "Delegated Design Requirements and Procedures" to design notification appliances, and smoke and heat detectors.
1. Material properties indicated in this Section shall be considered as minimum properties.

2.4 FIRE-ALARM CONTROL UNIT

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Fire-Lite Alarms.
 2. Notifier.
 3. Siemens Industry, Inc.; Fire Safety Division.
- B. General Requirements for Fire-Alarm Control Unit:
1. Field-programmable, microprocessor-based, modular, power-limited design with electronic modules, complying with UL 864.
 - a. System software and programs shall be held in nonvolatile flash, electrically erasable, programmable, read-only memory, retaining the information through failure of primary and secondary power supplies.
 - b. Include a real-time clock for time annotation of events on the event recorder and printer.
 - c. Provide communication between the FACP and remote circuit interface panels, annunciators, and displays.
 - d. The FACP shall be listed for connection to a central-station signaling system service.

- e. Provide nonvolatile memory for system database, logic, and operating system and event history. The system shall require no manual input to initialize in the event of a complete power down condition. The FACP shall provide a minimum 500-event history log.
 - 2. Addressable Initiation Device Circuits: The FACP shall indicate which communication zones have been silenced and shall provide selective silencing of alarm notification appliance by building communication zone.
 - 3. Addressable Control Circuits for Operation of Notification Appliances and Mechanical Equipment: The FACP shall be listed for releasing service.
- C. Alphanumeric Display and System Controls: Arranged for interface between human operator at fire-alarm control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.
 - 1. Annunciator and Display: Liquid-crystal type, 80 characters, minimum.
 - 2. Keypad: Arranged to permit entry and execution of programming, display, and control commands.
- D. Initiating-Device, Notification-Appliance, and Signaling-Line Circuits:
 - 1. Pathway Class Designations: NFPA 72, Class B.
 - 2. Pathway Survivability: Level 1.
 - 3. Install no more than 50 addressable devices on each signaling-line circuit.
 - 4. Serial Interfaces:
 - a. One dedicated RS 485 port for central-station operation using point ID DACT.
 - b. One RS 485 port for remote annunciators, Ethernet module, or multi-interface module (printer port).
 - c. One USB port for PC configuration.
 - d. One RS 232 port for VESDA HLI connection.
 - e. One RS 232 port for voice evacuation interface.
- E. Notification-Appliance Circuit:
 - 1. Visual alarm appliances shall flash in synchronization where multiple appliances are in the same field of view, as defined in NFPA 72.
- F. Door Controls: Door hold-open devices that are controlled by smoke detectors at doors in smoke-barrier walls shall [be] [not be] connected to fire-alarm system.
- G. Remote Smoke-Detector Sensitivity Adjustment: Controls shall select specific addressable smoke detectors for adjustment, display their current status and sensitivity settings, and change those settings. Allow controls to be used to program repetitive, time-scheduled, and automated changes in sensitivity of specific detector groups. Record sensitivity adjustments and sensitivity-adjustment schedule changes in system memory, and print out the final adjusted values on system printer.
- H. Transmission to Remote Alarm Receiving Station: Automatically transmit alarm, supervisory, and trouble signals to a remote alarm station.

- I. Printout of Events: On receipt of signal, print alarm, supervisory, and trouble events. Identify zone, device, and function. Include type of signal (alarm, supervisory, or trouble) and date and time of occurrence. Differentiate alarm signals from all other printed indications. Also print system reset event, including same information for device, location, date, and time. Commands initiate the printing of a list of existing alarm, supervisory, and trouble conditions in the system and a historical log of events.
- J. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, supervisory and digital alarm communicator transmitters shall be powered by 24-V dc source.
 - 1. Alarm current draw of entire fire-alarm system shall not exceed 80 percent of the power-supply module rating.
- K. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch.
 - 1. Batteries: Sealed lead calcium.
- L. Instructions: Computer printout or typewritten instruction card mounted behind a plastic or glass cover in a stainless-steel or aluminum frame. Include interpretation and describe appropriate response for displays and signals. Briefly describe the functional operation of the system under normal, alarm, and trouble conditions.

2.5 MANUAL FIRE-ALARM BOXES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Fire-Lite Alarms.
 - 2. Notifier.
 - 3. Siemens Industry, Inc.; Fire Safety Division.
- B. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.
 - 1. Double-action mechanism requiring two actions to initiate an alarm, pull-lever type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit.
 - 2. Station Reset: Key- or wrench-operated switch.
 - 3. Indoor Protective Shield: Factory-fabricated, clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm. Lifting the cover actuates an integral battery-powered audible horn intended to discourage false-alarm operation.
 - 4. Weatherproof Protective Shield: Factory-fabricated, clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm.

2.6 SYSTEM SMOKE DETECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Fire-Lite Alarms.
 - 2. Notifier.

3. Siemens Industry, Inc.; Fire Safety Division.
- B. General Requirements for System Smoke Detectors:
1. Comply with UL 268; operating at 24-V dc, nominal.
 2. Detectors shall be four -wire type.
 3. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.
 4. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.
 5. Integral Visual-Indicating Light: LED type, indicating detector has operated and power-on status.
 6. Remote Control: Unless otherwise indicated, detectors shall be digital-addressable type, individually monitored at fire-alarm control unit for calibration, sensitivity, and alarm condition.
 - a. Rate-of-rise temperature characteristic of combination smoke- and heat-detection units shall be selectable at fire-alarm control unit for 15 or 20 deg F (8 or 11 deg C) per minute.
 - b. Multiple levels of detection sensitivity for each sensor.
 - c. Sensitivity levels based on time of day.
- C. Photoelectric Smoke Detectors:
1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
 2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
 - a. Primary status.
 - b. Device type.
 - c. Present average value.
 - d. Present sensitivity selected.
 - e. Sensor range (normal, dirty, etc.).
- D. Duct Smoke Detectors: Photoelectric type complying with UL 268A.
1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
 2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
 - a. Primary status.
 - b. Device type.
 - c. Present average value.
 - d. Present sensitivity selected.
 - e. Sensor range (normal, dirty, etc.).
 3. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector for smoke detection in HVAC system ducts.
 4. Each sensor shall have multiple levels of detection sensitivity.
 5. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
 6. Relay Fan Shutdown: Fully programmable relay rated to interrupt fan motor-control circuit.

2.7 NOTIFICATION APPLIANCES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Cooper Wheelock.
 - 2. Federal Signal Corporation.
 - 3. GE UTC Fire & Security; A United Technologies Company.
 - 4. Gentex Corporation.
 - 5. Siemens Industry, Inc.; Fire Safety Division.
 - 6. SimplexGrinnell LP.
 - 7. System Sensor.
- B. General Requirements for Notification Appliances: Individually addressed, connected to a signaling-line circuit, equipped for mounting as indicated, and with screw terminals for system connections.
- C. Visible Notification Appliances: Xenon strobe lights complying with UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch- (25-mm-) high letters on the lens.
 - 1. Rated Light Output:
 - a. 15/30/75/110 cd, selectable in the field.
 - 2. Mounting: Wall mounted unless otherwise indicated.
 - 3. For units with guards to prevent physical damage, light output ratings shall be determined with guards in place.
 - 4. Flashing shall be in a temporal pattern, synchronized with other units.
 - 5. Strobe Leads: Factory connected to screw terminals.
 - 6. Mounting Faceplate: Factory finished, white.

2.8 REMOTE ANNUNCIATOR

- A. Description: Annunciator functions shall match those of fire-alarm control unit for alarm, supervisory, and trouble indications. Manual switching functions shall match those of fire-alarm control unit, including acknowledging, silencing, resetting, and testing.
 - 1. Mounting: Surface cabinet, NEMA 250, Type 1.
- B. Display Type and Functional Performance: Alphanumeric display and LED indicating lights shall match those of fire-alarm control unit. Provide controls to acknowledge, silence, reset, and test functions for alarm, supervisory, and trouble signals.

2.9 ADDRESSABLE INTERFACE DEVICE

- A. General:
 - 1. Include address-setting means on the module.
 - 2. Store an internal identifying code for control panel use to identify the module type.
 - 3. Listed for controlling HVAC fan motor controllers, fire pumps, and emergency generators for monitoring status
- B. Monitor Module: Microelectronic module providing a system address for alarm-initiating devices for wired applications with normally open contacts.

- C. Control Module:
 - 1. Operate notification devices.
 - 2. Operate solenoids for use in sprinkler service.

2.10 DIGITAL ALARM COMMUNICATOR TRANSMITTER

- A. Digital alarm communicator transmitter shall be acceptable to the remote central station and shall comply with UL 632.
- B. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire-alarm control unit and automatically capture two telephone line(s) and dial a preset number for a remote central station. When contact is made with central station(s), signals shall be transmitted. If service on either line is interrupted for longer than 45 seconds, transmitter shall initiate a local trouble signal and transmit the signal indicating loss of telephone line to the remote alarm receiving station over the remaining line. Transmitter shall automatically report telephone service restoration to the central station. If service is lost on both telephone lines, transmitter shall initiate the local trouble signal.
- C. Local functions and display at the digital alarm communicator transmitter shall include the following:
 - 1. Verification that both telephone lines are available.
 - 2. Programming device.
 - 3. LED display.
 - 4. Manual test report function and manual transmission clear indication.
 - 5. Communications failure with the central station or fire-alarm control unit.
- D. Digital data transmission shall include the following:
 - 1. Address of the alarm-initiating device.
 - 2. Address of the supervisory signal.
 - 3. Address of the trouble-initiating device.
 - 4. Loss of ac supply.
 - 5. Loss of power.
 - 6. Low battery.
 - 7. Abnormal test signal.
 - 8. Communication bus failure.
- E. Secondary Power: Integral rechargeable battery and automatic charger.
- F. Self-Test: Conducted automatically every 24 hours with report transmitted to central station.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for ventilation, temperature, humidity, and other conditions affecting performance of the Work.
 - 1. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment and wiring are installed, before installation begins.

- B. Examine roughing-in for electrical connections to verify actual locations of connections before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 ELECTRIC POWER

- A. Provide primary power for all fire alarm panel equipment from the emergency AC service to the building where shown on the drawings. Power shall be 120 VAC service, transformed through a two-winding, isolation type transformer and rectified to low voltage DC for operation of all circuits and devices. Make the service connection for the fire alarm panel equipment at the junction box labeled "FACP Connection" connected to the emergency distribution panel where shown. The circuit breaker shall be painted red, marked "Fire Alarm Control Circuit" and shall be provided with a lockable handle or cover. All 120 VAC primary power circuits shall be equipped with surge protection devices (SPD).

3.3 SYSTEM FIELD WIRING

- A. Wiring within Cabinets, Enclosures, Boxes, Junction Boxes and Fittings:
 - 1. Provide wiring installed in a neat and workmanlike manner and installed parallel with or at right angles to the sides and back of any box, enclosure or cabinet.
 - 2. Connect conductors which are terminated, spliced, or otherwise interrupted in any enclosure, cabinet, mounting or junction box, to terminal blocks.
 - 3. Mark each terminal in accordance with the wiring diagrams of the system. Make all connections with approved pressure type terminal blocks, which are securely mounted.
 - 4. Wire nuts and similar devices are not acceptable.
- B. Provide a terminal cabinet where indicated on the Drawings.
 - 1. Use terminal sizes appropriate for the size of the wiring to be connected.
 - 2. Provide labeling of conductor terminations, and a diagram permanently mounted in the terminal cabinet, showing all conductors, their labels, their circuits and their interconnection.
 - 3. Provide terminal cabinets having 25 percent spare backbox space.
- C. Fire Alarm Wiring:
 - 1. Provide fire alarm circuits in accordance with the equipment manufacturer's requirements, NFPA 70 – National Electrical Code, specifically Article 760 and these Specifications. Provide wire size sufficient to prevent voltage drop problems.
 - 2. Circuits operating at 24 VDC shall not operate at less than 21.6 volts.
 - 3. Audio speaker circuits operating at 70.7 VRMS shall be designated to operate at less than 0.5 dB (12.5 percent) loss. Circuits operating at any other voltage shall not have a voltage drop exceeding 10 percent of nominal voltage.
 - 4. Install all conductors in minimum electrical-metallic tubing (EMT), with a minimum diameter of 3/4 inch.
 - 5. Use shielded wiring where recommended by the manufacturer. For shielded wiring, the shield shall be grounded at only one point, which shall be in or adjacent to the FACP. Treat the drain or shield wires as a fire alarm conductor, landed on terminal strips. The drain wire shall be sleeved or insulated to within 1 inch of its termination. T-taps are not permitted. Circuits to fan shutdown systems shall terminate in terminal cabinets within 3 feet of the controllers for those systems

D. Wiring Installation:

1. All alarm initiating devices and supervisory initiating devices shall be connected on Style 4 two (2) wire (Class B) Signaling Line Circuits (SLC). Unsupervised wiring (point wires) shall not be permitted. Parallel branch circuit wiring shall be permitted on the addressable SLCs.
2. All alarm indicating devices shall be connected on Style Y two (2) wire electrically supervised circuits and on a minimum of two active circuits.
3. Wiring to initiating and supervisory devices and to fire alarm annunciators shall be with two (2) conductor twisted size 16 solid copper UL listed fire alarm system wire, subject to manufacturer's recommendations.
4. Wiring to alarm indicating devices shall be with two (2) conductors twisted No. 14 AWG solid copper UL listed jacketed fire alarm system wire, subject to manufacturer's recommendations.
5. Power wiring, operating at 120 VAC minimum, shall be No. 12 AWG solid copper, 600 VAC rated THHN/THWN insulation.
6. All other wiring shall be solid copper No. 14 AWG minimum with 600 volt THHN insulation except as specifically noted.
7. No splicing of wires is permitted except on terminal blocks in annunciators, control panels or properly labeled terminal cabinets as shown on the drawings.
8. The use of wire nuts or similar type devices is not permitted.

E. Conductor Terminations:

1. All devices shall have terminals for each wiring connection.
2. No splicing of any type shall be permitted in pull boxes, to include crimp terminals.
3. No specific color coding is required for any circuit; however, labeling of any circuit at terminal blocks in terminal cabinets, FACP, and remote fire alarm control units shall be provided at each conductor connection.
4. Each conductor or cable shall have a permanent label to provide a unique and specific designation.
5. Each terminal cabinet, FACP and remote fire alarm control unit shall contain a laminated drawing which indicates each conductor, its label, circuit and terminal. The laminated drawing shall be neat, using 12 point lettering minimum size, and mounted within each cabinet, panel or unit so that it does not interfere with the wiring or terminals.
6. All wires shall be labeled at both ends.. Use plastic wire ties and wire tie mounts to ensure a neat quality appearance.

F. Conduit Installation:

1. Conceal all electrical conduits above suspended ceilings and behind walls, except in unfinished areas where conduit may be surface mounted, unless otherwise specified.
2. The use of metal clad (MC) cable is acceptable only in concealed spaces and only as allowed by other Codes, including channeled walls and above suspended ceilings. The MC Cable shall be installed and supported in accordance with NFPA 70-NEC.
3. MC cable is not acceptable for smoke control system wiring.
4. All exposed conduit shall be painted to match adjacent finish.

G. Conduit Size:

1. Both exposed and concealed conduit including risers up to 2 inches in diameter shall utilize compression type steel fittings and connectors.
2. Unless otherwise noted, all conduit provided shall be 3/4 inch minimum trade size.
3. Vertical risers shall be one inch diameter minimum.

4. Limited use of 1/2 inch conduit is permitted on horizontal runs when a reduced diameter is required for better concealment. Where necessary, 1/2 inch diameter flex conduit may be fished or used for concealed work. Provide plenum rated wiring conductors (Type FPLP) when flex conduit is used.

3.4 EQUIPMENT INSTALLATION

- A. Comply with NFPA 72, NFPA 101, and requirements of authorities having jurisdiction for installation and testing of fire-alarm equipment. Install all electrical wiring to comply with requirements in NFPA 70 including, but not limited to, Article 760, "Fire Alarm Systems."
 1. Devices placed in service before all other trades have completed cleanup shall be replaced.
 2. Devices installed but not yet placed in service shall be protected from construction dust, debris, dirt, moisture, and damage according to manufacturer's written storage instructions.
- B. Install wall-mounted equipment, with tops of cabinets not more than 78 inches (1980 mm) above the finished floor.
 1. Comply with requirements for seismic-restraint devices specified in Section 26 0548.16 "Seismic Controls for Electrical Systems."
- C. Manual Fire-Alarm Boxes:
 1. Install manual fire-alarm box in the normal path of egress within 60 inches (1520 mm) of the exit doorway.
 2. Mount manual fire-alarm box on a background of a contrasting color.
 3. The operable part of manual fire-alarm box shall be between 42 inches (1060 mm) and 48 inches (1220 mm) above floor level. All devices shall be mounted at the same height unless otherwise indicated.
- D. Smoke- or Heat-Detector Spacing:
 1. Comply with the "Smoke-Sensing Fire Detectors" section in the "Initiating Devices" chapter in NFPA 72, for smoke-detector spacing.
 2. Comply with the "Heat-Sensing Fire Detectors" section in the "Initiating Devices" chapter in NFPA 72, for heat-detector spacing.
 3. Smooth ceiling spacing shall not exceed 30 feet (9 m) .
 4. Spacing of detectors for irregular areas, for irregular ceiling construction, and for high ceiling areas shall be determined according to Annex A [or Annex B]in NFPA 72.
 5. HVAC: Locate detectors not closer than 36 inches (910 mm) from air-supply diffuser or return-air opening.
 6. Lighting Fixtures: Locate detectors not closer than 12 inches (300 mm) from any part of a lighting fixture and not directly above pendant mounted or indirect lighting.
- E. Install a cover on each smoke detector that is not placed in service during construction. Cover shall remain in place except during system testing. Remove cover prior to system turnover.
- F. Duct Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes so they extend the full width of duct. Tubes more than 36 inches (9100 mm) long shall be supported at both ends.
 1. Do not install smoke detector in duct smoke-detector housing during construction. Install detector only during system testing and prior to system turnover.

- G. Remote Status and Alarm Indicators: Install in a visible location near each smoke detector, sprinkler water-flow switch, and valve-tamper switch that is not readily visible from normal viewing position.
- H. Visible Alarm-Indicating Devices: Install weather-proof device at exterior fire department connection. Locate in accordance with local authority having jurisdiction.
- I. Device Location-Indicating Lights: Locate in public space near the device they monitor.

3.5 PATHWAYS

- A. Pathways above recessed ceilings and in nonaccessible locations may be routed exposed.
 - 1. Exposed pathways located less than 96 inches (2440 mm) above the floor shall be installed in EMT.
- B. Pathways shall be installed in EMT.
- C. Exposed EMT shall be painted red enamel.

3.6 CONNECTIONS

- A. For fire-protection systems related to doors in fire-rated walls and partitions and to doors in smoke partitions, comply with requirements in Section 08 7100 "Door Hardware." Connect hardware and devices to fire-alarm system.
 - 1. Verify that hardware and devices are listed for use with installed fire-alarm system before making connections.
- B. Make addressable connections with a supervised interface device to the following devices and systems. Install the interface device less than 36 inches (910 mm) from the device controlled. Make an addressable confirmation connection when such feedback is available at the device or system being controlled.
 - 1. Alarm-initiating connection to smoke-control system (smoke management) at firefighters' smoke-control system panel.
 - 2. Smoke dampers in air ducts of designated HVAC duct systems.
 - 3. Magnetically held-open doors.
 - 4. Electronically locked doors and access gates.
 - 5. Alarm-initiating connection to activate emergency lighting control.
 - 6. Alarm-initiating connection to activate emergency shutoffs for gas and fuel supplies.
 - 7. Supervisory connections at valve supervisory switches.
 - 8. Data communication circuits for connection to building management system.
 - 9. Supervisory connections at fire-extinguisher locations.

3.7 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 26 0553 "Identification for Electrical Systems."
- B. Install framed instructions in a location visible from fire-alarm control unit.

3.8 GROUNDING

- A. Ground fire-alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire-alarm control unit.
- B. Ground shielded cables at the control panel location only. Insulate shield at device location.

3.9 FIELD QUALITY CONTROL

- A. Field tests shall be witnessed by authorities having jurisdiction.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
- D. Perform the following tests and inspections:
 - 1. Visual Inspection: Conduct visual inspection prior to testing.
 - a. Inspection shall be based on completed record Drawings and system documentation that is required by the "Completion Documents, Preparation" table in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.
 - b. Comply with the "Visual Inspection Frequencies" table in the "Inspection" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72; retain the "Initial/Reacceptance" column and list only the installed components.
 - 2. System Testing: Comply with the "Test Methods" table in the "Testing" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
 - 3. Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.
 - 4. Test audible appliances for the private operating mode according to manufacturer's written instructions.
 - 5. Test visible appliances for the public operating mode according to manufacturer's written instructions.
 - 6. Factory-authorized service representative shall prepare the "Fire Alarm System Record of Completion" in the "Documentation" section of the "Fundamentals" chapter in NFPA 72 and the "Inspection and Testing Form" in the "Records" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
- E. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.
- F. Fire-alarm system will be considered defective if it does not pass tests and inspections.
- G. Prepare test and inspection reports.
- H. Maintenance Test and Inspection: Perform tests and inspections listed for weekly, monthly, quarterly, and semiannual periods. Use forms developed for initial tests and inspections.

- I. Annual Test and Inspection: One year after date of Substantial Completion, test fire-alarm system complying with visual and testing inspection requirements in NFPA 72. Use forms developed for initial tests and inspections.

3.10 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of manufacturer's designated service organization. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
 1. Include visual inspections according to the "Visual Inspection Frequencies" table in the "Testing" paragraph of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
 2. Perform tests in the "Test Methods" table in the "Testing" paragraph of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
 3. Perform tests per the "Testing Frequencies" table in the "Testing" paragraph of the "Inspection, Testing and Maintenance" chapter in NFPA 72.

3.11 SOFTWARE SERVICE AGREEMENT

- A. Comply with UL 864.
- B. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for two years.
- C. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within [two] years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
 1. Upgrade Notice: At least 30 days to allow Owner to schedule access to system and to upgrade computer equipment if necessary.

3.12 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain fire-alarm system.

END OF SECTION

SECTION 31 1000 – SITE CLEARING

PART 1 - GENERAL

1.1 SUMMARY

- A. This Sections includes the following:
 - 1. Protecting existing vegetation to remain.
 - 2. Removing existing below-grade site improvements.
 - 3. Disconnecting, capping or sealing, and removing or abandoning site utilities.
 - 4. Providing temporary erosion- and sedimentation-control measures.

1.2 REFERENCES

- A. DOE – Department of Energy and Environment.

1.3 DEFINITIONS

- A. Tree Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction and defined by the drip line of individual trees or the perimeter drip line of groups of trees, unless otherwise indicated.

1.4 MATERIAL OWNERSHIP

- A. Except for stripped topsoil or other materials indicated to remain Owner's property, cleared materials shall become Contractor's property and shall be removed from Project Site.

1.5 SUBMITTALS

- A. Photographs or videotapes, sufficiently detailed, of existing conditions of trees and plantings, adjoining construction, and site improvements that might be misconstrued as damage caused by site clearing.

1.6 PROJECT CONDITIONS

- A. Traffic: Minimize interference with adjoining walks and other adjacent occupied or used facilities during site-clearing operations.
 - 1. Do not close or obstruct walks or other adjacent occupied or used facilities without permission from Owner and Contracting Officer Technical Representative (COTR).
 - 2. Provide alternative routes around closed or obstructed traffic ways if required by COTR.
- B. Utility Locator Service: Notify utility locator service for area where project is located before site clearing.
- C. Do not commence site clearing operations until temporary erosion and sediment control measures are in place.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 PREPARATION

- A. Protect and maintain benchmarks and survey control points from disturbance during construction.
- B. Locate and clearly flag trees and vegetation to remain. Erect a 6-foot high chain link tree protection fence as close to the critical root zone as possible.
- C. Protect existing site improvements to remain from damage during construction.
 - 1. Restore damaged improvements to their original condition, as acceptable to the Owner.

3.2 TEMPORARY EROSION AND SEDIMENTATION CONTROL

- A. Provide temporary erosion and sedimentation control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways, according to the erosion and sediment control plans, and in accordance with DOEE Standards and Specifications for Soil Erosion and Sediment Control.
- B. Inspect, repair, and maintain erosion and sedimentation control measures during construction until permanent vegetation has been established.
- C. Remove erosion and sedimentation controls after areas disturbed during construction are restored and stabilized.

3.3 UTILITIES

- A. Owner will arrange for disconnecting and sealing indicated utilities that serve existing structures before site clearing, when requested by contractor.
 - 1. Verify that utilities have been disconnected and capped before proceeding with site clearing.
- B. Locate, identify, disconnect, and seal or cap off utilities indicated to be removed.
 - 1. Arrange with utility companies to shut off indicated utilities.
 - 2. Owner will arrange to shut off indicated utilities when requested by Contractor.
- C. Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated.
 - 1. Notify Owner no less than three days in advance of proposed utility interruptions.
 - 2. Do not proceed with utility interruptions without Owner's written permission.
- D. Excavate for and remove underground utilities indicated to be removed.

3.4 DISPOSAL

- A. Disposal: Remove demolished materials, and waste materials including trash and debris, and legally dispose of them off Owner's Property.

June 15, 2026

Smithsonian OPDC Project No. 2533105

SmithGroup Project No. 00100084

1. Separate recyclable materials produced during site clearing from other non-recyclable materials. Store or stockpile without intermixing with other materials and transport them to recycling facilities.

END OF SECTION

FOR REFERENCE ONLY

SECTION 312300 - EARTHWORK

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Provide all facilities, labor, materials, equipment, transportation, supervision, and related work necessary to complete the Work specified in this Section, and as shown on the Drawings.
- B. Examine all Drawings and all other Sections of the Specifications for requirements therein affecting the work of this Section. All work under this Section of the Specifications shall be performed in accordance with Division 01 (General Requirements).
- C. Coordinate work with that of all other trades affecting or affected by the Work of this Section. Cooperate with such trades to ensure the steady progress of all work under the Contract.
- D. All work shall be performed in accordance with applicable codes, permits and regulations, and the requirements of all local, state, and federal agencies having jurisdiction over the work.

1.2 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections apply to this Section.

1.3 DESCRIPTION OF WORK

- A. The Work of this Section includes, but is not limited to:
 - 1. Excavating all types of materials (e.g., soil, boulders, bedrock, utilities, foundations, pavements, debris) to limits and bottom of excavation elevations indicated on the Drawings and herein, or required for foundations, slabs, utilities and other site improvements shown on the Drawings.
 - 2. Over-excavate soil and weathered rock, and other unsuitable materials to suitable foundation bearing strata.
 - 3. Preparing bearing surfaces for foundations.
 - 4. Installing building foundation drainage systems as shown on the Drawings.
 - 5. Providing, placing, moisture conditioning, compacting, and grading of fill and backfill materials to the specified limits and percent compaction required to construct foundations, slabs, structures, utilities, roadways, parking areas, walkways, landscaped areas, and other site improvements shown on the Drawings.
 - 6. Handling, conveying, segregating, and stockpiling materials used during the course of the Work.
 - 7. Re-use of the on-site soils to the extent possible.
 - 8. Removing from the site and legally disposing of excess materials and materials that are not suitable for on-site re-use in accordance with the Specifications.
 - 9. Removing from the site and legally and temporarily stockpiling materials that are suitable and planned for on-site re-use in accordance with the Specifications.
 - 10. Protecting existing utilities, structures, and other facilities to remain during the work.

11. Preventing trafficking of soil materials onto public roads or sidewalks and providing street cleaning to remove such materials during the work.
12. Obtaining, paying for, and complying with all required permits, licenses, and approvals prior to commencing the work.

1.4 RELATED SECTIONS

- A. Related Sections
 1. 024119 Selective Demolition
 2. 033000 Cast-in-Place Concrete
 3. 221313 Facility Sanitary Sewers
 4. 311000 Site Clearing
 5. 316333 Micropiles
 6. 321313 Concrete Paving
 7. 331415 Site Water Distribution Piping
 8. 334200 Stormwater Conveyance

1.5 DEFINITIONS

- A. Refer to Section 011000 for definition of Owner, Architect, Construction Manager, Owner's Representative, and Contractor. In this Section the term Contractor may refer to the Construction Manager as Constructor or Construction Contractor.
- B. Bidder: Entity bidding to complete the Work of this Section. After award of the contract, the Bidder becomes the Contractor for the purposes of this Section.
- C. Site: Refer to the limits of construction shown on the Drawings.
- D. Site Improvements: shall include, but not be limited to, buildings, structures, foundations, underground and above-ground utilities, pavements, landscaping, plants, slabs, sidewalks, curbs, and all other site features that are outside the limits of the site, and/or those elements within the limits of the site that are to remain.
- E. Exploration: shall include, but not be limited to, test borings and test pits and results of field and lab testing.
- F. Building Code or Code: Refer to the standards and regulations indicated on the Drawings.
- G. Rock (Bedrock): Mass of naturally formed, crystalline-mineral material that is hardened and intact or with in-situ discontinuities, and may be altered by weathering up to the degree it is soil-like.
- H. Structures: Foundations, slabs, walls, equipment pads, tanks, mechanical, plumbing, and electrical appurtenances, or other man-made stationary features constructed above or below the ground surface.
- I. Subgrade: Surface or elevation remaining after completing excavation, or top surface of a fill or backfill immediately below subbase, or the vertical excavation level and slopes indicated on the Drawings to which the excavation shall be conducted. For footing bearing subgrades this level

will be to the elevations indicated on the Drawings, or the top of material in a state suitable for foundation bearing, whichever is lower.

- J. Trench: Excavation of any length where width at top is less than twice the depth and depth is greater than 5 ft.
- K. Zone(s) of Influence (ZOI): The zone(s) below lines extending away from a structural element (e.g., spread footing foundation, slab-on-grade, pile cap) shown on the Drawings. The lines for the element are:
 - 1. At a slope of one and one-half horizontal to one vertical (1.5H:1V) beginning at the bottom outside edge of the element and away from the element until intersecting suitable bearing materials.
 - 2. Horizontal beginning at the 1 ft above the top of a laterally loaded element and extending away for a distance of three times the element height.

1.6 PROJECT CONDITIONS

- A. Prior to submitting a bid, the Bidder shall review and understand the information contained in the following documents. These documents are made available to the Bidder for informational purposes only. The subsurface conditions information presented in these documents, as applicable, are for informational purposes only and shall not be interpreted as a warranty of subsurface conditions whether interpreted from written text, exploration results, laboratory results, or other data or interpretations of data.
 - 1. "Report on Geotechnical Engineering Study, Construct Arabian Leopard Habitat, National Zoological Park, 3100 Connecticut Avenue NW, Washington, DC" prepared by Haley & Aldrich, Inc., dated March 2026.
- B. Prior to submitting a bid, the Bidder shall examine the records of subsurface features including but not limited to utilities and foundations, records of explorations, and the exploration samples to determine conditions under which the Work will be performed. The exploration samples are available for review at Haley & Aldrich, Inc., Vienna, Virginia.
- C. The exploration information represents subsurface conditions at the exploration locations at the time conducted. Data on indicated subsurface conditions are not intended as representations or warranties of accuracy or continuity between explorations. It is expressly understood that the Owner and Architect will not be responsible for interpretations or conclusions drawn there from by the Bidder.
- D. The Contractor may perform additional explorations and laboratory testing or field screening for their own information at no cost to the Owner following approval in writing from the Owner. The Bidder shall include the cost of any additional studies it deems necessary to properly perform the Work specified in this Section, in the Related Sections, and as shown on the Drawings.
- E. If, during the course of construction operations, conditions differing substantially from those indicated in the documents referenced in this Section are encountered, promptly notify the Owner's Representative and Architect in writing, and do not disturb such conditions until directed. The Owner, Owner's Representative, and Architect will investigate such conditions,

and, if it is determined that the conditions differ substantially from those that reasonably would have been anticipated from examination of the subsurface information and site, and that such conditions will necessitate a change in the Work, the Architect will recommend any required changes and adjustments in writing. Oral or written communications with field personnel shall not constitute acknowledgment of a differing subsurface condition.

1.7 QUALITY ASSURANCE AND CONTROL

- A. The Contractor shall perform on-site observation and testing during various phases of the construction operations. The presence of the Owner's Representative or Architect does not constitute supervision or direction of the Contractor's work. Neither the presence of the Owner's Representative or Architect, nor any observations and testing performed by them, nor any notice or failure to give notice shall excuse the Contractor from conformance with these Specifications or from defects discovered in his work or from the Contractor's responsibility for site safety including both persons and property.
- B. The Contractor shall conduct various laboratory and field testing and interpret the results to assess conformance with the requirements of the Contract Documents for the work of this Section and related sections. Except as indicated in the Contract Documents, the Contractor shall determine the types and frequency of testing as may be appropriate in coordination with the Owner's Representative. The Contractor will prepare a report indicating non-conformances as determined by the testing.
- C. Subgrades and fill layers shall be tested (if applicable), observed as required, and accepted by the Owner's Representative before construction of any further work thereon.
 - 1. The Owner's Representative and Architect may perform observation and field testing at any point during the work. Cooperate with the Owner's Representative and Architect to obtain field samples and conduct field testing. Furnish incidental labor in connection with the required sampling and testing.
 - 2. The Contractor shall be responsible for notifying the Owner's Representative and Architect of upcoming earthwork activities by providing a weekly schedule of work activities at least two business days prior to the start of each week, and with 24 hours prior notice, daily changes to the schedule.
 - 3. If, based on the observation and/or testing by the Contractor, a subgrade or backfill non-conformance is found (e.g., backfill below specified density), the non-conformance shall be remediated by the Contractor. All costs related to testing or remediation/replacement of nonconforming work/materials shall be paid for by the Contractor at no additional cost to the Owner and with no schedule impact to the Project.
 - 4. No fill material shall be removed from the site or delivered to the site prior to written acceptance by the Architect. Off-site materials, which are not accepted, if brought to the site, shall be immediately removed by the Contractor at no cost to the Owner.
 - 5. All materials being imported to the site shall be newly-excavated materials, free from contamination, oil and hazardous materials.
 - 6. The Contractor shall conduct its Work in a manner so that vibrations of buildings, structures, ground surfaces, site features, and utilities outside of the limits of Work do not exceed the more restrictive of 0.5 inches per second at all times or requirements provided by the Owner.

1.8 SUBMITTALS

- A. The Contractor shall submit the following for review.
1. A narrative and drawings (plans and sections) and calculations, describing the following: schedule, sequence, details, and procedures for excavation, temporary support of excavation, dewatering, foundation installation and construction, subdrainage installation, backfilling, soil management, and other related activities.
 2. Prior to start of earthwork, the Contractor's qualified, independent professional shall conduct a pre-construction condition survey.
 - a. The survey shall include the following, unless otherwise approved by the Architect:
 - 1) Utilities and site improvements to remain on and within 150 ft of the extents of the Site.
 - 2) Any other areas as may be affected by the Contractor's construction operations.
 - b. Coordinate activities, issue notices, obtain clearances and provide whatever photographic, video, and secretarial assistance is necessary to accomplish the survey.
 - c. Give notice in writing, to the owner of the property concerned, tenant of the property and any representative of local authorities required to be present at such survey. Advise in notice the dates on which surveys are to be made so that they may have representatives present during the examination. Provide copies of all notices.
 - d. Observations shall be recorded, and sufficient and detailed photographic and appropriately narrated video made, during the survey of the existing conditions for interiors and exteriors of buildings, utilities, and other structures that might be affected. Cracks, damage, or other defects shall be located and recorded to the extent that it will be possible to determine the effect, if any, of the construction operations on the defect.
 - e. The record of each property examined shall be signed by the representatives present.
 - f. Prior to start of earthwork, the Contractor's record shall be submitted to the Architect for review.
 - g. Upon completion of all excavation and backfilling work, the Contractor shall make a similar examination of any properties, structures, and conditions where complaints of damage have been received or damage claims have been filed. Give notice to all interested parties so that they may be present during the final examination. Records of the final examination shall be signed and distributed the same as the original pre-construction survey.
 3. Compaction equipment manufacturer literature and model numbers.
 4. Detailed shop drawings and calculations, to be reviewed by the Architect, of applicable earthwork procedures and sequences.
 5. Supplier quality control test results and two 50 lbs. bag/bucket samples for independent quality control testing from each borrow (off-site) source or supplier for each type of proposed material.
 6. Chemical test data and source site data on proposed borrow (imported) materials. Data shall include, at a minimum:

- a. Documentation, as judged sufficient by the Architect, confirming that all borrow materials are free of contamination. A letter, including backup data and chemical test results, from a Qualified Environmental Professional will constitute suitable documentation that the material is free of contamination.
- b. Location, address, owner's name and telephone number, and nature of the source site, including a street map with the limits of the borrow pit property and the exact location of where the borrow material will be obtained on the site clearly illustrated.
- c. Present and past usage of the source site and materials and description of abutting properties and their uses.
- d. Any previously existing report(s) associated with an assessment of the source site as relates to the presence of oil or hazardous materials.
- e. If the site characterization data indicate materials could possibly be polluted or contaminated, or the submitted chemical test data is unacceptable in the judgment of the Architect, chemical testing will be required as directed by the Architect. The chemical testing shall be completed by the Contractor in coordination with the Environmental Consultant at no additional cost to the Owner. If site characterization of off-site borrow sources indicates that soils are acceptable for use in the judgment of the Architect, then chemical testing will not be required.
7. Flowable Fill and Concrete Mix Designs: Mix designs with admixture information, and applicable laboratory test data documenting the specified properties.
8. A representative sample and literature of geotextiles. Submit manufacturer's product literature including physical properties in compliance with applicable specifications and warranty information.
9. Manufacturer literature and technical data for pipes and pipe fittings and specialties.
- B. Certification for Examination of Site and Records: Before proceeding with the work, submit certification in an acceptable form, stating that careful examination has been made of the site, adjacent structures, existing structures, records of utility lines, test boring or test pit records and reports, soil and rock samples, and the Contract Documents.

1.9 COORDINATION

- A. Prior to start of earthwork operations, the Contractor shall arrange an on-site meeting with the Owner, Architect, Owner's Representative, and other concerned entities for the purpose of establishing the Contractor's schedule of operations and reviewing observation and testing procedures and requirements. Record discussions and agreements and furnish a copy to each participant.

1.10 LINES, GRADES, AND TOLERANCES

- A. The Contractor shall be responsible for establishing lines, grades, and other survey control to complete the work. The Contractor shall be responsible for the maintenance and protection of the survey control reference points and location stakes. The Contractor shall employ a licensed Registered Land Surveyor or a Registered Civil Engineer, familiar with building construction, to establish lines and levels. The Contractor shall be responsible for the correct location of the proposed facilities, including locations and elevations and limits of excavations and fills.

- B. Construct subgrades to within ½ in. of the elevations indicated on Drawings.
- C. Maintain the moisture content of the fill material during placement within plus or minus two percent of the material's optimum moisture content per ASTM D1557.
- D. Repair and reestablish grades in settled, eroded, and rutted areas to specified tolerances.

1.11 PERMITS, CODES, AND REGULATIONS

- A. All labor, materials, equipment, and services necessary to make the work comply with such requirements shall be provided by the Contractor without additional cost to the Owner. Earthwork shall comply with requirements of governing agencies in the District of Columbia, where applicable.
- B. In case of conflict between regulations or between regulations and Specifications, the Contractor shall comply with the strictest applicable codes, regulations, or Specifications.
- C. Comply with the provisions of the Manual for Accident Prevention in Construction of the Associated General Contractors of America, Inc., and the requirements of the Occupational Safety and Health Administration (OSHA), United States Department of Labor.
- D. The Contractor shall procure and pay for all permits and licenses required for the complete work specified herein and shown on the Drawings.

1.12 EXISTING UTILITIES

- A. Notify 811 before site clearing or excavating. Hire private utility mark-out service for areas not marked by utility companies.
- B. Numerous subsurface utilities are present in the area of the work. The Contractor shall investigate, understand, and protect all utilities to remain as part of its work for this project.
- C. Existing utilities remaining in service, including those remaining in service until after relocation, and relocated utilities are shown on the Drawings. Before excavating near any existing utilities, notify the utility owner, coordinate protective work and comply with the utility owners' requirements. Safeguard and protect from damage or movement any existing services, utilities and utility structures uncovered or encountered which are to remain in service.
- D. Prior to beginning any excavation or fill placement, accurately locate, and mark underground utilities and appurtenances in site area. Excavate to and expose utilities at locations, and conduct field surveys as necessary to determine locations of existing utilities.
- E. Should uncharted, or incorrectly charted, piping, or other utilities be encountered during excavation, consult utility owner immediately for directions. Cooperate with Owner and public and private utility companies in keeping respective facilities and services in operation. Repair damaged utilities to the satisfaction of utility company as directed by the Owner.
- F. Do not interrupt existing utilities serving facilities occupied and used by Owner or others, during occupied hours, except when permitted in writing by Owner and then only after

arranging to provide acceptable temporary utility services. Provide minimum of 48-hour notice to Owner and receive written notice to proceed before interrupting any utility. Do not proceed with utility interruptions without Owner's and utility owner's written permission.

- G. In case of damage or injury caused in the performance of work the Contractor shall, at his own expense make good such damage or injury to the satisfaction of, and without cost to, the Owner and utility owner. Existing utilities damaged during the project work shall be repaired or replaced to their condition prior to commencement of earthwork operations as directed by the Owner.
- H. Inactive or abandoned utilities encountered during construction operations shall be removed, plugged, sealed, bulkheaded or capped as directed by the Owner's Representative to prevent migration of earth, water or other fluids into such utilities. The location of such utilities shall be noted on the Record Drawings and reported in writing to the Owner's Representative.
- I. Demolish and completely remove from site existing underground utilities indicated to be removed. Coordinate with utility companies for shut-off of services if lines are active.
- J. When in the course of the work it is necessary to connect a utility to a main in a public way, all the requirements of both the authorities governing the utility and those governing the public way shall be met. Pavement shall be temporarily and permanently replaced as directed by these authorities at no additional cost to the Owner.

PART 2 - MATERIALS

2.1 MATERIALS

- A. Earth materials for use as fills shall be as described below. All soil materials proposed for borrow shall be clean, mineral soil materials from accepted sources, free of any contamination as described in Part 1 - Submittals.
- B. Processed materials consisting of a mixture of two or more soil types (such as sand and either crushed stone, crushed concrete, or other crushed construction materials) are not acceptable for use as fill unless accepted by the Architect.
- C. Reuse on-site soils to the extent possible. On-site soils will be allowed as Common Fill and Structural Fill, if such materials meet the requirements of this Section and can be placed and compacted as specified herein, subject to acceptance by the Architect.
- D. Common Fill: Common Fill shall consist of mineral sandy soil, free of organic materials, environmental contaminants, plastic, metal, wood, loam, trash, wood, snow, ice, frozen soil, clay and other compressible or deleterious materials. Common Fill used within 4 ft of finished grade in landscaped planting areas (as shown on the Drawings) shall be free of materials deleterious to plant growth and shall be "free-draining" (see percent finer by weight below). Common Fill shall have physical properties such that it may be readily spread and compacted without excessive weaving or instability. Common Fill shall conform to the following gradation:

Sieve (ASTM D422)	Percent Finer by Weight
8-in. *	100
No. 4	20-90
No. 40	10-80
No. 200	0-30 **, ***

* when used in trenches within 2 ft of utilities, or within 2 ft of foundation walls the largest particle dimension shall be 3 inches. The size of the largest particle shall be less than 2/3 of the lift thickness. When used within 4 ft of finished grade in landscaped planting areas (as shown on the Drawings) the largest particle dimension shall be 1-3/4 in.

** when used as foundation wall backfill against drainage board, the percent finer by weight shall be less than 20.

*** when used in landscaped areas, the upper 2 ft immediately below the planting soil layer shall have a percent finer by weight of less than 8 unless otherwise approved by the Architect.

- E. Crushed Stone: Crushed Stone shall consist of inert, angular stone material derived from a stone quarry that is hard, durable, washed, and free of deleterious materials. Crushed stone shall be washed at the source site to remove fine-grained soils prior to import to the site. Gradation shall conform to AASHTO No. 57 Stone as indicated on the Drawings.
- F. Structural Fill: Structural Fill shall consist of suitable natural sand and gravel, free of organic material, environmental contaminants, debris, snow, ice, or other unsuitable materials. The fines in Structural Fill materials should have a liquid limit no greater than 40 percent and a plasticity index no greater than 10. Structural Fill should be well graded and shall confirm to the following limits:

Sieve (ASTM D422)	Percent Finer by Weight
6 in. *	100
No. 4	30 - 80
No. 40	10 - 50
No. 200	0 - 8 **

* when used in trenches within 2 ft of utilities or within 6 in. of foundation walls or slabs, the largest particle dimension shall be 3 inches. The size of the largest particle shall be less than 2/3 of the lift thickness.

** when placed in the upper 3 ft of filled areas during periods of wet and/or freezing weather, the percent finer by weight shall be less than 5 percent.

- G. Bedding Material: Sand or sandy soil free of debris, waste, frozen materials, and organic materials with 100 percent passing a 3/8 in. sieve and not more than 10 percent passing a No. 200 sieve.

- H. Sand Borrow: Sand Borrow shall consist of clean, inert, hard, durable grains of quartz or other hard, durable rock, free from loam or clay, surface coatings and deleterious materials. The maximum size for Sand Borrow shall be ¼-in. The allowable amount of material passing a No. 200 sieve shall not exceed 10 percent by weight.
- I. Sand: ASTM C 33; fine aggregate, natural, or manufactured sand, or accepted on-site material proposed for reuse.
- J. Low Permeability Fill: shall consist of Common Fill with a minimum 20 percent passing a No. 200 sieve.
- K. Concrete: shall have a minimum 28-day compressive strength of $f'_c = 2,500$ psi, unless otherwise noted, with a maximum slump of 6 in.
- L. Flowable Fill: A mixture of Portland cement, aggregate, and water, and may include fly ash, slag cement, air-entraining agents, and other accepted admixtures, Excavatable flowable fill shall have a 28-day compressive strength of between 30 and 150 psi. Non-excavatable flowable fill shall have a minimum 28-day compressive strength of 200 psi.
- M. Geotextile Filter: Needle-punched, non-woven, synthetic, chemically resistant, non-biodegradable fabric meeting requirements of AASHTO M288 Class II Non-Woven such as Solmax (formerly TenCate) Mirafi 160N, Carthage Mills FX-50HS, ADS Geosynthetics 0601T, Propex Geosolutions Geotex 601, US Fabrics 160NW, or accepted equivalent. Fabric shall be labeled showing manufacturer name, product number and roll identification. Fabric shall be wrapped with a protective plastic from delivery until time of installation that protects against: damage by impregnation, cement, construction fluids and moisture, and ultraviolet radiation including sunlight for more than 7 total days. Fabric shall be protected against tearing, flame and chemical exposure and temperatures exceeding 160 deg F or less than -22 deg F at all times.
- N. Perforated Drainage Pipe: 6-in. diameter, perforated, solid wall, Schedule 40 PVC pipe complete with bends, wyes, tees, reducers, caps, plugs, couplers, adapters, collars and joint materials. Fittings shall be DWV type with sanitary turns. Perforations shall be two rows of 5/8-in. diameter holes every 5 inches of pipe length. Rows shall be parallel to the pipe axis and 120 degrees apart at the 2 o'clock and 10 o'clock positions. Pipe shall be delivered to the site with factory-made perforations that are clean-cut and free of frayed edges.
- O. Solid Drainage Pipe: Equal to Perforated Drainage Pipe except solid wall.
- P. Clean-outs: Z1400 by Zurn Engineered Water Solutions, 4100 by Jay R. Smith Mfg. Co., 55000 by Josam Co., or equivalents, complete with solid riser pipes, waterstop flange, covers, bends, couplers, adapters, collars, hardware, joint materials, and concrete pad (exterior locations) or approved equal. Cleanouts shall be the same size as the pipe they serve.
- Q. Choke Material: shall consist of Concrete, Flowable Fill, Crushed Stone, and/or Filter Fabric, as proposed by the Contractor and accepted by the Architect.
- R. Balance of materials shall be used as indicated on the Drawings and/or as specified elsewhere in the Contract Documents.

2.2 ACCESSORIES

- A. Detectable Warning Tape: Acid- and alkali-resistant polyethylene film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 in. wide and 4 mils thick, continuously inscribed with a description of the utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 in. deep; colored as follows:
1. Red: Electric.
 2. Yellow: Gas, oil, steam, and dangerous materials.
 3. Orange: Telephone and other communications.
 4. Blue: Water systems.
 5. Green: Sewer systems.

