

FORT RILEY – Railyard Sling Head Attachment - Requirement Description

Provide one Sling Head Attachment for use with the Railyard's Kalmar RT240 Loading/Unloading system.

Sling Head Attachment must have the following characteristics:

- Must be compatible with the Railyard's already owned Kalmar RT240 Loading/Unloading system.
- Must present similar or identical capabilities and use as the one Sling Head Attachment already owned and used by the Railyard.
- Must be of durable material, able to withstand the wear and tear inherent to its use-case.
- Must have a lifting capacity of at least 48,000 lbs, to match the capacity of the Railyard's current system.
- Must be quick to attach and un-attach to the Railyard's already owned Kalmar RT240 Load/Unloading System.
- Must include storage solutions for Sling Head Attachment when it is not in use.

Installation Transportation Officer