2.3 USE OF MATERIALS

- A. Common Fill: Use to backfill outside the ZOI of foundations including beneath pavement sections and beneath select landscaping layers in landscaped areas.
- B. Structural Fill: Use to replace unsuitable materials within the ZOI of structural elements and below utilities; as base course for site pavements and utility trench backfill unless otherwise specified; where free-draining backfill is required; and as shown on the Drawings.
- C. Sand, Low Permeability Fill, Concrete, Flowable Fill: As shown on the Drawings, as proposed by the Contractor and accepted by the Architect, or as directed by the Architect.
- D. Bedding Material: Use for utility bedding unless otherwise shown on the Drawings.
- E. Crushed Stone: Use for drainage and subgrade layers as shown on the Drawings. Crushed Stone shall be entirely surrounded (i.e., top, bottom, sides) by a separation layer (e.g., Geotextile Filter) or concrete unless otherwise accepted in writing by the Architect.
- F. Geotextile Filters: Geotextile shall be used: 1) at the locations shown on the Drawings, 2) other locations to prevent soil intrusion into drainage fill or drains, 3) assist in stabilizing subgrades prior to placement of fill materials or structures, and 4) to separate fine-grained materials from coarser-grained materials where the Architect judges that migration of fine material into coarse material could occur (e.g., between Crushed Stone and soil subgrades). Other instances may also require the use of geotextile filter, as judged necessary by the Architect.
- G. Drainage Pipe and Cleanouts: Install at the locations and elevations shown on the Drawings. Solid pipe shall be used for lateral connections between the perforated foundation drainage piping and the discharge point.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine the site and all Work prepared by others and report to the Architect in writing any conditions detrimental to the proper and timely completion of the Work of this Section. Do not

proceed with the Work until unsatisfactory conditions have been corrected in an acceptable manner.

3.2 GENERAL REQUIREMENTS

- A. Earthwork activities shall conform with the Contract Documents and submittals that are acceptable to the Architect. No Work shall be performed unless it is conducted under the observation of the Architect, and in accordance with the accepted schedule and sequence.
- B. Excavated materials unsuitable for reuse, and surplus excavated soil not used to fulfill requirements of the Contract, shall become the property of the Contractor, legally removed from the site and legally disposed of by the Contractor and in accordance with other Specifications, Drawings, and regulations and requirements of municipalities or agencies having jurisdiction over the disposal, disposal sites and the route between the project site and disposal sites.
- C. Control vibrations and noise associated with the work so as to prevent damage to site improvements and disturbance to occupants. The Contractor shall conduct all Work associated with this Section to maintain vibrations below the Limiting Values which may require the use of light weight compaction equipment (and corresponding smaller lift thicknesses to achieve minimum degree of compaction).
- D. Prevent erosion at the site at all times in accordance with the Specifications and/or shown on the Drawings.
- E. Explosives or blasting agents shall not be permitted on the site without prior written approval of the Owner, Architect, Owner's Representative and local authorities.
- F. If unanticipated contaminated material is suspected or encountered during an excavation, the Contractor shall contact the Owner's Representative and Architect immediately. The Owner's Representative or Architect will provide direction on how to proceed.
- G. Do not excavate or remove any material from within the site or right of way, which is not within the excavation, as indicated, without written authorization from the Owner's Representative.
- H. Some existing on-site soils may be suitable for reuse. The Contractor shall reuse on-site excavated soils as indicated herein, as accepted by the Architect. The Contractor shall conduct all on-site reuse activities, including excavating, conveying, processing, fragmenting, screening, handling, segregating, and stockpiling, at no additional cost to the Owner.
- I. Stripping, Handling, Segregating, and Stockpiling of Materials:
 - 1. Strip topsoil from within the limits of Work, unless otherwise specified, and stockpile.
 - 2. During the course of the work, various quantities of materials will be accumulated and stockpiled (on- or off-site) for future re-use on-site or for off-site disposition. All excavated soils shall be classified by the Architect prior to reuse or removal from the site. The Contractor shall handle, segregate (to prevent intermixing of different materials), protect, stockpile, reuse and/or dispose of the excavated soils, as required.
 - 3. Stockpiling shall be coordinated by the Contractor and shall comply with sedimentation and erosion control requirements contained in the Specifications and/or shown on the

Drawings. Do not stockpile materials near edges of excavations or within any restricted areas shown on the Drawings.

J. Unfavorable Weather:

1. Freezing Weather:

- a. Fill materials and/or concrete shall not be placed on snow, ice, frozen subgrades, or frozen soil. Do not place fill containing frozen materials, snow, or ice.
- b. The Contractor shall, at his own expense, keep the site clear and free of accumulations of snow and ice, or as required to carry out the Work.
- c. Fill materials and/or concrete shall not be frozen when placed or be allowed to freeze prior to, or after compaction or placement. At the end of each day's Work during freezing weather, the last lift of fill, after compaction, shall be rolled by a smooth wheeled roller to eliminate ridges of un-compacted soil. Fill materials, subgrades to receive fill or structures, and concrete shall be covered with an insulating cover or heated during freezing weather, as required to prevent frost and freezing of fill and concrete. The Contractor shall suspend backfilling operations and placement of Concrete or Flowable Fill when air temperatures are below 32°F if directed by the Owner's Representative.
- d. Soil bearing surfaces below foundations, slabs or structures shall be protected against freezing, before and after concreting. Frost protection shall be provided in a manner acceptable to the Architect as soon as possible after foundations, slabs or structures are constructed.
- e. Do not excavate to full indicated depth when freezing temperatures may be expected, unless the footing or slab is poured immediately after the excavation has been completed. Protect the excavation from frost if placing of concrete is delayed. Where footings or slabs are exposed to freezing temperatures, they shall be protected to prevent damage to the concrete by freezing or frost penetration into the soil upon which they rest. Where foundations are exposed over the winter during construction, provide earth cover above the bottom surface of concrete equivalent to the Code required frost protection depth.
- f. Subgrades that have been permitted to freeze by the Contractor will be judged to be unsuitable for placement of fill, foundations, or structures by the Architect. The Contractor at the Contractor's expense shall conduct additional investigation to determine the extent of freezing, excavate soils that have frozen, and replace with materials acceptable to the Architect.

2. Wet Weather:

- a. If fill material placement, spreading, rolling, or compaction operations are interrupted by wet weather, do not resume such operations until ascertaining that the moisture content and density of the previously placed soil are as required by these Specifications.
- b. The Contractor shall control the grading so that ground is pitched to prevent water from running into excavated areas, damaging other structures, or leaving the site.

K. Backfilling Prior to Approval of Work Installed:

1. Do not allow or cause the Work performed or installed to be covered up or enclosed by Work of this Section prior to all required observations, tests, and approvals.
2. Should any of the Work be so enclosed or covered up before it has been accepted, uncover all such Work at no additional cost to the Owner.

3. After the Work has been completely tested, observed, and accepted, make all repairs and replacements necessary to restore the Work to the condition in which it was found at the time of uncovering, all at no additional cost to the Owner.

L. Dust and Erosion Control:

1. The Contractor shall take all necessary measures and provide equipment and/or materials to minimize dust from rising and blowing across the site and also to control surface water throughout the operation so that it does not run onto paved ways without being filtered. In addition, the Contractor shall control all dust created by construction operations and movement of construction vehicles, both on-site and off-site.
2. Thoroughly moisten all surfaces as required to prevent dust being a nuisance to the public, neighbors, and performance of other Work on-site.
3. Repair any erosion and siltation control measures damaged during earthwork operations and install any additional measures necessary for proper control.

3.3 EXCAVATION

A. Dimensions:

1. Excavate to elevations and dimensions indicated on the Drawings or as otherwise required for the Work.
2. Do all necessary excavation, including, but not limited to excavation for structures, utility lines, mechanical work, mechanical and drainage structures, drains, and other below grade work. Excavate sufficient material to allow ample space for construction operations including placing and removal of forms, installation of waterproofing, damp-proofing, or utilities and observation of excavated areas.
3. Side forms will be required for all concrete work unless omission of forms is requested by the Contractor, in writing, to the Architect. Where omission of forms is requested by the Contractor, and accepted by the Architect, the Contractor shall bear the cost of any additional concrete volume required beyond the minimum profiles and dimensions of the utility trench as detailed.

B. Excavation shall include the removal of all materials encountered including earth, rock, organic soils, boulders, pavement, utilities, obstructions, foundations, slabs, incidental structures and other materials to the elevations and limits required to construct the work shown on the Drawings. Excavations for foundations shall be to naturally-deposited soil or bedrock acceptable to the Architect.

C. Excavation, subgrade preparation and backfilling shall be performed in-the-dry.

D. Where excavations are made to remove unsuitable materials beneath the planned building foundations, other structural elements, utilities, or other facilities, the horizontal limits of excavation shall be sufficient to place accepted materials beneath structures or facilities below. If such fill limits cannot be achieved, notify the Architect immediately.

E. Excavation shall not be made into the ZOI of structural elements unless otherwise accepted by the Architect. Where excavations are required to be made into the ZOI, the Contractor may be required to shore and brace to protect the materials within the ZOI from undermining, washing out, loosening, or becoming disturbed, and protect the structure from movement by

underpinning. Prior to excavating into the ZOI, the Contractor shall submit the proposed schedule, sequence, procedures, materials, and equipment to accomplish the work to the Architect for review. The Contractor is responsible to protect existing facilities to remain from damage.

- F. The Contractor shall control the grading so that ground is pitched to prevent water from running into excavated areas, damaging other structures, or leaving the site.
- G. Where soil has been softened, frozen or otherwise disturbed, it shall be removed and replaced with suitable material at no additional cost to the Owner.
- H. Exercise care to preserve materials below and beyond the lines of excavation. Where excavation is carried out, through error, below indicated grade or beyond the lines of excavation, backfill to the indicated grade and compact with acceptable materials at no additional cost to the Owner.
- I. Excavate within a radius of 1.5 times the drip line of any tree only if directed by the Architect and in coordination with the Owner's Representative.
- J. Authorized Additional Excavation: Authorized Additional Excavation is excavation below subgrade elevations or beyond indicated lines and dimensions as directed by Architect. Where the Architect determines that the material encountered at the elevations shown is not capable of supporting the design load, or where unsuitable material is encountered, the Owner's Representative will direct the Contractor to remove and replace the unsuitable material as required herein. Authorized additional excavation and replacement material will be paid for according to Contract provisions for changes in the Work.
- K. Excavation: Excavate to elevations, cross sections, gradients, lines, subgrades, and dimensions indicated on the Drawings within a tolerance of plus or minus 1 inch. If applicable, extend excavations a sufficient distance from structures for placing and removing concrete formwork, for installing services and other construction, and for inspections. Extend excavations a sufficient depth to enable installation of base and subbase course(s), if applicable.
 - 1. General: Do not disturb bottom of excavation. Excavate by hand, or with flat-edge equipment if accepted by the Architect, at structures to final grade just before placing concrete reinforcement. Trim bottoms to required lines and grades to leave solid base to receive other work.
 - 2. Rock: Excavate rock using mechanical methods (i.e., hoe-ramming and excavators).
 - 3. Trenches, unless indicated elsewhere: Excavate trenches to uniform widths to provide the following clearance on each side of pipe, or conduit or ductbank. Excavate trench walls vertically from trench bottom to 12 in. higher than top of pipe, conduit or ductbank.
 - a. Trench excavation shall be of sufficient width, at least 12 in. each side of pipe or conduit unless other specified, and depth at all points to allow pipes to be laid, and appurtenant work to be built in a workman-like manner and, when needed, to allow for sheeting and shoring, pumping and draining, and/or for removing and replacing any unsuitable materials.
 - b. Excavate trenches 8 in. deeper than bottom of pipe elevation to allow for bedding materials. Hand excavate for bell of pipe.
 - c. Excavations for manholes, catch basins and miscellaneous site structures shall provide 18 in. minimum clearance on all sides.

3.4 SLOPING, SHEETING, SHORING, AND BRACING

- A. The Contractor shall slope, sheet, shore and/or brace excavations in accordance OSHA 29 CFR 1926 dated October 31, 1989, and subsequent amendments and revisions, including designing, furnishing, placing, and removing (or leaving in-place if directed by the Architect). The Contractor shall be solely responsible for protection of existing or new facilities, the stability of excavations, and for maintaining site safety in accordance with OSHA and other applicable regulations. Excavation support systems shall be designed to retain and provide full support for adjacent soil, rock, structures, utilities, light fixtures, streets and other features and protect them from damage due to settlement, lateral movement, loss of ground, or any other causes related to this construction. In addition, the support system must be located to allow new construction to be completed. Excavation support systems shall be designed for all temporary and permanent loading conditions to which it will be subjected.
- B. Temporary support of excavation systems shall not extend into the ZOI of structural elements unless proposed by the Contractor and accepted in writing by the Architect.

3.5 PRE-EXCAVATION

- A. Coordinate pre-excavation activities including equipment and materials with the support of excavation wall Contractor(s). The support of excavation wall Contractor(s) shall be satisfied with the proposed work prior to commencing pre-excavation.
- B. Pre-excavate along the alignment of the temporary support of excavation walls to remove any existing below-grade structures or obstructions so that subsequent wall construction can be undertaken without impedance.
- C. Pre-excavation shall extend to naturally deposited soils or to the depth of known foundations, whichever is higher. Pre-excavation shall be a minimum of 3 ft wide (or to the top/side of existing structures).
- D. Backfill the pre-excavation with a material suitable for re-excavation with nominal effort by the support of excavation wall Contractor(s) and/or to remain as the permanent backfill. The backfill material may consist of cement bentonite or excavatable flowable fill.

3.6 SUBGRADE PREPARATION AND PROTECTION

- A. General:
 - 1. Complete the excavations to the required subgrade elevations allowing for subbase material, bedding material, plus any additional depth required to accommodate (as applicable) drainage layers, waterproofing, geotextiles, pipes, pavements, sidewalks, etc.
 - 2. All subgrades must be observed and accepted by the Architect prior subsequent work.
 - 3. The subgrade shall be made smooth, and cleaned of all loose rock and soil, and disturbed material. Remove accumulated water, silt, trash, debris, or deleterious material from temporary and final subgrades.
 - 4. Boulders exposed at the subgrade shall be removed to a depth of at least 12 in. below the required subgrade level.

5. Backfill all holes and depressions that will not otherwise be removed in the course of the Work with materials and methods acceptable to the Architect to the subgrade elevation indicated on the Drawings.
6. Where excavations are anticipated to extend below groundwater level, the subgrade shall be protected with a 6-in. thick (or thicker as required for dewatering performance) layer of compacted Crushed Stone placed over Filter Fabric.
7. Care shall be taken to avoid disturbance to natural inorganic soil or previously-placed fill subgrades in areas to receive fill or support future structures. Equipment shall not be operated on prepared soil subgrades.
8. Moisture condition (where necessary) and re-compact subgrade soils with at least four passes of suitable heavy vibratory compaction equipment until subgrade soils are firm under re-compaction, or stable under proof-rolling (less than ½ in. elastic deformation during proof-rolling) with heavy vibratory compaction equipment or a loaded 10-wheel dump truck, and otherwise suitable to the Architect. The Architect may, at its discretion, conduct field unit weight tests on the re-compacted subgrade soils prior to placement of backfill to confirm that the subgrade soils have been compacted in accordance with the requirements of this Section. The Architect may, at its discretion, waive the requirement for re-compacting subgrade soils.
9. In areas of weaving or soft or unstable soils, the soft materials shall be excavated and replaced with materials acceptable to the Architect, at no additional cost to the Owner.
10. Take measures necessary to prevent disturbance of prepared subgrades. Disturbed subgrades, as judged by the Architect, shall be removed and replaced with suitable materials and/or reshaped and recompacted as specified herein.
11. Subgrades may require choking to prevent loss of material into larger underlying void space. The need for choking of the subgrade shall be determined by the Architect at the time of preparation.
12. Excavate materials to 2 ft above the indicated subgrade level by general excavation methods. Excavate the final 2 ft with smooth-edge equipment. Backblading of surfaces to smooth disturbed soil will not be permitted.
13. Take measures necessary to prevent undermining of any structural elements, utilities, excavation support systems, and previously prepared subgrades.
14. Geotextile Filter shall be installed over soil subgrades and excavation sidewalls where shown on the Drawings, specified herein, or where the Architect judges migration of soil into subsequently placed material could occur. Geotextile Filter shall be installed in intimate contact with subgrades and sidewalls.
15. The excavation slope required to achieve foundation and slab step geometry shall be such that mechanical compaction of the subgrade may be performed.

B. Spread Footing Foundations:

1. Subgrades below foundations (footings) sized with a maximum net allowable bearing pressure of two and three-quarters kips per square foot (2.75 ksf) shall consist of undisturbed residuum soil or compacted Structural Fill.
2. Fill, soft/very loose residuum soil, and other materials which do not meet the characteristics for acceptable foundation subgrade material as determined by the Architect, if encountered at subgrade within the ZOI of foundations, shall be considered unsuitable, and over excavated and replaced with Structural Fill, Crushed Stone, or Concrete .

3. Subgrades shall be prepared as flat as practical and no steeper than 6H:1V unless otherwise approved by the Architect.
 4. The subgrade shall be made smooth, and cleaned of all loose soil or rock and disturbed material. Disturbed subgrades shall be removed and replaced with Structural Fill, Crushed Stone, or Concrete.
- C. Slabs-on-Grade:
1. Subgrades below slabs-on-grade shall consist of Structural Fill, Rock, Crushed Stone, or Concrete. Existing fill, organic deposits, debris and other unsuitable materials, if encountered at subgrade, shall be over excavated and backfilled with Structural Fill, Crushed Stone, or Concrete.
 2. Slab base course shall consist of a 6-in. thick layer of compacted AASHTO NO. 57 Crushed Stone placed over Geotextile Filter. The subgrade shall be made smooth, and cleaned of all loose rock and soil, and disturbed material prior to placement of Geotextile Filter.
- D. Structured Slabs and Pile Caps:
1. Subgrades below structured slabs and pile caps shall consist of Structural Fill, Common Fill, Crushed Stone, or existing soil. Organic deposits, debris, abandoned utilities, and other unsuitable materials, if encountered at subgrade, shall be over excavated and backfilled with Common Fill, Structural Fill, or Crushed Stone.
 2. Base course shall consist of a 6-in. thick layer of compacted AASHTO No. 57 Crushed Stone placed over Geotextile Filter. The base course shall be contiguous throughout the building, including between pile caps and slabs across changes in subgrade level. The subgrade shall be made smooth, and cleaned of all loose rock and soil, and disturbed material prior to placement of Geotextile Filter. Subgrades shall be prepared as flat as practical and no steeper than 2H:1V where required to accommodate subgrade level transitions.
- E. Utilities, unless otherwise indicated:
1. Excavate all rock, boulders, or other unyielding bearing material to at least 12 in. below bottom of proposed utility lines, or deeper if required to place bedding materials shown on the Drawings.
 2. Subgrades below utilities shall consist of undisturbed, naturally deposited inorganic soils or rock, or re-compacted existing fill soils that are free of organic matter, stable under proof-compaction, and otherwise suitable to the Architect. Unsuitable soils, materials, or soft, disturbed, and unstable soils present at the subgrade level shall be over-excavated up to 18 in. below subgrade level and backfilled with Structural Fill, or other materials accepted by the Architect.
 3. Excavations for manholes, catch basins and utility structures shall provide 18 in. minimum clearance on all sides.
 4. Trench excavation shall be of sufficient width, at least 12 in. each side of pipe or conduit unless other specified, and depth at all points to allow pipes to be laid, and appurtenant work to be built in a workman-like manner and, when needed, to allow for sheeting and shoring, pumping and draining, and/or for removing and replacing any unsuitable materials.

3.7 INSTALLATION OF GEOTEXTILES

- A. Install Geotextile Filters against the earth material indicated on the Drawings. Earth shall be unfrozen, smooth and free of debris, loose soil or rock, and irregularities including voids and projections.
- B. Geotextile Filters shall be free of tension, wrinkles, folds, and in intimate contact with earth when placed. Unroll geotextiles during placement directly on the earth to receive the geotextile and in the direction of future fill placement. Unroll, cut, and place sufficient geotextile to allow for overlap widths and, where installed in trenches, the trench perimeter. Upstream/upslope geotextile shall overlap downstream/downslope geotextile. Anchor geotextiles using hand-placed Crushed Stone to prevent displacement until backfilling.
- C. Overlap width shall be a minimum of 3 ft from roll to roll. Overlap width at the top of geotextile-lined trenches shall be equal to the width of the trench or 12 in., whichever is greater.
- D. If sufficient backfill thickness for protection of the installed Geotextile Filter is not placed immediately after installation, place sacrificial layers Geotextile Filter or other protective material to prevent damage to installed Geotextile Filters. Sacrificial or protective material shall be removed by hand prior to final backfilling.
- E. Replace geotextiles damaged prior to backfilling. Traffic directly on geotextiles shall be limited to foot traffic.
- F. Backfill shall be placed immediately over the geotextile. Backfill shall be a minimum 12 in. thick prior to equipment traffic over the geotextile. Backfill in trenches shall be a minimum of 3 in. thick prior to foot traffic. Backfill shall not be dropped onto geotextiles from a height greater than 3 ft.

3.8 INSTALLATION OF FOUNDATION DRAINAGE

- A. Install pipe systems to the horizontal and vertical lines and grades shown on the Drawings.
- B. Drainage pipe systems and cleanouts shall be constructed to enable conventional cleaning equipment (e.g., jetting) to reach all points in the system from cleanout locations.
- C. Components of the drainage systems that are damaged by the Contractor or contaminated with soil or other deleterious materials shall be replaced by the Contractor at no additional cost to the Owner and with no schedule impact to the Project.
- D. Penetrations through concrete shall be accomplished by providing sleeve pipes cast into and through these elements or by drilling holes through the elements if approved by the Architect. The Contractor shall not jackhammer, chip or chisel holes to construct the sleeves. After centering the pipe in the hole, the annular space between sleeve pipes and product pipes shall be sealed with a non-degradable, elastic sealant material proposed by the Contractor and accepted by the Architect. Sleeves shall provide a 1-in. minimum annular space between the pipe and the sleeve all around. Rigid materials shall not be placed between the pipe and sleeve.

- E. Place Crushed Stone in 6-in. maximum thick lifts and compact each lift with at least four passes of mechanical vibratory compaction equipment except within 12-in. around and above. Hand-tamp around and above pipes.
- F. Interior of all piping shall be completely free of deleterious materials and other potential clogging contaminants before and after installation and shall be kept clean throughout construction. Pipe sections and fittings shall be cleaned and joined using adhesives, clamps, or other means in accordance with manufacturer recommendations.
- G. Install cleanouts, terminations, outlets, connections, and other fixtures at the locations and configurations shown on the Drawings. Cleanouts must be accessible during and after construction.
- H. Provide sleeves through concrete walls at the locations shown on the Drawings or as required. Penetrations through structural elements, and waterproofing, dampproofing, vapor barrier, and moisture barrier materials shall be sealed in accordance with manufacturer requirements and Related Sections.
- I. Crushed Stone installed at the pipe haunch and shoulder during initial backfill shall be continuous with the Crushed Stone layer below slabs.
- J. Provide continuous 12-in. minimum overlap between foundation wall drainage boards and Crushed Stone/Filter Fabric layers.

3.9 PLACEMENT AND COMPACTION OF FILL MATERIALS

- A. Place and compact backfill in excavations promptly and as soon as possible, but not before completing the following:
 - 1. Construction below finish grade including, where applicable, subdrainage, dampproofing, waterproofing, and perimeter insulation.
 - 2. As-built surveying for Record Documents.
 - 3. Testing and inspecting underground utilities.
 - 4. Removing concrete formwork.
 - 5. Removing unsuitable materials including trash and debris.
 - 6. Removing temporary shoring and bracing, as applicable.
 - 7. Installing permanent or temporary horizontal bracing on horizontally supported walls, as applicable.
 - 8. Installing geotextile filters to prevent migration of fine material into voids spaces of material in contact with backfill.
- B. Reuse of Excavated Soils and Materials
 - 1. The Contractor shall perform the work to maximize the reuse of excavated soils, subject to the requirements of this Section. Unless superseded by environmental or geotechnical reuse requirements, excavated soils should be reused in the same location and at the same depth that they were excavated.
 - 2. The Contractor shall coordinate, sequence, and schedule work as required to enable reuse of specified soils on-site.

3. Soils designated for on-site reuse shall be processed (i.e., screened to remove oversize cobbles or boulders and debris), moisture conditioned, and protected from the weather, as necessary, to maximize reuse. Soil that becomes unusable due to the Contractor's activities or lack thereof shall be disposed off-site in accordance with this Section at the sole cost of the Contractor. Such activities are considered those that the Contractor undertakes (or does not undertake) which result in excavated soils not being able to be reused at the time the soils are required for reuse (e.g., trafficking over prepared surfaces, failure to cover stockpiles, comingling, etc.).
4. Demolition materials and debris from foundations and utilities shall be separated from excavated soils.

C. Fill Placement

1. Place and compact fill to the limits, of the types and in the manner as specified herein and shown on the Drawings. Unless otherwise specified or directed, material used for filling and backfilling shall meet the requirements specified herein. If material removed from the excavations does not meet requirements specified herein, submission of proposed material(s) is required.
2. Slope and compact soil surfaces at the end of each day to provide for free surface drainage.
3. Placement of fill shall not begin prior to observation and acceptance of subgrade conditions by the Owner's Representative. The Contractor shall not place or compact fill material in the absence of the Owner's Representative.
4. Protect foundations, footings, waterproofing, utilities and other facilities during backfilling. Repair damage at no additional cost to the Owner.
5. Backfill shall not be placed against walls creating an unbalanced condition until they are braced or have cured sufficiently to develop strength necessary to withstand, without damage, pressure from backfilling and compacting operations. At walls not designed to resist lateral earth pressures, maintain the difference in elevation of the top of the backfill on either side of the wall within 2 ft.
6. If weaving or instability is observed during compaction, as judged by the Owner's Representative, compaction efforts shall be discontinued until the Contractor stabilizes the subgrade. If required, the Contractor shall excavate and replace the unstable fill material with acceptable compacted material, at no additional cost to the Owner.
7. Compaction shall be performed using accepted vibratory compaction equipment. Compaction by puddling or jetting is prohibited.
8. Control groundwater and surface run-off to minimize disturbance of material being placed. Dewater all subgrades prior to filling. Place all fill in-the-dry on stable, undisturbed subgrades.
9. Trench Backfill:
 - a. Utility bedding material shall be deposited in the trench, uniformly on both sides of the pipe, for the entire width of the trench to the springline of the pipe. The backfill material shall be placed by hand shovels, in layers not more than 6 in. thick in loose depth, and each layer shall be thoroughly and evenly compacted by tamping on each side of the pipe to provide uniform support around the pipe, free from voids.
 - b. Trench backfill material above the utility bedding material may consist of the excavated soils, provided the excavated soils meet the fill requirements for the

intended area (e.g., building slabs, parking areas, etc.), and can be readily spread and compacted.

- c. Backfill shall be made to grades required to establish the proper pavement section, landscaping section, etc.
- d. Any trenches or excavations improperly backfilled or where settlement occurs shall be reopened, to the depth required for proper compaction, then refilled and compacted with the surface restored to the required grade and condition, at no additional expense to the Owner.
- e. During filling and backfilling operations, pipelines will be checked by the Contractor to determine whether any displacement of the pipe has occurred. If the inspection of the pipelines shows poor alignment, displaced pipe or any other defects, the condition shall be remedied in a manner satisfactory to the Architect at no additional cost to the Owner.

D. Compaction Equipment

1. Light-weight Compaction Equipment: Compaction equipment used within 25 ft (in any direction, from any point) of existing foundations shall consist of vibratory plate compactors weighing less than 200 pounds applying a dynamic centrifugal force of less than 3,500 pounds or other similar accepted, light-weight equipment that is sufficient to provide a firm, stable subgrade and achieve the required compaction. The Contractor shall increase the 25 ft distance as required to meet the maximum vibration criteria.
2. Regular-weight Compaction Equipment: Compaction equipment used in areas beyond the area noted above may consist of a walk-behind vibratory drum roller, or reversible plate compactor, or other equivalent equipment having less than 7,000 pounds centrifugal force that is sufficient to provide a firm, stable subgrade and achieve the required compaction.
3. The Contractor shall use acceptable compaction equipment to obtain the specified compaction. In some cases, additional passes or thinner loose lifts may be required. The gradation of some materials is such that field unit weight testing methods may not provide representative compaction results. In these cases, the Owner's Representative will use judgment in evaluating if the Contractor achieved the intent of the specification.
4. When acceptable compaction equipment cannot be used in tight access areas (e.g., around and below existing or new utilities), the Contractor shall place flowable fill or concrete, subject to the acceptance of the Architect, at no additional cost to the Owner.

E. Compaction Requirements

1. Compaction shall not cause vibrations that exceed the Limiting Values specified in the Related Sections.
2. The Contractor will conduct in-situ density testing following compaction of fill as a means of control. The Contractor in coordination with the Owner's Representative will determine the acceptable in-place density test method and frequency of testing.
3. The degree of compaction is expressed as the in-place dry unit weight as a percentage of the maximum dry density at optimum moisture content as determined by ASTM Test D1557. Fill and backfill shall be compacted to at least the following minimum compaction requirements:

<u>Area</u>	<u>Minimum Compaction Percent</u>
Within ZOI of structural elements and within buildings	95%
Within 3 ft below exterior slabs, sidewalks, pavements	95%

Deeper than 3 ft below exterior slabs, sidewalks, pavements	92%
Landscape areas	85% to 92%*

*as directed by the Architect

F. Moisture Control

1. The fill should generally be within 2 percent of its optimum moisture content to facilitate compaction.
2. Fill too wet for proper compaction shall be harrowed or otherwise treated to achieve compaction to the required density. Fill that cannot be dried shall be removed and replaced with drier material.
3. Fill too dry for proper compaction shall be watered uniformly over the surface of the top loose layer. Sufficient water shall be added to allow compaction to the required density.
4. Soils excavated from on-site may be too wet or too dry and may require moisture conditioning prior to reuse on-site in order to provide a firm, stable subgrade and achieve the specified compaction requirements. It shall be assumed for bidding purposes that soils within the existing building are too dry and will require wetting to achieve the requirements herein.

G. Lift Thickness

1. Place fill in uniform horizontal layers.
2. Place fill in layers not to exceed 6 in. in loose lift thickness prior to compaction when using Light-weight Compaction Equipment, and 12 in. when using Regular-weight Compaction Equipment.
3. Compact material with a minimum of 4 complete coverages per lift.

H. Protection of Fill

1. Newly graded areas shall be protected from the actions of traffic and erosion. Damage to any lift caused by equipment shall be fully repaired by the Contractor prior to placement of overlying materials at no additional cost to the Owner.
2. The Contractor shall not disturb subgrade and underlying natural soils or compacted fill during filling operations. Methods of filling shall be revised as necessary to avoid disturbance of subgrade and underlying soils, including restricting the use of certain types of construction equipment and their movement over sensitive or unstable materials, dewatering, and other acceptable control measures. Disturbance shall be construed to include deterioration of fill, before or after placement and satisfactory compaction, due to the Contractor's operations, such as moving equipment, traffic, etc. Disturbed areas shall be fully repaired (e.g., excavate, replace, scarify surface, re-shape, compact, etc.) by the Contractor prior to placement of overlying materials at no additional cost to the Owner.
3. In the event of and prior to unfavorable weather, the Contractor shall suspend fill operations (placing, spreading and compaction) immediately and shall take steps to keep the site as well drained and insulated as possible. Fill operations shall not be resumed until the frost condition and moisture content of the fill meets the requirements of the Specifications.
4. Keep free of trash and debris.

I. Rough Grading

1. Rough grading shall include cutting and filling, shaping, trimming, rolling, finishing, and maintaining of the surface of the subgrade, including temporary subgrades, in accordance with the various depths as shown on the Drawings and as specified herein. Repair and re-establish grades in settled, eroded, and rutted areas to specified tolerances.
 2. Allow no stones over three inches (3 in.) in diameter within the upper 6 in. of subgrade material, unless more stringent criteria apply.
 3. Complete grading operations after site improvements have been installed and materials, rubbish and debris from such operations have been removed from the site. Leave subgrades clean and at required elevations. Provide sufficient grade staking to witness correct lines and grades.
- J. Final Surface
1. Upon completion of the work, ground surface shall be left and maintained in a firm, stable, unyielding, uniform condition, free of ruts and surface irregularities, in accordance with the grading requirements shown on the Drawings. All final surface grades and subgrades shall be prepared within ½ in. of the grades shown on the Drawings. Repair and re-establish grades in settled, eroded, and rutted areas to specified tolerances.
 2. Uniformly smooth-grade all areas to be graded, as indicated and as directed, including excavated sections and all areas disturbed as a result of the Contractor's operations.
 3. Where settling is measurable or observable at excavated areas during general project warranty period, remove surface (pavement, lawn or other finish), add material, compact, and replace surface treatment. Restore appearance, quality, and condition of surface and finish to match adjacent work and eliminate evidence of restoration to greatest extent possible.

PART 4 - MEASUREMENT AND PAYMENT

4.1 MEASUREMENT

- A. Earthwork shall not be measured and shall include all excavation, demolition, handling, processing, conditioning, borrow, filling, backfilling, compacting, grading, off-site disposal, dewatering, and other work of this Section.
- B. No separate measurement for payment will be made for acquisition of permits, materials, backfill, material processing, equipment, material disposal, construction dewatering, rock excavation, stockpiling, material rehandling, surveying, or other associated items or work considered incidental to the conduct of earthwork.

4.2 PAYMENT

- A. Payment for Earthwork will be made at the contract lump sum price, which shall include full compensation for furnishing all material, labor, equipment, tools, and incidentals necessary for completing the Earthwork specified in this Section.

END OF SECTION 312300

SECTION 316333 – MICROPILES

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Provide all facilities, labor, materials, equipment, transportation, supervision, and related work necessary to complete the Work specified in this Section, and as shown on the Drawings.
- B. Examine all Drawings and all other Sections of the Specifications for requirements therein affecting the work of this Section. All Work under this Section of the Specifications shall be performed in accordance with Division 01 (General Requirements).
- C. Coordinate work with that of all other trades affecting or affected by the Work of this Section. Cooperate with such trades to ensure the steady progress of all work under the Contract.
- D. All work shall be performed in accordance with applicable codes, permits and regulations, and the requirements of all local, state, and federal agencies having jurisdiction over the work.

1.2 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections apply to this Section.

1.3 DESCRIPTION OF WORK

- A. Work to be done under this Section includes, but is not limited to, providing all labor, materials, equipment, and incidentals as necessary to conduct and complete the Work specified herein and shown on the Drawings.
 - 1. Designing micropiles (“piles” in this Section) for the allowable design capacities in compression, tension and lateral loading and pile head movement shown on the Drawings.
 - 2. Installing micropiles shown on the Drawings in accordance with the requirements herein.
 - 3. Performing pile load tests to confirm assumptions made in the design.
 - 4. Providing survey control, layout and as-built plans.

1.4 RELATED SECTIONS

- A. Related Sections:
 - 1. 031000 Concrete Forming and Accessories
 - 2. 033000 Cast-in-Place Concrete
 - 3. 312300 Earthwork

1.5 REFERENCES

- A. FHWA, 2005: “Micropile Design and Construction (Reference Manual for NHI Course 132078),” Prepared for the Federal Highway Administration by P. Sabatini, et. al., Publication No. FHWA-NHI-05-039, December 2005.

1.6 DEFINITIONS

- A. Refer to Section 011000 for definition of Owner, Architect, Construction Manager, Owner's Representative, and Contractor. In this Section the term Contractor may refer to the Construction Manager as Constructor or Construction Contractor.
- B. Bidder: Entity bidding to complete the Work of this Section. After award of the contract, the Bidder becomes the Contractor for the purposes of this Section.
- C. Site: Refer to the limits of construction shown on the Drawings.
- D. Site Improvements: shall include, but not be limited to, buildings, structures, foundations, underground and above-ground utilities, pavements, landscaping, plants, slabs, sidewalks, curbs, and all other site features that are outside the limits of the site, and/or those elements within the limits of the site that are to remain.
- E. Exploration: shall include, but not be limited to, test borings and test pits and results of field and lab testing.
- F. Building Code or Code: Refer to the standards and regulations indicated on the Drawings.
- G. Bedrock: residual metasedimentary disintegrated rock also known as residuum.

1.7 PROJECT CONDITIONS

- A. Prior to submitting a bid, the Bidder shall review and understand the information contained in the following documents. These documents are made available to the Bidder for informational purposes only. The subsurface conditions information presented in these documents, as applicable, are for informational purposes only and shall not be interpreted as a warranty of subsurface conditions whether interpreted from written text, exploration results, laboratory results, or other data or interpretations of data.
 - 1. "Report on Geotechnical Engineering Study, Construct Arabian Leopard Habitat, National Zoological Park, 3100 Connecticut Avenue NW, Washington, DC" prepared by Haley & Aldrich, Inc., dated March 2026.
- B. Prior to submitting a bid, the Bidder shall examine the records of subsurface features including but not limited to utilities and foundations, records of explorations, and the exploration samples to determine conditions under which the Work will be performed. The exploration samples are available for review at Haley & Aldrich, Inc., Vienna, Virginia.
- C. The exploration information represents subsurface conditions at the exploration locations at the time conducted. Data on indicated subsurface conditions are not intended as representations or warranties of accuracy or continuity between explorations. It is expressly understood that the Owner and Architect will not be responsible for interpretations or conclusions drawn there from by the Bidder.
- D. The Contractor may perform additional explorations and laboratory testing or field screening for their own information at no cost to the Owner following approval in writing from the Owner. The Bidder shall include the cost of any additional studies it deems necessary to properly perform the Work specified in this Section, in the Related Sections, and as shown on the Drawings.

- E. If, during the course of construction operations, conditions differing substantially from those indicated in the documents referenced in this Section are encountered, promptly notify the Owner's Representative and Architect in writing, and do not disturb such conditions until directed. The Owner, Owner's Representative, and Architect will investigate such conditions, and, if it is determined that the conditions differ substantially from those that reasonably would have been anticipated from examination of the subsurface information and site, and that such conditions will necessitate a change in the Work, the Architect will recommend any required changes and adjustments in writing. Oral or written communications with field personnel shall not constitute acknowledgment of a differing subsurface condition.

1.8 QUALITY CONTROL AND ASSURANCE

- A. The Owner's Representative may observe the Contractor's micropile installation and testing activities. The Contractor shall provide sufficient notice to the Owner's Representative to allow the Owner's Representative to be present to observe each of the activities of this Section. The Contractor shall cooperate with the Owner's Representative in all respects to facilitate any testing or observations.
- B. The Architect will observe the Contractor's micropile construction activities. The Contractor shall provide sufficient notice to and cooperate with the Architect in all respects to facilitate their observations.
- C. The presence of the Construction Manager Owner's Representative or Architect shall not relieve the Contractor of its responsibility to perform the Work in accordance with the Contract Documents, nor shall it be construed to relieve the Contractor from full responsibility for the means and methods of construction, quality control, protection of site improvements against damage, and for safety on the construction site.
- D. The Contractor shall adhere to the applicable requirements of the Specifications, Occupational Health and Safety Administration (OSHA) Standards and to all other applicable ordinances, codes, statutory rules, and regulations of federal, state, and local authorities having jurisdiction over the Work of this Section.
- E. Work not in conformance with the specified requirements shall be improved, or removed and replaced, at no additional cost to the Owner. Costs related to evaluation and testing of nonconforming Work or materials shall be paid for by the Contractor at no additional cost to the Owner.
- F. Rejected piles include piles that do not conform to project requirements (e.g., installed out of tolerance, low-strength grout) and those that are damaged.
- G. The Contractor shall be responsible for establishing lines, grades, and other survey control to complete the work. The Contractor shall be responsible for the maintenance and protection of the survey control reference points and location stakes. The Contractor shall employ a licensed Registered Land Surveyor or a Registered Civil Engineer, familiar with building construction, to establish lines and levels. The Contractor shall be responsible for the correct location of the proposed facilities, including locations and elevations and limits of excavations and fills.
- H. Welding shall be performed by operators who have been previously qualified by tests as prescribed in the AWS. Evidence that welders meet qualification requirements shall be

submitted to the Architect before welding is begun. Welders shall demonstrate previous successful experience in permanent welding to the type of micropile casing used.

- I. The Contractor shall be responsible for the design of micropiles. The Contractor shall employ or retain a licensed Registered Civil Engineer, familiar with micropiles, to prepare and stamp drawings and calculations.
- J. Shop drawing and pile load test submittals shall be signed and sealed by a Professional Engineer registered in the District of Columbia
- K. Field Monitoring and Testing:
 - 1. Full-time field monitoring of the micropile installation operations, including cement grout placement, will be provided by the Contractor. No piles shall be installed or grouted except in the presence of the Contractor.
 - 2. Field monitoring of installation shall include observation and accurate measurement and recording of the following for each micropile.
 - a. Micropile designation, Contractor names, project identification and design information.
 - b. Date, times and durations of installation and grouting activities.
 - c. Inclination, plumbness, casing diameter and thickness, reinforcement size and length, casing plunge length and installed length, bond (uncased) length, total pile length as measured by weighted tape, and cleanliness of bottom of pile. All lengths shall be to the nearest inch and referenced to the design pile cut off elevation.
 - d. Drilling method, drill bit size and type, and any unusual conditions observed such as escape of drill fluids to the surface outside the casing.
 - e. Depth to top of bedrock from design pile cutoff elevation and any unusual soil conditions encountered such as boulders or difficult drilling.
 - f. Grout mix, density, quantities, placement method and any unusual conditions observed such as loss of grout through the bond length or to the ground surface.
 - g. Deviations from this Section.
 - 3. Cement grout test cylinders shall be taken and tested by the Contractor in accordance with ASTM C109. The Contractor shall obtain a minimum of two three-day and two twenty-eight day compressive strength tests per production grout batch. Three sets of three tests each for three-day, seven-day, and twenty-eight day compressive strength tests for each sacrificial pile shall be obtained. The Contractor is responsible for storing grout cylinders in an approved storage box, provided by the Contractor, for 24 hours after molding and held at a temperature between 60 to 80 degrees F.
 - 4. Grout consistency as measured by grout density shall be determined by the Contractor in accordance with ASTM C188 or API RP-13B-1 with a Baroid Mud Balance at a frequency of at least one test per pile, conducted just prior to start of pile grouting. The measured grout density shall be within 10% of the density indicated on the accepted submittal.
 - 5. Certification of the quality of the pile materials to be used in the Work shall be furnished, in a form acceptable to the Contractor, at the time of delivery of materials to the site. Pile materials shall also be subject to on-site observation for conformance with specifications.
 - 6. Approvals and acceptance given by the Architect shall not relieve the Contractor of responsibility for performing the Work in accordance with the Contract Documents and the Code.
- L. The Contractor shall be responsible for damage to any structure due to its work, and for corrective action or repairs needed to restore the structure to its original condition at no cost to the Owner and no schedule impact to the Project. Where structures are adversely affected by the

Contractor's operations, or lack thereof, the Contractor shall conduct restoration at no cost to the Owner and no schedule impact to the Project.

M. Pile Load Testing:

1. Performance static pile load testing shall be completed on sacrificial micropiles prior to installation of production piles to confirm the design assumptions including the allowable bond stress in rock, allowable compression and tension capacities, allowable lateral capacity, intended maximum pile head movements, and installation methods and equipment.
2. Pile load testing shall be performed on piles constructed using the same materials and procedures as piles in this Section and as shown on the Drawings. Locations of test piles shall be proposed by the Contractor for review by the Engineer. Testing shall be conducted under the observation of the Owner's Representative and Architect.
3. The pile load testing schedule is:
 - a. One tension load test in accordance with ASTM D3689-22 (latest reapproval). Testing apparatus shall be capable of a maximum test load of 250% of the design compression or tension load, whichever is greater. Results of tension load test are intended to satisfy the testing for compression capacity.
 - b. One lateral load test in accordance with ASTM D3966-22 (latest reapproval). Testing apparatus shall be capable of a maximum test load of 250% of the design lateral load.
4. Load testing schedules and pile acceptance criteria shall be in conformance with FHWA, 2005, Chapter 7.4.
5. Testing reaction frame shall be sufficiently rigid and of adequate dimensions such that excessive deformation of the testing equipment does not occur to safely support 125% percent of the maximum test load. Align the jack, bearing plates and stressing anchorage to prevent unloading and repositioning of the equipment during the test.
6. Monitor the creep test load hold during performance tests with the pressure gauge. Maintain a constant load hold during the creep test load hold.
7. Piles may not be loaded until the cement grout has achieved the design compressive strength.

N. Lines and Grades:

1. The Contractor shall maintain a maximum lateral deviation from the design location at cut-off elevation as submitted by the Contractor and reviewed by the Architect. A maximum deviation from design cut-off elevation as submitted by the Contractor and reviewed by the Architect will be permitted.
2. The Contractor shall be responsible for the correct location of piles.
3. The Contractor shall establish, maintain, and record all locations and elevations of micropiles, including the elevation of the top of the pile before and after cut-off, the bottom of the pile and casing, and the location relative to permanent site features.

O. Qualifications

1. The Contractor (including the personnel assigned to this project) shall have a minimum of 5-years' experience in the work specified in this Contract and shall have successfully completed a minimum of 5 similar projects.
2. The Contractor shall have available and be thoroughly familiar with the specialized type of equipment needed to perform micropile work in restricted sites with adjacent sensitive receptors.

3. The Contractor's Professional Engineer shall have a minimum of 5-years' experience involving the design of micropiles similar to those required for this project and shall have successfully completed a minimum of 3 similar projects.
4. The Contractor's field monitoring and testing personnel shall have a minimum of 3-years' experience involving drilled deep foundations, grout compressive strength and density tests, and pile material inspections and shall have successfully completed a minimum of 3 similar projects.

1.9 SUBMITTALS

A. General: Qualifications of the Contractor.

B. Shop Drawings:

1. Shop Drawings showing pile layout with unique pile identifications, and locations of sacrificial piles for pile load testing.
2. Shop Drawings showing dimensioned typical pile cross-section(s) with ground surface at time of installation, subsurface strata, and pile cap connection.
3. Details and manufacturer literature showing pile diameters and materials, length in bearing stratum, and dimensions and details of all pile components, pile-to-cap connections, and joints.
4. Load testing and acceptance criteria, field monitoring and testing schedules, and tolerances.
5. Calculations package with design criteria, assumptions, references, calculated geotechnical and structural capacities in all single and combined loading cases, pile head axial and lateral movements, group effects, casing joint tension and bending capacities, pile head reactions, and material strengths.

C. Installation:

1. Details of equipment and procedures for pile installation including but not limited to laydown and staging areas, equipment travel routes, work requiring coordination with other trades, pile construction sequences, means of handling drilling flush and grout spoils, number of drill rigs, drill rig manufacturer and model, means and methods for drilling through material types anticipated, and means and methods and sequence for installation of all pile components to achieve the project requirements.
2. Welding Procedure Specification conforming to AWS D1.1.
3. Cement grout mix design, manufacturer information for all materials to be incorporated in the mix, representative test results for the design mix, and procedures and equipment for batching and placing grout.
4. Casing and reinforcement segment lengths.
5. Casing threaded joint details and, if available, manufacturer's test results of casing joints in tension and bending.
6. Submit (for record) certified mill test reports, properly marked, for all steel components, as the materials are delivered. The ultimate strength, yield strength, elongation, and materials composition shall be included. For primary steel casing, a minimum of two representative coupon tests or mill certifications on each load delivered to the project. For secondary steel casing, submit verification of steel quality through tensile and chemical testing of steel samples and a minimum of two representative coupon tests.
7. The following records shall be prepared and completed within 24 hours after each pile installation is completed. Piles shall be grouped by pile cap/column identification. The records shall include the following minimum information:

- a. Pile drilling duration and observations (e.g., flush return, resistance) and water levels including unusual installation behavior (e.g., interaction, water loss, misalignment, drill chatter prior to reaching top of rock)
 - b. Information shown on the pile schedules, indicating as-built information which differ
 - c. Final tip elevation, bond length and diameter, and cut-off elevation
 - d. Length of casing segments and depth to uppermost joint below cut-off
 - e. Rated load capacities
 - f. Deviations from this Section or Submittals
 - g. Grout quantities pumped
- D. Pile Load Testing:
1. Narrative of procedures for pile load testing and sample data recording forms.
 2. Load testing schedule, test sequences, and plan locations.
 3. Type and calibration reports for each test jack, pressure gauge, and master pressure gauge to be used shall be submitted. The calibration tests shall have been performed within one year of the date submitted.
 4. Type and accuracy of the load measuring and application devices, pile movement and reaction frame measuring devices, and calibration reports.
 5. Type and capacity of reaction load system including details, sections, and calculations.
 6. Criteria for termination and acceptance of load test results.
 7. Written report with test pile installation details, soil and rock conditions, load test details, test methods and acceptance criteria, load measuring and application device information and calibrations, materials, load test data and procedure, data, personnel attending, data graphs, figures, results, analysis and conclusions. Data shall also be provided in raw electronic file format.
- E. As-Built Data: Actual pile location data shall be submitted within two working days after a pile is installed. The Contractor shall provide the Architect with written tabulation with pile designations, elevation of the top of each pile after cut-off (measured to the nearest 1/4 in.), and deviation from design plan location (measured to the nearest 1/4 in.).

1.10 MINIMUM PILE DESIGN CRITERIA

- A. Design and installation details of the piles shall be in accordance with approved submittals and the following:
1. Design the piles for structural loading at the pile head with appropriate factors of safety and to limit movement of the piles at the pile head to meet structural performance criteria.
 2. Design compression, tension and lateral loads shown on the Drawings and lateral deflection of 1/2 in. maximum at all design load cases.
 3. Spacing between micropiles shall be at least the center-to-center spacing shown on the Drawings.
 4. Piles shall derive their geotechnical resistance to compression and tension loads using friction between grout and bedrock and to lateral loads using passive soil pressure in the upper 15 ft of the micropile below the pile cap.
 5. Allowable stresses in grout and steel shall conform to the Code.
 6. Permanent casing shall extend to 15 ft min. below the pile cap and 2 ft min. below top of bedrock.
 7. Bond length in bedrock shall be determined using a maximum allowable side resistance of 2.5 ksf (17.5 psi) unless applicable load test data substantiate a greater value is submitted and accepted by the Architect.

8. Reinforcement shall be full length, Grade 75 min., and surrounded with 1.5 in. min. of grout cover.
9. Centralizers shall be used to center reinforcement at maximum 10 ft spacing.

1.11 MINIMUM PILE INSTALLATION TOLERANCES

- A. Unless otherwise indicated on the Drawings or in accepted shop drawings, the following shall be the maximum installation tolerances for micropiles:
 1. Centerline of micropile shall not be more than 3-in. from indicated plan location.
 2. Pile shall be plumb within 2 percent of total-length design plan alignment.
 - a. Battered piles inclined up to 1:6 (10 degrees) shall be within 4 percent of design plan alignment.
 - b. Battered piles inclined greater than 1:6 (10 degrees) shall be within 7 percent of design plan alignment.
 3. Top elevation of pile shall be plus 1 inch or minus 2 inch maximum from vertical design elevation indicated.
 4. Centerline of reinforcing steel shall not be more than 3/4-in. from indicated center of pile.

1.12 CONDUCT OF THE WORK

- A. The Contractor shall provide provisions to control exhaust from equipment, the flow of water/cuttings and disposal of same, and shall keep the premises clean and free of water and debris from the drilling/pile installation work, such that other work activities are not interrupted.
- B. Pile Interaction and Sequencing:
 1. Pile installation sequence shall be determined prior to the start of Work.
 2. Sequence of pile installation shall be such that adjacent piles, or piles located less than 4 ft center-to-center from a previously grouted pile, are not installed within 24 hours after grouting of the adjacent/ previously installed pile.
 3. If interaction between new/fresh drilled piles is observed during drilling, the drilling operations shall cease immediately, until the "fresh" drilled pile has cured (a minimum of 24 hours). Drilling may commence at other drilled pile locations.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Water: Water for mixing grout shall be potable, clean, and free from substances which may be in any way deleterious to grout or steel.
- B. Cement Grout: Cement Grout for piles shall conform to the requirements of the Code and ASTM Specification C94 for Ready Mixed Concrete, Third Edition. Cement shall be Portland and conform to ASTM C150, Types I, II, or III. The minimum 3-day compressive strength shall be 50% of the minimum 28-day compressive strength. The compressive strength shall be determined in accordance with ASTM C109. Admixtures, if submitted by the Contractor and accepted by the Architect, shall be mixed in accordance with manufacturer's recommendations.
- C. Casing: Manufactured to conform to American Petroleum Institute (API) 5CT, Grade N80 or better, or 5L, Grade X52. The permanent steel casing shall also meet the tensile requirements of ASTM A252, Grade 3, except the minimum yield strength shall be 80 ksi and minimum

elongation shall be 15%. Lengths sufficient to achieve the joint position requirements shall be supplied. For casing requiring structural welding:

1. The carbon equivalency as defined in AWS D1.1, Section XI5.1, shall not exceed 0.45.
2. The sulfur content shall not exceed 0.05%.

- D. Reinforcing Bar: Reinforcing steel shall be threaded, deformed bars in accordance with ASTM A615, Grade 420 or 520, or ASTM A722, Grade 1035. Bar couplers shall develop the ultimate tensile stress of the bar, without any evidence of failure. For compressive loading, the coupler shall be compatible with efficient load transfer and overall reinforcement performance requirements. Thread shall be continuous spiral deformed ribbing supplied by the manufacturer.
- E. Centralizers: Centralizers shall be fabricated from Schedule 40 PVC plastic tube or pipe, steel, or material that is non-detrimental to the reinforcing steel. Wood shall not be used.
- F. Pile-to-Cap Connection Components: Unless otherwise shown on the Drawings, structural steel plates and shapes for pile top attachments shall conform to ASTM A36 or ASTM A 572, Grade 350.

PART 3 - EXECUTION

3.1 GENERAL REQUIREMENTS

- A. Piles shall be installed at the locations and to the line and grades specified in the Drawings and Contractor's submittal.
- B. Pile installation activities shall conform with the Contract Documents and submittals that are acceptable to the Architect. No Work shall be performed unless it is conducted under the observation of the Contractor, and in accordance with the submitted schedule and sequence.

3.2 METHOD OF INSTALLATION

- A. The method of pile installation shall be determined by the Contractor, subject to review by the Architect. Pile installation shall be made by non-displacement, low vibration methods such as rotary drilling. Wet rotary drilling methods shall employ sufficient fluid pressure to provide complete removal of the drill cuttings and materials from the cased hole. Air drilling may be used provided the materials and tooling is specially designed and operated to direct primary air flush up through the inside of the casing and remove material in front of the drill with a minor amount of air flush across the drill face. These specially designed tool systems include, but is not limited to, the Spiral Flush system manufactured by Mincon.
- B. Internal drilling fluid or air flush methods shall be used to reduce the potential for disturbance to surrounding soils. External flush or wash methods for advancement of casing shall not be used.
- C. Contractor shall observe the ground conditions continuously during micropile installation for signs of ground heave, ground subsidence or loss of drill fluids. Immediately notify the Architect and Owner's Representative if signs are observed. Contractor shall immediately suspend or modify drilling or grouting operations if signs are observed, or if adjacent structures are damaged from the drilling or grouting. Contractor shall take corrective actions necessary to prevent further damage and perform repairs.

- D. Drilling shall be made in such a manner to prevent loss of ground beyond the specified pile diameter. Drilling mud or other methods shall be employed as required to stabilize the hole and prevent loss of ground. Drilling mud in the hole shall be sufficiently fluid such that it is readily and fully displaced by the cement grout.
- E. Drilling equipment and methods shall permit the advancement of casing through materials encountered and in a manner which will not loosen the materials below the pile cap around the casing. Intimate contact between the casing and the adjacent materials shall exist after the casing is installed.
- F. The bottom tip of the casing shall include carbide teeth to facilitate the casing being drilled through boulders and into rock. The roller bit shall be operated within the casing to direct water or air flush up through the casing rather than ahead and outside the casing circumference.
- G. A down-the-hole hammer or other approved methods shall be used only after the casing tip has reached a minimum depth of 2 ft into rock except down-the-hole hammer systems may be used above this depth provided the materials and tooling is specially designed to direct primary air flush up through the inside of the casing and remove material in front of the drill with a minor amount of air flush across the drill face. These specially designed tool systems include, but is not limited to, the Spiral Flush system manufactured by Mincon.
- H. Excavation and drilling spoils shall be controlled to minimize disturbances to site conditions and hindrances to pile installation procedures and requirements. The drilling water, spoil or other resulting by-products shall not be allowed to enter into any municipal drainage system without prior written approval from the controlling agency and the Owner.
- I. The Contractor is responsible for controlling the amount of dust and dirt created by the pile installation process using whatever methods are most appropriate.
- J. Pile locations shall be checked during installation and appropriate measures taken as necessary to maintain the correct pile location.
- K. Each pile shall be drilled to achieve the support within the identified bearing strata and shall be capable of supporting the specified design load. The bedrock socket shall be formed in tan, red, and/or gray, residual metasedimentary disintegrated rock with a Standard Penetration Test (SPT) resistance (N-value) of no less than 60 blows per foot.
- L. After drilling the rock socket, the hole shall be flushed with water and/or air to remove drill cuttings and/or other debris. Flush and re-flush as required until clear visibility through the drill fluid is obtained to complete the downhole video inspection.
- M. Casing joints shall be completely shouldered. Reinforcement shall be fully threaded into stop-type couplers with hex nuts.
- N. The reinforcement shall be lowered in the cased hole without difficulty. Provide centralizers equally spaced along the length of the reinforcement with a maximum center-to-center spacing of 10 ft. Locate the center of the bottom centralizer 3 ft (+/-1 ft) from the bottom of the micropile. Located the center of the top (after final cut-off) centralizer within 5 ft below the final cut-off elevation. Centralizers shall be located at least 2 ft from reinforcement couplers. Provide at least two centralizers per micropile. For micropiles 20 ft or less in length, place centralizers at the top and bottom quarter points of the micropile. Centralizers shall be

fabricated and installed to permit the free flow of grout without misalignment of the steel components. Lower the reinforcement with centralizers into the casing. Redrill casing and reinsert reinforcement if any difficulty is encountered during gravity lowering of the reinforcement.

O. Grouting:

1. The Contractor shall provide a stable, homogenous neat cement grout or a sand cement grout with a minimum 28-day unconfined compressive strength shown on the Drawings.
2. The grout shall not contain lumps or any other evidence of poor or incomplete mixing.
3. Grout of the specified compressive strength shall be placed by means of a tremie pipe and grout pump from the bottom of the pile upward in one continuous operation until the pile is filled and suitable, undiluted cement grout returns at the top of the pile. The cement grout shall not be allowed to fall freely through slurry or water.

3.3 PILE REJECTION

- A. Piles which are believed to have collapsed, based on the grout take volume, or which are otherwise unsatisfactory as specified above and which cannot be removed or repaired, will be rejected and shall be abandoned and filled with cement grout.
- B. Piles that are rejected as judged by the Architect because of damage, mis-location or misalignment, or failure to meet other installation criteria, shall be cut off below the design cut-off grade and abandoned. Additional pile(s) shall be installed as necessary subject to review by the Architect. Whenever, in the judgment of the Architect, misalignment or rejection of a pile is caused by the Contractor's non-conformance or other error on the Contractor's part, and installation of one or more replacement piles is necessitated, the cost of such re-installation shall be borne by the Contractor.

3.4 DISPOSAL OF EXCAVATED MATERIAL

- A. Excavated and cut-off pile material shall be removed and legally disposed of off-site by the Contractor in accordance with all applicable Sections. Prior to drill water discharge, the excess water shall pass through a sedimentation basin to remove soil fines. Additional treatment of water or slurry shall be performed as necessary to comply with any and all permits issued for dewatering and discharging of water and with all applicable regulatory requirements.

PART 4 - MEASUREMENT AND PAYMENT

4.1 GENERAL

- A. Pile installation includes all services, engineering, permits, labor, equipment, transportation, material, and supplies to complete the work herein. Payment for these items shall include furnishing, installing, grouting, testing, instrumentation, engineering, mobilization and demobilization, and other items incidental to the work specified herein. No other payments for any specified or indicated work nor for any work implied therefrom shall be made.
- B. Additions and/or deductions in the total footage may result during the course of the Work either by changes in pile length or changes in the number of piles. Total footage of micropiles added to or deleted from the Contract by the Owner will be measured and paid/credited on a per linear foot basis. The Contractor will be paid for additional length of micropiles at the Contract unit price when the length shown on the Drawings has been deepened by the Architect. Should a

design change be implemented by the Architect that results in a shortening of a micropile, a credit (at the Contract unit price) will be due the Owner for footage less than that indicated on the Drawings. The Contractor will not be compensated for micropiles that bear deeper than design elevations due to disturbance of the rock socket by the Contractor's activities and/or other unauthorized deepening of micropile lengths.

- C. Additions to the number of pile load tests may results during the course of the Work if directed by the Architect. Additional pile load testing added to the Contract by the Owner will be measured and paid/credited on a per test basis. The per test basis shall include the sacrificial pile on which the test will be performed and load testing on each pile shall be in accordance with the methods in this Section.
- D. No separate measurement or payment will be made for removing or overcoming obstructions.
- E. No separate measurement or payment will be made for rejected (or additional piles caused by rejected) piles or pile load tests due to the Contractor's non-conformance with project requirements or other Contractor error.
- F. Whenever, in the judgment of the Architect, misalignment or rejection of a pile or piles, caused by the Contractor's non-conformance with the specification or other Contractor error, necessitates structural redesign, the cost of such redesign shall be deducted from sums otherwise due to the Contractor under the contract. If the redesigned structural shoring requires greater quantities of materials, as compared with the quantities required as originally designed, the additional costs shall also be deducted from the contract price.

4.2 MEASUREMENT AND PAYMENT

- A. Payment for micropile installation measured and computed as provided above, will be made as part of the Base Contract Price, all-inclusive basis for the furnishing of all material, mobilization, labor, equipment, tools, and incidentals necessary to complete the Work specified herein and shown on the Drawings. No separate measurement or payment will be made for acquisition of permits, backfill, pre-excavation, equipment, material disposal, slurry, police details, water, electricity, material handling and re-handling, pile load tests, engineering, surveying, steel reinforcement, concrete, removal of steel and/or sound concrete to the design top of micropile elevation, chipping or chiseling contaminated (unsound) concrete to sound concrete and re-pouring concrete to the design top of micropile elevation, or other associated items or work considered incidental to the conduct of micropile construction.
- B. Payment for the work of this Section shall be a lump sum (Base Contract Price) covering all costs for the micropile work and incidentals as called for on the Drawings and in this Section except:
 - 1. Additional footage of micropiles shown on the Drawings added to the Contract by the Owner will be paid on a unit price basis.
 - 2. Reduced footage of micropiles shown on the Drawings deducted from the Contract by the Owner will be credited to the Owner on a unit price basis.
 - 3. Additional load tests of micropiles shown on the Drawings added to the Contract by the Owner will be paid on a unit price basis.

<u>Item No.</u>	<u>Description</u>	<u>Unit</u>
316333-1	Additional footage of micropile	\$____/ foot
316333-2	Reduced footage of micropile	\$____/ foot
316333-3	Additional sacrificial micropile and pile load test for compression and tension allowable loads	\$____/ each
316333-4	Additional sacrificial micropile and pile load test for lateral allowable loads	\$____/ each

SECTION 32 1313 – CONCRETE PAVING

PART 1 - GENERAL

1.1 SUMMARY

- A. This Sections includes the following:
 - 1. Aggregate base course.
 - 2. Concrete paving for:
 - a. Concrete sidewalks
 - b. Concrete curbs and gutters
- B. Related Requirements:
 - 1. Section 321373 – Concrete Paving Joint Sealants

C. District Department of Transportation (DDOT):

1. Standard Specifications for Highways and Structures.

1.3 PRE-INSTALLATION MEETINGS

A. Section 013000 – Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.4 SUBMITTALS

A. Section 013300 – Submittal Procedures: Requirements for submittals.

B. Product Data:

1. Submit data on all concrete materials, including admixtures and curing compounds.

C. Design Data:

1. Submit concrete mix design for each concrete strength. Submit separate mix designs when admixtures are required for the following:
 - a. Hot and cold weather concrete work.
2. Identify mix ingredients and proportions, including admixtures.
3. Identify chloride content of admixtures and whether chloride was added during manufacture.

D. Source Quality Control Submittals: Include results of factory tests and inspections.

1. Aggregate Tests
2. Concrete slump Tests
3. Air Content Tests
4. Flexural Strength Tests
5. Cementitious Materials
6. Field quality-control reports

1.5 SUSTAINABLE DESIGN SUBMITTALS

- A. Section 018113 – Sustainable Design Requirements: Requirements for sustainable design submittals.
- B. Manufacturer's Certificate: Certify products meet or exceed specified sustainable design requirements.
 - 1. Sustainable Sites Certificates:
 - a. Certify paving materials solar reflectance index.
 - 2. Materials Resources Certificates:
 - a. Certify recycled material content for recycled content products.
 - b. Certify source for regional materials and distance from Project site.
- C. Product Cost Data: Submit cost of products to verify compliance with Project sustainable design requirements. Exclude cost of labor and equipment to install products.
 - 1. Provide cost data for the following products:
 - a. Products with recycled material content.
 - b. Regional products.

1.6 QUALITY ASSURANCE

- A. Perform Work according to ACI 301 requirements of Section 031000, Section 032000, and Section 033000.
- B. Obtain cementitious materials from same source throughout.
- C. Perform Work according to DDOT standards.
- D. Maintain one copy of each document on site.

1.7 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years documented experience.
- B. Installer: Company specializing in performing work of this section with minimum three years documented experience.

1.8 AMBIENT CONDITIONS

- A. Section 015000 – Temporary Facilities and Controls: Ambient conditions control facilities for product storage and installation.
- B. Do not place concrete when base surface temperature is less than 40 degrees F, or surface is wet or frozen.

PART 2 - PRODUCTS

2.1 SUSTAINABILITY CHARACTERISTICS

- A. Section 018113 – Sustainable Design Requirements: Requirements for sustainable design compliance.

2.2 AGGREGATE BASE COURSE

- A. Aggregate Base Course: Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 209 Aggregate Base Course.

2.3 CONCRETE PAVING

- A. Performance/Design Criteria:
 - 1. Paving: Refer to Pavement Cross Section details provided in the Contract Drawings.
- B. Form Materials:
 - 1. Form Materials: Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 501.06 Setting Forms.
- C. Reinforcement:
 - 1. Reinforcing Steel and Wire Fabric: Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 812.01 Welded Wire Fabric.
- D. Sidewalk Concrete Materials:
 - 1. Cement: ASTM C150, Type I/II, no supplements such as Fly Ash or Granulated Blast Furnace Slug permitted. Refer to Landscape Drawings for color.
 - 2. Fine and Coarse Aggregates: Coarse aggregates shall be gravel of normal weight and uniformly graded from a single source with nominal maximum size of ¾-inch. Fine aggregates must be free of materials with deleterious reactivity to alkali in cement.
 - 3. Water: ASTM C94/C94M potable, without deleterious amounts of chloride ions.
 - 4. Air Entraining Admixture must meet ASTM C94; percent entrained air shall be 5 to 8 percent by volume.
 - 5. Chemical Admixtures – Compatible with other admixtures and manufacturer certified and to contain no more than 0.1 percent water-soluble chloride ions by mass of cementitious material.
- E. Curb and Gutter Concrete Materials:
 - 1. Adhere to the requirements set forth in DDOT Standard Specifications for Highways and Structures, Section 606.01.
 - 2. Materials: Shall meet the requirements specified in DDOT Standard Specifications for Highways and Structures, Section 501.02, except the Portland Cement Concrete (PCC) shall be Class F.
 - 3. Consistency: The consistency of the PCC shall meet the requirements specified in DDOT Standard Specifications for Highways and Structures, Section 501.15.

2.4 MIXES

- A. Concrete Mix – The proportions of materials for concrete shall meet the requirements of DDOT Standard Specifications for Highways and Structures, Section 817, Class F.

2.5 FINISHES

- A. Welded Wire Fabric: Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 812.01 Welded Wire Fabric.

2.6 ACCESSORIES

- A. Curing Compound: Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 814.01.
- B. Liquid Membrane Curing Compound: Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 814.02.
- C. Air Entraining Admixtures: Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 814.03.
- D. Chemical Admixtures: Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 814.04.

2.7 SOURCE QUALITY CONTROL

- A. Section 014000 – Quality Requirements: Testing and Inspection Services: Provide mix design for Sidewalk and Concrete Curb and Gutter.
- B. Submit proposed mix design of each class of concrete for review prior to commencement of Work.
- C. Tests on cement, aggregates, and mixes will be performed to ensure conformance with specified requirements.
- D. Test samples according to ASTM C94/C94M and ACI 301.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017000 – Execution and Closeout Requirements: Requirements for installation examination.
- B. Verify compacted subgrade is dry and ready to support paving and imposed loads.
 - 1. Proof roll subgrade according to DDOT Standard Specifications for Highways and Structures, Section 203.03.
- C. Verify gradients and elevations of base subgrade are correct.

3.2 PREPARATION

- A. Section 017000 – Execution and Closeout Requirements: Requirements for installation examination.
- B. Moisten substrate to minimize absorption of water from fresh concrete.

- C. Coat surfaces of manholes and inlet frames with oil to prevent bond with concrete paving. Ensure oil does not negatively react with the concrete, alter any surface finishes or colors, and conforms to the District Department of Energy and Environment (DOEE) environmental laws.
- D. Notify Contracting Officer Technical Representative (COTR) minimum 24 hours prior to commencement of concreting operations.

3.3 INSTALLATION

- A. Aggregate Base Course: Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 209 Aggregate Base Course.
- B. Forms: Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 501.06 Setting Forms.
- C. Reinforcement: Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 501.12 and Manufacturer Requirements.
- D. Placing Concrete: Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 501.11 Placing and Consolidating Concrete.
- E. Finishing: Follow the Manufacturer Requirements.
- F. Curing and Protection: Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 501.17 Curing.

3.4 TOLERANCES

- A. Section 014000 – Quality Requirements: Tolerances.
- B. Follow the requirements noted in the DDOT Standard Specifications for Highways and Structures, Section 501.23 Tolerance in Pavement Thickness.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 – Quality Requirements: Requirements for testing, adjusting, and balancing.
- B. Perform field testing according to the requirements of the DDOT Standard Specifications for Highways and Structures.
- C. Inspect reinforcing placement for size, spacing, location, and support.
- D. Testing firm will take cylinders and perform slump and air entrainment tests according to ACI 301.
- E. Strength Test Samples:
 - 1. Sampling Procedures: ASTM C172
 - 2. Cylinder Molding and Curing Procedures: ASTM C31/C31M, cylinder specimens, field cured.
 - 3. Sample concrete and make one set of three cylinders for every 150 cubic yards or less of each class of concrete placed each day and for every 5,000 square feet of surface area paving.
 - 4. Make one additional cylinder during cold weather concreting, and field cure.

F. Field Testing:

1. Slump Test Method: ASTM C143/C143M.
2. Air Content Test Method: ASTM C173/C173M or ASTM C231.
3. Temperature Test Method: ASTM C1064/C1064M.
4. Measure slump and temperature for each compressive strength concrete sample.
5. Measure air content in air entrained concrete for each compressive strength concrete sample.

G. Cylinder Compressive Strength Testing:

1. Test Method: ASTM C39/C39M.
2. Test Acceptance: Follow the testing according to the requirements of the DDOT Standard Specifications for Highways and Structures.
3. Test one cylinder at 7 days.
4. Test two cylinders at 28 days.
5. Dispose remaining cylinders when testing is not required.

H. Maintain records of placed concrete items. Record date, location of pour, quantity, air temperature, and test samples taken.

3.6 PROTECTION

- A. Section 017000 – Execution and Closeout Requirements: Requirements for protecting finished Work.
- B. Immediately after placement, protect paving from premature drying, excessive hot or cold temperatures, and mechanical injury.
- C. Do not permit pedestrian or vehicular traffic over paving for 7 days minimum after finishing or until 75% percent design strength of concrete has been achieved, whichever occurs last.

END OF SECTION

SECTION 32 1313 - CONCRETE PAVING**PART 1 GENERAL****1.1 RELATED REQUIREMENTS**

- A. Section 03 1000 - Concrete Forming and Accessories.
- B. Section 03 2000 - Concrete Reinforcing.
- C. Section 03 3533 - Stamped Concrete Finishes: Additional requirements for patterned surfaces.
- D. Section 07 9200 - Joint Sealants: Sealing joints.
- E. Section 31 2200 - Grading: Preparation of site for paving and base and preparation of subsoil at pavement perimeter for planting.
- F. Section 32 1120 - Subbase and Aggregate Base Courses.

1.2 REFERENCE STANDARDS

- A. ACI PRC-211.1 - Selecting Proportions for Normal-Density and High Density-Concrete - Guide; 2022.
- B. ACI PRC-304 - Guide for Measuring, Mixing, Transporting, and Placing Concrete; 2000 (Reapproved 2009).
- C. ACI PRC-305 - Guide to Hot Weather Concreting; 2020.
- D. ACI PRC-306 - Guide to Cold Weather Concreting; 2016.
- E. ACI SPEC-301 - Specifications for Concrete Construction; 2020.
- F. ASTM C33/C33M - Standard Specification for Concrete Aggregates; 2024a.
- G. ASTM C39/C39M - Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens; 2024.
- H. ASTM C94/C94M - Standard Specification for Ready-Mixed Concrete; 2026.
- I. ASTM C150/C150M - Standard Specification for Portland Cement; 2024.
- J. ASTM C173/C173M - Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method; 2026.
- K. ASTM C260/C260M - Standard Specification for Air-Entraining Admixtures for Concrete; 2024.
- L. ASTM C494/C494M - Standard Specification for Chemical Admixtures for Concrete; 2024.
- M. ASTM C618 - Standard Specification for Coal Ash and Raw or Calcined Natural Pozzolan for Use in Concrete; 2025a.

1.3 SUBMITTALS

- A. See Section 01 3000 - Administrative Requirements, for submittal procedures.
- B. Product Data: Provide data on joint filler, admixtures, and curing compound.
- C. Samples: Submit One of each paving type sample panels, 36 BY 36 inch (____ by ____ mm) in size illustrating finish.

PART 2 PRODUCTS**2.1 FORM MATERIALS**

- A. Form Materials: As specified in Section 03 1000, comply with ACI SPEC-301.

2.2 REINFORCEMENT**2.3 CONCRETE MATERIALS**

- A. Obtain cementitious materials from same source throughout.
- B. Exposed Aggregate: Quartz washed natural mineral aggregate, ____ inch (____ mm) minimum and ____ inch (____ mm) maximum size, _____ color, from a single source.
- C. Fly Ash: ASTM C618, Class C or F.
- D. Calcined Pozzolan: ASTM C618, Class N.
- E. Silica Fume: ACI PRC-211.1.
- F. Water: Clean, and not detrimental to concrete.
- G. Fiber Reinforcement: Synthetic fibers shown to have long-term resistance to deterioration when in contact with alkalis and moisture; 1/2 inch (12 mm) length.
- H. Air-Entraining Admixtures: ASTM C260/C260M.
- I. Chemical Admixtures: ASTM C494/C494M, Type A - Water Reducing, Type C - Accelerating, and Type G - Water Reducing, High Range and Retarding.

2.4 ACCESSORIES

- A. Surface Retarder:

2.5 CONCRETE MIX DESIGN

- A. Proportioning Normal Weight Concrete: Comply with ACI PRC-211.1 recommendations.
- B. Admixtures: Add acceptable admixtures as recommended in ACI PRC-211.1 and at rates recommended by manufacturer.
- C. Fiber Reinforcement: Add to mix at rate of 1.5 pounds per cubic yard (0.89 kg per cubic meter), or as recommended by manufacturer for specific project conditions.
- D. Concrete Properties:
 - 1. Compressive strength, when tested in accordance with ASTM C39/C39M at 28 days; ____ psi (____ MPa).
 - 2. Fly Ash Content: Maximum 15 percent of cementitious materials by weight.
 - 3. Calcined Pozzolan Content: Maximum 10 percent of cementitious materials by weight.
 - 4. Silica Fume Content: Maximum 5 percent of cementitious materials by weight.
 - 5. Total Air Content: 4 percent, determined in accordance with ASTM C173/C173M.

2.6 MIXING**PART 3 EXECUTION****3.1 EXAMINATION**

- A. Verify compacted subgrade is acceptable and ready to support paving and imposed loads.
- B. Verify gradients and elevations of base are correct.

3.2 SUBBASE

- A. See Section 32 1120 for construction of base course for work of this Section.

3.3 PREPARATION

- A. Moisten base to minimize absorption of water from fresh concrete.

3.4 FORMING

- A. Place and secure forms to correct location, dimension, profile, and gradient.

3.5 REINFORCEMENT

- A. Place reinforcement as indicated.

3.6 COLD AND HOT WEATHER CONCRETING

- A. Follow recommendations of ACI PRC-305 when concreting during hot weather.
- B. Follow recommendations of ACI PRC-306 when concreting during cold weather.
- C. Do not place concrete when base surface temperature is less than 40 degrees F (4 degrees C), or surface is wet or frozen.

3.7 PLACING CONCRETE

- A. Place concrete in accordance with ACI PRC-304.
- B. Ensure reinforcement, inserts, embedded parts, formed joints and ____ are not disturbed during concrete placement.

3.8 JOINTS

- A. Align joints with adjacent surfaces.
- B. Provide scored joints.

3.9 EXPOSED AGGREGATE

3.10 FINISHING

- A. Area Paving: Light broom, texture perpendicular to pavement direction.

3.11 TOLERANCES

- A. Maximum Variation of Surface Flatness: 1/4 inch (6 mm) in 10 ft (3 m).

3.12 FIELD QUALITY CONTROL

- A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.
 - 1. Provide free access to concrete operations at project site and cooperate with appointed firm.
 - 2. Submit proposed mix design of each class of concrete to inspection and testing firm for review prior to commencement of concrete operations.

3.13 PROTECTION

- A. Immediately after placement, protect pavement from premature drying, excessive hot or cold temperatures, and mechanical injury.

END OF SECTION

SECTION 32 1316 - DECORATIVE CONCRETE PAVING**PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes colored and stained concrete paving.
- B. Related Requirements:
 - 1. Section 03 3000 "Cast-in-Place Concrete" for general building applications of concrete.
 - 2. Section 32 1373 "Concrete Paving Joint Sealants" for joint sealants in expansion and contraction joints within decorative concrete paving and in joints between decorative concrete paving and other paving or adjacent construction.

1.2 DEFINITIONS

- A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash, slag cement, and other pozzolans.
- B. W/C Ratio: The ratio by weight of water to cementitious materials.
- C. Carbon Dioxide Mineralization: Active carbonation treatment of concrete during mixing such that the carbon dioxide (CO₂) that is injected during mixing is mineralized (I.E.chemically converted into a mineral) within the concrete. The concrete may undergo mix optimization whereby the strength enhancement property of the mineralized CO₂ is utilized to adjust cementitious content, pending that the optimized concrete mix meets concrete performance requirements as outlined.
- D. Carbonization Treatment: Active introduction of CO₂ into the concrete pore fluid which reacts with calcium from calcium hydroxide and calcium silicate hydrate to form calcite (CaCO₃).

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review methods and procedures related to decorative concrete paving, including but not limited to, the following:
 - a. Concrete mixture design.
 - b. Quality control of concrete materials and decorative concrete paving construction practices.
 - c. Mockup schedule.
 - d. Installation schedule.
 - e. Site access logistics.
 - f. Curing procedures.
 - g. Cold and hot weather concreting procedures.
 - h. Global warming potential (GWP) limits.
 - 2. Require representatives of each entity directly concerned with decorative concrete paving to attend, including the following:
 - a. Contractor's superintendent.
 - b. Ready-mix concrete manufacturer.
 - c. Decorative concrete paving Installer.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer ready-mix concrete manufacturer.
- B. Material Certificates: For the following, from manufacturer:
 - 1. Cementitious materials.
 - 2. Steel reinforcement and reinforcement accessories.
 - 3. Fiber reinforcement.
 - 4. Admixtures.
 - 5. Curing compounds.
 - 6. Applied finish materials.
 - 7. Bonding agent or epoxy adhesive.
 - 8. Joint fillers.
 - 9. Repair materials
- C. Material Test Reports: For each of the following:
 - 1. Aggregates. Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.
- D. Field quality-control reports.
- E. Mix Design: Submit Mix design for each type of decorative concrete paving.
- F. Product Test Reports and Certificates: For each of the following, signed by manufacturers:
 - 1. Carbon dioxide mineralization: Provide concrete producers certificate verifying mineralization of carbon dioxide. Include quantity, location, and supplier of injected CO₂.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers trained and approved by manufacturer of decorative concrete paving systems.
- B. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.
- C. Testing Agency Qualifications: Qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.
- D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups of full-thickness sections of decorative concrete paving to demonstrate typical joints; surface color, pattern, and texture; curing; and standard of workmanship.

2. Build mockups of decorative concrete paving types in the location and of the size indicated or, if not indicated, build mockups where directed by Architect and not less than [96 inches (2400 mm) by 96 inches (2400 mm)].
 - a. One mockup for Integral Colored Concrete Pavement with Exposed Aggregate Surface
 - b. One mockup for Integral Colored Concrete Pavement, with color to match or complement existing concrete at Asia Trail
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
5. Provide a minimum of 3 mockups of each type of paving, with more as needed to obtain approval from the COTR or their representative.

1.7 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: Engage a qualified independent testing agency to perform preconstruction testing on decorative concrete paving mixtures.

1.8 FIELD CONDITIONS

- A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.
- B. Cold-Weather Concrete Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:
 1. When air temperature has fallen to or is expected to fall below 40 deg F (4.4 deg C), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 deg F (10 deg C) and not more than 80 deg F (27 deg C) at point of placement.
 2. Do not use frozen materials or materials containing ice or snow.
 3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.
- C. Hot-Weather Concrete Placement: Comply with ACI 301 (ACI 301M) and as follows when hot-weather conditions exist:
 1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F (32 deg C) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
 2. Cover steel reinforcement with water-soaked burlap, so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
 3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

- A. ACI Publications: Comply with ACI 301 (ACI 301M) unless otherwise indicated.

2.2 FORMS

- A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.
 - 1. Use flexible or uniformly curved forms for curves of a radius of 100 feet (30.5 m) or less. Do not use notched and bent forms.
- B. Forms for Textured Finish Concrete: Units of face design, size, arrangement, and configuration indicated. Provide solid backing and form supports to ensure stability of textured form liners.
- C. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

2.3 STEEL REINFORCEMENT

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 90 percent.
- B. Plain-Steel Welded-Wire Reinforcement: ASTM A 1064/A 1064M, fabricated from as-drawn steel wire into flat sheets.
- C. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (Grade 420); deformed.
- D. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60 (Grade 420) plain-steel bars. Cut bars true to length with ends square and free of burrs.
- E. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded-wire reinforcement, and dowels in place. Manufacture bar supports according to CRST's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater compressive strength than concrete specified, and as follows:

2.4 CONCRETE MATERIALS

- A. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.
- B. Cementitious Materials: Materials conforming to the following are permitted.
 - 1. Portland Cement: ASTM C 150/C 150M, gray or white portland cement Type I, with integral color.

- C. Normal-Weight Aggregates: ASTM C 33/C 33M, Class 4S, uniformly graded. Provide aggregates from a single source with documented service-record data of at least 10 years' satisfactory service in similar paving applications and service conditions using similar aggregates and cementitious materials.
 - 1. Maximum Coarse-Aggregate Size: 3/4 inch (19 mm) nominal.
 - 2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.
- D. Air-Entraining Admixture: ASTM C 260/C 260M.
- E. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.
 - 1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A, colored.
 - 2. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D, colored.
- F. Color Pigment: ASTM C 979/C 979M, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, free of carbon black, nonfading, and resistant to lime and other alkalis.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Butterfield Color.
 - b. Davis Colors.
 - c. MATCRETE Inc.
 - d. Scofield, L. M. Company.
 - e. Solomon Colors, Inc.
- G. Water: Complying with ASTM C1602.
- H. Colors: See landscape drawings for color and finish type.

2.5 CURING AND SEALING MATERIALS

- A. Slip-Resistance-Enhancing Additive: Manufacturer's standard finely graded aggregate or polymer additive, designed to be added to clear acrylic sealer to enhance slip resistance of sealed paving surface.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Advanced Surfaces Inc.; Skid Guard.
 - b. Bomanite Corporation; Sure Trak.
 - c. Bon Tool Co.; BonWay Gator Grip Slip Resistive Additive.
 - d. H&C Concrete Care Products; SharkGrip Slip Resistive Additive.
 - e. QC Construction Products; QC Sure Trak.
 - f. Vexcon Chemicals Inc.; Certi-Vex Grip.

2.6 RELATED MATERIALS

- A. Joint Fillers: ASTM D 1751, asphalt-saturated cellulosic fiber in preformed strips.

- B. Bonding Agent: ASTM C 1059/C 1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.
- C. Epoxy-Bonding Adhesive: ASTM C 881/C 881M, two-component epoxy resin capable of humid curing and bonding to damp surfaces; of class suitable for application temperature, of grade complying with requirements, and of the following types:
 - 1. Types IV and V, load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.
- D. Polyethylene Film: ASTM D 4397, 1 mil (0.025 mm) thick, clear.

2.7 CONCRETE MIXTURES

- A. Obtain each color, size, type, and variety of concrete mixture from single manufacturer with resources to provide concrete of consistent quality in appearance and physical properties.
- B. Prepare design mixtures, proportioned according to ACI 301 (ACI 301M), for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.
 - 1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.
- C. Drying shrinkage limit is percentage in change in length after 28 days of drying when tested as per ASTM C157 with 3 inches x 3 inches x 11 inches specimen moist cured 7 days prior to drying.
- D. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:
 - 1. Air Content: 6 percent plus or minus 1.5 percent for 3/4-inch (19-mm) nominal maximum aggregate size.
- E. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.
- F. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.
 - 1. Use water-reducing admixture water-reducing and retarding admixture water-reducing and accelerating admixture in concrete as required for placement and workability.
 - 2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
- G. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.
- H. Concrete Mixtures: Normal-weight concrete.
 - 1. Compressive Strength (28 Days): 3500 psi (24.1 MPa).
 - 2. Maximum W/C Ratio at Point of Placement: 0.45.
 - 3. Slump Limit: 4 inches (100 mm), plus or minus 1 inch (25 mm).

2.8 CONCRETE MIXING

- A. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M. Mix concrete materials in appropriate drum-type batch machine mixer.
 - 1. For concrete batches of 1 cu. yd. (0.76 cu. m) or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
 - 2. For concrete batches larger than 1 cu. yd. (0.76 cu. m), increase mixing time by 15 seconds for each additional 1 cu. yd. (0.76 cu. m).
 - 3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixing time, quantity, and amount of water added.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.
- B. Proof-roll prepared subbase surface below decorative concrete paving to identify soft pockets and areas of excess yielding.
 - 1. Completely proof-roll subbase in one direction and repeat in perpendicular direction. Limit vehicle speed to 3 mph (5 km/h).
 - 2. Proof-roll with a pneumatic-tired and loaded, 10-wheel, tandem-axle dump truck weighing not less than 15 tons (13.6 tonnes).
 - 3. Correct subbase with soft spots and areas of pumping or rutting exceeding depth of [1/2 inch (13 mm)] according to requirements in Section 31 2000 "Earth Moving."
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove loose material from compacted subbase surface immediately before placing concrete.
- B. Protect adjacent construction from discoloration and spillage during application of color hardeners, release agents, stains, curing compounds, and sealers.

3.3 EDGE FORMS AND SCREED CONSTRUCTION

- A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.
- B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.4 STEEL REINFORCEMENT INSTALLATION

- A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.
- B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.
- C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.
- D. Install welded-wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.
- E. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum 2-inch (50-mm) overlap to adjacent mats.

3.5 JOINTS

- A. General: Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.
 - 1. When joining existing paving, place transverse joints to align with previously placed joints unless otherwise indicated.
- B. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour unless paving terminates at isolation joints.
 - 1. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of paving strips unless otherwise indicated.
 - 2. Butt Joints: Use [bonding agent] [epoxy-bonding adhesive] at joint locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
 - 3. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.
- C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, walks, other fixed objects, and where indicated.
 - 1. Locate expansion joints at intervals of [50 feet (15.25 m)] unless otherwise indicated.
 - 2. Extend joint fillers full width and depth of joint.
 - 3. Terminate joint filler not less than 1/2 inch (13 mm) or more than 1 inch (25 mm) below finished surface if joint sealant is indicated.
 - 4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
 - 5. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
 - 6. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.

- D. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated on drawings. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows, to match jointing of existing adjacent decorative concrete paving:
1. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- (3-mm-) wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.
 - a. Tolerance: Ensure that sawed joints are within [3 inches (75 mm)] in both directions from centers of dowels.
 2. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.
- E. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a 1/4-inch (6-mm) radius. Repeat tooling of edges after applying surface finishes. Eliminate edging-tool marks on concrete surfaces.

3.6 CONCRETE PLACEMENT

- A. Before placing concrete, inspect and complete formwork installation and items to be embedded or cast-in.
- B. Remove snow, ice, or frost from subbase surface before placing concrete. Do not place concrete on frozen surfaces.
- C. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.
- D. Comply with ACI 301 (ACI 301M) requirements for measuring, mixing, transporting, and placing concrete.
- E. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.
- F. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.
- G. Consolidate concrete according to ACI 301 (ACI 301M) by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.
 1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating joint devices.
- H. Screed paving surface with a straightedge and strike off.

- I. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleedwater appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

3.7 FLOAT FINISHING

- A. General: Do not add water to concrete surfaces during finishing operations.
- B. Float Finish: Begin the second floating operation when bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

3.8 INTEGRALLY COLORED CONCRETE FINISH

- A. Integrally Colored Concrete Finish: After final floating, apply the following finish:
 1. Medium-to-Fine-Textured Broom Finish: Draw a soft-bristle broom across float-finished concrete surface, perpendicular to line of traffic, to provide a uniform, fine-line texture.

3.9 CONCRETE PROTECTION AND CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.
- B. Comply with ACI 306.1 for cold-weather protection.
- C. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h (1 kg/sq. m x h) before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete but before float finishing.
- D. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

3.10 PAVING TOLERANCES

- A. Comply with tolerances in ACI 117 (ACI 117M) and as follows:
 1. Elevation: 3/4 inch (19 mm).
 2. Thickness: Plus 3/8 inch (10 mm), minus 1/4 inch (6 mm).
 3. Surface: Gap below 10-foot- (3-m-) long, unleveled straightedge not to exceed 1/2 inch (13 mm).
 4. Lateral Alignment and Spacing of Dowels: 1 inch (25 mm).
 5. Vertical Alignment of Dowels: 1/4 inch (6 mm).
 6. Alignment of Dowel-Bar End Relative to Line Perpendicular to Paving Edge: 1/4 inch per 12 inches (6 mm per 300 mm) of dowel.
 7. Joint Spacing: 3 inches (75 mm).
 8. Contraction Joint Depth: Plus 1/4 inch (6 mm), no minus.
 9. Joint Width: Plus 1/8 inch (3 mm), no minus.

3.11 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Testing Services: Testing of composite samples of fresh concrete obtained according to ASTM C 172/C 172M shall be performed according to the following requirements:
 - 1. Testing Frequency: Obtain at least one composite sample for each 5000 sq. ft. (465 sq. m) or fraction thereof of each concrete mixture placed each day.
 - a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
 - 2. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
 - 3. Air Content: ASTM C 231/C 231M, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
 - 4. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F (4.4 deg C) and below and when it is 80 deg F (27 deg C) and above, and one test for each composite sample.
 - 5. Compression Test Specimens: ASTM C 31/C 31M; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.
 - 6. Compressive-Strength Tests: ASTM C 39/C 39M; test one specimen at seven days and two specimens at 28 days.
 - a. A compressive-strength test shall be the average compressive strength from two specimens obtained from same composite sample and tested at 28 days.
- C. Strength of each concrete mixture will be satisfactory if average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi (3.4 MPa).
- D. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
- E. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
- F. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect.
- G. Decorative concrete paving will be considered defective if it does not pass tests and inspections.
- H. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

- I. Prepare test and inspection reports.

3.12 REPAIR AND PROTECTION

- A. Remove and replace decorative concrete paving that is broken or damaged or does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by Architect.
- B. Detailing: Grind concrete "squeeze" left from tool placement. Color ground areas with slurry of color hardener mixed with water and bonding agent. Remove excess release agent with high-velocity blower.
- C. Protect decorative concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.
- D. Maintain decorative concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than two days before date scheduled for Substantial Completion inspections.

END OF SECTION

SECTION 32 1373 - CONCRETE PAVING JOINT SEALANTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Cold-applied joint sealants.
 - 2. Cold-applied, fuel-resistant joint sealants.
 - 3. Hot-applied, fuel-resistant joint sealants.
 - 4. Joint-sealant backer materials.
 - 5. Primers.
- B. Related Requirements:
 - 1. Section 07 9200 "Joint Sealants" for sealing nontraffic and traffic joints in locations not specified in this Section.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Joint sealant for Integral Colored Concrete Pavement with Exposed Aggregate
 - 2. Joint sealant for Integral Colored Concrete Pavement
 - 3. Joint sealant for existing asphalt pavers
 - 4. Joint sealant at rockwork edge
- B. Retain "Samples for Verification" Paragraph below if a color choice is available for joint-sealant types specified.
- C. Samples for Verification: For each kind and color of joint sealant required, provide Samples with joint sealants in 1/2-inch- (13-mm-) wide joints formed between two 6-inch- (150-mm-) long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.
- D. Paving-Joint-Sealant Schedule: Include the following information:
 - 1. Joint-sealant application, joint location, and designation.
 - 2. Joint-sealant manufacturer and product name.
 - 3. Joint-sealant formulation.
 - 4. Joint-sealant color.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Certificates: For each type of joint sealant and accessory.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Product Testing: Test joint sealants using a qualified testing agency.

1.6 FIELD CONDITIONS

- A. Do not proceed with installation of joint sealants under the following conditions:
 - 1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F (5 deg C).
 - 2. When joint substrates are wet.
 - 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
 - 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Compatibility: Provide colored joint sealants, backing materials, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

2.2 COLD-APPLIED JOINT SEALANTS

- A. Single-Component, Nonsag, Silicone Joint Sealant: ASTM D 5893/D 5893M, Type NS.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Crafcro Inc.; RoadSaver Silicone.
 - b. Dow Corning Corporation; 888.
 - c. Pecora Corporation; 301 NS.
- B. Single-Component, Self-Leveling, Silicone Joint Sealant: ASTM D 5893/D 5893M, Type SL.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Crafcro Inc.; RoadSaver Silicone SL.
 - b. Dow Corning Corporation; 890-SL.
 - c. Pecora Corporation; 300 SL.
- C. Multicomponent, Nonsag, Urethane, Elastomeric Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use T.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Meadows, W.R., Inc.; Pourthane NS.

- D. Single Component, Pourable, Urethane, Elastomeric Joint Sealant: ASTM C 920, Type S, Grade P, Class 25, for Use T.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Meadows, W.R., Inc.; Pourthane SL.
- E. Multicomponent, Pourable, Urethane, Elastomeric Joint Sealant: ASTM C 920, Type M, Grade P, Class 25, for Use T.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Pecora Corporation; Dynatred Dynatrol II-SG Urethane NR-200.

2.3 JOINT-SEALANT BACKER MATERIALS

- A. Joint-Sealant Backer Materials: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by joint-sealant manufacturer, based on field experience and laboratory testing.
- B. Round Backer Rods for Cold- and Hot-Applied Joint Sealants: ASTM D 5249, Type 1, of diameter and density required to control sealant depth and prevent bottom-side adhesion of sealant.
- C. Round Backer Rods for Cold-Applied Joint Sealants: ASTM D 5249, Type 3, of diameter and density required to control joint-sealant depth and prevent bottom-side adhesion of sealant.
- D. Backer Strips for Cold- and Hot-Applied Joint Sealants: ASTM D 5249; Type 2; of thickness and width required to control joint-sealant depth, prevent bottom-side adhesion of sealant, and fill remainder of joint opening under sealant.

2.4 PRIMERS

- A. Primers: Product recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine joints to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning of Joints: Before installing joint sealants, clean out joints immediately to comply with joint-sealant manufacturer's written instructions.

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
- B. Joint Priming: Prime joint substrates where indicated or where recommended in writing by joint-sealant manufacturer, based on preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

3.3 INSTALLATION OF JOINT SEALANTS

- A. Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated unless more stringent requirements apply.
- B. Joint-Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions.
- C. Install joint-sealant backings to support joint sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
 1. Do not leave gaps between ends of joint-sealant backings.
 2. Do not stretch, twist, puncture, or tear joint-sealant backings.
 3. Remove absorbent joint-sealant backings that have become wet before sealant application and replace them with dry materials.
- D. Install joint sealants immediately following backing installation, using proven techniques that comply with the following:
 1. Place joint sealants so they fully contact joint substrates.
 2. Completely fill recesses in each joint configuration.
 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- E. Tooling of Nonsag Joint Sealants: Immediately after joint-sealant application and before skinning or curing begins, tool sealants according to the following requirements to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint:
 1. Remove excess joint sealant from surfaces adjacent to joints.
 2. Use tooling agents that are approved in writing by joint-sealant manufacturer and that do not discolor sealants or adjacent surfaces.
- F. Provide joint configuration to comply with joint-sealant manufacturer's written instructions unless otherwise indicated.

3.4 CLEANING AND PROTECTION

- A. Clean off excess joint sealant as the Work progresses, by methods and with cleaning materials approved in writing by joint-sealant manufacturers.

- B. Protect joint sealants, during and after curing period, from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately and replace with joint sealant so installations in repaired areas are indistinguishable from the original work.

END OF SECTION

FOR REFERENCE ONLY

SECTION 32 1400 - UNIT PAVING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Asphalt-block pavers set in bituminous setting beds.
- B. Related Requirements:
 - 1. Section 31 2000 "Earthwork" for concrete base under unit pavers.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

- A. Product Data: For materials other than water and aggregates.
- B. Product Data: For the following:
 - 1. Pavers.
 - 2. Bituminous setting materials.
 - 3. Joint materials
- C. Samples for Initial Selection: For each type of unit paver indicated and the following:

1.4 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for unit pavers, indicating compliance with requirements.
 - 1. For solid interlocking paving units, include test data for freezing and thawing according to ASTM C 67.

1.5 QUALITY ASSURANCE

- A. [Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups of full-thickness sections of unit paving
 - 2. Build minimum of 3 mockups in the location and of the size indicated or, if not indicated, build mockups where directed by Architect and not less than [96 inches (2400 mm) by 96 inches (2400 mm)].
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
 - 5. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store pavers on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied.
- B. Store liquids in tightly closed containers protected from freezing.
- C. Store asphalt cement and other bituminous materials in tightly closed containers.

1.7 FIELD CONDITIONS

- A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.
- B. Protect unit pavers and aggregate during storage and construction against wetting by rain, snow or groundwater, and against soilage or intermixture with earth or other types of materials.
- C. Handle pavers to prevent chipping, breakage, soiling or other damage. Do not use pinch or wrecking bars without protecting edges of pavers with wood or other rigid materials. Lift with wide-belt type slings wherever possible; do not use wire rope or ropes containing tar or other substances which might cause staining. If required, use wood rollers and provide cushion at end of wood slide.
- D. Store pavers on wood skids or pallets. Place and stock skids and pavers to distribute weight evenly and to prevent breakage or cracking. Protect stored pavers from weather with waterproof non-staining covers or enclosures, but allow air to circulate around pavers.
- E. Weather Limitations for Bituminous Setting Bed:
 - 1. Install bituminous setting bed only when ambient temperature is above 40 deg F (4 deg C) and when base is dry.
 - 2. Apply asphalt adhesive only when ambient temperature is above 50 deg F (10 deg C) and when temperature has not been below 35 deg F (2 deg C) for 12 hours immediately before application. Do not apply when setting bed is wet or contains excess moisture.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain each type of unit paver, joint material, and setting material from single source with resources to provide materials and products of consistent quality in appearance and physical properties.

2.2 ASPHALT-BLOCK PAVERS

- A. Asphalt-Block Pavers: Solid units made from asphalt cement complying with ASTM D 312, Type III; inorganic stone dust or cement filler; and coarse aggregate, consisting of clean, hard, unweathered stone crushed into angular particles varying in size up to 3/8 inch (9.5 mm).
 - 1. Basis of Design:

- a. Hanover 8" Hexagonal Asphalt Block Paver, Matrix A80011, Ground Tudor Finish
- b. Hanover 8" x 8" Asphalt Block Paver, Matrix A80026, Ground Tudor Finish

2.3 CURBS AND EDGE RESTRAINTS

- A. Job-Built Concrete Edge Restraints: Comply with requirements in Section 03 3000 "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mixed concrete with minimum 28-day compressive strength of 3000 psi (20 MPa).

2.4 ACCESSORIES

- A. Compressible Foam Filler: Preformed strips complying with ASTM D 1056, Grade 2A1.

2.5 AGGREGATE SETTING-BED MATERIALS

- A. Sand for Joints: Fine, sharp, washed, natural sand or crushed stone with 100 percent passing No. 16 (1.18-mm) sieve and no more than 10 percent passing No. 200 (0.075-mm) sieve.
- B. Polymeric Sand for Joints
 - 1. Provide sand of color needed to produce required joint color.

2.6 BITUMINOUS SETTING-BED MATERIALS

- A. Primer for Base: ASTM D 2028/D 2028M, cutback asphalt, grade as recommended by unit paver manufacturer.
- B. Fine Aggregate for Setting Bed: ASTM D 1073, No. 2 or No. 3.
- C. Neoprene-Modified Asphalt Adhesive: Paving manufacturer's standard adhesive consisting of oxidized asphalt combined with 2 percent neoprene and 10 percent long-fibered mineral fibers containing no asbestos.
- D. Sand for Joints: Fine, sharp, washed, natural sand or crushed stone with 100 percent passing No. 16 (1.18-mm) sieve and no more than 10 percent passing No. 200 (0.075-mm) sieve.
- E. Polymeric Sand for Joints
 - 1. Provide sand of color needed to produce required joint color.

2.7 BITUMINOUS SETTING-BED MIX

- A. Mix bituminous setting-bed materials at an asphalt plant in approximate proportion, by weight, of 7 percent asphalt cement to 93 percent fine aggregate unless otherwise indicated. Heat mixture to 300 deg F (149 deg C).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces indicated to receive unit paving, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

- B. Where unit paving is to be installed over waterproofing, examine waterproofing installation, with waterproofing Installer present, for protection from paving operations, including areas where waterproofing system is turned up or flashed against vertical surfaces.
- C. Proceed with installation only after unsatisfactory conditions have been corrected[and waterproofing protection is in place].

3.2 PREPARATION

- A. Remove substances from concrete substrates that could impair mortar bond, including curing and sealing compounds, form oil, and laitance.
- B. Sweep concrete substrates to remove dirt, dust, debris, and loose particles.
- C. Proof-roll prepared subgrade according to requirements in Section 31 2000 "Earth Moving" to identify soft pockets and areas of excess yielding. Proceed with unit paver installation only after deficient subgrades have been corrected and are ready to receive subbase and base course for unit pavers.

3.3 INSTALLATION, GENERAL

- A. Do not use unit pavers with chips, cracks, voids, discolorations, or other defects that might be visible or cause staining in finished work.
- B. Mix pavers from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.
- C. Cut unit pavers with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible. Hammer cutting is not acceptable.
- D. Handle protective-coated brick pavers to prevent coated surfaces from contacting backs or edges of other units. If, despite these precautions, coating does contact bonding surfaces of brick, remove coating from bonding surfaces before setting brick.
- E. Joint Pattern: As indicated, or to continue existing pattern..
- F. Pavers over Waterproofing: Exercise care in placing pavers and setting materials over waterproofing so protection materials are not displaced and waterproofing is not punctured or otherwise damaged. Carefully replace protection materials that become displaced and arrange for repair of damaged waterproofing before covering with paving.
 - 1. Provide joint filler at waterproofing that is turned up on vertical surfaces[unless otherwise indicated; where unfilled joints are indicated, provide temporary filler or protection until paver installation is complete].
- G. Tolerances: Do not exceed 1/32-inch (0.8-mm) unit-to-unit offset from flush (lippage) nor 1/8 inch in 10 feet (3 mm in 3 m) from level, or indicated slope, for finished surface of paving.

- H. Expansion and Control Joints: Provide for sealant-filled joints at locations and of widths indicated. Provide compressible foam filler as backing for sealant-filled joints[unless otherwise indicated; where unfilled joints are indicated, provide temporary filler until paver installation is complete]. Install joint filler before setting pavers. Sealant materials and installation are specified in Section 07 9200 "Joint Sealants."

3.4 BITUMINOUS SETTING-BED APPLICATIONS

- A. Apply primer to concrete slab or binder course immediately before placing setting bed.
- B. Prepare for setting-bed placement by locating 3/4-inch- (19-mm-) deep control bars approximately 11 feet (3.3 m) apart and parallel to one another, to serve as guides for striking board. Adjust bars to subgrades required for accurate setting of paving units to finished grades indicated.
- C. Place bituminous setting bed where indicated, in panels, by spreading bituminous material between control bars. Spread mix at a minimum temperature of 250 deg F (121 deg C). Strike setting bed smooth, firm, even, and not less than 3/4 inch (19 mm) thick. Add fresh bituminous material to low, porous spots after each pass of striking board. After each panel is completed, advance first control bar to next position in readiness for striking adjacent panels. Carefully fill depressions that remain after removing depth-control bars.
 - 1. Roll setting bed with power roller to a nominal depth of 3/4 inch (19 mm). Adjust thickness as necessary to allow accurate setting of unit pavers to finished grades indicated. Complete rolling before mix temperature cools to 185 deg F (85 deg C).
- D. Apply neoprene-modified asphalt adhesive to cold setting bed by squeegeeing or troweling to a uniform thickness of 1/16 inch (1.6 mm). Proceed with setting of paving units only after adhesive is tacky and surface is dry to touch.
- E. Place pavers carefully by hand in straight courses, maintaining accurate alignment and uniform top surface. Protect newly laid pavers with plywood panels on which workers can stand. Advance protective panels as work progresses, but maintain protection in areas subject to continued movement of materials and equipment to avoid creating depressions or disrupting alignment of pavers. If additional leveling of paving is required, and before treating joints, roll paving with power roller after sufficient heat has built up in the surface from several days of hot weather.
- F. Joint Treatment: Place unit pavers with hand-tight joints. Fill joints by sweeping sand over paved surface until joints are filled. Remove excess sand after joints are filled.

3.5 REPAIRING, POINTING, AND CLEANING

- A. Remove and replace unit pavers that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.

END OF SECTION

SECTION 32 1816.13 - PLAYGROUND PROTECTIVE SURFACING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Unitary synthetic poured rubber EPDM seamless surface.

1.2 DEFINITIONS

- A. Critical Height: Standard measure of shock attenuation. According to CPSC No. 325, this means "the fall height below which a life-threatening head injury would not be expected to occur."
- B. SBR: Styrene-butadiene rubber.

1.3 PERFORMANCE REQUIREMENTS

- A. Impact Attenuation: According to ASTM F 1292.
- B. Accessibility of Surface Systems: According to ASTM F 1951.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Sustainable Design Submittals:
 - 1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
- C. Shop Drawings: For each playground surface system, include materials, plans, cross sections, drainage, installation, penetration details, and edge termination including border edge tiles. Include patterns made by varying colors of surfacing.
- D. Samples for Initial Selection: For each type of playground surface system indicated.
- E. Samples for Verification: For each type of playground surface system indicated.
 - 1. Minimum 1-quart (0.95-L) loose-fill surface sealed in a container.
 - 2. Minimum 6-by-6-inch (150-by-150-mm) Sample of [synthetic rubber seamless] [synthetic rubber tile] [synthetic, dual-density, rubber tile] surface.
 - 3. 6-inch (150-mm) long by full-size cross section of border edging.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
 - 1. Critical heights for playground surfaces and fall heights for equipment.
- B. Qualification Data: For qualified Installer.

- C. Product Certificates: For each type of unitary synthetic playground surface system, from manufacturer.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For playground surface system to include in maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers trained and approved by manufacturer.
- B. Source Limitations: Obtain playground surface system materials, including primers and binders, from single source from single manufacturer.
- C. Standards and Guidelines: Comply with CPSC No. 325, "Handbook for Public Playground Safety"; ASTM F 1292; and ASTM F 1487.

1.8 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit playground surface system installation to be performed according to manufacturers' written instructions and warranty requirements.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of playground surface system that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 UNITARY SYNTHETIC SEAMLESS SURFACE

- A. Surface System: Poured-in-place, single-layer system. Provide manufacturer's standard thickness as required for overall thickness indicated, tested for impact attenuation according to ASTM F 1292 and for accessibility according to ASTM F 1951.
 - 1. Products: Subject to compliance with requirements, provide the following:
 - a. No Fault Sport Group, LLC; Bonded Rubber Mulch.
 - 1) or SI-approved equal.
 - 2. Cushion Course: Manufacturer's standard blend of recycled SBR and EPDM rubber, particles forming an integral wearing course and cushion course, site mixed and applied.
 - 3. Binder: Weather-resistant, UV-stabilized, flexible, nonhardening, 100 percent solids polyurethane complying with requirements of authorities having jurisdiction for nontoxic and low VOC content.
 - 4. Critical Height: 5 feet (1.5 m) .
 - 5. Primer/Adhesive: Manufacturer's standard primer and weather-resistant, moisture-cured polyurethane adhesive suitable for unit, substrate, and location indicated.
 - 6. Color(s): As selected by Architect from manufacturer's full range.

- B. Leveling and Patching Material: Portland cement-based grout or epoxy- or polyurethane-based formulation suitable for exterior use and approved by playground surface system manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for maximum moisture content, subgrade and substrate conditions, drainage, and other conditions affecting performance of the Work.
- B. Hard-Surface Substrates: Verify that substrates are satisfactory for unitary playground surface system installation and that substrate surfaces are dry, cured, and uniformly sloped to drain within recommended tolerances according to playground surface system manufacturer's written requirements for cross-section profile.
 - 1. Concrete Substrates: Verify that substrates are dry, free from surface defects, and free of laitance, glaze, efflorescence, curing compounds, form-release agents, hardeners, dust, dirt, loose particles, grease, oil, and other contaminants incompatible with playground surface system or that may interfere with adhesive bond. Determine adhesion, dryness, and acidity characteristics by performing procedures recommended in writing by playground surface system manufacturer.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. General: Prepare substrates to receive surfacing products according to playground surface system manufacturer's written instructions. Verify that substrates are sound and without high spots, ridges, holes, and depressions.
- B. Concrete Substrates: Provide sound surface free of laitance, efflorescence, curing compounds, and other contaminants incompatible with playground surface system.
 - 1. Repair unsatisfactory surfaces and fill holes and depressions.
 - 2. Treat control joints and other nonmoving substrate cracks to prevent telegraphing through playground surface system.

3.3 INSTALLATION, GENERAL

- A. General: Comply with playground surface system manufacturer's written installation instructions. Install playground surface system over area and in thickness indicated.

3.4 INSTALLATION OF SEAMLESS PLAYGROUND SURFACE SYSTEMS

- A. Seamless Surface: Mix and apply components of playground surface system according to manufacturer's written instructions to produce a uniform, monolithic wearing surface and impact-attenuating system of total thickness indicated.
 - 1. Substrate Primer: Apply over prepared substrate at manufacturer's standard spreading rate for type of substrate.

2. Poured Cushion Course: Spread evenly over primed substrate to form a uniform layer applied at manufacturer's standard spreading rate in one continuous operation, with a minimum of cold joints.
3. Intercoat Primer: Over cured cushion course, apply primer at manufacturer's standard spreading rate.
4. Wearing Course: Spread over primed base course to form a uniform layer applied at manufacturer's standard spreading rate in one continuous operation and, except where color changes, with [no] [a minimum of] cold joints. Finish surface to produce manufacturer's standard wearing-surface texture.

3.5 PROTECTION

- A. Seamless Systems: Prevent traffic over system for not less than 48 hours after installation.

END OF SECTION

FOR REFERENCE ONLY

SECTION 32 3100 - METAL FENCES AND GATES**PART 1 GENERAL****1.1 SECTION INCLUDES**

- A. Guest Barrier
- B. Guest Handrail
- C. Service Handrail
- D. On Habitat Handrail
- E. Plant Protection Barrier
- F. Gates

1.2 RELATED REQUIREMENTS

- A. Section 03 3000 - Cast-in-Place Concrete.
- B. Section 31 2316 - Excavation.
- C. Section 09 94 13 -Themed Finishes

1.3 SYSTEM DESCRIPTION:

- A. Delegated Design:
 - 1. The work of this section requires professional design services or certifications by a design professional employed by the fabricator, and who is not the Consultant.
 - 2. Complete the design of the doors, frames, panels, and connections.
 - 3. Maintain the general design concept shown.
 - 4. Do not change member sizes or alter profiles and alignment, except as outlined in the design processes of this section.
- B. Structural Systems Design:
 - 1. Structural Design:
 - a) Provide the structural engineering design for all barriers, posts, wire rope (cables), wire rope, mesh, and mesh connections hardware, the doors, frames, hardware, fixed panels, and all connections. Connection hardware for cables shall have an ultimate capacity of at least 1.4 times the breaking strength of the cable or as recommended by the hardware manufacturer, whichever is greater. Refer to drawing for limits on cable and mesh sag (drape) and reactions on the supporting structure.
 - b) Drawings and Calculations:
Provide complete design, calculations, and drawings, prepared and signed in accordance with pertinent provisions of division one of these Specifications.
 - c) Licensed Engineer:
Design drawings will be prepared, approved, signed and sealed by a Professional Engineer licensed in the jurisdiction in which the project will be constructed.
 - 2. General Design Loads:
Design all elements for the following loads:
 - a) Dead loads
 - b) Live loads due to guests and keeper staff,
 - c) Wind loads where applicable.
- C. Approvals and Permits:
 - 1. General:
Secure the approval of governmental agencies having jurisdiction prior to submitting for the Consultant's approval.

2. Building Permits:
Obtain all required permits and approvals for proposed systems.
- D. Performance Standards:
 1. Materials specified herein are intended to establish the standards of quality required for the Work of this Section.
 2. Provide appropriate documentation that all proposed materials meet the specific performance requirements specified below.
 3. All materials and/or completed fabrications must have a twenty (20) year structural service life.
 4. All materials must be capable of resisting the loads and all potential wear and abrasions inherent in their position within the completed exhibits.

1.4 REFERENCE STANDARDS

- A. ASTM A276/A276M - Standard Specification for Stainless Steel Bars and Shapes; 2025.
- B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2025a.
- C. ASTM D1654 - Standard Test Method for Evaluation of Painted or Coated Specimens Subjected to Corrosive Environments; 2024.
- D. CLFMI WLG 2445 - Wind Load Guide for the Selection of Line Post and Line Post Spacing; 2023.

1.5 SUBMITTALS

- A. See Section 01 3000 - Administrative Requirements, for submittal procedures.
- B. Product Data: Submit manufacturer's data sheets on each product to be used, including:
 1. Preparation instructions and recommendations.
 2. Storage and handling requirements and recommendations.
 3. Installation methods.
- C. Design Drawings:
 1. Delegated Design:
 - a) Submit complete drawings accurately showing proposed all of the fabrications and equipment described in this section, prepared in accordance with the following provisions:
 - b) Verify materials selection and sizes.
 - c) Verify fabrication and connection details for the fabrications or suggest alternative connection details.
 - d) Design system utilizing the system components specified in Part 2 of this specification.
 - e) Revise drawings as required by the Owner and resubmit.
 2. Delegated Design Submittals:
 - a) Provide all submittals described in Section 01 33 23 as required for the work of this section.
 3. Design Notes and Calculations:
 - a) Submit design notes and calculations, signed and sealed by the Professional Engineer.
- D. Shop Drawings:
 1. Indicate plan layout, spacing of components, post foundation dimensions, hardware anchorage, gates, and schedule of components.
 2. Drawings shall show all members, and shop
 3. Provide templates for anchor and bolt installation by other trades.

4. No fabrication or work shall be commenced until shop drawings have been reviewed and returned to the contractor.
 5. Fabricate from reviewed drawings only.
 6. Provide engineered drawings stamped by a structural engineer licensed in the jurisdiction in which the project is located.
- E. Prototype:
1. Construct one full-sized prototype of each type of door and door operator system for review by the Consultant and Owner.
 2. Revise the shop drawings for final review, incorporating all requested modifications to the door and operator system.
 3. The approved prototype may be included in the finished work when constructed in accordance with the final shop drawings.
- F. Samples:
1. Provide a two-foot length or square piece of each type, size, finish, and grade of each specified material.
 2. Provide a sample of each piece of hardware specified.
- G. Manufacturer's Warranty.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Experienced with type of construction involved and materials and techniques specified with a minimum of five years of experience.

1.7 WARRANTY

- A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

PART 2 PRODUCTS

2.1 METAL

- A. Metal Surfaces, General:

For fabrication of the Work of this Section, which will be exposed to view, use only those materials which are smooth and free from surface blemishes including pitting, seam marks, roller marks, rolled trade names and roughness.

- B. Standards:

All materials shall comply with:

1. Steel plates, shapes, and bars: ASTM A36.
2. Steel plates to be bent or cold formed: ASTM A283, Grade C.
3. Steel tubing, hot-formed, welded, or seamless: ASTM A501.
4. Steel bars and bar-size shapes: ASTM A306, Grade 65, or ASTM A36.
5. Cold-finished steel bars: ASTM A108, grade as selected by the fabricator.
6. Cold-rolled carbon steel sheets: ASTM A336.
7. Galvanized carbon steel sheets: ASTM A526, with G90 zinc coating in accordance with ASTM A525.
8. Steel pipe: ASTM A53, type as selected, Grade A, black finish unless galvanizing is specified or required, Schedule 40 unless otherwise indicated.
9. Structural Steel Tubes: ASTM A-500, Grade B

2.2 GALVANIZING

- A. General:

Provide a zinc coating for all ferrous metal specified in this section, as follows:

1. ASTM A153 for galvanizing iron and steel hardware.
2. ASTM A123 for galvanizing rolled, pressed, and forged steel shapes, plates, bars, and strip 3 mm (1/8") thick and heavier.
3. ASTM A386 for galvanizing assembled steel products.
4. All galvanized work to be reformed true to line and level as required in shop before delivery to the job site.

B. Field Galvanizing Repair:

C. Use a high zinc dust content paint for re-galvanizing welds in galvanized steel, complying with MIL-P-21035.

1. Repair in accordance with applicable requirements of ASTM A780.
2. Products: "Galvicon" by Galvicon Corp., "Drygalv" by Anchor Brand Co., "Tot-Rust" (with aluminum color added) by Wilbur & Williams Co. or equal.

2.3 WIRE ROPE ASSEMBLIES

A. Cable Fittings

2.4 WOVEN WIRE MESH

A. Manufacturers and Installers:

1. A thru Z Consulting and Distributing, Tucson AZ, info@athruzconsulting.com, www.athruzcages.com, tel: (520) 434-8284
2. Nets Unlimited, Cave Creek AZ, www.netsunlimited.com, tel: (480) 515-1300

B. Hand woven stainless steel wire mesh.

1. Woven from 1/16 inch diameter stainless steel wire rope.
2. 2 inch by 2 inch mesh openings.
3. Black oxide finish

2.5 LACING BARS

A. General:

1. 1/2" diameter gal
2. Weld to post as shown on drawings
3. Paint to match posts

2.6 GUEST BARRIER

A. Posts and rails, powder coated Bronze

B. Wire Rope cable assembly

C. Woven Wire Mesh: 1"x1"

D. Handrail mounted to posts, powder coated Bronze, where indicated on drawings

2.7 GUEST HANDRAIL

A. Handrail, powder coated Bronze

B. Posts, powder coated Bronze

2.8 SERVICE HANDRAIL

A. Handrail, painted Black

B. Posts, painted Black

- 1.

2.9 ON HABITAT HANDRAIL

A. Posts, painted Bronze

- B. Handrail, painted Bronze

2.10 PLANT PROTECTION BARRIER

- A. Metal Stanchion 1-1/2" square, powder coated Bronze
- B. Double Cables, Bronze
- C. Provide clips for access as indicated in drawings

2.11 SINGLE SWING GATE

- A. Metal Frame Gate, powder coated Bronze
- B. Wire Rope cable assembly
- C. Woven Wire Mesh: 1"x1"

2.12 DOUBLE SWING GATES

- A. Metal Frame Gate, powder coated Bronze
- B. Wire Rope cable assembly
- C. Woven Wire Mesh: 1"x1"
 - 1. HARDWARE
 - a) General: All hardware to be colored bronze
 - b) Acceptable manufacturers:
 - 1) Richards Wilcox, www.rwhardware.com
 - 2) McKinney, www.mckinneyhinge.com
 - 3) Stanley, www.stanley.com
 - 4) McMaster-Carr, www.mcmaster.com
 - 5) Gringer, www.graniger.com
 - c) Gate Hinge:
 - 1) Closing: Manual
 - 2) Material: Steel. Galvanized. Epoxy painted.
 - 3) Products:
 - (a) McKinney 5 knuckle, Heavy weight, ball bearing hinges
 - (b) Model T4B 3386
 - d) Heavy Duty Lift-Off Hinges:
 - 1) Closing: Manual.
 - 2) Material: Steel. Galvanized. Epoxy painted.
 - 3) Products:
 - (a) McMaster-carr 1071A38
 - e) Gate Latches: Finished to match fence components.
 - 1) Mechanism: Gravity.
 - 2) Locking: Mechanical.
 - 3) Material: 302 Stainless Steel Powder coated.
 - 4) Lockable
 - 5) Products:
 - (a) McMaster Carr
 - (b) Model 1774A15
 - (c) Match finish of gate frames.
 - (d) Provide padlock staple on latch side of gate
 - f) Cane Bolt
 - 1) Mechanism: Gravity.
 - 2) Locking: Mechanical

- 3) Material: Stainless steel
- 4) Products:
 - (a) Richards Wilcox
 - (b) Model 0524.00023SS
 - (c) Provide keeper in
- 2. Hardware Groups
 - a) Guest Barrier Single Swing Gate
 - 1) HW Group 1
 - 2 ea Gate Hinge
 - 1 ea Gate Latch
 - b) Guest Barrier Double Swing Gate
 - 1) HW Group 2
 - 2 ea Gate Hinge, per leaf
 - 1 ea Gate Latch
 - 2 ea Cane Bolt
- 3. Design & fabrication
 - a) Design Parameters:
 - 1) Fabricate from materials in sizes to achieve the profiles and arrangements shown on the drawings:
 - 2) Design to withstand the loads specified in Part 1 of this section.
 - 3) Make necessary allowances for expansion and contraction and movement of structure the structure.
 - b) Quality:
 - 1) Conform to the Quality Assurance standards for this work.
 - 2) Use materials of size and thickness shown or, if not shown, of required size and thickness to produce strength and durability of connecting material in the finished product.
 - 3) Work to dimensions shown or accepted on the Shop Drawings, using proven details of fabrication and support.
 - 4) Use type of materials shown or specified for the various components of the Work.
 - 5) Form exposed Work true to line and level, with accurate angles and surfaces and with straight sharp edges.
 - 6) Ease the exposed edges to a radius of approximately 1/32" unless otherwise shown.
 - 7) Weld metal and plastic corners and seams continuously, complying with the recommendations of the standard specifications for this section.
 - 8) At exposed connections, grind exposed metal welds smooth and flush; match and blend with adjoining surfaces.
 - 9) Form exposed connections flush and smooth, using concealed fasteners wherever possible.
 - 10) Provide for anchorage of the type shown. Coordinate with supporting structure. Fabricate and space the anchoring devices to provide adequate support for intended use.
 - 11) Cut, reinforce, drill, and tap the work as indicated to receive finish hardware and similar items.
 - 12) Fabricate joints that will be exposed to weather in a manner to exclude water or provide weep holes to evacuate accumulated water.
 - c) Support Posts and Gate Frames:

- 1) Provide horizontal and vertical members as shown on the drawings and as required to form a rigid structure without sag or twist.
- 2) Weld all frame members continuously at all joints.
- 3) Close all open tube ends.
- 4) Connections:
 - (a) All internal connections fully welded.
 - (b) Provide bolted connections to adjacent frames, panels, or concrete.
- d) Fasteners:
 - 1) Provide fastener material matching the materials to be fastened except where specified otherwise.
 - 2) Provide fastener types and sizes appropriate for size and weight of materials to be fastened and as documented in the shop drawings.
 - 3) Except where otherwise specified provide the following fastener types:
 - (a) Hot dip galvanized, conforming to all standards of paragraph 2.01 and Finishes below.
 - (b) Stainless steel, type 302/304.
4. finishes
 - a) Shop finishes
 - 1) Shop finish all work of this section, except members or portions of members to be embedded in concrete or masonry, surfaces and edges to be field welded.
 - 2) Finish stainless steel work as specified in this section.
 - 3) Remove scale, rust, and other deleterious materials before applying shop coat.
 - 4) Clean off rust and loose mill scale in accordance with SSPC-SP-1.
 - 5) Remove oil, grease, and similar contaminants in accordance with SSPC-SP-1.
 - 6) Sand blast to near white metal in accordance with SSPC-SP-10 for ferrous metals to receive zinc rich polyamid epoxy primer.
 - 7) Ferrous metals to receive zinc rich polyamid epoxy primer require inspection by Owner prior to priming. Notify Owner 24 hours prior to prime coating.
 - 8) Immediately after surface preparation, brush or spray on primer in accordance with manufacturer's recommendations, and at a rate to provide the recommended dry film thickness.
 - 9) Use painting methods, which will result in full coverage of joints, corners, edges, and exposed surfaces.
 - 10) Apply one shop coat to fabricated metal items; except, apply two shop coats to surfaces inaccessible after assembly or erection. Change color of second coat to distinguish it from the first coat.
 - b) Galvanizing:
 - 1) Galvanize all ferrous steel following fabrication in compliance with the following specifications:
 - (a) ASTM A 153 for galvanizing iron and steel hardware.
 - (b) ASTM A 123 for galvanizing rolled, pressed, and forged steel shapes, plates, bars, and strip 3 mm (1/8") thick and heavier.
 - (c) ASTM A 386 for galvanizing assembled steel products.
 - (d) All galvanized work to be performed true to line and level as required in shop before delivery to the job site.
 - c) Stainless Steel:
 - 1) All stainless steel to be finished black or black vinyl coated.
 - d) Powder Coating:
 - 1) Shop powder coat all work of this section with a thermoset powder coat.

- 2) Use abrasive, mechanical, or chemical cleaning to remove deleterious materials before applying shop coat as appropriate for the material being cleaned.
- 3) Clean in accordance with SSPC-SP-1 Solvent Cleaning or other SSPC standard.
- 4) Apply powder coat to 60 to 80 minimum dry coating thickness as appropriate for powder and color to be applied.
- 5) Use coating methods, which will result in full coverage of joints, corners, edges, and exposed surfaces.
- 6) Apply in accordance with ASTM D3451-06 Standard Guide for Testing Coating Powders and Powder Coatings.
- e) Field Galvanizing Repair:
 - 1) Use a high zinc dust content paint for re-galvanizing welds in galvanized steel, complying with MIL-P-21035.
 - 2) Repair in accordance with applicable requirements of ASTM A780.
 - 3) Products:
 - 4) "Galvicon" by Galvicon Corp., "Drygalv" by Anchor Brand Co., "Tot-Rust" (with aluminum color added) by Wilbur & Williams Co. or equal.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Do not begin installation until substrates have been properly prepared.
- B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 INSTALLATION

- A. General
 1. Set work accurately at the established lines and levels.
 2. Install in strict accordance with approved drawings and actual conditions, true and horizontal or perpendicular as the case may be, level and square with angles and edges parallel with related lines of the structure.
 3. Set support structures and frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set.
 4. Install gates and hardware in accordance with manufacturer's data, and as specified herein.
- B. Shop Drawings:
 1. Install the work of this Section in strict accordance with the reviewed Shop Drawings.
- C. Anchor Bolts:
 1. Properly locate and build into the connecting work.
 2. Preset bolts and anchors using templates or such other methods as may be required to locate the anchors and anchor bolts accurately.
- D. Loose Bearing and Leveling Plates:
 1. Provide loose bearing and leveling plates for steel items bearing on concrete construction, made flat, free from warps or twists, and of required thickness and bearing area.
 2. Drill plates to receive anchor bolts and for grouting as required.
- E. Fastening:
 1. General.
 - a) Provide malleable iron washers for heads and nuts, which bear on wood structural connections.
 - b) Provide steel washers for all metal and plastic connections.
 - c) Cut, drill, and tap units to receive hardware.

- d) Provide gate frames with integrally welded anchors for casting into concrete or masonry, and furnish inserts if units must be installed after concrete is placed.
- e) Space anchors 60 cm (24") on centers, except where shown otherwise on the drawings.
- 2. Hardware:
 - a) Manufactured Hardware:
Fasten to substrates and frames using stainless steel screws, and bolts, using the sizes as recommended by the hardware manufacturer.
 - b) Custom Hardware:
Fasten to substrates and frames as shown in the reviewed design and shop drawings.
- F. Cable Barriers:
 - 1. Install cables in accordance with manufacture's instructions and approved shop drawings.
 - 2. Set components plumb, level and rigid
 - 3. Welding:
 - a) Field weld components indicated on the Shop Drawings
 - b) Grind exposed welds smooth
 - 4. Tack welds prohibited on exposed surfaces
 - a) Conform to AWS D1.1/D1.1M
 - 5. Install cable hardware onto ends of cables using manufacture's supplied swaging equipment
 - 6. Terminate and tension cables in accordance with manufacturer's instructions.
 - 7. Tension cables to a minimum of 400 pounds each.
 - 8. Ensure that cables are parallel to each other and without kinks or sags
 - 9. Prevent contact of exterior aluminum and dissimilar metals by use of zinc rich paint, bituminous coating or non-absorptive gaskets.
 - 10. Paint all steel posts per 09 94 16.
- G. Gate Installation:
 - 1. Fit gates accurately in their respective frames.
 - 2. Clearances between gates and posts or frames shall vary from 9.6mm (3/8-inch) minimum to 3/4-inch maximum.

3.3 CLEANING

- A. Clean jobsite of excess materials; scatter excess material from post hole excavations uniformly away from posts. Remove excess material if required.
- B. Clean fence with mild household detergent and clean water rinse well.
- C. Touch up scratched surfaces using materials recommended by manufacturer. Match touched-up paint color to factory-applied finish.

3.4 PROTECTION

- A. Protect installed products until completion of project.
- B. Touch-up, repair, or replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 32 3300 - SITE FURNISHINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Seating.
 - 2. Trash receptacles.
- B. Related Requirements:
 - 1. Section 03 3000 "Cast-in-Place Concrete" for installing pipe sleeves cast installing anchor bolts cast in concrete footings.
 - 2. Section 31 2000 "Earthwork" for excavation for installing concrete footings.

1.2 ACTION SUBMITTALS

- A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal. Ensure compliance with requirements included in Section 01 3300 "Submittal Procedures."
- B. Product Data: For each type of product.
- C. Sustainable Design Submittals:
 - 1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
- D. Samples: For each exposed product and for each color and texture specified.
- E. Samples for Initial Selection: For units with factory-applied finishes.
- F. Product Schedule: For site furnishings. Use same designations indicated on Drawings.

1.3 QUALITY ASSURANCE

- A. Provide the following upon request:
 - 1. Material Certificates: For site furnishings manufactured with preservative-treated wood.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For site furnishings to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Bench Replacement Slats: No fewer than two full-size units for each size indicated.
 - 2. Trash Receptacle Inner Containers: Five full-size units for each size indicated, but no fewer than two units.

PART 2 - PRODUCTS

2.1 SEATING : as indicated in landscape drawings.

2.2 TRASH RECEPTACLES : as indicated in landscape drawings.

2.3 MATERIALS

- A. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated; free of surface blemishes and complying with the following:
1. Rolled or Cold-Finished Bars, Rods, and Wire: ASTM B211 (ASTM B211M).
 2. Extruded Bars, Rods, Wire, Profiles, and Tubes: ASTM B221 (ASTM B221M).
 3. Structural Pipe and Tube: ASTM B429/B429M.
 4. Sheet and Plate: ASTM B209 (ASTM B209M).
 5. Castings: ASTM B26/B26M.
- B. Steel and Iron: Free of surface blemishes and complying with the following:
1. Plates, Shapes, and Bars: ASTM A36/A36M.
 2. Steel Pipe: Standard-weight steel pipe complying with ASTM A53/A53M, or electric-resistance-welded pipe complying with ASTM A135/A135M.
 3. Tubing: Cold-formed steel tubing complying with ASTM A500/A500M.
 4. Mechanical Tubing: Cold-rolled, electric-resistance-welded carbon or alloy steel tubing complying with ASTM A513/A513M, or steel tubing fabricated from steel complying with ASTM A1011/A1011M and complying with dimensional tolerances in ASTM A500/A500M; zinc coated internally and externally.
 5. Sheet: Commercial steel sheet complying with ASTM A1011/A1011M.
 6. Perforated Metal: From steel sheet not less than 0.120-inch (3.0-mm) nominal thickness; manufacturer's standard perforation pattern.
 7. Expanded Metal: Carbon-steel sheets, deburred after expansion, and complying with ASTM F1267.
 8. Malleable-Iron Castings: ASTM A47/A47M, grade as recommended by fabricator for type of use intended.
 9. Gray-Iron Castings: ASTM A48/A48M, Class 200.
- C. Stainless Steel: Free of surface blemishes and complying with the following:
1. Sheet, Strip, Plate, and Flat Bars: ASTM A240/A240M or ASTM A666.
 2. Pipe: Schedule 40 steel pipe complying with ASTM A312/A312M.
 3. Tubing: ASTM A554.
- D. Wood: Surfaced smooth on four sides with eased edges; kiln dried, free of knots, solid stock of species indicated.
1. Wood Species: Manufacturer's standard.
- E. Certified Wood: Wood products shall comply with requirements of ASTM D7612-10 (FSC, SFI, ATSM, CSA or PEFC certifications are acceptable).
- F. Fiberglass: Multiple laminations of glass-fiber-reinforced polyester resin with UV-light stable, colorfast, nonfading, weather- and stain-resistant, colored polyester gel coat, and with manufacturer's standard finish.

- G. Plastic: Color impregnated, color and UV-light stabilized, and mold resistant.
 - 1. Polyethylene: Fabricated from virgin plastic HDPE resin.
 - 2. Polyethylene with Recycled Content: Fabricated from HDPE and other resins with postconsumer recycled content plus one-half of preconsumer recycled content not less than 90 percent.
- H. Anchors, Fasteners, Fittings, and Hardware: Manufacturer's standard, corrosion-resistant-coated or noncorrodible materials; commercial quality, tamperproof, vandal and theft resistant, concealed, recessed, and capped or plugged.
 - 1. Angle Anchors: For inconspicuously bolting legs of site furnishings to below-grade substrate; extent as indicated.
 - 2. Antitheft Hold-Down Brackets: For securing site furnishings to substrate; extent as indicated on Drawings.
- I. Galvanizing: Where indicated for steel and iron components, provide the following protective zinc coating applied to components after fabrication:
 - 1. Zinc-Coated Tubing: External, zinc with organic overcoat, consisting of a minimum of 0.9 oz./sq. ft. (0.27 kg/sq. m) of zinc after welding, a chromate conversion coating, and a clear, polymer film. Internal, same as external or consisting of 81 percent zinc pigmented coating, not less than 0.3 mil (0.0076 mm) thick.
 - 2. Hot-Dip Galvanizing: According to ASTM A123/A123M, ASTM A153/A153M, or ASTM A924/A924M.

2.4 WOOD-PRESERVATIVE-TREATED MATERIALS

- A. Preservative Treatment: Pressure-treat wood according to AWP A U1, Use Category UC3b, and the following:
 - 1. Use preservative chemicals acceptable to authorities having jurisdiction and containing no arsenic or chromium. Use chemical formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 - 2. Kiln-dry lumber and plywood after treatment to a maximum moisture content, respectively, of 19 and 15 percent. Do not use materials that are warped or do not comply with requirements for untreated materials.

2.5 FABRICATION

- A. Metal Components: Form to required shapes and sizes with true, consistent curves, lines, and angles. Separate metals from dissimilar materials to prevent electrolytic action.
- B. Welded Connections: Weld connections continuously. Weld solid members with full-length, full-penetration welds and hollow members with full-circumference welds. At exposed connections, finish surfaces smooth and blended, so no roughness or unevenness shows after finishing and welded surface matches contours of adjoining surfaces.
- C. Pipes and Tubes: Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of handrail and railing components.

- D. Preservative-Treated Wood Components: Complete fabrication of treated items before treatment if possible. If cut after treatment, apply field treatment complying with AWPAC M4 to cut surfaces.
- E. Exposed Surfaces: Polished, sanded, or otherwise finished; all surfaces smooth, free of burrs, barbs, splinters, and sharpness; all edges and ends rolled, rounded, or capped.
- F. Factory Assembly: Factory assemble components to greatest extent possible to minimize field assembly. Clearly mark units for assembly in the field.

2.6 GENERAL FINISH REQUIREMENTS

- A. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 ALUMINUM FINISHES

- A. Powder-Coat Finish: Manufacturer's standard polyester powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.

2.8 STEEL AND GALVANIZED-STEEL FINISHES

- A. Powder-Coat Finish: Manufacturer's standard polyester powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.
- B. PVC Finish: Manufacturer's standard, UV-light stabilized, mold-resistant, slip-resistant, matte-textured, dipped or sprayed-on, PVC-plastisol finish, with flame retardant added; complying with coating manufacturer's written instructions for pretreatment, application, and minimum dry film thickness.

2.9 IRON FINISHES

- A. Powder-Coat Finish: Manufacturer's standard polyester powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.

2.10 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 1. Run directional finishes with long dimension of each piece.
 2. Directional Satin Finish: ASTM A480/A480M, No. 4.
 3. Dull Satin Finish: ASTM A480/A480M, No. 6.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with manufacturer's written installation instructions unless more stringent requirements are indicated. Complete field assembly of site furnishings where required.
- B. Unless otherwise indicated, install site furnishings after landscaping and paving have been completed.
- C. Install site furnishings level, plumb, true, and securely anchored at locations indicated on Drawings.
- D. Post Setting: Set cast-in support posts in concrete footing with smooth top, shaped to shed water. Protect portion of posts above footing from concrete splatter. Verify that posts are set plumb or at correct angle and are aligned and at correct height and spacing. Hold posts in position during placement and finishing operations until concrete is sufficiently cured.
- E. Posts Set into Voids in Concrete: Form or core-drill holes for installing posts in concrete to depth recommended in writing by manufacturer of site furnishings and 3/4 inch (19 mm) larger than OD of post. Clean holes of loose material, insert posts, and fill annular space between post and concrete with , mixed and placed to comply with anchoring material manufacturer's written instructions, with top smoothed and shaped to shed water.

END OF SECTION

SECTION 32 84 00 - LANDSCAPE IRRIGATION

PART 1 - GENERAL

1.01 SCOPE

- A. Furnish all labor, materials, supplies, equipment, tools and transportation, and perform all operations in connection with and reasonably incidental to the complete installation of the irrigation system, and guarantee/warranty as shown on the drawings, the installation details, and as specified herein.

1.02 ITEMS OF WORK INCLUDED

- A. Items of work specifically included are:
 - 1. Procurement of all applicable licenses, permits, and fees including payment of all development, plant investment, or any other fees and permits associated with the purchase and installation of the tap.
 - 2. Coordination of Utility Location. ("Call Before You Dig")
 - 3. Verification of existing static pressure and flow rate.
 - 4. Installation, connection of all sensors, and programming of irrigation controller.
 - 5. Installation and connection to irrigation central control system.
 - 6. Maintenance period.
 - 7. Sleeving for irrigation pipe and wire.

1.03 RELATED WORK

- A. Division 00 00 00 – Procurement and Contracting Requirements
 - 1. 00 01 15 – List of Drawing Sheets
- B. Division 01 00 00 – General Requirements
 - 1. 01 10 00 – Summary
 - 2. 01 11 00 – Summary of Work
 - 3. 01 33 23 – Shop Drawings, Product Data, and Samples
- C. Division 02 00 00 – Existing Conditions
- D. Division 32 82 00 – Irrigation Pumps
- E. Division 32 90 00 – Planting

1.04 SUBMITTALS

- A. Submit samples under provisions of Contract Documents
- B. Deliver four (4) copies of all required submittals to the Owners' Representative within fifteen (15) days from the date of the Notice to Proceed.
- C. Materials List: Include, pipe, fittings, mainline components, water emission components, control

system components and all other components needed to construct a fully operating automatic irrigation system. At a minimum include all components specifically identified on the irrigation drawings. Quantities of materials need not be included.

- D. Manufacturers' Data: Submit manufacturers' catalog cuts, specifications, and operating instructions for equipment shown on the materials list. Highlight specific items to be utilized for construction of the irrigation system.
- E. Shop Drawings: Submit shop drawings called for in the installation details. Show products required for proper installation, their relative locations, and critical dimensions. Note modifications to the installation detail.
- F. Project Record Drawings: Submit project record (As-Built) drawings to Owner prior to commencement of maintenance period per Contract Documents. Accurate and complete project record drawings will be required before the maintenance period begins.

1.05 RULES AND REGULATIONS

- A. Work and materials shall be in accordance with the latest edition of the National Electric Code, the Uniform Plumbing Code as published by the Western Plumbing Officials Association, and applicable laws and regulations of the governing authorities.
- B. When the contract documents call for materials or construction of a better quality or larger size than required by the above-mentioned rules and regulations, provide the quality and size required by the contract documents.
- C. If quantities are provided either in these specifications or on the drawings, these quantities are provided *for information only*. It is the Contractor's responsibility to determine the actual quantities of all material, equipment, and supplies required by the project and to complete an independent estimate of quantities and wastage.

1.06 TESTING

- A. Notify the Owners' Representative three (3) days in advance of any testing.
- B. Pressure Test:
 - 1. Pipelines jointed with rubber gaskets or threaded connections may be subjected to a pressure test at any time after partial completion of backfill. Pipelines jointed with solvent-welded PVC joints shall be allowed to cure a minimum of 24 hours before testing. Pipelines installed with thrust blocks shall have the concrete cured for a minimum of seven (7) days before testing.
 - 2. Subsections of mainline pipe may be tested independently, subject to the review of the Owners' Representative.
 - 3. Furnish clean, clear water, pumps, labor, fittings, and all equipment necessary to conduct tests or retests.
 - 4. The test pressure shall not exceed the rated working pressure of the pipe.
 - a. Hydrostatic Pressure Test:
 - 1) Fill mainline pipe with water, purge all air out of the system. Subject mainline pipe to a hydrostatic pressure of 150 PSI for two hours. Test with mainline components installed. A 2 PSI pressure variation is allowed.
 - a.) The use of an air compressor to provide pressure is not allowed.

- 2) Fill lateral pipe with water, purge all air out of the system. Subject lateral pipe to a hydrostatic pressure of 75 PSI. Test with risers for sprinklers capped.
 - a.) The use of an air compressor to provide pressure is not allowed.
- 3) Backfill to prevent pipe from moving under pressure. Expose couplings and fittings.
- 4) Leakage will be detected by visual inspection. Replace defective pipe, fitting, joint, valve, or appurtenance. Repeat the test until the pipe passes test.
 - a.) Cement or caulking to seal leaks is prohibited.
- 5) The Owners' Representative reserves the option to furnish the gauges and metering devices for the tests.

C. Operational Test:

1. Prior to the Operational Test connect and configure all system sensors.
 - a. The flow sensor shall be operational and operated per the manufacturer's instructions to learn the flow for all zones to be tested. The flow shall be stored in the controller's memory.
 - b. The master valve shall be installed and connected to the controller, and fully operational.
 - c. All rain, wind, temperature, weather or other sensors specified on the plan shall be installed, connected, and fully operational.
2. Activate each remote-control valve in sequence from controller. The Owners' Representative will visually observe operation, water application patterns, and leakage.
3. Replace defective remote-control valve, solenoid, wiring, or appurtenance to correct operational deficiencies.
4. Replace, adjust, or move water emission devices to correct operation or coverage deficiencies.
5. Replace defective pipe, fitting, joint, valve, sprinkler, or appurtenance to correct leakage problems.
6. Cement or caulking to seal leaks is prohibited.
7. Repeat test(s) until each lateral passes all tests.
8. The Owners' Representative will measure and record static and dynamic pressure at the point of connection and in the system mainline at various locations.
9. The Owner's Representative will measure and record dynamic pressure at various sprinklers and water emission devices.

1.07 CONSTRUCTION REVIEW

- A. The purpose of on-site reviews by the Owners' Representative is to periodically observe the work in progress and the Contractor's interpretation of the construction documents and to address questions with regards to the installation.
 1. Scheduled reviews such as those for irrigation system layout or testing should be scheduled with the Owners' Representative as required by these specifications.

2. Impromptu reviews may occur at any time during the project.
3. Final review will occur at the completion of the irrigation system and Record Drawing (As-Built) submittal.

1.08 GUARANTEE/WARRANTY AND REPLACEMENT

- A. The purpose of this guarantee/warranty is to ensure that the Owner receives irrigation materials of prime quality, installed and maintained in a thorough and careful manner.
 1. For a period of one year from commencement of the formal maintenance period, guarantee/warranty irrigation materials, equipment, and workmanship against defects. Fill and repair depressions. Restore landscape or structural features damaged by the settlement of irrigation trenches or excavations. Repair damage to the premises caused by a defective item. Make repairs within seven (7) days of notification from the Owners' Representative.
 2. Costs for all guarantee/warranty work shall be entirely paid for by the Contractor.
 3. Contract documents govern replacements identically as with new work. Make replacements at no additional cost to the contract price.
 4. Guarantee/warranty applies to originally installed materials and equipment and replacements made during the guarantee/warranty period.

PART 2 - MATERIALS

2.01 QUALITY

- A. Use materials that are new and without flaws or defects of any type and are the best of their class and kind.

2.02 SUBSTITUTIONS

- A. Pipe sizes referenced in the Construction Documents are minimum sizes and may be increased at the option of the Contractor. Substitutions in pressure class of pipe shall be approved by the Irrigation Designer.

2.03 SLEEVING

- A. Install separate sleeve beneath paved areas to route each run of irrigation pipe or wiring bundle.
- B. Sleeving material beneath pedestrian pavements shall be Class 200 PVC or other bell end pipe with solvent welded joints.
- C. Sleeving beneath drives and streets shall be Class 200 PVC or other bell end pipe with solvent welded joints.
- D. Sleeving diameter: As indicated on the drawings and installation details or equal to twice the nominal diameter of the pipe or wiring bundle being sleeved.
 1. Furnish and install size sleeves for wiring bundles per the current NEC Conduit Fill calculations and charts.

2.04 PIPE AND FITTINGS

- A. Mainline Pipe and Fittings:
 1. Use rigid, unplasticized polyvinyl chloride (PVC) round pipe, National Sanitation

Foundation (NSF) approved, extruded from material meeting the requirements of Cell Classification 12454 as defined in ASTM Standard D1784, with an integral belled end.

2. Use Class 200, SDR-21, rated at 200 PSI, conforming to the dimensions and tolerances established by ASTM Standard D2241 and ASTM Standard D2672. Use PVC pipe rated at higher pressures than Class 200 in the case of small nominal diameters which are not manufactured in Class 200.
 - a. Use solvent weld pipe for mainline pipe with a nominal diameter less than 3-inches or where a pipe connection occurs in a sleeve. Use Schedule 40/80, Type 1, Cell Classification 12454, PVC solvent weld fittings conforming to ASTM Standard D1784 and ASTM Standard D2466 (Schedule 40)/D2467 (Schedule 80). All belled end pipe shall have tapered sockets to create an interference type fit, which meet or exceed the dimensional requirements and minimum socket length for pressure type sockets as defined by ASTM Standard 2672. Use primer specifically approved by the pipe manufacturer. Solvent cement to conform to ASTM Standard D2564.
3. Contractor shall run a #14-AWG, direct bury, UL listed wire by Paige Wire along the entire mainline length. Wire shall be continuous with wire splices only placed within valve boxes and labeled on the record drawing. No wires are to be exposed. Use purple jacketed wire for mainline runs. Tape the tracer wire to the pipe at 15-foot intervals. Label tracer wire runs in each valve box.

B. Lateral Pipe and Fittings:

1. Use rigid, unplasticized polyvinyl chloride (PVC) round pipe, National Sanitation Foundation (NSF) approved, extruded from material meeting the requirements of Cell Classification 12454 as defined in ASTM Standard D1784, with an integral belled end.
2. Use Class 200, SDR-21, rated at 200 PSI, conforming to the dimensions and tolerances established by ASTM Standard D2241. Use PVC pipe rated at higher pressures than Class 200 in the case of small nominal diameters that are not manufactured in Class 200. All belled end pipe shall have tapered sockets to create an interference type fit, which meet or exceed the dimensional requirements and minimum socket length for pressure type sockets as defined by ASTM Standard 2672.
 - a. Use Schedule 40/80, Type 1, Cell Classification 12454, PVC solvent weld fittings conforming to ASTM Standard D1784 and ASTM Standard D2466 (Schedule 40)/D2467 (Schedule 80).
 - b. Use primer approved by the pipe manufacturer. Solvent cement to conform to ASTM Standard D2564, of a type approved by the pipe manufacturer.
 - 1) Solvent welded pipe shall not be installed when the outside temperature drops below forty-five (45) degrees Fahrenheit.
 - c. Flexible high-density polyethylene (HDPE) pipe is an alternate to rigid PVC pipe for lateral piping only.
 - 1) Use SDR-11.5, PE23, rated at 100 PSI that is National Sanitation Foundation (NSF) approved, conforming to ASTM Standard D2239.
 - 2) Use Type 1, cell classification 12454PVC as defined in ASTM Standard D1784 insert fittings conforming to ASTM Standard D2609 designed for use with flexible polyethylene (PE) pipe. Use stainless steel pinch clamps or worm gear clamps (including stainless steel screw) to join pipe and fittings.

3. Low Density Polyethylene Hose:
 - a. Use pipe specifically intended for use as a flexible swing joint.
 - 1) Inside diameter: 0.490+0.010 inch
 - 2) Wall thickness: 0.100+0.010 inch
 - 3) Color: Black
 - 4) Pressure Rating: 80 PSI
 - b. Use spiral barb fittings supplied by the same manufacturer as the hose.
4. Assemblies calling for threaded pipe connections shall utilize PVC Schedule 80 nipples and PVC Schedule 80 threaded fittings.
5. Joint sealant:
 - a. Use only Teflon-type tape pipe joint sealant on plastic threads. Use nonhardening, nontoxic pipe joint sealant formulated for use on water-carrying pipes on metal threaded connections.
6. Marking Tape:
 - a. Mainline Pipe - Christy underground I.D. tape TA.DT.6.P.NPW.

2.05 MAINLINE COMPONENTS

- A. Main System Shutoff Valve: As per local practice and in compliance with local code.
- B. Winterization Assembly: As per local practice and in compliance with local code.
- C. Backflow Prevention Assembly: As presented in the installation details and in compliance with local code.
- D. Master Valve Assembly: As presented in the installation details.
- E. Flow Sensor Assembly: As presented in the installation details.
- F. Isolation Gate Valve Assembly: As presented in the installation details. Install a separate valve box over a 3-inch depth of 3/4-inch gravel for each assembly.
- G. Quick Coupling Valve Assembly: Double swing joint arrangement as presented in the installation details. Install at a height where key can be inserted, turned and valve pressurized without removing threaded handle.
- H. Combination Pressure Regulator/Wye-Strainer Assembly: As presented in the installation details. Install a separate valve box over a 3-inch depth of 3/4-inch gravel for each assembly.
- I. Pressure Regulator Assembly: As presented in the installation details. Install a separate valve box over a 3-inch depth of 3/4-inch gravel for each assembly.
- J. Wye-Strainer Assembly: As presented in the installation details. Install a separate valve box over a 3-inch depth of 3/4-inch gravel for each assembly.
- K. Manual Drain Valve Assembly: As presented in the installation details. Install a separate sump consisting of a minimum of nine cubic feet of 3/4-inch gravel for each drain valve.
- L. Air/Vacuum Relief Valve Assembly: As presented in the installation details.

2.06 SPRINKLER IRRIGATION COMPONENTS

- A. Remote Control Valve (RCV) Assembly for Sprinkler and Bubbler Laterals:
1. As presented in the installation details. Use wire connectors and waterproofing sealant to join control wires to solenoid valves. Use standard identifications tags marked with controller name and station number. Install a separate valve box over a 3-inch depth of washed pea gravel for each assembly. Use 8-ounce minimum weight non-woven geotextile fabric underneath pea gravel and box assembly to prevent dirt and debris intrusion. Adjust valve flow control per manufacturer's recommendations prior to use.
 - a. Install decoder compatible with irrigation controller on each valve for communication on 2-wire control system.
 2. Sprinkler Assembly: As presented in the drawings and installation details.

2.07 CONTROL SYSTEMS COMPONENTS

- A. Controller – Existing Bison Exhibit controller to be obtained from zoo staff and installed in new cheetah exhibit structure. Controller to be connected to zoo central control system and be programmed to utilize flow data from the central control system.
- B. Control Wire:
1. Use American Wire Gauge (AWG) No.12/14 solid copper conforming to ASTM B-3 or ASTM B-8. Type UF or PE cable, UL approved for direct underground burial from the controller unit to each remote-control valve. Use American Wire Gauge (AWG) No.12 wire for common wire.
 - a. Type PE Cable:
 - 1) Minimum temperature rating of 60° C and 600 volts.
 - 2) Minimum insulation thickness of 0.060".
 - 3) Sunlight resistant, testing at 300 hours of carbon-arc or xenon-arc exposure.
 - 4) Cold Bend Test: Insulation shall not show any cracks when sample is bent around a 3X mandrel after being subjected to minus 25° C for four (4) hours.
 - 5) Insulation shall not absorb more than 25mg mass of water per square inch.
 - b. Wire Color for Conventional Wire Controllers:

1) Common	White
2) Turf	Green
3) Native Seed	Orange
4) Drip to Shrubs	Yellow
5) Drip to Trees	Red
6) Drip to Planters/Pots/Perennials	Blue
7) Spare Wires	Purple
8) Tracer Wire	Pink
- C. Splices: Use wire connectors with waterproof sealant. Wire connector to be of UV radiation resist plastic construction consisting of two pieces, one piece which snap locks into the other. Connector shall be pre-filled with non-hardening silicone gel. Utilize twist style wire connector

provided with assembly to connect wires.

1. Wire connectors to meet requirements of UL Standard 486D
 2. Utilize DBR/Y-600 Black Splices
 3. Encase wiring not located near PVC irrigation pipe in PVC Schedule 80 electrical conduit. Utilize long sweep elbows for changes of direction.
- D. Warning tape: Detectable Warning Tape reading “Caution: Buried Electrical Line Below” shall be inert plastic film highly resistant to alkalis, acids, or other destructive chemical components likely to be encountered in soils. Tape shall be six inches wide, colored red.
- E. Grounding
1. All controllers and decoders are to be grounded as indicated on the drawings. Minimum grounding per details and per the ASIC detail for controller grounding.
 2. Grounding shall be a rod and plate arrangement for the controller.
 3. Grounding Rod
 - a. 5/8-inch diameter, UL listed, copper-clad ground rod, 8-feet in length, with a 10-AWG factory welded insulated conductor, 15-feet in length.
 - b. Manufacturer shall be Paige Wire, model number 182000IC10 or approved equal.
 - c. Clamps, wire nuts, and / or CADWELD “One-Shot” connectors are not approved for use.
 - d. Install rod per manufacturers guidelines as to not damage the rod or welded conductor.
 - e. Ground rods shall be placed in their own ten-inch round valve box.
 4. Grounding Plate
 - a. 4-inch by 36-inch copper ground plate with a 10-AWG welded insulated conductor, 10-feet in length.
 - b. Manufacturer shall be Paige Wire, model number 182201IC or approved equal.
 - c. Provide 50-pounds of ground enhancement material (GEM) / earth contact backfill on the top and the bottom of each plate, for a total of 100-pounds per plate.
 - d. Manufacture shall be Loresco, Paige Electric model number 1820058 or 1820059 based on site soil conditions or approved equal.
 5. All wire connections between the ground rod and ground plate leads to the surge suppression device shall be made via a Paige Wire re-enterable terminal connector, model number 270RC3 or approved equal.
 6. The Contractor will be responsible to provide earth ground of two-wire ohm reading of not more than ten-ohms or approved in writing from the manufacture or within manufacture’s acceptable range.
 7. The supplying distributor shall check all ohm readings with a ground resistance tester (commonly referred to as a “Megger”) and provide documentation, signed by the distributor, that all readings are under ten-ohms. The Contractor will be responsible for making adjustments to the grounding system to achieve this reading at no additional cost to the Owner.

2.08 OTHER COMPONENTS

- A. Tools and Spare Parts: Provide operating keys, servicing tools, test equipment, other items and spare parts indicated in the General Notes of the drawings.
 - 1. Additionally, provide the following:
 - 2. Two operating keys for each type and size of manually operated valve.
 - 3. Two keys for each type and size of quick coupler.
 - 4. Two of each servicing wrench or tool needed for complete access, adjustment, installation of nozzles and repair of all spray, rotary and rotor type sprinklers.
 - 5. Two 3" diameter pressure gauges and associated fittings to measure system pressure and pressure at spray, rotary and rotor type sprinklers and remote-control valves. Pressure gauge shall have a range of 0-160 PSI.
 - 6. Two sets of keys for each controller, enclosure or equipment that requires keyed access.
 - a. If required, keys shall be keyed to match other locks that the Owner possess.
 - 7. All instruction manuals, repair manuals, operating manuals and original paper work related to the products that were installed during construction of the irrigation system.
- B. Owner Stock: Include the following for owner stock for future replacements.
 - 1. Five (5) of each type of spray and rotary sprinkler body.
 - 2. Five (5) of each type of rotor body.
 - 3. Ten (10) of each type, radius, arc, and nozzle of spray and rotary sprinkler.
 - 4. Ten (10) of each type and size of rotor nozzle.
 - 5. Ten (10) sets of waterproof connectors.

PART 3 - EXECUTION**3.01 INSPECTION AND REVIEWS**

- A. Site Inspections:
 - 1. Verify site conditions and note irregularities affecting work of this section. Report irregularities to the Owners' Representative prior to beginning work.
 - 2. Beginning work of this section implies acceptance of all existing conditions.
 - 3. Contractor will be held responsible for coordination between landscape and irrigation system installation.
 - 4. Landscape material locations shown on the Landscape Plan shall take precedence over the irrigation system equipment locations. If irrigation equipment is installed in conflict with the landscape material locations shown on the Landscape Plan, the Contractor will be required to relocate the irrigation equipment, as necessary, at Contractor's expense.
- B. Utility Location (Call Before You Dig)
 - 1. Arrange for and coordinate with local authorities the location of all underground utilities.
 - 2. Repair any underground utilities damaged during construction. Make repairs at no additional cost to the contract price.

- C. Irrigation System Layout Review: Irrigation system layout review will occur after the staking has been completed. Notify the Owners' Representative three business days in advance of review. Modifications will be identified by the Owners' Representative at this review.

3.02 LAYOUT OF WORK

- A. Stake out the irrigation system. Adjust system layout from plans to conform to final approved landscape design. Items staked shall include: Sprinklers, pipe, control valves, manual drains, controller, and isolation valves, grounding locations and sleeving.
- B. Install all mainline pipe and mainline components inside of project property lines.

3.03 EXCAVATION, TRENCHING AND BACKFILLING

- A. Excavate to permit the pipes to be laid at the intended elevations and to permit work space for installing connections and fittings.
- B. Minimum cover (distance from top of pipe or control wire to finish grade):
 - 1. 24-inch over mainline pipe and over electrical conduit.
 - 2. 26-inch over control wire.
 - 3. 18-inch over lateral pipe to sprinklers.
 - 4. 8-inch over drip lateral pipe in turf or paved areas downstream of drip system zone control valves.
 - 5. 3-inch minimum mulch cover over drip lateral pipe in planting beds downstream of drip system zone control valves. PVC UV radiation resistant lateral pipe shall be installed directly on the soil surface under landscape fabric.
- C. Backfill only after lines have been reviewed and passed hydrostatic tests and accepted by the Owner.
 - 1. Excavated material is generally satisfactory for backfill. Backfill shall be free from rubbish, vegetable matter, frozen materials, and stones larger than 1/2-inch in maximum dimension. Remove material not suitable for backfill. Backfill placed next to pipe shall be free of sharp objects which may damage the pipe. All soil shall be screened and pass through a square opening 1/2" x 1/2".
 - 2. Backfill un-sleeved pipe and sleeves in either of the following manners:
 - a. Backfill and puddle the lower half of the trench. Allow to dry 24 hours. Backfill the remainder of the trench in 6-inch layers. Compact to density of surrounding soil.
 - b. Backfill the trench by depositing the backfill material equally on both sides of the pipe in 6-inch layers and compacting to the density of surrounding soil.
 - 3. Enclose pipe and wiring beneath roadways, walks, curbs, etc. in sleeves. Minimum compaction of backfill for sleeves shall be 95% Standard Proctor Density, ASTM D698-78. Conduct one compaction test for each sleeved crossing less than 50 feet long. Conduct two compaction tests for each sleeved crossing greater than 50 feet long. Costs for such testing and any necessary retesting shall be paid for by the Contractor. Use of water for compaction around sleeves, puddling, will not be permitted.
 - 4. Dress backfilled areas to original grade
 - 5. Where utilities conflict with irrigation trenching and pipe work, contact the Owners' Representative for trench depth adjustments.

3.04 SLEEVING AND BORING

- A. Install sleeving at a depth which permits the encased pipe or wiring to remain at the specified burial depth.
- B. Extend sleeve ends six inches beyond the edge of the paved surface. Cover pipe ends and mark with stakes. Mark concrete with a chiseled "X" at sleeve end locations.
- C. Bore for sleeves under obstructions which cannot be removed. Employ equipment and methods designed for horizontal boring.

3.05 ASSEMBLING PIPE AND FITTINGS

- A. General:
 - 1. Keep pipe free from dirt and pipe scale. Cut pipe ends square and deburr. Clean pipe ends.
 - 2. Keep ends of assembled pipe capped to prevent dirt and debris intrusion. Remove caps only when necessary to continue assembly.
- B. Mainline Pipe and Fittings:
 - 1. Use only strap-type friction wrenches for threaded plastic pipe. Tighten threaded plastic pipe per pipe and fitting manufacturers recommendations.
 - 2. PVC Solvent Weld Pipe:
 - a. Use primer and solvent cement. Join pipe in a manner recommended by the manufacturer and in accordance with accepted industry practices.
 - b. Cure for 30 minutes before handling and 24 hours before allowing water in pipe.
 - c. Snake pipe from side to side within the trench.
 - 3. Fittings: The use of cross and wye type fittings is not permitted.
- C. Lateral Pipe and Fittings:
 - 1. Use only strap-type friction wrenches for threaded plastic pipe. Tighten threaded plastic pipe per pipe and fitting manufacturers recommendations.
 - 2. PVC Solvent Weld Pipe:
 - a. Use primer and solvent cement. Join pipe in the manner recommended by the manufacturer and in accordance with accepted industry practices.
 - b. Cure for 30 minutes before handling and 24 hours before allowing water in the pipe.
 - c. Snake pipe from side to side within the trench.
 - 3. Polyethylene (PE) Pipe:
 - a. Join pipe in the manner recommended by manufacturer and in accordance with accepted industry practices.
 - b. Snake pipe from side to side within the trench.

3.06 INSTALLATION OF MAINLINE COMPONENTS

- A. Main System Shut Off Valve: Install where indicated on the drawings.
- B. Winterization Assembly: Install where indicated on the drawings.
- C. Backflow Prevention Assembly: Install where indicated on the drawings. Install assembly so

that its elevation, orientation, access, and drainage conform to the manufacturer's recommendations and applicable health codes.

- D. Master Valve Assembly: Install where indicated on the drawings.
- E. Flow Sensor Assembly: Install where indicated on the drawings.
- F. Isolation Gate Valve Assembly:
 - 1. Install where indicated on the drawings.
 - 2. Locate at least 12-inches from and align with adjacent walls or edges of paved areas.
- G. Quick Coupling Valve Assembly: Install where indicated on the drawings.
- H. Combination Pressure Regulator/Wye-Strainer Assembly: Install where indicated on the drawings.

3.07 INSTALLATION OF SPRINKLER IRRIGATION COMPONENTS

- A. Remote Control Valve (RCV) Assembly for Sprinkler Laterals:
 - 1. Flush mainline before installation of RCV assembly.
 - 2. Install where indicated on the drawings. Wire connectors and waterproof sealant shall be used to connect control wires to remote control valve wires. Install connectors and sealant per the manufacturer's recommendations.
 - 3. Install only one RCV to a valve box. Locate valve box at least 12-inches from and align with nearby walls or edges of paved areas. Group RCV assemblies together where practical. Arrange grouped valve boxes in rectangular patterns. Allow at least 12-inches between valve boxes.
 - 4. Adjust RCV to regulate the downstream operating pressure.
 - 5. Attach ID tag with controller station number to control wiring.
- B. Sprinkler Assembly:
 - 1. Flush lateral pipe before installing sprinkler assembly.
 - 2. Install per the installation details at locations shown on the drawings.
 - 3. Locate rotary sprinklers 6-inches from adjacent walls, fences, or edges of paved areas.
 - 4. Locate spray sprinklers 3-inches from adjacent walls, fences, or edges of paved areas.
 - 5. Set sprinklers perpendicular to the finish grade.
 - 6. Supply appropriate nozzle or adjust arc of coverage of each sprinkler for best performance.
 - 7. Adjust the radius of throw of each sprinkler for best performance.

3.08 INSTALLATION OF CONTROL SYSTEM COMPONENTS

- A. Irrigation Controller Unit:
 - 1. The location of the controller unit as depicted on the drawings is approximate; the Owners' Representative will determine the exact site location upon commencement of contract during sprinkler layout review.
 - 2. Lightning protection: Ground rods are to have a minimum diameter of 3/4" and a minimum length of 10 feet. These are to be driven into the ground in a vertical position or an oblique

angle not to exceed 15 degrees at location 10 feet from the electronic equipment, the ground plate, or the wires and cables connected to said equipment, as shown in the irrigation details. The rod is to be stamped with the UL logo. A 6 AWG solid bare copper wire (no more than 12 feet long) shall be connected to the ground rod by the installer using a Cadweld GR1161G" One-Shot" welding kit. This wire shall be connected to the electronic equipment ground lug as shown in the detail above.

3. Lightning protection: Provide on all remote-control valve wiring as recommended by the manufacturer. Provide other components such as ground rod, grounding wire, etc., to manufacturer's recommendations.
 4. Install primary surge protection arrestors on incoming power lines.
 5. Install one valve output surge protection arrestor on each control wire and one for the common wire.
 6. Attach wire markers to the ends of control wires inside the controller unit housing. Label wires with the identification number (see drawings) of the remote-control valve to which the control wire is connected.
 7. Connect control wires to the corresponding controller terminal.
- B. Instrumentation:
1. Install sensors per the installation details and manufacturer's recommendations. Install at locations shown on the drawings.
 2. Install electrical connections between irrigation controller and sensors per manufacturer's recommendations.
- C. Control Wire:
1. Bundle control wires where two or more are in the same trench. Bundle with pipe wrapping tape spaced at 10-foot intervals.
 2. Decoder Systems: Where 2-wire decoder cable is used, install decoder cable fuse devices for wire-path trouble-shooting at each intersection where the cable splits in different directions, and in long cable runs between groups of multiple decoders. Install device per manufacturer's recommendations.
 3. Provide a 24-inch excess length of wire in an 8-inch diameter loop at each 90-degree change of direction, at both ends of sleeves, and at 100-foot intervals along continuous runs of wiring. Make wiring loop by turning control wire 5 turns around 1-inch pipe. Coil 24-inch length of wire within each remote-control valve box.
 4. Install common ground wire and one control wire for each remote-control valve. Multiple valves on a single control wire are not permitted.
 5. If a control wire must be spliced, make splice with wire connectors and waterproof sealant, installed per the manufacturer's instructions. Locate splice in a valve box which contains an irrigation valve assembly, or in a separate 6-inch round valve box. Use same procedure for connection to valves as for in-line splices.
 6. Unless noted on plans, install wire parallel with and under PVC mainline pipe. If wire is installed adjacent to section of metal pipe, separate wire from pipe minimum of 6-inches and install wire in PVC conduit.
 7. Encase wire not installed with PVC mainline pipe in electrical conduit.

- D. Warning tape: Detectable Warning Tape shall be installed approximately 6 inches above mainline pipe where required or where specified.

3.09 INSTALLATION OF OTHER COMPONENTS

- A. Tools and Spare Parts:
 - 1. Prior to the Pre-Maintenance Review, supply to the Owner operating keys, servicing tools, test equipment, and any other items indicated on the drawings.
 - 2. Prior to Final Review, supply to the Owner the spare parts indicated in the General Notes on the drawings.
- B. Other Materials: Install other materials or equipment shown on the drawings or installation details to be part of the irrigation system, even though such items may not have been referenced in these specifications.

3.10 PROJECT RECORD (AS-BUILT) DRAWINGS

- A. Maintain on-site and separate from documents used for construction, one complete set of contract documents as Project Documents. Keep documents current. Do not permanently cover work until as-built information is recorded.
- B. Record pipe and wiring network alterations. Record work which is installed differently than shown on the construction drawings. Record accurate reference dimensions, measured from at least two permanent reference points, of each irrigation system valve, each backflow prevention device, each controller or control unit, each sleeve end, each stub-out for future pipe or wiring connections, and other irrigation components enclosed within a valve box.
- C. Prior to Final Review, purchase from the Owners' Representative a reproducible mylar copy of the drawings. Using technical drafting pen, duplicate information contained on the project drawings maintained on site. Label each sheet "Record Drawing". Completion of the Record Drawings will be a prerequisite for the Final Review.

3.11 MAINTENANCE

- A. Upon completion of Final Review, maintain irrigation system for a duration of 30 calendar days. Make periodic examinations and adjustments to irrigation system components to achieve the most desirable application of water.
- B. Following completion of the Contractor's maintenance period, the Owner will be responsible for maintaining the system in working order during the remainder of the guarantee/warranty period, for performing necessary minor maintenance, for trimming around sprinklers, for protecting against vandalism, and for preventing damage during the landscape maintenance operation.

3.12 CLEAN-UP

- A. Upon completion of work, remove from the site all machinery, tools, excess materials, and rubbish.

END OF SECTION 32 8400

SECTION 32 9115 - PLANTING SOILS

PART 1 - GENERAL

1.1 GENERAL REFERENCE

- A. The work of this Section is integral with the whole of the Contract Documents and is not intended to be interpreted outside that context.
- B. This Section includes planting soils for use in landscape contexts both within the habitat of the exhibit and restoration and landscape improvements outside of the exhibit in public areas.
 - 1. Habitat planting soils consist of two layers of horticultural soils. 12" of Planting Soil over 24" or less of Horticultural Subsoil, and bioinfiltration soils
 - 2. The horticultural soils within the habitat will be armored with filter fabric and stone mulch of varying thickness and compositions of sand, crushed stone and boulders to protect the placed soils from erosion, provide for native talus stone habitat and to minimize establishment of native and non-native weed populations. Habitat Soils include the following:
 - a. Planting Bed Soil
 - b. Horticultural Subsoil
 - c. Bioretention Planting Soil
 - d. Bioretention Subsoil
 - 3. The horticultural soils outside of the habitat, in front of the exhibit building entrance, along Olmstead Path and for other public area landscape restoration areas, will consist of imported planting soils, as well as existing landscape soil restoration within the rootzone of existing trees. Non-Habitat Soils include the following:
 - a. Planting Bed Soil
 - b. Sand based Structural Soil
 - c. Horticultural Subsoil
 - d. Soil Restoration amendment

1.2 SCOPE OF WORK

- A. This Section specifies administrative and procedural requirements for planting soil including, but not limited, to the following:
 - 1. Imported planting soil components material acquisition.
 - 2. Testing of existing topsoil decompaction and soil amendment as required.
 - 3. Testing and analysis for specification conformance.
 - 4. Inspection and testing of subgrade for preparation of subgrade.
 - 5. Preparation of planting soil blends and testing for conformance and quality control.
 - 6. Preparation of Mock-up of subgrade preparation.
 - 7. Mock-up, installation and placement of planting soils, and stone mulch.
 - 8. Compaction of planting soils.
 - 9. Final in-place testing of planting soils.

10. Coordination with other contractors.
11. Clean-up.
12. Project-close out and Warranty.

B. References to other Sections are given that may duplicate provisions in this Section.

1.3 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to all Sections. The Contract Documents are complementary, and what is required by one shall be as binding as if required by all.

1.4 RELATED WORK UNDER OTHER SECTIONS

- A. Examine Contract Documents for requirements that affect work of this Section. Other Specification Sections that directly relate to work of this Section include, but are not limited to:
1. Section 312000 - Earth Moving
 2. Section 328400 - Irrigation System
 3. Section 329300 – Planting and Fine Grading

1.5 DEFINITIONS

- A. Definitions/References:
1. Finish Grade: Elevation of finished surface of planting soil after settlement.
 2. Imported Planting Soils for Soil Profiles: Soil produced from off-site sources by homogeneously blending mineral soils or sand with mature and stable organic compost to produce specified planting soil blends.
 3. Subgrade: Surface or elevation of subsoil remaining after completing excavation, or top surface of a fill or backfill, before placing planting soils.
 4. Contractor: The Contractor performing the work specified herein.
 5. ASA: American Society of Agronomy
 6. ASTM: American Society of Testing Materials.
 7. AOAC: Association of Official Agricultural Chemists.
 8. Soil Scientist: The project Soil Scientist shall be Pine and Swallow Environmental, 867 Boston Rd., Groton, MA 01450, 978-448-9511, www.pineandswallow.com
 9. Drainage Layer/Drainage Blanket: A layer of specified sand to facilitate drainage and control of groundwater below planting soils.
 10. Imported Planting Soils: Planting Soils are composed of a blend of three base components: base loam, organic material and sand. The quality of the blend depends on the quality of the original components. Locate and obtain approval of sources for base loam, organic material and sand that meet the Specification requirements. Contractor is then responsible for mixing the components. Approximate mixing ratios are provided, but may require adjustment, depending on the final materials and with the approval of the Architect or their representative, in order to meet Specification requirements for each blend.

11. Habitat: Non-public areas inside of the enclosure for the Arabian Leopard Exhibit. Special soil requirements for habitat soils are specified herein.
12. Talus/Talus Stone: Geologically, talus describes accumulations of angular large, loose boulders at the base of a cliff. For the Arabian Leopard habitat, talus is a blend of large stones to sand size material that will armor the horticultural soils from erosion and weed growth. The horticultural soils will be covered with a variable composition and thickness of quarried stone, crushed rock and tailings or stone dust to create the desired habitat and landscape performance requirements.
13. Final Acceptance: Final Acceptance shall be the day on which the project is 100% complete and accepted by the Landscape Architect and Owner, including "Punch List" items. Maintenance and Warranty work shall commence at Final Acceptance.

B. Testing/Testing Agency

1. Section 312000 – Earth Moving
2. Refer to this Section, Part 1.

1.6 QUALITY ASSURANCE

- A. Testing Laboratory Qualifications: An independent laboratory, recognized by the State Department of Agriculture that has, and must be able to demonstrate that they have, the experience and capability to conduct the testing indicated and that they specialize in types of tests to be performed.
1. Employ at Contractor's expense a qualified independent testing and inspection laboratory acceptable to the Landscape Architect and Owner to perform all compaction, moisture and infiltration tests and certifications as specified herein including both laboratory and field-testing. Tests shall be made in strict compliance with the standards of the AOAC, ASTM, or as described herein. Field testing results shall be emailed within 2 days to the Landscape Architect and Soil Scientist.
 - a. It is the responsibility of Landscape Contractor in conjunction with the Soil Supplier to submit material for the soil and compost tests.
- B. Contractor Experience
1. Candidate Contractor shall submit written documentation of at least five years of contracting and landscape construction experience completing projects of similar scope, complexity and value.
 2. Candidate Contractor shall submit written documentation of at least five projects in which engineered blended horticultural soil was used.
- C. Critical Path Processing - Soils Testing Report Submittals:
1. Critical Path Processing: The Contractor shall be responsible for recognizing that these critical project materials warrant timely attention, that the procurement process and testing protocols to achieve approved materials shall be considered a long lead time item. Under no circumstance shall failure to comply with all specification requirements be a reason for substitution of unacceptable material(s).
- D. Construction Observations
1. The Contractor shall not place any Soil Blend or Sand on Subgrade prior to inspection and approval by the Landscape Architect or Owner's Representative for compliance with

grading and compaction and infiltration specifications. At locations selected by the Landscape Architect, the Contractor shall submit spot grades of the subgrade to the Landscape Architect. The Contractor shall request inspection seven days before proceeding.

2. The Contractor shall not place any horticultural soils prior to inspection and approval by the Landscape Architect for compliance with subgrade depth, grading and compaction specifications. The Contractor shall request inspection seven days before proceeding.

E. Regulatory Requirements

1. Comply with laws, regulations, and quarantines for agricultural and horticultural products.
2. Contractor shall submit certification that all soil blend components and all soil blends meet all environmental standards of the District of Columbia. Refer to the project's Environmental Consultant. Testing of imported soils for oil and hazardous material (OHM) is not included in this Section. Testing and compliance of horticultural soils for OHM shall be at the direction of the Soil Management Plan, Environmental Consultant or other entity designated by the Owner.

F. Planting Soil Testing Protocol

1. The Appendix summarizes the process of planting soil testing, submittal, and evaluation.

1.7 TESTING, SUBMITTALS AND MOCK-UPS

- A. Certificates: Provide certificates required by authorities having jurisdiction for any composted materials. Contractor shall submit certification that all soil blend components and all soil blends meet all environmental standards of the Commonwealth of Massachusetts.

B. Testing for Subgrade, Planting Soil Components, Existing Stripped Topsoil, and Planting Soil Mixes: Testing is required at the following intervals: (if required)

1. Testing of individual components (Base Loam, Sand, and Compost) for planting soil mixes shall be carried out by the Soils Testing Laboratory. Recommendations for amending and/or correcting the soil mix will be provided to the Contractor by the Soil Supplier.
2. Failure of any material by testing and/or amendment procedure to meet Specification requirements shall require the Contractor to seek another source for the failed material and the initiation of all testing procedures for the new replacement material shall immediately take place.
3. After test results for components have been accepted, create sample mixes of each planting soil mix and perform tests described in Section 329115, Part 1.
 - a. Planting Soil Mixes shall be compliant to Section 329115, Part 2.
4. After the test results for planting soil mixes have been accepted, and during the production of planting soils, test every 200 cubic yards of every Soil Mix blended for: organic matter content, gradation, and pH. Before shipping of any Planting Soil Mix, the Contractor shall confirm that the Soil Scientist has accepted the mix. Testing applies to all soil layers of the planting profile. After three consecutive compliant tests, the Contractor may increase the interval of testing to 500 cubic yards. Approval is required before shipment.
5. Laboratory test reports for components and blend batch stockpiles, and blend production stockpiles shall be no older than three months from date of submittal. Compost maturity

- and stability as per Part 2 shall be tested every month after initial acceptance and during and until final blend production.
6. Testing of Subgrade: Prior to placement of the planting soil profile, test the subgrade as described in this Section 329115, Part 3. Coordinate the testing of the subgrade with the Sitework Contractor before the planting soil profile is placed.
 7. Testing of existing stripped topsoil: organic matter content, gradation, and pH (if required).
 8. In-place tests: Compaction tests of each type of material placed in accordance this section. Infiltration tests shall be in accordance with this Section.
- C. Test Reports: Submit certified reports for tests as described in this Section.
1. Mechanical gradation (sieve analysis) shall be performed and compared to the USDA Soil Classification System using sieve size nos. 10, 18, 35, 60, 140 and 270. Percent clay (0.002 mm) shall be reported separately in addition to silt (via hydrometer method: ASTM D6913 and ASTM D7928).
 2. The silt and clay content shall be determined by a Hydrometer Test of soil passing the #270 sieve.
 3. Chemical analysis shall be undertaken for Phosphorus, Potassium, Calcium, Magnesium, Aluminum, Iron, Manganese, Lead, Cation Exchange Capacity, Soluble Salts, organic matter content, acidity (pH) and buffer pH.
 4. Tests shall be conducted in accordance with Recommended Soil Testing Procedures for the Northeastern United States, 2nd Edition, Northeastern Regional Publication No. 493. Tests include the following:
 - a. Test for soil Organic Matter by loss of weight on ignition.
 - b. Test for soil CEC by exchangeable acidity method.
 - c. Test for soil Soluble Salts shall be by the 1:2 (v:v) soil:water Extract Method.
 - d. Test for Buffer pH by the SMP method.
 - e. Tests for pH shall be conducted on a 1:1 soil to distilled water ratio.
 5. Certified reports on analyses from producers of composted organic materials shall be required and new test reports shall be submitted when sources or material are changed. Analyses shall include all tests for criteria specified in Part 2.
 6. Saturated hydraulic Conductivity: Test procedure ASTM D2434.
 - a. Hydraulic Conductivity tests shall be taken of samples during QA/QC testing at the Soil Supplier's facility. Samples from each stockpile for each soil blend shall be tested.
 7. Testing Agencies: The following firms are acceptable testing agencies for the various components.
 - a. Leaf Yard Waste Compost Stability Test: Woods End Laboratories, 150 Whitten Road, Augusta, ME, 04330, tel: 201.293.2457, or approved equal
 - b. Mechanical Gradation, Chemical Analysis and Organic Matter Content, All Soil Components and Planting Soil Mixes: University of Massachusetts, 203 Paige Laboratory, 161 Holdsworth Way, Amherst, MA 01003, <http://soiltest.umass.edu>, tel: 413.545.2311, or approved equal.
 - c. All other tests except those listed above: Certified Testing laboratory (CTL), 155 US Route 130, Bordentown, NJ 08505, tel: 609.298.3255 www.certifiedtestinglabs.com or approved equal.
 8. Laboratory Density Testing Submittal: ASTM D698 Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort

- a. Standard Proctor density tests shall be performed on samples collected at the Soil Supplier's facility, to obtain the optimum moisture content and maximum dry density values.
- 9. Test Report Timeliness
 - a. All submitted test reports must be from recent analyses, less than 90 days old, and represent materials that are available for delivery to the site.
 - b. Base component materials should be blended into soil blends within 90 days of test reports. Soil blends should be delivered to the project site or be reserved for project use at designated areas within 90 days of test reports for each soil blend. Soil blends may be mixed, approved by the Design team, and stockpiled in advance. If stockpiling occurs, the Construction and Design teams should be notified, and the storage period shall be up to 360 days. In the event of long-term storage beyond 90 days, new samples of each stored stockpile shall be tested for gradation, organic matter content and pH and results submitted for approval.
 - c. Pre-blended and accepted stockpiles should be stored in accordance with Specification Requirements and be labeled and protected.
 - d. If base component test reports expire beyond the 90-day limit while soil blends are being manufactured, the contractor shall submit certification to the design team that the materials are the same materials that were tested and accepted initially and may continue blending using the accepted submittals up to a maximum of 180 days at which time new samples and laboratory tests must be submitted.
- D. In-Place Testing
 - 1. Density Tests: Density of soil and rock in place shall be tested using ASTM D1556 Sand Cone Method or ASTM D6938 Standard Test Method for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth), and ASTM D698 Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort. (Standard Proctor).
 - a. In-place density tests shall be carried out at a rate of one test per 1,000 square feet for placed horticultural soils, or at direction of the Landscape Architect or Soil Scientist.
 - b. Density Test results shall be emailed to the Landscape Architect and Soil Scientist within two business days.
 - 2. In-place infiltration tests shall be performed using the Perforated Canister Method or the Turf-Tec IN2-W Infiltrometer utilizing manufacturer's operating instructions.
 - a. Perforated Canister Method
 - 1) Utilize perforated canisters or buckets seven to ten inches in diameter and a minimum of six inches high.
 - 2) A test hole shall be hand dug at the soil horizon to be tested approximately one-inch larger than the diameter of the test canister and approximately six inches deep. The sides of the test hole shall not be smoothed.
 - 3) Place one-half inch of clean coarse sand in the bottom of the hole and place the canister firmly into the hole. The space around the canister shall then be filled with coarse sand. Tamp the coarse sand to firmly fill any void space around the test canister.
 - 4) Fill the canister with water to the soil horizon level and allow to drain until approximately one inch of water remains, or a minimum of 1 hour.
 - 5) Refill the canister to the soil horizon level. After the water level drops approximately one inch, start the test. Record time versus water level as the

water level drops. The percolation rate is the length of time for the water level to drop per inch. The field scientist shall record the rate of percolation for a minimum of two hours or until the water level has dropped a minimum of three inches after the start of measurements.

- 6) The subgrade must be capable of infiltrating water at least one inch per hour (1"/hr) in planted areas and 2"/hour in bioinfiltration soil areas. If subgrade fails to pass water at the minimum rate, the soils shall be re-worked or drainage provisions shall be required.
3. In addition, in-place soil blends may be sampled and tested by the Owner. Tests for gradation and organic matter content shall be compliant with Specifications for that blend.
- E. Prior to ordering the below listed materials, submit representative composite samples to the Landscape Architect, Owner and Soil Scientist for selection and approval. Representative composite samples shall be composed of at least five equal-sized subsamples mixed thoroughly and resampled for submittal. Do not order materials until Landscape Architect's, Owner's Representative's and Soil Scientist's approval has been obtained. Delivered materials shall closely match the approved samples.
1. Base Components
 - a. Leaf and Yard Waste Compost: sample of one gallon.
 - b. Base Loam (for imported soil blends): sample of one gallon.
 - c. Coarse Sand (for imported soil blends, and drainage layer as required): sample of one gallon.
 2. Test Blends
 - a. Planting Bed Soil: sample of one gallon.
 - b. Horticultural Subsoil: sample of one gallon.
 - c. Sand Based Structural Soil: sample of one gallon.
 - d. Bioretention Planting Soil: sample of one gallon.
 - e. Bioretention Subsoil: sample of one gallon.
 3. Production Stockpiles
 - a. Planting Bed Soil: sample of one gallon.
 - b. Horticultural Subsoil: sample of one gallon.
 - c. Sand Based Structural Soil: sample of one gallon.
 - d. Bioretention Planting Soil: sample of one gallon.
 - e. Bioretention Subsoil: sample of one gallon.
 4. Materials
 - a. 3/4" Crushed Stone sample of 1 gallon.
 - b. Sand and Gravel sample of one gallon.
 - c. Letter Certification description of feed stock for Compost.
 - d. Sod Farm Growing Medium: one square foot sample of Sod.
 - e. Stone Mulch Components for Talus slopes
 1. AASHTO #57 Crushed Stone (3/4") (alternate)
 2. AASHTO #6 Crushed Stone (1/2")
 3. AASHTO #7 Crushed Stone (3/8")
 4. AASHTO #8 Crushed Stone (5/16")
 5. AASHTO #9 Crushed Stone (No. 4)
 6. Washed AASHTO #10 Crushed Stone (No. 4)

- F. Sources for Base Loam, Sand, and Compost: Submit information identifying sources for all soil components and the firm responsible for mixing of planting soil mixes.
1. Landscape Architect, Soil Scientist and Owner shall have the right to reject any soil .
 2. Soil mix supplier shall have a minimum of five years-experience at supplying custom planting soil mixes.
 3. Submit supplier name, address, telephone and fax numbers and contact name.
 4. Submit certification that accepted supplier is able to provide sufficient quantities and qualities of materials for the entire project.
 5. Final approval of soil supplier shall be made after on-site review of supplier's facility by the Soil Scientist.
 6. Recommended Soil Suppliers
 - a. Stancils, 499 Mountain Hill Road, Perryville, MD 21903, Contact: Chris Siciliano, chris@stancills.com, 877-536-9572, www. stancills.com.
 - b. WeCare Denali - 7800 Kabik Ct. Woodbine, MD 21797, Contact: David Lundberg, 240-315-5357, www.wecarecompost.com.
 - c. Luck Ecosystems, Stonemule Rd, VA. Contact: John Irby 877-904-5825, https://luckecosystems.com/locations
 - d. Advanced Soil Technologies, 276 Deans Rhode Hall Road, Dayton, NJ 08810, (O) 732.840.1700, Contact: Patrick Schlagenhaft, Patrick@AdvancedSoilTechnologies.com
 - e. The Dirt Company-Northeast, Inc., P.O. Box 156, Jamesburg, NJ., Contact Alan Marolf, (917)524-5054, amarolf@comcast.net
 - f. Renard Lakes, LLC, 12401 Crain Highway, Brandywine, MD 20613, Contact: Andrew Molloy Assistant Project Manager, Ph: (703)335-2255, RenardLakes.com
 7. Recommended Talus Stone Suppliers
 - a. Aggtrans, 7535 Railroad Avenue, Harmans, MD 21077 (410) 766-4242, www.aggtrans.com.
 - b. Rockbridge Stone Products, 1024 Lone Jack Rd, Glasgow, VA 24555, www.rockbridgestone.com

1.8 DELIVERY, STORAGE AND HANDLING

- A. Refer to DIVISION 01 for overall material handling requirements.
- B. In addition, the following provision is established: Material should not be handled or hauled, placed or compacted when it is wet as after a heavy rainfall or is frozen. Soil should be handled only when the moisture content is within the moisture range specified in 329115, Part 1.
- C. Store and handle packaged materials in strict compliance with manufacturer's instructions and recommendations. Protect all materials from weather, damage, injury and theft.
- D. Sequence deliveries to avoid delay. On-site storage space is extremely limited and shall be permissible only with written notice from the owner. Deliver materials only after preparations for placement of planting soil have been completed.
- E. Prohibit vehicular and pedestrian traffic on or around stockpiled planting soil.
- F. Blended soil mixes that are to be stockpiled longer than two weeks shall not be placed in mounds greater than ten feet high. If soil stockpiles greater than ten feet high are present longer than two

weeks then the contractor shall break down and disperse soil so that mounds do not exceed the ten foot height restriction for longer than two weeks. Ten-foot high stockpiles that are in place longer than three months shall be aerated by rolling over or moving.

- G. Vehicular access to the site is restricted. Before construction, the Contractor shall submit for approval a plan showing proposed routing for deliveries and site access.

1.9 MOCK-UPS

- A. General: Mock-ups are required for subgrade preparation and soil placement and must be approved by the Soil Scientist or Landscape Architect. If a mock-up is not approved by the Soil Scientist or Landscape Architect the Contractor shall provide additional mock-ups as required, at no cost to the Owner and until an approved mock-up is obtained. Mock-ups must be approved before soil placement is begun. Approved mock-ups shall be considered the accepted practice for designated soils. The mock-up shall be built in a location as directed by Landscape Architect and at a location that will become part of the final work, unless otherwise noted. A field testing agency is required and should be equipped with the means to conduct field density testing on placed soils. The Contractor shall be equipped with acceptable compaction tools.
- B. Subgrade Preparation Mock-up: The subgrade shall be ripped or scarified according to the procedures outlined in Part 1 and Part 3, tested for infiltration capacity and recompressed prior to the installation of Planting Soils.
- C. The contractor shall document methods and equipment of stripping and stockpiling existing topsoil without commingling the topsoil with the underlying subgrade, as well as storage meeting specification parameters. (if required).
- D. Plant Bed Soil Mock-up: Upon acceptance of all materials and prior to installing Horticultural Subsoil and Planting Bed Soil, the Contractor shall construct mock-up in a designated area. Build mock-up of Horticultural Subsoil and Planting Bed Soil in a bed to allow the Landscape Architect or Soil Scientist to review the installation methods. Approved materials include drainage layer, Horticultural Subsoil, and Planting Bed Soil as specified. Moisture content of all soils must be compliant with this section.
- E. Sand Based Structural Soil Mock-up: Upon acceptance of all materials and prior to installing Sand-Based Structural Soil, the Contractor shall construct mock-up on site in a designated area. Build mock-up of Structural Soil that will support Pavement to allow the Landscape Architect or Soil Scientist to review the installation methods. Approved materials include drainage layer, Sand-Based Structural Soil, 3/4" Crushed Stone and Aeration Pipe as specified. Moisture content of the Sand-Based Structural Soil must be compliant with this section.
- F. Bioinfiltration Profile Mock-up: Upon acceptance of all materials and prior to installing the Bioinfiltration Soils, the Contractor shall construct mock-up on site in a designated area. Build mock-up of Bioinfiltration Planting Soil and Bioinfiltration Subsoil in a bed to allow the Landscape Architect or Soil Scientist to review the installation methods. Approved materials include drainage layer, Bioinfiltration Planting Soil and Bioinfiltration Subsoil. Moisture content of all soils must be compliant with this section.

- E. Habitat Soils with Graded Aggregate Stone Mulch Mockup: Upon acceptance of all materials and prior to installing Horticultural Subsoil and Planting Bed Soil, the Contractor shall construct mock-up in a designated area on a slope of approximately seven percent. Build mock-up of Horticultural Subsoil and Planting Bed Soil with Graded Aggregate material over the Planting Bed Soil in a bed to allow the Landscape Architect or Soil Scientist to review the installation methods. Approved materials include drainage layer, Horticultural Subsoil, and Planting Bed Soil as specified. Moisture content of all soils must be compliant with this section.
- F. Steep Slope Habitat Soils with Crusher Run Aggregate Stone Mulch Mockup: Upon acceptance of all materials and prior to installing Horticultural Subsoil and Planting Bed Soil, the Contractor shall construct mock-up in a designated area with a slope of approximately 30%. Build mock-up of Horticultural Subsoil and Planting Bed Soil with Crusher Run Aggregate in a bed to allow the Landscape Architect or Soil Scientist to review the installation methods. Approved materials include drainage layer, Horticultural Subsoil, and Planting Bed Soil as specified. Moisture content of all soils must be compliant with this section.

1.10 PROJECT/SITE CONDITIONS

- A. Soil Moisture Content
 - 1. Contractor shall not move, blend or grade soil when moisture content is so great that excessive compaction will occur, nor when it is so dry that dust will form in the air or that clods will not break readily, nor when it is frozen. Apply water, if necessary, or allow drying to bring soil moisture between 60% of optimum moisture content (OMC) on the dry side of optimum and optimum moisture content as determined by ASTM D698 for compaction, grading and plantings. All Planting Soils must be at or below OMC for placement and compaction.
 - 2. Field Soil Moisture Screening Test
 - a. Form soil in palm of hand, if soil retains shape and crumbles upon touching, the soil may be worked.
 - b. If the soil will not retain shape, it is too dry and shall not be worked.
 - c. If the soil retains shape and will not crumble, it is too wet and shall not be worked.
 - d. If the soil glistens or free water is observed when the sample is patted in the palm of hand the soil is too wet and shall not be worked.
 - e. Field Moisture Screening Test is a qualitative guideline test shall not be used for compliance to Specification Requirements.
 - f. Applicable field method for soil moisture content testing shall be by ASTM 4959 - Determination of Water Content of Soil by Direct Heating

1.11 ACCEPTANCE

- A. Request for Acceptance: In writing, request Landscape Architect's and Soil Scientist's inspection for acceptance at least 10 days in advance of preferred inspection date. Do not request inspection for acceptance until work is 100% complete and in compliance with the Contract requirements.
- B. Final Acceptance: Final Acceptance shall be the day on which the project is 100% complete and accepted by the Landscape Architect and Owner, including "Punch List" items. Maintenance and Warranty work shall commence at Final Acceptance.

1.12 WARRANTY AND MAINTENANCE

- A. Warranty: Provide written warranty agreeing to remove and replace work that exhibits defects in materials or workmanship. Defects shall include settlement, poor drainage, anaerobic soils, compacted soils or any other conditions that are detrimental to healthy plant growth. Length of Warranty shall be two years from Final Acceptance.
- B. Contractor shall begin maintenance immediately after placement. Contractor shall repair slope erosion, remove silt and clay deposits in low areas, maintain soil levels around plant root balls and soil saucers, and monitor irrigation rate and frequency to maintain soil moisture content within horticultural sustaining limits.

PART 2 - PRODUCTS

2.1 BASE COMPONENTS

- A. Soil Performance Criteria
 - 1. All soil blends specified below shall meet all parameters as noted.
 - a. Soil blends shall be free-draining. Achieving minimum saturated hydraulic conductivity value (SHCV) for each blend is of paramount importance. SHVC for each soil blend is specified below.
 - b. Soil blends shall not be over-compacted: compliance with in-place compaction value for each soil blend is of paramount importance. Compaction value for each soil blend is specified below.
- B. General
 - 1. All planting mix material shall fulfill the requirements as specified and be tested to confirm the specified characteristics.
 - 2. Samples of individual components of planting soil mixes in addition to blended plant mixes shall be submitted by the Contractor for testing and analysis to the approved testing laboratory. Comply with specific materials requirements specified.
 - a. No base component material or soil components for plant mixes shall be used until certified test reports by an approved soils laboratory have been received and approved by the Landscape Architect and Soil Scientist.
 - b. As necessary, make all soil mix amendments at any time until completion.
 - 3. The Landscape Architect and Soil Scientist may test at their discretion all soil samples for Quality Control and Quality Assurance. If samples fail to be compliant with specifications, the Contractor shall pay all testing fees.
- C. Soil Samples: Contractor is responsible for paying costs for testing. Submit 1 gallon planting soil samples in two phases. Submit samples concurrent with horticultural soil test reports in both phases. Submit as Phase One, planting soil base components for approval. Only after approval of Phase One components, submit as Phase Two, soil blend test batches for approval. After approval of test batches submit as Phase Three production stockpile test results. All reports must be from recent analyses, less than 90 days old, and represent materials that are available for delivery to the site.
 - 1. Phase One Submittals of Planting Soil Base Components:
 - a. Base Loam
 - b. Compost
 - c. Coarse Sand for Blends and for Drainage Layer (if required)

2. Phase Two Submittals of test batch Planting Soils: mixing and batching of soils shall be produced with the same equipment and in the same manner as production stockpiles will be produced for Phase Three.
 - a. Planting Bed Soil
 - b. Sand based Structural Soil
 - c. Horticultural Subsoil
 - d. Bioretention Planting Soil
 - e. Bioretention Subsoil
3. Phase Three Submittals shall be identical to Phase Two Submittals and be conducted for each 200 cubic yards of soil material prepared for the project site. After three consecutive compliant tests, the Contractor may increase the interval of testing to 500 cubic yards.
4. Submit reports for each of the above samples: Submit sample from each proposed source for testing and approval. Deliver samples to both the testing laboratory and the project soil scientist and pay costs. Send report directly to Owner's Representative.
5. Soil Sample Submittals: Sampling shall be done by the Contractor. The size of the samples and method of sampling shall be as follows: Samples shall be representative of the material to be brought to the site. Each sample shall be a Composite Sample, which consists of 5 separate sub samples taken from a minimum of (5) different locations at each source and mixed together to make the test sample.
6. The Contractor shall schedule this testing in order to permit reasonable time for testing, evaluation, and approvals prior to scheduled shipment and installation. Allow for a minimum of 4 weeks to perform testing and obtain approvals.

D. Imported Base Loam

1. The Contractor shall supply Base Loam from off-site sources. Base Loam as required for blending with other components shall be a naturally occurring soil formed from geologic soil-forming processes without admixtures of sand or organic matter sources (composts). Base Loam shall be free of subsoil, Horizon B and C soils, large stones, earth clods, sticks, stumps, clay lumps, roots or other objectionable, extraneous matter or debris. Base Loam shall also be free of quack-grass rhizomes, Agropyron Repens, and the nut-like tubers of nutgrass, Cyperus Esculentus, and all other primary noxious weeds. Base Loam shall not be delivered or used for planting while in a frozen or muddy condition. Base Loam for mixing shall conform to the following grain size distribution for material passing the #10 sieve.

U.S. Sieve Size Number	Percent Passing	
	Minimum	Maximum
10	---	100
18	85	100
35	70	95
60	50	85
140	36	53
270	32	42
0.002mm	3	6

2. The ratio of the particle size for 80% passing (D80) to the particle size for 30% passing (D30) shall be 8 or less ($D80/D30 < 8$).
3. Maximum size shall be one-inch largest dimension. The maximum retained on the #10 sieve shall be 15% by weight of the total sample.
4. The organic content shall be between 4.0 and 8.0 percent by weight.
5. pH shall be between 6.0 and 7.4.

6. Chemical analysis shall be undertaken for Phosphorus, Potassium, Calcium, Magnesium, Aluminum, Iron, Manganese, Lead, Cation Exchange Capacity, Soluble Salts, organic matter content, acidity (pH) and buffer pH. Test reports shall be reviewed for phytotoxic high levels or extreme deficiencies.

E. Sand

1. Sand for Drainage Layer (if required) and Soil Mixes shall be uniformly graded medium to coarse sand consisting of clean, inert, rounded to sub-angular grains of quartz or other durable rock free from loam or clay, surface coatings, limestone, mica, calcareous materials and deleterious materials with the following gradation, for material passing the #10 Sieve.

U.S. Sieve Size Number	Percent Passing	
	Minimum	Maximum
10	100	--
18	60	80
35	25	45
60	8	20
140	0	8
270	0	3
0.002mm	0	0.3

2. Maximum size shall be one half-inch largest dimension.
3. The maximum retained on the #10 sieve shall be 10% by weight of the total sample.
4. The ratio of the particle size for 70% passing (D70) to the particle size for 20% passing (D20) shall be 3.0 or less ($D70/D20 < 3.0$).
5. pH of Sand shall be 7.2 or less, and shall produce no reaction in an acid test.

F. Leaf Yard Waste Compost

1. Organic Matter for amending planting soil and stripped existing topsoil shall be a stable, humus-like material produced from the aerobic decomposition and curing of leaves and yard waste, composted for a minimum of one year (12 months). The Leaf Yard Waste Compost shall be free of debris such as plastics, metal, concrete or other debris. The leaf yard waste compost shall be free of stones larger than ½-inch, larger branches and roots. Wood chips over 1" in length or diameter shall be removed by screening. The compost shall be a dark brown to black color and be capable of supporting plant growth with appropriate management practices in conjunction with addition of fertilizer and other amendments as applicable, with no visible free water or dust, with no unpleasant odor, and meeting the following criteria as reported by laboratory tests.
 - a. The ratio of carbon to nitrogen shall be in the range of 12:1 to 25:1.
 - b. Stability shall be assessed by the Solvita procedure. Protocols are specified by the Solvita manual (version 5.0). The compost must achieve a maturity index of 6 or more as measured by the Solvita scale. Stability tests shall be conducted by Woods End Laboratories, Augusta, Maine.
 - c. Organic Content shall be at least 20 percent (dry weight). One hundred percent of the material shall pass a 1/2-inch (or smaller) screen. Debris such as metal, glass, plastic, wood (other than residual chips), asphalt or masonry shall not be visible and shall not exceed one percent dry weight. Organic content shall be determined by weight loss on ignition for particles passing a number 10 sieve.
 - d. pH: The pH shall be between 6.5 to 7.2 as determined from a 1:5 soil-distilled water suspension.

- e. Salinity: Electrical conductivity of a one to five soil to water ratio extract shall not exceed 2.0 mmhos/cm (dS/m).
- f. Nutrient content shall be determined by the Soil Testing Laboratory or equivalent laboratory and utilized to evaluate soil required amendments for the mixed soils. Chemical analysis shall be undertaken for Ammonium Nitrogen, Phosphorus, Potassium, Calcium, Aluminum, Magnesium, Iron, Manganese, Lead, Soluble Salts, Cation Exchange Capacity, soil reaction (pH), and buffer pH.
- g. Compost shall not contain phytotoxic residual herbicide levels or other oil or hazardous materials (OHM) above levels established for soils used in residential applications.

2.2 NON-SOIL MATERIALS

- A. AASHTO #57 Crushed Stone (3/4") (alternate) Stone Mulch Material. Stone mulch material must be reviewed and accepted for rock type, source, composition, size and angularity.
 - 1. Crushed Stone shall comply with AASHTO #57.
- B. AASHTO #6 Crushed Stone (1/2") Stone mulch material must be reviewed and accepted for rock type, source, composition, size and angularity.
 - 1. Crushed Stone shall comply with AASHTO #6.
- C. AASHTO #7 Crushed Stone (3/8") Stone mulch material must be reviewed and accepted for rock type, source, composition, size and angularity.
 - 1. Crushed Stone shall comply with AASHTO #7.
- D. AASHTO #8 Crushed Stone (5/16") Stone mulch material must be reviewed and accepted for rock type, source, composition, size and angularity.
 - 1. Crushed Stone shall comply with AASHTO #8.
- E. AASHTO #9 Crushed Stone (No. 4) Stone mulch material must be reviewed and accepted for rock type, source, composition, size and angularity.
 - 1. Crushed Stone shall comply with AASHTO #9.
- F. Washed AASHTO #10 Crushed Stone (No. 4) Stone mulch material must be reviewed and accepted for rock type, source, composition, size and angularity.
 - 1. Washed Crushed Stone shall comply with AASHTO #10.
- G. Perforated Underdrainage Pipe with Filter Fabric
 - 1. Planting underdrain pipe shall be ADS Single Wall Corrugated Polyethylene Pipe with filter fabric, manufactured by ADS Company, Columbus, OH 43221, or approved equal. Pipe shall be manufacturer's standard perforated configuration of suitable strength for the intended use. Jointing shall be made using manufacturer's standard snap coupling type fittings.
 - 2. Filter Fabric Covering for Corrugated Piping: Piping shall be factory-fitted with a filter fabric covering around piping. Filter fabric shall be Drain Sock filter fabric manufactured by ADS Company, Columbus, OH 43221, or approved equal.
 - 3. In all installations of Planting Underdrainage Pipe with Filter Fabric, Sand as specified herein shall surround the pipe on all sides at least two inches thick and as shown on the Drawings.

- H. Underdrainage Panel Pipe with Filter Fabric (if required)
 - 1. Drainage Pipe shall be 12" width AdvanEdge Pipe by Advanced Drainage Systems (ADS), 12" J-Drain MVP1 by JDR Enterprises or approved equal.
 - 2. In all installations of Underdrainage Panel Pipe with Filter Fabric, Sand as specified above shall surround the pipe on all sides at least two inches thick and as shown on the Drawings, except in cases where Panel Pipe is installed in crushed stone or on protection board. See Drawings.
- I. Non-perforated Underdrainage Pipe
 - 1. Pipe: Pipe shall be ADS Single Wall Corrugated Polyethylene Pipe, manufactured by ADS Company, Columbus, OH 43221, or approved equal.
 - 2. Pipe shall be manufacturer's standard non-perforated configuration of suitable strength for the intended use.
 - 3. Jointing shall be made using manufacturer's standard snap coupling type fittings
- J. Perforated Aeration Pipe and Cap
 - 1. Aeration pipe shall be 4-inch ADS Single Wall Corrugated Polyethylene Pipe, manufactured by ADS Company, Columbus, OH 43221, or approved equal. Pipe shall be manufacturer's standard perforated configuration of suitable strength for the intended use. Jointing shall be made using manufacturer's standard snap coupling type fittings.
- K. Non-perforated Aeration Pipe
 - 1. Aeration pipe shall be 4" ADS Single Wall Corrugated Polyethylene Pipe, manufactured by ADS Company, Columbus, OH 43221, or approved equal. Pipe shall be manufacturer's standard non-perforated configuration of suitable strength for the intended use. Jointing shall be made using manufacturer's standard snap coupling type fittings.
 - 2. Aeration Pipe Cap (alternate, see Irrigation Plans): Provide metal pipe cap, Zurn Z400B Type 'B' Round Strainer with heel proof square openings and secured grate, provided by Zurn Industries, 1801 Pittsburgh Avenue, Erie, PA, Tel: 855.663.9876, www.zurn.com, or approved equal.
- L. Filter Fabric
 - 1. Filter fabric shall be Mirafi 140N (<http://www.mirafi.com>) or approved equal.
- M. Erosion Control Mat shall be Geocoir 400 available from Belton Industries, or approved equivalent, and shall be installed according to the manufacturer's instructions at slopes of 3:1 or greater as shown on the Plans.
 - 1. GeoCoir 400 is available from Belton Industries.
 - 2. Erosion Control Mat shall be installed according to manufacturer's recommend practices, using manufacturer supplied hardware/staples/ties.
 - 3. Soils to be protected with Erosion Control Mat shall be compressed to the Specified compaction ranges and checked for compaction level prior to installing Erosion Control Mat.
- M. Sand and Gravel
 - 1. Free-draining sand and gravel borrow shall consist of inert, hard, durable stone and coarse sand, free from loam, clay, mica, surface coatings and deleterious materials and shall conform with the following gradation:

U.S. Sieve No.	Percent Passing by Weight	
	Minimum	Maximum
3 inch	100	-
1/2 inch	60	-
# 4	40	100
# 50	8	28
# 200	0	5

2. As a chinking layer above $\frac{3}{4}$ -inch crushed stone, Sand and Gravel borrow shall be placed in one lift not more than four inches thick before compaction. Compaction shall be by vibration to a density between 90 and 95% Standard Proctor. Saturated hydraulic conductivity of the sand and gravel shall be not less than 30 inches per hour according to ASTM D2434 when compacted to a minimum of 95% Standard Proctor, ASTM 698.

2.3 SOIL AND BLENDED MATERIALS

- A. Uniformly mix ingredients by either windrowing/tilling on an approved hard surface area or by processing through a screener. Organic matter shall be maintained moist, not wet, during mixing. Amendments shall not be added unless approved to extent and quantity by the owner and additional tests have been conducted to verify type and quantity of amendment is acceptable. Percentages of components, unless otherwise noted, will be established upon completion of individual test results for components of the various mixes. Approximate mixing ratios are provided, but may require adjustment, depending on the final materials. As necessary, the contractor shall adjust suggested ratios to produce compliant blends.
- B. Planting Soil Mixes specified below are based on blends of Base Loam with approved organic matter and sand. After component percentages are determined by the Contractor, each planting soil mix shall be tested for physical and chemical analysis under 1.7 of this Specification Section.
- C. Planting Bed Soil
 1. Planting Soil shall consist of a blend of approximately one-part by volume of Sand, one part by volume of Base Loam and one part by volume of Leaf Yard Waste Compost (1S:1L:1C). Blending of the components shall be carried out with earth moving equipment or screener prior to placement. The components shall be blended to create a uniform mixture as determined by the Landscape Architect. The final mix shall conform to the following gradation requirements for material passing a Number 10 sieve.

U.S. Sieve Size Number	Percent Passing	
	Minimum	Maximum
10	100	-
18	85	95
35	60	85
60	42	65
140	21	44
270	18	24
0.002mm	2	5

2. Maximum size shall be one-half inch largest dimension. The maximum retained on the #10 sieve shall be 15% by weight of the total sample.
3. The ratio of the particle size for 80% passing (D80) to the particle size for 30% passing (D30) shall be 8.0 or less, (D80/D30 <8.0). Tests shall be by combined hydrometer and wet sieving in compliance with ASTM 6913 or ASTM D7928.

4. The final mix shall have an organic content between 5.0 and 7.0 percent by weight.
5. pH shall be 6.0 to 7.0
6. The final mix shall have a saturated hydraulic conductivity of not less than 2.0 inches per hour according to ASTM D2434 when compacted to a minimum of 85 percent Standard Proctor.
7. Chemical analysis shall be undertaken for Phosphorus, Potassium, Calcium Magnesium, Aluminum, Iron, Manganese, Lead, Cation Exchange Capacity, Soluble Salts, organic matter content, acidity (pH) and buffer pH.

D. Horticultural Subsoil

1. Imported Horticultural Subsoil shall consist of a blend of approximately two-part by volume of Sand, one part by volume of Base Loam (2S:1L). The following gradation for material passing a Number 10 Sieve shall be achieved in the final mix.

U.S. Sieve Size Number	Minimum	Maximum
10	100	--
18	85	95
35	55	80
60	30	60
140	20	33
270	12	17
0.002mm	1	3

2. Maximum size shall be one half-inch largest dimension. The maximum retained on the #10 sieve shall be 10% by weight of the total sample.
3. The ratio of the particle size for 80% passing (D80) to the particle size for 30% passing (D30) shall be 6.5 or less, (D80/D30 <6.5).
4. The final mix shall have an organic content between 2.0 and 3.0 percent.
5. The final mix shall have a saturated hydraulic conductivity of not less than 2.5 inches per hour according to test procedure ASTM D2434 when compacted to a minimum of 92 percent Standard Proctor ASTM D698.
6. Chemical analysis shall be undertaken for Ammonium Nitrogen, Phosphorus, Potassium, Calcium Magnesium, Aluminum, Iron, Manganese, Lead, Cation Exchange Capacity, Soluble Salts, organic matter content, acidity (pH) and buffer pH.
7. pH shall be 6.0 to 7.0.

E. Sand Based Structural Soil (SBSS)

1. Base Loam, Sand and Compost, each as specified above, shall be combined in an approximate mix ratio of four parts by volume Sand to one part by volume Imported Base Loam to one and one half part by volume Compost (4S:1L:1.5C) to create a uniform blend which meets the following requirements.
2. Gradation for Material Passing the Number 10 Sieve:

U.S. Sieve Size Number	Minimum	Percent Passing Maximum
10	100	--
18	68	90
35	38	63
60	18	39
140	9	18

- | | | |
|---------|---|----|
| 270 | 8 | 10 |
| 0.002mm | 1 | 2 |
3. Maximum size shall be one-inch largest dimension. The maximum retained on the #10 sieve shall be 15% by weight of the total sample.
 4. Ratio of the particle size for 70% passing (D70) to the particle size for 20% passing (D20) shall be 3.2 or less. (D70/D20 <3.2)
 5. Saturated hydraulic conductivity of the mix: not less than 6 inches per hour, according to ASTM D2434 when compacted to a minimum of 92% of Standard Proctor MDD, ASTM 698.
 6. Organic content: between 2.5 and 3.5 percent by weight.
 7. The pH shall be between 6.0 and 7.0.
 8. Chemical analysis shall be undertaken for Phosphorus, Potassium, Calcium Magnesium, Aluminum, Iron, Manganese, Lead, Cation Exchange Capacity, Soluble Salts, acidity (pH) and buffer pH.
 9. After approval of the above horticultural testing, conduct Standard Proctor Test (ASTM 698) to obtain maximum dry density and optimum moisture content values.

F. Bioretention Planting Soil

1. Base Loam, Sand and Yard Waste Compost, each as specified above, shall be combined in an approximate mix ratio of three parts by volume Sand to one part by volume Base Loam to one part by volume Compost (3S:1L:1C) to create a uniform blend which meets the following requirements.
2. Gradation for Material Passing the Number 10 Sieve:

U.S. Sieve Size Number	Percent Passing	
	Minimum	Maximum
10	100	--
18	70	90
35	42	75
60	24	40
140	13	20
270	10	13
0.002mm	2	4

3. Maximum size shall be one-inch largest dimension. The maximum retained on the #10 sieve shall be 15% by weight of the total sample.
4. Ratio of the particle size for 70% passing (D70) to the particle size for 20% passing (D20) shall be 4.2 or less. (D70/D20 <4.2)
5. Saturated hydraulic conductivity of the mix: not less than 4 inches per hour according to ASTM D5856-95 (2000) when compacted to a minimum of 88% Standard Proctor, ASTM 698.
6. Organic content: between 2.0 and 3.0 percent by weight.
7. The pH shall be between 6.0 and 6.5.

G. Bioretention Subsoil

1. Bioretention Subsoil shall meet the requirements of Bioretention Soil above except that the percentage of compost shall be reduced to create a blend that has an Organic Content between 1.0 and 2.0 percent by weight.

H. Sand Compost Mix

1. Sand Compost Mix shall consist of a 50/50 blend of approved sand and compost for use in amending existing in place soils in tree protection zones and other soil restoration areas as directed by the Planting Consultant, Soil Scientist and Landscape Architect. Additional testing is not required provided the sand and compost are accepted by the Design Team.
- I. Graded Aggregate Crushed Stone Blend Stone Mulch
 1. Graded Aggregate shall consist of a blend of equal parts by volume AASHTO Crushed Stone Numbers 6, 7, 8 and 9, plus one-half part by volume washed AASHTO Crushed Stone Number 10. The Soil Scientist shall review a physical sample of the blend and may require adjustments to the blend component amounts.
- J. Eight-Inch Crusher Run Talus Stone Mulch
 1. Eight-Inch Crusher Run shall be washed, eight-inch maximum size evenly graded, angular, crushed stone material from a rock crushing operation or a blend of crushed stones graded evenly from eight inch angular stones to quarter-inch crushed stone. The blend must be approved for gradation and angularity by the Soil Scientist.
- K. Washed Stone Dust Talus Stone
 1. Stone Dust Surfacing shall consist of Stone Dust, as specified herein, and of the same material as talus stone which has been washed to remove the finer portion of the material and to achieve the following gradation:

U.S. Sieve No.	% Passing by Weight	
	Minimum	Maximum
1/4 inch	100	--
# 10 sieve	60	90
# 20 sieve	25	55
# 40 sieve	5	25
# 100 sieve	0	12
# 200 sieve	0	3

PART 3 – EXECUTION

3.1 COORDINATION

- A. Verify that all Submittals and Test Results required herein have been reviewed and accepted by the Soil Scientist.
- B. Refer to Division 01.
- C. Coordinate activities with other project Contractors so that there is no soil disturbance from traffic or other construction activities subsequent to placement of planting soil mixes. Report disturbances to Soil Scientist and Landscape Architect and implement corrective measures as necessary.
- D. Pre-Installation Examination Required: The Contractor shall examine previous work, related work, and conditions under which this work is to be performed and shall notify Landscape

Architect in writing of all deficiencies and conditions detrimental to the proper completion of this work. Beginning work means Contractor accepts substrates, elevations, previous work, and conditions. The Contractor shall not place any planting soil until all work in adjacent areas is complete and approved by the Landscape Architect and Soil Scientist.

- E. Examination of Subgrade: The subgrade shall be examined by the Contractor prior to the start of soil placement and planting. Any deficiencies shall be noted and related to the Landscape Architect in writing prior to acceptance of the subgrade by the Landscape Contractor. Deficiencies include, but shall not be limited to the following:
 - 1. Construction debris present within the planting areas.
 - 2. The subgrade is at incorrect elevations for installing the designed soil profile
 - 3. Subgrade not compacted as specified.
- F. Planting Soil Preparation: Refer to Part 2 of this Section for planting soil and mixtures. Examine soil and remove foreign materials, stones over 1/2", and organic debris over 2" in length. Mix-in fertilizers and amendments as required by tests and as approved by the Landscape Architect and Soil Scientist. All preparation and mixing shall be accomplished when the soil moisture content is less than field capacity. If lime is to be added, it shall be mixed with dry soil before fertilizer is added and mixed.

3.2 EXCAVATION AND REMOVAL

- A. Refer to Section 312000 – Earth Moving
- B. The Contractor is responsible for carefully delineating the limits of work, along with excavating and removing the materials to the elevations shown on the plans to accommodate the new soil profile.
- C. Stripping, stockpiling and re-use of existing topsoil (if required)
 - 1. The extent of existing in-place soils shall be carefully delineated in the field and then stripped and stockpiled without incorporation of the underlying subsoil or other undesirable soils. The stripped topsoil must then be tested in accordance with this Section. If the stockpile is greater than 6 feet tall, the pile shall be rolled over every 3 months to increase aeration, to further homogenize, and to prevent weed growth.

3.3 MIXING OF PLANTING SOIL MIXES

- A. Planting mixtures shall be produced with equipment that blends together each component in a thorough and uniform manner.

3.4 SUBGRADE PREPARATION, INSPECTION AND PERCOLATION TESTING

- A. At all planted areas, after subgrade levels have been reached, the Landscape Architect or Soil Scientist shall observe de-compaction and preparation of the subgrade according to this Section and inspect soil conditions to evaluate subsurface drainage conditions. Heavy Site Subgrade Compaction Mitigation is not required in areas of drainage layer.

- B. In areas with no drainage layer, coordinate the following scarification work to eliminate subgrade compaction when located in Planting areas. Maintain 12" clearance from any underground utilities during subgrade de-compaction.
1. Heavy Site Subgrade Compaction Mitigation:
 - a. Heavily compacted subgrade areas such as, but not limited to, temporary parking areas, material stockpile areas, temporary roadways, construction areas and areas around structures and other similar areas.
 - b. Prior to establishing the final subgrade, these areas shall be dug up or ripped to a depth of (18) inches to break up the soil hard pan, then re-compacted with two passes of the tracks of a wide track bulldozer size D-6 or smaller, or other approved equipment.
 2. General Site Subgrade Compaction Mitigation for all general Planting areas that are not heavily compacted and would be mitigated as specified in Item 1 above:
 - a. Immediately prior to placing Planting Soil, the entire subgrade shall be loosened to a minimum depth of 8-inches using the teeth of a backhoe or other suitable equipment, then re-compacted with two passes of the tracks of a wide track bulldozer size D-6 or smaller, curled bucket of an excavator, or other approved equipment. Vibratory compaction of subgrade in planted areas is prohibited.
- C. After Subgrade has been scarified as described above, it shall be recompressed by the tracks of a small exactation equipment, curled bucket of an excavator, static rolling or other accepted means. Verify the subgrade passes water at or greater than the minimum requirement.
- D. Remove all stones or debris greater than 6" in any dimension from the subgrade prior to placing Planting Soils.

3.5 BACKFILLING OF PLANTING SOIL LAYERS

- A. Planting Soil Placement Preparation:
1. Verify that the underdrainage system has been installed and accepted.
 2. Notify the Landscape Architect and Soil Scientist of soil placement operations at least seven calendar days prior to the beginning of work.
 3. The Landscape Architect will stake locations for trees and shrubs during placement of the planting soils.
 4. After subgrade compaction the upper few inches shall be scarified before placement of planting soil.
- B. Placement of Sand Drainage Layer (if required)
1. Sand Drainage layer shall be placed in conformance with the Drawings and shall be graded smooth and parallel to the finish grades.
 2. Sand Drainage layer shall be compacted to with 2 passes of a vibratory plate compactor to approximately between 90 and 94 percent Standard Proctor.
- C. Placement of all Horticultural Soils
1. Placement of all Planting Soils and plant stock shall be placed simultaneously to prevent excessive traffic over soil lifts and the final grade so as to prevent the creation of undesirable soil compaction. The Landscape Architect will stake trees during placement of the planting soils. Soil backfill around the plant root ball shall be layered in the same depth and sequence as the surrounding soil profile. Compaction due to moving and

- placement of plants, removal of excess soils or from any other operation including foot traffic shall be decompacted.
2. All Planting Soils shall be placed in lifts not to exceed 8 inches in thickness and compacted to meet minimum and maximum requirements as specified below. The surface of each compacted lift shall be scarified by raking or other approved methods to a minimum depth of one-inch prior to placement of the following lift.
 - a. Horticultural Subsoil shall be compacted to between 84 and 86 percent Standard Proctor, except on the Habitat area Horticultural Subsoil shall be compacted to between 86 and 88 percent Standard Proctor
 - b. Soils beneath the rootballs shall be compacted to between 88 and 92 percent Standard Proctor to create a firm pedestal and prevent settlement of the rootballs.
 - c. Planting Bed Soil shall be compacted to between 83 and 85 percent Standard Proctor except in the Habitat Area Planting Bed Soil shall be compacted to between 85 and 87 percent Standard Proctor.
 - d. BioInfiltration Soil shall be compacted to between 83 and 85 percent Standard Proctor.
 - e. BioInfiltration Subsoil shall be compacted to between 84 and 86 percent Standard Proctor.
 - f. In all cases, the soil being placed shall be in a dry to damp condition. No wet soils shall be placed. All testing of in-place density for planting soil shall be made according to ASTM methods or by the Soil Scientist with a compaction probe.
 3. All Planting Soils should never be moved or worked when wet or frozen.
 4. The Contractor shall place barricades as required to prevent any unnecessary compaction of planting soil from vehicles, equipment, or pedestrian traffic.
 5. As required, percolation tests of all Planting Soils shall be performed using Turf-Tec IN2-W Infiltrometer utilizing manufacturer's operating instructions, or via the Perforated Canister Method.
 - a. In-place infiltration tests shall be carried out at a rate of one test per 1,000 square feet for both the subgrade and each type of placed horticultural soil, or at direction of Landscape Architect or Soil Scientist
 - b. Landscape Architect or the Owner's Representative may direct additional testing in locations subject to compaction or adverse Contractor operations.
 - c. Placed planting soils exhibiting noncompliant percolation values shall be removed or restored to compliant conditions.
 - d. In-place field tests must meet or exceed Saturated Hydraulic Conductivity standards specified in Part 2 for each blend.
 - e. If test results are less than specified standards, the Landscape Architect and Soil Scientist will evaluate possible solutions including removal of the soil blend and installation of compliant blend soil. Any repair/replace operation by the Contractor shall be at no additional charge.
 6. Sand-Based Structural Soil shall be spread in lifts not greater than eight inches and compacted with a minimum of three passes of vibratory compaction equipment to a density between 92 and 96 percent Standard Proctor Maximum Dry Density. Stop work and notify Soil Scientist if more than 8 passes are required to achieve minimum density requirement.
 - a. Prepare Mock-Up of initial Sand Based Structural Soil Installation as provided in this Specification. After approval of the Mock-Up, all subsequent installation of Sand Based Structural Soil shall be placed according to approved methods.

- b. A medium to large sized vibratory plate compactor should be used to compact Sand Based Structural Soil. Moisture content of Sand Based Structural Soil should be as close to optimum moisture content (as determined by Standard Proctor Test) as possible for best results.
 - c. Rake the surface of each accepted lift of Sand Based Structural Soil to break the surface glaze caused by the compaction equipment, prior to placing subsequent lifts.
 - d. Density testing for Sand Based Structural Soil must be by the following acceptable Density Test Methods: ASTM D1556 Density of soil and rock in place using Sand Cone Method or ASTM D6938 Nuclear Methods after ASTM D698 Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort. Density testing shall be conducted at a minimum of one test for each plant bed for each lift. Geotechnical testing agency must be on-site to conduct soil moisture and density tests during installation of Sand Based Structural Soil. ASTM 1556 Sand Cone method is the default test and preferred.
 - e. Sand-Based Structural Planting Medium shall be placed in 8" lifts to a minimum depth of two feet within the areas shown on the Drawings, except as otherwise indicated.
 - f. A minimum of six-inches of ¾- inch crushed stone shall be placed over the Sand-Based Structural Planting Medium in areas shown on the Plans.
 - g. Aeration piping shall be placed within the crushed stone layer above Sand Based Structural Soils. Aeration Piping shall be connected to open air connections at the locations shown on the Plans. Open air connections shall be covered with an aeration grate and sump as shown on the Plans.
 - h. Install irrigation soil moisture sensors at the time of SBSS installation, or at the direction of the irrigation consultant.
- 7. In-place infiltration tests shall be carried out at a rate of one test per 1,000 square feet for both the subgrade and each type of placed horticultural soil, or at direction of Landscape Architect or Soil Scientist
 - 8. Landscape Architect or the Owner's Representative may direct additional testing in locations subject to compaction or adverse Contractor operations.
 - 9. Placed planting soils exhibiting noncompliant percolation values shall be removed or restored to compliant conditions.
 - 10. In-place field tests must meet or exceed Saturated Hydraulic Conductivity standards specified in Part 2 for each blend.
 - 11. If test results are less than specified standards, the Landscape Architect and Soil Scientist will evaluate possible solutions including removal of the soil blend and installation of compliant blend soil. Any repair/replace operation by the Contractor shall be at no additional charge.

3.6 HABITAT LANDSCAPE PLANT INSTALLATION AND PLACEMENT OF STONE MULCH

- A. For Habitat areas with slopes at or less than 20% set rootballs approximately three inches below final grades which is approximately three inches above the level of installed Planting Soils. Place Plant Bed Soil around the rootballs to create a two horizontal to one vertical slope from the top of the rootball to the placed Plant Bed Soil.
 - 1. Place pervious root barrier over planting soils.

2. Place rounded peastone in a three-inch thick and three-inch wide band around the trunks of trees and shrubs. For perennials and grasses, place three inches of Medim to Coarse Sand, as specified, over the rootballs. Place three inches of Graded Aggregate over the remainder of rootballs for shrubs and trees, and for all plantings increase to six inches away from rootballs.
 3. Wet the Graded Aggregate and compact with a small vibratory plate compactor.
- B. For Habitat areas with slopes greater than 20% set rootballs approximately three inches below final grades, which is approximately nine inches above the level of installed Planting Soils.
1. Place pervious root barrier over planting soils.
 2. Place rounded peastone in a three-inch thick and three-inch wide band around the trunks of trees and shrubs. For perennials and grasses, place three inches of Medim to Coarse Sand, as specified, over the rootballs. Place three inches of Crusher Run Aggregate over the remainder of rootballs for shrubs and trees, and for all plantings increase to six inches away from rootballs.
 3. Wet the Crusher Run Aggregate and compact with a small vibratory plate compactor

3.7 SOIL RESTORATION AND AMENDMENT IN TREE PROTECTION ZONES

- A. Soil Restoration and Amendment within tree protection zones must be conducted by use of an air spade. Air spading shall be carried out under the supervision of a certified arborist with a minimum of five years experience with air spading techniques.
- B. Air spading for Soil Restoration and Amendment shall be carried out within the entire area of all tree protection zones and shown on the plans and within a minimum distance of ten feet of the tree stem for any other existing trees to remain. The depth of air spading and soil amendment shall be determined by an arborist to loosen as much soil as possible without root damage but should be a minimum of six inches unless the arborist determines a lesser depth is appropriate.
- C. After initial soil loosening, three inches of Sand-Compost Blend, as specified, shall be spread over the loosened soils. Mycorrhizal fungi and other amendments as recommended by the arborist should also be spread. The amendments should then be incorporated into the loosened soil by air spading, generally creating a six to eight-inch layer of blended soil.
- D. After air spading is complete, the area shall be compressed with one pass of the tracks of small construction equipment as approved by the Arborist or Soil Scientist. Following compression, the areas shall be thoroughly watered to wet the entire air spaded depth.

3.8 PROTECTION AND ADJUSTMENTS

- A. Protect newly graded areas from traffic, freezing and erosion. Keep free of trash, debris or construction materials from other work
- B. Repair and re-establish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or compacted due to subsequent construction operations or weather conditions. Scarify or remove and replace material to a depth as directed by the

Landscape Architect; reshape and re-compact at optimum moisture content to the required density.

- C. Where settling occurs, before final acceptance or during the warranty period, remove finish surfacing, backfill with additional approved material, compact to specified rates, and restore any disturbed areas to a condition acceptable to the Owner.
- D. Existing soils and placed horticultural soils shall be protected from wheeled equipment by installation of steel plates or protection mats. Should travel across existing soil or placed horticultural soils be necessary, the protection plan shall be submitted for approval by the Landscape Architect and Soil Scientist seven days prior to travel.

3.8 COORDINATION AND EXCESS MATERIALS

- A. Coordinate activities with other project contractors so that there is no soil disturbance from traffic or other construction activities subsequent to placement.
- B. Excess Planting Soil Mixture and Materials: Remove the excess planting soil mixture and materials from the site at no additional cost to the Owner unless otherwise requested.

3.9 POST-INSTALLATION TESTING

- A. In-place density testing is required in all areas. Placed planting soils must be inspected for compaction level by the Soil Scientist or by the following acceptable Density Test Methods: ASTM D1556 Density of soil and rock in place using Sand Cone Method or ASTM D6938 Nuclear Methods after ASTM D698 Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort.
- B. Density and moisture content testing for Sand-Based Structural Soil must be by ASTM D6938-10 Nuclear Methods, after ASTM D698 Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort. Density testing shall be conducted at a minimum of one test for each lift in each plant bed or a minimum of every 300 square feet.
- C. Placed Planting Soils must be capable of infiltrating water at the minimum rate provided in this Specification for each type of planting soil

END OF SECTION 32 9115

© 2026 Pine & Swallow Environmental

APPENDIX: PLANTING SOIL TESTING PROTOCOL

SECTION 32 9119 - LANDSCAPE GRADING

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Topsoil placement.
- B. Finish grading.

1.2 RELATED REQUIREMENTS

- A. Section 32 9219 - Seeding.

1.3 REFERENCE STANDARDS

- A. ASTM D5268 - Standard Specification for Topsoil Used for Landscaping and Construction Purposes; 2023.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Planter Soil: shall meet the following conditions:
 - 1. Soils shall be free from any materials detrimental to plant growth and will be of a pH normal range for plant growth pH 5.5-7.0.
 - 2. Soils shall contain no stones or other organic or inorganic debris greater than 1/2 inch in diameter.
 - 3. Soils shall possess from 6% to 12% organic matter by weight per ASTM D 2974.
 - 4. Mechanical analysis shall fall within the following particle ranges:
 - a) Sand (0.0502 mil dia.)Range: 30-70%Avg. Percentage: 50%
 - b) Silt (0.002-0.05 mil dia.)Range: 20-50%Avg. Percentage: 35%
 - c) Clay (less than 0.002 mil dia.)Range: 5-25%Avg. Percentage: 15%
 - d) 95% of the topsoil shall pass a 2.0 sieve
 - 5. Soils shall have a maximum soluble salt content of 75 parts per million.
- B. Fill Soil
 - 1. Fill soil shall be obtained from required excavations on site. The selection, blending, routing, and disposition of material in the various fills shall be subject to approval by the landscape architect. Fill materials shall contain no frozen soil, sod, brush, roots, or other perishable material. Rock particles larger than 1" shall be removed prior to compaction of the fill.
- C. Amended Existing Soil
 - 1. Zoo to preform a soil test to determine what compost needs to be added.

PART 3 EXECUTION

3.1 TOPSOIL PLACEMENT

- A. Uniformly distribute and spread topsoil.
- B. Compacted Topsoil Thickness: Place as indicated on drawings.

3.2 FINISH GRADING

- A. Maintain profiles and contour of subgrade.
- B. Remove roots, weeds, rocks, and foreign material while spreading.
- C. Maintain uniform topsoil thickness.
- D. Lightly compact placed topsoil.

END OF SECTION

SECTION 32 9300 – EXTERIOR PLANTINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Tree and shrub plantings.
 - 2. Plug plantings.
 - 3. Herbaceous perennials, ornamental grasses, groundcover and vine plantings.
 - 4. Plant procurement.
 - 5. Plant mulch.
 - 6. Aggregate maintenance edge.
 - 7. Metal edging.
 - 8. Staking and guying.
 - 9. Jute mesh slope stabilization.
 - 10. Maintenance.
 - 11. Warranty replacements.
- B. Related Requirements:
 - 1. Section 01 5639 "Temporary Tree and Plant Protection" for protecting, trimming, pruning, repairing, and replacing existing trees to remain that interfere with, or are affected by, execution of the Work.
 - 2. Section 31 1000 "Site Clearing" for stripping on-site topsoil.
 - 3. Section 31 2000 "Earth Moving" for mass grading of the site.
 - 4. Section 32 8000 "Irrigation System" for design-build irrigation systems.
 - 5. Section 32 8400 "Planting Irrigation" for turf and planting irrigation systems.
 - 6. Section 32 9100 "Topsoil" for lawns and plant mixture amendment.
 - 7. Section 32 9280 "Vegetation Control" for control of weeds or eliminating established lawn areas before planting.
 - 8. Section 33 4600 "Subdrainage" for plant bed and tree pit underdrainage system.

1.2 REFERENCES AND REGULATORY REQUIREMENTS

- A. Hortus Third, The Staff of the L.H. Bailey Hortorium. 1976. MacMillan Publishing Co., New York.
- B. ASTM International, as referenced herein as ASTM.
- C. American Standard for Nursery Stock, as referenced herein as ANSI Z60.1 (current edition). Where there is a conflict between the information in this Section and ANSI Z60.1, this Section shall govern.
- D. United State Department of Agriculture (USDA), Plant disease and insect control Phytosanitary and Export Certifications.
- E. United States Composting Council, Seal of Testing Assurance (STA), Procedures for sampling and testing as outlined in the Test Methods for the Examination of Composting and Compost (TMECC) protocols.

1.3 DEFINITIONS

- A. Balled and Burlapped Stock: Plants dug with firm, natural balls of earth in which they were grown, with a ball size not less than diameter and depth recommended by ANSI Z60.1 for type and size of plant required; wrapped with burlap, tied, rigidly supported, and drum laced with twine with the root flare visible at the surface of the ball as recommended by ANSI Z60.1.
- B. Bare-Root Stock: Plants with a well-branched, fibrous-root system developed by transplanting or root pruning, with soil or growing medium removed, and with not less than the minimum root spread according to ANSI Z60.1 for type and size of plant required.
- C. Container-Grown Stock: Healthy, vigorous, well-rooted plants grown in a container, with a well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for type and size of plant required.
- D. Fabric Bag-Grown Stock: Healthy, vigorous, well-rooted plants established and grown in-ground in a porous fabric bag with well-established root system reaching sides of fabric bag. Fabric bag size is not less than diameter, depth, and volume required by ANSI Z60.1 for type and size of plant.
- E. Finish Grade: Elevation of finished surface of planting soil.
- F. Mycorrhizal Inoculum: Fungi either introduced or naturally occurring in the soil that increase plant roots growth and ability to absorb nutrients and water.
- G. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. Pesticides include insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. They also include substances or mixtures intended for use as a plant regulator, defoliant, or desiccant. Some sources classify herbicides separately from pesticides.
- H. Pests: Living organisms that occur where they are not desired or that cause damage to plants, animals, or people. Pests include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.
- I. Planting Soil: Existing, on-site soil; imported soil; or manufactured soil that has been modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.
- J. Root Flare: Also called "trunk flare." The area at the base of the plant's stem or trunk where the stem or trunk broadens to form roots; the area of transition between the root system and the stem or trunk.
- K. Root Production Method (RPM): A trademark technology referred to as root production method for a variety of tree and shrub species resulting in a dense fibrous root system for smaller sized plants.
- L. Single Central Leader: A single central dominant leader branch, free of secondary co-dominant stems that would compete with the central leader, either naturally occurring or professionally trained in the nursery with no stem deformities.

- M. Specimen Plant: Exceptionally heavy, symmetrical, and tightly knit, growth, superior in form, with properly spaced branching.
- N. Stem Girdling Roots: Roots that encircle the stems (trunks) of trees at or below the soil surface.
- O. Subgrade: The surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.
- P. Sheared Evergreen: Any evergreen tree or shrub that has been heavily trimmed or pruned to remove the natural shape of the plant. An evergreen tree grown at a "Christmas tree farm" is typically sheared.
- Q. Young Plants: Lining out stock, seedlings generally sold within the wholesale trade for continued cultivation.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Product Data:

1. Plant procurement verification:
 - a. Within 4 weeks following the execution of the Agreement between the Owner and Contractor, submit vendor purchase order, invoice or bill of lading for each plant species showing sizes, quantities and root treatment.
 - b. Provide digital photos of all plant materials. Photos must depict the entire size and condition of the plant and include a scale rod or other measuring device to show scale. For species where more than 20 plants are required, include a minimum of three photos that show the average plant, the best quality plant, and the worst quality plant to be provided. Label each photograph with the plant name, plant size, and name of the growing nursery.
 - c. The Contractor may request the Landscape Architect to provide nursery visits for the purpose of reviewing and tagging plant materials. The Contractor shall compensate the Landscape Architect for said services.
 - d. Substitutions shall not be permitted without written approval from the .
2. Metal edging and accessories.
3. Jute mesh.
4. Soil amendments: Provide information on composition and source of all soil amendments. Include test results for compost and peat.
5. Mycorrhizal inoculum.
6. Fertilizer.
7. Antidesiccants: Include product label and manufacturer's application instructions.
8. Maintenance edge aggregate gradation analysis.
9. Maintenance edge aggregate separation fabric.
10. Organic Mulch: Include product source and composition.
11. Predator barrier fencing and tree guard.
12. Staking and guying materials and ties.
13. Root barrier for bamboo control.

B. Source Quality Control:**1. Samples:**

- a. Organic Mulch: 1 quart by volume in sealed plastic bag labeled with composition of materials and source of mulch. Provide an accurate representation of color, texture, size, and organic makeup.
- b. Mineral Mulch: 1 quart by volume in sealed plastic bag labeled with composition of materials and source / product name. Provide an accurate representation of color, texture, and size. Note, multiple samples of available products may be required for color selection by the Owner.
- c. Maintenance edge aggregate: 1 quart by volume in sealed plastic bag labeled with composition of materials and source / product name. Provide an accurate representation of color, texture and size. Note, multiple samples of available products may be required for color selection by Owner.

2. Test Report:

- a. Topsoil: Test reports including fertilization recommendations for lawns and plant materials. Refer to Section 329100 "Topsoil".

3. Certifications/Licenses:

- a. Phytosanitary Certification: Plant material Inspection Certificates required by Federal, State or other governing authority at the time of plant material verification identified above.
- b. License certificate(s) for pesticide applicator.

4. Nursery Requirements:

- a. Plants shipped to the site as B&B must originate from a licensed plant nursery with a current Phytosanitary certification. Field collected plants will not be permitted.
- b. Plant digging shall comply with the following requirements:
 - 1) Digging shall not occur more than 4 months in advance of plant installation.
 - 2) Plants dug during the spring digging season must be planted in advance of the fall digging season of that same year.
 - 3) Plants dug during the fall season must be planted during the same season and will not be permitted for spring planting.
 - 4) No plants that have leafed out shall be dug.
 - 5) Plants with root systems that have grown through the original jute wrapping will not be permitted. This included all plants that have a second jute covering over the root ball.
 - 6) Jute wrapping that is heavily decayed or torn with exposed roots and loose root ball soil will not be permitted.
- c. Wrap tree trunks with protective material in advance of digging.

C. Field Quality Control:

1. Project Work Schedule: Within 4 weeks following the issuance of the Notice to Proceed, submit a project work schedule to the Landscape Architect indicating dates for delivery, installation, and Substantial Completion for all landscape work. The Schedule shall be comprehensive and address procurement, delivery, and installation of irrigation, planting and seeding/sodding areas of the site. For large site, the schedule shall reflect a phased installation and shall include support graphics required to identify this phased approach. Refer to Part 1.10 below for a complete list of schedule requirements.

2. Maintenance Schedule: Prior to the issuance of Substantial Completion, submit a detailed typewritten approach and schedule for the warranty maintenance of all landscape activities outlined under Part 3.13 of this section. Coordinate landscape maintenance with other applicable Sections (, Irrigation) and combine all maintenance activities into one plan of action. The schedule shall be comprehensive and shall be the basis for monthly payment during the maintenance period.
3. Irrigation Plan: Within 4 weeks following the issuance of the Notice to Proceed, submit a detailed typewritten approach and schedule that outlines watering requirements for maintaining the landscape as described herein. The Irrigation Plans shall be submitted in conjunction with the Maintenance Schedule. The plan shall address how the irrigation system will be operated during the warranty period, frequencies and durations that will be established to provide the correct watering rates for plants and lawns, inspection protocols and frequencies and winterization procedures. In locations where no automatic irrigation system has been installed, describe means, methods and frequencies for hand watering. If the automatic irrigation system is inoperative or not present, provide an approved temporary irrigation system or hand water from a source approved by the COTR. Supply all water and equipment at the Contractor's expense from a source approved by the COTR. Reliance on natural precipitation will only be allowed with provision of recorded data from a rain gauge located within a 2-mile radius of the project site. The schedule shall be comprehensive and shall be the basis for monthly payment during the maintenance period.
4. Maintenance Report Forms: Using the approved Maintenance Schedule and Irrigation Plan as the framework for all maintenance activities (plant maintenance, lawn maintenance and irrigation operations). The Contractor shall provide detailed maintenance report forms for each site visit. The reports shall be completed by the on-site maintenance superintendent performing the work prior to leaving the site and shall be submitted monthly as back-up to each invoice. Office prepared reports will not be permitted and payment for this work will only be made by the Owner when proof of completed specified maintenance has been provided. Each report shall include the following:
 - a. Date of activity.
 - b. Length of time on site (start time and finish time).
 - c. Name and signature of the maintenance superintendent.
 - d. Number of personnel performing the work.
 - e. Site climatic conditions (rain, wind, temperature, etc.)
 - f. Detailed description of maintenance activities performed by area.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data:

1. Include list of at least three similar projects completed in the last 5 years by Installer demonstrating Installer's capabilities and experience. Include project names, addresses, and year completed, and include names and addresses of owners' contact persons.
2. Provide resumes of field technician (foreman) responsible for managing the purchase and installation of all materials. Separate resumes shall be provided for the planting, seeding, irrigation and maintenance technicians.
3. ISA certification for arborist.

1.7 QUALITY ASSURANCE

A. Qualifications:

1. The Contractor shall be a company specializing in exterior landscape, irrigation installations and maintenance, having a minimum 5 years' experience in projects of the scope and scale being specified.
2. Installer's field technician: The installer shall provide a full-time supervisor on site when work is in progress.
3. Maintenance field technician: The maintenance activities for all landscape areas shall be performed by skilled employees of the landscape installer. Subcontractors specializing in landscape and turf maintenance will not be permitted unless approved in writing by the Landscape Architect.
4. Pesticide applicator: State licensed, commercial.
5. Tree and shrub pruning: ISA certified Arborist.

B. Substitutions:

1. It is the Contractor's responsibility to locate and secure all plant materials and to verify their availability well in advance of installation through the timely Action Submittal process identified above. Failure to comply with this requirement shall not be a reason for making substitutions. Furthermore, it may be necessary to purchase specified plants from multiple nurseries and from out-of-state sources providing said sources are within the same hardiness zone as the site.
2. Substitutions of plant materials will not be permitted unless authorized in writing by the Landscape Architect. If proof is submitted in writing that a plant specified is not obtainable, the Landscape Architect may assist in identifying alternate sources or substitutions.
3. Plants of larger size may be used if approved and if root balls meet ANSI Z60.1 for the increased size. Adjustments will be made at no additional cost to the Owner. Approval of smaller size plant materials shall require a corresponding credit to the contract price subject to Owner pre-approval.

C. Measurements: Measure plants according to ANSI Z60.1. Do not prune to obtain required sizes.

1. Trees and Shrubs: Measure with branches and trunks or canes in their normal position. Take height measurements from or near the top of the root flare for field-grown stock and container grown stock. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip to tip. Take caliper measurements 6 inches above the root flare for trees up to 4-inch caliper size, and 12 inches above the root flare for trees larger than 4-inch caliper.
2. Other Plants: Measure with stems, petioles, and foliage in their normal position.
3. Plants pruned to compensate for transplanting shock will not be accepted if overall height and spread do not meet the specified dimensions after pruning.

D. Plant Material Observation: Landscape Architect may observe plant material either at place of growth or at site before, during or after planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Landscape Architect retains right to observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and to reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.

1.8 DELIVERY, STORAGE, AND HANDLING

A. General:

1. Packaged Materials: Deliver packaged materials in original unopened containers showing weight, analysis and name of manufacturer. During shipment and storage on site, protect materials from breakage, moisture, heat or other damage.
2. Store materials only in locations approved by the Owner. No storing or mixing of pesticides or herbicides is allowed on site.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery of bulk materials with appropriate certificates.

C. Plant Materials:

1. Do not bend, stack or bind plants in a manner that damages bark, breaks branches or root systems, deforms root balls or destroys natural shape.
2. Transport plants in closed vehicles or with the entire load properly covered to protect from drying winds, heat, freezing or other exposure that may be harmful. Schedule shipping to minimize on-site storage of plants. Closed vehicles shall be adequately ventilated/refrigerated.
3. Labels: Prior to shipping, each plant or bundle of like variety and size shall be labeled with legible weatherproof tags indicating the correct name and size of plant.
4. Stock shall not be shipped until the planting preparations have been completed. If planting is delayed more than 24 hours after delivery, set plants and trees in filtered sun or shade, protect from weather and mechanical damage, and keep roots moist.
 - a. Heel-in bare-root stock. Pack root system in wet straw, hay, or other suitable material to keep root system moist until planting. Soak roots in water for two hours immediately prior to planting. Plants with dry roots will be rejected. Any bare-root plants requiring sweating to break dormancy must have this procedure carried out before plants arrive onsite.
 - b. Set balled stock on ground and cover ball with soil, or bark mulch.
 - c. Do not remove container-grown stock from containers before time of planting.
 - d. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly wet condition.
5. Store bulbs, corms, and tubers in a dry place at 60 – 65 degrees F until planting.
6. Handle plants at all times in accordance with the best horticultural practices. Lift B&B materials from the bottom of the ball only; do not roll the plants. Plants handled otherwise will be subject to rejection. Balled and burlapped plants which have cracked or broken balls are not acceptable and shall not be planted. Plants with mechanical damage, deformation or breakage will not be accepted and are to be replaced at the Contractor's expense.

1.9 SCHEDULING

A. Work Schedule:

1. Upon authorization to proceed with the work, submit a project work schedule indicating the dates of each of the following items:
 - a. Submittal schedule.
 - b. Tagging of plants in nurseries.

- c. Delivery of other materials to the site.
 - d. Staking of plant locations on the site.
 - e. Delivery of plant material to the site.
 - f. Planting.
 - g. Substantial Completion of the work.
 - h. Maintenance period.
2. Update schedule monthly to reflect progress of the work.

B. Planting Season:

1. Materials shall be installed during planting seasons normally recognized in the job locality. Soils shall be in workable condition and not frozen.
2. USDA Hardiness Zone 7:
 - a. B&B and container grown deciduous trees and shrubs, planting season shall be from March 15 through May 15 and from October 1 through November 30.
 - b. Containerized perennials, planting season shall be from March 15 through May 15 and from September 15 through October 30.
 - c. Coniferous evergreen plants, planting season shall be from March 15 through May 15 and from October 1 through November 1.
 - d. Broadleaf evergreen plants, planting season shall be from March 15 through May 15 and from September 1 through October 15.
 - e. Bare root woody plants, planting season shall be in early spring dormant period, prior to April 1 but no later than full leaf-out of existing woody plants in project area.
 - f. Bare root woody plants and aquatic tuber and root stock only in spring from March 15 through approximately May 15 but no later than full leaf-out of existing woody and aquatic plants.
 - g. Bulbs, corms and tubers from October 1 through November 15 and from March 15 through May 15. Spring vs. fall planting is species dependent and Contractor shall comply with seasonal limitations identified on the plant list included on the drawings.
3. If special circumstances warrant installation outside the normal planting season, submit a written request to the Landscape Architect describing conditions and stating the proposed variance. Planting outside the planting season could extend warranty obligations and will be dependent upon the extent of the variance.
4. Weather limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

1.10 WARRANTY AND ACCEPTANCE

A. Substantial Completion:

1. The Substantial Completion inspection shall occur for the entire landscape and only one Notice of Substantial Completion will be issued. Phased approvals will not be permitted. Following the inspection, the Landscape Architect will issue a punch list identifying all work requiring completion or correction.
2. The Contractor shall complete all punch list items within 2 weeks of its issuance. All repairs and plant replacements shall occur at no additional cost to the Owner.
3. Substantial Completion will be provided for all planting areas complying with the following:
4. Landscape Architect approval of all specified submittals.

5. The work shall be 100 percent complete (including all site preparation , earthwork , plant mixture installation , plantings , native seeding, irrigation, and clean-up), and ready for inspection.
 6. After receiving a Notice of Substantial Completion warrant and maintain all plantings in accordance with Part 3.13 of this Section in a vigorous, well-kept condition until Final Acceptance.
- B. Final Acceptance:
1. The Contractor shall complete all punch list items within 2 weeks of its issuance. All repairs and plant replacements shall occur at no additional cost to the Owner.
 2. Final Acceptance will be based upon Owner approval and the work having:
 - a. Been well maintained with all landscape plantings in a healthy growing condition free of disease and insect problems.
 - b. All maintenance items completed and documented by Contractor through maintenance report forms.
 3. Final Acceptance and the end of the warranty period for the landscape will occur only after all punch list items have been satisfactorily completed and the site is left in the condition specified under Cleanup and Protection.
- C. Warranty and Maintenance Period:
1. The end of the warranty and maintenance period shall be:
 - a. October 31 ““ one year following fall Substantial Completion.
 - b. June 30 ““ one year following spring Substantial Completion.
 2. Prior to and during the warranty and maintenance period, replace any plants that are damaged, dead, or, in the opinion of the Landscape Architect, are unhealthy, or have lost more than 25 percent of their natural shape due to dead branches, excessive pruning or improper maintenance. Rejected plant materials shall be removed from the site immediately after being rejected and legally disposed off-site. Replacement plants shall be installed within 2 weeks following the inspection unless otherwise agreed to in writing by the Owner.
 3. Only one replacement of any plant is required after Substantial Completion, except for losses due to failure to comply with specified installation and/or maintenance requirements. Failures include but are not limited to: infestation of crowns of perennials or ornamental grasses with invasive weeds due to failure to maintain beds, insufficient watering operations, herbicide damage, structural failures such as trees not remaining upright, and faulty performance of tree stabilization or watering devices.
 4. Make replacements in accordance with the original specifications, plant list, planting details, and notes. Fully restore areas damaged by replacement operations to their original and specified condition.
 5. The Contractor will not be held responsible for defects resulting from neglect by Owner, abuse or damage by others, or unusual phenomena or incidents beyond landscape installer's control which result from floods, hail storms, winds over 100 miles per hour, fires or vandalism, unless Contractor has not completed specified installation or maintenance in a manner that could have protected the landscaping from these phenomena.

6. If, in the opinion of the Landscape Architect, it is advisable to extend the warranty and maintenance period for an additional growing season, the Contractor will be notified of such requirement by the Owner. Improper planting and/or failure to perform and document the specified maintenance in accordance with contract requirement shall be the basis for extending the period of establishment for an additional growing season. All specified maintenance and warranty requirements will be required during this extended period and all costs shall be the responsibility of the Contractor.

PART 2 - PRODUCTS

2.1 PLANT MATERIALS

- A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in the Plant List shown on Drawings and with the minimum quality conforming to ANSI Z60.1. Branching on all plants shall be characteristic of the species, well-shaped, full, sound, healthy, vigorous stock of uniform growth and densely foliated when in leaf. All plants shall be free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.
 1. Collected Stock: Do not use plants harvested from the wild, from native stands, from an established landscape planting, or not grown in a nursery unless otherwise indicated.
 2. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Where plant height or spread is indicated with a tolerance, the smaller dimension is the minimum acceptable; the larger dimension represents the maximum permissible. The average dimension of all plants must, at least, equal the average of the tolerance figures shown on the drawings. Spread shall meet the minimum dimension specified in all directions and must be considered as pivoting on center of plant.
 3. Canes on shrubs shall arise at or just below the root crown. Multi-stem and clump form trees shall have branches that arise at or just below the root crown except when approved by the Landscape Architect.
 4. All plants shall have a waterproof legible label securely attached to each plant bearing designation of plant's common and scientific name, including genus, species, and cultivar or variety, when applicable.
 5. Do not prune plants prior to delivery.
 6. Stressed or damaged plants or those not conforming to the specifications shall be subject to rejection by the Landscape Architect at any time during the term of the contract.
- B. Root treatments on all plants shall conform to the following requirements:
 1. Balled and burlapped ("B&B") plants shall have healthy root systems developed by transplanting or root pruning with a firm, natural ball of earth securely wrapped with burlap, bound with cord and wire basket. Root flare shall be visible before planting. Plants with damaged or broken root balls or multiple layers of burlap will not be accepted.
 2. Containers shall be finished landscape grade material having their roots well established in the soil mass. Plants over-established in the container, as evidenced by pot-bound root ends, will not be accepted.

3. Annuals , biennials , perennials , staked vines , groundcover and ornamental grasses shall have well-established root systems reaching to sides of the container to maintain a firm ball, but not with excessive root growth encircling the container. Provide only plants that are acclimated to outdoor conditions before delivery. Annuals and biennials shall be in bud but not yet in bloom.
 4. Bulbs, Corms and Tubers: Provide healthy, disease free rot stock of the genus, species, variety and condition listed on the drawing. All plant sizes, grades and weights shall conform to ANSI Z60.1.
- C. Trees: Evergreen and deciduous trees shall have straight single leaders. Trees with damaged, crooked, or multiple leaders; tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); crossing trunks; cut-off limbs more than 3/4 inch in diameter; or with stem girdling roots will not be accepted. Evergreens shall be unsheared.
1. Trees indicated as specimen shall be exceptionally heavy, symmetrical, and superior in form, branching, and symmetry.
 2. Caliper is the trunk diameter taken at a specified distance above root collar as described in ANSI Z60.1.
 3. Branching height is the distance above ground where balanced branching occurs.

2.2 MULCH

- A. Organic Mulch: Well-composted, finely shredded processed hardwood bark, free from foreign material and fragments in excess of 2 inches in any dimension.
1. Dyed mulch or mulch that is predominantly wood chips will not be accepted.
- B. Leaf Mulch:
1. Fully decomposed, dark, friable, organic material derived primarily from deciduous leaves, with a pH of 6.0–7.0 and organic matter content of at least 40%, applied at 1–3 inches depth as a top dressing.
- C. Mineral Mulch: Hard, durable stone, washed free of loam, sand, clay, and other foreign substances, of following type, size range, and color:
1. Type, Size, and Color: As indicated in landscape drawings..
- D. Filter Fabric: Synthetic, non-woven, needle-punched geotextile fabric weighing 2 to 4 oz per square yard with a minimum grab tensile strength of 35 pounds and permeability of 0.03 cm/second.

2.3 JUTE MESH

- A. Uniform, open, plain weave fabric of unbleached, single jute yarn having a width of 48 inches, plus or minus 1 inch and durability of 1-2 years. Yarn shall be loosely twisted jute fiber, having an average twist of not less than 1.6 turns per inch, varying in thickness by not more than 1/2 its normal diameter, and averaging 130 pounds per spindle of 14,400 yards. Polymer yarns are not acceptable.
1. Fasteners shall be natural based plastic that is 100 percent biodegradable from microbial activity in accordance with ASTM D5338 or D6400, formed in a T-shaped with barbed heads and shoulders, minimum six inches long, color green and installed per manufacturer's spacing and installation instructions.

2.4 STAKING AND GUYING

- A. Staking (for deciduous trees less than or equal to 3.5-inch caliper, ornamental/understory trees, and evergreens less than or equal to 12-foot height):
 - 1. Tree support stakes shall be a minimum actual size (not nominal) 2 inch x 2 inch hardwood posts free of bark or 3 inch diameter hardwood or cedar posts with bark intact. Posts shall be minimum 8 feet long. Metal fence posts are not permitted unless approved in advance by the [Landscape Architect] <Insert text>.
 - 2. Tree support stakes for Root Production Method trees (RPM) shall be 1 inch x 1 inch hardwood posts free of bark.
 - 3. Wire stays for tree stakes shall be No. 12 to 14 gauge galvanized wire. Polypropylene strapping will not be permitted.
 - 4. Chafing guards shall be fiber-reinforced hose of not less than 1/2 inch inside diameter, color black. Multi-colored hose will not be permitted.
- B. Guying (for deciduous trees greater than 3.5" caliper and evergreen trees greater than 12-foot height):
 - 1. Tree support stakes for guying shall be 2 x 4 hardwood posts 30 inches long or metal fence posts 48" long. Guying stakes shall be driven below grade and not visible.
 - 2. Cable for guying trees shall be 3/16 inch diameter, five strand, galvanized steel wire. Polypropylene strapping will not be permitted.
 - 3. Cable clamps and turnbuckles shall be galvanized, forged steel. Turnbuckles shall be 3/8-inch eye with 6-inch minimum opening.
 - 4. Chafing guards shall be fiber-reinforced hose of not less than 1/2 inch inside diameter, color black. Multi-colored hose will not be permitted.

2.5 TREE WRAP, TRUNK PROTECTION, AND TREE GUARDS

- A. Tree wrap for deciduous trees as noted in Plant List on Drawings shall be 4-inch wide, two-ply, waterproofed crepe Kraft paper with plies cemented together with asphalt. Twine used to secure wrap shall be natural fiber two-ply jute. Tape or plastic twine will not be permitted as a substitution for the jute twine.
- B. Trunk Protection for deciduous shade trees: Corrugated PVC trunk protection, minimum 6" diameter, 5' height minimum.

2.6 WATER

- A. Water shall be available from off-site sources.
- B. Water shall be free of wastewater effluent or other hazardous chemicals. On-site sources of water may be available [based on pumping from the [creek][lake][pond]][from City hydrant with metering and payment by Contractor][insert known source]. Confirm prior to commencing work.

2.7 FERTILIZER

- A. Fertilizers are required at the time of installation and during the warranty/maintenance period. The fertilization program shall be based on soil testing and formulations and rates of application shall be based on test reports provided by the independent testing laboratory.

- B. The independent testing laboratory shall also prepare a custom formulation and rate for each category of plants to be installed and maintained; i.e. trees, shrubs, perennials/ornamental grasses, annuals and bulbs.
- C. Fertilizers shall include organic and inorganic, slow release and water-soluble nitrogen and the percentages shall be based on soil types and the time of year being applied. Fertilizers shall not be applied during the hot summer months unless specific to blooming plants or from mid-summer through the end of the growing season when new plant growth will not harden off prior to the first killing frost.
- D. The fertilizer to be used to amend the soil before planting shall be granular fertilizer that conforms to applicable state and federal regulations, and contains no less than 60 percent slow-release nitrogen.
- E. Fertilizer to be used during the warranty and maintenance period shall be a complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, not less than 30 percent of the nitrogen from a slow release source. Fifty percent of the nitrogen shall be derived from natural organic sources. The formulations shall be as provided by soil test of this Section.

2.8 ANTIDESICCANTS

- A. Water-soluble, biodegradable, non-hazardous emulsion specifically manufactured for agricultural use that will provide a protective film over plant surfaces to limit transpiration yet not interfere with respiration, osmosis, or photosynthesis. Use according to manufacturer's written instructions.

2.9 METAL EDGING

- A. Metal edging shall comply with ASTM A1011/A1011M, sized [3/16 inch thick x 4 inches wide x 16 feet length], made of steel, colored [black], fabricated in sections with stake pockets stamped, punched, or welded to face of sections approximately 30 inches apart, with 3/16 inch x 16 inch stakes, as manufactured by J.D. Russell Co., or approved equal.
 - 1. Accessories shall be from same product line and manufacturer.

2.10 MAINTENANCE EDGE AGGREGATE

- A. Aggregate for maintenance edges shall be: Hard, durable stone, washed free of loam, sand, clay, and other foreign substances, of following type, size range, and color:
 - 1. Type, Size and Color: As indicated in landscape drawings. .
- B. Filter Fabric: Synthetic, non-woven, needle-punched geotextile fabric weighing 2 to 4 oz per square yard with a minimum grab tensile strength of 35 pounds and permeability of 0.03 cm/second.

2.11 BAMBOO ROOT BARRIER

- A. Size, type as indicated in landscape drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. General:

1. Prior to beginning work, examine and verify the acceptability of the project site and notify the Landscape Architect of unsatisfactory conditions or obstructions that do not appear on the Drawings. Do not proceed with the work until unsatisfactory conditions have been corrected or resolved.
2. Verify that no foreign or deleterious material has been deposited in soil within a planting area.
3. Where planting occurs in close proximity to other site improvements, provide adequate protection to all features prior to commencing work. Promptly repair any items damaged during planting operations to their original condition.
4. Do not mix or place soils and soil amendments in frozen, wet, or muddy conditions.
5. Suspend soil spreading, grading, and tilling operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
6. Uniformly moisten excessively dry soil that is not workable and which is too dusty.
7. If plants die or are rejected due to non-conformity to contract requirements, they must be removed from the site immediately and replaced before Substantial Completion.

B. Utilities: Have all underground utilities located by servicing agencies. In the vicinity of utilities, hand-excavate to minimize possibility of damage.

C. Coordination with Other Work:

1. The Contractor shall coordinate work with other contractors or trades to determine the appropriate sequence of landscape installation with respect to other work on the site.
2. Completed work installed out of construction sequence which is subsequently disturbed by the completion of work by other trades shall be repaired by the landscape installer at no cost to the Owner.
3. Maintain grade stakes and layout controls set by others until removal is mutually agreed upon by all parties concerned.

3.2 PREPARATION

- A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.
- B. Install erosion control measures, if necessary, to prevent erosion or displacement of soils and discharge of soil-bearing water run-off or airborne dust to adjacent properties, natural resources and all pavement surfaces.
- C. Vegetation Removal: Strip and dispose of organic debris and root mat.

3.3 LAYOUT

- A. Accurately lay out each plant location and planting bed edges according to the drawings, using clearly visible painted, labeled stakes or plastic flags. Spray paint continuous lines on bare soil delineating plant bed boundaries. When scaling locations on the drawings, use at least 2 known reference points as layout controls to determine plant locations. Do not proceed with planting operations until locations have been reviewed and approved in writing by the Landscape Architect.
- B. Prior to installation, all plant locations and bed edges must be approved by the Landscape Architect, who may field adjust locations at no additional cost to Owner. Plants installed without layout approval are subject to relocation at Contractor's expense.

3.4 PLANT INSTALLATION

- A. General: Complete all plantings, metal edging and mulching prior to fine grading adjacent seed beds. Keep excavations covered or otherwise protected after working hours and when unattended by Installer's personnel.
- B. Planting Pit Excavation:
 - 1. For individual plant pits in seeded areas, spread seed bed topsoil to the uniform depth and rough grade prior to layout and planting pit excavation.
 - 2. Remove rocks and other unclassified underground obstructions to at least 6 inches below the finished planting depth of the root ball. Trim perimeter of planting pit leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Ensure that root ball will sit on undisturbed base soil to prevent settling. If plant pits are initially dug too deep, add soil to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
 - 3. If underground utilities or other surface or subsurface obstructions are encountered that cannot be removed, do not proceed with planting operations until alternate planting locations have been selected and approved by the Landscape Architect.
 - 4. Size and configure planting pits in accordance with the planting details. If rotating augers or other mechanical diggers are used, scarify the side walls and bottom of the pit.
 - 5. Where poor soil percolation is probable, test drainage by filling planting pits with 12 inches of water. Record the drainage time for each pit and if, in the opinion of the Landscape Architect, the water does not adequately drain off within 24 hours, install drains or raise plant pits as directed.
- C. Planting Bed Excavation:
 - 1. Refer to Section 311000 "Site Clearing" for vegetation removal and topsoil salvage for reuse in plant mixture.
 - 2. Refer to Section 312000 "Earthwork" for earthwork requirements.
 - 3. [In locations where plant beds are shown on the drawings and earth moving is not required other than achieving the specified plant bed subgrades, excavate plant beds to the depth shown on the planting details. Remove all existing vegetation. Following vegetation removal, top dress plant bed with four inches compost and rototill into upper twelve inches of soil. Lightly compact.
 - 4. Grade subgrade smooth and uniform. Slope to perimeter of plant bed when underdrains are required to collect accumulated water within the bed.

5. Transition from plant bed subgrade to adjacent seed bed subgrade outside the limits of the plant bed to ensure full depth plant bed mixture is provided.
 6. Where plant beds terminate next to pavement surfaces, subgrade transitions shall be 12 inches wide within the plant bed to protect pavement base material from being undermined.
 7. Obtain approval from the Landscape Architect for all subgrades prior to placing plant mixtures. Notify the Landscape Architect at least 48 hours in advance of placing plant mixture.
- D. Mixing and Placing Planting Mixtures:
1. Install planting bed and planting pit mixtures to the specified proportions and depths. On-site mixing of salvaged topsoil with off-site topsoil or amendments shall result in a homogenous blend of all ingredients. Screen all mixture to remove foreign debris and rocks greater than ½ inch diameter prior to placement.
 2. Place planting bed mixture in 6 inch lifts and lightly compact to prevent settlement after planting. Settlement that occurs after planting will require plant removal and the placement of additional plant mixture at the Contractor's expense. When placing mixture in raised planters, set finish grade elevations 2 inches low for mulch placement, if required on Drawings.
 3. Grade planting areas to a smooth, uniform surface plane. Roll and rake, remove ridges, and fill depressions to meet grade.
 4. Before planting, obtain Landscape Architect's approval of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.
- E. Fertilizing:
1. Prior to or during planting, amend all planting pit and bed mixes by incorporating fertilizer at rates required by soil test reports as specified under Section 329100 "Soil Preparation (Topsoil)". Do not broadcast fertilize over the surface of the soil or onto any plant root ball.
 2. For individual plant pits, incorporate fertilizer into back fill during planting operations. For plant beds, pre-mix fertilizer prior to installation.
- F. Planting and Backfill:
1. Do not plant when the ground is frozen or saturated.
 2. Balled and burlapped plants: Do not use planting stock if root ball is cracked or broken before or during planting operation. Set the plant in the center of planting pit with the crown set at 1 inch above adjacent soil for shrubs and 2 inches above adjacent soil for trees. Root flares shall not be set below adjacent finish grade. Face plant to give the best appearance or relationship to primary views. Cut away burlap, rope, wire or other wrapping materials from the the entire root ball and remove from pit. If plastic wrap or other non-degradable materials are used in lieu of burlap, completely remove them from the root ball before backfilling. Backfill planting pit approximately two-thirds full, add fertilizer, water and allow planting mixture to settle. After the water has been absorbed, complete backfilling and tamp lightly to grade to prevent future settlement and form a watering basin with plant mixture of the size indicated on Plans.

3. Container-grown plants: Remove containers and make at least four vertical cuts one-half to one inch deep around the root ball and thoroughly loosen the roots on the outside of the ball. Plant as specified above for balled and burlapped plants with the additional requirement that container-grown stock shall be planted so that top of container soil is level with surrounding grade, unless the root flare is not at the surface of the container soil. If the root flare is buried, excavate to expose the flare and place as required above in relation to finish grade. Size of root ball must meet ANSI Z60.1 after removal of material. Do not plant higher to account for mulch, as mulch should not cover plant crown.

3.5 SPECIAL PLANTING CONSIDERATIONS:

- A. Mycorrhizal Inoculum:
 1. Rototill 2 granular pounds per 1000 square feet into the top 8 inches of soil for plant beds or as recommended by supplier. Incorporate 1 pound per cubic yard of plant pit backfill as backfill is being placed.
- B. Sloped Plantings:
 1. When planting on slopes, set the plant so the root flare on the uphill side is flush with the surrounding soil on the slope; the edge of the root ball on the downhill side will be above the surrounding soil. Apply enough soil to cover the downhill side of the root ball. Complete planting as specified under Part 3.4 F above.
- C. Jute Mesh:
 1. On sloped plantings requiring jute mesh, immediately following placement of plant mixture cover the entire bed area before plant pit excavation and installation of plants. Excavate plant pits and insert plants through mesh by separating the fibers or cutting slits into the fabric, taking care not to destroy the integrity of the mesh as a whole. To minimize the disturbance of the mesh when planting, work from long, lightweight ladders or planks laid parallel to the slope.
- D. Aquatic Plantings:
 1. Predator barrier:
 - a. Immediately install predator barrier in the locations shown on the Plans after planting.
 - b. Install stakes driven 2.5' into the soil at 10' on center intervals around the perimeter of the planted areas.
 - c. Using 25-pound fishing monofilament, firmly connect the monofilament to posts on opposite sides of the planting area via wrapping, stretching, and tying. Avoid parallel lines. Overlap and crisscross as much as possible until each post has at least one attached line. Line shall be suspended 30-36" above the normal water surface elevation. Attach 24" long red or orange survey ribbon to the strings every 24" apart.
 - d. Install perimeter polyethylene fence tight against the hardwood stakes.
 - e. Maintain monofilament and fence in a tight condition until the end of the planting warranty period. At that time, the entire predator barrier system shall be removed and disposed of by Contractor
- E. Perennial Plugs:
 1. Install native seed and erosion mat per Drawings prior to any plug planting.
 2. Set out and space perennials plugs as indicated on drawings with triangular spacing.

3. Prior to planting, biodegradable plant containers shall be split and non-biodegradable containers removed. The root systems of all plants shall be split or crumbed by hand.
4. To install plugs into erosion control mat, cut 'X' into the erosion control mat, pull back corners and excavate hole 2x width of plug and same depth as plug. Install and backfill with topsoil, folding fabric under to hold open at sides of plug plant foliage.
5. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.
6. Do not mulch plugs planted within seeded areas.

F. Root Production Method (RPM) Trees:

1. Complete plantings as specified for container grown plants above. Install tree guard and staking in accordance with planting detail.

G. Bare-Root Plants:

1. Prior to planting, remove damaged roots and those running beyond the general root mass. Soak bare root trees and shrubs for two to six hours in water prior to planting. Place bare-root stock in center of plant pit and plant so that the roots are arranged in a natural position, uniformly distributed around the crown of the plant. Carefully work soil mix in around the roots in several layers, watering until puddled and allowing the soil to settle between layers. Maintain plumb while working backfill around roots. Complete planting as specified for balled and burlapped plants above.
2. Tree guards shall be placed around all bare root plant material per manufacturer's instructions and stake securely.

3.6 MULCHING

- A. Uniformly install mulch on all trees and shrub beds to depth shown on Plans within 48 hours of planting.
- B. Keep mulch out of the crowns of shrubs and perennials, at least 3 inches from all tree trunks, and off sidewalks and roadways.

3.7 PRUNING

- A. After planting, prune trees and shrubs to remove all dead, dying, broken, or crossed limbs flush with the ground or main stem leaving no stubs. Do not prune to shape or to compensate for transplanting shock. Retain natural form of the plant type. Prune using standard professional horticultural and arboricultural practices. Remove trimmings from the site.
- B. Employ workers experienced in this type of work.

3.8 WRAPPING

- A. The trunks of deciduous trees as noted for particular species in Plant List shall be wrapped immediately after planting, but not before the condition of the trunks has been inspected and approved by the Landscape Architect. Trim the margins of any abrasions or cuts with a sharp, sterile knife prior to applying wrap.
- B. Wrap trees beginning at the base and extending to the first branches in a spiral pattern with an overlap of half the width of the paper.
- C. Secure the wrapping at the top, bottom and at 18 inch maximum intervals with twine.

3.9 STAKING AND GUYING

- A. Install guying and staking as shown on the details immediately after planting.
- B. Remove and dispose of stakes and guys at the end of the warranty period.

3.10 EDGING

- A. Metal Edge:
 - 1. Install edging as detailed and at all locations shown on Plans, keeping the alignment smooth and continuous without visible deviation from the line or arc being set.

3.11 MAINTENANCE EDGE

- A. Excavate areas receiving maintenance edge to the cross section shown on the details.
- B. Level and compact subgrade and install metal edging and filter fabric as detailed, overlapping ends by 6 inches.
- C. Install aggregate, leveling material with the top of edging.

3.12 CLEANUP AND PROTECTION

- A. Remove excess and waste material daily. When planting has been completed, clear the site of all debris, stockpiles and materials.
- B. Repair any damage to existing landscape, paving or other such features as a result of work related to this contract to its original condition.
- C. Protect landscape work and materials from damage due to landscape operations, and operations by other Contractors and trades. Maintain protection during installation and maintenance periods. Treat, repair or replace damaged landscape work as directed.
- D.

3.13 MAINTENANCE

- A. Provide all maintenance under the supervision of a skilled employee of the landscape installer. The skilled maintenance supervisor shall be: capable of operating the automatic irrigation system controller, conducting plant diagnostics to identify the presence of disease and insect problems and directing a maintenance crew in the performance of horticultural maintenance practices identified below. Maintenance requirements identified below shall be the basis for information to be included in the Maintenance Schedule and Irrigation Plan identified under Part 1.5 of this section and documented under the required Maintenance Report Forms to verify the work has been properly performed.
 - 1. [Failure to perform [and submit factual Maintenance Report Forms] could result in non-payment for said services and require the extension of the warranty and maintenance period an additional year at the Contractor's expense.

- B. Provide all equipment, materials, labor and services to maintain the landscape beginning immediately after each plant is installed and continuing until Final Acceptance and the end of the warranty period. Perform all work under the direct supervision of a technician trained to recognize and treat conditions affecting the establishment and growth of the plants and perform the following:
1. Inspect the entire landscape at least once per week during the growing season and perform needed maintenance promptly.
 2. Irrigation:
 - a. Irrigate all plants to maintain optimum moisture within the root zone. Reoccurring overly dry or wet conditions shall be grounds for rejection of plant material. When using an automatic sprinkler system, the landscape installer responsible for maintenance shall bear full responsibility to set each zone to the correct frequency and duration.
 - b. If the automatic irrigation system is inoperative or not present, provide an approved temporary irrigation system or hand water from a source approved by the COTR. The system shall have the ability to be operated without moving hoses or sprinklers around the site between seeded/planted areas (i.e. system can be set to water one area for the required maintenance period), and may be automated with a timer. Supply all water and equipment at the Contractor's expense from a source approved by the COTR.
 3. All pruning shall be performed by or under the supervision of a certified arborist. Prune only dead wood and broken limbs as identified, in accordance with Part 3.7 - Pruning. Do not shear evergreens or any shrubs unless specifically required to be maintained as a sheared hedge. Maintain the natural shape of trees and shrubs. Plants sheared so that they no longer present their natural shape will be replaced at Contractor's expense.
 4. Maintain stakes and guys taut and in the specified condition. Repair tree wraps if loose, torn or untied.
 5. Maintain all plant beds and tree saucers weed free. Edge shrub and perennial beds and tree rings at least monthly during the growing season, keeping all tree rings to a uniform diameter. Hook mulch monthly and add mulch as needed.
 6. Deadhead perennials, annuals, biennials as necessary during maintenance visits to extend blooming periods.
 7. In early spring – prior to the start of the growing season, cut all ornamental grasses to within 8" of the ground and remove cuttings from the site.
 8. Apply treatments as necessary to keep plants and planted areas free of insects, pests, and disease. Use integrated pest management practices whenever possible to minimize the use of pesticides and herbicides. Treatments include utilizing physical and cultural controls.
 9. Apply antidesiccant to upright conifers and broadleaf evergreens in December through February, at least once per month. In locations subject to high wind or salt spray, install burlap windscreens around spreading conifers and broadleaf evergreens but do not allow burlap to touch the plants.
 10. Collect all litter and debris from plant beds and dispose off-site.
 11. Fertilization:
 - a. Fertilize plant material as recommended by the soil test report.
 12. Remove dead and unacceptable plants as their condition becomes apparent. Make replacements during normal planting schedule season unless otherwise directed by Landscape Architect. Do not wait until end of the warranty period to replace plants unless directed to do so by Landscape Architect.

13. At the end of the warranty period, but prior to Final Inspection, remove all staking, guying, trunk wrap, protection fences, watering bags or saucers, and other accessories and top dress tree rings and beds 1 inch deep with the specified mulch product.

END OF SECTION

FOR REFERENCE ONLY

SECTION 32 9300 - PLANTS

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Preparation of subsoil.
- B. Placing topsoil.
- C. New trees, plants, and ground cover.
- D. Relocated trees, plants, and ground cover.
- E. Fertilizer.
- F. Maintenance.
- G. Tree Pruning.

1.2 RELATED REQUIREMENTS

- A. Section 32 9119 - Landscape Grading.

1.3 REFERENCE STANDARDS

- A. ANSI/AHIA Z60.2 - American Standard for Nursery Stock; 2025.

1.4 SUBMITTALS

- A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

1.5 QUALITY ASSURANCE

- A. Nursery Qualifications: Company specializing in growing and cultivating the plants with three years documented experience.
- B. Installer Qualifications: Company specializing in installing and planting the plants with 5 years documented experience.
- C. Tests and Inspections: Provide test results for chemical and physical characteristics of all items listed under submittals.

1.6 FINAL ACCEPTANCE

- A. General: Work under this section will be accepted by the Owner upon satisfactory completion, including maintenance, but exclusive of replacement of plant materials under the Warranty Period. Upon Final Acceptance, the Owner will assume responsibility for maintenance of the work.
- B. Inspections:
 - 1. Make written request for inspection after planting operations have been completed. Such inspection is for the purpose of establishing the Warranty Period.
 - 2. Submit written requests for inspections to Consultant and Owner at least 14-days prior to anticipated inspection date.

1.7 WARRANTY PERIOD AND REPLACEMENTS

- A. General: Contractor shall warranty that all plants installed under this Contract will be healthy and in flourishing condition of active growth one year from date of Final Acceptance.
- B. Plant Replacements:
 - 1. Plants shall be continuously in thriving conditions free of dead or dying branches and branch tips, and shall bear foliage of a normal density, size and color. All plants not meeting these requirements shall be replaced as required below.
 - 2. Replacements shall closely match adjacent specimens of the same species and shall be subject to all requirements of this specification.

3. At any time during the warranty period and at the end of the warranty period, replace, without cost to the Owner, and as soon as weather conditions permit, all plants not meeting the requirements set forth in this section.
 4. Rejected plants may be retained in place or at the discretion of the Owner, must be removed immediately.
- C. Exclusions to Warranty Replacement:
1. Contractor shall not be held responsible for failures due to neglect by the Owner or vandalism during Warranty Period. Report such conditions to Owner in writing.
 2. Warranty shall not include damage or loss of plant materials caused by fires, floods, freezing rains, lighting storms, winds over seventy-five (75) MPH, or winter kill caused by extreme cold and severe winter conditions not typical of the project site.
 3. Plant replacement during the warranty period shall be limited to one replacement unless the prior plant installation did not meet the requirements of these specifications.

1.8 WARRANTY INSPECTION

- A. General:
1. Hold final inspection with Contractor, Consultant, and Owner at the end of the one-year period.
 2. Contractor will notify the Consultant and Owner 14 days prior to the proposed meeting.

PART 2 PRODUCTS

2.1 PLANTS

- A. Plants: Species and size identified in plant schedule, grown in climatic conditions similar to those in locality of the work.
- B. Basic requirements:
1. Provide the specified plant species except as modified by the substitution procedures.
 2. All Plants will meet the requirements of ANSI Z60.1 for size and condition.
 3. Provide plant materials meeting all requirements of this section.

2.2 SOIL MATERIALS

- A. Topsoil: Type Planting Soil; see Section 32 91 13.

2.3 MULCH

- A. General:
1. Organic materials, locally available.
 2. Suitable for retaining moisture.
 3. Allows the free exchange of water vapor and other gasses between planting soil and the atmosphere above.
 4. Size of wood chips not to exceed 3/4" in size.
- B. Mulch – Physical and Chemical Requirements:

Table:

Property	Test Method	Requirement
pH	TMECC 04.11-A	6.0–8.5
	Elastometric pH 1:5 Slurry Method pH Units	
Soluble Salts	TMECC 04.10-A Electrical	0–10.0
	Conductivity 1:5 Slurry Method dS/m (mmhos/cm)	

Moisture Content	TMECC 03.09-A Total Solids & Moisture at 70+/-5 deg C % Wet Weight Basis	N/A
Organic Matter Content	TMECC 05.07-A Loss-On-Ignition Organic Matter Method (LOI) % Dry Weight Basis	30-100
Maturity	TMECC 05.05-A Germination and Vigor, % Relative to Positive Control Seed Emergence: Seedling Vigor:	N/A/N/A
Stability	TMECC 05.08-B Carbon Dioxide Evolution Rate mg CO ₂ -C/g OM per day	N/A
Particle Size	TMECC 02.02-B Sample Sieving for Aggregate Size Classification % Dry Weight Basis	- 2-in > 99% passing- 3/8-in < 25% passing- 3-in max. length
Pathogen	TMECC 07.01-B Fecal Coliform Bacteria < 1000 MPN/gram dry wt.	< 1000 (Pass)
Pathogen	TMECC 07.01-B Salmonella < 3 MPN/4 grams dry wt.	< 3 (Pass)
Physical Contaminants	TMECC 02.02-C Man Made Inert Removal and Classification: Plastic, Glass and Metal % > 4mm fraction	Combined Total: < 1.0
Physical Contaminants	TMECC 02.02-C Man Made Inert Removal and Classification: Sharps % > 4mm fraction (Sewing needles, hypodermic needles)	None Detected

C. Definitions:

TMECC refers to "Test Methods for the Examination of Composting and Compost," published by the United States Department of Agriculture and the United States Compost Council (USCC).

2.4 SOIL AMENDMENT MATERIALS

- A. Water: Clean, fresh, and free of substances or matter that could inhibit vigorous growth of plants.
- B. Planting Fertilizer: Containing fifty percent of the elements derived from organic sources; of proportion necessary to eliminate any deficiencies of topsoil, as indicated in analysis.
 - 1. Nitrogen: 20 percent. Minimum of 50% of nitrogen derived from slow release ureaformaldehyde Agriform tablets.

- a) Trees and shrubs: 21 gram tablets
 - b) Groundcovers and Aquatic Plants: 5 gram tablets.
- 2. Phosphoric Acid: 10 percent.
- 3. Soluble Potash: 5 percent.
- C. Top-Dress Fertilizer:
 - 1. General:

6-10-8 complete fertilizer, fifty percent of the nitrogen to be derived from natural organic sources or ureaform. Available phosphoric acid shall be from superphosphate, bone or tankage. 50% of the Potash shall be derived from sulfate of potash-magnesium.

 - a) 6% nitrogen
 - b) 10% phosphoric acid
 - c) 8% potash
 - 2. Additives:

Fertilizer shall contain the following additives:

 - a) F.T.E. 2%
 - b) Multitracin 0.5%
 - 3. Gradation:

Fertilizer to meet the following gradation:

 - a) No. 4 sieve retains 0%
 - b) No. 20 sieve retains 65%
 - c) No. 80 sieve retains 100%

2.5 ACCESSORIES

- A. Wrapping Materials: Burlap.
- B. Stakes: Pressure treated wood stakes, 6 foot to 8 foot by 2 inch x 2 inch.
- C. Cable, Wire, Eye Bolts and Turnbuckles: Non-corrosive, of sufficient strength to withstand wind pressure and resulting movement of plant life.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verify that prepared subsoil and planters are ready to receive work.
- B. Saturate soil with water to test drainage.
- C. Holding plants on site:
 - 1. Plants will / may be held on the project within the limits of work or in a location designated by the Owner.
 - 2. The Contractor takes responsibility for maintaining the plant's health and condition immediately upon each plant's removal from the holding area.

3.2 PREPARATION OF SUBSOIL

- A. Prepare subsoil to eliminate uneven areas. Maintain profiles and contours. Make changes in grade gradual. Blend slopes into level areas.
- B. Remove foreign materials, weeds and undesirable plants and their roots. Remove contaminated subsoil.
- C. Scarify subsoil to a depth of 3 inches (75 mm) where plants are to be placed. Repeat cultivation in areas where equipment, used for hauling and spreading topsoil, has compacted subsoil.
- D. Dig pits and beds 6 inches (150 mm) larger than plant root system.

3.3 PLACING TOPSOIL

- A. Spread topsoil to a minimum depth of 4 inches (100 mm) over area to be planted. Rake smooth.
- B. Place topsoil during dry weather and on dry unfrozen subgrade.
- C. Remove vegetable matter and foreign non-organic material from topsoil while spreading.
- D. Grade topsoil to eliminate rough, low or soft areas, and to ensure positive drainage.
- E. Install topsoil into pits and beds intended for plant root balls, to a minimum thickness of 6 inches (150 mm).

3.4 FERTILIZING

- A. Apply fertilizer in accordance with manufacturer's instructions.
- B. Apply after initial raking of topsoil.
- C. Mix thoroughly into upper 2 inches (50 mm) of topsoil.
- D. Lightly water to aid the dissipation of fertilizer.

3.5 PLANTING

- A. Set plants vertical.
- B. Remove non-biodegradable root containers.
- C. Set plants in pits or beds, partly filled with prepared plant mix, at a minimum depth of 6 inches (of 150 mm) under each plant. Remove burlap, ropes, and wires, from the root ball.
- D. Place bare root plant materials so roots lie in a natural position. Backfill soil mixture in 6 inch (150 mm) layers. Maintain plant life in vertical position.
- E. Saturate soil with water when the pit or bed is half full of topsoil and again when full.

3.6 PLANT RELOCATION AND RE-PLANTING

- A. Relocate plants as indicated by Architect.
- B. Replant plants in pits or beds, partly filled with prepared topsoil mixture, at a minimum depth of 6 inches (of 150 mm) under each plant. Remove burlap, ropes, and wires, from the root ball.
- C. Place bare root plant materials so roots lie in a natural position. Backfill soil mixture in 6 inch (150 mm) layers. Maintain plant materials in vertical position.
- D. Saturate soil with water when the pit or bed is half full of topsoil and again when full.

3.7 PLANT SUPPORT

- A. Brace plants vertically with plant protector wrapped guy wires and stakes to the following:
 - 1. Tree Caliper: 2 to 4 inches (50 to 100 mm); Tree Support Method: 3 guy wires with eye bolts and turn buckles
 - 2. Tree Caliper: Over 4 inches (100 mm); Tree Support Method: 4 guy wires with eye bolts and turn buckles
- B. Guy and stake in accordance with planting details. Plants shall stand plumb after guying, unless otherwise noted on drawings.

3.8 LAYOUT AND EXCAVATION OF PLANT PITS

- A. Layout:
 - 1. Layout plants or stake positions in locations shown on drawings for Consultant's inspection and approval.
 - 2. Consultant will adjust locations in the field before planting begins.

3. Consultant reserves right to refuse such inspection if, in his opinion, an insufficient number of plants are available on site. All plants specified for each area to be planted must be available for layout .
 4. Plant mixed groupings of understory plants with cluster of the same species in groups of 5, 7, or 9 plants per cluster for natural effect.
 5. Landscape Architect to approve layout prior to planting.
- B. Excavation:
1. Excavate plant pits to the following dimensions:
To a width two and a half times greater in any dimension than rootball, container, or box.
 2. Subsoil Removal:
Separate subgrade soils and remove from planting area during planting operations. Loosen subgrade in pits and beds to a depth of 3-inches (75mm). Thoroughly scarify sides of planting pits.
 3. Backfill with 1:1 mix of planting soil to native soil.

3.9 DRAINAGE, OBSTRUCTIONS AND DETRIMENTAL SOILS

A. Detrimental Soils:

Notify Consultant in writing of any soil or drainage conditions detrimental to growth of plant material.

B. Drainage:

1. Test drainage of 10% of tree and 5% of shrub pits prior to plant installation by filling completely with water. In areas where pits retain water as specified below test the remaining plant pits.
2. Conditions permitting the retention of water for more than twenty-four (24) hours shall be brought to the attention of the Consultant.

C. Shrubs in areas retaining water shall be mounded a minimum of 150mm (six-inches) above final grade and trees shall be mounded a minimum of 300mm (twelve-inches) or a height sufficient to place bottom of rootball above groundwater level. Feather soil away from root ball at a slope no greater than two feet horizontal to one foot vertical.

D. Obstructions:

1. If rock, underground utilities or foundations, tree roots or other obstructions are encountered in the excavation of plant pits, alternate locations may be selected by Consultant.
2. Where locations cannot be changed, submit cost required to remove obstructions to a depth of not less than six inches (6") below the required pit depth.
3. Proceed with work only after written approval of Consultant

3.10 PLANT PLACEMENT

A. Pre-planting Period:

1. Protect plants at all times from sun or drying winds or freezing.
2. Plants that cannot be planted immediately on delivery shall be kept in the shade, protected from wind, and maintained at each species optimum moisture content.

B. Container Removal:

1. Canned stock shall be removed carefully after container has been cut on two sides with approved cutter.
2. Do not lift or handle container plants by tops, stems, or trunks at any time.
3. After removing plant from container, scarify side of rootball to prevent root-bound condition.

- C. Plant Placement:
 - 1. Use Planting Soil Mix to backfill plant pits.
 - 2. Place plant and rotate to best advantage from principal viewpoints of adjacent walkways.
 - 3. Set plant plumb and brace rigidly in position until planting soil has been tamped solidly around the ball and roots.
 - 4. When plant pits have been backfilled approximately 2/3 full, completely flood with water containing rooting hormone, before installing remainder of the planting soil to top of pit.
 - 5. Firm soil to eliminate air pockets.
- D. Planting Fertilizer Placement:
- E. Evenly distribute tablets in plant pits when backfilled 2/3 as follows:
 - 1. Deciduous Trees - two 21 gram tablets per caliper inch.
 - 2. Deciduous Shrubs - two 21 gram tablets per foot of height.
 - 3. Evergreen Trees and Shrubs - one 21 gram tablet per foot of height or spread.
 - 4. Groundcovers, vines, and herbaceous plants - one 5 gram tablet per plant.
- F. Burlap Removal:
 - 1. When 1/2 backfilled, cut ball ties, remove burlap from top and sides, cut and adjust to prevent formation of air pockets.
 - 2. Do not pull burlap from under the balls.

3.11 MULCH PLACEMENT

- A. Finish Grading:

Smooth planting area to conform to specified grades after full settlement has occurred.
- B. Mulch Placement:

Mulch all pits and beds with a 50mm (2-inch) layer of mulch.
- C. Rooting Hormone:

Saturate ground cover areas with water containing rooting hormone immediately after completion of planting.

3.12 PRUNING

- A. General:

Prune plants only after planting, in accordance with standard horticultural practice, and only at the direction of the Consultant.
- B. Pruning of existing trees:

Pruning to remove dead wood, broken or damaged branches shall be done as directed by and under supervision of the Project Arborist or Consultant.

3.13 TOP DRESS FERTILIZER

- A. First Application:

Immediately after completing mulching of shrub and ground cover beds, apply Top Dress Fertilizer at the rate of seven (7) pounds per 1000 feet.
- B. Subsequent Application:
 - 1. Beginning April 15 and extending to August 15 of the first full growing season or one month after first application for planting completed during the first growing season, make monthly applications of Top Dress Fertilizer to all shrub and ground cover beds at the rate of seven (7) pounds per 1000 square feet.

2. In planting areas for which Final Acceptance occurs during the first growing season continue the top dress fertilizer application at specified rates and intervals for a period of 1 year from First Application until warranty inspection.

3.14 MAINTENANCE

- A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

END OF SECTION

FOR REFERENCE ONLY

SECTION 33 1415 – SITE WATER DISTRIBUTION PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Water Distribution Piping.
 - 2. Water Distribution Fittings.
 - 3. Water Distribution Sleeve Couplings.
 - 4. Water Distribution Concrete Thrust Block
 - 5. Water Distribution Valves
- B. Related Requirements:
 - 1. Section 312000 – Earth Moving

1.2 REFERENCES

- A. ASTM International (ASTM):
 - 1. ASTM A307 – Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60000 PSI Tensile Strength.
 - 2. ASTM A536 – Specification for Ductile Iron Castings.
 - 3. ASTM A5563 – Specification for Carbon Alloy Steel Nuts.
- B. American Water Works Association (AWWA):
 - 1. AWWA C104 – Cement-Mortar Lining for Ductile Iron-Pipe and Fittings.
 - 2. AWWA C110 – Ductile-Iron and Gray-Iron Fittings.
 - 3. AWWA C111 – Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
 - 4. AWWA C116 – Protective Fusion-Bonded Coatings for the Interior and Exterior Surfaces of Ductile-Iron and Gray-Iron Fittings.
 - 5. AWWA C150 – Thickness Design of Ductile-Iron Pipe.
 - 6. AWWA C151 – Ductile-Iron Pipe, Centrifugally Cast.
 - 7. AWWA C153 – Ductile-Iron Compact Fittings.
 - 8. AWWA C210 – Liquid-Epoxy Coatings and Linings for Steel Water Pipe and Fittings.
 - 9. AWWA C213 – Fusion-Bonded Epoxy Coatings and Linings for Steel Water Pipe and Fittings.
 - 10. AWWA C219 – Bolted, Sleeve-Type Couplings for Plain-End Pipe.
 - 11. AWWA C600 – Installation of Ductile Iron Water Mains and Their Appurtenances.
- C. DC Water:
 - 1. DC Water Standard Specifications.

1.3 SUBMITTALS

- A. Product Data:
 - 1. Piping.
 - 2. Sleeves.
 - 3. Valves.
- B. Information:
 - 1. Submit “Affidavits” for products stating that they comply with the requirements of this Section and the applicable AWWA standards.

2. Submit "Certifications" for each of the materials specified herein, which are used on the project, with the manufacturer's Certificate of Compliance stating that the materials meet or exceed the specified requirements.
3. Submit the "Product Data Sheets" for each product used.
4. Submit "Test" results for proof of hydraulic tests on sleeve type couplings.
5. Submit the manufacturer's "Installation Instructions and Details" for installing pipe, fittings, restrained joints, retaining glands, and sleeve type couplings.

C. Closeout:

1. Submit "Working Drawings" showing the layout and installation of the piping to be installed. Working drawings shall include but not be limited to pipe laying schedule, closure pieces, and fittings, extra mainline fittings, joint details, restraint and harnessing and special designs.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Delivery, storage, and handling shall be in accordance with AWWA C600.
- B. Coordinate delivery and distribution shall of pipe with installation and scheduled to provide minimum interference with traffic.
- C. Distribute pipe along line of work and outside trench as near as practicable to point of placement, facing in proper direction and properly wedged secure.
- D. Pipe shall not be rolled or dragged on the ground. No pipe shall be placed against trees or shrubs or in a manner that may damage private and other property.
- E. Protect pipe, pipe ends, pipe coating and lining, fittings and appurtenances from damage at all-times.
- F. Keep interior pipe surfaces clean at all times. Protect pipe ends by installing and maintaining, in good condition, approved plugs and caps.
- G. No material shall be deposited on or against pipe.

1.5 QUALITY ASSURANCE

- A. Prior to placing pipe and fittings in trench, the interior and exterior of pipe and fittings shall be inspected by Testing Agency. Pipe or fittings that are damaged shall be repaired or removed and replaced as directed by Testing Agency at no additional cost to Owner.

PART 2 - PRODUCTS

2.1 NUTS AND BOLTS

- A. Nuts shall comply with ASTM A563 unless noted otherwise in the Contract Documents.
- B. Bolts shall comply with ASTM A307 unless noted otherwise in the Contract Documents.

2.2 DUCTILE-IRON PIPE

- A. Pipe shall be ductile-iron meeting the requirements of AWWA C151 with mechanical joints.

- B. Coat exterior of pipe with shop applied coating per AWWA C151 and cement lined with double thickness and seal coated in accordance with AWWA C104.
- C. Pipe shall be furnished in lengths of 18 to 20 feet and shall include all joining materials.
- D. Pipes shall be Thickness Class 56.

2.3 FITTINGS

- A. Fittings shall be mechanical joints for ductile-iron pipe and fittings in accordance with AWWA C111.
- B. Fittings 48 inches and smaller in diameter shall be mechanical joint bell, ductile-iron in accordance with AWWA C110.
- C. Coatings for Fittings:
 - 1. Provide exterior asphaltic coating per AWWA C110 and interior cement-mortar lining per AWWA C104; or
 - 2. Provide interior and exterior fusion bonded epoxy coating, 6-8 mils in thickness, conforming to AWWA C116.
- D. All fittings shall be complete with all joint accessories, rubber gaskets, bolts and nuts.

2.4 JOINT RESTRAINT

- A. Unless otherwise noted, pressure ratings for pipe harnessing components shall not be less than the pipe working pressures of the installed pipe.
- B. Retaining glands for restraint of mechanical joint fittings to ductile-iron pipe 24 inches in diameter and smaller shall be designed to fit standard mechanical joint bells conforming to AWWA C111. Glands shall be manufactured of ductile-iron conforming to ASTM A536 with a restraining mechanism of size and arrangement per manufacturer's recommendations, of the following type:
 - 1. Ductile-iron wedges in combination with extra mainline fittings, heat-treated set screws with or without twist-off nuts, torqued per manufacturer's recommendation or hardened steel set screws with knurled and cupped points, with or without twist-off nuts.
 - 2. Megalug Series 1100 by EBAA Iron Sales, Inc., Uni-Flange Series 1400 by Ford Meter Box Co., or approved equal.
 - 3. Retainer gland shall meet working pressure ratings for installed pipe.

2.5 SLEEVE TYPE COUPLINGS

- A. Couplings shall be designed, manufactured and installed in accordance with AWWA C219 except as modified below:
 - 1. The Manufacturer shall provide an affidavit certifying compliance with the above standard.
 - 2. Couplings shall be designed for 150 psi operating pressure unless shown otherwise on the Contract Drawings. Provide manufacturer certification for proof of design tests per AWWA C219.
 - 3. The Contractor shall verify the outside diameters of the pipes to be connected, and shall select the correct diameter sleeve-type coupling to ensure a proper fit without utilizing pipe stops.
- B. The entire sleeve assembly shall be lined and coated with one of the factory-applied coating systems as follows:

1. Fusion bonded epoxy per AWWA C213 with eight (8)-12 mils minimum exterior coating thickness and eight (8)-12 mils minimum interior coating thickness.
2. Liquid epoxy per AWWA C210 with 16 mils minimum and 25 mils maximum coating thickness.
3. Other coating system as approved by the Engineer.

C. Bolts, nuts and harness tie rods shall be stainless steel as specified in AWWA C219.

D. The Contractor may use mechanical joint sleeve at no additional cost to DC Water.

2.6 FIELD APPLIED COATING AND LINING SYSTEMS

- A. Field applied coating system for repairs of pipe coatings and linings shall be a two (2) component, quick setting, 100 percent polyurethane product – Corropipe by Valspar Industrial, or equal.
- B. Lining system shall be NSF 61 compliant.
- C. Touch-up coating that is oxidized by using shop coat paint and following the manufacturer's recommendations.

2.7 GATE VALVES

- A. Adhere to the standards and specification in DC Water Specification 33 14 00 Gate Valves.

2.8 POST INDICATOR VAVLE

- A. Refer to the Contract Drawings.

2.9 FIRE DEPARTMENT CONNECTION

- A. Refer to the Contract Drawings.

PART 3 - EXECUTION

3.1 GENERAL

- A. Pipe, fittings, and specials shall be new materials.
- B. No more than 50 linear feet of pipe shall be laid in advance of backfilling.
- C. Straight pipe shall be furnished in standard uniform lengths. Approved short pipe lengths shall be used where necessary to meet line and grade or as closure pieces.

3.2 MAINTAINING WATER SERVICE

- A. Existing water service or by-pass piping shall remain in service until new water mains are complete, temporarily capped, tested, disinfected, and charged except when disconnecting or connecting new Work.

- B. Where existing pipe is cut and connected to a new pipe, Work shall be scheduled as directed by Contracting Officer Technical Representative (COTR) to minimize service interruption.
- C. The Contract shall submit a shutdown request to COTR at least five (5) days prior to cuttings or abandoning water piping.
 - 1. Prior to submitting the shutdown request all work necessary to prepare for the shutdown shall be complete, including but not limited to excavation, determining existing pipe measurements, having pipe laying sketches and work plan complete and approved, and all materials are procured and on site.
 - 2. Upon receiving the shutdown request COTR will verify the Contractor is ready to perform the connection and, if all preparatory work is complete, COTR will schedule the date of the outage and notify the Contractor of the approved outage date. Contractor shall make the connection on the date and time approved by COTR.

3.3 INSTALLATION

- A. Interior pipe surfaces shall be kept clean throughout construction by use of carefully fitted stoppers.
- B. Trench excavation and suitable bedding shall be complete to proper grade before pipe is placed. Any adjustment due to improper trench grade or settlement shall be accomplished at Contractor's expense.
- C. Pipe shall be laid to the horizontal and vertical alignment as shown on the Project Drawings. Entire length of pipe and fittings shall be bedded solidly on trench bottom to required line and grade. Under no condition shall pipe be subjected to a blow or shock to bring it to required line and grade.
- D. As part of work, bell holes shall be excavated to adequate size where necessary to accommodate proper joints.
- E. When straight pipe requires cutting, the Contractor shall take field measurements for making, closing, and connecting pieces of correct dimensions. Cutting shall leave a smooth end. The cut shall be made by abrasive saw or by a special DIP pipe cutter. All pipe ends shall be square with the longitudinal axis of the pipe and shall be reamed and smoothed to assure a good connection.

3.4 MAKING CONNECTIONS

- A. Unless otherwise indicated, the Contractor shall cut existing water mains and remove pipe, fittings, and appurtenances to connect new water mains, reconnect existing water mains, and perform all work necessary or incidental thereto.
- B. Transferring water connections, completing connections, and abandoning pipe shall be performed continuously until complete. The Contractor shall provide necessary labor, equipment, and materials, including but not limited to overtime pay, lights, and generators, to complete the work on a 24 hour basis at no additional cost to Owner.

3.5 JOINTS AND FITTINGS

- A. Joints shall be assembled per AWWA C600 and manufacturer's recommendations.

- B. Springing of joints is prohibited.
- C. Unless otherwise specified, the diameter of ductile-iron plain ends shall be the same as for mechanical-joint cast or ductile-iron pipe.
- D. The inside of the pipe socket and the outside of the plain end shall be thoroughly cleaned to remove oil, grit, excess coating and other foreign matter.
- E. A retainer gland shall not be used on any pipe joint connecting ductile-iron pipe to existing cast-iron pipe.
- F. Pipe installation of proprietary restrained joint pipe systems shall be in accordance with the manufacturer's printed recommendations.
- G. Pipe Deflections:
 - 1. Under no circumstances shall pipe deflections, either horizontal or vertical, exceed the manufacturer's printed recommendations. Where deflections will exceed the manufacturer's recommendations, fittings shall be used.
 - 2. Keep the pipe straight while pushing the pipe home. The joint deflections shall only be completed after the pipe is homed.
 - 3. Changes in alignment or grade greater than the manufacturer's allowable deflection shall be made using fittings.
- H. Installing Mechanical Joint Fittings:
 - 1. Install mechanical joint fittings in accordance with the fitting manufacturer's instructions and AWWA C600.
 - 2. Torque range for retainer gland set screws shall be in accordance with fitting manufacturer's recommendations or AWWA C600 if manufacturer does not make recommendations.
 - 3. T-bolts, harness tie rods, coupling bolts, flanged joint bolts, etc. shall be installed to provide at least one complete thread projecting beyond the nut when properly tightened.
 - 4. If effective seal is not obtained at maximum specified torque, the joint shall be disassembled, cleaned and reassembled at no additional cost to the Owner.
 - 5. Bolts that are overstressing shall be removed and replaced at no additional cost to the Owner.
- I. After each ductile-iron pipe, fitting, and valve is jointed, each joint area including restraint elements shall be cleaned, inspected and approved before next section is installed.
- J. Carbon steel bolts, clamps, and connecting parts including thread areas, etc., shall receive one prime coat and one finish coat of field-applied coating system applied in accordance with AWWA C210. Field coatings shall be complete prior to line tests.

3.6 SLEEVE TYPE COUPLINGS

- A. General:
 - 1. Use sleeve-type couplings only when indicated on the Contract Drawings.
- B. Pipe end condition:
 - 1. Pipe for use with sleeve type couplings shall have plain ends, cast or machined at right angles to pipe axis.
 - 2. Ductile-iron and cast-iron pipe shall be smooth and round for a distance of eight inches from end of the pipe up through 24 inch diameter, and for 12 inches from the end of the pipe for pipe larger than 24 inch diameter.

3. Maximum actual O.D. of pipe end shall be such as to permit the passing of a ring gauge having an internal bore not greater than 0.01 inch larger than the nominal O.D. plus the maximum variation indicated in AWWA C110.
4. Steel pipe larger than 10-3/4 inches O.D. shall be free from indentations, projections or roll marks for a distance of eight inches from the end of the pipe and, within this distance, the actual O.D. shall be not more than 1/32 inch smaller than nominal O.D. Maximum actual O.D. shall be not more than 1/32 inch smaller than nominal O.D. Maximum actual O.D. of pipe end shall be such as to permit the passing of a ring gauge having an internal bore not greater than 3/32 inch larger than pipe nominal O.D.
5. For each type pipe, minimum actual O.D. shall be determined by use of a steel tape, calibrated to 100th of an inch, applied circumferentially to pipe.

C. Assembly:

1. Couplings shall be assembled in accordance with the manufacturer's printed installation instructions and provide a leak free connection when the pipe is tested at required test pressure.
2. Laying deflection per coupling shall not exceed manufacturer's recommendations.
3. Harness all couplings using stainless steel tie rods.
4. The Contractor may use mechanical joint sleeve at no additional cost to Owner.

3.7 BLOW-OFFS

- A. Piping for air and drain blow-offs shall be included as part of the water utility piping installation.
- B. Blow-off valves and casings shall be supplied as specified in DC Water Specification 33 06 23 Concrete Valve Casings and DC Water Specification 33 14 00 Gate Valves.

3.8 THURST RESTRAINT

- A. Pipe shall be restrained at all joints, fitting, valves, appurtenances, and specials using the joint restraining systems specified in this Section.
- B. Concrete thrust restraints shall be used when shown on the Contract Drawings, as required by DC Water Specification 33 11 20 Concrete Thrust Restraints or when approved by Engineer and shall be in accordance with DC Water Specification 33 11 20.
- C. Mechanical joint and retainer glands shall be used to restrain fittings. Restraint of mechanical joint ductile-iron pipe shall be accomplished by using approved ductile-iron retainer glands in lieu of follower glands, installed in accordance with manufacturer's printed instructions.
- D. After each restrained joint is complete, the joint restraint elements shall be cleaned and inspected.

3.9 DISINFECTING WATER PIPING

- A. Piping for water systems shall be disinfected in accordance with DC Water Specification 33 13 01 Disinfecting Water Mains.

3.10 PRESSURE AND LEAKAGE TESTING

- A. Pressure pipe shall be tested in accordance with DC Water Specification 33 19 05 Pressure and Leakage Testing – Pressure Pipe.

3.11 EXTRA MAINLINE FITTINGS

- A. Contractor shall identify to Engineer extra mainline fittings necessary for closure sections or unanticipated interferences. If Engineer agrees that extra mainline fittings are necessary, the Contractor shall:
1. Verify the size of existing pipe in service and provide fittings in accordance with this section to complete a closure or navigate around an unanticipated interference.
 2. Contractor shall provide working drawings showing the proposed modifications to the design and the limits of pipe and fittings that will be needed for closure or navigating around the unanticipated interference.
 3. Upon review and approval of the proposed modifications by Engineer, the Contractor shall install the modifications as shown on the working drawings.

END OF SECTION

FOR REFERENCE ONLY

SECTION 33 4200 – STORMWATER CONVEYANCE

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Storm Conveyance Piping.
 - 2. Storm Conveyance Fittings.
 - 3. Storm Conveyance Manholes.
 - 4. Storm Conveyance Overflow Structures.
 - 5. Storm Conveyance Trench Drains.
 - 6. Storm Conveyance Drain Basins.
- B. Related Requirements:
 - 1. Section 312000 – Earth Moving

1.2 REFERENCES

- A. ASTM International (ASTM):
 - 1. ASTM A48 – Standard Specification for Gray Iron Castings
 - 2. ASTM A536 – Standard Specification for Ductile Iron Castings
 - 3. ASTM A615 – Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement
 - 4. ASTM B26 – Standard Specification for Aluminum-Alloy Sand Castings
 - 5. ASTM C1103 – Standard Practice for Joint Acceptance Testing of Installed Precast Concrete Pipe Sewer Lines
 - 6. ASTM C139 – Standard Specification for Concrete Masonry Units for Construction of Catch Basins and Manholes
 - 7. ASTM C231 – Standard Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method
 - 8. ASTM C270 – Standard Specification for Mortar for Unit Masonry
 - 9. ASTM C32 – Standard Specification for Sewer and Manhole Brick (Made from Clay or Shale)
 - 10. ASTM C443 – Standard Specification for Joints for Concrete Pipe and Manholes, Using Rubber Gaskets
 - 11. ASTM C478 – Standard Specification for Precast Reinforced Concrete Manhole Sections
 - 12. ASTM C507 – Standard Specification for Reinforced Concrete Elliptical Culvert, Storm Drain, and Sewer Pipe
 - 13. ASTM C55 – Standard Specification for Concrete Building Brick
 - 14. ASTM C923 – Standard Specification for Resilient Connectors Between Reinforced Concrete Manhole Structures, Pipes and Laterals
 - 15. ASTM C990 – Standard Specification for Joints for Concrete Pipe, Manholes and Precast Box Sections Using Preformed Flexible Joint Sealants
 - 16. ASTM D1751 – Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types)
 - 17. ASTM D1752 – Standard Specification for Preformed Sponge Rubber Cork and Recycled PVC Expansion
 - 18. ASTM D1784 – Standard Specification for Rigid Poly(Vinyl Chloride) (PVC) Compounds and Chlorinated Poly(Vinyl Chloride) (CPVC) Compounds
 - 19. ASTM D1785 – Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120
 - 20. ASTM D2167 – Density and Unit Weight of Soil in Place by the Rubber Ballon Method

21. ASTM D2321 – Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications
22. ASTM D3212 – Standard Specification for Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals
23. ASTM D6938 – Standard Test Method for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth)
24. ASTM F477 – Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe

B. DC Water:

1. DC Water Standard Specifications.

1.3 SUBMITTALS

A. Product Data:

1. Storm drainage piping and fittings.
2. Manholes.
3. Overflow Structures.
4. Drain Basins.
5. Stormwater Trench Drains

B. Shop Drawings:

1. Manholes, Overflow Structures, and Drain Basins:
 - a. Indicate RIM and Bottom Elevations
 - b. Indicate the size of all incoming pipes and the outgoing pipe.
 - c. Indicate the invert elevations for all incoming pipes and the outgoing pipe.
 - d. Indicate the location of any throat openings, if required in the Drawings.
2. Stormwater Trench Drain:
 - a. Indicate critical dimensions, installation and anchoring requirements, and other details.
 - b. Signed and sealed by the qualified professional engineer responsible for their preparation.

C. Information:

1. Source Quality-Control Reports: For Stormwater Trench Drains.
2. Field Quality-Control Reports: For storm drainage pipe, manholes, overflow structures, drain basins, and Stormwater Trench Drains.
3. Qualifications Statement: For manufacturer.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Inspection: Accept materials on Site in manufacturer's original packaging and inspect for damage.
- B. Store materials according to manufacturer instructions.
- C. Protection:
1. Protect materials from moisture and dust by storing in clean, dry location remote from construction operations areas.
 2. Provide additional protection according to manufacturer instructions.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this Section with minimum three years documented experience.

1.6 WARRANTY

- A. Furnish five year manufacturer's warranty for stormwater trench drains.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Perform Work according to:
1. DC Water Standards and Specifications

2.2 STORM DRAINAGE PIPING

- A. Reinforced Concrete Piping:
1. Pipe:
 - a. Comply with ASTM C76, Class IV, Wall Type B.
 - b. Reinforcement: Bars complying with ASTM A615, Grade 60
 - c. Inside Nominal Diameter: According to the Drawings
 - d. End Connections: Bell and spigot
 2. Fittings: Concrete.
 3. Joints:
 - a. Comply with ASTM C443.
 - b. Gaskets: Rubber, compression.
- B. PVC Piping:
1. Pipe:
 - a. Comply with ASTM D1785, Schedule 80.
 - b. Inside Nominal Diameter: According to the Drawings
 - c. Style: Bell and spigot with rubber-ring seal gasket joint.
 2. Fittings: PVC.
 3. Joints:
 - a. Comply with ASTM F477.
 - b. Gaskets: Elastomeric.

2.3 MANHOLES

- A. In accordance with the latest editions of DC Water Standards and Specifications, unless otherwise noted on the plans. Conform to ASTM C478. Joints between precast concrete risers and tops shall be full-bedded in cement mortar and shall be smoothed to a uniform surface on both interior and exterior of the structure or made with flexible watertight, rubber-type gaskets meeting the requirements of paragraph JOINTS.

2.4 OVERFLOW STRUCTURES

- A. All overflow structures' materials and methods of installation shall be in conformance with the latest edition of DC Water Standards and Specifications unless otherwise noted on the plans.

2.5 MANHOLE AND OVERFLOW STRUCTURE FRAMES AND COVERS

- A. In accordance with the latest editions of DC Water Standards and Specifications, unless otherwise noted on the plans. Submit certification on the ability of frame and cover or gratings to carry the imposed live load. Frame and cover for gratings shall be cast gray iron, ASTM A48, Class 35B;

cast ductile iron, ASTM A536, Grade 65-45-12; or cast aluminum, ASTM B26, Alloy 356.O-T6. Weight, shape, size, and waterway openings for grates and curb inlets shall be as indicated on the plans. The word "Storm Sewer" shall be stamped or cast into covers so that it is plainly visible.

2.6 MISCELLANEOUS MATERIALS

A. Concrete:

1. Unless otherwise specified, concrete and reinforced concrete shall conform to the requirements for 3,500 psi concrete under Section 03 30 00 CAST IN PLACE CONCRETE. The concrete mixture shall have air content by volume of concrete, based on measurements made immediately after discharge from the mixer, of 5 to 7 percent when maximum size of coarse aggregate exceeds 1-1/2 inches. Air content shall be determined in accordance with ASTM C231/C231M. The concrete covering over steel reinforcing shall not be less than 1 inch thick for covers and not less than 1-1/2 inches thick for walls and flooring. Concrete covering deposited directly against the ground shall have a thickness of at least 3 inches between steel and ground. Expansion-joint filler material shall conform to ASTM D1751, or ASTM D1752, or shall be resin-impregnated fiberboard conforming to the physical requirements of ASTM D1752.

B. Mortar:

1. Mortar for pipe joints, connections to other drainage structures, and brick or block construction shall conform to ASTM C270, Type M, except that the maximum placement time shall be 1 hour. The quantity of water in the mixture shall be sufficient to produce a stiff workable mortar but in no case shall exceed 6 gallons of water per sack of cement. Water shall be clean and free of harmful acids, alkalis, and organic impurities. The mortar shall be used within 30 minutes after the ingredients are mixed with water. The inside of the joint shall be wiped clean and finished smooth. The mortar head on the outside shall be protected from air and sun with a proper covering until satisfactorily cured.

C. Precast Concrete Segmental Blocks:

1. Precast concrete segmental block shall conform to ASTM C139, not more than 8 inches thick, not less than 8 inches long, and of such shape that joints can be sealed effectively and bonded with cement mortar.

D. Brick:

1. Brick shall conform to ASTM C62, Grade SW; ASTM C55, Grade S-I or S-II; or ASTM C32, Grade MS. Mortar for jointing and plastering shall consist of one part portland cement and two parts fine sand. Lime may be added to the mortar in a quantity not more than 25 percent of the volume of cement. The joints shall be filled completely and shall be smooth and free from surplus mortar on the inside of the structure. Brick structures shall be plastered with 1/2 inch of mortar over the entire outside surface of the walls. For square or rectangular structures, brick shall be laid in stretcher courses with a header course every sixth course. For round structures, brick shall be laid radially with every sixth course a stretcher course.

2.7 JOINTS

A. Flexible Watertight Joints:

1. Flexible watertight joints shall be made with plastic or rubber-type gaskets for concrete pipe. The design of joints and the physical requirements for preformed flexible joint sealants shall conform to ASTM C990, and rubber-type gaskets shall conform to ASTM C443. Factory-fabricated resilient joint materials shall conform to ASTM C425. Gaskets shall have not more than one factory-fabricated splice, except that two factory-fabricated splices of the rubber-type gasket are permitted if the nominal diameter of the pipe being gasketed exceeds 54 inches.

2. Rubber gaskets shall comply with the oil resistant gasket requirements of ASTM C443. Certified copies of test results shall be delivered to the Contracting Officer Technical Representative (COTR) before gaskets or jointing materials are installed. Alternate types of watertight joint may be furnished, if specifically approved.

B. External Sealing Bands:

1. Requirements for external sealing bands shall conform to ASTM C877.

C. Flexible Watertight, Gasketed Joints:

1. Gaskets: When infiltration or exfiltration is a concern for pipe lines, the couplings may be required to have gaskets. The closed-cell expanded rubber gaskets shall be a continuous band approximately 7 inches wide and approximately 3/8 inch thick, meeting the requirements of ASTM D1056, Type 2 A1, and shall have a quality retention rating of not less than 70 percent when tested for weather resistance by ozone chamber exposure, Method B of ASTM D1171. Rubber O-ring gaskets shall be 13/16 inch in diameter for pipe diameters of 36 inches or smaller and 7/8 inch in diameter for larger pipe having 1/2 inch deep end corrugation. Rubber O-ring gaskets shall be 1-3/8 inches in diameter for pipe having 1 inch deep end corrugations. O-rings shall meet the requirements of ASTM C990 or ASTM C443. Preformed flexible joint sealants shall conform to ASTM C990, Type B.
2. Connecting Bands: Connecting bands shall be of the type, size and sheet thickness of band, and the size of angles, bolts, rods and lugs as indicated or where not indicated as specified in the applicable standards or specifications for the pipe. Exterior rivet heads in the longitudinal seam under the connecting band shall be countersunk or the rivets shall be omitted and the seam welded. Watertight joints shall be tested and shall meet the test requirements of paragraph HYDROSTATIC TEST ON WATERTIGHT JOINTS.

2.8 STRUCTURE STEPS

- A. Storm structures with a depth of 4 feet and greater must be provided with manhole steps. Unless stated otherwise on plans, steps must be a minimum of 10 inches wide with a maximum step spacing of 16 inches on center. Step must be embedded a minimum of 3 inches into concrete structure wall and extend a minimum of 4 1/2 inches from the face of structure wall. Step shall withstand a minimum force of 300 pounds. The preferred structure step is constructed of #4, grade 60 reinforcing bar encased with polypropylene.

2.9 RESILIENT CONNECTORS

- A. Flexible, watertight connectors used for connecting pipe to manholes and inlets shall conform to ASTM C923.

2.10 TRENCH DRAINS

A. Performance and Design Criteria:

1. Loading: H-20, according to AASHTO HB-17.

B. Channel Drains:

1. Material, built-in slope, bottom radius, channel section length, end connections, and bottom outlet according to manufacturer requirements.
2. Width: According to the Drawings.

C. Channel Grates:

1. Material, openings, style, and color according to Landscape Drawings and/or Exhibit Drawings.
2. Shall be high heel proof.

D. Accessories:

1. Grate lock.
2. End cap and screws.
3. End outlet.
4. Bottom outlet adapter.

2.11 DRAIN BASINS**A. Basin**

1. Shall be manufactured from PVC pipe stock, utilizing a thermoforming process to reform the pipe stock to the specified configuration.
2. The drainage pipe connection stubs shall be manufactured from PVC pipe stock and formed to provide a watertight connection with specified pipe system.
3. Joint tightness shall conform to ASTM D3212 for joints for drain and sewer plastic using flexible elastomeric seals. The flexible elastomeric seals shall conform to ASTM F477.
4. The pipe bell spigot shall be jointed to the main body of the drain basin or catch basin. The raw material used to manufacture the pipe stock that is used to manufacture the main body and pipe stubs of the surface drainage inlets shall conform to ASTM D1784 cell class 12454.

B. Grates and Frames

1. Furnished for all surface drainage inlets, shall be ductile iron, and shall be made specifically for each basin so as to provide a round bottom flange that closely matches the diameter of the surface drainage inlet.
2. Grates for drain basins shall be capable of supporting various wheel loads as specified.
3. Ductile iron used in the manufacture of the castings shall conform to ASTM A536 grade 70-50-05. Grates and covers shall be provided and painted black.

PART 3 - EXECUTION**3.1 INSTALLATION OF PIPING**

- A. Excavation of trenches, and for appurtenances and backfilling for piping, manholes, and overflow structures shall be in accordance with the applicable portions of these Specifications, DC Water Standards and Specifications, and the requirements specified below.

B. Trenching:

1. The width of trenches at any point below the top of the pipe shall be not greater than the outside diameter of the pipe plus 24 inches to permit satisfactory jointing and thorough tamping of the bedding material under and around the pipe. Sheet piling and bracing, where required, shall be placed within the trench width as specified, without any overexcavation. Where trench widths are exceeded, redesign with a resultant increase in cost of stronger pipe or special installation procedures will be necessary. Cost of this redesign and increased cost of pipe or installation shall be borne by the Contractor without additional cost to the Government.

C. Removal of Rock:

1. Rock in either ledge or boulder formation shall be replaced with suitable materials to provide a compacted earth cushion having a thickness between unremoved rock and the pipe of at least 8 inches or 1/2 inch for each foot of fill over the top of the pipe, whichever is greater, but not more than three-fourths the nominal diameter of the pipe. Where bell-and-spigot pipe is used, the cushion shall be maintained under the bell as well as under the straight portion of the pipe. Rock excavation shall be as specified and defined in Section 31 20 00 Earth Moving.

D. Removal of Unstable Material:

1. Where wet or otherwise unstable soil incapable of properly supporting the pipe, as determined by the COTR, is unexpectedly encountered in the bottom of a trench, such material shall be removed to the depth required and replaced to the proper grade with select granular material, compacted as provided in paragraph BACKFILLING. When removal of unstable material is due to the fault or neglect of the Contractor while performing shoring and sheeting, water removal, or other specified requirements, such removal and replacement shall be performed at no additional cost to the Government.

E. Bedding:

1. Follow the requirements noted in the Drawings and according DC Water Standards and Specifications.

F. Placing Pipe:

1. Each pipe shall be thoroughly examined before being laid; defective or damaged pipe shall not be used. Plastic pipe, excluding SRPE pipe shall be protected from exposure to direct sunlight prior to laying, if necessary to maintain adequate pipe stiffness and meet installation deflection requirements. Pipelines shall be laid to the grades and alignment indicated. Proper facilities shall be provided for lowering sections of pipe into trenches. Lifting lugs in vertically elongated pipe shall be placed in the same vertical plane as the major axis of the pipe. Pipe shall not be laid in water, and pipe shall not be laid when trench conditions or weather are unsuitable for such work. Diversion of drainage or dewatering of trenches during construction shall be provided as necessary. Deflection of installed flexible pipe shall not exceed 5%. Lay bell and spigot pipe shall proceed upgrade with the bell end upstream.

3.2 JOINTS**A. Flexible Watertight Joints**

1. Gaskets and jointing materials shall be as recommended by the particular manufacturer in regard to use of lubricants, cements, adhesives, and other special installation requirements. Surfaces to receive lubricants, cements, or adhesives shall be clean and dry. Gaskets and jointing materials shall be affixed to the pipe not more than 24 hours prior to the installation of the pipe, and shall be protected from the sun, blowing dust, and other deleterious agents at all times. Gaskets and jointing materials shall be inspected before installing the pipe; any loose or improperly affixed gaskets and jointing materials shall be removed and replaced. The pipe shall be aligned with the previously installed pipe, and the joint pushed home. If, while the joint is being made the gasket becomes visibly dislocated the pipe shall be removed and the joint remade.

3.3 DRAINAGE STRUCTURES**A. Manholes and Overflow Structures:**

1. Construction shall be of reinforced concrete, precast reinforced concrete; complete with frames and covers or gratings; and with fixed galvanized manhole steps as necessary. Pipe connections to concrete manholes and inlets shall be made with flexible, watertight connectors.

B. Structure Step Installation:

1. Step shall be vertically aligned and uniformly spaced the entire depth of any structure. In precast structures the steps may be cast in place, mortared into holes provided by fabricator or driven.

3.4 BACKFILLING

A. Backfilling Pipe in Trenches

1. After the pipe has been properly bedded, selected material from excavation or borrow, at a moisture content that will facilitate compaction, shall be placed along both sides of pipe in layers not exceeding 6 inches in compacted depth. The backfill shall be brought up evenly on both sides of pipe for the full length of pipe. The fill shall be thoroughly compacted under the haunches of the pipe. Each layer shall be thoroughly compacted with mechanical tampers or rammers. This method of filling and compacting shall continue until the fill has reached an elevation equal to the midpoint (spring line) of concrete pipe or has reached an elevation of at least 12 inches above the top of the pipe for flexible pipe. The remainder of the trench shall be backfilled and compacted by spreading and rolling or compacted by mechanical rammers or tampers in layers not exceeding 8 inches. Tests for density shall be made as necessary to ensure conformance to the compaction requirements specified below. Where it is necessary, in the opinion of the COTR, that sheeting or portions of bracing used be left in place, the contract will be adjusted accordingly. Untreated sheeting shall not be left in place beneath structures or pavements.

B. Backfilling Pipe in Fill Sections

1. For pipe placed in fill sections, backfill material and the placement and compaction procedures shall be as specified below. The fill material shall be uniformly spread in layers longitudinally on both sides of the pipe, not exceeding 6 inches in compacted depth, and shall be compacted by rolling parallel with pipe or by mechanical tamping or ramming. Prior to commencing normal filling operations, the crown width of the fill at a height of 12 inches above the top of the pipe shall extend a distance of not less than twice the outside pipe diameter on each side of the pipe or 12 feet, whichever is less. After the backfill has reached at least 12 inches above the top of the pipe, the remainder of the fill shall be placed and thoroughly compacted in layers not exceeding 8 inches. Use select granular material for this entire region of backfill for flexible pipe installations.

3.5 MOVEMENT OF CONSTRUCTION MACHINERY

- A. When compacting by rolling or operating heavy equipment parallel with the pipe, displacement of or injury to the pipe shall be avoided. Movement of construction machinery over a pipe or storm drain at any stage of construction shall be at the Contractor's risk. Any damaged pipe shall be repaired or replaced.

3.6 COMPACTION

A. General Requirements:

1. Cohesionless materials include gravels, gravel-sand mixtures, sands, and gravelly sands. Cohesive materials include clayey and silty gravels, gravel-silt mixtures, clayey and silty sands, sand-clay mixtures, clays, silts, and very fine sands. When results of compaction tests for moisture-density relations are recorded on graphs, cohesionless soils will show straight lines or reverse-shaped moisture-density curves, and cohesive soils will show normal moisture-density curves.

B. Minimum Density:

1. Backfill over and around the pipe and backfill around and adjacent to drainage structures shall be compacted at the approved moisture content to the following applicable minimum density, which will be determined as specified below.

- a. Under paved roads, streets, parking areas, and similar-use pavements including adjacent shoulder areas, the density shall be not less than 90 percent of maximum density for cohesive material and 95 percent of maximum density for cohesionless material, up to the elevation where requirements for pavement subgrade materials and compaction shall control.
- b. Under unpaved or turfed traffic areas, density shall not be less than 90 percent of maximum density for cohesive material and 95 percent of maximum density for cohesionless material.
- c. Under nontraffic areas, density shall be not less than that of the surrounding material.

3.7 TRENCH DRAINS

A. Examination:

1. Examine substrates, areas, and conditions for compliance with the requirements for installation tolerances and other conditions affecting performance.
2. Verify that excavation is ready to receive stormwater trench drains.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation:

1. Do not install stormwater trench drains if Site conditions induce loads exceeding structural capacity of trench drains.

C. Installation of Stormwater Trench Drains:

1. Excavation:
 - a. According to manufacturer requirements and to depth as indicated on Drawings.
 - b. Provide clearance around sidewalls of structure for construction operations.
 - c. If groundwater is encountered, prevent accumulation of water in excavations; place stormwater trench drains in dry trench.
2. Place stormwater trench drain sections plumb and level, to elevations as indicated on Drawings, and according to manufacturer's instructions.
3. Backfilling: As specified by manufacturer and in Section 31 20 00 Earth Moving.
4. Cut and fit for pipe.

3.8 DRAIN BASINS

- A. The specified PVC surface drainage inlet shall be installed using conventional flexible pipe backfill materials and procedures. The backfill material shall be crushed stone or other granular material meeting the requirements of class 1 or 2 material as defined in ASTM D2321. The surface drainage inlets shall be bedded and back-filled uniformly in accordance with ASTM D2321. The drain basin body shall be cut at the time of the final grade so as to maintain a one piece, leak proof structure. No brick, stone or concrete block will be used to set the grate to the final grade height. For H-25 load rate installations, an 8-inch to 10-inch thick concrete ring shall be poured under the grate and frame as recommended by details provided from the manufacturer.

3.9 FIELD QUALITY CONTROL

- A. Testing is the responsibility of the Contractor. Perform all testing and retesting at no additional cost to the Government.
- B. Hydrostatic Test on Watertight Joints: Watertight joints shall be tested and shall meet test requirements of paragraph HYDROSTATIC TEST ON WATERTIGHT JOINTS. Rubber

gaskets shall comply with the oil resistant gasket requirements of ASTM C443. Certified copies of test results shall be delivered to the COTR before gaskets or jointing materials are installed.

1. PVC Pipe: A hydrostatic test shall be made on the watertight joint types as proposed. Only one sample joint of each type needs testing; however, if the sample joint fails because of faulty design or workmanship, an additional sample joint may be tested. During the test period, gaskets or other jointing material shall be protected from extreme temperatures which might adversely affect the performance of such materials. Test requirements for joints in PVC, PE, and PP plastic pipe shall conform to ASTM D3212.
2. Leakage Test: Lines shall be tested for leakage by water testing or exfiltration tests, as appropriate, prior to completing backfill. Testing of individual joints for leakage by water shall conform to ASTM C1103. Prior to exfiltration tests, the trench shall be backfilled up to at least the lower half of the pipe. If required, sufficient additional backfill shall be placed to prevent pipe movement during testing, leaving the joints uncovered to permit inspection. Visible leaks encountered shall be corrected regardless of leakage test results. When the water table is 2 feet or more above the top of the pipe at the upper end of the pipeline section to be tested, infiltration shall be measured using a suitable weir or other device acceptable to the COTR. An exfiltration test shall be made by filling the line to be tested with water so that a head of at least 2 feet is provided above both the water table and the top of the pipe at the upper end of the pipeline to be tested. The filled line shall be allowed to stand until the pipe has reached its maximum absorption, but not less than 4 hours. After absorption, the head shall be reestablished. The amount of water required to maintain this water level during a 2-hour test period shall be measured. Leakage as measured by the exfiltration test shall not exceed 0.2 gallons per inch in diameter per 100 feet of pipeline per hour.
3. Determination of Density: Testing shall be performed by an approved commercial testing laboratory or by the Contractor subject to approval. Tests shall be performed in sufficient number to ensure that specified density is being obtained. Laboratory tests for moisture-density relations shall be made in accordance with ASTM D1557 except that mechanical tampers may be used provided the results are correlated with those obtained with the specified hand tamper. Field density tests shall be determined in accordance with ASTM D2167 or ASTM D6938. When ASTM D6938 is used, the calibration curves shall be checked and adjusted, if necessary, using the sand cone method as described in paragraph Calibration of the referenced publications. ASTM D6938 results in a wet unit weight of soil and ASTM D6938 shall be used to determine the moisture content of the soil. The calibration curves furnished with the moisture gauges shall be checked along with density calibration checks as described in ASTM D6938. Test results shall be furnished the COTR. The calibration checks of both the density and moisture gauges shall be made at the beginning of a job on each different type of material encountered and at intervals as directed.
4. Deflection Testing: Conduct deflection test no sooner than 30 days after completion of final backfill and compaction testing. Clean or flush all lines prior to testing. Perform a deflection test on entire length of installed flexible pipeline upon completion of work adjacent to and over the pipeline, including backfilling, placement of fill, grading, paving, placement of concrete, and any other superimposed loads. Deflection of pipe in the installed pipeline under external loads shall not exceed limits in paragraph PLACING PIPE above as percent of the average inside diameter of pipe. Use a laser profiler or to determine if allowable deflection has been exceeded.
5. Laser Profiler: Inspect pipe interior with laser profiling equipment. Utilize low barrel distortion video equipment for pipe sizes 48 inches or less. Use a camera with suitable lighting to allow a clear picture of the entire periphery of the pipe interior. Center the camera in the pipe both vertically and horizontally. The camera must be able to pan and tilt to a 90 degree angle with the axis of the pipe rotating 360 degrees. Use equipment to move the camera through the pipe that will not obstruct the camera's view or interfere with proper documentation of the pipe's condition. The video image shall be clear, focused, and relatively free from roll static or other image distortion qualities that would prevent the reviewer from evaluating the condition of the pipe. For initial post installation inspections for pipe sizes larger than 48 inches, a visual inspection shall be completed of the pipe interior.

3.10 INSPECTION

- A. Post-Installation Protection: Visually inspect each segment of concrete pipe for alignment, settlement, joint separations, soil migration through the joint, cracks, buckling, bulging and deflection. An engineer must evaluate all defects to determine if any remediation or repair is required.
1. Flexible Pipe: Check each flexible pipe (PVC) for rips, tears, joint separations, soil migration through the joint, cracks, localized buckling, bulges, settlement and alignment.
 2. Post-Installation Inspection Report: The deflection results and final post installation inspection report must include: a copy of all video taken, pipe location identification, equipment used for inspection, inspector name, deviation from design, grade, deviation from line, deflection and deformation of flexible pipe, inspector notes, condition of joints, condition of pipe wall (e.g. distress, cracking, wall damage dents, bulges, creases, tears, holes, etc.).
- B. Trench Drains:
1. Inspect stormwater trench drains immediately prior to placement in excavation to verify that trench drains are internally clean and free from damage.
 2. Remove and replace damaged sections.
 3. Verify alignment of gate and components.
 4. Verify that gate operates smoothly and does not bind or scrape.
 5. Prepare test and inspection reports.
- C. Repair of Defects:
1. Leakage Test: When leakage exceeds the maximum amount specified, correct source of excess leakage by replacing damaged pipe and gaskets and retest.
 2. Deflection Testing: When deflection readings are in excess of the allowable deflection of average inside diameter of pipe are obtained, remove pipe which has excessive deflection and replace with new pipe. Retest 30 days after completing backfill, leakage testing and compaction testing.
 3. Inspection: Replace pipe or repair defects indicated in the Post-Installation Inspection Report.
 - a. Flexible Pipe: Replace pipes having cracks or splits.
 4. Protection: Protect storm drainage piping and adjacent areas from superimposed and external loads during construction.
 5. Warranty Period: Pipe segments found to have defects during the warranty period must be replaced with new pipe and retested.
